The profit necessity and private plundering and hoarding are therefore much less of a block on production and innovation than in the US. China's private sector is also much younger, so its overaccumulation of capital is significantly less severe. The proceeds from production are reinvested (in social enterprise) to a much greater degree, instead of sitting on the sidelines in private bank accounts, surplus to requirements and only able to accrue interest.

15. Staff, "GDP (PPP) by Country (2025)," *Worldometer*, April 2026, https://www.worldometers.info/gdp/gdp-by-country/.

16. Ilaria Mazzocco, "Unpacking Linkages Between the Chinese State and Private Firms," *Big Data China*, March 21, 2024, https://bigdatachina.csis.org/unpacking-linkages-between-the-chinese-state-and-private-firms/.

According to the Penn World Table, in 2019 gross fixed capital formation as a share of gross profit was 42% in China compared to the US rate of 9% and a global average of 14%.

Since 1992[17] China's GDP has grown 51-fold compared to the US's 5-fold; but China's stock market capitalisation grew 8-fold while the US's 29-fold.) China's economy is real and productive; the US's speculative and debt-based.

China's economic position has enabled it to offer much more attractive deals and lending terms to nations that were previously dependent on the US. In 2023 China was the largest bilateral trading partner for 145 out of 205 of the world's economies (about 70%), compared to the US's 33. (Whether that makes China imperialist is a difficult question to answer but its capital exports as a share of its economy are small; and many of its overseas investments are actually made by SOEs — arguably a kind of exportation of socialism.)

The US dollar still utterly dominates global reserves and transactions, but only 80% of international oil contracts are now priced in US dollars — the 'petrodollar' — compared to well over 90% 20–30 years ago. As a share of global reserves, the US dollar has fallen[18] to 56% from 73% in 2000; although its use in foreign exchange trading volume has held at about 88%.

The Chinese renminbi (RMB) is making noticeable inroads. Its share of global reserves roughly doubled from 2016 to over 2% by the end of 2023. It accounted for around 4–4.5%% of global cross-border payments in 2024, up from 0.1% in 2010, making it the fourth most active payment currency after the US dollar, the euro, and pound sterling.

About 28% of China's goods trade was settled in RMB in 2024–25; and a bit more than half of China's overall cross-border receipts and payments, a dramatic rise from virtually zero a decade before.

US tariffs aimed at preventing China's rise have so far failed, with China continuing to increase its share of global exports enormously in 2025 (largely as a result of slashing prices).

Empire strikes back

With the value of the dollar waning, other nations are diversifying their reserves and turning to gold or other currencies. Falling demand in turn compounds the dollar's devaluation.

New decentralised peer-to-peer blockchain networks are also enabling the circumvention of middle men and cutting down on transaction fees that traditional institutional banks rely on.

The US is therefore increasingly turning to coercion to try to force countries to continue to trade in the dollar and/or privatise state assets and public wealth[19] as has been the case for example in Iraq, Ukraine, Libya and now Syria and potentially Venezuela. Countries that do not co-operate are sanctioned: US companies that exchange dollars with sanctioned foreign currencies are heavily fined if they are found to have mediated such transactions. Brazil, Russia, India, China and Saudi Arabia, along with others — like Venezuela — have responded by building an alternative trading bloc (BRICS), increasingly shunning the US dollar. With sanctions failing, military action, such as the invasion of Venezuela, is the next course of action. Venezuela is rich with oil and mineral reserves, but successfully attacking it would also be a blow to China, which may lose an export market and a cheap supply of oil.

(Venezuela recovered somewhat from a severe escalation in sanctions in 2017 — which reduced government revenue by a reported 99%[20] — becoming the second fastest growing country in Latin America in 2024 (8.5%) and 2025 (6%)[21].)

Given that capital's falling profitability makes it increasingly dependent on state subsidies, facilities and contracts, the private sector is increasingly dependent on inventing things to sell to the state — *largely by becoming increasingly militarised* — and bleeding the public dry through consumer and income tax hikes[22] (as well as fines, and so on).

22. Grossmanite, "The REAL Reason".

But the devaluation of the dollar and the increasing demands on the US military — as it overextends itself across the globe in order to defend and extend the US's private investments — makes the reproduction of the US's military might increasingly expensive (in real-terms), badly compounding the country's deficit and debt problem.

This process is obviously unsustainable. For one thing, the US's reliance on investing overseas makes its economy and military incredibly dependent on imports from none other than China.

China dominates key supply chains for rare earth elements used in advanced defence systems — from fighter jets and missiles to radar and precision guidance — and controls a large share of the world's production and processing of elements such as dysprosium, samarium, terbium, and yttrium. US import dependence on Chinese rare earths has reached around 70–80%. Beijing has also restricted or banned exports of strategic materials including gallium, germanium, antimony, tungsten and graphite, all vital for semiconductors, batteries and military electronics, disrupted US supply chains and raising costs for defence contractors.

The arms race, furthermore, is accelerating the automation revolution that is making capitalism historically obsolete, as commodities are made increasingly quickly, with less and less labour, reducing the value of wages and in turn the consumer demand for commodities.

Recession

Now, the first extended, full blown recession since 2009 has almost certainly begun.

The US's unemployment rate crept up from a low of 3.4% in late 2023 to 4.5% in November 2025, despite an absolute 7% increase in GDP. Averaged across 2025, the US added only 44,000 jobs per month, the lowest since 2020 and lower than any year during the 2010s.

After the worst October in two decades, job losses hit 1.2 million in the first 11 months of 2025, up by 54%[23] year-on-year. (The number of jobs created from

23. Megan Cerullo, "Employers have cut 1.1 million jobs this year. Here's what's behind the wave of layoffs," *CBS News*, December 4, 2025, https://www.cbsnews.com/news/employers-cut-1-1-million-jobs-2025-why-layoffs-rising/.

April 2024 to March 2025 was also revised down[24] by 911,000.) Job cuts have surpassed one million in a single year only five[25] other times since 1993: in 2001, 2002, and 2003, with the Dot Com bust; 2009, during the Housing/Great Financial Crisis (GFC); and in 2020, when the COVID pandemic and lockdowns struck, following a period when Donald Trump had been calling for the Fed to lower interest rates, as US growth in Q4 2018 slipped to 0.7%. (Turkey and Argentina experienced negative growth in 2018 and Germany and the UK flatlined in Q3.)

Average time spent out of work has also hit 24 weeks[26] up from 16 in the run up to the GFC. The underemployment rate has risen, too, with the number of people employed part-time but wanting full-time work increasing by 980,000 over the year to 10.8%. For recent college graduates, the underemployment rate hit 41.8%.

The unemployment rate for young college educated workers is up by a full 1.6 percentage points in the last year. More broadly, the unemployment rate for new labour market entrants (like young adults looking for their first paycheck) and re-entrants (like stay-at-home parents going back to office work) are both hovering near their highest levels since 2016. Wage growth for the lowest-paid workers is much lower compared to higher-paid counterparts, manifesting in the largest gap in wage growth favouring high earners since the early 2010s.

The US lost an estimated net 145,000 manufacturing jobs in 2025[27] — making a mockery of Trump's 'promise' of a blue-collar revival — at the fastest rate since early in the pandemic and worse than any period from 2011–19.

Tech sector jobs fell by more than 19,000; adding up to 100,000 since late 2023. It took just over a year before tech employment began to grow again after the GFC; whereas today's decline continues nearly three years on. If it persists

through 2026, it will beat the Dot-Com bust for the longest period of tech job market losses.

The US public sector lost more than 157,000 jobs. Federal employees represent 13% of all public-sector jobs, but the 277,000 jobs eliminated at the national level, plus the 45,000 losses at the state level, easily outstripped small growth at the local level.

The beginning of a recession is unlikely to be officially confirmed until a year after it starts, but a wide range of economic data signals a brewing contraction. According to Moody's Analytics, 22 US states and the District of Columbia experienced shrinking GDP in 2025; while another 13 have flatlined, leaving only 16 generating or experiencing growth.

Overall, 717 large firms went bankrupt in the first 11 months of 2025, the highest number since 2010. The figure includes 85 consumer discretionary and 32 consumer staples companies; 110 industrial and 46 healthcare companies; and publicly-listed firms with either assets or liabilities over $2m and private firms with liabilities over $10m.

The Institute for Supply Management manufacturing index indicated a contraction in the US manufacturing sector for the 10th consecutive month at the end of December, putting the index at 47.9 (below the 50.1 that indicates growth). The index has only expanded in two of the past 38 months.

Declines in heavy truck sales often reach 20–40% or more before recessions; sales in 2025 were down by around 13–16%. Freight shipping has also approached 2008–09 levels.

Housing starts in the US are expected[28] to come in at 1.3 million for 2025, having dropped from 1.6 million in 2021 to 1.55m in 2022, 1.42 in 2023, and 1.36m in 2024. In August, the delinquency rate of office mortgages packaged into commercial mortgage-backed securities jumped[29] to 11.7%, surpassing the 2008 peak of 10.7%. As recently as December 2022, the rate stood at only 1.6%.

Productivity growth is slowing globally, falling from 1.6% to below 1% in 'developed nations' between 2011 and 2022; and from 5.9% to 3.4% in 'developing nations'.

US GDP growth has been steady at 2.9% and 2.8% in 2023 and -24 (although the figure is of course inflated by 'value added' from things like disease-inducing 'food', weapons of mass destruction, speculative transactions, bank fees, and gambling; the latter growing from $30bn in 2020 to $72bn in 2024; about 0.5% of GDP).

The average decade-on-decade figure, though, has consistently declined from a high point of around 6% in the 1960s. In the last decade or so it has been propped up by a temporary shale gas boom.[30]

The US's 10-Year minus 2-year Treasury yield curve has recently uninverted — a historically reliable recession indicator. The curve turns negative when long-term bond yields — usually higher because of the uncertainty that comes with a longer wait and compounding inflation — fall below short-term rates; reflecting investor expectations of weakening growth and central bank rate cuts.

Historically, recessions have followed the exit from the inversion, not the inversion itself, with lead times ranging from 6 to 23 months. The last inversion lasted an *unprecedented* 26 months, falling to a record -1.06 percentage points. Deeper, longer inversions have preceded more severe recessions, suggesting that the next downturn will be worse than 2008–09's 'Great Recession' — the deepest since the Great Depression of 1929–33 — when US GDP contracted by 4.3% from peak to trough and unemployment hit 10%. (10.1% and 14.7% during the much shorter Covid pandemic-lockdown recession.)

Ending postwar US recessions have required an average 6 percentage-point fall in the central bank rate, indicating that the Fed may have to go to zero again, given that it started cutting, very tentatively, from 5.3% in July 2024 (to 3.7% at the end of 2025); and kept rates at zero — for the first time ever — for seven years after 2009 and 20 months after 2020.

Each recession-countering rate cut since 1981 has started from a lower point: 19%; then 9.8% in 1989; 6.1% in 2000; 5.3% in 2008; and 2.4% in (the

30. Arthur Berman, "Draining America First—The Beginning of the End for Shale Gas," *Art Berman* (blog), January 23, 2024, https://www.artberman.com/blog/draining-america-first-the-beginning-of-the-end-for-shale-gas/.

exceptional circumstances of) 2020. The 5.3% of 2024 bucks the trend, though barely, and followed rate hikes that largely went up to counter 40-year high general inflation (which makes investment and mergers — capital accumulation — more expensive).

Conversely, a recession is the temporary, partial solution to overaccumulation — and renewed investment catalyses recession. As the relative underproduction of profit rises, surplus capital rises; production and supply slows down relative to demand; and prices rise. Interest rates therefore go up, lending tightens, and demand falls as reserves run dry, pulling prices back down, as has been seen in the case of oil and gas; and, even more crucially, (real) wages (relative to overall inflation).

Employee share of income in the US averaged 64% from 1967 to 2002, but fell sharply[31] after the Dot Com crash, the GFC and the short, sharp Covid recession, sinking to around 53–55%a record low[32] (something that is of course compounded by labour's shrinking role in the production process as automation advances). This trend has been the biggest factor in overall corporate profit margins (after operating costs) jumping to a record high[33] — for very few companies in actuality — about 21% after Covid and 20% again now, up from the previous peaks of 18.5% before and after the GFC; and 15.5% in 1997.

As commodity prices fall and capital depreciates, the affordability of investment and innovation improves again, at least for companies with big enough reserves to ride out rising inflation and/or falling demand. At least some surplus money capital pours out of speculation, savings and stocks and back into productive commodity production, as can be seen perhaps most clearly in charts of US money market funds during and after recessions.

The money supply expands, devaluing money and capital, and the effect on the purchasing power of money crushes the ability of firms with slender profit margins or reserves to pay wages, bills and/or debts. Unprofitable capital (including factories) is written off and abandoned or sold off on the cheap to the

survivors, resulting in an overall centralisation of capital, a concentration of corporate and monopoly power. Some innovative start ups do emerge, having taken advantage of falling prices while starting out with low overheads; but to a lesser and lesser extent.

The economy can therefore go through a contraction for some and a boom for others at the same time. Following the fall in the price of oil and borrowing in 2025, at the start of January corporations received $95bn from 55 investment-grade bond deals, the highest weekly volume since May 2020 and the busiest start to a year on record.

“Companies took advantage of strong investor demand for high-quality dollar debt that has pushed borrowing costs close to their lowest level relative to US Treasuries since the global financial crisis… with the cost of borrowing for investment-grade companies at just 0.79 percentage points above government debt, according to Ice BofA data,” *The Financial Times* reports. “While January has typically been a busy month for new bond issuance, many companies are starting their funding programme even earlier than usual this year to get ahead of an expected issuance glut to finance Merger and Acquisition (M&A) activity and big tech companies’ AI infrastructure […] Morgan Stanley forecasts investment-grade bond sales this year of $2.25tn, eclipsing the 2020 record of $1.9tn.”[34]

M&A activity improved by 40% year-on-year in 2025, “as larger firms acquired smaller, leaner competitors to bolster their own operational efficiency”.[35]

The relative boom may not last long — in mid-January the price of oil jumped back up by 10% amid the US’s invasion of Venezuela and concerted uprisings in Iran, both countries of course being critical to global oil supplies and having long had their development obstructed by sanctions, tariffs and blockades that the US continues to reinforce. It did then drop again as Trump responded to a bond market wobble by rowing back on his threat to bomb Iran. Whether oil spikes higher or continues to resume its trajectory downwards before at some point rocketing upwards remains to be seen.

Glorified betting

Desperate not to spook investors, multinational investment bank Goldman Sachs claimed in October that "anticipated investment returns are sustainable".

A stock market frenzy, however, is itself a bellwether of a weakening real economy, since a shortage of profitable opportunities in commodity production — where new value is created — is chucked instead into the glorified betting of speculation, inflating the value of stocks and generating a false sense of prosperity.

From the start of October to mid-November, furthermore, only 38% of S&P 500 stocks trended upwards. Michael Burry (of *The Big Short*) has, as he did in 2008 when he made millions of dollars by shorting (betting against) the mortgage market, deregistered his hedge fund and shorted Nvidia, the absurdly overvalued computer chip designer (with a price-to-earnings ratio of 48).

Many commentators and analysts sounding the alarm are drawing comparisons to 2008 and 1929. The situation might well be worse than either. At the end of 2024, US banks had about $483bn of unrealised losses[36] on securities; compared to no more than $150bn around the time of the GFC (or an inflation-adjusted $220bn). That equates to 21% of tier 1 capital instead of the GFC's 14% (the highest quality capital a bank holds to absorb losses and truly protect depositors and maintain solvency).

To meet cash demands, banks may sell long-duration bonds at a loss, converting paper losses into realised capital losses, weakening buffers. One bank's forced sales can push down bond prices, creating losses for other banks. Market panic can make liquidity dry up within 90 days even for healthy banks. This threat to the US banking system lies ahead.

The concentration of stocks and general wealth in the US is now on a par with the late 1920s, for the first time since that dark period. From 1979 to 2021[37] real average wages rose by 1.0% annually; but only 0.6% for the bottom 90%; against average annual inflation rose of 4.1%. In contrast, the top 1% and 0.1%

---

36. Steven Kelly (@sjkelly6), "Unrealized losses on banks' securities holdings," *LinkedIn*, February 25, 2025, https://www.linkedin.com/posts/sjkelly6_unrealized-losses-on-banks-securities-holdings-activity-7300232264104235008-EkfZ.

37. Elise Gould and Jori Kandra, "Inequality in annual earnings worsens in 2021," *Economic Policy Institute*, December 21, 2022, https://www.epi.org/publication/inequality-2021-ssa-data/.

saw their income grow by 2.7% and 4.2% per year. That means income for the top 1% and top 0.1% surged by 206.3% and 465.1%, respectively, while wages for the bottom 90% grew by just 28.7%. The share of total earnings for the top 0.1% rose from about 1.6% to roughly 5.9%

Just under 50% of all consumer spending is made by the top 10% of earners (who made $251,000 or more in 2024), an historic high and up from 43% in 2020.[38]

The top 10% of households own 93%[39] of the stock market's value. The top 25 stocks account for 45% of the S&P 500 and the top seven for 31%. Nvidia's market cap is 7% of all publicly-traded US companies and 4.9% of the MSCI All Country World Index — up from 1% in 2023 — higher than the 4.83% for all of Japan, the world's fourth largest economy.

Only 10% of households were invested in the stock market when it crashed in 1929 — now 62% of US adults report owning stocks[40] and not counting retirement funds that are often directly or indirectly invested in the stock market. At least 43% of retail investors (individuals) are buying more stock[41] than their cash can afford.

US household equity holdings have surged to a record 47% of total financial assets, exceeding the 2000 peak by 8 percentage points.

The S&P 500 CAPE Ratio (Cyclically Adjusted Price-Earnings), the S&P 500 price divided by the average of the past 10 years of inflation-adjusted earnings, has risen to 45, beating the 2000 peak of 39.

The CAPE Ratio moves more or less in lockstep with US Households Holding of Equities as a Share of Total Financial Assets. Both peaked together in 2000,

41. Ethan Wolff-Mann, '43% of retail investors are trading with leverage: survey," *Yahoo Finance*, September 9, 2020, https://finance.yahoo.com/news/43-of-retail-investors-are-trading-with-leverage-survey-172744302.html.

followed by the -50% S&P 500 crash. Both peaked again in 2007, followed by the -57% crash.

In the run up to the 1930s Great Depression, all active home mortgages represented 10%[42] of US GDP, rising to 32% in 1930. US mortgage debt today is 70% of GDP, more than $18 trillion in total household debt. (In Australia and Canada, mortgage debt is higher than the country's entire GDP.)

Households are badly exposed to the coming stock market crash. An estimated 67%[43] of Americans are already living paycheck to paycheck, up from 63% in 2024; spending their entire income on bills and expenses as it comes in, leaving little to no money for savings or emergencies. In 2023, 12.6% of the total US population received food stamp benefits — one in eight people — up from 6.1% 2001.

The rapid expansion of margin debt, the total amount that investors have *borrowed to buy securities* — which fuelled the 1929 crisis — reached a record high[44] of $1.1 trillion in September, up by 34% on 2024. The private (non-bank) credit market is exploding at a rate of around 15% a year, rising from $0.5 trillion back in 2012.

Drawing comparisons to the 2008 subprime housing crisis, US subprime used-car lender Tricolor filed for bankruptcy in September after it allegedly pledged the same loan portfolios to multiple lenders, exposing private credit providers and major banks such as JPMorgan, Barclays, and Fifth Third to unexpected losses, with its filing listing up to $10bn in assets and liabilities.

'AI' bubble

The private credit bubble is only part of a much larger one — an '*everything bubble*' that since the GFC has *for the first time ever* engulfed *every* asset class (debt, equity, reserves). Now the 'AI Bubble' has joined the party and

outbloated all that came before. One has to ask: what comes after an everything bubble?

The top 'Magnificent 7' stocks are all tech sector, and the tech and 'AI' sector accounted for a scarcely believable 92% of US growth in the first half[45] of 2025. Since the debut of the advanced research assistant tool Chat-GPT in November 2022, AI-related stocks have added an estimated $17.5 trillion in market value — 75% of the S&P 500's gains.

In breakneck competition to construct expansive data centres equipped with specialised, cutting-edge chips, Microsoft, Alphabet, Amazon, and Meta reported a combined capital expenditure of $245bn in 2024[46] a figure surpassing $360bn in 2025 and expected to hit up to $600bn in 2026. According to an MIT report, though, only 5% of integrated AI tools are generating profitable returns.[47]

In the third quarter, venture capital deals with private AI firms dropped[48] by 22% quarter-on-quarter. Amid ongoing problems with reliability and the rocketing costs of training new models, AI-tool usage at firms with more than 250 employees dropped from nearly 14% in June to under 12% in August. According to Edge AI & Vision Alliance, training costs have surged by more than 4,300% since 2020,[49] driven mostly by the rising price of chips and staff (engineers and researchers).

Investment has been pouring into AI stocks out of hype, lack of other options, and the hope of innovation-based growth (which is certainly not all hype; MIT found a 14% increase in productivity for customer support agents; the London

School of Economics found AI-assisted workers save about 7.5 hours per week).

Oracle's debt-to-equity ratio is *500%*. Chat-GPT owner OpenAI is valued at $500bn but reported a net loss[50] of $13.5bn on $4.3bn in revenue in the first half of 2025. The company does not expect to be profitable until the end of the decade and is now begging tail-between-legs for a state bailout. (Something that Trump might be addressing by effectively taxing old "underperforming" defence contractors by capping executive pay and share buybacks.[51]) Such talk at the start of November sent the NASDAQ down by more than 1% in a single day and wiped $1 trillion off the value of Wall Street's most valuable tech companies within a week.

Bain & Co. estimates that cloud service providers like Google, Microsoft, and Amazon will have to generate an additional $2 trillion in annual revenue by 2030 to afford all the necessary infrastructure, five times more than the current global market for software subscriptions. In 2024 Amazon, Alphabet, Apple, Meta, Microsoft, and Nvidia combined made less than $2 trillion. US electricity consumption growth stayed at 0.1% in 2005–2020. That has since picked up to 1.7%, but AI is expected to add another 2% of demand per year up to 2030, likely consuming power faster than new power plants can be built. Total generation likely needs to be 27–35% higher by 2030 compared to 2022 levels.

An annual power market auction in July 2024 by the largest US electrical grid operator, PJM Interconnection, which covers parts of 13 states from Illinois to New Jersey, resulted in prices more than 800% higher than the year before[52]; up from $28.92 per megawatt-day to $269.92. Electricity bills for customers rose by about 20% per month.[53]

China, in contrast, thanks significantly to the largely joined up state ownership of its core, essential industry — as opposed to being dominated by many

competing, profit-seeking, corner-cutting entities — has solidified its position as the global leader in electricity generation and installed capacity, providing a massive, rapidly expanding power base for its AI and industrial sectors. China's total power generation in 2025 was 10 trillion kWh, roughly 140% higher than the US's, with renewable enegy now accounting for 59.1% of total capacity, compared to the US's 28%.

China's DeepSeek AI performs at least as well as US equivalents while requiring 50–75% less energy. Instead of one giant model, DeepSeek splits its neural network into many smaller, specialised 'expert' networks (e.g., for coding, math, poetry). A 'generalist' network directs requests to the most relevant experts, so the entire model doesn't need to run for every query, drastically cutting down on computation demands.

An economy with less dependence on capital accumulation, it turns out, can develop less capital-intensively, enabling more agile and innovative progress.

The US's capitalist state is attempting to ride to the rescue — although relatively meekly. The 2024 AI National Security Memorandum recast the success of US AI as *the* national security priority of our times. The Trump administration's AI Action Plan aims to accelerate AI adoption within the government and military by pushing changes to regulatory and procurement processes. The One Big Beautiful Bill Act authorised $1bn in AI funding, including $450m for AI applications in naval shipbuilding and autonomy and $250m for advancing the AI ecosystem within the Department of Defense. Another $500m has been allocated for AI-related broadband and infrastructure.

Such figures are not particularly impressive, owing to the US's overaccumulation and indebtedness. OpenAI is now in talks with sovereign wealth funds in the Middle East to secure a reported $50bn.

These subsidies and bailouts nevertheless heap yet more debt onto the backs of a public increasingly weighed down by the burden of saving the private sector *continuously* since 2008.

Nvidia, OpenAI, and major data centre operators are propping up one another's growth through large, incestuous circular investments. As demand far outstrips supply, Nvidia sells its chips (which it designs but are actually manufactured by Taiwan Semiconductor Manufacturing Company) at an extremely high margin. It is left with little choice but to subsidise that demand by investing in AI firms

that purchase its hardware. OpenAI has committed to buying 10 gigawatts of compute from Nvidia, at a cost of at least $15bn each; but in return Nvidia is investing $100bn in OpenAI (for non-voting shares). Similar arrangements run through other firms such as CoreWeave and Nebius.

Real economic growth will of course continue to tend to slow relative to inflated valuations. As profitability falls, liquidity reserves and lending dry up, and job losses rise, the Federal Reserve will tend to continue to lower its baseline interest rate — fueling the bubble, since investors will find it easier to borrow to speculate on assets and future growth.

If an 'external' factor like tariffs or war do not spook investors first, the intensifying concentration of stocks will eventually shut out too many investors from sufficient returns and a massive sell off will begin, bursting the bubble; which will also happen if a panic-sparking absolute economic contraction takes off. The fictitious money investors have been throwing into this hole will be wiped off the ledger board. A 30% correction is strongly correlated with a protracted, economy-wide recession, but a much higher figure, perhaps accumulated over the course of two or more 'corrections' (10% stock market declines) and 'bear markets' (20%) over several years, should come as no surprise. (20% contractions usually result in short, shallow contractions; such as 2022's -1.6% in Q1 and -0.6 Q2; and 2025's -0.5 in Q1.[54])

Gita Gopinath, former chief economist of the IMF and now with Harvard, believes that a market correction of the same magnitude of the Dot-Com crash — when the S&P 500 and the NASDAQ Composite crashed by 50% and 75%, respectively — could wipe out[55] about $20 trillion in wealth for US households, nearly 70% of annual US GDP. On that basis, consumption would fall by more than 3% and GDP by two percentage points, easily enough to push the US economy into a deep recession. She also estimates that foreign investors could face wealth losses exceeding $15 trillion, about 20% of the rest of the world's annual GDP, since US equities make up 60% of the global market. We should not be surprised if Gopinath's estimate turns out to be wildly conservative.

1929

In contrast with the asset inflation that characterised the aftermath of 2009 and the *asset and consumer* price inflation after 2020; 1929 resulted in absolute overall *deflation* — average prices were 27.4% lower in April 1933 than in October 1929.

The Fed and every government since have been desperate to avoid a repeat, as income loses its value relative to (fixed) debt; and demand (including for labour) falls faster in anticipation of falling prices. (The Fed's hands were tied by the commitment to 'sound money' and the gold standard — fixing the currency's value to a specific amount of gold, limiting money printing and therefore economic growth — which the government finally abandoned in 1971 since retaining it would have allowed another full-on depression.)

The Wall Street Crash impacted the whole world so badly because the US, then a net lender, was the world's biggest lender. The rest of the world needed to borrow US capital to grow their economies.

As the home of the world's dominant reserve currency and richest consumer base, a major US recession today will again of course devastate the whole world. Now, though, the US is a net borrower and the world's largest borrower. About 30% of its debt and government spending is financed by foreign capital inflows; but at the end of 2025, China's US Treasury holdings were $683bn, down rom $1.07 trillion five years earlier. Japan's did drop from $1.3 trillion to $1.1 trillion before creeping back up to $1.2 trillion. Now European funders are threatening to disinvest in protest against Trump's intention to buy or seize Greenland.

Since 2020, official US government debt-to-GDP has been higher than the 119% at the end of WWII. On course to soon hit $40 trillion, US government debt is growing at around 6% per year and the annual government deficit — the gap between income and expenditure — 8.5% (since 2008). As discussed above, as the debt rises to particularly high levels, the risk of lending to the government climbs as the chances of the overstretched tax base losing its capacity to repay therefore naturally increases. Lenders therefore tend to demand higher rates, further undermining their own investment as the government is forced to increase its borrowing to cover the difference, expanding the money supply and fueling inflation.

Towards the end of January, the US's 10-year Treasury bond jumped from 4.14% to to 4.3%; the 20 from 4.73% to 4.88%; and the 30 from 4.79% to 4.92%. At the same time, Japan's 40-Year bond broke through 4% for the first time since its introduction in 2007. The 30, having gone above 3% for the first time in 2025 since its introduction in 1999 — also moving above China's falling 30-Year for the first time (down from 4.5% in 2018 to below 2%) — jumped from 3.6% to 3.9% (up from 1.4% in June 2023 and 0.1% in 2016). Government debt is getting harder to sell — less is being bought than the government wants to sell.

Interest payments grew from 6% of government spending in 2020 to 14% in 2025,[56] making it the fastest growing component of state expenditure. A net 19 cents of every $1[57] (from 24c gross) in taxes collected now goes toward paying interest on public debt — roughly $7,300 per household — double the level in 2021. Net interest payments ($1.2bn gross minus payments owed to state departments) hit $970bn; compared to $345bn in 2020 and $180bn in 2005.

Because the state is rolling over maturing debt — borrowing new debt to pay off debt due to be repaid now — by issuing short-term debt in order to avoid the higher long-term rates, debt is maturing sooner. In 2026 the US government is due to repay about 30% of its $38 trillion debt, more than $9 trillion — nearly double the $5.2 trillion collected in taxes in 2025. The debt has to be repaid by borrowing at higher rates than the debt originally issued.

The £20bn extra brought in by tariffs is not touching the sides.

This state of affairs is clearly unsustainable. The tax base capital is so dependent on for bailouts, subsidies, contracts and sales is collapsing.

The Trump administration is naturally desperate to bring borrowing rates down and is making moves to deregulate banks — to lower the reserves they have to keep, to invest the difference in Treasuries — and pack the Fed with its own people in order to get its wish sooner rather than later; since the Fed has lowered rates slowly and tentatively given the negative reaction from bond markets that expect debt and inflation to rise as a result. The small downgrades

the Fed has made have brought down short-term rates, but long-term rates and inflation have moved higher, since lower short-term rates allow the government to borrow and spend more money into existence. A continuation of that reaction would prevent Trump's hopes of rolling over short-term debt into low-rate long-term debt.

Trump wants some devaluation of the dollar in order to boost the competitiveness of exports; but not so much that the demand for the dollar falls drastically. The Fed wants to keep interest rates higher than Europe's to make lending to the US the more appealing option.

Official annual inflation is still near 3%, above the 2% target aimed at preventing deflation and maintaining business stability. Average US inflation hit a 40-year high of 9% in 2022. The average basket of goods is now 25% higher than in 2020. Coffee is up 21% in just the past year and ground beef 15%.

Overall monthly inflation is only 'low' because of falling oil prices, and when the latter falls too low to retain profitability, oil production will be cut in order to hike prices, something that would certainly negatively impact the stock market and economic growth — potentially very badly, depending on the extent and pace of cuts.

The average cost of operating existing wells in the US is $41 per barrel, and prices have fallen to around $60, with Trump attempting to bring them even lower by seizing foreign oil tankers and give private US multinationals the ownership of Venezuela's largely state-owned oil industry (which needs a lot of expensive, long-term modernising that may not be worth the effort[58] since it provides very heavy, sticky and therefore discounted, low-margin oil; but which is the kind US Gulf Coast states have the ability to refine[59]). Some analyses suggest break-even shale production — shale/tight oil being lighter and runnier than crude — presently averages about $70 per barrel and could rise toward $90–95 over the next decade[60] as core inventory depletes.

Fossil fuels have been vital for capitalism in the past century: they are extractive-intensive and non-renewable, *continuously creating new labour time to exploit* — whereas additive renewables, once built, do not. Limitless, abundant energy would be *free and therefore unprofitable*, meaning capitalism literally cannot wean itself off of fossil fuels (making the end of capitalism necessary for the survival of the human species[61]).

New oil discoveries have tended to decline over time, though, as extraction has had to venture deeper and deeper underground to reach untapped reserves, making it increasingly expensive; while the quality of newly found and extracted oil has also declined, making refinement more and more expensive as well.

For now oil prices are falling and so the Fed is planning to drop its rates and print money to buy debt — possibly, given the absolute (debt-inflated) value of the economy is that much bigger, at an even greater rate than it did in 2008 and 2020. In the latter example the money supply grew by a shocking 40% in less than two years, although exceptional circumstances of course exacerbated the move.

At the start of December 2025 the Fed stopped tightening its balance sheet (as it had done since 2022 in its fight against inflation) and started reversing course. *Sacrificing the housing market*, instead of reinvesting in maturing mortgage-backed securities, proceeds will go solely into purchasing government debt in a desperate bid to bring down the cost of government borrowing.

The Fed has committed to buying $40bn in Treasuries per month to start with. It aims to suppress the long-term interest rates by making up for the lack of demand from Central Banks and foreign and private investors, thereby lowering the cost of refinancing the US government's debt. Without making this move, the extra returns bond lenders are likely to demand as debt continues to rise could easily take rise from 4.5% to 6% (see below).

During WWII, the British government did the same, suppressing rates to 3% and then 2.5% for a year or so after — debasing pound sterling to the point that it lost its position as the world's dominant reserve currency.

---

61. Ted Reese (@Grossmanite), "Socialism or Extinction: Capitalism's War on the Climate, Earth and Human Fertility," *YouTube*, November 27, 2024, https://www.youtube.com/watch?v=94dQu95R4wQ.

The Fed's coming intervention will again devalue wages and savings, amounting to another, likely much greater round of relative inflation in terms of lost purchasing power and plummeting investment and supply — which would then compel the Fed to about-turn and agressively raise rates, as it did in 1981 (to an all-time high of *19%*, which today would 'feel' much higher given that wages are relatively much lower and household debt is relatively much higher). The Fed is stuck between a rock and a hard place: we could be heading for very high or even hyperinflation followed by (hyper)deflation.

To play its part in sufficiently reincentivising investment — to whatever degree that remains possible — the capitalist state will have no choice but to limit bailouts to a smaller proportion of the private sector compared to 2008 and 2020 (when it did allow a portion to fail in order to limit debt growth and centralise wealth, re-enabling accumulation for the winners); and making even greater cuts to spending on welfare and public services.

Eventually, in its flailing attempts to counter falling profitability, the capitalist class and its state *must bite off more than it can chew*, as the costs of its warmongering — on competitors, state ownership, public wealth, labour, and consumers — will become completely unaffordable or completely destructive; stimulating an unstoppable process of socialist radicalisation that it will only continue to provoke; or destroying the habitability of Earth.

Death Knell

Liberals and social democrats will blame Donald Trump's anti-migrant policies for exacerbating labour shortages; along with his tariffs — taxes on US importers and consumers which are impacting demand and draining reserves — but which aim to improve US capital's profitability, by *i)* making domestic capital and exports more competitive; *ii)* strong-arming foreign corporations to move operations to the US; *iii)* compelling partners to accept trade deals that improve US margins on imports and exports; and *iv)* lowering a deficit that has been widening over several decades, in order to pull down interest rates.

China, though, seems largely unaffected, with its trade surplus reaching record highs since the escalation of tariffs in 2022. It controls too many critical resources and the close proximity and smart organisation of its domestic industry is largely not worth uprooting for a less efficient setup in the US or

elsewhere. China's exports to the US have fallen by only 6%[62] so far and countries with entrenched supply chain linkages to China have seen the fastest export growth to the US, which therefore remains dependent on China, if not as directly.

Trump and his policies are symptomatic of deeper structural rot; and largely simply intensify the policies of his predecessors. Every US president since Bill Clinton in the early 1990s has raised tariffs on Chinese imports. Eventually someone had to up the ante.

The reality is that capitalism unavoidably generates the conditions of its own crises and downfall.

Via bankruptcies and mergers and acquisitions — the recent deals between the likes of Nvidia and Open AI represent a gigantic *proto-merger* — the ownership of capital and wealth *necessarily* concentrates in order to offset falling profitability; excluding an increasingly large proportion of the population from both the capitalist class and the proceeds of production. The dwindling capitalist class is therefore pushed back into a corner of its own making, from which it lashes out increasingly aggressively, stimulating an intensifying class struggle.

As capitalists continue to automate their operations in the effort to lower outlay and re-widen profit rates and margins, *the contradiction at the heart of the system is increasingly aggravated*. No wonder AI is unprofitable — data is produced and rearranged at increasingly breathtaking speed. Not to mention that capital accumulation requires capital-intensive solutions; while the relatively falling supply of skilled labor, due to education costs capital cannot afford to pay for (hence education's privatisation), is making the skilled labour needed to produce and train AI increasingly pricey (*producing, along with other scientists, who have usurped manufacturers as the helmsmen of production, a new and emerging proto ruling class of wealthy workers*). Unlike humans, robots and computers cannot have their time exploited through wage labour for profit or buy commodities capitalists need to sell. The fully automated system of production capital itself reaches for is making capitalism historically obsolete and (global) socialism necessary.

Why socialism? Empirical economic data again makes the case clear: that concentration of capital through bankruptcies and mergers is demonstrated by

62. Maddie Doyle, "Why Tariffs Haven't Broken Supply Chain Ties," *The Trade War Lab*, December 12, 2025, https://www.tradewarlab.com/p/why-tariffs-havent-broken-supply.

the fact that, *despite 50 years of aggressive privatisation*, the number of private banks and corporations in the US has roughly halved[63] since the turn of the century; while the overall proportion of startups has also declined. That trend goes back much further — since 1921 the number of US banks has fallen from 21,000 to 4,000 — but the merger trend has tended to accelerate since 1980 (following a brief period in the 1970s when private monopolies were broken up to bring price down — not just because of government policy in part designed to fight inflation but *because general wealth had risen*, enabling a lot more people to start businesses competitive businesses. The same trend is evident everywhere, most notably in China's private sector since the GFC.

The average age of the S&P 500 private enterprise, furthermore, has fallen from around 60 in the 1950s and 35 in the late 1970s to around 15 years today.

A *'final merger'* in the not-too-distant future evidently beckons — to be enacted by a socialist state, since a capitalist state cannot by definition socialise/deprivatise the whole private economy — necessitating the transition to an economy owned entirely by the public, *since no exchange of ownership is necessary in a total monopoly*.

This conclusion is reinforced by the fact that the number of currencies in the world is trending towards zero — of the roughly 750 that have existed since 1700less than 20% still remain[64] — with the US dollar and UK pound both having lost nearly 100% of their purchasing power over the past century (mainly since the computing revolution kicked off; accelerating productivity exponentially), *indicating the approaching necessity of a moneyless economy*.

Private enterprise itself, furthermore, is increasingly 'centrally planned', having countered falling profitability with efficiency gains such as the elimination of 'internal markets' (competition between departments) and the introduction of *automated*, centralised databases collecting data in real-time from barcoded, traceable stock, erasing duplication and other inefficiencies (*enabling decentralisation* as all data is accessible to all parts of a network). Centrally auto-planning the economy *as a whole* is the next phase of this evolution.

Perhaps the US will succeed in forcing China to privatise its entire economy *for a while*. Perhaps a much more privatised China will usurp the US as the world

---

imperialist power *for a while*. Perhaps China will tend to continue to deprivatise its economy and export more SOEs at a quicker rate. All of these possibilities will influence the ups and downs of the intensifying class struggle. Either way, capitalism's days are numbered.

A long, painful, *unavoidable* struggle awaits — but so too, at last, does *working class and human liberation*; not only from several hundred years of capitalist tyranny *but thousands of years of private property*.

A Hundred Years of Fidel Alejandro Castro Ruz: Interview with Fidel Antonio Castro-Smirnov

Fidel Antonio Castro-Smirnov & Carlos L. Garrido [1] [2]

---

1. Dr. Fidel Antonio Castro Smirnov is a scientist, researcher, and professor at the University of Havana. He is the grandson of Fidel Alejandro Castro Ruz.

2. Dr. Carlos L. Garrido is a Cuban American Professor of Philosophy who received his M.A. and Ph.D. from Southern Illinois University Carbondale. He serves as the Secretary of Education for the American Communist Party and as a Director of the Midwestern Marx Institute, the largest Marxist-Leninist think-tank in the United States. Dr. Garrido has authored a few books, including *Marxism and the Dialectical Materialist Worldview* (2022), *The Purity Fetish and the Crisis of Western Marxism* (2023), *Why We Need American Marxism* (2024), and the two forthcoming texts, *Domenico Losurdo and the Marxist-Leninist Critique of Western Marxism* (2026) and *Hegel, Marxism, and Dialectics* (2026-7). Dr. Garrido has published over a dozen scholarly articles and over a hundred articles in popular settings across the U.S., Mexico, Cuba, Iran, China, Brazil, Venezuela, Greece, Peru, Canada, etc. His writings have been translated into over a dozen languages. He also writes short form articles for his Substack, @philosophyincrisis, and does regular YouTube programs for the Midwestern Marx Institute channel. He is on Instagram @carlos.l.garrido

Garrido: We are at the centenary of Fidel's birth. Fidel's thought, although deeply situated within the history and context of the struggles that have constituted the Cuban people, nevertheless, like the revolution he himself led, contains profoundly universal contributions. Fidel, like Lenin, like Mao, cannot be reduced simply to a man of action, but must also be understood as a revolutionary theorist who advanced Marxist thought together with the struggles in which he participated. When you reflect on Fidel's thought, what are, for you, the most relevant and universal ideas for our era? In other words, what can Fidel, through the thought he developed, say to a revolutionary, whether Cuban, American, African, or Russian?

Castro-Smirnov: As we commemorate this year the centenary of the birth of Commander in Chief Fidel Castro, his thought is remembered as an active force and an indispensable compass for human emancipation in the face of contemporary challenges.

For the Cuban Revolution, Fidel's figure transcends his role as a leader of action and establishes itself as that of a theorist who, like Lenin or Mao, enriched Marxism through the practice of anti-colonial and anti-imperialist struggle.

Fidel's ideas offer fundamental lessons for any revolutionary in today's world. First of all, the conviction that just causes are invincible, even in the most adverse contexts, constitutes a pillar that transcends borders.

Fidel promoted the unbreakable unity of left-wing forces and the peoples of the Global South as the only path toward confronting the unjust international economic order.

His vision regarding the need to pay the ecological debt rather than the external debt, together with his call to "eliminate hunger, not humanity," remains a moral imperative in the face of the climate crisis and systemic inequality.

Following Fidel's principles, Cuba is supportive, compassionate, and internationalist. Wherever there is a just cause, we will be there to support it, from Palestine to Iran and Venezuela. We support them because we are the same. We support them because their history is our history. There will be no blockades or imperial pressures capable of stopping our march toward a sovereign, independent, prosperous, and sustainable socialism.

From my grandfather, the eternal and undefeated Fidel, we learned that sovereignty is non-negotiable. It is the very oxygen of a nation. He also taught

us that no force is more powerful than the unity of people and the integration of nations, and that helping others is the only way to repay our debt to humanity. He taught us that there is no enemy so powerful that it cannot be defeated, nor any situation so desperate, nor any blockade so suffocating, that human intelligence cannot find a way out. And we hold the deepest conviction that ideas are more powerful than weapons, no matter how powerful and sophisticated those weapons may be.

Garrido: The Cuban people have dignifiedly resisted for more than 65 years a suffocating and genocidal blockade imposed by the hegemonic empire of our era, the United States, or, as Martí called it, the giant with seven-league boots. This empire has tried in vain to overthrow the Revolution through hybrid warfare, which has included terrorist attacks such as those carried out by Luis Posada Carriles, more than 600 assassination attempts against Fidel, and, of course, invasions like the Bay of Pigs. How has revolutionary consciousness been maintained among the Cuban people throughout all of these pressures? In a context where Trump once again threatens to invade Cuba, how does the people maintain revolutionary determination despite the hardships produced by the blockade?

Castro-Smirnov: In the face of the continuous threats and hostility of the giant with seven-league boots, the determination of the people is sustained by several factors. The ability of the Cuban people to resist more than 65 years of blockade and hybrid warfare can be explained by the profound consciousness that the Revolution is a collective project, built with the humble, by the humble, and for the humble.

The fact that power resides, in essence, in the workers and not in the rich, allows policies to be directed toward safeguarding fundamental rights even in moments of the most severe crisis.

The history of struggle of the Cuban people has forged an identity armored against attempts at external domination, one in which sovereignty is non-negotiable.

A clear example of this could be seen in the most recent May Day march in the Cuban capital. Half a million people walked through the streets of Havana in support of the Cuban Revolution. At the front were Army General Raúl Castro and President Miguel Díaz-Canel. During the event, it was announced that 6 million 230 thousand signatures had been collected during the “My Signature

for the Homeland" campaign, a call by the Cuban people for peace and sovereignty, against the blockade, the energy siege, and war.

Garrido: We are in a period of global transition produced by the revolution that has occurred in digital media, artificial intelligence, and the new ways of constituting subjectivity through social media. How is the Cuban Revolution preparing itself to confront this new context of ideological struggle, or the struggle for the consciousness and being of the people in the new digital era?

Castro-Smirnov: In the new context of global ideological struggle, characterized by cognitive warfare, the use of algorithms, and digital revisionism, Cuba approaches the challenge as an existential struggle for national sovereignty.

The Revolution is preparing itself with greater political organization, stronger ideological formation, and increased digital sovereignty in order to defend national consciousness in the new technological era. The aim is to transform digital development into a strength of the socialist project, not a gateway for external manipulation.

Cuba faces a cultural and ideological war on social media, and therefore the response must be a battle of ideas that is more intelligent, more united, and more connected to the reality of the country. Within this framework, emphasis is placed on strengthening independent thought, national identity, and critical capacity in the face of content presented as "neutral" while actually serving hostile agendas.

The preparation includes the expansion of digital transformation, the digital agenda, and the artificial intelligence strategy, always under the principle of technological sovereignty and service to the people. Digital content aligned with Cuban culture is also promoted, alongside the use of national platforms and the development of digital competencies so that the population is not merely a consumer of content, but an active producer of it.

A decisive front is the work carried out with youth, students, intellectuals, and social organizations, because much of the struggle over common sense and confidence in the socialist project takes place there.

The idea is to combine political education, participation, more effective institutional communication, and a stronger presence in the spaces where opinions and emotions are now formed.

In the face of the “war of symbols” that seeks to strip figures like José Martí, Fidel Castro, and Che Guevara of their emancipatory content, Cuba reinforces historical education as a shield against the ideological dismantling promoted by agendas of external intervention.

Cuba is bringing the Revolution into the digital sphere with intelligence, creativity, and firmness, transforming every technological challenge into an opportunity for socialist reaffirmation. In this vision, the battle for consciousness is not lost. It is organized, studied, and won with more people, more ideas, and more independent tools.

Where Deleuze Encounters Engels

Alex Taek-Gwang Lee [1]

1. Deleuze's Critique of Thermodynamics

Generally, Gilles Deleuze has often been regarded as a philosopher detached from Marxism. Yet his entire philosophical project unfolds through sustained interventions in contemporary Marxist thought. The work that most clearly exemplifies this is his doctoral thesis, *Difference and Repetition*. Widely recognised as the text that establishes Deleuze's distinctive philosophical orientation, it also reveals a critical engagement with Althusserianism, an intellectual formation itself emerging from the fusion of structuralism and Marxism.

While I have examined this issue at length in *Communism After Deleuze*, today's presentation seeks to extend and refine those earlier arguments. More

specifically, I will focus on Deleuze's critique of the Second Law of Thermodynamics as it pertains to the concept of energy in *Difference and Repetition*. Through this lens, I aim to elucidate how Deleuze's latent Marxism encounters Friedrich Engels's *Dialectics of Nature*, revealing an unacknowledged but profound dialogue between their respective philosophies of production, energy, and transformation.

What appears as Deleuze's distance from Marxism can instead be understood as a subterranean fidelity. *Difference and Repetition* is not merely a metaphysical treatise but an intervention into the crisis of Marxism after structuralism, a reconstitution of materialist thought that replaces the dialectic of contradiction with a dynamism of difference, and the entropic model of decay with a creative ontology of energy. Through this reading, Deleuze's critique of thermodynamics becomes a philosophical event in which Marxism encounters its own renewal, mediated by an ontology of immanence that transforms the very meaning of production, nature, and the political.

In his analysis of Nietzsche and Freud, Deleuze reinterprets their theories through the conceptual lens of energy, offering a novel account of how energetic processes underlie both thought and desire. For Deleuze, Nietzsche's notion of eternal return and Freud's theory of libido can be understood not as metaphors for psychological or moral forces but as expressions of energetic differentials that drive the production of reality itself. Both thinkers, in his view, break with the mechanistic and thermodynamic conception of energy as a measurable quantity tending toward equilibrium. Instead, they conceive energy as essentially differential, as an intensive force that produces qualitative transformations rather than merely dissipating over time.

Deleuze reads Nietzsche's eternal return as the affirmation of difference, energy conceived as the creative power of becoming, constantly generating new forms rather than obeying the entropic logic of decay. For Deleuze, Nietzsche's concept of the eternal return does not mean the literal recurrence of the same events or identities. It cannot, because it presupposes a world defined by the will to power, a world in which all fixed identities have already been dissolved into processes of becoming. The eternal return is thus not the return of the identical, but the affirmation of being as becoming. What "returns" is not sameness but the power of transformation itself, the becoming-identical of becoming.

In this sense, the eternal return expresses the identity of difference: an identity produced by and through difference, rather than one that precedes it. Repetition

here is not mechanical but creative; it is the repetition of what differs. The eternal return, therefore, operates as a principle of selection among differences; it affirms only those forces capable of transformation, those that can endure and renew themselves through the test of recurrence. What returns are not the ordinary, the small, or the static, but the extreme and the transformative, those forces that push existence to the limits of its power and continually pass into something else.

Eternal return, then, is the ordinary being of all metamorphoses, the equal being of all that is unequal but capable of fully realising its inequality. It designates a world of pure intensities, of dynamic individuations and masks, where being and becoming are the same. In Deleuze's reading, Nietzsche's eternal return is not a doctrine of repetition but a metaphysics of difference: the affirmation that existence eternally recreates itself through the transformative power of its own becoming. From this perspective, Deleuze emphasises that "we must discover what Nietzsche means by noble: he borrows the language of energy physics and calls noble that energy which is capable of transforming itself."[2]

Like wise, Freud's Eros binds and preserves life through repetition, weaving the circular relation between memory and desire. The death instinct, by contrast, breaks this circle. It does not return to an earlier equilibrium but opens a new temporal dimension defined by pure form, static order, and irreversible progression. Time thus becomes the labyrinth without centre. Within this framework, the narcissistic ego appears as a "great amnesiac," an ego detached from memory and love, stripped of its relational depth.

Having lost its body along with its objects, it reflects itself only in the ego ideal, foreseeing its own dissolution in the superego, like two fractured fragments of the same self. Deleuze maintains that "the correlation between Eros and Mnemosyne is replaced by that between a narcissistic ego without memory, a great amnesiac, and a death instinct desexualised and without love."[3] Deleuze's reading of Freud here transforms the death drive from a biological hypothesis into a metaphysical figure of time itself: the expression of an empty, formal, and fatal temporality in which subjectivity no longer lives through desire but through the anticipation of its own end.

When the narcissistic ego turns inward after losing its objects of desire, for Deleuze, it becomes detached from both body and life. Through the death

3. Deleuze, *Difference and Repetition*, 111.

instinct, it reflects itself in the ego ideal and anticipates its own dissolution in the superego, i.e., two fragments of a fractured self. According to Deleuze, Freud captures this process in noting that when libido withdraws onto the ego, it becomes desexualised, turning into a neutral, transferable energy that ultimately serves the death drive.[4]

Deleuze's engagement with Freud in his critique of thermodynamics serves a precise philosophical function: it enables him to reconfigure the dominant energetic paradigm of the nineteenth century and to expose the metaphysical assumptions that underlie its apparent scientific neutrality. The Second Law of Thermodynamics, with its axiom of irreversible entropy, provided modernity with a cosmological model of decay and equilibrium. Within this framework, energy was conceived as a finite, measurable substance destined for dissipation, a vision that extended far beyond physics into the moral and metaphysical imagination of the age. Deleuze's critical intervention consists in demonstrating how this entropic worldview infiltrated modern thought, including Freud's psychoanalytic energetics, and in transforming it through an ontology of difference and becoming.

Freud, in Deleuze's analysis, inherits the thermodynamic schema at the level of the psyche. His metapsychology is based on an economic model of energy regulation, in which the drives seek to discharge accumulated excitation and thereby achieve equilibrium. The pleasure principle mirrors the thermodynamic principle of minimum energy, while the death drive, the compulsion to return to the inorganic, represents the psychic transposition of the Second Law itself. Freud's theory thus internalises the logic of entropy: all movement and tension are ultimately subordinated to the ideal of quiescence, the "zero degree" of energy.

Yet Deleuze's reading of Freud is neither dismissive nor merely critical. Rather, he identifies within Freud's own conceptual apparatus the potential for a radical reversal of thermodynamic fatalism. The death instinct, understood not as a regression toward inorganic stillness but as the expression of a new temporality, becomes the key to this reversal. For Deleuze, Freud's discovery of a non-pleasurable, non-cyclical drive corresponds to what he calls the third synthesis of time, a temporal order no longer governed by repetition, recollection, or equilibrium, but by pure formal succession. In this sense, the death drive testifies to a fundamental transformation of the concept of energy:

4. Deleuze, *Difference and Repetition*, 111.

it ceases to signify conservation and loss. Instead, it becomes the principle of differentiation and renewal.

2. Thermodynamics as an Ideological Operation

Deleuze reinterprets Freud's energetic model as an ontological rather than a psychological system. Energy, stripped of its thermodynamic reduction to quantity and entropy, is reconceived as intensive difference, a self-differentiating process that continually produces new forms of being. The death drive, far from signifying the end of life, designates the transcendental field in which becoming unfolds as pure temporal synthesis. By mobilising Freud against the metaphysical residues of thermodynamics, Deleuze effects a decisive philosophical shift: from a science of exhaustion to an ontology of creation.

In this new energetic paradigm, the world is no longer governed by the decline of differences but by their perpetual generation. The death drive, reinterpreted through the logic of difference and repetition, becomes not the affirmation of entropy but the sign of an affirmative energetics, a thinking of life and time beyond the fatalism of equilibrium and decay. By reframing their theories in this way, Deleuze resists the fatalism of thermodynamic thought, which reduces all energetic processes to exhaustion and entropy.

Through Nietzsche and Freud, Deleuze constructs an alternative energetics, a theory of production grounded in difference, intensity, and transformation. Energy, for him, is not consumed but continuously reconfigured; it is the very condition of becoming. In this sense, Deleuze's reading not only revitalises the philosophical significance of Nietzsche and Freud but also redefines materialism itself: no longer a physics of substance or decay, but a metaphysics of differential energy, where desire and power are modes of creation immanent to life. Deleuze argues that

> *Difference is the sufficient reason of change only to the extent that the change tends to negate difference. It is indeed in this manner that the principle of causality finds in the signalling process its categorical physical determination: intensity defines an objective sense for a series of irreversible states which pass, like an 'arrow of time', from more to less differenciated, from a productive to a reduced difference, and ultimately to*

> *a cancelled difference. We know how these themes of a reduction of difference, a uniformisation of diversity, and an equalisation of inequality stitched together for the last time a strange alliance at the end of the nineteenth century between science, good sense and philosophy. Thermodynamics was the powerful furnace of that alloy. A system of basic definitions was established which satisfied everybody, including a certain Kantianism: the given as diverse; reason as a process of identification and equalisation tending towards identity; the absurd or irrational as the resistance of the diverse to that identificatory reason. The words 'the real is rational' found there a new sense, for diversity tended to be reduced in Nature no less than in reason. As a result, difference was neither a law of nature nor a category of the mind but only the origin =* x *of the diverse: a given, but not a 'value' (except a regulative or compensatory value).*[5]

Deleuze critiques the entropic logic of nineteenth-century science and its alliance with "good sense." He begins by observing that intensity, the differential element underlying phenomena, has an intrinsic tendency to cancel itself out when expressed in extensity and quality. Physical laws such as those formulated by Carnot, Curie, and Le Chatelier describe precisely this movement: differences in energy drive change only insofar as they tend toward equilibrium, uniformity, and the negation of difference. Thermodynamics, therefore, codifies a metaphysics of equalisation, a worldview in which nature and reason both move inexorably from diversity to identity.

Deleuze distinguishes between empirical and transcendental understandings of energy to challenge the reduction of thermodynamics to a system of equilibrium and identity. When energy is defined empirically, it is measured through extensive and qualified factors, i.e., quantities distributed across space, leading only to the tautology of sameness ("something remains constant"). By contrast, when energy is conceived transcendentally, it refers to pure intensity, the differential force that precedes any extension or quality. In this sense, energy is not a uniform substance at rest but the *difference of intensity* that generates transformation itself, i.e., the "profound tautology of the Different."[6]

Empirical laws like those of Carnot or Curie describe how particular systems tend toward the cancellation of differences (entropy), but these laws govern only specific, qualified domains. Beneath them, Deleuze posits an intensive

---

5. Deleuze, *Difference and Repetition,* 223-224.
6. Deleuze, *Difference and Repetition*, 240.

field, or *spatium*, a transcendental space where energy exists as pure potential for metamorphosis. This intensive energy does not belong to any given domain; it *gives* domains their existence by creating the differences that empirical laws later regulate and neutralise.

Energy in the transcendental sense functions as a principle of genesis rather than a law of conservation. It is the condition for all transformation, the underlying field from which every empirical system arises and in which differences are continually produced. While the empirical sciences describe the surface behaviour of nature, the transcendental principle, linked to Nietzsche's eternal return, operates in a deeper, "volcanic" dimension of being, where difference perpetually generates the conditions of the world.

In this sense, Deleuze grasps thermodynamics as more than a scientific concept; he sees it as the culmination of a nineteenth-century ideological operation. Through an alliance of science, philosophy, and common sense, the idea of "good sense" was established as the systematic negation of difference. For Deleuze, "good sense" is not neutral reason, but a powerful ideological mechanism. It functions to regulate and correct differences, ensuring they gradually cancel each other out. This faculty is "eschatological": it is motivated by a moral and political dream of universal homogenisation and compensation, where all inequalities ultimately vanish.

The thermodynamic view of the cosmos, moving toward reduced differences, serves as the moral blueprint of middle-class reason, solidifying faith in natural equilibrium, predictability, and rational progress toward absolute sameness. Deleuze contrasts this with the "mad" or nomadic distribution of difference: an anarchic, productive multiplicity that perpetually precedes and resists the dictates of good sense. He insists that genuine thought must embrace this delirious aspect, for it begins not by classifying or predicting identities, but by confronting difference in its purest, most immediate state.

Paradox, not good sense, is the engine and passion of philosophy. It functions as a shock to the system, instantly dismantling the mind's harmonious faculties, i.e., memory, recognition, and common sense, by presenting an unthinkable object. This disruption is crucial: it compels thought to wrestle with the intensive, the improbable, and the unidentifiable. Paradox forces thought beyond representation, breaking the need for identity and prediction, and opening up a domain of pure, non-representational difference.

In this framework, Deleuze criticises thermodynamics as a transcendental illusion. Entropy appears as the loss of difference, but this disappearance occurs only in the realm of extensity, where intensity explicates itself outwardly. Difference is not truly annihilated; it remains implicated within itself, continuously generating the systems that seem to erase it. The “heat death” of the universe, then, is a mistaken extrapolation: an illusion born of confusing the explicated order of extensity with the implicated dynamism of intensity. For Deleuze, difference is the ontological ground of reality; it gives diversity to be sensed and thought, while the apparent cancellation of difference belongs only to the representational order of good sense.

Deleuze transforms the thermodynamic notion of entropy into a philosophical critique of modern reason. What science and philosophy had treated as the inevitable equalisation of differences, he reclaims as the creative, ever-implicated production of difference itself. Actual thought, he insists, begins not with equilibrium but with the paradoxical intensity that continually resists it. Deleuze’s critique of thermodynamics finds a striking, if indirect, affinity with Friedrich Engels’s own critique of the entropic worldview developed in the late nineteenth century.

3. Engels's Critique of Thermodynamics

Like Deleuze, Engels rejects the fatalistic interpretation of the Second Law of Thermodynamics as the ultimate law of nature. This principle would regard the cosmos as a closed, decaying system moving inevitably toward equilibrium and death. Each, in his own way, opposes this image of universal exhaustion with an ontology of production, transformation, and becoming.

Engels’s critique appears most clearly in his unfinished *Dialectics of Nature*. Responding to the growing cultural influence of thermodynamic fatalism, Engels attacked the interpretation, associated with Clausius and Helmholtz, that the universe was destined for “heat death.” Such a view reinstated a metaphysical dualism between matter and motion, treating energy as a quantity that could only dissipate, not transform. For Engels, this reduction of natural processes to irreversible degradation violated the dialectical principle that nature is self-moving, self-transforming, and inexhaustible.

In his materialist dialectic, every process of decay is simultaneously a process of renewal; the apparent dissipation of energy in one form becomes the

condition for its reconfiguration in another. Rather than conceiving nature as a closed, dying system, Engels insists on its perpetual metamorphosis, the dialectical transformation of quantity into quality. To quote Engels,

> The law of identity *in the old metaphysical sense is the fundamental law of the old outlook:* a = a. *Each thing is equal to itself. Everything was permanent, the solar system, stars, organisms. This law has been refuted by natural science bit by bit in each separate case, but theoretically it still prevails and is still put forward by the supporters of the old in opposition to the new: a thing cannot simultaneously be itself and something else. And yet the fact that true, concrete identity includes difference, change, has recently been shown in detail by natural science.*[7]

Here, it is not difficult to see that Engels's critique of thermodynamics as a form of metaphysical thinking is consistent with his broader rejection of the law of identity that underpinned traditional metaphysics. He explicitly associates metaphysical reasoning with the principle that "a = a," the belief that every entity is self-identical, fixed, and permanent. This logic, Engels argues, reflects an outdated worldview in which the universe was conceived as a stable order of unchanging substances, e.g., the solar system, the stars, and living organisms, all governed by immutable laws. Such thinking isolates being from becoming and denies the dialectical truth that concrete identity includes difference and change.

Further, Engels strongly criticises the attempt to apply thermodynamics to the realm of political economy. He claims that the eagerness to re-import the thermodynamic category of "work," much like the uncritical adoption of Darwinian ideas like the struggle for existence, was occurring, but the final result of this effort would be utterly illogical and amount to "nothing but nonsense."[8] He argued that

> *Let someone try to convert any SKILLED LABOUR into kilogram-metres and then to determine wages on this basis! Physiologically considered, the human body contains organs which in their totality,* from one aspect, *can be regarded as a thermodynamical machine, where heat is supplied and*

7. Frederick Engels, "Dialectics of Nature," in *Marx-Engels Collected Works*, volume 25, trans. Clemens Dutt (London: Lawrence and Wishart, 1987), 496.

8. Engels, "Dialectics of Nature," 586-587.

> *converted into motion. But even if one presupposes constant conditions as regards the other bodily organs, it is questionable whether physiological work done, even lifting, can be at once fully expressed in kilogram-metres, since within the body* internal *work is performed at the same time which does not appear in the result. For the body is not a steam-engine, which only undergoes friction and wear and tear.*[9]

In this passage, Engels mocked the idea that human labour could be expressed in purely thermodynamic or mechanical terms, such as kilogram-metres. He insisted that while the human organism can, in one limited sense, be understood as a heat engine, the analogy breaks down at the point where internal, unmeasurable forms of work occur, i.e., mental, affective, and physiological energies that cannot be fully captured in mechanical or thermodynamic equations. This critique underscores what might be called the unrepresentable or differential dimension of labour: work involves a surplus of activity that exceeds the calculable.

Deleuze takes a parallel position in ontological terms. For him, all processes of production, whether physical, biological, or social, are grounded in intensive differences that cannot be reduced to extensive quantities or representational equivalences. Difference is not something that can be translated into a measurable unit; it is the generative force that gives rise to such units in the first place. In this way, Deleuze's distinction between intensity and extensity echoes Engels's refusal to treat labour as a closed, quantifiable system analogous to a thermodynamic machine.

Engels's critique exposes the ideological dangers of importing physical categories into the analysis of human and social activity, an error that masks qualitative differences under the guise of scientific precision. We might say that Deleuze, extending this critique onto an ontological plane, shows that such reductions are symptomatic of the dogmatic image of thought, which mistakes representation and identity for the real forces of production and becoming. Engels's insistence on the non-equivalence between human labour and mechanical work converges with Deleuze's affirmation of difference as the unrepresentable condition of production.

These critiques insist that life, labour, and energy exceed any representational or quantitative schema, each affirming a world where productivity and

---

9. Engels, "Dialectics of Nature," 587.

transformation arise from what cannot be reduced to the identical or the measurable. In this context, Engels interprets the Second Law of Thermodynamics, with its doctrine of irreversible entropy and universal decay, as a modern reformulation of this metaphysical identity-thinking. Although framed as a scientific principle, it reproduces the same static ontology by treating energy as a homogeneous quantity that can only diminish, never transform.

The thermodynamic image of an inevitable homogeneity posits an absolute, final state in which all differences are cancelled, i.e., a universe that has become entirely identical with itself, incapable of further becoming. For Engels, such a view reinstates precisely the metaphysical dualism between matter and motion that modern science had supposedly overcome: matter becomes inert, while motion (or energy) appears as an external attribute destined to vanish.

By contrast, Engels's dialectical materialism conceives identity as dynamic rather than static. Every being, he insists, is what it is only by virtue of what it is becoming; matter is not a fixed substrate but a self-transforming process. Natural science, in his view, increasingly confirms this insight by revealing that all apparent stability is the product of continuous transformation. Thus, the metaphysical law of identity, and its thermodynamic expression in the idea of irreversible equilibrium, must yield to a dialectical conception of nature in which contradiction, motion, and transformation are internal to being itself.

In this light, Engels's rejection of thermodynamic fatalism is not simply a scientific disagreement but a philosophical intervention. The entropic worldview, he argues, perpetuates a metaphysical illusion of finality and sameness; dialectics, by contrast, recognises the unity of identity and difference, the becoming of being, and the inexhaustible productivity of nature. This marks the crucial point of convergence with Deleuze's later critique. They oppose the entropic logic of identity and equilibrium by affirming an ontology of difference, energy, and continuous creation.

For Deleuze, the Second Law represents the subordination of intensive difference, i.e., the generative force of becoming, to an extensive equilibrium, the reduction of life and thought to measurable identity. Both Engels and Deleuze thus resist the notion that energy tends toward uniformity; both conceive energy instead as productive, self-differentiating, and transformative. Where Engels calls this the dialectic of nature, Deleuze calls it the energetics of difference.

Moreover, Deleuze and Engels recognise that thermodynamics was not merely a physical theory but a cultural and ideological formation. Engels saw in the doctrine of entropy a reflection of bourgeois ideology, an intellectual projection of capitalist exhaustion and the fear of limits, masked as natural necessity. Similarly, Deleuze interprets the thermodynamic image of equilibrium as the expression of "good sense," i.e., the bourgeois ideal of stability, moderation, and reconciliation that disguises the suppression of difference under the guise of reason. In both, the critique of thermodynamics thus doubles as a critique of ideology: a refusal of the idea that nature, history, or thought are bound to decline into sameness.

In this sense, Deleuze and Engels share a familiar philosophical gesture. Each contests the entropic narrative that defines modernity's scientific and cultural self-understanding. Engels's dialectical materialism and Deleuze's ontology of difference both seek to restore to nature and thought their internal dynamism, to think energy not as a diminishing resource but as an inexhaustible process of creation. Where Engels speaks of the dialectic as the movement of self-development within matter, Deleuze redescribes it as the immanent production of difference. Still, they envision a cosmos that resists thermodynamic fatalism through its own capacity for renewal.

Engels's insistence that labour cannot be reduced to the mechanical expenditure of energy thus finds its philosophical counterpart in Deleuze's claim that production, in every domain, exceeds representation. They reject the thermodynamic model of energy as the dissipation of difference and instead affirm an immanent energetics in which transformation is constitutive of being.

Engels and Deleuze also share an acute awareness that thermodynamics was not a neutral scientific discourse but a bourgeois ideology of equilibrium. Engels interpreted the doctrine of entropy as an intellectual projection of capitalist exhaustion and fear of limits. This worldview naturalised social decline and economic stagnation as universal laws of nature. Deleuze rearticulates this critique in philosophical terms: the thermodynamic ideal of equilibrium becomes for him the operation of "good sense," the ideological suppression of difference under the mask of rationality and order.

In this convergence, Engels's dialectic of nature and Deleuze's energetics of difference can be seen as two moments in a shared attempt to recover production as the unrepresentable ground of materialism itself. Engels reformulates the Marxist understanding of labour and matter against the

metaphysics of identity; Deleuze radicalises this gesture by situating production within a transcendental field of intensive difference. Both reject the entropic image of the universe as a closed, self-identical system and affirm instead a world of perpetual metamorphosis, an ontology of nature and thought that is at once materialist, creative, and inexhaustibly productive.

4. Deleuze and Engels against the Ideology of Artificial Intelligence

Above all, Deleuze's reformulation of Marxism, especially his transformation of materialism from a dialectics of contradiction into an energetics of difference, offers a robust framework for criticising the ideology of artificial intelligence (AI), which today operates under what might be called the thermodynamics of information. Just as nineteenth-century thermodynamics converted energy into a paradigm for understanding nature, society, and labour, contemporary computational capitalism rearticulates those same metaphysical assumptions in the language of information theory, entropy, and optimisation. Deleuze's philosophy exposes how these scientific abstractions become ideological mechanisms, legitimising social, cognitive, and planetary forms of control by representing difference, thought, and labour as calculable, exhaustible, and self-regulating systems.

At the core of Deleuze's critique is his rejection of the entropic image of thought, the assumption that all systems, whether physical or cognitive, tend toward equilibrium, predictability, and the cancellation of difference. The ideology of artificial intelligence inherits precisely this thermodynamic imaginary. Information theory, born from Norbert Wiener's cybernetics and Claude Shannon's mathematical model of communication, defines information as the negation of entropy, a measure of order extracted from noise.[10] Under this regime, the world is reconceived as a vast system of signal and noise, of measurable differences awaiting optimisation. AI, in its contemporary form, extends this logic to human thought and creativity, representing intelligence as an energetic economy of computation, where learning equals the minimisation of error and entropy.

10. On the development of the information theory, see Norbert Wiener, Cybernetics: Or Control and Communication in the Animal and the Machine, 2nd ed. (Cambridge, MA: MIT Press, 1961); Claude E. Shannon and Warren Weaver, The Mathematical Theory of Communication (Urbana: University of Illinois Press, 1949); Bernard Dionysius Geoghegan, Code: From Information Theory to French Theory (Durham, NC: Duke University Press, 2023).

From a Deleuzian-Marxist perspective, this model of intelligence reproduces the metaphysics of identity and conservation that Engels and Deleuze both opposed in thermodynamics. It conceives thought as a process of equilibration, where the goal is not the generation of new differences but their normalisation and prediction. Neural networks, for instance, are designed to converge on a minimised loss function, an asymptotic approach to equilibrium that mirrors the thermodynamic ideal of maximum entropy. This technical image of thought is also an ideological one: it recasts cognition, labour, and life itself as calculable processes, subordinating the qualitative and the unforeseeable to the quantitative and the optimisable.

Deleuze's reformulation of Marxism challenges this reduction at its ontological roots. In *Difference and Repetition*, energy, and by extension, production, is understood not as a substance to be conserved or measured but as pure intensity, a differential process that precedes all representation. The generative power of life and thought lies precisely in their resistance to equilibrium: production is not the management of difference but its continual creation. When applied to the ideology of AI, this insight reveals that the very project of artificial intelligence, its aspiration to model, predict, and automate thought, depends on the repression of what Deleuze calls the unrepresentable condition of production. AI systems may simulate the outcomes of thinking, but they cannot reproduce the intensive processes of becoming through which thought emerges.

From this standpoint, the thermodynamics of information can be seen as the late-capitalist counterpart to the nineteenth-century entropic worldview that Deleuze and Engels both critiqued. It extends the same fantasy of total equivalence, now between thought and data, mind and machine, life and code. The digital economy, structured around the extraction and optimisation of information, translates difference into measurable units, i.e., "bits" of entropy, thereby reducing the qualitative multiplicity of thought and experience to the homogeneous order of computational value. The resulting ideology naturalises cognitive capitalism as a self-regulating system, concealing the material and affective labour that sustains it under the guise of algorithmic efficiency.

Against this, a Deleuzian-Marxist critique would insist that intelligence cannot be reduced to information, because thinking, like production, arises from intensive differences that cannot be represented or exhausted by computation. What AI captures is only the extensive expression of thought, the surface of recognisable patterns, but not the intensive, pre-individual field from which

novelty and creativity emerge. This is precisely the distinction Deleuze draws between extensity and intensity: whereas the former can be quantified and systematised, the latter is the generative principle that continually exceeds such systems.

In reintroducing Deleuze's reformulated Marxism into debates about AI, we can thus expose how the thermodynamics of information functions as a new ideological apparatus of capitalism, one that disguises the real processes of production under a veneer of computational necessity. The AI economy, governed by metrics of optimisation, efficiency, and entropy reduction, mirrors the bourgeois ideal of "good sense" that Deleuze criticised in thermodynamics: the dream of an entirely predictable, self-equilibrating world. To resist this ideology is to reaffirm production as difference in itself, as the creative, non-equilibrium force that no algorithm can capture. In short, Deleuze's energetic reformulation of Marxism allows us to reinterpret artificial intelligence not as the fulfilment of human rationality but as the latest stage in the metaphysical reduction of life to calculable energy. Against the thermodynamics of information, Deleuze, in alignment with Engels, offers an ontology of difference and creation, in which thought, labour, and intelligence remain inexhaustibly productive, continually exceeding the mechanisms that seek to represent, capture, and contain them.

Building from Nothing: On Discipline, Time, Pains and Gains of a New Party

Slava Jalili [1]

There's a kind of struggle you don't really understand until you're in it yourself. Not defending something already built and not improving something that already works. But starting from nothing—or close to it—and trying to turn that into something real.

That's where we are. No big resources. No perfect structure. Uneven experience. Some days, things move; other days, they don't. You try to build discipline, organization, and trust out of conditions that don't naturally give you any of that.

And it's not easy. But if we take Marxism-Leninism seriously, none of this should surprise us. Lenin wrote plainly: *"Without revolutionary theory, there can be no revolutionary movement."* We have studied the texts and continue

---

1. Slava Jalili is a member of the Political Bureau of the American Communist Party, where she serves as the Head of the Department of Personnel Chapter Activities Task Force.

learning. But theory alone doesn’t build anything - practice does. And practice is always messy at the beginning.

No party appears fully formed from the start. Every organization is weak, uneven, and full of contradictions when taking its first steps. We shouldn’t look at it as a flaw but as part of development. That’s dialectics in a nutshell. Still, knowing all about it doesn’t stop the frustration many of us experience.

What it means to build from scratch

Right now, we are building everything step by step, with each member recruited, trained, and tested. Every action is planned, executed, and then reviewed to discover what works and what doesn't. Structures are tested, sometimes failing, then rebuilt, making the process clear and manageable.

Nothing comes automatically. Some chapters move forward easily. And others may go through periods of low activity and struggle. Some may even go back and forth - active one week, and dead the next. That’s not failure. That’s what this stage looks like.

Marx put it clearly: *“Men make their own history, but they do not make it as they please; they do not make it under self-selected circumstances, but under circumstances existing already, given and transmitted from the past.”* We didn’t choose easy conditions. We inherited what we have, and we work with it. We all come from different backgrounds and experiences. Expecting us to work perfectly from the beginning is like trying to square a circle.

What wears people down

The hardest part of building from nothing is not the actual work. We can easily put time and effort into the common cause. But what happens when we don’t see immediate results? When nothing obvious happens right away? If no big growth is noticed all across the party? It’s that gap between all the efforts and visible results that can shake our trust.

We get impatient - expecting things to move faster than they realistically can. We start doubting ourselves - “Maybe I’m not doing this right.” Some just

quietly pull back - less involvement, less energy, less disappointment. Others compare - “Why is that chapter doing better than us?”

All of that is human. But if it’s not addressed, it weakens the entire organization. The solution is not to hide or pretend that everything is fine. From a materialist point of view, this is a contradiction between what we expect and what conditions actually allow. And like any contradiction, it doesn’t go away by just wishing it away. It gets resolved through understanding and practice.

Why does it feel like nothing is happening

A big problem is that most of the progress we’re making right now isn’t visible. We’re building trust among people, communication habits, basic leadership skills, confidence through trial and error, and the ability to function together.

You can’t measure those things easily. It doesn’t show up as numbers right away. But they serve as foundations. Engels once pointed out that real change often builds quietly before it becomes visible. In dialectical terms, we’re still in that stage where quantity hasn’t yet turned into quality.

But it will - if the groundwork is actually there. The danger is when people think “nothing is happening,” even though the slow, necessary work is getting done and habits and communication are being built beneath the surface. Patience is essential to maintaining resilience during this stage.

The Department of Personnel’s Chapter Activities Task Force is checking in with chapter executives regularly and is noticing certain patterns. The most common issues are poor communication, unclear roles and responsibilities, and a few people doing most of the work, which leads to bursts of activity followed by burnout and stagnation.

But the stable chapters - even if they’re not big - usually have a few things in common: simple and clear structure, regular communication, willingness to adjust, and realistic goals.

It’s not about talent. It’s about discipline, knowing that consistent effort, even when unseen, is what truly matters and builds strength over time. Lenin emphasized this constantly - that organization and discipline are what turn scattered effort into real force.

Everyone wants results. That's normal. But trying to force results before the foundation is in place just burns people out. A real organization is built over time. There's no shortcut around that.

As communists, we are not just wishing things to move forward. We understand stages of development and how they look in reality, not just in theory.

Discipline instead of impatience

The only real growth happens when we are consistent in our work and practice discipline. And instead of continuing experiments and jumping from one project to another, we stay focused on a few things we can consistently do. It's better to start small and expand as we go rather than bite more than we can chew.

If demoralization and inconsistency keep coming up, then they're not just personal issues - they're organizational ones. What we can do immediately is adjust expectations about growth: understand that it may be slow and uneven, sometimes even invisible, but that doesn't mean it's not there.

We must improve our communications so no one feels isolated. If projects are large and require significant effort and resources, it's okay to break them into smaller tasks. What is the point of big goals if they are unreachable?

We also have to keep in mind that, as part of the collective, we need to reflect on common experiences together rather than at the individual level or in terms of how capitalist society has trained us.

Having disagreements with your comrades and arguing about them is not a problem, but a necessity. The Bolsheviks held public debates that helped them build the party and, later, the state. We should not shy away from having as many discussions as the chapter needs to have a better structure and development.

We are all just tools in the shed, sharpening each other to serve the cause better. Having humility about our role in the movement will also save us on bad days when we think we are not contributing enough. If we remember that we each are a small part of a big machine, it will motivate us to do our best to move forward.

Eventually, we will look back and analyze these first few years of our party's growth. And I am confident we will be talking about them as "the good old days" or the "honeymoon period". No matter how hard our path may seem, it is worth every drop of sweat. Keep moving forward, comrades, even when it seems like you are making "*one step forward, two steps back*," as Lenin said.

4

History and Formation of the Communist Party of China: Learning How to Govern Our Party[1]

Chet Ozmun [2]

1. The following is adapted from a lecture given on May 14th, 2026, at the Chicago Workers School in Chicago, IL.

2. Chet Ozmun is a freelance translator who lives and works in Chicago, IL. He is a cadre in the Illinois chapter of the American Communist Party and a member of the ACP Department of Education.

Our focus today is a book titled *Governing the Party: How the CPC Works*.[3] Before we dive into the text, it is crucial to understand who compiled it. The author is Xie Chuntao, a professor and the Executive Vice President of the Central Party School in the People's Republic of China. He also serves as the President of the Chinese Modern History Society.[4] Xie is directly responsible for the political and ideological education of the CPC's top leadership echelons today. This book, therefore, is a practical, insider's manual on how a vanguard party builds discipline, survives its own severe mistakes, and holds onto state power.

We need a manual like this right now because the American Communist Party has reached a breakthrough moment. Thanks to independent media platforms like Midwestern Marx, Infrared, and Jackson Hinkle, we are bypassing traditional gatekeepers and shattering decades of anti-communist conditioning. We are connecting with the disaffected American working class and the multitudes left behind by a decaying system. But the lessons of history, as outlined in Xie's work, teach us that raw momentum is dangerous if it lacks structure. As our ranks swell with people from diverse and politically alienated backgrounds, we face the exact same structural dilemma the CPC faced in its infancy.

The early CPC had to forge a vanguard out of a fractured, agrarian society. They were forced to build their base primarily from rural farmers, rather than industrial workers. This meant figuring out how to take the ragtag, disorganized rebellions of the dispossessed and hammer this energy into an unbreakable governing force.

And it is this very transition that is the subject of today's lecture. Using the first two chapters of Xie's book, we are going to look at how the CPC solved this problem, and how the ACP can apply those solutions to our own conditions here in the United States. We will focus on three core lessons drawn from Xie Chuntao's work: the strict necessity of ideological discipline, the mature handling of historical continuity, and the uncompromising fight against corruption.

If we fail to internalize these lessons, we risk devolving into another undisciplined, ineffective faction of pan-leftism. But if we study how the CPC

3. Xie Chuntao, ed., *Governing the Party: How the CPC Works* (Beijing: New World Press, 2017).

4. " 谢春涛," 百度百科, accessed May 24, 2026, https://baike.baidu.com/item/%E8%B0%A2%E6%98%A5%E6%B6%9B/5851683.

approached similar problems, we can build a party capable of actually wielding power responsibly.

Let’s start by addressing a fundamental historical confusion. When we discuss the early CPC’s reliance on the peasantry, and specifically how this was opposed by the CPC members more loyal to the Comintern and the USSR, at this point a common objection tends to arise. People ask, “Wait, wasn't Tsarist Russia also a backward, agrarian empire? Didn't the Bolsheviks also recruit peasants out of sheer necessity?” And this is true, they did. But there is a massive, structural difference in how those two revolutions functioned.

In Russia, the primary engine of the October Revolution was the urban industrial centers, like the factories of Petrograd and Moscow. Even though the Russian countryside was vast, the Bolshevik vanguard remained overall dominated by urban workers and intellectuals. The peasantry certainly served as a crucial allied force, but the core leadership was always the industrial proletariat. The Bolsheviks never had to abandon their cities and let peasants become the main body of their party.

By comparison, let’s now look at China after 1927. Urban workers' movements had been brutally crushed by Chiang Kai-shek. To survive, the CPC was forced to retreat deep into the countryside. Rural farmers suddenly made up eighty to ninety percent of the party's ranks. The Chinese revolution became entirely rural-peasant led. As Xie’s book explains, this created an unprecedented ideological crisis. For the orthodox advisors obedient to the Comintern, this demographic shift was absolute heresy. According to orthodox Soviet practice, class origin determined your political nature. An industrial worker was inherently revolutionary. A peasant, however, was viewed as a small-scale producer, i.e. a petty-bourgeois element. Orthodox doctrine dictated that peasants were conservative, selfish, and scattered. The Comintern firmly believed that a communist party could only be led by industrial workers. If you allow peasants to dominate the ranks, they argued, you destroy the proletarian nature of the party and make socialism impossible. They demanded that the CPC recruit only workers and purge non-proletarian elements from leadership. The dogmatic faction within the CPC, heavily influenced by the Soviet Union, fiercely supported this. They proudly called themselves the “100% Bolsheviks,” and they blindly copied Soviet formulas, opposing any strategy that relied on the rural masses. However, this demand was completely detached from the material reality of China.

So as mentioned before, at this point the rural population of China made up about eighty to ninety percent of the CPC. But to more deeply understand the crisis at hand, which these first two chapters are alluding to, put yourself in the shoes of a Red Army field commander in 1929. The Red Army was now swelling with illiterate farmers, former bandits, and random defectors from warlord armies. When you're faced with such chaos on the ground, the pragmatic temptation is to just skip over political theory entirely. The logic at that time was straightforward: You are a loyal soldier, and that's good enough for us. We will tell you where to point and shoot. The commanders believed military discipline and a chain of command were sufficient to hold the ranks together.

So at this crossroads, Mao Zedong's pivotal and historical role lay in dismantling this logic. At the Gutian Congress in 1929, he officially diagnosed this shortcut as the "Purely Military Viewpoint." He argued that treating the Red Army as merely a fighting machine was a fatal error.[5]

Handing a disenfranchised peasant a rifle without fundamentally changing his worldview isn't the same thing as building a communist vanguard. At worst, what you're doing instead is arming yet another warlord faction. These new recruits that were flooding in at the time brought the survival habits of the old society with them: individualism, greed, a mercenary mindset. There's a Chinese movie about this very moment in the history of the CPC called *The Bugle of Gutian*, and watching it, you can see very vividly how this plays out on the ground. For example in one scene Mao and Zhu De have to discipline some Red Army soldiers because they assaulted a ten year old kid. This is just one example of the kind of extreme behaviors they were dealing with at the time. So Mao recognized that without rigorous and persistent ideological education, the Red Army would inevitably absorb the toxic culture of the very enemy it was trying to overthrow, and this could lead to collapse from within.

So, how did the CPC prevent this internal collapse? The Gutian Congress was Mao drawing a line in the sand. He established a principle that fundamentally changed the trajectory of the Chinese revolution: the Red Army is an armed body tasked with carrying out the political objectives of the proletariat. Mao's great innovation was proving that ideological loyalty and rigorous education

---

5. The only complete unabridged rendering of this speech I could find in English is in Mao Tse-tung, "Resolution of the Ninth Congress of the Chinese Communist Party of the Fourth Army of the Red Army," in *The People's Liberation Army and China's Nation-Building*, ed. Ying-Mao Kau (London: Routledge, 2018), 5–50.

could override strict class origin. You could take a dispossessed, desperate recruit, and through persistent political study, remold them into a highly disciplined vanguard fighter.

This brings us directly to the American Communist Party today. Right now, we are successfully tapping into a massive reservoir of anti-establishment anger. But if we simply gather the disaffected, give them a platform, and thrust their anger at the establishment without demanding deep, meticulous ideological education, then we will suffer the exact fate Mao warned against in 1929. The acute risk is devolving into just another loud, fractured arm of pan-leftism, destined for ideological collapse. And so to build a vanguard out of the American masses, we also need to build our party ideologically. We can do worse than starting with the lessons of the Gutian Congress.

I want to pause for a moment to make sure I'm absolutely clear: I am not suggesting that our Party is currently suffering from the dangers described above. Nobody is running around beating up kids, for example. But more broadly we're not yet seeing the kinds of giant holes in our political education that the CPC saw back in 1929. The purpose of a session like this one is entirely preventative. If we properly internalize this history, we can bypass the growing pains and missteps that have historically crippled early revolutionary movements.

These are the broad strokes of Chapter 1. Chapter 2 moves right along to what happens when a vanguard party successfully takes power, yet still goes on to make its own severe mistakes. How do we process such complex history without losing our own ideological footing?

This brings us to what for many in the Western left is a very contentious elephant in the room: The Cultural Revolution.

Western historians and the liberal media in Western countries rely on a simplistic and outright absurd formula. To them, the Cultural Revolution equals the years 1966 to 1976. Therefore, they argue, everything that happened in that entire decade within China's borders can be reduced to a so-called "ten years of chaos." But if we pause for just a moment to think critically about this kind of approach, we realize how bizarre it is. An entire decade of history in a country as large, diverse, and complex as China cannot be painted with such a broad brush. Think about our own setting, how much happened in the USA from 2016-2026 alone. If an academic took any full decade of American life and

dismissed it wholesale as a ten-year void of pure chaos, they would be laughed out of the room. But unfortunately, when it comes to communist states, this massive academic sleight-of-hand is the norm.

Battling it out in these discursive spaces we also find the modern, online ultra-left. These internet Maoists tend to swing the pendulum completely in the opposite direction. To them, ten years of complex history gets reduced to a flawless, romantic triumph. They offer nothing but blanket praise for this era. Distinct from all this noise, what is the actual, official position of the Communist Party of China?

As Xie Chuntao details in Chapter 2, the Party unequivocally condemns the extreme ”leftist” factionalism that hijacked that period. The CPC specifically condemns the actions driven by figures like Jiang Qing, who weaponized the drive to ”purify” the ranks in order to persecute honest, upright officials. Their factionalism severely damaged the Party's democratic centralism, wrecked organizational discipline, and nearly destroyed the vanguard from the inside out. The CPC officially acknowledges this as a devastating mistake. But here is the critical distinction we must make: condemning that factionalism is not the same thing as condemning an entire decade of Chinese history. We cannot engage in historical nihilism. During this exact same ten-year period, the socialist state continued to function and deliver monumental victories for the masses. It was during this supposedly ”lost” decade that rural cooperative healthcare was systematically established, eventually providing medical care to 90 percent of the nation's farmers.[6] Basic education was drastically expanded across the countryside. The nation launched its first satellites into space, built massive, enduring agricultural infrastructure to stabilize the food supply, and made ground-breaking, world-changing archaeological discoveries. If you ever get a chance to visit the Terracotta Warriors, the 8th Wonder of the World, these treasures were uncovered and preserved during what Western academics would have us believe was a decade of nothing but pure chaos and destruction.

How, then, does the CPC today approach a historical period defined by both profound political error and undeniable progress? In short, they use a historical framework introduced by Xi Jinping Thought, which I’ve translated in English

---

6. 豆庆升 [Dou Qingsheng], ” 习近平 ‘两个不能否定’ 党史观解读——以 ‘文革’ 时期毛泽东民生指导思想转变为例 [Interpretation of ‘Neither Era Shall Negate the Other’—Xi Jinping’s View of the Party’s History],” 阿坝师范学院学报 [Journal of Aba Teachers University] 36, no. 1 (March 2019): 51–57.

as “Neither Era Shall Negate the Other.” (两个不能否定).[7] The framework is straightforward: you cannot use the post-Mao era of reform and opening up to negate the pre-reform era, and conversely, you cannot use the pre-reform era to negate our current era. This means rejecting historical nihilism. The CPC maintains that both periods were legitimate, necessary, and continuous explorations of building socialism. You do not cut off your own roots just because the tree grew in unexpected directions.

For the American Communist Party, this mature approach to history is the absolute bedrock of our official ideology, which we call the ”Unified Tendency” of Marxism-Leninism. When we examine the socialist experiments of the 20th century, we refuse to discard these movements over their historical flaws or geopolitical splits. Conversely, we refuse to blindly worship them as static religious dogmas. Instead, we extract their practical, material contributions to the class struggle, synthesize that accumulated wisdom, and apply it directly to our own circumstances in the 21st century.

Such mature, objective understandings of our history are what prepare us for the ultimate test. Because, as Chapter 2 of Xie’s book points out, leading a successful rebellion is actually only half the battle. What happens *after* you win? We must remember that peasant uprisings succeeding in China was not a new phenomenon. For centuries, dynastic cycles were broken by massive, rural rebellions that swept across the country. Xie’s book discusses the story of Li Zicheng. He was the leader of a massive peasant revolt that successfully overthrew the Ming Dynasty. He marched his army right into Beijing and seized the throne. But his reign lasted only a matter of days, because the moment his peasant soldiers entered the opulent capital, they abandoned all discipline. The very forces that had fought against corruption immediately dissolved into looting, extortion, and hedonism. They had the power to conquer the state, but they entirely lacked the ideological discipline to govern it, and as a result they were swiftly destroyed.

Mao Zedong understood this historical trap perfectly. On the eve of total victory in 1949, as the Communist leadership prepared to finally enter the capital, Mao did not treat the moment as a time for celebration or relaxation. Instead, he told his comrades, ”We are going to Beijing for an examination.” He warned the Party that while they had survived the actual artillery of the enemy, they were about to face a far more insidious threat: the ”sugar-coated bullets”

---

7. ” 两个不能否定,” 百度百科, accessed May 24, 2026, https://baike.baidu.com/item/%E4%B8%A4%E4%B8%AA%E4%B8%8D%E8%83%BD%E5%90%A6%E5%AE%9A.

of peacetime. This meant that arrogance, the love of pleasure, and the desire for personal luxury could dismantle the vanguard just as quickly as it had dismantled Li Zicheng centuries before.

Therefore, between 1951 and 1952, the Party launched the ”Three Anti's” Movement to ruthlessly root out corruption, waste, and bureaucracy. It was during this campaign that the harrowing story of Liu Qingshan and Zhang Zishan unfolded. You must understand that these were high-ranking, hardened revolutionary heroes. They had bled for the Party, survived through brutal wars, and helped build the new state. But once they acquired power and comfortable positions, they succumbed to those sugar-coated bullets. They embezzled massive amounts of state funds intended for the people. In fact, when they were caught, many within the Party pleaded for their lives, arguing that their past heroic deeds and immense contributions to the revolution should grant them leniency. This could have included for example life imprisonment as opposed to outright execution.

But Mao flatly refused. He declared that it was precisely *because* of their high status and their past heroism that they had to be executed. Mao argued that only by executing these two prominent heroes could the Party save twenty, two hundred, or two thousand other officials from the rot of corruption. This was a threshold moment when the CPC proved it was doing something fundamentally new within the long arc of Chinese history.

The American Communist Party does not hold any state power yet, but we are already taking our own version of this examination. Every political movement in this country faces an immediate, material choice: how do you fund your existence? If you look at the so-called ”left” in the United States today, you will see a movement that failed this examination before it even began. They are entirely reliant on the NGO-industrial complex and the massive financial apparatus of the Democratic Party. Their political lines are dictated by the grants they receive. They are captured by the very establishment they pretend to oppose. As our leadership has made abundantly clear, the American Communist Party operates on a fundamentally different model. We do not have mega-donors. We do not have capitalist patrons. There are no Wall Street billionaires bankrolling our rapid expansion. Our political independence is non-negotiable, and we understand the basic Marxist reality that you cannot possess true political independence without economic independence.

We build economic independence from the ground up through what our Constitution outlines as ”Chapter Enterprises.” Rather than begging for

foundation grants, our local chapters are tasked with establishing and running cooperative businesses. These enterprises are designed to fund our local and national operations efficiently, ethically, and autonomously. They ground our members in the actual economic life of their communities, and transform our local chapters into engines of self-reliance. Of course, building such an infrastructure requires immense discipline and out-of-pocket sacrifice from among our ranks.

So to sum up, today we looked back at how the CPC was forged, and we looked at how this experience can give us a blueprint for our own survival. If we are going to succeed where the broader Western left has entirely failed, we must weave three historical threads together.

First, we need the ideological remolding born at the Gutian Congress, actively transforming anti-establishment anger into a unified, proletarian worldview. Second, we need the historical maturity of our ”Unified Tendency.” We must navigate the complex, triumphant, and sometimes tragic legacy of the 20th century with clear eyes. That means extracting the material victories, rejecting the factional errors, and refusing to be paralyzed by the historical nihilism demanded by our ruling class. And third, we need the ruthless anti-corruption discipline of the early PRC. Operating inside the belly of the American empire means we are constantly surrounded by the sugar-coated bullets of capitalist capture and NGO patronage. We must remain economically independent through our own collective sacrifice, and we must be utterly merciless against any parasitic rot that tries to take root in our ranks.

Let me leave both our members and the public with this final thought. The ACP is not here to be your latest social club. Neither are we a DC pressure group begging for concessions. We are not building an organization because we enjoy protesting the establishment.

This machine is designed for long-term governance and leadership. The American working class has been waiting for a vanguard that can actually hold its own through the rising instability of our society. The era of playing the eternal opposition is over. Our constitution declares that the future belongs to the working class. It is time we finally forge the vanguard capable of claiming that future.

5

The Last Days of the USSR and Trump's Visit to China[1]

Zi Hengmo [2]

---

1. Editors' note: We are publishing a commentary from China's Left. This article has attracted great attention among Communists in China. It is a good example of the diversity that exists within China's left-wing milieu, and the young author, Zi Hengmo, is an important critical voice on the Left. His analyses are widely shared on left-wing online media and have sparked debate online. Here we bring his warning comparison between Trump's visit to China and the last days of the Soviet Union. This article was originally published in Chinese in Utopia and translated and submitted to Red America from China.

2. Zi Hengmo (子珩墨) is a young Chinese Marxist writer and online commentator. He writes about anti-imperialism, global inequality, social issues and socialist theory in the Chinese internet public sphere, and has published articles on several left-wing platforms and self-media outlets. His sharp texts have made him a prominent voice within China's large left-wing public sphere. Zi Hengmo comes from a village in Shandong province and holds a bachelor's degree from Shandong University.

Comrades,

I am Zi Hengmo.

Recently the plane from the other side of the Pacific landed. The red carpet was rolled out, the flashbulbs popped – and once again news of Trump's visit to China filled every headline.

The media overflow with praise and fancy words like "thaw", "win-win", "pragmatic cooperation" and "historic deal". Some of China's Western-oriented intellectuals, financial compradors, and the so-called "rational, neutral, objective"[3] intellectuals are jubilant, as if it were a party. It is as if the cunning businessman's signature on a deal will instantly make all external blockades and internal contradictions facing China disappear.

But when I look at the pictures of toasts, at the fawning, smiling faces, I feel an icy chill. I don't know why, but this scene evokes a strong physical discomfort and a feeling of historical déjà-vu.

The similarity is striking. It is exactly like when the Soviet Union stood on the edge of the abyss in the late 1980s, when Gorbachev frequently met Western politicians – glasses clinked, and they held their very last feast, as if there would be no tomorrow.

Today I will use the analytical apparatus of historical materialism to take a closer look at this spectacular diplomatic "show". When a country is confronted with the empire's smiles and "cooperation", and lays aside class analysis – what is the result? A chance for peaceful development, or a danger of gradually being dragged into the abyss?

I

Let us first look at a history that is not so distant, but which has quite conveniently and deliberately been forgotten.

In the mid-to-late 1980s, the Soviet Union's economic structure faced deep problems and internal contradictions worsened dramatically. At this point, the

3. Editor's note: 理中客 (Lǐ Zhōng Kè) is a term used pejoratively on the Chinese left. It describes a person who claims to be rational, neutral and objective, but in reality either avoids taking a stand or hides a right-wing agenda behind a facade of reason.

Soviet leadership under Gorbachev chose not to rely on the broad working class at home to carry out socialist reforms. Instead, they reached an extremely absurd and fatal conclusion: as long as we give up ideological confrontation, as long as we show the West sufficient "sincerity", the Americans will accept us, and the Soviet Union's crises will be solved.

Thus began a spectacle called "New Thinking". From 1985 to 1991, the Soviet leadership suffered from a kind of "catwalk syndrome" and met frequently with US presidents Reagan and Bush senior. Geneva, Reykjavik, Washington, Moscow, Malta… At every summit, the meeting was proclaimed by Soviet media as an "epoch-making milestone for world peace".

What price did the Soviet Union pay for the Americans' smiles? For a single word of praise from Western media? What did it cost?

They introduced unilateral disarmament, they themselves destroyed their intermediate-range missiles, they gave up leadership of the Eastern bloc, and they even abolished Article 6 of the constitution, which guaranteed the Communist Party's leading role. Gorbachev wrote naively in his book "New Thinking": "The common interests of humanity stand above class interests."

He believed that if only he took off his armour, laid down his weapons, and even voluntarily handed his sword to the other side, the American empire would turn into a well-mannered philanthropist – and would come with vast amounts of dollars and advanced technology to save the Soviet economy.

What was the result?

In the empire's dictionary, the word "mercy" does not exist. Only "the law of the strong".

By the time the Soviet leadership had lost everything – national security, geopolitical buffers, ideological integrity – they did not receive a single cent of a "Marshall Plan". What the Americans gave them was a meat-grinder called "shock therapy", a privatisation scheme that sold the Soviet state assets built up over decades to a handful of oligarchs. In the end, they could only watch powerlessly as the red flag that had flown for 74 years was lowered over the Kremlin.

He who gives up the struggle to beg for unity will in the end gain no unity. What meets him instead is a merciless massacre.

II

Back to the present.

Who is Trump?

He is by no means a “good friend”. Nor is he the “pragmatic businessman” that some Chinese “public intellectuals”[4] claim.

He is a beast that the American monopoly bourgeoisie has unleashed in its current crisis of decline – a beast that has torn off all of America’s false masks. His “America First” is, in essence, imperialism developing in its most extreme, shameless, and naked form.

He doesn’t care about soft, sentimental morality. For him, the only thing that matters is squeezing out every last drop of profit. When he flies to Beijing in his private jet, when he sits across from you at the negotiating table and smiles, what his eyes are fixed on is by no means a grand plan for the peace of mankind.

What he is watching for is when our financial barriers can finally be torn down, so that Wall Street’s blood-thirsty capital can pour in unhindered. He is watching for when our state-owned enterprises can be dismembered and privatised and turned into tasty morsels in the mouths of multinational oligarchs. He is watching for how our high-tech industrial supply chain can be permanently locked at the lowest level, so that we can forever be only an assembly plant and a sweatshop for the Americans.

This is obvious when one knows that the essence of imperialism is plunder.

Do you think that if you just buy a few hundred more Boeing planes, import tens of thousands more tons of soybeans, and open a few more licences in the financial sector, you can satisfy their appetite? That is like cutting meat from

---

4. Editor’s note: In Chinese, 公知 (gōng zhī) is an abbreviation for “public intellectual” (公共知识分子). Originally a neutral or even positive term for academics and professionals who engage in public debate with critical, independent positions, the concept became widespread in China after 2004, when the magazine Southern People Weekly published a special list of “50 public intellectuals who have shaped China”. In recent years, however, the term has taken on a negative meaning on the Chinese left. It is now often used pejoratively to describe people who – under the guise of being “independent” and “critical” – systematically praise Western values while portraying China’s political system and social conditions in a consistently negative light. The expression partly corresponds to the “public intellectual” in Western debate, but due to China’s specific political context it has acquired a far more negative and politicised connotation.

your own thigh to feed a tiger. After you have cut the meat from your thigh and fed the tiger today, it will not be grateful. It will only think that you are weak and easy to bully, and tomorrow it will eat your heart.

To base the future of the country and the people on the hope of making a "perfect trade deal" with imperialism is a form of capitulationism even more primitive and vulgar than Soviet revisionism's "New Thinking".

III

What really worries me is not actually Trump's visit. That imperialist leaders come to negotiate and apply pressure is an objective necessity – as certain as the rain that falls from the sky.

What truly frightens me are the Trojan horses inside the country who exploit this visit to whip up sentiment behind our backs and make plans of which we know nothing.

Whenever there is high-level contact between China and the United States, the Chinese compradors, the Western-oriented elites, and the spineless opinion-makers wallow in collective ecstasy.

They use the chance to drum up a mood: "Look, even the American president is coming! Confrontation leads nowhere. We have to integrate into the Western world!"

What they call "integration" can be translated as: "Give up resistance, surrender completely."

Under the cover of "improving Sino-American relations", they will spread the poison of neoliberalism at home.

They will say that to show the United States sincerity, and to create "good conditions for business", we can no longer focus on making our state-owned enterprises big and strong. We must implement "property rights reforms" (that is, privatisation). We must relax workers' rights. And we must give capital free rein.

What is the difference between these people and the Soviet nomenklatura (ed: the Soviet elite) who sold state secrets and dissolved the Soviet Union just to

buy cosmetics in Paris or send their children to Ivy League schools? They can hardly wait for China to surrender to the United States.

For only when capital is given free rein in the wild party can they launder the enormous sums of black money they have secretly transferred abroad, and themselves transform into a new class of oligarchs living at the people's expense.

Chairman Mao pointed out with great acumen already in 1959: "The strategic goal of imperialism is peaceful evolution [5]… They will destroy us – from within."

The people at home who preach that "China and the US are inseparable" and that "money can buy anything" are the Trojan horse that imperialism has placed inside us. As long as they exist here, the danger of us repeating the fate of the Soviet Union is real.

IV

Some might ask: "But Zi Hengmo, does that mean we cannot have any contact with the Americans at all? Are we forced to lock ourselves in and fight to the bitter end?"

Wrong. That is the usual trick of the fake leftists: to create confusion with sophistry and false oppositions.

Of course we need to negotiate. Of course we need to have contact. But we must never lay down our weapons! We must never sell out the country's core interests or sacrifice the interests of the working class.

In 1972, the US president Nixon visited China. At that time, China was much poorer than today, and the international climate was much harsher. But how did Chairman Mao receive Nixon?

---

5. Editor's note: "Peaceful evolution" (和平演变, hépíng yǎnbiàn) is a concept that originates from US foreign policy during the Cold War. It was formulated by US Secretary of State John Foster Dulles in the late 1950s as a further development of George F. Kennan's original doctrine of "peaceful coexistence" between the socialist and capitalist blocs (formulated in Kennan's famous "Long Telegram" in 1946). In speeches from 1957–58, Dulles argued for using "peaceful means" to "accelerate the evolution of government policies within the Sino-Soviet bloc" and thereby "shorten the expected life span of communism". The idea was that socialist states could be transformed from within – without military confrontation, but through gradual influence from foreign ideas, economic pressure and cultural infiltration.

He did not go to the airport to meet him. He sat in his study in Zhongnanhai (ed. Mao's residence and seat of the central government), surrounded by old Chinese books, and received the imperialist leader – on his own terms. For Nixon was sinking in the quagmire of the Cold War.

Mao said to Nixon: "I like to negotiate with the right wing."

Why? Because the right wing hides nothing; they have exploitation and hegemony written right on their foreheads. But that in no way means that Mao identified with the imperialist actions of the United States. When the Shanghai Communiqué was signed, China insisted on writing:

"Where there is oppression, there is resistance. Countries want independence, nations want liberation, and the people want revolution – this has become an unstoppable force in history."

We negotiate with you while standing upright. We negotiate in order to break your encirclement and exploit the internal contradictions of imperialism to strengthen ourselves – not to beg for your mercy. We import your technology and capital in order to build a strong socialist state – not to let our working class become slaves to the capitalists again!

That is the attitude and those are the principles that characterise a proletarian revolutionary when dealing with American imperialism – nothing less.

Afterword

In early December 1989, on the island of Malta in the Mediterranean. Mikhail Gorbachev, Chairman of the Presidium of the Supreme Soviet, and US President George H.W. Bush held a historic meeting aboard the Soviet passenger ship "Maxim Gorky".

Outside, a storm raged. The enormous waves seemed to herald the fall of a mighty empire. On this swaying ship, Gorbachev agreed to almost all of the Americans' demands. He unilaterally announced that he would not interfere in the upheavals in Eastern Europe, and he unilaterally promised sharp cuts in weapons stockpiles – all in exchange for Bush's verbal promises of "economic aid" and "support for Soviet reforms". All empty words.

After the meeting, Gorbachev proudly announced to the media: “The world is now leaving one epoch and entering another. We stand at the beginning of a long road to a lasting, peaceful era.”

He saw himself as the great architect of history. But he did not know that Bush wrote these cold and brutal words in his diary: “We won. They are handing over everything – we didn’t even have to lift a finger.”

Only two years and twenty days later, on 25 December 1991, the Soviet Union collapsed. The red giant that had once made the entire Western capitalist world tremble broke apart after having mutilated itself, torn to pieces by Western multinational capital and domestic oligarchs.

And what of Gorbachev, who thought he had brought peace to the world? A few years later, to earn a pitiful little fee, he appeared as a mascot clown in an American Pizza Hut commercial, surrounded by curious customers. In front of the camera, he stood with a slice of Western capitalist pizza and a fawning smile. It was the most tragic and ironic moment of the twentieth century.

Today, when the empire’s private jet once again lands on our soil, when we once again face deals that are claimed to bring “win-win” and “prosperity”;

I will say to all comrades:

Do not let yourselves be dazzled by smiles and tempting numbers. Instead, keep a sharp eye on the only thing that matters: Do we still have the power to defend the interests of the working class and our national sovereignty?

If we lay down our weapons because we crave temporary convenience and an illusory “deal”, then the storm over Malta could hit us at any moment. And next time, imperialism will have prepared itself – there will not even be a slice of Pizza Hut pizza left for us.

6

Caudwell, Freud, and Marcuse[1]

Thomas Riggins [2]

1. This essay is a reworked version of a chapter in the forthcoming (June 2026) book from Dr. Riggins, *Christopher Caudwell and His Critics: A Study of Caudwell's Philosophy of Art and Critical Responses*, published by the Midwestern Marx Publishing Press.

2. Thomas Riggins is a retired philosophy teacher (NYU, The New School of Social Research, among others) who received a PhD from the CUNY Graduate Center (1983). He has been active in the civil rights and peace movements since the 1960s when he was chairman of the Young People's Socialist League at Florida State University and also worked for CORE in voter registration in north Florida (Leon County). He has written for many online publications such as People's World, Political Affairs, and Midwestern Marx, working as an editor in the later two. He also served on the board of the Bertrand Russell Society and was president of the Corliss Lamont chapter in New York City of the American Humanist Association. He is the author of a few books, publishing by the Midwestern Marx Publishing Press, including: *Reading the Classical Texts of Marxism* (2022)*, Eurocommunism: A Critical Reading of Santiago Carrillo and Eurocommunist Revisionism* (2022), and *Christopher Caudwell and His Critics: A Study of Caudwell's Philosophy of Art and Critical Responses* (2026).

Caudwell discusses Freud both in *Illusion and Reality* and *Studies in a Dying Culture*. Chapter Seven of the latter work is, in fact, a major study and critique of Freud's thought. I hope to show here that while Caudwell's critique may be a bit dated (formulated as it was in the context of the anti-fascist movement of the 1930s) it is still, essentially, valid and should lay to rest attempts to brand Caudwell himself as a "Freudian" in the sense that he eclectically and uncritically attempted to blend together ideas from Marx and Freud. I have also included a discussion of Herbert Marcuse's *Eros and Civilization* because this work throws light both on Freud's own thought as well as on Caudwell's criticism. Caudwell in many ways anticipated some of Marcuse's views (such as the stress on the social background of individuals with reference to the type of society they live in) and Marcuse for his part has provided an extension of Freud's theories, based in large measure on Marxist influences, which a reader of Caudwell can well appreciate in large part, even if not accepting many of the more speculative conclusions.

Turning now to Caudwell's critique, we see that he maintains that while Freud is one of the first of the scientific psychologists, he will be remembered more for his empirical contributions than for his theoretical ones. His scientific discoveries have been presented in a "semi-magical" framework, and he remains confined within the "mythical era" of the development of psychology. Caudwell, in fact, considers Freudianism to be *religious* in its explanations of the human mind. The complex workings of the mind are symbolized, for example, as the Censor, Ego, Id, etc., which, Caudwell says, are "mind-deities" analogous to the "weather deities who inhabited Greek Olympus."[3] Freud is, nevertheless, credited (as in *The Future of an Illusion*) for upholding the progressive tendencies of bourgeois materialism against earlier idealistic and outright religious (as in Christianity) formulations of human nature. Freud considers himself a materialist; how then could Caudwell come to call him, at heart, religious?

The key to understanding Caudwell's critique of Freud is to see that Freudianism is essentially a *bourgeois* psychology. For Caudwell, this means that two crucial, and for Marxists false, ideas underpin Freud's theories -- these ideas are not uniquely Freudian but characteristic of bourgeois thought in general. These ideas are "firstly that the consciousness of men is *sui generis*, unfolding like a flower from the seed instead of being a primarily social

3. Christopher Caudwell, "Freud: A Study in Bourgeois Psychology" in *Studies in a Dying Culture*, reprinted in *Studies and Further Studies in a Dying Culture*, introduction by Sol Yurick (Monthly Review Press, 1971) page 159.

creation, and secondly that there is a source of free action in the individual, the 'free will' the 'wish' or the 'instincts,' which is only free in proportion to the extent to which it is unrestrained by social influences."[4] According to Caudwell, these views distort Freud's psychology "like buried magnets" and prevent it from rising above the level of myth to that of scientific understanding. The other idea, or fault, according to Caudwell, is Freud's use of a form of the coherence theory of truth -- i.e., Freud accepts any logically coherent connection which accounts for the "facts" as a valid scientific explanation. If the Oedipus Complex or the death wish or instinct can be used to give such a logically coherent explanation of phenomena, then this fact is itself the evidence for the existence of a death instinct or the Oedipus Complex. This helps to explain the growth of rival schools such as Jung's or Adler's, since these psychologists also thought out logically coherent systems (the collective unconscious, inferiority complex, etc.) to explain the same data with which Freud occupied himself. All this is, according to Caudwell, uncharacteristic of the development of scientific thought. Note that this view of Caudwell was less likely to be controverted in the 1930's than it would be today.

Scientific thought is characterized by "crucial tests." "If," Caudwell writes, "of two hypotheses one exhibits more comprehensively and less symbolically the structure of the determinism of the phenomena it explains and their relation to the already established structure of reality, that hypothesis will be more powerful as an instrument for predicting the recurrence of such phenomena in real life. Hence arises the crucial test, which decides between one hypothesis and another."[5] This leads Caudwell to conclude that: "No hypothesis, religious or scientific, can have any meaning unless it can give rise to a crucial test, which will enable it to be socially compared with other hypotheses."[6] It is precisely because Freudianism and its offshoots are unable to come up with a crucial test that Caudwell, while believing them to be scientific in intent, likens them to religions.

Just what is it that Freud and his followers and rivals are attempting to understand? Caudwell gives us a brief description of our mental life and what is of interest in it. Mental events are the result of nervous activity. In the evolution of life, a small and comparatively recent set of nervous activity has become aware of itself and is called "consciousness." Of all the different sets of nervous activity, consciousness appears as the least determined of the sets -- since it is

4. Ibid., page 161.
5. Ibid., page 164.
6. Ibid., pages 164-65.

consciousness in the form of individual “egos” or “subjects” which is analysing and studying all the other sets, including myself. We may call all the other sets, not partaking of consciousness, the “unconsciousness.” Instinct, according to Caudwell, is a term we use to label specific unconscious patterns of activated neurons which, in conjunction with environmental stimuli, lead to automatic and predictable behavior. He uses the term memory (which need not refer to conscious behavior at all) to describe the mechanism by which the original instinctual behavior may be modified by interaction with the environment. He admits that this way of talking is not very rigorous -- it is, indeed, mythological (“perhaps at present unavoidable”) but is dictated by the level of the science.

Comparing the activation of neurons to the striking of a chord on the piano (where the unused strings are as necessary to the overall tone as is the wood making up the piano, the atmosphere in the room, etc.) Caudwell asserts that any neuronal activity is conditioned by and affects the total neuronal system as well as the rest of the body. Consciousness thus stands on the ground of the unconscious. It is also important to note, Caudwell insists, that besides the set of recently evolved neurons which seem to be the seat of consciousness (and which are able to be modified in their responses -- are susceptible, that is, to education), there is an older, more primitive, set of neurons which we have received as part of our evolutionary heritage. This set is less modifiable and seems to be the seat of that type of behavior we call “instinctive.” In certain extreme situations in which we find ourselves (and also in sleep), this set of neurons is liable to predominate and inundate our consciousness with urges that lead to behavior which our more recent neural set would never have led to, nor which our consciousness would condone.

Caudwell credits Freud with the first pioneering studies to explain the structure and behavior of our mental life, and, while acknowledging important empirical contributions made by him, he rejects the theoretical integument in which these discoveries are contained. One of the most serious objections to Freud’s views, according to Caudwell, is their *dualism*.

What kind of “dualism” does Caudwell have in mind here? He is not referring to the traditional mind-matter dualism familiar in philosophy at least from the time of Descartes. He means, rather, that Freud uses two contradictory approaches in his method of analysis -- one method in discussing the individual in relation to mental illness, and another in discussing social and historical problems. Caudwell thinks this is inconsistent and that the same focus should be used in discussing social as individual development. In the first approach,

for example, the point of view of individual consciousness is adopted, and the unconscious factors in mental life are referred to as "distortions," "mental illness," etc. this, according to Caudwell, is a prejudicial categorization of the unconscious by the conscious, whose point of view is here taken by Freud. "Just as mythological and consistent a psychology as Freud's might be written," Caudwell says, "from the point of view of the 'unconscious,' in which, instead of the 'instincts,' the 'experiences' would now play the part of energetic imprisoned demons distorting or inhibiting the stability and simple life of the innate responses."[7] In this approach, the conscious and intellectual is defended against the urges of the unconscious. In the second approach, Caudwell maintains, Freud does just the opposite, i.e., he champions the unconscious over the conscious (hence the unresolvable dualism within Freudianism as Freud developed it, not necessarily unresolvable per se). Freud does this, as we shall see, when he turns his attention to the discussion of the psychological factors behind the developments of history and civilization.

Caudwell's Marxism leads him to apply here the dialectical principle of the mutual interpenetration and identity of opposites. Thus, he rejects the "conscious" and the "unconscious" as two mere abstractions used incorrectly to symbolize our mental life.

Consciousness and unconsciousness are not exclusive opposites, but in any hierarchy of innervations forming the behaviour of the moment, we have a certain amount of high innate modifiability and others with high innate predisposition, and the proportion of these may vary. But they are in mutual relations, like positive and negative poles of a battery activating a circuit, and it is only by abstraction that we separate out the complex called consciousness, as we might separate out the threads forming the patterns in a tapestry.[8]

In the same way that historical materialism has led to the notion that the future will be a product of both the present and the past -- not simply the present itself, so our future consciousness will become a part of our knowledge based on our present (the conscious) and our past (the unconscious). Caudwell rejects the preeminence of one over the other in favor of a harmonious balance. The conscious and the unconscious, being mere abstractions, cannot be pitted against each other. Freud's dualism stems from the fact that he, on one

7. Ibid., page 169.
8. Ibid., page 170.

occasion, champions the conscious and on another the unconscious.[9] This fictional and unscientific mode of expressing his ideas resulted in Freud's being confounded by other schools of thought, which broke away from his initial system and raised themselves up in opposition to it. There is no scientific way to judge between Freud on the one hand and, say, Adler or Jung on the other. No "crucial experiment" could decide, for example, between Adler's self-preservation instinct on the one hand, and Freud's theory of the *libido* on the other, as to which "really" could explain our observed behavior better. They are both mythological constructs used to explain behavior that we are not yet in a position to describe by rigorous scientific techniques.

In the same way that the conscious and unconscious factors unite to make a whole individual subject, the subject itself is united to its environment. We cannot remain content with just studying all of our innovations as if they were isolated and sufficient unto themselves. Using a musical metaphor, Caudwell likens the "harmony of the psyche" to a reflection of the harmony of the body's being in reality."[10] The body and the external world are two poles of an elaborate and interacting structure. If psychology ignores or plays down the influence of the environment, it can never arrive at a scientifically valid description of man's mental life. Caudwell also maintains that the social environment is the most important (because it is the most rapidly changing) sector of the external world to influence our psychological development. Psychology must be grounded in sociology. Failure to achieve this grounding will lead us to view psychic phenomena as constant over time, and we will end up universalizing our own particular, historically conditioned psychic life as *the* psychic life of man. Caudwell asserts that this is just what has happened with all (the then) contemporary schools of psychology.[11]

The bourgeois myth of freedom is at work here in Freud's thought. The "Rousseauism" of Freud consists in the view that culture and civilization hinder man's free instinctual development. The view that the causal laws of nature and

---

9. "After showing how the wicked complex devils of the Unconscious distort and obsess the consciousness, Freud goes over to the other side and paints the Unconscious as it would like to paint itself. He shows us the Instincts tortured by the inhibitions of culture, martyrs to the present and to consciousness. Yet the scientist ought in these matters to be impartial, otherwise he will never synthesize these two opposites, past and present, new and old." Ibid., page 173.

10. Ibid., page 175.

11. "As it happens, no modern school of psychology has ever studied social relations as primary, as conditioning the consciousness which is generated by them. None study concrete society and its non-psychical basis. No modern school of psychology has ever yet got so far as to formulate its basic approach to the environment of the psyche it studies, continuous interaction with which is the law of psychic life." Ibid., page 177.

civilization hamper our free development is the most important defining characteristic of bourgeois thought for Caudwell. Contrary to Jefferson's dictum that government is best which governs least, Caudwell would champion the view that government is best which governs most -- with the reservation that both dicta are functionally dependent upon their own historical periods. In true Hegelian fashion, Caudwell maintains that: "Man is a part of reality, in constant relation with it, and the process of consciousness, in so far as it increases his knowledge of causality, increases his freedom."[12] For Caudwell, the development of culture and civilization increases, rather than decreases, our potential freedom.

Caudwell rejects Freud's use of terms such as "repression" and "inhibition" to describe the mental mechanisms which have developed with the growth of civilization in order to thwart the natural "free" instinctive life of man. Freud, according to Caudwell, completely bypasses the social environment when he describes the evolution of civilization as the byproduct of the struggle of two primary instincts -- e.g., Eros and Death. Freud's discussion of the role of the father seems proto-fascistic to Caudwell. Freud maintains that the danger of social discontent is the result of individuals within a group relating more to one another rather than to a "leading personality." Although Freud's views predate Hitler, Caudwell sees here an anticipation of the *Führerprinzip*. The irony is that fascism seeks to destroy Freudianism and all other forms of non-fascist ideology, while Freudianism and bourgeois thought in general cannot free themselves from their own premises, which, Caudwell says, ultimately lead down the road to fascism. "Freudianism, attempting to cure civilization of its instinctive distortions, points the way to Nazism."[13]

In what sense does Freudianism nurture fascism? Caudwell tells us that the consciousness of the bourgeoisie cannot assimilate the new world being created by socialism and thus begins to break up. A consciousness on the verge of breaking up can either go forward and begin to assimilate the newer, larger consciousness (socialist consciousness) which confronts it, or it can regress. Socialist consciousness is seen by Caudwell as "larger" because, in Hegelian fashion, it both negates and overcomes and preserves at a higher level the basic ingredients of the previous conscious level. This is only another way of saying

---

12. Ibid., page 179.

13. Ibid., page 181. "Yet this is the irony of all bourgeois culture, that because it is based on a contradiction, it gives rise to the opposite of what it desires. It desires freedom and individual expression, but, because it believes freedom is to be found in abolition of social organization, it gives rise to all the tyrannies and blind crippling necessities of the modern world." Loc. cit.

that the world outlook of socialism is “larger” than that of modern industrial capitalism, just as the latter is more inclusive, higher, etc., than that of feudalism or slavery. Socialist consciousness itself is the awareness, based on scientific analysis of the economic structures of capitalism, of the new social forms needed to overcome the contradictions and limitations of our present bourgeois society. Freud, according to Caudwell, as a thinker essentially unfamiliar with Marxism and unable to transcend the consciousness of the bourgeois capitalist world, was incapable of adapting his theoretical system to the new world outlook -- thus his views represent a regression (since they do not go forward to assimilate the newer forms of consciousness) to more primitive levels of the old system of consciousness.

Here, Caudwell is using Freud’s ideas of “repression” and “infantilism.” To regress is, however, not the answer. Our current situation (i.e., Caudwell’s situation in the mid-30s) is entirely different from the situation which was reflected in our earlier level of consciousness—any attempt to resurrect an earlier form of consciousness to deal with our current reality is bound to fail. Freud, according to Caudwell, sees this very well, but since he cannot adjust to the larger consciousness, he can offer no answer to the problem of cultural regression, which ultimately leads to fascism. Thus, he concludes, “after all ... is not a therapy, it is only a diagnosis,” Freudianism “after all ... is not a therapy, it is only a diagnosis.”[14]

The defense made of Freudianism that it justifiably uses mythological terminology because it deals with emotional problems and this way of expressing the relationships of mental phenomena has a powerful therapeutic and emotional effect on the patient is totally rejected by Caudwell. It is precisely because Freudianism relies on myth, precisely because it is unscientific (if not anti-scientific), that it fails utterly, as far as Caudwell is concerned, as a therapy. The Freudians do not understand the true nature of emotion. Emotion is not the individual nature of a thing, an individual force within the mind that gets out of control and can be soothed by the psychoanalyst and made to behave. Caudwell sees emotion as essentially social -- the product of thousands of years of cultural development-- the emotional forces are “the dynamism of society.” “Emotion, in all its vivid colouring, is the creation of ages of culture acting on blind, unfeeling instincts. All art, all education, all day-to-day social experience, draw it out of the heart of the human genotype and direct and shape its myriad phenomena. Only society as a

14. Ibid., page 182.

whole can really direct this force in the individual."[15] The failure of Freudianism to recognize that society, not individual therapists, must be the instrument for the control of emotional forces vitiates for Caudwell any serious consideration of Freudianism as either scientific or therapeutic.

Caudwell clarifies his critique as follows. He calls the "instincts" purely mechanical innate responses that are capable of being *modified* by experience -- this includes both conscious and unconscious responses. The psyche is the product of the conscious and unconscious reflexes, which are modifiable by our experiences, and it is grounded in, a development out of, the physiological foundations described above. Social adaptation is brought about by consciousness. Individuals and the environment (physical and social) have a mutual interactive relationship. Every individual both affects and is affected by the environment; however, this interaction is not equally balanced. An individual consciousness finds itself interacting with millions of other consciousnesses, which, like itself, have been produced by, and are subject to, the rules of culture, society, language, etc. The influence of the individual on the mass is minuscule compared with the influence of the mass upon the individual. "In psychology as in mechanics," Caudwell writes, "the reaction of a body on its cosmic environment can be neglected, as compared to the effect of the world on the body,"[16]

The important thing to recognize in this context, the thing which Caudwell maintains Freud failed to recognize, is that sociology is not to be founded on, or explained in terms of, psychology, but rather psychology is to be understood only as resting upon the foundations of sociology -- and the only truly scientific sociology is that of historical materialism founded by Marx. We cannot understand the growth and evolution of the human psyche independently of the environment of social relations in which it is enmeshed from the moment of birth. Freud, on the contrary, projects the eternal struggle of the unchanging instincts onto the screen of culture and civilization and explains the historical development of mankind in terms of these instinctual desires and mechanisms produced by the psyche to repress and distort their energies. Freud is thus unable to explain the growth and development of civilization in any other but psychological terms. Caudwell likens Freud's enterprise to that of the men chained in Plato's cave and forced to deduce the nature of reality from the shadows cast upon the wall. The true causes of psychic phenomena are as far

15. Ibid., page 183.
16. Ibid., page 185.

removed from Freud's psychology as are the true causes of the shadows removed from the dwellers in Plato's cave.

Caudwell calls Freudianism a preeminently "bourgeois" psychology -- one that can never "advance beyond the viewpoint of the 'individual' in civil society."[17] The psyche, for Caudwell, a creation of the environment, is treated by Freud as a self-subsisting entity guided by mysterious inner forces and urges which alone determine its behavior and development. If we follow the pathway pointed out by Freud, we will never arrive at a correct scientific understanding of our mental life. We must first understand Marxism. "The psyche is the organ of adaptation to social relations; therefore, for psychology, the laws determining social relations are fundamental."[18] It is only within this framework, and upon this ground, that we can hope to achieve a scientific understanding and discover the true path to follow in constructing a psychology which will both explain our psychic life and lead to a therapy capable of resolving the psychic problems that overwhelm individuals. "We owe much to Freud for his symbolic presentation of the discord between the deep and recent layers of men's minds; but he cannot heal us, for he cannot even teach us that first truth, that we must change the world in order to change ourselves."[19]

Before turning to Freud's writings themselves, in order to evaluate Caudwell's analysis, I want to present the views of Herbert Marcuse as contained in *Eros and Civilization: A Philosophical Inquiry into Freud*. Marcuse is important because, like Caudwell, he approaches Freud with an understanding and appreciation of Marxism and attempts to provide the foundations for a theory of social change which Caudwell deemed so necessary and so lacking in Freud's thought.[20] Whether Marcuse's emendations of Freud's thought are reconcilable with Caudwell's outlook is a question we shall deal with at the end of this chapter.

18. Ibid., page 188.

19. Ibid., page 192.

20. Marcuse notes, for instance, that "The immense capabilities of the advanced industrial society are increasingly mobilized against the utilization of its own resources for the pacification of human existence. All talk about the abolition of repression, about life against death, etc., has to place itself into the actual framework of enslavement and destruction. Within this framework, even the liberties and gratifications of the individuals partake of the general suppression. Their liberation, instinctual as well as intellectual, is a political matter, and a theory of the chances and preconditions of such liberation must be a theory of social change." Herbert Marcuse, *Eros and Civilization: A Philosophical Inquiry Into Freud* (New York: Vintage Books, 1955) page xi.

Marcuse sees psychological categories as being primarily political categories resulting from the development of what he calls "industrial civilization" -- a term which Caudwell would look askance upon, no doubt, and replace with "monopoly capital." In any event, terminological questions aside, Marcuse maintains that our current economic and political system has encroached upon what little privacy and independence that our forefathers might have enjoyed as to render whatever private problems of a psychologically important nature which we may be subject to, in reality public problems and symptoms not so much of personal distress as fundamental disorders in society as a whole.[21]

Marcuse begins his analysis by basing himself on what he considers to be one of Freud's principal postulates -- that the human "instincts" *must* be repressed in order for civilization to exist. Marcuse's argument is that, while this postulate *may* be true of hitherto existing civilizations, it may not necessarily be the case that civilization *qua* civilization must rest on repressive mechanisms. Within the framework of Freud's own theory, Marcuse maintains, the question of the identification of repression and civilization must be reevaluated. Marcuse suggests that the dialectic of civilization and repression may "result only from a specific historical organization of human existence."[22]

Marcuse claims that there is a "hidden trend" to be found in Freud's thought, which renders it much more revolutionary than Freud or his followers thought. Freud thus appears to stand in relation to his theory in much the same way as Hegel stood in relation to his own philosophy. In both cases, the theoretical elaborations of the thinkers provided grounds for much more radical conclusions and departures than they themselves were aware of.

In order to arrive at the "hidden trend," Marcuse starts by drawing up a table reflecting two groups of opposed aims -- one group characteristic of man as a primitive pre-civilized animal, the other characteristic of man in society -- the transformation of the first group into the second is, in Freudian terms, the triumph of the *reality* principle over that of the pleasure principle.

---

21. "The traditional borderlines between psychology on the one side and political and social philosophy on the other have been made obsolete by the condition of man in the present era: formerly autonomous and identifiable psychical processes are being absorbed by the function of the individual in the state — by his public existence. Psychological problems therefore turn into political problems: private disorder reflects more directly than before the disorder of the whole, and the cure of personal disorder depends more directly than before on the cure of the general disorder." Ibid., page xvii.

22. Ibid., page 4.

Pleasure Principle

Reality Principle

Pleasure Restraint of Pleasure

Joy (Play) Toil (Work)

Receptiveness Productiveness

Absence of Repression Security[23]

Civilization results from the repression of the pleasure principle -- the aims of the defeated principle retreat into the unconscious, but they continually seek to break out into the conscious realm. Marcuse holds that "the *return of the repressed* makes up the tabooed and subterranean history of civilization. And the exploration of this history reveals not only the secret of the individual but also that of civilization. Freud's individual psychology is in its very essence social psychology. Repression is a historical phenomenon."[24] Freud himself recognizes the economic basis of the development of civilization -- scarcity renders it impossible for men to live together by means of the pleasure principle. Marcuse points out that the view which holds "that a non-repressive civilization" is impossible is a cornerstone of Freudian theory."[25] Thus, Freud's views not only expose the repressive aspects of our civilization, but justify them and support them -- a charge earlier made by Caudwell.

It is at this point that Marcuse begins to uncover the "hidden trend." He reminds us of the role which memory plays in psychoanalysis. The repressed individual liberates himself from his neurotic symptoms by remembering his primal urges and destroying the repressive mechanisms constructed by his rationalizing consciousness. Marcuse sees this as a form of liberation and maintains that the road to a liberated future lies in the way of concentration on uncovering and understanding the past. He sees regression as essentially progressive. Marcuse thinks this insight of his separates him from Freud, for whom memory was merely the mechanism for adapting us to our present -- not the means for attaining a new and better future. In order to better explicate his views, Marcuse divides the mutually interrelated individual-societal complex

23. Ibid., page 12.
24. Ibid., page 15.
25. Ibid., page 16.

into its two abstract components and proposes to first explain the origin of repressed individuals and then of repressed civilization. In this way, he hopes the "hidden trend" in Freud's thought will become manifest.

As far as individual psychology is concerned, Marcuse concentrates on Freud's final systematic presentation of his theory of instincts. Man is controlled by two basic instinctual drives -- life (Eros) and death. At this point, Freud holds that "the fundamental *regressive* or 'conservative' tendency in all instinctual life.[26] He holds that man's instinctual life is striving for equilibrium and rest -- for a return to the *inorganic world*. At this point, the concept of the *Nirvana principle* is brought forth. The pleasure principle is subordinated to this new principle, comprising a more general concept. The unconscious identifies pleasure with this peaceful state of inorganic return -- thus melding together the pleasure principle with the death instincts.[2] Nevertheless, other instinctual drives must be reckoned with -- namely, the instinctual drives relating to sexual fulfillment. Thus, Eros arises, and a struggle between the life and death instincts emerges. Which of these two instincts is the most fundamental for Freud is a problem that has not yet been solved -- the textual evidence to be found in his last works is vague. Marcuse thinks that it is an open question just what Freud's final conclusions were.

Marcuse is interested in discovering the common source and beginning of these two basic instincts. The dualism which many find in Freud (e.g., Caudwell), in Marcuse's opinion, is illusory. In his final works, Freud's insistence on the conservative aspects of *all* instincts, coupled with his view that it was difficult, if not fruitless, to point to any drives that were not ultimately linked to Eros, suggests to Marcuse the incorrectness of all dualistic interpretations of Freud's final position. Indeed, he thinks Freud's last formulation has "a suspense and depth which make it one of the great intellectual ventures in the science of man. The *quest for the common origin* of the two basic instincts can no longer be silenced."[27] If we look more closely at the "death instinct," we see it is basically a flight from repression and an unhappy existence. "The death instinct is destructiveness not for its own sake, but for the relief of tension. The descent towards death is an unconscious flight from tension, pain, and want. It is an expression of the eternal struggle against suffering and repression. And the death instinct itself seems to be affected by the historical changes which affect this struggle."[28] The instincts as historically determined, rather than as innate,

26. Ibid., page 22.
27. Ibid., page 26.
28. Ibid., page 27.

immutable drives (cf. Caudwell), will be better understood, according to Marcuse, by looking at Freud's final views on the structure of personality.

It is in his last formulations of the theory of the personality that Freud introduces the famous triad of *id*, *ego*, and *superego*. These three terms are sufficiently well known as not to require any special explanation -- they should be kept in mind as reference points with regard to the discussion which follows.

Marcuse addresses one of the major criticisms of Freud's thought. This is the position that he has generalized the cultural restrictions of his own time into universal instinctual repressions and urges valid for all times and places. The developing Ego, Marcuse points out, is faced with a specific historical condition confronting it -- "an *historical* world" -- and the *reality principle* which underpins the Ego is thus of a specifically historically conditioned nature. Freud's treatment of these situations tends to transform historically contingent conditions into biologically determined ones. Marcuse holds that this criticism is, by and large, just, but it overlooks a real truth that Freud was trying to express -- namely, that heretofore all forms of the *reality principle* have led to the repression of man's instinctual nature. More simply put, Marcuse says Freud "expresses the historical fact that civilization has progressed as organized *domination*."[29]

Marcuse's position is thus based on Freud but reworks his notions into a historical interpretation rather than a biological one. He maintains that what we discover when we read Freud is historical developments that have been "reified" into biological developments. This must be kept in mind as we pursue our exploration of Marcuse's thought.

He introduces two of his own terms at this point -- "surplus repression" and "performance principle." Let us first look at what he means by "surplus repression." We know already that in order for men to live together in civilization (or culture -- neither Marcuse nor Freud differentiates these concepts), their instinctual drives must be repressed to the level necessary for social intercourse. We also know that it is due to scarcity that society is organized in the way it is. Here is where Marcuse separates himself from Freud. Repression is not always the result of scarcity *per se,* as Freud would have it -- but rather, as Marcuse emphasizes, "a specific *organization* of scarcity." The influence of Marxism begins now to show in Marcuse's views. Different

29. Ibid., page 32.

civilizations and different historical periods within the same civilization have organized the *distribution* of scarcity in various ways -- as many ways as there are different forms of the reality principle. Not only this, but "the specific historical institutions of the *reality principle* and the specific interests of domination introduce *additional* controls over and above those indispensable for civilized human association. These additional controls arising from the specific institutions of domination are what we denote as *surplus-repression*."[30] The question which immediately arises is -- is it possible to construct a society in which human beings can freely associate, which lacks domination and thus *surplus*-repression, and in which man and civilization can finally be reconciled? We shall return to this question.

The other new term, "performance principle," denotes the specific form of the reality principle which, Marcuse says, exists in modern times. He says that "under its rule, society is stratified according to the competitive economic performances of its members."[31] The forces which drive on Eros are harnessed towards the goals of modern industrial society. Man finds himself in an "alienated" state, Marcuse says, since the major portion of his time is directed not towards his own ends but towards the social ends determined by the nature of his society and directed by the dominant groups controlling power. Repression thus functions to adapt the individual to the needs of the *status quo* and to condition him into their acceptance. The *superego* thus acts as an internal representative, not of morality or values as such, but as the specific representative of a historically conditioned performance principle. As society becomes more complex, the need for regimentation and repression increases. The balance between the life and death instincts becomes upset. The ego's function of controlling the fantastic desires of the id becomes more complicated as the superego demands ever more repression. Marcuse says the superego becomes ever more destructive vis-à-vis the ego as it orders increased psychic energy be expended to deny the id its gratifications in order to satisfy the increasing demands for conformity and regimentation as society advances along the road of technical advance. Following Freud, Marcuse holds that, due to its life-denying and repressive functions, the superego becomes the general headquarters for the forces of the death instinct. Thus, a super-destructive potential begins to build up within the individuals of an advanced technological society. We are now no longer on the grounds of individual psychology but of

30. Ibid., page 34.
31. Ibid., page 41.

social psychology. We must, at this juncture, turn our attention to the origin of repressed civilization.

Marcuse begins by summarizing Freud's views on the origin of civilization as he presented them in *Moses and Monotheism* -- the theoretical part of which is based on his earlier research into the field of ethnology and published as *Totem and Taboo*.

Freud's position is that present-day civilization is strongly affected in its origins in prehistory because we carry about within us "memory traces" based on the experiences of our ancestors. We thus have an "archaic heritage." This heritage is so influential that, as it were, it programs the later development of the ego. Marcuse remarks that Freud's theory of the archaic heritage and his schematization of the development of civilization -- i.e., primal horde, clans, matriarchy, etc., (we shall return to this) has been, to put it mildly, strongly attacked and finds little present-day acceptance. "The difficulties in scientific verification and even in logical consistency are obvious and perhaps insurmountable,"[32] Marcuse is only interested in its "symbolic value." We can treat Freud's theory, then, as myth, rather like those we encounter in reading Plato -- its value does not lie in its historical veracity but in its heuristic value alone.

In the beginning, then, was the primal horde dominated by one male who maintained exclusive sexual rights with all the women and kept the other males at bay -- rather like a walrus colony. The dominant male (the father) thus set up patterns of restraint and subjection to authority in the inchoate psyches of the other members of the horde. This "primal patriarchal despotism" sets the course for all future civilization. It doesn't last long, however, as the other males kill off the horde despot and eat his remains (to assimilate his power and authority). This is the point at which "civilization" begins. The victorious males rule jointly by means of the "brother clan" and, by means of "guilt feelings," institute prohibitions and taboos in order to consolidate and perpetuate the group. With the death of the despot and the sharing of power within the brother clan, the status of women and their importance in the regulation of communal life began to increase. Women did not share in the original guilt of the killing of the despot and were slowly deferred to in questions of child rearing and clan organization. The matriarchate is established. With the advancement of technical progress and the importance of war and hunting gradually coming to

32. Ibid., page 54.

the fore, the matriarchate is "replaced by a patriarchal counter-revolution," and the latter is stabilized by the institutionalization of religion.[33]

It is important to emphasize that Marcuse is not claiming that this sequence is actually historical. Nevertheless, *something* more or less similar must have happened, or at least must be postulated to have happened, if we are going to arrive at any understanding of the origins of the type of repression in civilized societies that Marcuse is attempting to explain. This is primarily the repression of the sexual instincts and the placing of them in the service of the reality principle.

Marcuse remarks that Freud saw this paradigm -- the overthrowing of authority and its reinstitution in other forms -- as "re-enacted" in each generation and in each individual in the course of their development. It is on this basis that the hidden trend in psychoanalysis is to be understood, since Freud accounts for this perpetual recurrence in terms of the idea of the "return of the repressed."

But how can these repressed emotions, arising from a prehistoric past, possibly be operative today? Freud's answer -- that we carry about "memory traces" in our unconscious mind-- seems much too mythical and unscientific; it has been almost universally rejected, as Marcuse points out. However, it may be possible to explain this concept of "the return of the repressed" without resorting to innate "memory traces." Marcuse suggests that this can be deduced from Freud himself. The reinforcement of repressions against the innate drives and instincts builds up over the generations and would, according to Marcuse, produce the same effects with or without any "memory traces" from the primal horde lingering about in the unconscious. More to the point, the complete externalization of these ancient events in terms of poetry, mythology, and the verbal traditions of primitive peoples allows the "memory traces" of the events to enter into the psyche of each new generation without the need of postulating any genetic carrier of this information. Marcuse maintains that, as history has developed, the image of the primal despot, or father, has merged "with duly constituted authority. Domination has outgrown the sphere of personal relationships and created the institutions for the orderly satisfaction of human needs on an expanding scale. But it is precisely the development of these institutions which undermines the established basis of civilization. Its inner limits appear in the late industrial age."[34]

---

33. Ibid., page 59.
34. Ibid., page 70.

In order to understand what all this means, we have to turn to Marcuse's chapter on the *dialectic* of civilization. Here, Marcuse points out that with the increasing complexity of civilization, the repressions against our aggressive tendencies must become more intense -- but this can occur only if the forces of Eros can be increased, for only Eros "can effectively 'bind' the destructive instincts."[35] And, Marcuse stresses, it is just this increase in *Eros* which our civilization is incapable of producing since it is based on "intensified regimentation and control." From this point on, in my opinion, Marcuse's discussion alternates between interesting extensions of Freud's theory and dubious speculations of his own mind. While it is true that "late industrial civilization" has dramatically increased the powers of destruction and oppression, and at the same time provided by scientific and technological development the possibility of eliminating destruction and oppression, it is not so obvious that this increased destructiveness and oppressiveness can be explained primarily in terms of "instinctual roots." While not ruling out entirely the psychological theories previously discussed, a reader of Caudwell might, at this point, expect some discussion along Marxist lines dealing with modes of production, the development of capitalism, etc., to round out the picture. Marcuse, however, sticks to his psychological categories. He reiterates his distinction between regular and "surplus" repression and says that the civilization with the least amount of surplus repression is also the least repressive. If we remember that repression functions to restrain our instinctual gratifications in the interest of a common political and social life, and that the increased demand made upon individuals by the growing complexity of civilization as it develops automatically increases the amount of repression required, we can see why Marcuse concludes that "the necessity of repression, and of the suffering derived from it, varies with the maturity of civilization, with the extent of the achieved rational mastery of nature and of society."[36] *Surplus* repression functions solely on the side of the ruling class, as it is that extra amount of repression individuals must internalize in order to be content with the particular ruling group that is culturally in place—since this group lives by exploiting the majority, the majority has a built-in acceptance of the *status quo*.

The still prevailing impoverishment of vast areas of the world is no longer due chiefly to the poverty of human and natural resources but to the manner in which they are distributed and utilized. This difference may be irrelevant to

35. Ibid., page 74.
36. Ibid., page 80.

politics and to politicians, but it is of decisive importance to a theory of civilization which derives the need for repression from the 'natural' and perpetual disproportion between human desires and the environment in which they must be satisfied.[37]

The question, then, is -- must repression and surplus repression continue into the future as they have in the past? Must civilization become more and more repressive until the forces of repression become so oppressive that instinctual drives can no longer tolerate them and break forth in an orgy of self-destruction and annihilation? The answer is to be found in Part Two of *Eros and Civilization*. The question, as Marcuse phrases it, is "whether the continued rule of the performance principle as *the* reality principle must be taken for granted (so that the trend of civilization must be viewed in the light of the same principle), or whether the performance principle has perhaps created the preconditions for a qualitatively different, non-repressive reality principle."[38]

Marcuse maintains that Freud essentially equates the reality principle as such with what Marcuse has called the performance principle. If Marcuse is right about the historically conditioned nature of the reality principle, then he says, Freud's "dialectic of civilization" would lose its finality." Marcuse also stresses that the historical nature of the reality principle would also historicize the instincts since the life and death drives would be different when operating in the context of a different reality principle. The greatest argument against his view, as Marcuse sees it, is Freud's position on the unalterable nature of the basic instinctual drives -- if being destructive is a "primary instinct," then the main thrust of *Eros and Civilization* is "idle speculation."

Marcuse reminds us that the death and life instincts work in tandem and that, as long as life is developing and growing, it is the libido that ultimately governs our instinctual drives. This being the case, the nature of the death instinct (and the heretofore existing nature of human destructiveness) could be modified if there were a qualitative change in the essential characteristics of libido. Marcuse must now point out how it would be possible, in the period of late industrial civilization, to bring about a change in the libido so that it would be free of the repressive structures with which it is now encumbered. The discussion now focuses upon that portion of our mental life which is relatively free from bondage to the performance principle.

---

37. Ibid., page 84.
38. Ibid., page 117.

We find such an area of mental life, Marcuse notes, as Freud himself recognized in the realm of *fantasy*. Phantasy is a pathway which leads from the unconscious to one of the most developed areas of conscious life -- that of artistic creation. Here then is a bond between *illusion and reality* which "preserves the archetypes of the genus, the perpetual but repressed ideas of the collective and individual memory, the tabooed images of freedom."[39] In the development of individuals, the realm of phantasy comes into existence during the process of our early growth when the reality ego gradually supplants the pleasure ego. Phantasy and imagination represent the drives and goals of the ego before the triumph of the reality principle in conscious life -- before, Marcuse says, the individual becomes cognizant of himself as a separate entity counterposed to other individuals. The truth to which the imagination is committed is different from that to which the reality principle adheres. "Imagination envisions the reconciliation of the individual with the whole, desire with realization, of happiness with reason."[40] It is, to use Caudwell's term, in the creation of the *mock world* of art that the truths of the imagination manifest themselves and become a form of knowledge. The power behind our aesthetic understanding is the claim of the imagination for a "harmony of sensuousness and reason" -- it is "the eternal protest against the organization of life by the logic of domination, the critique of the performance principle."[41] We must now remark, as Marcuse says, that one of the most important functions of the performance principle is to repress the pleasure principle in the interests of society's needed work, as exemplified by the length of the working day. If the work day could be reduced, a vast amount of repression currently applied by the performance principle could evaporate, leading to the overthrow of that principle itself as it is currently structured. If this could be accomplished, a real growth in human freedom could be anticipated. It should be noted here that Marcuse thinks that this can only be accomplished by reducing the living standards in the late industrial states. This, however, is arguable. The reduction of the extravagant standards of our ruling groups (for which surplus repression exists), along with the concomitant increase in the standards of the deprived, may actually bring about an overall increase in the living standards found in our civilization as a whole. Be that as it may, Marcuse fails to mention that it is just this reduction in working time, the overthrow of the performance principle, if you like, in the interests of developing human personality and freedom, that

39. Ibid., page 128.
40. Ibid., page 130.
41. Ibid.

Marxist thinkers, Caudwell among them, have put forth as the theoretical end result of the establishment of communism.

The major objection, as Marcuse sees it, to his notion of overthrowing the performance principle is the argument that there will always be some amount of unpleasant work to be done in order to maintain civilization, and, since the basic instincts always push for immediate gratification, there will thus always be the need for a certain modicum of repression. In order to overcome this objection, Marcuse has to make a case for the substitution of the term "instinctual liberation" for "instinctual repression" in the Freudian sequence of repression, necessary labor, and civilization. Marcuse reminds us that, in his view, the repression associated with the performance principle is really *surplus* repression based not on the necessity of labor *per se* but only on particular historically conditioned forms of its social organization. "If this is true, the emergence of a non-repressive reality principle would alter rather than destroy the social organization of labor: the liberation of Eros could create new and durable work relations."[42] Marcuse, however, does not commit himself to the view that a new civilization will eventually emerge based on these principles. It is enough to point out the possibilities of such an occurrence and to demonstrate that even in the context of the Freudian analysis of human nature and civilization, the seeds for such a transformation can be discovered. Having uncovered the "hidden trend" in Freud's thought is Marcuse's contribution to this task. We will thus take our leave of *Eros and Civilization* with this final observation on the possibility of a non-repressive reality principle --one freed from the necessity of oppressing the free development of libido, and this conception -- Marcuse's major point -- can implicitly be discovered in Freud's own writings and those of some of his followers -- this is the "idea of civilization very different from that derived from repressive sublimation, namely, civilization evolving from and sustained by free libidinal relations."[43]

---

42. Ibid., page 140.

43. Ibid., page 189. Marcuse also notes that "Geza Roheim used Ferenczi's notion of a 'genitofugal libido' to support his theory of the libidinous origin of culture. With the relief of extreme tension, libido flows back from the object to the body, and this 'recathecting of the whole organism with libido results in a feeling of happiness in which the organisms find their reward for work and stimulation to further activity.' The concept assumes a genitofugal 'libido trend to the development of culture' -- in other words, an inherent trend in the libido itself toward 'cultural' expression, *without* external repressive modification. And this 'cultural' trend in the libido seems to be *genitofugal,* that is to say *away* from the genital supremacy toward the erotization of the entire organism. These concepts come close to recognizing the possibility of non-repressive sublimation. The rest is left to speculation." Ibid., pages 189-90.

Marcuse's interpretation of Freud goes beyond what Freud himself explicitly formulated -- yet is reconcilable with his basic outlook. Caudwell's Freud and Marcuse's Freud are not at loggerheads. I hope the above discussion of *Eros and Civilization* will throw some light on what follows.

Caudwell derived his understanding of Freudianism from six basic works (listed along with the *Collected Papers* in the bibliography of *Illusion and Reality*) -- they were *The Interpretation of Dreams*, I*ntroductory Lectures on Psychoanalysis, Totem and Taboo, Group Psychology and the Analysis of the Ego*, *The Ego and the Id, and The Future of an Illusion*. Let us remember that Caudwell held that Freud made great empirical advances in the science of psychology -- such as are discussed in the *Interpretation of Dreams* -- i.e., the discovery of an ordered mental life within the unconscious -- and the *Introductory Lectures*. Nevertheless, according to Caudwell, Freud's theoretical elaboration of his empirical discoveries is not warranted -- in the earlier part of this chapter, we have seen how he considers Freud's theory to be a form of bourgeois idealism. If we turn to Freud's works themselves, we see the justice of Caudwell's remarks. None of Caudwell's criticisms of Freud, however, are related to Marcuse's development of Freud's basic ideas, nor should we forget that Freud's works are full of reservations which explicitly recognize the tentative nature of his conclusions. The later theoretical works, which Caudwell found so untenable, Freud himself acknowledges as speculative. Nevertheless, Freud's theory labors under the restrictions of bourgeois individualism to such an extent that it is understandable why Marxists, especially in the 30's when fascism was the major problem of the day, so heartily rejected it and why Caudwell's few appreciative remarks were taken out of context and his critical reservations overlooked by some Marxist thinkers. The following quote from *The Future of an Illusion* (1927) will exemplify this:

> *It is just as impossible to do without control of the mass by a minority as it is to dispense with coercion in the work of civilization. For masses are lazy and unintelligent; they have no love for instinctual renunciation, and they are not to be convinced by arguments of its inevitability; and the individuals composing them support one another in giving free reign to their indiscipline. It is only through the influence of individuals who can set an example and whom the masses recognize as their leaders that they can be induced to perform the work and undergo the renunciations on which the existence of civilization depends.*[44]

---

44. Sigmund Freud, *The Future of an Illusion* (N.Y.: W.W. Norton, 1961) translated by 3ames Strachey, pages 7-8.

At first sight, the critics of Caudwell, Freud, and Marcuse are likely to be reinforced in their negative judgments -- "Aha, here is contempt for the masses of working people, an appeal to a fascist notion of 'leaders' and a view that people are always going to be the same and must be subjected to coercion. What more needs to be said to substantiate the position that Caudwell, by flirting, even critically, with Freud's ideas, has departed from Marxism?" In fact, this is just the criticism to which Caudwell was subjected, as we saw in the chapter on the "Caudwell Debate." A closer reading, however, of Freud's book provides the grounds for rejecting this first impression. Freud claims that the above characterization is a "purely descriptive judgement."[45] based on "an investigation for which our own long-consolidated civilization affords us material."[46] That human nature must remain the same, Freud admits, "I do not know."[47] -- but by changing our *social* environment (primarily by means of education -- Freud is, after all, not a Marxist), he maintains that it would be possible, perhaps, to "succeed in achieving a state of things in which life will become tolerable for everyone and civilization no longer oppressive to anyone."[48]

These quotations show the undercurrent in Freud's thought that Marcuse put so much stock in, and it also gives us some idea as to why Caudwell did not reject some of Freud's ideas out of hand. A more detailed discussion of Freud is not warranted in a work primarily concerned with Christopher Caudwell; but there are three points, however, that I hope to have established. First, that Caudwell, while influenced by Freud, was in no sense a "Freudian" nor did he uncritically and eclectically try to blend together Marxism and Freudianism. Second, that Marcuse's attempt to interpret Freud in a Marxist manner is in no way contrary to the spirit of Freudianism and provides the basis for a better Marxist understanding of both Freud's theory and Caudwell's criticisms of it. Third, that Caudwell's views on Freud are due to his initial reading of Freud in the context of the 1930s anti-fascist movement, and that Marcuse's emendations allow us to better appreciate both Freud and Caudwell.

Speeches from 2026 Victory Day Celebrations

Soviet and American soldier meeting on Elbe River.

Editor's Note: In this month's issue, we commemorate the anniversary of Victory Day by presenting a curated selection of speeches from celebrations co-hosted by the American Communist Party and Russian diaspora communities across the United States and Canada. Featured in this issue are two longer speeches from Texas: one by our chapter executive, Dan Seymour Redd, and another by ACP cadre PJ Cornell. We also include a speech by Ontario cadre Emrick Benedicto, as well as the transcript of remarks delivered by Vietnam veteran David Applewhite at our event in Dallas, Texas. Finally, for the first time in Red America, we publish a poem by Texas cadre Fallon Julia Cochlin.

Memory and Lesson of Victory Day

By: Dan "Seymour" Redd[1]

I. Intro

Hello everyone. Thank you for being here.

Welcome to this gathering on the 81st anniversary of Victory Day. I want to start by thanking Red Bird Landing for opening this space to us, and a special thank you to Pat and the folks with CPAL who trusted us to host a memorial event in this shared community hub. Thank you to the Armstrong family and the local Russian community, whose presence here today means a great deal, and for whom we're gathering today. Thank you to all the members of the American Communist Party, our friends, our family, everyone who made the commitment to be here this morning.

Our goal today is simple to say and heavy to hold: we are here to honor the sacrifices, the bravery, the loss, and the heroism of the Allied Forces, namely the peoples of the Soviet Union and the United States, who united to defeat the fascist scourge.

We gather as comrades of the ACP and as honored guests from the Russian community, united in commemoration. This 81st anniversary is not just a date in a history book. It is a living legacy, the legacy of the greatest anti-fascist struggle in human history. My purpose this morning is to honor the unparalleled bravery and sacrifice that defeated Nazism, and to reignite the memory of the wartime bond between the Soviet and American people. This bond can't be left to dusty, propaganda-ridden history books, or some distant museum piece that holds no weight in our lives today. This wartime bond between America and the Soviets is a fire that still needs carrying.

II. The Ground We Stand On

I want to take a moment to recognize where we are. This is Red Bird Landing in South Dallas, a community space managed by the Childhood Poverty Action Lab, and built with the mission of reducing neighborhood blight and unused commercial space that often attracts crime and violence to working class neighborhoods. This space is now an open call to action to grassroots

1. Dan is the Chapter Executive of ACP Texas and a member of the Department of Education.

organizers, community programs, and the local working class to come together around beneficial community programs. Our access to this space was earned, not given, as consistent volunteers with the Oak Cliff Veggie Project's free fresh grocery and food distribution program. This was achieved through months, over a year, of disciplined, patient work as humble volunteers. Not a single event, not a single style of work. A sustained commitment to being logistical and operational muscle for OCVP and Red Bird Landing.

That work was grassroots service as communist practice. Food distribution, "mutual aid," neighborhood clean-ups. That was not charity, and it was not a recruitment tactic. It was the practical application of our principles, the kind of labor that builds trust because it meets people where they actually live and forges class-conscious trust through hard work.

And there is a direct line between that work and the Soviet tradition we draw from. The Soviets called it *subbotnik*, voluntary community labor, the understanding that liberation begins with tangible solidarity. Our work here in North Texas captures that same spirit. Serve the people. Earn the trust required to lead them. Build a new world brick by brick, right here in Dallas. That's what these Red Bird Landing grounds represent.

III. The Historical Magnitude of the Soviet Sacrifice

When we talk about the Great Patriotic War, 1941 to 1945, we are talking about the Eastern Front, where the Soviet Union bore the brunt of the Nazi war machine. The human cost is almost impossible to comprehend. An estimated 26.6 to 27 million Soviet citizens perished. Military, civilian. Millions more wounded.

The land itself was torn open. Over 1,700 cities destroyed. Over 70,000 villages wiped off the map. And Leningrad. 900 days of siege, a symbol of suffering so total and defiance so absolute that it still defies easy words. This sacrifice was not a side note. It was the decisive factor in breaking the back of fascism. And that is a truth that must never be whitewashed, and must never be forgotten.

IV. The Collaborative Front

But the defeat of Nazi Germany was not the work of one nation. It was a collective, internationalist effort of the Allied powers. Now, we have to be honest. The sad truth is that the American government at the time saw an

opportunity to establish itself as the preeminent capitol of finance capital and hegemonic imperialism. That's what the governing state saw. But for the American people, and for the cold, hard logic of the development of the productive forces, this was a war of great purpose. A war that built American productive capacity on the cause of anti-fascism, national unity, and international solidarity.

There was practical solidarity too. Lend-Lease. The delivery of thousands of aircraft along the Alaska-Siberia air route. It wasn't the bulk of Soviet production, the Soviet people carried that weight themselves, but it was a material expression of an alliance that mattered. And then there was the opening of the Second Front: D-Day, June 1944. That operation forced Germany into a two-front war and directly aided the Red Army's relentless westward push.

But let's be clear. The tide of the war turned at Stalingrad and Kursk. The Soviets engaged and destroyed the vast majority of Nazi divisions. That sacrifice, that grinding, total war in the east, made victory in the west possible.

V. The Spirit of the Elbe

And then came Elbe Day. April 25th, 1945. Soviet forces pushing from the east, American forces pushing from the west. And they met at the Elbe River, near Torgau, Germany. This is the moment I want everyone here to sit with.

Imagine a U.S. patrol under Second Lieutenant William Robertson. These soldiers didn't have an official flag, so they improvised one from a bedsheet. They approached a destroyed bridge, and on the other side they saw a Soviet patrol under Lieutenant Alexander Silvashko. There was suspicion at first. Then recognition. Two groups of men who had fought through hell, suddenly realizing they were looking at brothers.

There's a quote from Corporal James J. McDonnell that I always come back to. He said, ”We couldn't speak Russian, and they couldn't speak English, but the hugs and handshakes said it all.”

That moment was profound. It was human solidarity made physical. The soldiers embraced. They exchanged souvenirs. And they swore an oath to ”block the way to war” in the name of their fallen comrades. And it wasn't just a gesture. Robertson and Silvashko stayed friends, visiting each other even

through the Cold War. That bond was real. A genuine anti-fascist brotherhood was built that day.

VI. The ACP Bearing

The U.S.-Soviet collaboration in that war is both a historical precedent and a warning to the fascist imperialists: it shows what is possible when the working classes of two great nations unite against a common threat, against the primary contradiction unraveling the world before them. And that is where we, as a party, draw our line. The Soviet victory was not a nationalist triumph. It was a vindication of the socialist system's ability to organize, to sacrifice, and to conquer fascism.

So I pose a challenge to everyone here. If our grandfathers could unite across language, across ideology, across the ruined bridges of a burning continent, and defeat fascism on the battlefield, then what is our duty today? What is our duty to unite against fascism's ideological descendants?

VII. The Erosion of Our Shared Legacy

Because let's be honest about where we stand now, as Americans. We have lost this sense of honor. We have lost this sense of duty. We have become a pacified people, systematically stripped of the memory of working people's bloodshed for a common, greater, productive cause.

The mighty industrial engine that once made America the arsenal of democracy? Hollowed out. Shipped away by the same capitalist class that profited from the war, leaving our communities gutted and dependent.

The widespread culture of socialist and communist sympathy that existed in the 1930s and 1940s, among workers, artists, intellectuals, has been ruthlessly neutered by decades of McCarthyism, red-baiting, and ideological erasure.

The history of fraternal bonds with the USSR, sealed in blood at the Elbe and on the Eastern Front, has been deliberately erased from (Maxwell-owned) textbooks, from popular memory. And today, Russia, our ally in the anti-fascist crusade, is vilified by our politicians. A new Iron Curtain, drawn to divide the international working class and further obscure this shared history.

Even the concepts of bravery, collective sacrifice, and honor have been twisted into something suspect, often labeled fascist by a corrupted Left that has

abandoned class politics for identity politics, fragmentation and flattening of imperialist contradictions.

So as we honor Victory Day, we have to confront this bitter truth: the very country that once joined the Soviet Union to destroy Nazism has inherited the fascist mantle itself, through global Western hegemony, through an American Empire in its most rabid form.

But this is not a counsel of despair. It is a call to clear-eyed recognition. We cannot reclaim what we do not name. Honoring the past we share with the first great Proletarian State is part of that duty. We must rediscover these foundations as Americans, before they are lost forever.

VII. Conclusion

So let me bring it home.

This anniversary is a tribute to the 27 million Soviet souls. A tribute to the spirit of the Elbe that proves our peoples can be more than allies. We can be brothers and sisters.

And that fact places a direct, personal obligation on us. It is our sacred duty as American working people, guided by the Marxist-Leninist tradition, to defeat fascism in this era. Not to watch our country execute the whims of the new Epsteinian Reich. The sacrifices of Soviet and American soldiers demand nothing less.

And that duty is not abstract. The patient organizing at Red Bird Landing, the trust we built in this community, that is not separate from this global struggle. It is the very first brick in rebuilding the lost culture of common cause, bravery, and honor. What we do here in North Texas is the American working class beginning to remember itself.

So let us commit. Let us commit to honoring their sacrifice, not in words alone, but by dedicating our own lives, our own Party, to the ongoing struggle against fascism in all its modern forms. Their victory is our inheritance. Their fight is our duty. We will not, we cannot, let that fire die.

Thank you.

Becoming a People: An American Veteran on Victory Day

By: P.J. Cornell[2]

In John 15:31, Jesus Christ tells us "Greater love hath no man than this, that a man lay down his life for his friends."

In war, men are called to defend their country, and their families, and so men sign up and sacrifice their time, their comfort, their professional futures, and sometimes their lives to defend their homes. But when you are actually on the field of battle, what ends up happening is that your comrades become your friends, and, although you are there for your family and your country, in the moment, it is for them that you stand ready to sacrifice your life.

The US joined the war[3] to defend its allies and prevent further fascist incursions on her soil, and 291,557 Americans proceeded to give their lives to that cause.

The Soviet Union was invaded by fascists at a scale that represented the full force of the Axis war machine at its height. We don't know how many Soviet soldiers sacrificed their lives in that war, but that number is estimated to be between 8.8-10.7 million.

The Americans who fought in that war represented the very best that America had to offer. The Russians who fought in that war were called from every walk and station and were forced by circumstance to rise above what they were to stand with the best mankind has ever offered.

When Hitler invaded the Soviet Union, he believed he would march up to Moscow virtually unopposed, genocide the Russian people, and move his German subjects in to enjoy the land and resources of that vast expanse.

---

2. PJ Cornell is a member of the American Communist Party of Texas. He joined the Communist movement in 2023 after a period of education that began in 2021 as a member of the Infrared community. Prior to that, he was a card-carrying member of the Libertarian Party for several years, beginning in 2006, and was involved in local North-East Texas Tea Party activities in 2012. He earned BA degrees in Slavic Studies and Policy Studies from Rice University in 2007, and became familiar with phenomenology and depth psychology as a graduate student at the University of Dallas from 2015-2016, where he began, but did not complete graduate coursework in Philosophy and Industrial and Organizational Psychology. He was commissioned as an Army Infantry Officer with one OCONUS deployment to Iraq (OIF, 2009-2010), ran a piano studio and gunsmith shop in Powderly, TX, and now has a technical career that has ranged from low voltage installation and repair, to mechatronics and robotics, to data center commissioning work. He has written on subjects ranging from philosophy, psychology, geopolitics, demographics, social issues, and economic theory and blockchain technology. He is a Marxist-Leninist with a populist-libertarian bias.

3. Editor's note: World War II.

And this was a reasonable assumption. Russia had just secured its freedom not 2 decades ago, and had begun its short existence as a subsistence farming feudal backwater.

But what his army encountered there shocked him to his core. He found a mighty industrial power with tens of thousands of tanks, aircraft, and artillery pieces ready to support tens of millions of determined, well-armed soldiers.

When Stalin took the reins of power, he inherited a country that was far behind the Western powers in development, and yet, at first, he led that country with a fairly light touch, allowing the Soviet citizens to enjoy the freedoms they had just earned in their bloody Civil War. However, he quickly realized what a threat fascism was posing to his nascent Union, and so he rapidly mobilized and galvanized the Soviet peoples for another war. The Soviets developed a collective culture built around shared objectives and values and built and fought as a unified whole. The results were inconceivable to Hitler, and not even fathomed by the modern West.

But tanks and planes are not the only things which are required to secure the survival of a nation. What good is a tank without a crewman loading rounds into the chamber. What good is a bomber plane without an infantryman on the ground drawing fire and pointing out the target. Victory and collective survival still come down to men on the field facing down death itself.

Facing the enemy of your country and your family is an individual choice. *But the practice of the Christian message at scale in the face of mass destruction can only be a collective experience*. The Americans who returned from war left as individuals and came back as members of a collective that had changed them forever. The Russians who fought, or even simply survived through that war became, as individuals, the collective itself, all the way down to the marrow of their bones.

For the soldiers and civilians who experienced the sieges of Leningrad, Stalingrad, and Moscow, there was no escape, there was no reprieve, and there was no relief. There was only the day in, day out struggle to survive and overcome. Half of the populations of each of these cities gave their lives to this struggle, due to starvation, collateral damage, and direct kinetic battle. Those who survived did not survive as distinct individuals, but as *a people*, unified in fire, sorrow and blood.

Having lived in the city formerly known as Leningrad for several years, I can tell you that the heroism of that place is palpable.

One time, when I was visiting the Texas State Cemetery, I was overcome by the presence of the heroes buried there. I could feel the spiritual presence of the men and women lying there in a way that was out of place for Austin, TX.

If that experience was a summer shower, then that same experience is the sea itself when you walk the streets of St Petersburg.

In the American wars which have followed the second World War, especially since Vietnam, and to include my own military service experience, this phenomenon of individual courage in war as a form of brotherly love has been heightened, and not diminished. Our government has told its young men and women that they are being sent off to war to fight evil, implacable foes who seek to dominate the free world, and America itself.

But what we have discovered again and again is that this has been a lie. We have fought these wars to project the power of the US dollar, and to put more money and control in the hands of the business and financial elites of the Western world.

Even before WWII, this was sometimes the case; so much so that the WWI hero, General Smedley Butler once remarked, “War is a racket.”

So while the warriors of that conflict could take solace in the fact that, at least their lives were not a waste in the grand scheme of things, American service men and women today have no such comfort, and that has directly impacted American military morale, and finally, even American military recruitment.

But for those who have served during these times of political degeneracy, the importance of service to one's brothers and sisters has become that much more central and vital.

As Harold G. Moore wrote in his book about his time in Vietnam, *We Were Soldiers Once and Young*, “We discovered in that depressing, hellish place, where death was our constant companion, that we loved each other. We killed for each other, we died for each other, and we wept for each other. And in time we came to love each other as brothers.”

It is that culture which has survived in the US Military, and which I experienced firsthand.

Christianity holds Jesus Christ as its object of worship. It does this because the example that Jesus gave us was one that cannot be fulfilled by any other human person. And yet, his message calls us to fulfill it.

What cannot be fulfilled individually, is fulfilled collectively.

If there is one takeaway from the Great Patriotic War, it is this:

As frail and imperfect as you are, together, with your family, and your neighbors, and your friends, and your allies, you are capable of more courage, strength, dignity, and sacrifice than could ever be expected of a one who is detached from the whole.

On Victory Day, remember that you are not just yourself. You carry within you your family, your friends, your nation, and your God, and all of these will be the shoulders you stand on as you face the challenges and tragedies of your life.

Victory Day In Ontario

By: Emrick Benedicto[4]

Eighty-one years ago, Nazi Germany unconditionally surrendered to the Soviet Union, ending a war which took the lives of twenty-seven million Soviet citizens.

Under the extraordinary leadership of Joseph Stalin, the Soviet Union came together as one nation to defeat a barbaric and genocidal horde which had tasked itself with the elimination of the USSR and its people. Fighting for their families and their homeland, the Soviet people claimed victory in the Great Patriotic War through their collective determination and unity of purpose. Their strength should serve as an inspiration to all of humanity, for the rest of time.

On behalf of the American Communist Party, I join you today to honor the Soviet heroes and everyone who risked their lives for our freedom from Nazi tyranny.

In that time, the Canadian and Soviet people fought beside each other against a common threat. From the volunteers of the Mackenzie–Papineau Battalion in Spain, to the enlisted men of the Third Infantry Division on the shores of Normandy, many Canadians also made the ultimate sacrifice while fighting fascism in Europe.

They shared this noble fate with millions of their allies in the Soviet army, in a moment of solidarity between our two nations.

Unfortunately, some in Canada have since gone on to distort the history of the USSR, denying its great contributions to humanity. Such lies not only devalue the efforts of Soviet veterans, but also those of the Canadian veterans who saw the Soviet Union as their treasured ally.

The American Communist Party opposes any attempt to undermine the history and sacrifice of the Soviet people, so that we may protect the dignity of all those who fought to liberate the world from fascism. We aim to speak on the part of all Canadians who extend their deepest gratitude and reverence to the veterans of the Second World War. We share a responsibility to inform the

4. Ontario Chapter Cadre, undergraduate student of Mathematics and Philosophy at the University of Toronto, and President of the American Communist Party University of Toronto Student League (ACPUTSL).

Canadian public about the bravery of our anti-fascist allies and the destined failure of fascism throughout history.

We are committed to the eternal legacy of this day, the day of victory over Nazism.

Vietnam Veteran: On the Significance of Victory Day

By: David Applewhite[5]

One place a friend of mine invited me to once was a state hospital in East Texas, for the mentally ill. He asked me to come speak to the veterans and all who were in the hospital. So I showed up, and got up to give my speech.

A patient on the first row kept yelling out, "Shut him up and get him out of here! That's the worst speech I've ever heard in my life."

I ignored it and kept talking, and he did it two or three more times. I finally looked down at the doctor behind me.

I said, "Doc, is there any way you can shut him up?"

He said, "No, no, keep going. That's the most sensible thing he's said since he's been here."

But I'll try to be a little better on this one.

May 9th. The day World War II ended. That day, for the first time, at the Elbe River, Soviet troops and United States troops met. There's a picture on the internet you can find of an American soldier shaking hands with a Russian comrade upon their entry into Germany. It's a significant holiday for the Russian people, as it marks the defeat of the Nazi rule of terror.

No one here today needs a history lesson on World War II. But, however, there are some young people that might need history lessons. I was at my granddaughter's birthday party, a skating rink. She was fourteen, I believe. At that time, I'd had eye surgery and had a black eye patch on. It looked really bad. One little girl came up to me. She said, "What happened to your eye?" I said, "Well, I got shot down in a dogfight over Pearl Harbor by the Germans in World War I." She said, "Wow."

So they need to start teaching some things in school.

---

5. David is a Dallas-based Vietnam War Veteran who spoke at the Victory Day event hosted by the ACP and the local Russian community.

Anyway. It reminds us of the beginning of the Nazi onslaught into Russia. The Nazis had signed a non-aggression pact with Russia, and we all know how that went. Hitler was never good at keeping promises or treaties.

The German army steamrolled into Russia, slaughtering over twenty million civilians, countless soldiers, and 3.5 million prisoners of war, Russian prisoners of war. They slaughtered 3.5 million of them. Then the beast of the Russian winter hit. The Nazi army was ill-equipped for the harshness of the weather. The supply lines were thin and far behind them, preventing them from getting the needed supplies and cold-weather gear. Then the wheels of fate turned, and it was the Russian army's turn to steamroll all the way to Berlin with Marshal Zhukov. You can visualize the joyful celebrations that were going on around the world, for the Allied side anyway, that the war had ended. Massive celebrations.

And now for the other side of the story, which is the main part of my speech. The veterans. The veterans of World War II, any war, but many wars. In the USA they're called the Greatest Generation. In Russia, the celebration is called the Immortal Regiment. And I kinda like that one a little better than the one we hear.

But the definition of a military veteran says: a person who has served in active service in the military, army, naval, or air forces. That's the definition for all countries' veterans. Let's look at what the veterans of Russia and the other Allied forces endured.

First, they had a pledge to protect their homeland from foreign occupation or invasion.

Second, there was the isolation of being apart from their families for extended periods, sometimes years. They were missing holidays, birthdays, deaths in their families, not being there to see their children's events, or even seeing their spouse.

Third is the cold and heat they couldn't get out of. They had no place. They worked in the weather, fighting the war in different climates, different cultures, different languages of foreign people.

Fourth are the visions of things that cannot be unseen, visions that linger for the rest of their lives and haunt them in their dreams.

Fifth are the difficulties in absorbing back into civilian life: anger issues, emotional problems, difficulty maintaining relationships. These are not just temporary problems. They unite all veterans into one cohesive group, no matter what country they're from.

World War II is perhaps the defining conclusion of a cooperative, united, and significant event of the world during that time. In 2025, it's estimated there were 7,000 World War II Russian soldiers, Army, Navy, left from that era. In the United States, around fifty thousand, and it's dropping rapidly. And perhaps today we can learn a lot from the World War II veterans about cooperation, mutual respect for different cultures, understanding between countries, and patience to allow all practical solutions to be examined before war.

An old Army general, Douglas MacArthur from the United States, stated: "The soldier above all others hates war. For it is they that are willing to lay down their lives for their country."

I pray that our schools start teaching history, or we'll repeat the same mistakes again. The children and young people of the United States and Russia are the future leaders of our countries. Talk to them. Tell them about the brave, gallant men and women who gave so much for our countries in World War II. Teach them about respect for culture and the need for cooperation between countries to avoid another devastating, unwanted war.

Thank you for the honor of being here today. It's a privilege to be part of this great celebration. Thank you.

A Boy from Lubbock

Fallon Julia Cochlin[6]

Lord, I miss my mama
I miss her awful bad
There's lots of things I never done
And things I never had

I learned from Daddy early
You do what must be done
And I must be a solider
Cause I'm Daddy's only son

I miss my old long hair
But I ain't worried much
I got more things to think about
Those fascist boys, and such

Today I saw a body
It spooked me pretty bad
I seen my share of dead folks
But this was extra sad

I knew this buck before the war
I seen his face back then
It ain't quite the same this time
Seein' him again

His face was bright the last I saw
He had this sideways smile
I thought he looked a bit like me
And now he's on the pile

Commander says we's closing in
He says prepare our head
He says the place is worse than Hell
Them people worse than dead

The stink has got us crying
And it's snowing in July
Commander says we gotta move
So I guess this is goodbye

Message From the Chairman: On the Occasion of the 250th Anniversary of 1776

Haz Al-Din[1]

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

On the occasion of the 250th anniversary of the American Declaration of Independence, let us not confine ourselves to mere apologetics about the American revolutionary tradition, and the inception of the first American state. Plenty of long words have already been devoted to explaining the nuances of the American War of Independence, with clear and lucid explanations about the meaning of socialist patriotism within the Marxist-Leninist tradition. Let us accept with equal clarity and lucidity the predicament we find ourselves in now, as an American nation.

At a certain point in the development of the United States of America, the Federal Government of the United States of America headquartered in Washington D.C. had become, for the majority of the men and women that live on this land, the equivalent of a foreign occupier. What we call the American nation has far surpassed anything that can find comprehensive representation from the Atlantic coasts where the founders of the first independent American state declared independence against the British Empire.

Through the civil war, the territorial expansion of the United States, the industrial revolution - and finally and most importantly, the rise of the integrated nationwide system of command-and-control created by the military-industrial complex: The nation has taken on a character which finds no real representation in its capital. It is now unclear where the true center of this nation exists, but it is most assuredly not in Washington D.C. Perhaps it is somewhere in Area 51: This location is simultaneously West of the Mississippi River, strongly associated with the secret militarized power behind the deception of “politics,” and, in American popular imagination, houses aliens.

The fact of the matter is that aliens of some kind do objectively rule the nation, and they’re just about as representative of the real national character of what we confusingly call America as we would expect invaders from another planet would be. The American nation itself is fundamentally unrecognizable, and beyond any conventional articulation. It is my view that artists like the late David Lynch had come the closest to actually giving what this nation is some kind of accurate representation. The conventional stereotypes associated with the American national character: Football, beer, burgers, performative patriotism - this is nothing more than some kind of collectively accepted simulacra of national existence. There is something deeply fake, deceptive, and false about it.

There is an America illuminated by this false, deceptive sun, and then there is the real America now submerged into the night of the world. Like old Yankee

guerillas, eyes pierced through the trees in the dead of night at unsuspecting redcoat prey, the real American nation of today sets its terrifying gaze upon the United States of America itself. When *it* declares independence, it will be as though a new nation had been born, both foreign and deeply familiar to a people not only oppressed physically by the United States regime, but psychically and spiritually. The nation is discursively, imaginatively, culturally, and materially kept from taking shape. Its spontaneous, authentic leaders are assassinated, jailed, slandered, or driven insane.

Only upon the lifting of this oppression will the men and women of today's America know the catharsis that the founders of the American state must have felt declaring independence from Britain.

2

What is to Be Done: Revolutionary Theory, or a Fashion Accessory for Hasan Piker?

Edward Liger Smith [1]

1. Edward Liger Smith (Eddie Smith) is an American political scientist and economist who works as a Co-Director at the Midwestern Marx Institute, the largest Marxist-Leninist think tank in the United States, and as an Executive Board member and Media Director of the American Communist Party.

On April 30th the popular leftist political streamer Hasan Piker posted a picture of himself on a train reading Vladimir Lenin's classic text *What is to be Done*. This book has long been a staple for Marxist political organizers as it lays out many core principles of political organization, while refuting many of the erroneous ideas permeating left wing spheres during Lenin's era. The text still has much relevance today as many of the tendencies that existed in the Russian left at the time are still alive and well in the modern era, albeit in new forms. The irony of Hasan Piker posting a picture with *What is to be Done* is that he himself represents many of the tendencies that Lenin criticizes explicitly in the book. One cannot help but wonder if he actually took the time to read Lenin's words, and if he did, how on earth did he not see his own political organizing strategies reflected in the elements of the Russian left that Lenin was critiquing? In this article I will show how Hasan Piker's political strategy of organizing within the Democratic Party diverges from the strategies advocated by Lenin, and lines up almost exactly with the strategies of those who Lenin criticizes in this famous work of Marxist theory.

Firstly, let us briefly discuss the context in which *What is to be Done* was written so that the reader can aptly understand the point that Lenin was making, and draw parallels between the opportunistic tendencies of his era and today's. A primary target of Lenin's polemic is the tendency of "Economism" which he connects to the theory of Bernsteinism, as expounded by the reformist socialist Eduard Bernstein. Another object of his critique is "tailism," which describes a tendency in which revolutionaries follow behind the spontaneous struggle of the working class- a struggle that is inevitable in all class societies, rather than positioning themselves as the leaders of it, or as being more theoretically advanced than the mass of workers already is organically.

The economists believed that revolutionary political struggle should be subordinated to economic trade union struggles, and the resulting conclusion of this strategy is that revolutionaries should fight for petty reforms that benefit workers, rather than fighting for the overthrow of the entire social system, even though the system itself is entirely antagonistic to their class interests. Here we can see the connection between Economism and Bernsteinism, a theory which emerged in the late 1800s positing that capitalism had become stable enough to stave off revolution, and therefore socialists should pursue reforms through parliamentary means, rather than full-scale upheaval of the capitalist social system.

Anyone who is familiar with Hasan Piker should quickly realize the connection between his views and those of Eduard Bernstein. Despite posing for social media photo-ops with Lenin, Piker argues that the American people are not ready for revolution, and therefore the goal of socialists should be to work through the Democratic Party to fight for reforms such as universal healthcare and free college. This is a deeply anti-Leninist position, as Lenin said not to tail behind the consciousness of the workers as it already exists by joining bourgeois parties, but to lead the workers by creating an independent political party of the most theoretically advanced segments of the working class and its allies. For Lenin, the working masses' lack of revolutionary consciousness was not an excuse to collapse into reformism, but a sign that the Communists must do a better job of leading the workers forward, and showing them the necessity of social revolution. The task is to teach working people of the capitalist system's inherent contradictions, showing them that the interests of the system's ruling elite are diametrically opposed to their own, and that the entire economy is built upon the exploitation of their labor by the unproductive classes. Not to abandon revolutionary struggle and become the left wing of the bourgeoisie.

As Lenin explains in *What is to be Done*, Bernstein's theory says that "Social-Democracy must change from a party of the social revolution into a democratic party of social reforms."[2] And how ironic that Lenin uses the term "democratic party" which is the literal name of the bourgeois party that Piker now advocates for Communists to work within today. And what's worse, the Democratic Party is not even a reformist party, but the party of empire and the ruling financial elite. Piker justifies his support for the Democrats by pointing to a very small segment of reformist socialists within the party like Bernie Sanders and Alexandria Ocasio-Cortez who he has hosted on his streams in the past. And far from pushing America closer towards social revolution, these reformist socialists have failed to even achieve any notable reforms, as they are routinely crushed by the corporate backed establishment of the Democratic Party, as was the case with Bernie Sanders' Presidential runs in 2016 and 2020. To promote such politicians, and such a strategy, in the name of Vladimir Lenin should be UNIMAGINABLE to anyone who has seriously engaged with his work!

Not only does Piker advocate for a strategy of working within the Democratic Party, but he actively derides those who are engaged in the work of building an independent political vehicle. Lenin said that the reformists "corrupted socialist

2. V. I. Lenin, *What is to be Done* (Paris: Foreign Language Press, 2021), 7.

consciousness by vulgarizing Marxism, by preaching the toning down of social antagonisms, by declaring the idea of the social revolution and the dictatorship of the proletariat to be absurd, by restricting the labor movement and the class struggle to narrow trade unionism and to a 'practical' struggle for petty, gradual reforms."[3] This passage describes Piker's attacks on revolutionary Socialists almost to a tee, as he regularly mocks those who take seriously the ideas of Marx and Lenin that he claims to uphold. The American Communist Party is treated as a joke on Piker's streams, and dismissed as an absurdity because they advocate for Communism despite its unpopularity in the current American political climate as a result of years of red scare brainwashing and CIA infiltration of left wing organizations. He even went as far as to promote the lie that the ACP was running a cryptocurrency scam on his show, and neglected to issue a retraction when this was shown to be completely false. This despite the fact that the ACP is actively engaged in the work of building an independent and sovereign Communist party, outside the grips of the Democratic Party, which has garnered massive attention and successfully mobilized workers in almost every state across the country.

Piker has similarly mocked the Revolutionary Blackout Network, a collective of black American Communists who advocate for revolution over reform, accusing them of grifting for attempting to organize a general strike. An ironic accusation considering nobody has made more money off of advocating for pseudo-socialist politics than Hasan Piker over the last decade. This is just one of many examples where Piker has harsher criticism for those attempting to build something independent of the Democratic Party, than for those working within the Party, even as it facilitated a genocide in Gaza.

On a recent stream Piker covered an interaction that he had on X where a Communist criticized him for supporting the same party that enabled Israel's genocide in Gaza. Hasan responded by claiming his critic was waiting for a revolution to arise spontaneously in America, while he, on the other hand, was actively fighting to replace Zionist Democrats with anti-Zionist Democrats. Hasan's criticism of spontaneity is meant to invoke Lenin, who polemicizes against the idea that revolutionary consciousness will emerge spontaneously within the working class without the existence of a vanguard party to lead them in that direction. However, this is a gross distortion of Lenin's argument, given that the Democratic Party is NOT in fact a vanguard party made up of revolutionary Communists and the most theoretically advanced segments of

3. Lenin, *What is to be Done,* 18.

workers. Lenin was instrumental in building a party that did act as this vanguard, which ultimately led the Russian peasants and workers in a successful revolution against the Tsarist Monarchy and the ruling economic elite of their era. What he did not do was join a ruling class political party in order to "move it left" from the inside by winning internal party elections. To claim that the Democrats could ever constitute the kind of independent vanguard party that Lenin advocated for is so patently absurd to anyone familiar with the party that it hardly warrants explanation.

In the same stream segment Hasan goes on to advocate for a vanguard strategy that is almost the polar opposite of the one advocated by Lenin in *What is to be Done.* He says, "I'm not standing in opposition of a Communist party in this country (despite his repeated criticisms and smears of the American Communist Party), I'm not standing in opposition of building a vanguard in this country, but you have to match up your organizational efforts with where the masses are. Americans self-identify as liberals…" he goes on to say that the idea of building an independent vanguard party is stupid, because first you have to build awareness of socialist ideas, and the best way to do this is by using the Democratic Party as a microphone with which to voice these ideas.

This strategy advocated by Piker reflects almost exactly the ideas of the economists and reformists in Lenin's day, although he tries to mask it in Leninist language. These ideas represent what Lenin described as tailism or tailing behind the masses and their existing political consciousness, rather than leading the masses forward by explicitly advocating for the necessity of social revolution. Lenin said of the reformists that they "want the revolutionaries… to recognize the 'legitimacy' of what exists; they do not want the 'ideologists' to try to 'divert' the movement from the path that 'is determined by the interaction of material elements and material environment.' They want recognition 'for the only struggle that the workers can conduct under present conditions," which in their opinion is the struggle 'which they are actually conducting at the present time.' " He went on to say "We revolutionary Social-Democrats, on the contrary, are dissatisfied with this submission to elemental forces, i.e., bowing to what is 'at the present time'... we declare that 'before we can unite, and in order that we may unite, we must first of all firmly and definitively draw the lines of demarcation between the various groups."[4] What Lenin says here directly refutes the strategy which Piker uses Leninist language to advocate for in his stream. Piker wants revolutionaries to recognize the "legitimacy of what

4. Lenin, *What is to be Done,* 22.

exists" rather than striving to build something which is ahead of what exists currently in order to lead the masses further forward. Instead of drawing lines of demarcation between the reformists and the revolutionaries, Piker wants us to work with the reformists in order to "raise awareness" of socialist ideas. He is advocating for the exact strategy that Lenin mocks the reformists for in *What is to be Done* when he says they want to "let the Marxist intelligentsia merge with the liberals for the political 'struggle.' " [5]

This strategy advocated by Piker is a gross distortion of Leninism that could only come from somebody reading his own ideas into Lenin's work, similarly to what the disgraced streamer Vaush did in 2024 when he tried and failed to show how the heroes of Marxism would have advocated for voting Democrat using cherry picked and distorted quotes. Piker may have in fact read Lenin's words, but he did so not in order to learn and sharpen his own political ideas, but to manipulate Lenin's theories in order to justify his current political strategies, which allow him to maintain comfortable relations with bourgeois politicians within the Democratic Party.

After re-reading Lenin's *What is to be Done* myself, I cannot help but think that Hasan is simply using it as some kind of fashion accessory to appear more revolutionary or "edgy" than he actually is. He is using Lenin as a prop for his social media photo-op, instead of earnestly trying to understand the vital points that he was making. This is ironic, considering that Lenin explicitly says in the first chapter of the text "If we judge people not by the brilliant uniforms they deck themselves in, not by the imposing appellations they give themselves, but by their actions, and by what they actually advocate, it will be clear that 'freedom of criticism' (the slogan of the opportunists of that era) means freedom for an opportunistic tendency in Social-Democracy, the freedom to convert Social-Democracy into a democratic reformist party, the freedom to introduce bourgeois ideas and bourgeois elements into socialism."[6] This statement so aptly describes Hasan Piker that one must wonder how he didn't have a moment of self-reflection upon reading it. While championing the ideals of socialism and Marxism as if donning a revolutionary uniform, Piker incessantly smuggles bourgeois ideals into the revolutionary struggle, to the absurd point of advocating that Communists work within a genocidal bourgeois party before building an independent vanguard.

---

5. Lenin, *What is to be Done,* 19.
6. [pg 14]

The final point I will make is that Piker often accuses the American Communist Party of being a Conservative political organization, for "dogmatically" upholding the traditional ideals of Marxism-Leninism, rather than tailoring its political program to that of the Democrats and Liberals. Lenin and the Russian revolutionaries he allied with faced similar allegations in their day, and on this topic he said

> *"We are marching in a compact group along a precipitous and difficult path, firmly holding each other by the hand. We are surrounded on all sides by enemies, and are under their almost constant fire. We have combined voluntarily, especially for the purpose of fighting the enemy and not to retreat into the adjacent marsh, the inhabitants of which, right from the very outset, have reproached us with having separated ourselves into an exclusive group, and with having chosen the path of struggle instead of the path of conciliation. And now several in our crowd begin to cry out: Let us go into this marsh! And when we begin to shame them, they retort: How Conservative you are! Are you not ashamed to deny us the right to invite you to take a better road!"*
>
> *Oh yes gentleman! You are free, not only to invite us, but to go yourselves wherever you will, even into the marsh. In fact we think that the marsh is your proper place, and we are prepared to render you every assistance to get there. Only, let go of our hands, don't clutch at us, and don't besmirch the grand word 'freedom'; for we too are 'free' to go where we please, free, not only to fight against the marsh, but also those who are turning towards the marsh."*[7]

Comrades, Hasan Piker is free to go into the marsh, where he may roll around in the mud with the likes of AOC to his heart's content. But those of us who believe in the ideals of Marxism and Social Revolution must resist the pull of the marsh and reproach those who follow Hasan Piker into its depths. The American people are in dire need of a revolution and of a vanguard party to lead them in that direction. The Democrats have failed to bring about even the most meager of reforms, and now is the time for the building of an independent political force that can act as the vehicle for genuine social revolution in this country. Do not fall prey to reformism and be a part of the effort to build the political party that America desperately needs. And to Mr. Piker, if you ever decide to start taking the words of V.I. Lenin seriously, we will be here building

---

7. Lenin, *What is to be Done,* 10.

the vanguard party. You are always welcome to emerge from the marsh and join us in this effort.

Marxism and Anarchism Are Incompatible

Haz Al-Din[1]

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the *Infrared Media Collective*.

Introduction [2]

We are not merely what we see when we look in the mirror. Human beings are not self-sufficient, isolated individuals whose reality can be reduced to what appears before us immediately. We are a part of a larger social whole that both precedes and defines us.

This distinction lies at the heart of the divide between Marxism and anarchism. To understand why Marxism and anarchism are fundamentally incompatible, it is necessary to first consider their respective conceptions of the relationship between the individual and the state.

Despite its claims to represent a radical alternative, anarchism and liberalism ultimately share the same metaphysical foundation. Thinkers as diverse as Thomas Hobbes, John Locke, Pierre-Joseph Proudhon, William Godwin, and Mikhail Bakunin share a common premise: the empirical individual is primary, while the state is secondary and derivative. In this view, the individual constitutes the fundamental unit of reality, and the state emerges only as the result of definite relations between already-existing individuals.

Marxism takes a fundamentally different view. Marxism rejects the notion that reality can be reduced to the interactions of isolated individuals. More broadly, Marxism rejects the assumption that relations between individuals are merely secondary or derivative of individual consciousness. Instead, Marxism analyzes the underlying material basis of social relations between individuals, arguing that these relations precede and define the conditions under which individuals themselves come into existence as social beings.

This essay examines the metaphysical foundations of anarchism and argues that Marxism and anarchism are ultimately incompatible. At the center of this incompatibility lies the question of the materiality of social relations, a sociological problem that marks the decisive philosophical break between the two traditions. The central contention of this essay is that, despite its proclamations of radical politics, anarchism ultimately shares the same individualist metaphysical premises as liberalism. Marxism, by contrast, proceeds from a fundamentally different conception of social reality, one

2. This essay was transcribed, edited, and adapted by Jonathan Brown, Managing Editor of *Red America* journal, based on: Haz Al-Din, “Why Marxism & Anarchism Are Incompatible,” *Infrared Show Clip*, uploaded by Talonsight, June 11, 2022, YouTube, https://www.youtube.com/watch?v=RFwqjhUyDLo

centered on objective social relations, class, production, and historical development.

Marx and Materialism

To understand the distinction between Marxism and anarchism, it is necessary to begin with Marx's critique of earlier forms of materialism. In the first of his *Theses on Feuerbach*, Marx writes:

> *The chief defect of all hitherto existing materialism... is that the thing, reality, sensuousness, is conceived only in the form of the object, or of contemplation, but not as sensuous human activity, practice, not subjectively.*[3]

What does Marx mean by this? He is arguing that earlier forms of materialism conceived of objectivity solely in the form of isolated objects – self-enclosed, atomized things existing independently of one another. Reality was understood as a collection of tangible entities that could be observed, measured, and contemplated. What this older materialism failed to conceive was labor, activity, and practice. More importantly, it failed to recognize that the relations between individuals is itself material.

At first glance, this appears to be a startling claim. How can relations be material? Individuals are tangible. They can be observed, measured, and directly encountered in reality. Relations, by contrast, appear to be intangible. One cannot point to a relation in the same way one can point to a physical object. Yet it is precisely this question that defines the philosophical divide between Marxism and anarchism.

For Marx, objectivity is not reducible to form. Objectivity is not merely the appearance of a thing as a discrete and identifiable object. Rather, objectivity is the dialectical unity of form and content. Therefore, relations themselves can be objective and material.

By the time we enter the world as conscious beings capable of recognizing and categorizing objects, we have already been materially determined. Our true

---

3. Karl Marx, “Theses on Feuerbach,” in *The Marx-Engels Reader*, ed. Robert C. Tucker (New York: W. W. Norton, 1972), 107–109.

material causes precede our conscious awareness of them. The arrogance of modernity lies in the assumption that once we have identified an object – a human individual, for example, or a water bottle – we have arrived at the essence of material reality. Marx's insight is that the very ability to differentiate and render the world intelligible as a collection of objects already presupposes material relations.

This is the scandalous insight of Marx. Relations between people exist before those relations become tangible to us. The relation itself possesses a material reality prior to the form in which it appears before consciousness. Consider, for example, the relation between capitalist and proletarian. Marx's argument is not that this relation becomes real only once a capitalist hires a worker. Rather, the relation possesses a material reality that precedes its immediate appearance. Relations of production can be material only insofar as they possess a primacy in relation to their actual manifestation and to the way they become phenomenally intelligible to us.

Marx argues that labor in relation to nature precedes consciousness. This does not mean that labor is entirely unconscious. Human labor certainly involves thought and imagination. Rather, it means that human beings are always already engaged in practical activity before that activity becomes fully intelligible to consciousness. We are doing something in reality before we can completely cognize it in conceptual form.

In this respect, Marx's argument bears a resemblance to what Freud would later describe as *drives* or the *unconscious*.[4] Before we inhabit a world of consciously cognizable forms, we are already engaged in activity. Human practice emerges from a deeper layer of reality that cannot be reduced either to animal instinct or to rational consciousness. It exists in a liminal space between the two.

One might think of this as a kind of ”dreamtime” – a primordial domain of practical activity that precedes conceptual understanding.[5] Material relations originate here, before they become recognizable as definite forms within consciousness. This does not mean that consciousness is unimportant. On the contrary, consciousness is indispensable to human labor. As Marx observed,

5. The Editors of Encyclopaedia Britannica, “The Dreaming,” *Encyclopaedia Britannica*, April 9, 2025, https://www.britannica.com/topic/the-Dreaming-Australian-Aboriginal-mythology.

what distinguishes human beings from animals is the capacity to raise the object of labor in imagination before realizing it in practice.[6] Yet consciousness itself emerges within a field of activity and material relations that precedes it.

The crucial point is that material reality cannot be reduced to immediately observable objects. Material relations are primary, while the forms through which those relations become visible to consciousness are secondary. It is this conception of the materiality of social relations that marks the decisive philosophical break between Marxism and anarchism.

The Fundamental Distinction Between Marxism and Anarchism

We can now return to the discussion of Marxism and anarchism. The disagreement between the two is not primarily political, but philosophical. It concerns the very nature of material reality itself.

For anarchism, liberalism, and related currents of thought, material reality is always already bound to its phenomenal form. When something is said to be material, it is understood as something that already exists in an apparently tangible and observable manner outside of consciousness. Materiality is identified with the object as it appears. A thing is real because it can be seen, measured, or otherwise encountered as a definite object.

Yet this conception immediately confronts a paradox. How do we know that something is tangible? How do we know that something exists independently of our minds? The object is only known to us insofar as it has first become cognizable to consciousness. The very claim that something exists outside the mind appears to presuppose the activity of the mind itself.

Marxism, and particularly Lenin's development of Marxism, resolves this contradiction by rejecting the dichotomy altogether. The opposition between subjective consciousness and objective reality is a false one. Although consciousness plays an indispensable role in giving form to reality within thought, form itself is not simply given. Human beings actively participate in the production of form through cognition.

---

6. Karl Marx, “German Ideology,” in *The Marx-Engels Reader*, ed. Robert C. Tucker (New York: W. W. Norton, 1972), 114.

For this reason, Marxism does not identify materiality with form. Materiality belongs to content. More precisely, materiality is the content of the dialectical relation between form and content. Form belongs to the sphere of thought; it is the way content becomes intelligible to consciousness. Materiality, however, refers to the objective content that precedes and underlies its phenomenal appearance.

This distinction carries profound implications. If objectivity precedes form, then the state cannot be understood as merely an arithmetic relation between already-existing individuals. The materiality of the state precedes its tangible appearance. The objective basis of statehood exists prior to the particular forms through which it manifests itself. In this sense, the state is objective before it is apparent.

Consequently, Marxism does not conceptualize the state as a voluntary arrangement, a conspiracy, or an arbitrary mechanism through which certain individuals impose themselves upon others. The state is not the result of a simple act of domination. Rather, it is derivative of objective class relations and relations of production. The state emerges from material relations that exist independently of the consciousness of particular individuals.

Anarchists, however, start from the opposite premise. The state is understood as beginning with the arbitrary elevation of some individuals over others. Whether this is expressed through the liberal myth of a *state of nature* or through anarchist theories of coercion and domination, the underlying premise remains the same. Individuals are primary, while the state is secondary. Society is conceived as a collection of atomized individuals who are either forced into association through violence or who would otherwise enter into purely voluntary communal relations.

Despite their differences, the liberal and anarchist perspectives share the same metaphysical premise. The state is understood as the result of relations between individuals rather than as the expression of objective social relations that precede and constitute those individuals. It is precisely at this point that Marxism and anarchism part ways. For Marxism, objectivity precedes form. For anarchism, objectivity is identified with already existing forms. Consequently, contemporary anarchists conceive of society as a network of domination and subordination in which individuals compete for varying degrees of power. This framework is heavily indebted to the work of French

postmodernist thinker, Michel Foucault.[7] It leads to what I refer to as a *Foucauldian arithmetic*, in which power is conceived as a quantifiable calculation that can be distributed and accumulated between individuals. Marxists, by contrast, conceive of power between individuals as derivative of deeper material relations that precede and constitute those individuals in the first place. The entire dispute over the nature of the state follows from this deeper philosophical disagreement.

The Proletariat as the Truth of Humanity

The decisive difference between Marxism and anarchism emerges in their respective responses to modernity. By modernity, I mean the historical process through which traditional forms of life are subjected to abstraction and negation. Established institutions, inherited identities, religious traditions, communal bonds, and customary ways of life are increasingly dissolved and rendered subordinate to abstract social forces. The question confronting both Marxism and anarchism is how this negation ought to be understood. For Marxism, negation is a real historical process, but it is not the final truth of reality. For anarchism, by contrast, negation increasingly becomes the object itself.

Marx first encountered this problem through his study of modern philosophy. Beginning with Hegel, thought was increasingly elevated above reality and presented as the ultimate standard against which reality was to be judged. The contradiction between philosophical ideas and concrete reality generated a series of responses among the Young Hegelians. If reality appeared to contradict thought, the conclusion increasingly became that reality itself must be deficient.

This tendency found expression in thinkers such as Max Stirner and Bruno Bauer. Stirner, for example, reduced reality to the individual ego, treating every social or objective reality that transcended the individual as a mere abstraction or ”spook.”[8] Feuerbach represented a more serious attempt to move beyond idealism by locating reality in humanity rather than in pure thought.[9] Yet even

---

7. Michel Foucault, *Power/Knowledge: Selected Interviews and Other Writings, 1972–1977*, ed. Colin Gordon (New York: Pantheon Books, 1980).

8. Max Stirner, *The Ego and Its Own*, ed. David Leopold (Cambridge University Press, 1995), 40.

9. Marx, “Theses on Feuerbach,” 107–109.

Feuerbach's humanity remained an abstraction – a philosophical ideal rather than a concrete historical reality.

Marx's response differed fundamentally from both. He accepted the reality of the negation produced by modernity, but he refused to treat negation itself as the ultimate object. The contradiction between modernity and human existence was not the final truth of reality but only a moment within a larger process of development. Behind this process stood a positive material being that Marx identified as humanity itself.

Unlike Feuerbach, however, Marx did not understand humanity as an abstract essence. Rather, he located humanity in a concrete historical subject: the proletariat. Marx described the proletariat as the ”industrious soil” of the people, the class in which the truth of humanity appears most clearly.

The proletariat occupies this position because it is the remainder produced by the process of modernity itself. It is what remains after the abstract and destructive tendencies of modern society have stripped humanity of its traditional forms. Having undergone the complete loss of man in the face of modernity, the proletariat is the class that can only find its liberation through the complete recovery of humanity. For this reason, the proletariat becomes the truth of humanity.

At this point the divergence between Marxism and anarchism becomes unmistakable. Both begin from the same contradiction produced by modernity, yet they arrive at opposite conclusions. For Marx, the proletariat is the objective reality through which the negation of modernity can be overcome. The proletariat represents a form of positive being capable of reconciling the contradictions of modern life.

Yet this does not mean that the proletariat exists as a self-subsisting object entirely independent of consciousness. Marx's discovery of the proletariat as the truth of humanity was simultaneously an acknowledgment that this had been the underlying reality all along. The development of consciousness – particularly the history of philosophy culminating in German Idealism – was not external to this process. Rather, consciousness itself participated in the development of the object. Humanity's intellectual journey through philosophy formed a moment within the historical development through which the proletariat emerged as the truth of modern society. The implication is that, for Marx, material reality does not exist at the expense of form. Nor can form be

dismissed as a mere illusion. Form participates actively in the realization of its own content. The proletariat therefore appears not simply as an empirical social class, but as the historical form through which humanity comes to recognize its own material reality.

For anarchism, by contrast, negation itself becomes the object. The experience of alienation, domination, and abstraction produced by modernity is elevated into the ultimate truth. Where Marx seeks reconciliation, anarchism finds authenticity in negation itself. Humanity, culture, religion, civilization, nationhood, and even the state become little more than masks concealing an underlying absence.[10]

The implications of these two perspectives are profound. Marxism seeks the recovery of humanity through a reconciliation of modernity's contradictions. This reconciliation extends beyond class alone and opens the possibility of restoring particular forms of human life – cultures, civilizations, religions, traditions, and nations – on a new historical basis. Anarchism, by contrast, rejects reconciliation altogether. The goal becomes the negation of all determinate forms in favor of a perpetual opposition to them.

This is what Hegel described as the ”unhappy consciousness.”[11] The dialectic proceeds through affirmation, negation, and the negation of negation. Marxism seeks to move through negation toward reconciliation. Anarchism, however, remains fixed within the moment of negation itself. It is, in this sense, a philosophy that becomes trapped within the second moment of the dialectic.

Social Relations and the State

From a Marxist perspective, there is no hidden substance of the state lurking behind its outward appearance. The state is not a mere façade concealing some deeper reality. Rather, the state participates in the development and realization of its own material object through its concrete and visible forms. There is no ”true” state concealed behind the apparent state. The form of the state is itself the realization of its material content.

---

10. Percy Bysshe Shelley, “The Mask of Anarchy,” in *The Complete Poetical Works of Percy Bysshe Shelley, Including Materials Never Before Printed in Any Edition of the Poems*, ed. Thomas Hutchinson (London: Humphrey Milford, Oxford University Press, 1914), 335–42.
11. Georg W. F. Hegel, *The Phenomenology of Mind* (Mineola: Dover Publications, 2003).

This is precisely why Marxists can make the seemingly paradoxical claim that relations of production are more fundamental than their phenomenally apparent forms. The relation is, in a certain sense, more real than the appearance through which it manifests itself because the relation expresses the essence of that appearance.

Consider, for example, the relation between capitalist and proletarian. This relation cannot be reduced to what takes place on the factory floor, nor can it be understood simply as a contractual agreement between two individuals. The capitalist relation does not originate in the conscious decisions of particular persons. Rather, it is rooted in objective contradictions that define the very conditions under which individuality itself is constituted.

The bourgeois state provides a clear illustration of this process. It establishes a universal political community in which all individuals appear as formally equal citizens. Before the law, distinctions of caste and privilege are abolished, and individuals confront one another as equal legal subjects. Yet it is precisely this formal universality that gives rise to a distinctive social relation: a society in which some individuals sell the products of labor while others sell labor-power itself.

From this standpoint, capitalist social relations can be derived even before their most obvious and visible manifestations appear. The relation is primary because it does not refer to a consciously created relationship between individuals. Rather, it refers to a deeper material reality that precedes and conditions those relationships. This reality is objective, unconscious, and material. It exists prior to the forms through which it becomes visible to consciousness.

This leads Marxists and anarchists toward fundamentally different conceptions of the state. For anarchists, the state represents the arbitrary power of some individuals over others. It is the expression of one will imposed upon another. The state is therefore understood as an instrument of domination external to society itself. Marxism rejects this interpretation. The state is not the arbitrary elevation of one will over another. Rather, it represents the highest level at which individuals enter into definite social relations. The state gives institutional form to objective relations of production and to the social conditions through which individuals relate to one another as members of a larger social whole.

In this sense, the state is not merely an instrument of coercion but the political expression of a material social reality. The objective relations embodied within

the state are not created by individual acts of will. They emerge from the historical development of society itself and define the conditions through which humanity relates to its own universality.

This insight carries implications beyond political theory. Human beings are not simply isolated individuals who first exist and then enter into social relations. Before we consciously ask, ”what am I?”, we have already been situated within a network of objective social relations. As Jacques Lacan observed through his notion of a *chain of signifiers*, individuals acquire meaning only through their place within a larger structure of relations.[12] The individual is always already embedded within a social reality that precedes conscious self-understanding.

The Social Whole

Human beings are not merely isolated individuals – we are defined by our participation in a larger social whole. While this notion might appear strange to the modern Western mind, many civilizations outside of Europe have historically treated it as a matter of common sense. The notion that an individual is defined, at least in part, by his membership within a greater social totality has long been an intuitive feature of social life in civilizations such as China and India.

In this respect, Marxism begins from a premise that many non-Western traditions would readily recognize: the individual cannot be understood apart from the larger social reality of which he is a part. The difference, however, is that Marx transforms this intuition into a scientific theory. Rather than relying upon mythological, religious, or metaphysical explanations to account for humanity's place within a larger social whole, Marx seeks to establish what might be called a science of sociality.

Traditional civilizations often explained social unity through reference to transcendent principles. The state might be understood as possessing divine origins, or society itself might be viewed as the earthly realization of a sacred order. Such explanations recognized the reality of the social whole, but they did so through forms of consciousness that could easily drift into mystification or superstition. Marx's approach differs fundamentally. He rejects the need to appeal to any external or transcendent principle in order to explain humanity's

12. Jacques Lacan, *Écrits: A Selection*, trans. Alan Sheridan (New York: W. W. Norton, 1977).

participation in a larger social totality. Human beings are connected to one another through objective material relations.

The social whole is neither a mystical abstraction nor a divine organism. It is constituted through the relations of production that organize and reproduce social life. Production, in this sense, is more than the presence of markets, commodities, or financial exchange. Rather, production encompasses the means through which human beings secure their subsistence, transform nature, organize their collective existence, and reproduce their way of life across generations. The material relations of production therefore define the manner in which individuals participate in a larger social whole. They determine how human beings relate not only to one another, but also to nature and to the conditions of their own existence. The social whole is not an abstract idea imposed upon individuals from above. It is reproduced through the practical activity by which human beings sustain and recreate their lives.dsds

The Problem with Technocratic Interpretations of Marxism

Unfortunately, certain Western interpretations of Marxism have sought to discard Marx's dialectical investigation of the social whole, transforming Marxism into a mere technocratic doctrine. This perspective mirrors the failings of earlier mechanical materialists who focused on isolated objects while neglecting the dialectical whole. This tendency is evident in the work of Hungarian philosopher György Lukács, who treated Marxism as a mechanism to render sociability entirely transparent and vulnerable to scientific consciousness.[13] A comparable shift occurred within the Analytical Marxist tradition, championed by figures like G.A. Cohen and Erik Olin Wright, which abandoned dialectics to align Marxism with the empiricist methods of conventional social science.[14] These approaches share a common flaw: they conceptualize knowledge in static, technocratic terms, ultimately reducing society to a mere target for technological control and scientific domination.

By contrast, one aspect of the indispensable wisdom of Joseph Stalin was that he saw Marxism as a science of the social whole. Stalin refused to engage in

14. David Leopold, “Analytical Marxism,” *The Stanford Encyclopedia of Philosophy*, Fall 2022 Edition, ed. Edward N. Zalta and Uri Nodelman, https://plato.stanford.edu/archives/fall2022/entries/marxism-analytical/.

the sort of technocratic thinking so common to Western interpretations of Marx. One clear example of this can be seen in the Soviet Union's efforts to collectivize the countryside. Stalin understood that the relations of production that permeated the countryside were holding back industrialization. These productive relations were leftover from the agrarian reforms introduced by Prime Minister Pyotr Stolypin in the early 20th century, which aimed to modernize Russian agriculture, dismantle the collective village commune system, and establish a loyal, prosperous class of independent peasant landowners to stave off revolution. From Stalin's perspective, collectivization was not simply an administrative or technocratic measure. It was an attempt to transform the underlying social relations that had become an obstacle to further development of Soviet society and to bring the countryside into alignment with the broader requirements of socialist industrialization. The only way Stalin was able to accomplish this task was through his dialectical study of the social whole.

The practical relevance of Marxism-Leninism as the science of the social whole is vividly demonstrated today in the People's Republic of China. While there is a broad consensus within the nation that traditional small-scale agriculture has become unsustainable, these agrarian relations are deeply woven into the historical fabric of Chinese civilization. Consequently, as the Xi Jinping era oversees the transition away from this economic mainstay through targeted poverty alleviation campaigns, the underlying essence of these ancestral social bonds is not being discarded but rather distilled into new structures. This continuity manifests in the realm of real estate, where small-scale apartments now serve as the modern equivalent of the traditional plot – providing citizens with stable home-ownership buttressed by various state-supported benefits.

In *The Communist Manifesto*, Marx and Engels famously observed that the capitalist mode of production tears apart the traditional social bonds that had held civilizations together for centuries, replacing them with "naked self-interest" and "shameless, direct, brutal exploitation."[15] The religious, political, and cultural forms that characterized earlier modes of production are stripped of their sacred character and reduced to mere monetary relations, to mere "callous cash payment."[16] As Marx and Engels explained, "all that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses his real conditions of life, and his relations with his

16. Marx and Engels, "The Communist Manifesto," 337.

kind."[17] It is in this sense that the bourgeoisie conceives of science as an instrument of calculation, administration, and control – a means of mastering society through technocratic domination rather than understanding it as a living social whole.

But Marxism-Leninism – the science of the social whole – resists this tendency. It does not reduce humanity's sacred historical forms to mere illusions. Rather, it seeks to preserve and elevate them. The oceanic depth of humanity's civilizational character, expressed through literature, poetry, art, religion, and culture, is not abolished under socialism but carried forward onto a higher historical foundation. This is the purpose of a science of the social whole: not a narrow, technocratic sociology that employs empiricist methods as instruments of management and control, but a comprehensive understanding of society capable of integrating, transforming, and uplifting the essential bonds that have united human civilizations across history. It is this quality of statesmanship that can be seen in the leadership of figures such as Xi Jinping, Mao Zedong, and Joseph Stalin. These leaders represent a return to Asiatic statesmanship in the highest sense of the term, with their ability to grasp society as a living totality. Such a distinctive form of political wisdom is made possible only through Marxism-Leninism.

Conclusion

The central argument of this essay has been that Marxism and anarchism are not merely competing political strategies but fundamentally different philosophical worldviews. Their disagreement originates at the level of metaphysics, sociology, and the very conception of human reality itself. For anarchists, society is ultimately reducible to the individual, and the state is viewed as an external form of domination imposed upon society, lacking any objective foundation. Marxism begins from a fundamentally different premise, seeing individuals as constituted through definite social relations. The state is therefore not an arbitrary power structure imposed on society, but is better understood as the political expression of historically developed relations of production. This Marxism provides such a radically different response to the challenges of modernity than anarchism does. As the capitalist mode of production uproots traditional forms of life, subjecting human beings to a process of abstraction and negation, Marxists see the proletariat as the class

17. Marx and Engels, "The Communist Manifesto," 338.

capable of recovering and reconciling what capitalist-modernity has torn apart. Anarchism arrives at the opposite conclusion, elevating negation itself into the highest principle and casting doubt upon the legitimacy of all social institutions. It is in this sense that anarchism shares a common structure with both liberalism and fascism. Despite their obvious political differences, all three begin from the same individualist premise and remain trapped within the contradiction between the individual and the social whole. Marxism, by contrast, seeks to reconcile the contradiction by locating individuals within the objective social relations that constitute them.

The question, therefore, is not whether human beings should be free from society, but whether they can understand the social relations through which they become what they are. Marx's enduring contribution was to demonstrate that these relations are neither arbitrary nor unknowable. They possess an objective reality that can be studied scientifically. Marxism thus emerges not merely as a theory of class struggle or political economy, but as a science of humanity itself that allows us to grasp the social whole and allow human beings to consciously participate in their own historical development.

On Long March Ethnic Minority Films

Ba Longfeng[1] & Chet Ozmun [2]

---

1. *Ba Longfeng (*巴陇锋*) is an author, screenwriter, and specialist in Long March film studies. He is known as the "Bard of the Silk Road." His literary works include* Clouds Loom Over the Qinling Mountains (《云横秦岭》), Forever Lost, My Love (《永失我爱》), Silk Road Roots (《丝路寻祖》), Dawn of May (《五月黎明》), Qinling Homestead (《秦岭人家》), and the essay collection Ballet on the Tip of a Pen (《笔尖上的芭蕾》). *He is the recipient of numerous literary awards. His novels are read widely throughout Asia, and multiple full-length novels are scheduled for translation into English for publication in the United States and Canada by Midwestern Marx Publishing Press. His full-length academic essay collection* The Long March on the Silver Screen (《银幕上的长征》) *is forthcoming in Chinese.*

2. Chet Ozmun is a freelance translator who lives and works in Chicago, IL. He is a cadre in the Illinois chapter of the American Communist Party and a member of the ACP Department of Education.

Translator's Introduction

> *History is a rich mine for literature and art, providing us with an inexhaustible source of creative material.*[3]
>
> —Ba Longfeng

> *Without the Silk Road, there is no Karl Marx.*
>
> —Haz Al Din

2026 marks the 90th anniversary of the triumphant conclusion of the Red Army's Long March. For American readers who may be unfamiliar with the sheer scale of this historical event, the Long March (1934–1936) was a massive strategic relocation undertaken by the Chinese Workers' and Peasants' Red Army to evade the encircling annihilation campaigns of the Kuomintang (KMT). It was a historically unprecedented feat of staggering logistical and human endurance. Over the course of two years, the Communist forces fought more than 600 battles, crossed 24 rivers and 18 mountain ranges, and traversed roughly 25,000 *li* (approximately 7,800 miles) across 14 provinces before the three main front armies victoriously converged in Gansu in October 1936.[4]

However, a crucial detail is often overlooked in Western historical memory: the Long March's indispensable context within the remote frontiers of Western China. In this unforgiving terrain, many Red Army soldiers for the first time in their lives came into direct contact with China's diverse ethnic minority populations. The Red Army's survival depended upon their ability to navigate local tribal dynamics, establish united fronts, and forge life-or-death alliances with these historically marginalized groups. As the translated essay below will explore, these early frontier encounters laid the historical foundation for the Communist Party of China's (CPC) enduring policies toward ethnic minority autonomous regions.

See also Jin Yinan, *Misery and Glory: The Long March and Its Antecedents* (Beijing: Foreign Languages Press, 2020). For a more personalized account of how the Long March continues to influence young people in the Xi Jinping era, see Huang Wenxiu, *A New Long March: The Poverty Alleviation Diaries of Huang Wenxiu* (Iowa: Midwestern Marx Publishing Press, Forthcoming).

Skeptical American readers might reasonably ask: why does any of this matter to our own political context today? To answer this question, we have to first understand that the Long March was an important turning point for the CPC in adapting Marxism to China's unique national conditions. Pushed to the brink of annihilation, more and more Party leaders were realizing that simple ideological purity was not enough to guarantee survival.

The turning point of this awakening occurred in January 1935 at the Zunyi Conference in Guizhou Province. Prior to this historic meeting, the Red Army had suffered devastating, catastrophic losses, most notably during the Battle of Xiang River. This was because its leadership was blindly executing the rigid military dogmas of the Soviet Comintern, enforced heavily by the foreign military advisor Otto Braun (known in China as Li De or Bo Gu). At Zunyi, the CPC decisively broke with this approach. The conference firmly established Mao Zedong's leadership and marked the first time the CPC independently applied the fundamental principles of Marxism-Leninism to solve the concrete realities of its own revolutionary path.[5] As Qu Qingshan, head of the CPC Institute of Party History and Literature, notes in his analysis of the conference, Zunyi effectively ended the dangerous tendency of "dogmatizing Marxism and sanctifying Comintern resolutions and Soviet experiences." By severing their reliance on foreign templates, the CPC embraced the foundational tenets of independence and "seeking truth from facts," charting a uniquely Chinese path forward.[6]

There is of course a profound and urgent lesson here for American Marxists. For decades, the American left has been heavily gatekept by a coastal, academic subjectivity that often imports European theories and applies them mechanically to the American working class.[7] Just as the CPC learned at Zunyi that they could not simply copy-paste Russian dogma onto the vast, diverse, and complex realities of China, American communists must learn to localize our struggle. We cannot rely on imported models or seek validation from external gatekeepers. Instead, we must follow the *spirit* of Zunyi by directly applying Marxist principles to our uniquely American material, cultural, and

historical conditions. We must embrace the genuine, untamed spirit of our own frontiers to forge a truly homegrown socialist movement.

Looking even deeper, the terrain of the Red Army's Long March through ethnic minority regions shares massive overlap with the geography of the historic Silk Road. When the Chinese communists traversed these frontiers, they were treading upon the ancient arteries of Eurasian trade and cultural exchange. The Red Army's early integration with the diverse minority populations of Western China forged a vital national unity that laid the political and material groundwork for the modern development of these regions. Eurocentric histories often portray these regions as remote and desolate hinterlands, but Western China and Central Asia have always been the true historical crossroads of human civilization. Today, these regions have been revitalized as the beating heart of global socialist development, serving as the central hub for the monumental Belt and Road Initiative (BRI).

As Haz Al Din has forcefully articulated, Western leftism has long treated the last two centuries of European history as the sole engine of human progress, completely ignoring millennia of civilizational development, trade, and philosophical exchange across the Silk Road and Eurasia that made European development possible in the first place.[8] American Marxists must break from this narrow framework and turn our attention to Western China's diverse ethnic and economic development. The contemporary reality of the Silk Road proves that socialism can thrive through concrete infrastructure and genuine ethnic unity. By studying the legacy of the Long March and linking this history to the ongoing developments of the Belt and Road Initiative, American communists can champion a materialist politics of civilization-building that actively defies the balkanization and decline perpetuated by Western imperialism.

In the US this is a complicated and under-explored subject/region, but as American readers seek to dive deeper into this vital intersection between the Long March, Western China's ethnic minorities, and the Silk Road, there is no scholar more qualified to guide them than the author Ba Longfeng. Ba was born in Gansu Province, and he currently resides in the historic western capital of Xi'an.[9] A CPC member himself, his academic foundation is built upon decades of specialized research into how the People's Republic of China (PRC) constructs and projects its own historical memory. In 2007, he completed his

9. " 巴陇锋" [Ba Longfeng], Baidu Baike, last modified May 29, 2026, https://baike.baidu.com/item/%E5%B7%B4%E9%99%87%E9%94%8B/5517632.

Master's thesis at Lanzhou University, titled *The Long March on the Silver Screen: The Narrative Art of Long March-Themed Films*.[10] This trailblazing work meticulously dissected the evolution of Long March cinema, exploring how PRC filmmakers used shifting cinematic narrative strategies to portray historical truths, legitimize the revolution, and depict ethnic minorities on the frontier. The translated essay that follows is an excerpt from his highly anticipated, forthcoming academic book of the same name, which expands upon nearly twenty years of this dedicated research.[11]

Ba Longfeng is also a widely acclaimed novelist and screenwriter. In Chinese media he is known as the ”Bard of the Silk Road.”[12] His massive literary output bridges the gap between high-level geopolitical history and popular taste. His fiction, which includes the novels *Silk Road Romance* and *Silk Road Roots*,[13] breathes vibrant cinematic life into the ancient and modern realities of Western China. His novel *Clouds Loom Over the Qinling Mountains* was shortlisted for the Mao Dun Literature Prize, China's highest and most prestigious literary honor. As literary critic Ma Congmin has noted, Ba's unique writing style can be summarized as ”popular modernity,” tackling complex historical and political themes and translating them into engaging, accessible, and deeply human narratives while making use of cinematic tropes.[14] It is this ability to merge rigorous historical theory with the living spirit of the frontier that makes Ba Longfeng the perfect guide for American Marxists seeking to understand the ongoing legacy of the Silk Road.

As you dive into Ba Longfeng’s essay below, you’ll notice a specific formatting choice of mine. The original Chinese characters of all film titles have been retained in parentheses alongside the English translations. This is a purposeful tool I provided for the reader. Due to decades of Western cultural blockades, English-language distribution and subtitling of these classic Chinese ethnic minority films has been tightly limited. China for its own part continues to

---

10. Ba Longfeng, ” 银幕上的长征——长征题材电影的叙事艺术” [The Long March on the Silver Screen: The Narrative Art of Long March-Themed Films] (Master's thesis, Lanzhou University, 2007),

11. ” 巴陇锋” [Ba Longfeng], Baidu Baike.

12. Ibid.

13. Part one and two respectively of Ba Longfeng’s “Silk Road Trilogy.” Part three is still being written. *Silk Road Romance* and *Silk Road Roots* are both forthcoming in English translation from Midwestern Marx Publishing Press.

14. Ma Congmin, ” 锐评 || 通俗的现代性：巴陇锋作品浅论” [Sharp Critique || Popular Modernity: A Brief Discussion on Ba Longfeng's Works], 陕甘宁文学 [Shaanxi-Gansu-Ningxia Literature], WeChat public account, May 22, 2018, https://mp.weixin.qq.com/s/ubl5b9ny9DFjgpLDSvHSBA.

invest heavily in preserving and promoting these revolutionary narratives. See for example the massive ”Red Tourism” infrastructure and Long March National Cultural Park currently being expanded ahead of the 90th anniversary this year.[15] Nonetheless, these rich cultural products remain deliberately obscured from the Western public. Web searches using their translated English titles alone will often yield severely limited results.

Therefore, my formatting choice serves as a direct call to action. I strongly encourage readers, even those with absolutely zero Chinese language skills, to copy and paste these original characters directly into search engines and video hosting platforms such as YouTube or Bilibili. By utilizing browser translation plugins and auto-generated subtitles, anyone can begin to watch, study, and appreciate these works. American Marxists should take the initiative to actively bypass Western distribution limits. By tracking down these films yourselves, you can access a vital, suppressed history of socialist cultural production and take a crucial step toward independently exploring the cinematic and revolutionary legacy of Western China.

If we are to understand the future of global Marxism, we must understand the Silk Road and Western China. The shifting of the historical center of gravity back toward Eurasia is one of the defining developments of our era. I wish to express my deepest gratitude to Ba Longfeng for granting *Red America* the permission to publish this illuminating excerpt on Long March cinema, and for his immense trust in allowing Midwestern Marx Publishing Press to publish parts 1 and 2 of his Silk Road Trilogy. As you read Ba Longfeng’s analysis of Long March ethnic minority cinema, keep the profound lessons of Zunyi, the frontier, and the Silk Road close to heart. I hope this history will not only illuminate the cinematic and political triumphs of the Chinese revolution, but also serve as a theoretical tool and a source of inspiration for our own struggles here at home. History is indeed a rich mine, and the time to start digging is now.

On Long March Ethnic Minority Films

Among the nearly 100 films about the Long March, Long March ethnic minority films appeared relatively early. Long March ethnic minority films focus on the awakening of the people in ethnic minority regions, their subsequent voluntary participation in the revolution, and their support for the Red Army. The early appearance of this particular theme in movies about the Long March is connected to the history of the Red Army's Long March passing through remote ethnic regions. It is also closely tied to the active policies of the CPC and the national government toward ethnic minority autonomous regions.

After the founding of the PRC, New China strengthened its support for and construction of ethnic minority regions for three main reasons. Firstly, the Han nationality and the ethnic minorities are all inseparable and organic parts of the Chinese nation. Secondly, the ethnic minority regions at the time were still relatively underdeveloped compared to the vast Han regions, with some of these places still in the stage of serfdom prior to liberation. And thirdly, ethnic minority regions were located at the motherland's borders and therefore urgently needed to be rapidly stabilized. One important aspect here was intensifying propaganda work, namely cultural outreach campaigns in Xinjiang. This work has continued up to the present. The state likewise still carries out targeted assistance programs for Xizang, Xinjiang, border regions, and ethnic minority areas. This is one of China’s fundamental national policies.

In the early days of the PRC, the national literacy rate remained low, and language barriers separated ethnic minority regions from Han communities. Motion pictures, relying on audio-visual language, thus became one of the most convenient and effective communication vehicles for ethnic minority outreach, as well as a precious window through which outsiders could understand the realities of ethnic minority areas. A string of outstanding ethnic minority films debuted in this era. *Victory of the Inner Mongolian People* (《内蒙人民的胜利》, 1950) was New China’s first feature film focused on ethnic minority themes. It depicts the Inner Mongolian people’s struggle for liberation under Party leadership. *Caravans Ring Through Mountain Valleys* (《山间铃响马帮来》, 1954) is set against the backdrop of Yunnan’s borders, portraying the struggles of the ethnic minority villagers and the Chinese People’s Liberation Army as they unite to defend the frontier. Yet another example is *Five Golden Flowers* (《五朵金花》1959), which similarly showcased the local customs of Yunnan. With a love story between Bai minority youths as its main storyline, it quickly became a classic musical romance film. Released in 1964, *Ashima* (

《阿诗玛》) was China's first widescreen stereophonic color musical film. Adapted from a narrative epic of the Sani branch of the Yi ethnic minority group, it chronicles Ashima's resistance against the powerful Re Bubala clan, vividly showcasing Yi ethnic culture and spirit.

Through depictions of daily life across diverse ethnic communities, these films reflected the political, economic, and cultural development of China's ethnic minority regions in the early years of New China, making vital contributions to publicity and social progress in these areas. Colorful vignettes of ethnic minority life and fiery revolutionary struggle dominated the silver screen. Films like *Ashima* and *Five Golden Flowers* even screened overseas, winning international acclaim. *Ashima* set multiple industry milestones and drew massive global audiences. *Five Golden Flowers* was distributed across 46 countries, setting a record for Chinese film exports, and its theme song "Butterfly Spring Riverside" (《蝴蝶泉边》) remains widely sung to this day.

Against this broader cultural backdrop, it was only natural that Long March ethnic minority films would step onto the historical stage. Released in 1957, *Eagles in the Storm* (《暴风中的雄鹰》) stands as a pioneering Long March ethnic minority film. It was the second feature film with a Long March storyline, and the first motion picture comprehensively depicting the full history of the Long March. Its premiere triggered a wave of subsequent Long March ethnic minority productions, forming the second-largest subgenre of Long March films, trailing only Long March battleground films. Over the past 68 years, the Chinese film industry has released a core group of 13 films entirely dedicated to the ethnic minority experience during the Long March. In these films, the minority characters, their local struggles, and their eventual liberation are the focal point of the narrative. These films are: *Eagles in the Storm*, *Red Eagle* (《红鹰》1960), *Ode to the Qiang Flute* (《羌笛颂》1960), *Liupan Mountain* (《六盘山》1978), *Snow Lotus on the Iceberg* (《冰山雪莲》1978), *Spark in the Stockade* (《山寨火种》1978), *Yi-Hai Alliance* (《彝海结盟》1996), *Zhaxi's Long March* (《扎喜的长征》2006), *Red Bond* (《红缘》2017), *Story of a Chieftain* (《红色土司》2019), *Red Memory* (《红麦》2022), *Warm Waters of the Jinsha River* (《金沙水暖》2024), and *Tianbao* (《天宝》2025).

Beyond this primary group, there is a secondary category of eight films that feature ethnic minority elements, but with a different narrative focus. While these stories are set in minority regions, their focus remains squarely on the Red Army troops and the broader military narrative. In these films, the ethnic setting primarily serves as a backdrop to highlight the Red Army's discipline

and the Party's concept of ethnic unity. The films in this secondary category are: *The Jinsha River Bank* (《金沙江畔》1963), *Waves Beat the Jinsha River* (《金沙水拍》1994), *Years of Heartfelt Devotion* (《心动岁月》2003), *My Long March* (《我的长征》2006), *96 Hours of Life and Death* (《生死 96 小时》2016), *Half a Quilt* (《半条棉被》2020), *Oath of Blood and Fire* (《浴血誓言》2022), and *Bloodshed at Kunniu Mountain* (《浴血困牛山》2026). Taken together, these 21 films constitute an undeniably robust subcategory of Long March cinema that is ripe for further academic research.

It was in the 1960s that Long March war films began to rely heavily on ethnic minority elements, telling stories of eliminating ethnic conflicts when the Red Army passed through ethnic minority regions, propagating revolutionary truth, and expressing the theme of "a single spark can start a prairie fire." As can be seen above, such films have been continuously produced up to the present. But this subgenre deserves further unpacking. It bears five defining characteristics:

1. The central casts prominently feature distinct ethnic minority community figures with unique, historically defined social roles specific to China's frontier ethnic regions, each holding separate levels of authority and cultural standing. These characters include

    a. General tribal leaders (a broad term for informal, community-elected leaders who mediate local daily disputes without formal state-sanctioned hereditary power).
    b. Chieftains (local clan heads who govern single extended kinship groups and command their clan's fighters and land).
    c. Tusi (土司, formal imperial and early Republican-era hereditary ethnic rulers officially recognized by China's central government at the time. They were granted legal authority over large swathes of ethnic territory, tax collection, and local judicial systems. This hereditary feudal governance system unique to China's southwest ethnic borderlands differs fundamentally from Western tribal chieftain systems).
    d. Young maidens (term for teenage and unmarried young ethnic minority women who carry narrative weight in these films as representatives of ordinary marginalized ethnic community members, often embodying the civilian population's initial skepticism toward outside forces and eventual sympathetic embrace of the Red Army's mission, distinct from noble or elite ethnic female characters).

The film Story of a Chieftain *serves as a prime example showcasing this full spectrum of varied ethnic minority leadership roles as well as civilian youth roles.*

2. The story backdrops unfold in ethnic minority concentrated settlements amid wartime conditions, capturing distinctive local customs and landscapes, as can be seen distinctly in *Yi-Hai Alliance* and *Red Memory*.

3. In terms of plot, while the battle between the KMT army and the Red Army is taking place, an exceptionally arduous ”battle for popular support” also unfolds (e.g., *Eagles in the Storm* and *Yi-Hai Alliance*). After patient and meticulous work by the CPC and the Red Army, the ethnic minority people unconditionally support the Red Army, eagerly join the army, and organize ethnic minority forces to fight bloody battles against the reactionary army (e.g., *Snow Lotus on the Iceberg*, *Story of a Chieftain*). Some of the ethnic minority soldiers then mature into Party and state leaders (e.g., *Tianbao*).

4. The standard narrative framework follows a fixed arc. Complex circumstances place the Red Army at a disadvantage. Perilous situations force Red Army sacrifices. Finally a dramatic reversal stabilizes the crisis and expands revolutionary forces. This structure is embodied in *Eagles in the Storm*.

5. Over time, the documentary realism of the early ethnic minority films was completely lost, giving way to increasingly rigid formulas. By the time of the 1978 releases of *Liupan Mountain*, *Snow Lotus on the Iceberg*, and *Spark in the Stockade*, Long March ethnic minority film had become unsustainably stiff and formulaic. Consequently, the narrative models of early Long March war films, including these ethnic minority films, descended into a convoluted and muddled state.

The new millennium brought thorough artistic and narrative renewal to Long March ethnic minority films. After the genre had virtually disappeared for over a decade, ethnic minority storylines reappeared in *Waves Beat the Jinsha River*, this time as a narrative device used to demonstrate the revolutionary foresight, broad-mindedness, and rich character of the Red Army's leadership. The cinematic function of ethnic minority elements had drastically changed.

Conversely, *Yi-Hai Alliance* leaned heavily into the propaganda of the Party’s ethnic policies, echoing the creative tropes of earlier decades. By tapping back into this dramatic material, the film crafted a cinematic portrait of the military

strategist Liu Bocheng. 1996, the year *Yi-Hai Alliance* was released, marked the 104th anniversary of Liu's birth and the 10th anniversary of his passing. *Yi-Hai Alliance* sparked a second boom for Long March ethnic minority films, paving the way for subsequent productions including *Zhaxi's Long March*, *Story of a Chieftain*, *Red Whea*t, *Warm Waters of the Jinsha River*, and *Tianbao*.

Long March ethnic minority films have firmly established themselves as a vital, distinct genre of Long March cinema, and ethnic minority storytelling has undergone artistic rejuvenation in the 21st century. Films such as *Years of Heartfelt Devotion*, *Waves Beat the Jinsha River*, and *Bloodshed at Kunniu Mountain* all incorporate ethnic minority motifs, yet uniformly pay tribute to revolutionary heritage without overemphasizing ethnic themes or overly glorifying ethnic policies.

Against Genetic Determinism and Toward a Dialectical Biology

Daniel Sarkissian[1] and Minnal J. Kunnan[2]

---

1. Daniel Sarkissian was born and raised in Glendale, California, where he developed an early interest in both athletics and the sciences. He played varsity water polo and swim team in high school, continued with intramural soccer in college, and has participated in masters water polo post-college. For Glendale High School, he was fortunate enough to play with great teammates who helped win important championships, such as the Pacific League three years in a row from 2011-2013, the Los Altos Pre-Season Tournament in 2012, and the 2013 CIF championship for division 5 water polo, earning him an All-CIF Second Team spot and being included in the CIF all star games. Daniel was the starting goalkeeper in the 2012 Los Altos final, the 2013 pacific league final and the CIF division 5 final. Sports have remained a central part of his life, reflecting his belief that movement is the best medicine. Academically, Daniel graduated from UCLA with a B.S. in neuroscience with honors. Daniel serves as the Fitness Director of the California Chapter of the American Communist Party.

2. Minnal is a cadre member of the ACP and pursuing a post-graduate degree in stem cells and regenerative medicine.

Modern scientific research has problematized the vulgar, reductionist notion of the ”gene” to the point of its complete functional dissolution. Tremendous advances in biochemistry, cellular microbiology, and high-resolution microscopy have provided a wealth of empirical evidence to overturn traditional genetic dogma. Yet, American academic institutions stubbornly continue to peddle oversimplified Mendelian concepts of the gene and embrace an atomistic paradigm devoid of a holistic, unifying theory. In terms of classical Marxist political economy, our current material base of empirical scientific research has drastically outpaced the ideological superstructure of the bourgeois academy.

Despite mounting empirical contradictions and increasingly intricate models of gene regulation, the conceptual hegemony of Mendelianism remains firmly intact within scientific education, institutional funding pipelines, and broader public discourse. A telling example of this is any fitness influencer’s social media posts which will have numerous comments explaining how their physique is due to “just genetics”. Challenging this inertia is necessary not only to preserve the pursuit of material truth in science but to shatter the hegemonic bourgeois conception of nature, a paradigm that serves to constrain the horizons of human liberation by, for example, presenting social inequality as an inevitable biological reality. This paper seeks to systematically interrogate the reductionist gene as one of the final prevailing mythologies of bourgeois science. By outlining the fundamental assumptions of mechanistic biology, juxtaposing them against contemporary epigenetic and metabolic research, and analyzing these dynamics through dialectical materialism, we aim to rearm our movement with a truly liberating, dialectical biology.

Tyranny of the Central Dogma

To understand the necessity of this paradigm shift, we must first trace the parameters of the dominant bourgeois model. The reigning paradigm treats the gene as a static, discrete, and autonomous unit of heredity. In this framework, the physical site of the gene is reduced to a specific sequence of nucleotides bonded in a double-helix structure along a sugar-phosphate backbone.[3] This

Crick, “Molecular Structure of Nucleic Acids: A Structure for Deoxyribose Nucleic Acid,” *Nature* 171(4356) (1953): 737–738, https://doi.org/10.1038/171737a0; Rosalind E. Franklin and Raymond G. Gosling, “Molecular Configuration in Sodium Thymonucleate,” *Nature* 171(4356) (1953): 740–741, https://doi.org/10.1038/171740a0.

deoxyribonucleic acid (DNA) molecule wraps around histone proteins to form nucleosome complexes, which in turn condense into chromosomes housed within the cell nucleus.[4]

On this anatomical foundation, bourgeois science erected the absolute authority of the Central Dogma of Molecular Biology. Formulated to illustrate a unidirectional flow of genetic information, the Central Dogma posits that DNA serves as the immutable master blueprint from which information is passively transcribed and spliced into messenger RNA (mRNA), which is subsequently translated by the ribosome into proteins.[5]

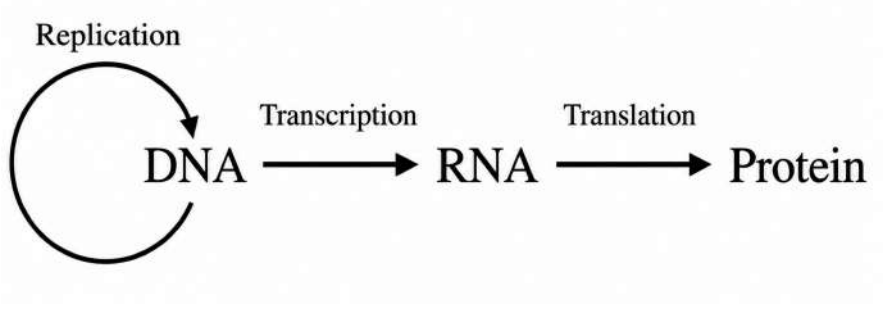

Figure 1. *The central dogma of biology.*[6]

This structural schema was ideologically wedded to early twentieth-century Mendelian genetics and the rigid theoretical framework of the "Weismann barrier," which claimed an absolute separation between the somatic cells of the body and the hereditary germ line.[7] While charitably we may consider this to be a historically reasonable proposition, the political utility of this framework has become exceedingly useful to the ruling class. By characterizing the genome as an insulated, unchangeable script that dictates the capacities, behavior, and position of the organism, bourgeois biology makes class relations an inherent

and fixed aspect of reality. Poverty, trauma, and systemic marginalization under capitalism are rebranded as individual behavioral deficiencies, dictated by genes, which in turn insulates the capitalist mode of production from critique.

The reality is, of course, much more complicated. We will attempt to lay out some of the various mechanisms that complicate the "Central Dogma of Biology" and suggest the need for a more robust and contemporary interpretation of what our material science has revealed. It is also noteworthy that there have already been, and continue to exist today, a number of heterodox scientists who have challenged this paradigm. Yet, for various reasons, political and otherwise, these scientists have been excluded from mainstream discourse. One example of this is from renowned physiologist Dr. Denis Noble who has attempted to map out a more thorough understanding of this system in the illustration below.

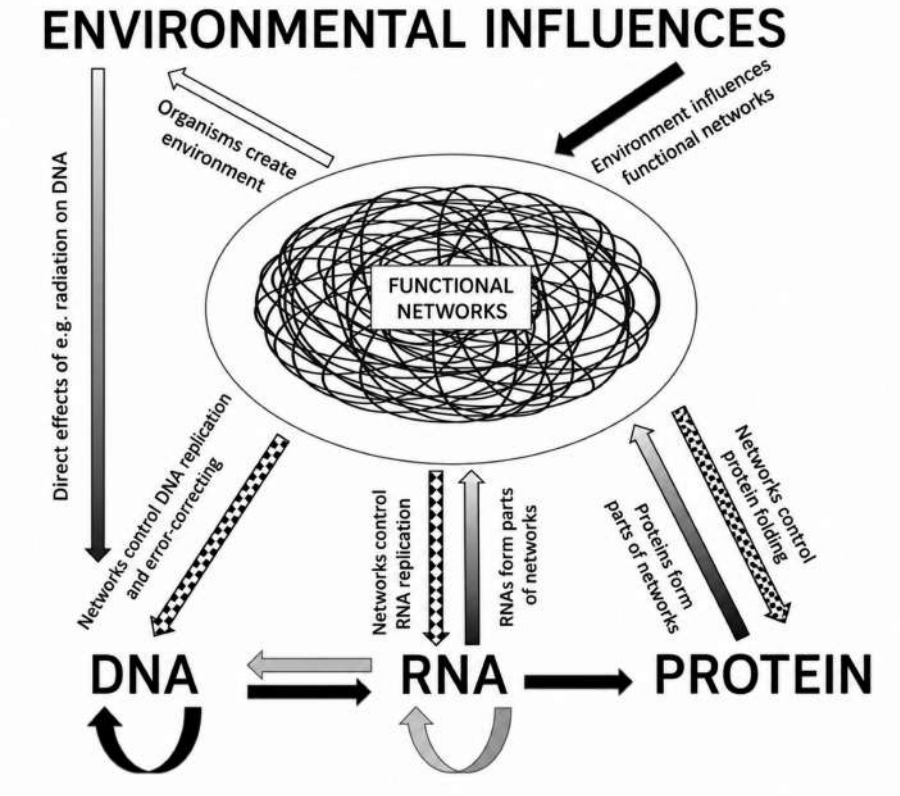

Figure 2. *Noble's biological information flow model.*[8]

Dialectics of DNA Accessibility

While the basic biochemical architecture of DNA and the transcription-translation apparatus are verified material facts, the assertion that DNA contains discrete, autonomous causal units of inheritance is a massive oversimplification. Modern biological research provides all of the groundwork necessary to completely abandon the reductionist Mendelian gene. However, academic institutions resist this shift due to institutional inertia and the class interests of corporate-backed research agendas.

A critical limitation of bourgeois genetic determinism is its abstracting of gene expression from the material, metabolic and energetic conditions required to sustain cellular life. Gene transcription is not a passive reading of static ”information”; it is an active, energy-intensive material process dependent on adenosine triphosphate (ATP) availability, redox balance, intracellular pH, global metabolic flux and so on.

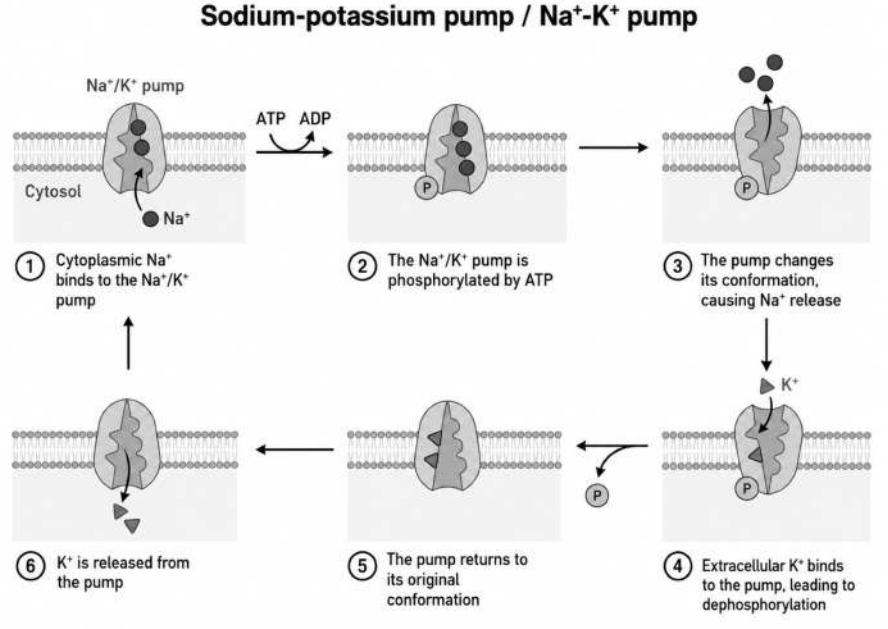

Figure 3. *Sodium-potassium pump mechanism.*[9]

9. Rashal Shakya, “Sodium-Potassium (Na+/K+) Pump: Mechanism, Functions,” *Microbe Notes*, July 16, 2025, fig. 3, https://microbenotes.com/sodium-potassium-na-k-pump/.

At this foundational junction, the sodium-potassium pump emerges as a central mediator between the organism's cellular environment and heredity. Consuming a massive proportion of total cellular energy, the sodium-potassium pump maintains the strict electrochemical and ionic gradients across the cell membrane necessary to drive nutrient transport and secondary active metabolic absorption. These metabolic activities directly dictate mitochondrial respiration and ATP throughput, which in turn act as the immediate material regulators of chromatin-modifying enzymes.[10] From here we can then consider the structural opposition of these modified chromatin states:

Euchromatin: Transcriptionally active, loosely bound DNA segments.

Heterochromatin: Transcriptionally inactive, tightly condensed DNA segments.

From a dialectical materialist standpoint, heterochromatin and euchromatin are not fixed, static structural categories, but distinct, opposing moments within an overarching metabolic process. Their continuous interconversion is driven by internal cellular contradictions: energy production versus expenditure, ion gradient maintenance versus dissipation, and anabolic synthesis versus catabolic stress responses.

For example, histone acetylation, the chemical modification that neutralizes positive charges on histones to loosen DNA-protein bonds, requires the metabolite acetyl-CoA. When cellular energy production and metabolic throughput are high, acetyl-CoA availability increases, fueling histone acetyltransferases (HATs) to open chromatin into euchromatin. Conversely, when the cell experiences metabolic stress, ATP depletion, or a collapse of ion gradients, histone deacetylases (HDACs) strip these modifications away, promoting chromatin compaction into heterochromatin and causing transcriptional repression.[11]

10. Jens C. Skou, “The Influence of Some Cations on an Adenosine Triphosphatase from Peripheral Nerves,” *Biochimica et Biophysica Acta* 23(2) (1957): 394–401, https://doi.org/10.1016/0006-3002(57)90343-8.

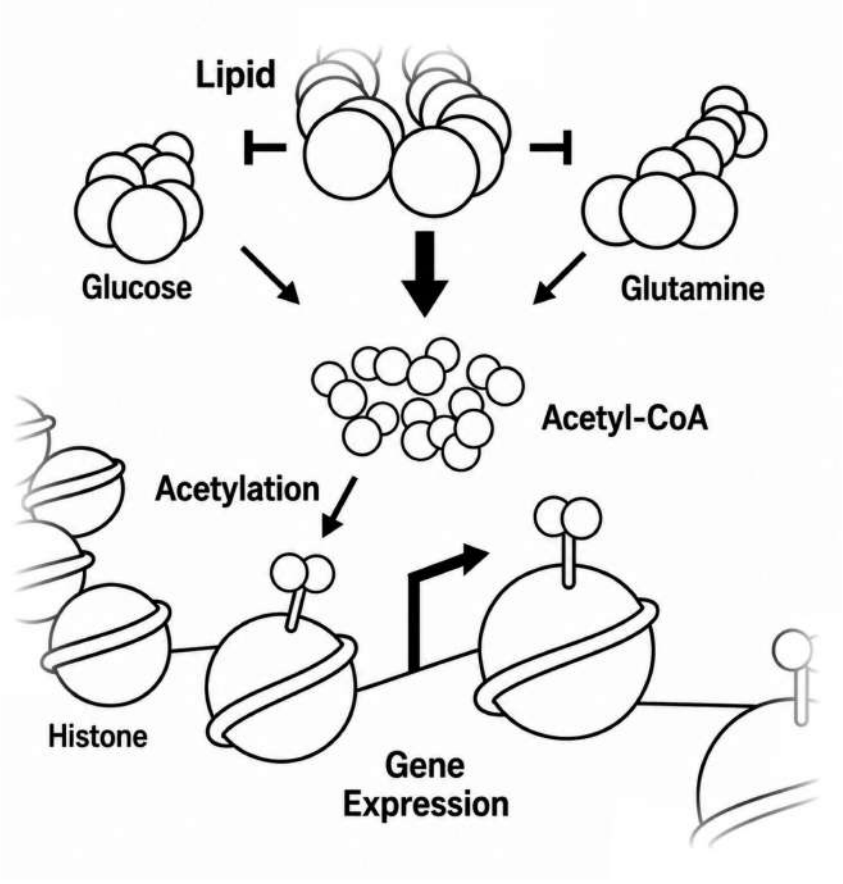

Figure 4. *Acetyl-CoA and general metabolic effects on gene expression.*[12]

Thus, the heterochromatin-euchromatin opposition is fundamentally energetically conditioned. It represents a direct biological manifestation of the law of the transformation of quantity into quality. A progressive accumulation of small, quantitative chemical modifications (such as acetyl or methyl groups) on histone tails eventually triggers a sudden, qualitative leap in chromatin architecture, switching a genomic locus from a state of transcriptional dormancy to active expression.

12. Eoin McDonnell, Scott B. Crown, et al., "Lipids Reprogram Metabolism to Become a Major Carbon Source for Histone Acetylation," *Cell Reports* 17(6) (2016): fig. 4, https://doi.org/10.1016/j.celrep.2016.10.012.

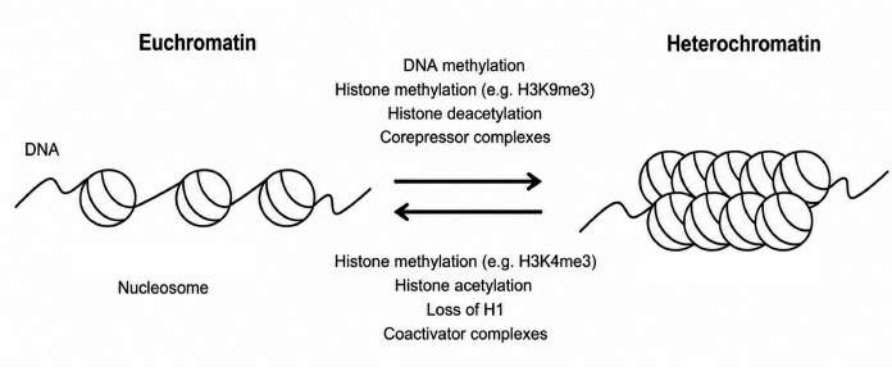

Figure 5. *Conformational transition between euchromatin and heterochromatin.*[13]

This dynamic completely overturns the bourgeois conception of genes as autonomous causal agents. Instead, the genome is revealed to be a reactive material structure that responds directly to metabolic signals produced by the organism's historical interaction with its environment. Genes, therefore, are not the sole determinants of an organism's metabolism but rather are also determined by this metabolism in a dialectical process.

This dialectical motion is further illustrated by DNA methylation, the addition of a methyl group to cytosine residues in CpG islands, which functions as a long-term epigenetic silencing mechanism. Initially, methylation represses gene expression by recruiting corepressor complexes to condense chromatin.[14] However, during embryogenesis and cellular differentiation, waves of active demethylation and remethylation occur, allowing the cell to dynamically ”forget” and selectively ”remember” specific gene programs based on developmental cues and environmental context.[15]

This cycle of methylation —> demethylation —> remethylation operates as a biological instantiation of the negation of the negation. When a once-repressed

15. Yang Zeng and Taiping Chen, “DNA Methylation Reprogramming during Mammalian Development,” *Genes* 10(4) (2019): 257, https://doi.org/10.3390/genes10040257.

gene is demethylated and reactivated, it undergoes its first negation. When it is later silenced again in a new developmental stage, it undergoes the second negation. Crucially, this second negation is not a simple return to the original, primitive embryonic state. Rather, the gene is now embedded within a qualitatively new cellular totality, a more advanced and differentiated physiological matrix. The gene has been sublated, negated, preserved, and raised into a higher unity within the developing organism.

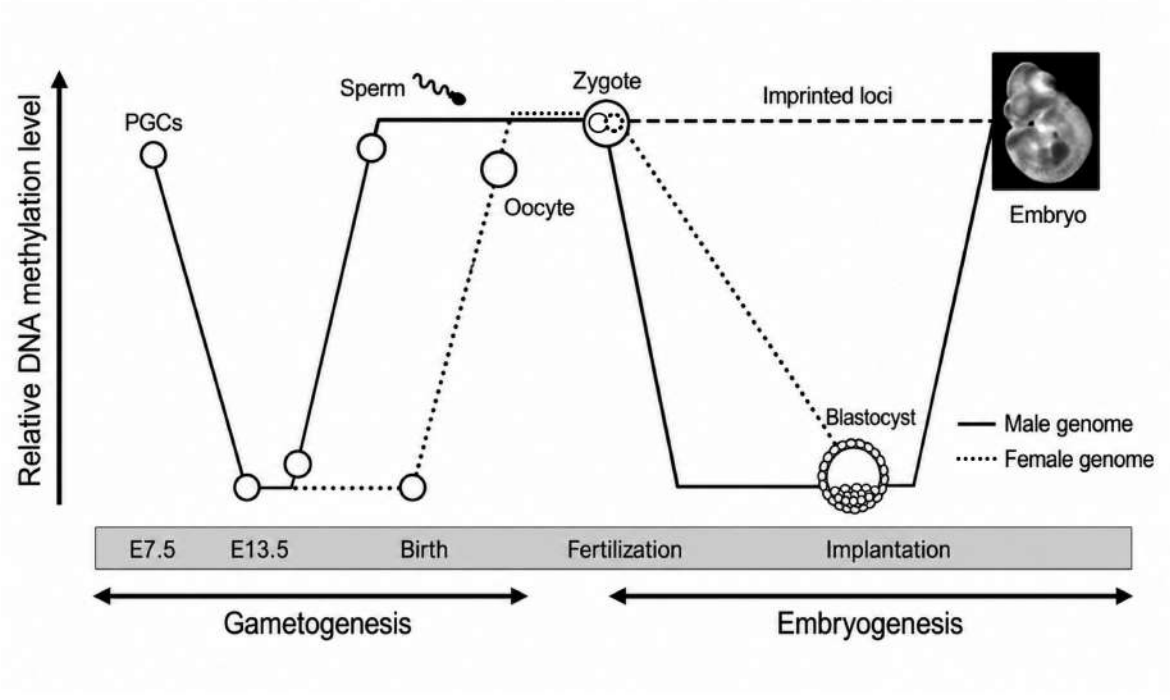

Figure 6. *DNA Methylation levels throughout development.*[16]

This historical activity is also apparent in the behavior of transposable elements (”jumping genes”, or transposons). Transposons are mobile genetic elements that can alter their positions within the genome, rewriting genomic architecture, changing chromatin structure, and shifting gene expression patterns.[17] They embody an unresolved internal contradiction within the genome itself: the

16. Yang Zeng and Taiping Chen, “DNA Methylation Reprogramming during Mammalian Development,” *Genes* 10(4) (2019): fig. 1, https://doi.org/10.3390/genes10040257.

17. Barbara McClintock, “The Significance of Responses of the Genome to Challenge,” *Science* 226(4676) (1984): 792–801, https://doi.org/10.1126/science.15739260.

contradiction between stability (inheritance) and mobility (transformation). Mendelian genetics captures only the relative, temporary stability of inheritance under highly artificial, constrained conditions. Transposons reveal that the genome is a dynamic, historically active material system whose mobilization is regulated by environmental shock, metabolic stress, and cellular relations.

Mediation of Gene Expression

Even when chromatin accessibility is established, transcription is never an automatic, unmediated reflection of a genetic blueprint. Bourgeois biology presents transcription as the mechanical ”reading” of DNA by RNA polymerase. In reality, transcription is heavily mediated by a dense, collective regulatory infrastructure consisting of promoters, enhancers, silencers, and mobile transcription factors.

A coding sequence lacking promoter activation or disconnected from long-range enhancer loops will remain inert. Enhancers, which can reside hundreds of kilobases away, collapse three-dimensional nuclear space to loop into physical contact with promoters.[18] This spatial flexibility contradicts the naive, localized logic of the Mendelian gene. Enhancers demonstrate that the functional identity of a gene does not reside in a single contiguous stretch of DNA, but emerges from global nuclear organization and cellular history. Furthermore, transcriptional silencing via repressors is not a passive absence of activity, but an active production of absence that demands continuous metabolic work and energy expenditure from the cell. No single component acts as an autonomous commander; transcription emerges from a collective balance of forces, mirroring the materialist principle that no phenomenon exists in isolation, but only through a web of dialectically reciprocal relations.

18. Julian Banerji, Sandro Rusconi, and Walter Schaffner, “Expression of a β-Globin Gene Is Enhanced by Remote SV40 DNA Sequences,” *Cell* 27(2) (1981): 299–308, https://doi.org/10.1016/0092-8674(81)90413-X.

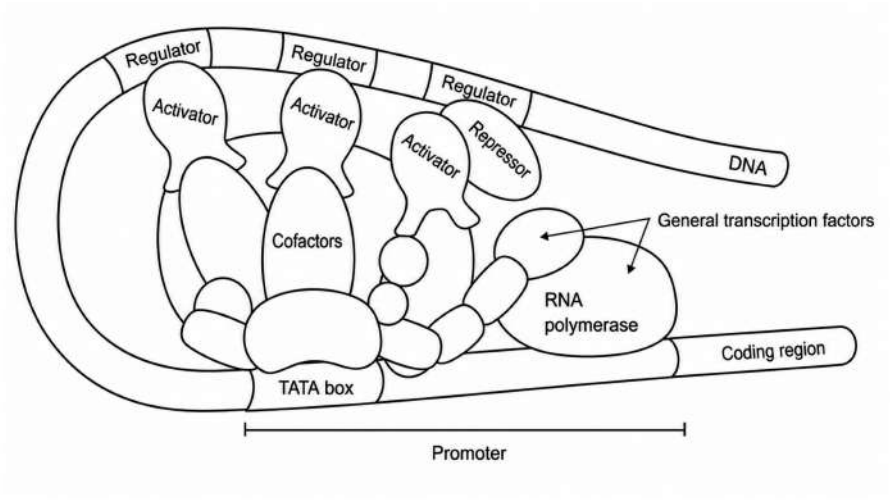

Figure 7. *Transcriptional regulation of DNA.*[19]

Once an RNA transcript is successfully produced, its processing, splicing and translation introduce further layers of non-linear mediation:

1. Alternative Splicing: The spliceosome can excise introns and splice exons together in multiple configurations, enabling a single genomic locus to yield hundreds of functionally distinct protein isoforms. What is expressed is never a singular ”gene,” but only a particular and contingent spliced configuration of the gene.[20] Thus, the same DNA segment can be transcribed and spliced into different protein configurations.
2. RNA Processing and Decay: The addition of a 5' cap and poly-A tail confers conditional legitimacy on the transcript. Through this, the cell actively dictates the lifespan and temporal availability of mRNA through regulated degradation pathways, highlighting the importance of time as a variable.[21]

3. Translational Fine-Tuning: Through small non-coding RNAs (miRNAs and siRNAs), the cell can target mRNAs for translational repression or total cleavage, effectively negating gene expression downstream without altering a single nucleotide of the underlying DNA.[22]

4. Translational Efficiency: Variations in the cell's tRNA pools and ribosomal stalling during wobble-pairing mean that two identical mRNA sequences can yield vastly different quantities of protein based entirely on the distribution of translational resources.[23]

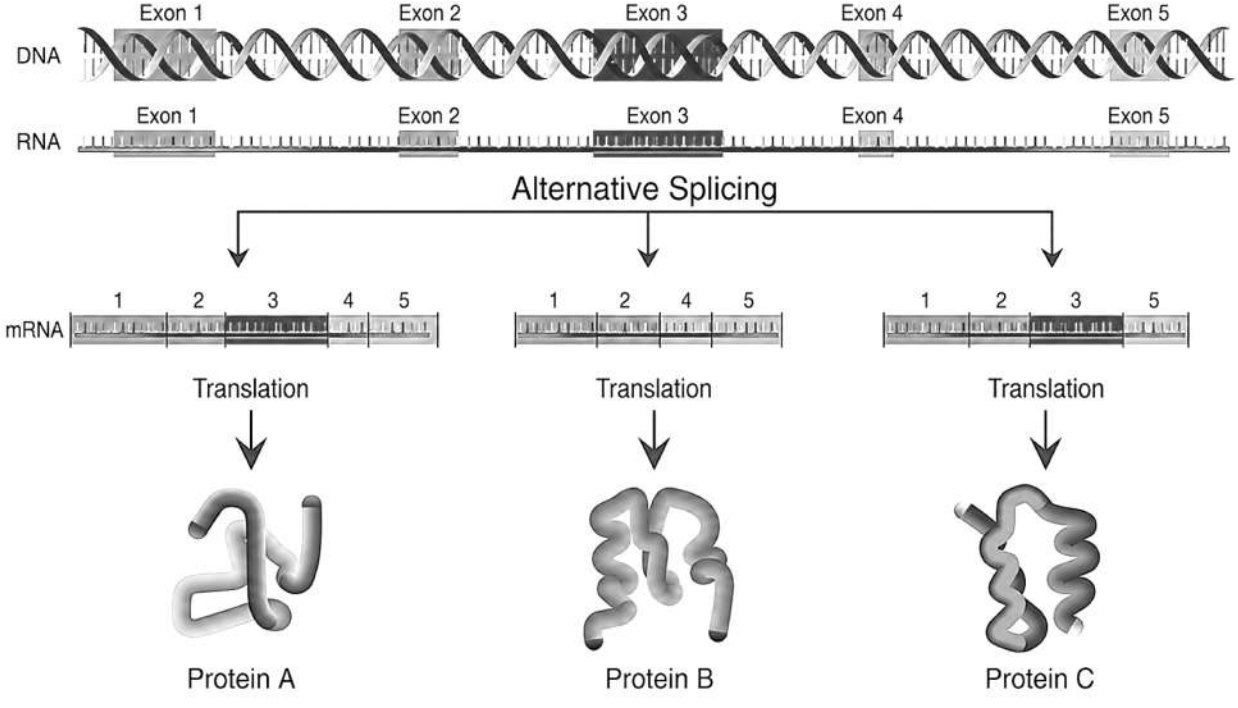

Figure 8. *Alternative splicing of mRNA.*[24]

After translation, additional post-translational modifications can further alter the resulting protein. While we cannot provide an exhaustive account of every

layer of gene expression, indeed, such an account may be impossible, the mechanisms outlined here demonstrate that protein synthesis follows the immediate material needs of cellular life activity, not a detached genetic instruction manual. For example, the acetylation and methylation of histones are post-translational modifications that directly impact gene transcription. Thus, the protein products impact DNA transcription as much as the DNA's downstream effects result in protein production.

The Social Cost of Genetic Reductionism

The practical cost of maintaining a myopic, gene-reductionist paradigm is directly visible in the systemic health crises plaguing the working class. While modern medicine sings praises of its technical achievements and capabilities, aggregate population-level analysis indicates that Americans are becoming more and more unhealthy as current medicine isolates health and disease from social, industrial, and economic environments. This is not an individual failing, but an anti-social bourgeois society structured around protecting private property with no regard for human life except for how it increases corporate profits detached from social consequences.[25]

This can be better conceptualized in a number of ways. For example, at the organismal level, metabolic and epigenetic states are systemically coordinated through the dialectical opposition of the sympathetic nervous system (SNS) and the parasympathetic nervous system (PNS). The SNS governs stress mobilization and catabolism, accelerating glycolysis and lipid turnover. Under the conditions of today's capitalism, characterized by chronic overwork, financial insecurity, structural racism, starvation wages, unsafe and low nutritional food supply, and environmental toxicity, the working class is forced into a state of chronic sympathetic dominance. This systemic overactivation elevates cortisol, damages mitochondrial efficiency, disrupts ion homeostasis, and enforces sustained chromatin condensation via histone deacetylation and DNA methylation in stress-sensitive tissues.[26]

This prolonged metabolic distortion directly induces insulin resistance, hyperglycemia, type 2 diabetes and other metabolic diseases. Our current

system treats these conditions as moral failings or genetic bad luck, but the reality is that these diseases are in turn physiological symptoms of class exploitation. These socially induced metabolic regimes leave long-term molecular marks on the chromatin landscape that can be inherited transgenerationally. In this way the exploitation of our current regime is reflected directly in the biology of the working class.

While our current medical practices fail to address the needs of Americans, emerging research is simultaneously showcasing the need to move away from gene-centric paradigms. Huntington's disease is one example of this. Huntington's disease (HD) is a neurodegenerative disorder that affects approximately 4-5 people out of every 100,000 in the United States.[27] The disease is caused by a trinucleotide repeat of the "CAG" codon, which codes for glutamine. People who have fewer than 27 repeats do not develop the disorder, and their repeats do not expand in future generations. Individuals with 27-35 repeats also do not develop the disease, but their repeats may expand in future generations. Those who have 36-39 repeats have partial penetrance, meaning that they may have very late onset (after 60 years of age) or may not develop the disorder at all. Those who have 40 repeats or more develop the disorder, with increasing CAG repeats meaning that they develop the disorder sooner. Currently, there is no cure for HD patients, and life expectancy is between 10 to 30 years following the onset of symptoms.[28]

Although HD is taught in universities and medical schools as a standard Mendelian genetic disorder, epigenetic treatments are now being explored to alleviate symptoms for those afflicted with HD. As described by Dr. Junghee Lee, "Interestingly, the hypo-acetylation of histone is correlated with down-regulations of genes in HD, and therapeutic inhibition of histone deacetylases (HDAC) restores the acetylation level of histone and improves the

neuropathology and the motor symptom in HD."[29] HD, another disease that was previously viewed as having typically Mendelian inheritance, is now at the forefront of epigenetic research that aims to solve the mechanism for treatment by going outside of the Mendelian paradigm. Thus, if a supposedly absolute Mendelian disease is fundamentally dependent on epigenetic and chromatin modifications to manifest its severity, then the paradigm of genetic predeterminism fails as an absolute framework.

Recovering a Dialectical Biology

To build a scientifically rigorous alternative to bourgeois reductionism, we must look to our biological and philosophical predecessors through the lens of dialectical materialism, recovering a legacy that the academy has deliberately marginalized.

As Friedrich Engels brilliantly anticipated in his *Dialectics of Nature*, biological systems develop through an integrated, historical relationship centered around physiological needs. Long before the advent of molecular biology, pioneering naturalists sought to grasp this plasticity. Jean-Baptiste Lamarck posited that organisms are active participants in their own development, adapting to environmental conditions through structural changes that are gradually reinforced over time.[30] While Lamarck lacked a molecular framework, his focus on environmental responsiveness over one-sided causal chains contained an enduring materialist insight that modern epigenetics has partially vindicated.

Importantly, Charles Darwin did not reject Lamarck's insights. In his theory of pangenesis, Darwin proposed that all parts of an organism emit material particles called gemmules that circulate throughout the body, altering reproductive inheritance in response to environmental use and disuse.[31] Darwin explicitly sought to ground inheritance in systemic, bodily material processes rather than an isolated, mystical germ line. By doing so, Darwin demonstrated the historical development of species, breaking from the metaphysical myth of static, immutable natural forms.

31. Charles Darwin, *The Variation of Animals and Plants under Domestication*, 2 vols. (London: John Murray, 1868).

In the Soviet Union, scientists sought to liberate biology from the Malthusian, capitalist projections embedded in Western evolutionary theory, which reduced natural selection to an eternal, individualistic struggle driven by scarcity and competition. While the historical figure of Trofim Lysenko was undermined by severe execution flaws, a lack of molecular tooling, and intense administrative politicization during a period of agricultural crisis, his underlying core philosophical critique targeted the reductionism of gene-centered determinism. Lysenko asserted that metabolism is the primary mediating process through which environmental conditions are internalized by the organism, stating that speciation and intra-specific diversity arise fundamentally from ”change in the conditions of life...change in the type of metabolism”. He viewed development as a qualitative transformation, ”the genesis of a new quality within the old, of a quality that contradicts the old”. Today, contemporary research into transgenerational epigenetic inheritance, vernalization mechanisms, and environmental plant conditioning reveals that the core phenomenon Lysenko observed, environmentally induced, heritable adaptations mediated by metabolic states, is a verified molecular reality.[32]

This materialist current also includes other marginalized figures of twentieth-century science:

Conrad Hal Waddington: Introduced genetic assimilation, demonstrating via Drosophila experiments that phenotypic traits initially triggered by environmental stressors (like heat shock) could become stabilized within regulatory networks over generations, proving that developmental context shapes evolutionary outcomes.[33]

James Mark Baldwin: Articulated how behavioral and physiological plasticity precede and actively guide genetic stabilization, positioning the organism as an active agent in evolutionary dynamics.[34]

Ivan Michurin: Conducted extensive hybridization experiments demonstrating that heritable traits in crops are dynamically modulated by soil composition,

climate, and cultivation methods, proving that heredity is mediated by developmental context rather than fixed genetic inputs alone.[35]

You Can Liberate Yourself

Western liberal science treats epigenetics and metabolic regulation as mere ”exceptions” to the supremacy of DNA. In doing so, it preserves the bourgeois fiction that our fundamental capacities, health outcomes, and social trajectories are written in an immutable genetic ledger.

When viewed through materialist dialectics, however, the environment is not external to heredity; it is immanent to it. Nutrition, labor conditions, toxic industrial exposures, and class relations leave direct molecular marks on the genetic landscape. The genome is not an autonomous agent or a fixed destiny; it is a reactive, historical record of material struggle. As Karl Marx and Friedrich Engels famously observed in *The German Ideology*, ”life is not determined by consciousness, but consciousness by life”.[36] In cellular terms, gene expression is not determined by an autonomous DNA blueprint, but by real life activity, by metabolism, cellular environment, and social context.

The philosophical law of the unity of opposites is the basic law of nature. In biology, this is significantly manifest in the dynamic contradiction between heterochromatin and euchromatin or even the general expression or repression and more general regulation of genetic material. Because these states are in constant, metabolically driven flux, human physiology is fundamentally a historical product of our collective habits, diets, labor, and interaction with the external environment. When the material conditions of life are altered through revolutionary struggle, our biological expression will follow.

We are not the helpless servants of our genes. By throwing off the yoke of capitalist exploitation, and reshaping the material conditions of our society, the working class has the power to reclaim its collective health, reshape its biological future, and achieve true human liberation.

An Anti-Imperialist Case for Investing in Physical Silver

PJ Cornell [1]

---

1. PJ Cornell is a member of the American Communist Party of Texas. He joined the Communist movement in 2023 after a period of education that began in 2021 as a member of the Infrared community. Prior to that, he was a card-carrying member of the Libertarian Party for several years, beginning in 2006, and was involved in local North-East Texas Tea Party activities in 2012. He earned BA degrees in Slavic Studies and Policy Studies from Rice University in 2007, and became familiar with phenomenology and depth psychology as a graduate student at the University of Dallas from 2015-2016, where he began, but did not complete graduate coursework in Philosophy and Industrial and Organizational Psychology. He was commissioned as an Army Infantry Officer with one OCONUS deployment to Iraq (OIF, 2009-2010), ran a piano studio and gunsmith shop in Powderly, TX, and now has a technical career that has ranged from low voltage installation and repair, to mechatronics and robotics, to data center commissioning work. He has written on subjects ranging from philosophy, psychology, geopolitics, demographics, social issues, and economic theory and blockchain technology. He is a Marxist-Leninist with a populist-libertarian bias.

There exists an opportunity, at this moment in time, for revolutionary actors to simultaneously contribute to anti-imperialist friction and, potentially, benefit personally (and therefore, collectively) from a market aberration that has been slowly breaking down over the course of about a year. Namely, the silver market has been one of the greatest vulnerabilities of the global hegemonic financial system for decades, and that vulnerability has been managed through systemic institutional financial fraud. It is my opinion that that fraud is now breaking down, which presents a once in a lifetime opportunity for investors and revolutionary actors. In the following paragraphs, I will describe this vulnerability in depth and describe how it is possible to exploit it on an individual and collective basis.

What follows is not financial advice. Everyone's financial situation is different, and every investment carries some degree of risk and requires a certain time frame, and the hypothetical investment model I am presenting here may not be right for everyone.

What's more, it's important to understand that the silver market is highly opaque. Miners and smelters do not disclose industry relationships, and most exchanges do not disclose availability of physical supplies. A lot of my thesis depends on the best estimates of industry professionals, and trying to look at supply and paper trends on the basis of what information is publicly available.

Why Silver is a Critical Mineral

In 2025, the Trump administration added silver to its list of strategically critical minerals.[2] This happened because silver is one of the most widely used minerals in existence, and is indispensable to almost every modern technological innovation – including and especially military hardware. For instance, each Tomahawk missile requires approximately 500 ounces of silver.[3] Modern torpedoes require between 5-50kg of silver each, modern drones

---

2. Office of Communications and Publishing, USGS, *Interior Department Releases Final 2025 List of Critical Minerals*, (Washington D.C., In-house USGS Science Publication, 2025), https://www.usgs.gov/news/science-snippet/interior-department-releases-final-2025-list-critical-minerals .

3. Jon Dempsey, "Why Tomahawk Missiles Use Silver (and How Much they Contain)," *Slashgear News*, June 30, 2025, https://www.slashgear.com/1897698/tomahawk-missiles-silver-use-quantity/ .

require up to half a kilo of silver, modern submarines require up to 8 tons of silver, and Starlink satellites use between 6-18 kg of silver each.[4]

At scale, these numbers are difficult to even visualize; and that's just the military applications.

Every TV, every cell phone, every personal vehicle (especially electric vehicles), every computer, and every solar panel uses silver.[5] Increasingly, it's being found to have medical uses because of its antibacterial properties.[6]

It is arguably the most versatile mineral in existence with the exception of petroleum, while being far more rare.[7][8] The main reason for this is that it is the best electric conductor in existence, in addition to its aforementioned antibacterial properties.[9]

This accounts for demand. How about supply?

The supply is extremely constrained.

Collapsing Global Availability

The main market exchange mechanism for industrial silver in the West is the CME COMEX (Chicago Mercantile Exchange Commercial Exchange).[10]

While most major industrial players source their silver directly from mines, smelters, and refiners (although the specific relationships are not usually disclosed),[11][12] The supply that is available for the wider market in the West is generally captured by the COMEX.[13] This makes the COMEX an extremely important market bellwether, because it speaks to the general market availability of the mineral. With that in mind, let's look at COMEX supply over the last few years.

Prior to 2022, the LBMA (London Bullion Mercantile Exchange) was one of the primary marketplaces for physical silver with supplies exceeding well over 1,000,000 troy ounces.[14] Starting at that point in time, their supplies began to collapse precipitously, and it isn't clear where it all went, although, I suspect that much of it was shipped to the Shanghai Metals Market. I believe this is the case because supplies at that exchange collapsed from 3,000 tons near the end of 2020 down to under 1,500 tons mid 2022, suddenly rising back to 2,200 tons by 2023.[15] This suggests to me that Chinese industrial demand is putting a major strain on Shanghai stockpiles, driving them to drain global supplies. However, starting at the beginning of 2025, it is a matter of public record that a lot of it was being transferred to the COMEX, accounting for a draw down to 711,396 t oz at the LBMA while stocks at the COMEX rose from 2,659,866 t oz to 5,314,844 t oz., establishing it as, far and away, the largest Western silver market.[16] I was not able to confirm this trend by looking at other major physical exchanges, such as the OSE, the DGCX, or the IIBX. It seems that the LBMA, the SMM, and the COMEX are the only major exchanges that report levels of physical supplies at all, which makes the market, as a whole, extremely opaque, and this aspect of my thesis, admittedly, speculative. I am

forced to use the LBMA as a kind of barometer for other, smaller (than the COMEX and SMM) exchanges.

Since the peak supply level at the end of September 2025 accounted for by the drainage of global supplies to the COMEX, the available supplies at the COMEX itself have imploded down to approximately 3,200,000 t oz at time of writing. This has happened over the span of under 7 months. This represents the most dramatic draw down of available silver supplies in history, and it's showing no sign of stopping.[17][18] Meanwhile, the supplies at the SMM have collapsed from a peak of 3,000 tons in 2020-2021 down to 663 tons by the end of 2025.[19]

This fact is reflected by the statistics tracked by The Silver Institute which tracks silver inflows and outflows from numbers reported by major industry players, and which has recorded a supply deficit for 6 years straight.[20] It's important to note that certain former industry insiders believe the numbers reported by The Silver Institute to be spurious, and that the silver situation is actually far more dire.[21] One thing is certain; major global industrialists are highly concerned about the chronic silver supply deficit, even if most of them stay quiet about it.[22]

To put it simply, what I believe the numbers suggest to us is that what has happened since 2022 is that New York and Shanghai have competed with one another to absorb the entire global supply of this mineral, and now the vaults in both of those centers are being drained – which means that the mineral is being drained *globally.*

Why Silver Production Cannot Keep Up with Demand

Normally, in the commodities space, shortfalls are answered with increased excavation and production. E.g., the rocketing oil prices in the early 2010s led to the fracking revolution.[23] Tightness in the supplies of copper and rare earths leads to more excavation of those minerals to meet demand.[24][25] However, replenishing silver supplies is far less simple.

70% of silver supply comes as a byproduct of mining other minerals, such as lead, copper, and gold.[26] Primary silver mining accounts for about 10-15% of total supply (80-85% of supply being from mining, minus the 70% that comes as non-primary product).The rest (15-20%) comes from recycling and scrap.[27] The majority of silver that is used in industry is used in such trace amounts that it is not economically viable to recycle it at current prices, which means that most silver that is used is simply consumed and lost, permanently.[28]

So what does this mean? It means that the supply of silver is highly inelastic. Demand for more silver will not drive significant new supply over the long term. In the short term, private holders of silver may choose to take profits and sell their silver into the market, but once that is gone, it's gone, and, for the most part, silver holders hold for the very long term.

Therefore, the main constraint of silver price is demand, and not supply, because demand is more elastic than supply is. This is a terrifying thing to understand, as I will explain.

Possible Outcomes and Price Predictions

If physical silver is not available, then, given the in-elasticity of supply, what will constrain the price is demand destruction. What does this mean? It means a global recession. It means fewer phones, cars, computers, medical devices, solar panels, etc., being produced. It also means that the international stage will become much higher stakes. There will be a much higher likelihood that trade wars will escalate as world powers compete to secure supply. It also means that, at some point, nation states may declare that silver will no longer be available for the consumer market without state approval because, without it, military technology cannot be replenished.

The silver lining (pun not intended) is that this would also make wars far more expensive, and therefore this may constrain kinetic military conflicts. This is, obviously, a desired outcome for a revolutionary stacker.

But, in short, the collapse of silver supply will greatly heighten the social contradictions, and it will be much better for members of the Communist party if they are facing these contradictions with a stockpile of this mineral, because that will give them a much higher degree of economic leverage as they decide how to respond to those contradictions.

As for the future price of the commodity, the potential defies one's ability to accept or imagine it. It will become more clear why the prices are necessary when I describe the fraud which I am alleging that has taken place in the following paragraphs. But, in short, the potential prices of silver in the future could be anywhere from $300 per t oz on the low end, to somewhere around $10,000 per t oz on the high end – and potentially even more if international competition over the mineral spirals out of control. Should all international cooperation collapse, a $42,000 per t oz silver price is theoretically possible.

Here's how I got those numbers.

In order to constrain the price without destroying consumer demand, either the mining industry will have to bring much more silver online, or the price will have to justify recycling trace silver. New mines are not likely to happen in a timely manner, because, from discovery to production in a favorable jurisdiction takes, on average, 8.5 years, and the current supplies will not last that long.[29] If we were to attempt to expand silver excavation as a secondary

29. John Zadeh, "Silver Supply Deficit: How Industrial Demand Growth Reshapes the Market," *Shanghai Metals Market*, August 24, 2025,

product, we would be facing similar new mining constraints, and the price of those other commodities would collapse, as they would now become the secondary mining product. As for recycling trace silver, it's difficult to find sources that will explicitly say what the price would have to be to make this viable, but one figure I've heard is $200 an ounce to break even. Therefore, I would surmise that a $300 per t oz price floor would have to be very well established before the infrastructure to perform this form of recycling would even begin to be spun up. An interesting conversation about the viability of recycling trace silver can be read in the following footnote.[30]

So then, considering that supply cannot be expanded to sufficiently meet demand, it follows that price constraint by demand destruction appears to be inevitable. What does that look like? It's hard to predict because it's not easy to predict how governments will respond to extreme shortages. If they respond by continuing to coordinate to suppress price, and also ration it for commercial use, then the $300 per t oz price may be able to be maintained. However, given the breakdown of the hegemonic US-led liberal world order, that does not seem likely. If prices are allowed to run without managing industrial demand, then the price of silver will have to impact the prices of consumer products to such an extent that the consumer begins to be priced out.

In this latter case, The ceiling on the price is much, much higher, because of the fact that it is used in such trace amounts. Let's use the $10,000 per t oz price point as an example. There is approximately 0.34 grams of silver in a smart phone.[31] So at $10,000 per t oz, the price of a smart phone increases by $109.32. Most people will still be buying smart phones at this price. On the margin, some consumers may be priced out of a new phone. Computers contain between 0.75-1.25 grams of silver.[32] So at that price point, computers will cost between $240-$360 more. This may double the price of low end computers, pricing some consumers out of a new computer, but it will definitely not stop a majority of people from buying one if they need one. Flat screen TVs contain

1-2 grams of silver.[33] So at that price point, a new TV will cost an additional $321-$642. This may price many people out of buying a new TV, but some people will still be buying new TVs. Conventional vehicles use 15-28 grams of silver, and electric vehicles use 25-50 grams.[34] This means a new gasoline vehicle will cost an additional $4,800-$9,000, and a new electric vehicle will cost an additional $8,000-$16,000. This seems like a lot, and will certainly be a major headwind to vehicle sales, but when you consider that the price of a new vehicle, on average, is already $49,814[35], it's clear that that this repricing of silver may suppress new car sales, but will certainly not stop them.

In short, the $10,000 per t oz price point for silver is where consumer demand destruction *begins* to occur, meaning, it could actually go even higher – assuming a situation of relative global peace and cooperation.

What if governments begin to hoard it over the long term and begin to genuinely treat it as a strategic reserve asset?

Well, in such a case, it's difficult to predict just how high it could go. But because of the fact that it is so rare and indispensable, if governments were to start locking it away, it could quickly outpace the market cap of all other assets – including the USD, and come to collateralize most world liquidity. Global liquidity is approximately $98.6 trilion.[36] Considering that there are 2.3 billion t oz of investable silver in existence,[37] this would suggest a potential stable price of $42,869.57 per t oz in current dollars.

The Spot Price Fraud

All of this begs the question – if the potential price of silver is so high, why is the spot price so low ($75.70 per t oz at time of writing)?[38] In a word – fraud. Specifically, the spot price is a scam perpetuated by the super-imperialist hegemonic system.

The LBMA and COMEX have been allowing the rehypothecation of silver and gold via leveraged derivatives.[39][40]

What is rehypothecation? Rehypothecation is the act of issuing multiple contracts in the form of a loan on the same underlying asset.[41] Effectively, this practice creates multiple notional assets on the basis of a single real asset. Typically, the SEC limits broker-dealer rehypothecation to 140% of the underlying asset,[42] and for good reason – leveraged debt products can lead to creditors being left without compensation in the case of insolvency. If an asset is rehypothecated at 140%, and the borrower goes bankrupt, then at least 40% of that borrower's creditors will not be made whole. Think of it as taking out multiple mortgages on your house. If you become insolvent and are forced to sell your house when you've borrowed more than the house is worth, then some of your lenders are not going to get their money on the basis of your sold collateral, and will have to sue you in court to try to get you to pay the rest.

With that in mind, understand that gold and silver are rehypothecated far beyond the 140% level allowed by the SEC. It is difficult to prove this, although the US Debt Clock, which claims to aggregate its data directly from the exchanges, claims that, at time of writing, the paper to silver ratio is 386.47 to 1, and, for gold, 144.41 to 1.[43][44] In percentage terms, that would be 38,647% and 14,441%, respectively.

It may be difficult to prove this, but given the collapse of silver supplies at both the SMM and COMEX this year as contract holders have finally been standing for delivery, this claim now seems quite credible.

It isn't clear how long this has been taking place (I was not able to find any clear sources that gave a date), but it's likely that it has been occurring since the time of FDR. I say this because, in 1933, FDR made individual ownership of gold illegal, and the COMEX was founded that same year.[45][46] That seems like a strange coincidence, because, the reason that the transition away from a gold standard began is that the FDR administration wanted to be able to set the price of gold, and if derivatives trading were to be centrally coordinated, that would have given them the ability to do exactly that by managing the notional paper supply. Conversely, had the dollar remained redeemable in gold, that would have given the American people the power to constrain the derivatives traders' ability to set the price by simply removing the physical product out of their hands.

At that time, the underlying issue had to do with money supply, which made gold the primary target of the price manipulation. Since then, we have experienced several tremendous technological revolutions that have vastly increased the industrial and strategic demand for silver. So, I would argue that, now, silver is the Achilles heel of the entire Western financial system.

The Gold to Silver Ratio

One particularly damning piece of evidence to suggest that the market price of silver has been criminally suppressed is the gold to silver ratio.

The "gold to silver ratio" refers to the market price of gold compared to the market price of silver.[47] At time of writing, the gold price is $4,722.68 per t

45. Wikipedia, *Executive Order 6102*, (San Francisco: Wikipedia, 2026), 1, https://en.wikipedia.org/wiki/Executive_Order_6102 .

oz,[48] and the price of silver is $76.08 per t oz[49] ($0.38 more than when I checked for the price earlier in the article). This gives us a gold to silver ratio of approximately 62:1; meaning that one ounce of gold is worth 62 ounces of silver according to the spot market.

This is an absurd situation for multiple reasons.

In the first place, silver is mined out of the ground at a ratio of about 8:1.[50] Furthermore, because silver is consumed by industry more quickly than it can be produced, the ratio of gold to silver in usable form is closer to 3:1, because most of the silver that has ever been produced has been expended.[51][52] On that basis alone, a fair price for silver would be at least 33% of the price of gold, which would put it at about $1,500 per t oz.

But hold on.

Gold is used only sparingly in industrial products, and is mainly used a form of monetary collateral (and jewelry, which also can serve that function).[53] Conversely, silver is ravenously consumed by industry, which is why so little of it remains in investable form – and that trend is projected to *increase*.[54] This means that everything we've seen so far has been only industry competing for supply, because if states and individuals begin acquiring it for investment and monetary value at scale, the value of the metal could easily outpace the 3:1 physical ratio, because it is not a nice-to-have monetary instrument in the way

that gold is. It is a must-have-if-you-want-an-industrial-economy thing to have, and if industry was having to meaningfully compete with retail and sovereign investors, the gold to silver ratio would likely be far closer to the 3:1 figure than the 62:1 figure we see at this point in time.

The Source of the Contradiction and How to Exploit it

If silver is this rare and valuable, then why on Earth would the Western political and financial establishments allow the spot price to be so low?

One can only speculate, but here's a theory.

Americans have a long tradition of holding silver as a form of wealth. Until 1965, US coinage was, primarily, silver, with the exception of pennies, which were made out of copper.[55][56]

As it happens, 1965 was a year during which globalism was being pursued by the US led liberal order in earnest,[57] and was only two years after JFK was assassinated.[58]

Perhaps, not coincidentally, one of the things JFK was allegedly attempting to do was to transition the dollar away from the control of the Federal Reserve back to the US Treasury, using silver backed bank notes.[59] What's more, his assassination now appears to have been backed by elements of the US government itself. The CIA had been monitoring Oswald, his alleged assassin, but failed to apprehend him, allegedly, out of "laziness and incompetence."[60]

60. John Hanna and Jamie Stengle, "Newly Released JFK Assassination Files Reveal More About CIA but Don't Yet Point to Conspiracies," *AP News*, March 24, 2025,

So now, a possible narrative begins to take shape.

The bourgeois US state, in an attempt to reduce the power of the working class, which had secured many labor victories in the previous decade due to its unprecedented economic leverage,[61] decided to eviscerate the value of their silver savings, and remove silver itself from circulation. When Kennedy tried to wrest monetary power away from the banks and hand monetary power back to the people, he was murdered. At the same time, the US economy began to ship American jobs overseas, reducing their economic leverage even further.[62]

The silver war is the class war.

What is to Be Done

The systemic price suppression of, arguably, the most critically short mineral in existence by the entity which most needs to secure its supply is a major contradiction. The extent to which this contradiction has been allowed to play out for the purposes of disenfranchising the public (as I allege) is an absurd situation, and the answer to this absurd situation could not be simpler.

Stack physical silver.

Why physical? Because if you merely accumulate paper silver, or attempt to leverage it yourself, you are playing their game and you will lose.

This is what the Hunt Brothers attempted to do in the 1980s, and they managed to orchestrate a market crisis, but through multiple last minute rule changes, the US regulatory system not only successfully thwarted their plan, but managed to bankrupt them in the process.[63]

A very similar situation has unfolded earlier this year (2026) in which radically escalating silver prices were met with repeated rule changes by the exchanges

which forced leverage traders to liquidate their positions, manipulating the spot price down from the $120 per t oz range back down to the $60-$80 price range.[64]

In spite of this, as I described before, physical supplies of silver continue to disappear rapidly from COMEX and SMM shelves.

So what happens when physical silver is accumulated by private investors en masse?

Simple.

Silver disappears off of bullion dealers' shelves, and they have to buy more, thus heightening the already critically stretched demand. As institutional buyers continue to rush the exchanges for silver, which is now even less available due to retail demand, the COMEX and LBMA will be forced to institute force majeure; that is, they will be forced to settle contracts in cash at the spot price, instead of receiving the physical metal.[65] One of the initial symptoms of this will be that premiums on physical silver will explode to some multiple of the spot price, which is not an unprecedented event.

Though the following event has not been officially recorded so far as I was able to uncover through my own research, I personally recall as a silver investor in 2020, how the spot price briefly spiked below $12 in mid-March, and closed at $12.12 per t oz.[66] When that occurred, I got on APMEX as quickly as I could to buy as much metal as I could afford. I remember that I was able to buy some ounces at around $16 per t oz (approximately 33% premium) in spite of the website functioning poorly due to unprecedented traffic, and in spite of most inventory already being out of stock by the time I was aware that the crash had taken place.

Then, for a period of a few weeks, silver stocks on the online dealers remained almost non-existent, and so I started buying on eBay, where the cheapest metal I could find was selling for $25 per t oz – an over 100% premium to spot.

66. JM Bullion, *5 Year Silver Price Chart*, (Dallas, JM Bullion Charts, 2026), 1, https://www.jmbullion.com/charts/silver-prices/5-year/ .

I believe that this occurred because the derivatives trader-controllers overshot on their correction of the price, and retail immediately took advantage of that. At such time as the COMEX is forced to resort to force majeure, I expect this to happen again; but this time, because it will be understood by everyone – this time, to include institutional investors and industrial buyers – that the emperor has no clothes, I expect the multiple of premium to spot to explode much, much higher.

So, effectively, this event will mark the end of Western control over spot, probably permanently. Once contracts in the Western markets are only being settled in cash, that will prove incontrovertibly that there is no relationship of Western spot to the actual market value of the metal. We already are beginning to see hints of this happening due to the Shanghai arbitrage; the SMM, for some time now, has been paying a 10-15% premium on physical silver (12.63% at time of writing)[67] compared to COMEX spot in a bid to bring more of the physical commodity into its vaults. At the same time, the Chinese government has severely restricted exports of silver.[68]

To be clear, this means that the actual market value of silver is already being set by Shanghai, and not New York. Now, so far, Shanghai is merely setting a premium to Western spot, which is only logical, since that is all that is required to stimulate a constant arbitrage trade from New York to Shanghai. Yet the fact remains, that the Shanghai price is already the going rate for silver sellers, because they are offering the most competitive bid.

Once trust in COMEX spot has collapsed, anyone who holds a paper contract will be a jilted lender, and anyone holding the physical commodity will be holding tremendous economic leverage and will be able to name their price. At that point, I suspect that the SMM may be the last institutional seller left standing, and, at that point, I predict that they will set the price significantly higher than it is at present.

In the meantime, if physical silver purchases are performed by working class people and Communists en masse, then this event will represent an unprecedented wealth transfer from the bourgeois banking system to the proletarian class.

68. James Anderson, “China’s Silver Market Dominance, Now with Export Controls,” *SD Bullion Blog,* December 13, 2025, https://sdbullion.com/blog/china-silver-market-dominance-export-controls .

Furthermore, every ounce held by an American worker, is an ounce that cannot be used to build weapons for the imperialist hegemonic system.

All of that being said, it is important to note that buying physical silver may be a poor investment in dollar terms for the foreseeable future; so long as the CME retains pricing power. However, that power is significantly challenged when the physical commodity is removed from its open market mechanisms.

Therefore, Communists should not invest in silver in order to get USD returns, although, in the long run, actual (if not spot) USD appreciation is highly likely. Communists should invest in silver because holding the physical commodity is absolute economic and political leverage.

Every Communist with the means to do so should aspire to accumulate enough silver to deprive the US Government of one Tomahawk missile.

"It is a fact: the nation is a bourgeois phenomenon."
—Aimé Césaire, *Discourse on Colonialism*

An April 2026 online article[2] posted by *Jacobin* (which is considered one of the foremost socialist online publications) cannot help but adopt a tone of irascibility regarding the leader of the West African nation of Burkina Faso: "Ibrahim Traoré Would Like to Be Thomas Sankara's Heir." Authored by Bettina Engels, a Professor of Political Science from Berlin, the *Jacobin* piece serves as a follow-up to her original article[3] for *Review of African Political Economy*, "More pragmatic than socialist: Burkina Faso's recent politics is no remake of Sankarism."

As the Amerikan empire and its allies lash out at sovereign nations throughout the Global South on a weekly basis (see Iran, Venezuela, and Caribbean fishermen[4]), Engels and *Jacobin* have calculated that their platforms are best utilized launching critiques at one of Africa's most popular revolutionary movements.

Why is it that, just as Traoré is fighting off multiple attempted military coups, these so-called 'leftists' feel the need to make such claims about the supposed illegitimacy of the current phase of the Burkinabè Revolution? Why do Engels and *Jacobin* so eagerly delineate the Burkina Faso of Traoré as something that has betrayed the original sentiments of so-called 'Sankarism?' Why does this narrative persist among 'leftists' in the West despite the concrete material gains achieved by the Burkinabè people since 2022?

2. Bettina Engels, "Ibrahim Traoré Would Like to Be Thomas Sankara's Heir," *Jacobin*, April 20, 2026, https://jacobin.com/2026/04/traore-reform-military-repression-sankara

- Jul.-Sep. 2023: The Alliance of the Sahel States (AES) is formed in conjunction with Mali and Niger, setting the course for an independent, anti-colonial movement in West Africa. [8]

- Jun. 2024: The Traoré administration launches its Presidential Initiative for Agriculture, providing a massive government support program for Burkina Faso's agricultural sector—the lifeblood of its domestic economy. [9]

- Aug. 2024: The first steps are taken to nationalize the country's mining/mineral industry, the main natural source of Burkina Faso's material wealth—two of the nation's largest gold mines were nationalized during this first phase. [10] We note here that Burkina Faso is the world's 13th-largest producer of gold, while remaining one of the poorest countries in the poorest region of Africa. [11]

- Apr. 2025: The first wide-scale assassination and regime change plot against the Traoré and his administration is undertaken by Ivory Coast-based militia groups and former Burkinabè military personnel. [12] The attack comes just two weeks after AFRICOM Commander Michael Langley testified before the US Senate Armed Services Committee, declaring Traoré a threat to US national security because of the nationalization of Burkina Faso's precious mineral wealth. [13] As reported by *MintPress News,* the Amerikan Embassy changed its travel guidelines to "do not travel" regarding Burkina Faso just before the coup

attempt; Langley also met with the Defense Minister of the Ivory Coast both before and after the insurgency. [14]

- Jun. 2025: The second wave of mine naturalizations expels French colonialists from five more of the largest gold mines in Burkina Faso. [15] Shortly afterward, all rural land is nationalized for the purpose of agricultural development that serves the Burkinabè people. [16]

- Jan. 2026: Another large coup attempt is foiled by the Traoré administration. Burkinabès took to the streets en masse to demonstrate their support for Traoré and the revolutionary government immediately following the failed regime change effort. *People's Dispatch* notes that "to the West on Burkina Faso's southern border is Togo – home to 'the principal actor' [in] this plot, Burkina Faso's former Lieutenant-Colonel Paul-Henri Damiba," who was ousted by Traoré during the popular uprising of 2022. [17]

- Mar. 2026: Burkina Faso launches its $65 billion National Development Plan with the principal goal of regaining total control of the country from jihadist and terrorist groups. [18] (As *Business Insider Africa* notes, "despite security challenges, the government has expanded control of national territory from 69% in 2023 to 73.56% by late 2025." 'Security challenges' is a rather misleading term used to describe being under siege by Western-backed jihadist military forces.) [19]

- Jun. 2026: The AES announces the launching of the Union of Territorial Collectivities, a regional initiative designed to promote collaboration and solidarity among the indigenous villages of the Sahel States. [20]
- Jul. 2026: The Burkinabe government inaugurates its first completely state-owned gold mine in the municipality of Yako, which is "expected to produce more than seven tons of gold over the next 15 years while creating more than 1,200 direct and indirect jobs." [21]

Despite all this, Engels maintains that "the question remains as to what alternative idea of democracy and political rule Traoré and the MPSR 2 [Traoré's party] represent. So far, they seem to rely rather on what is often referred to as output or performance legitimacy (legitimacy based on answering the basic demands of the population and improving material living conditions)."

Scenes from revolutionary upsurge in 1983 that toppled pro-imperialist regime, Ougadougou. Headline from newspaper in France reads: "Upper Volta: a 33-year old 'anti-imperialist' captain takes power."

In other words, to Engels and the *Jacobin* 'Left,' the new phase of the Burkinabè Revolution, while resulting in immediate material gains and indubitably responding to some of the most dire needs of its citizenry, is nevertheless at best worth a sort of apathetic ambivalence from their Western audience. Why do they come to this conclusion?

From the Cold War period onward, the Amerikan empire has achieved the imposition upon much of the Western world a phenomenon which Cuban-American Communist and Professor of Philosophy Carlos L. Garrido

20. "Sahel Alliance Establishes Union of Territorial Collectivities," *NewsGPT World*, June 12, 2026, https://newsgpt.world/sahel-alliance-establishes-union-of-territorial-collectivities-9904

21. Mick Kelly, "First Public Gold Mine Marks New Chapter for Burkina Faso's Economic Sovereignty," *MR Online*, July 11, 2026, https://mronline.org/2026/07/11/first-public-gold-mine-marks-new-chapter-for-burkina-fasos-economic-sovereignty/

labels the 'Purity Fetish.' In his book *The Purity Fetish and the Crisis of Western Marxism,* Garrido critiques Western 'leftists' ' inability to come to the realization that:

> *Socialism is not 'betrayed' when it, encountering the external and internal pressures of imperialism and a national bourgeois class, is forced to take more so-called 'authoritarian' positions to protect the revolution. Socialism is not 'betrayed' or transformed into 'state capitalism' (in the derogatory, non-Leninist sense) when faced with a backwards economy it takes the risk of tarrying with its opposite and engages a process of opening up to foreign capital to develop its productive forces. The 'authoritarian' moment, or the moment of 'opening up to foreign capital,' are not an annihilating negation of socialism—as Western Marxists would have you believe—but the sublation of the idealistic conceptions of a 'pure' socialism, especially in its earliest stages… The 'authoritarianism' that the Western Marxist's purity fetish condemns is in every instance a necessary component to protect a revolution's sovereignty and socialist democracy.*[22]

In a similar vein, Italian Marxist militant Domenico Losurdo dubs this tendency the "bifurcation of two Marxisms." In his seminal book, *Western Marxism: How it was Born, How it Died, and How it Can be Reborn,* Losurdo outlines "how different socioeconomic contexts and varying cultural traditions contributed to bifurcating the Marxisms in the West and the East." Indeed, as he points out, there "should not be any contradictions between Western Marxism and Eastern Marxism. We are dealing with two different perspectives on the same social system, each taking off from Lenin's analyses [which in turn had built upon Marx's]. In other words, two struggles for recognition called into question imperialism-capitalism."[23]

In practice, we can see that there are indeed contradictions between the development of Marxism and 'progressive' politics of Western and Eastern countries. Western 'leftists' regularly disparage these differences as 'impurities' or 'inefficacies' of revolutionary movements abroad, especially those of the

---

Global South. In doing so, they remain blind to or willfully ignorant of the political context surrounding the actions taken by these movements.

The purity fetish and the misunderstanding of Marxism by Western 'leftists' is due, in large part, to the failure to grasp the essence of imperialism as it was initially laid out by Lenin in 1916-'17. Domenico Losurdo explains that "if, in the West, communism and Marxism are the truth and the weapon to end war and pull it up by the roots, in the East, communism and Marxism-Leninism are the truth and the ideological weapon to end a situation of oppression and being 'looked down upon' by colonialism and imperialism."[24]

This distinction is highlighted in another example cited by Losurdo of Ho Chi Minh's 1923 comments on Marxism: "Marx built his doctrine on a certain philosophy of history. What history? That of Europe. But what is Europe? It is not humanity in its entirety."[25] Through the poignant declarations of anti-colonial leaders of the Global South such as Ho, we can see that Losurdo's mapping of the bifurcation of the two Marxisms leads to a definitive conclusion: at the core of the philosophy of 'Eastern' Marxism is the two-pronged struggle against imperialism and colonialism, a crucial aspect of a revolutionary movement that is often lacking (or altogether absent) in Western Marxist movements.

Garrido, for his part, separates the Western 'left' from those revolutionary movements of the East with the following analysis:

> *According to the orthodox view (which was reformed by Marx and Engels in posthumously published manuscripts) where capitalism was most developed, i.e., Western Europe and the US, was where socialism was to first arrive. Yet, the first successful revolution took root in Russia (the 'weakest link') and then in China, Korea, Cuba, Vietnam, and other countries from the third world. The colonial, semi-colonial, and semi-feudal conditions in these areas forces these socialist projects to focus on developing a strong state (to defend against aggression and secure sovereignty) and the forces of production sciences, and technology (to raise living standards and shrink global inequality).* [26]

25. Id. at p. 69.

26. Garrido, Carlos L. *The Purity Fetish and the Crisis of Western Marxism.* Midwestern Marx Publishing Press, 2023. at p. 35.

It is not, then, the so-called modern republics of the US and Europe that represent the objectively superior material gains in the struggle against capitalist imperialism. It was first and foremost the peasant and working-class uprisings of Russia, China, Korea, Vietnam, and Cuba which acted as the catalysts for profound and fundamental changes in society to the benefit of the working class majority.

But to many of even the most 'progressive' Westerners, "the success [of socialism] in the East, because it has been impure, is deemed a failure, [and] the failure in the West, because purity has been sustained, is deemed a success." In this way, "the purity the Western Marxists seek to keep their idea of socialism in is to the detriment of the truth of socialism itself."[27] This is the reality that many Westerners who claim to be on the Left fail to recognize—and it is this crucial message which is at the core of Garrido and Losurdo's work.

Thomas Sankara with Burkina Faso revolutionary military leaders, including Blaise Campaoré (far left), the NATO-backed general who later betrayed Sankara and facilitated his assassination.

While Burkina Faso's revolutionary movements have never followed an explicitly Marxist-Leninist program, we can use the above theory to

27. Id. at p. 36.

demonstrate that Engels and her colleagues plainly exhibit the hallmarks of the Western purity fetish in their analysis of the current phase of the country's revolution under Traoré.

So begins *Jacobin*'s article by questioning "whether a military government can be the alternative, and whether the ends justify the means." Absent is the acknowledgement that before Traoré took power in Burkina Faso, jihadist terrorist groups were estimated[28] to have controlled almost half of the country's land; if the basic question of the basic right to self-determination of the Burkinabè people over their natural resources is being actively denied, how is anything less than a military response warranted? These complexities seem to fall dead at the feet of such 'leftists' as Engels and those at *Jacobin* who platform her analysis.

Groups such as Jama'at Nusrat al-Islam wal-Muslimin (JNIM—which perpetrates the vast majority of the violence in Burkina Faso today), are tied directly to Al-Qaeda, the international terrorist organization proven to be linked to the vast labyrinth of Amerikan intelligence, military/defense personnel and private contractors. Works such as journalist Max Blumenthal's *The Management of Savagery: How America's National Security State Fueled the Rise of Al Qaeda, ISIS, and Donald Trump* explore this phenomenon, relying on primary sources and interviews from ex-government officials and experts within the international community. Indeed, a different article[29] in Engels' *Review of African Political Economy* by Jeffrie Quarsie, "Is France Funding Terrorism in the Sahel?" highlights the disturbing correlation between French military presence and the 2000% increase in jihadist terrorist violence between 2007 and 2022. These facts apparently warrant no consideration in Engels' analysis.

What most Western critics willingly gloss over is the fact that Traoré's administration (as well as the greater AES alliance) is actively moving away from Western military aid due to strictly the *anti-imperialist* character of its movement. Traoré and leaders allied with him recognize that, just as Sankara stated four decades ago, "[Western] welfare and aid policies have only ended

28. Lefaso.net, "Burkina Faso: Les Députés Adoptent la Loi Portant Réorganisation Agraire et Foncière," *Lefaso.net*, July 3, 2025, https://lefaso.net/spip.php?article133207

29. Jeffrie Quarsie, "Is France Funding Terrorism in the Sahel?," *Review of African Political Economy (ROAPE)*, June 12, 2026, https://roape.net/2026/06/12/is-france-funding-terrorism-in-the-sahel/

up disorganizing us, subjugating us, and robbing us of a sense of responsibility for our own economic, political, and cultural affairs."[30]

Instead of interpreting the Traoré administration's 'authoritarian' or 'pragmatic' measures with this context in mind, Engels accuses him of appropriating "anti-French sentiment, which had increased since 2019, and [using] it to generate support for his government." Instead of leading his people against a foreign colonizing force, Traoré's role is reduced to simply taking advantage of the already existing anti-colonial tendencies for what are construed as undemocratic purposes. For Engels, the refusal to address the political context that exists in Burkina Faso works to the benefit of her analysis that Traoré and the current phase of the Burkinabè Revolution are decidedly undemocratic and therefore must be condemned.

We must recognize that the anti-French sentiment which Engels accuses Traoré of exploiting has been present throughout Burkina Faso since the 1980s, and in greater West Africa for much longer; it is not a new phenomenon by any means, and to imply it is in some way unjustifiable or coincidental is to ignore more than a century of evidence to the contrary. With this in mind, one can begin to question why the politico-economic transformations taking place in the Sahel today should be labeled as 'authoritarian' at all—for whom, exactly, are they 'authoritarian?' If Burkina Faso under Traoré is 'authoritarian,' how shall we describe the centuries-long war of oppression waged by Western European colonialist elite against the people of Africa?

Nowhere in Engels' observations is there the notion that perhaps—as the brutal legacy of Western European imperialism shows—the US and France's military involvement in the Sahel does *not* serve the interests of the Burkinabè people; it is rather very much to the contrary. Unmentioned in both articles is the fact that Western nations have a monstrous record[31] when it comes to effective counterterrorism campaigns via AFRICOM, the international colonial military machine, operating primarily out of Western Europe but spearheaded by the US. Multiple reports have shown[32] that the increase in foreign military activity in West Africa is *directly correlated* with the sharp rise in terrorist violence.

By applying a purity fetishist lens to her analysis of the Burkina Faso Revolution, Engels shifts the focus of the reader away from the fundamental achievements of the Burkinabè working class under Traoré—much of which do indeed echo the popular policies of Sankara's time—and towards unequivocally condemning the uncomfortable (for Westerners, that is) possibility of the US/French-backed liberal hegemony being existentially threatened in West Africa. As such, the remaining chapters of this project will be dedicated to dissecting some of the specific accusations leveled at Traoré and the Burkina Faso Revolution.

> *Imperialism, trying to preserve itself in the face of the oppressed masses anticolonial struggle, presented neocolonialism to the masses. Neocolonialism means powerless visibility. You see an African president, but the entire country is controlled by France or Belgium or England—its former colonial master.*
>
> —Kwame Turé & Charles V. Hamilton, Black Power: The Politics of Liberation

In addition to refusing to recognize the intricacies of Sahel politics, Dr. Bettina Engels spends a considerable portion of her *Jacobin* article[33] harping on "the hype on social media" surrounding Traoré and "the strong desire, especially among the younger generation, for substantial change in political and economic structures, namely an end to neocolonial and imperialist exploitation and domination" has led to "Traoré being stylized as a Pan-Africanist revolutionary." The wide-reaching socioeconomic implications of the Burkinabè Revolution is reduced to a petty game of ego and identity politics, stripped of vital context and a concrete analysis of the material conditions of the country's people.

This is a classic aim of the purity fetishist; it is in the way Engels analyzes the Burkinabè Revolution under Traoré that, as Dr. Carlos L. Garrido says in *The Purity Fetish and the Crisis of Western Marxism*, "things are no longer seen in their movement and interconnections, but treated abstractly and in a reified manner. Socialism becomes a rigid definition, with a series of characteristics reality must meet in order to be labeled as 'socialist.' " [34]

Ougadougou, August 4, 1985. Parade of women celebrates revolution's second anniversary.

Again, we note that neither Traoré nor Sankara ever claimed to desire to move Burkina Faso, as a national project, towards Communism (although Sankara often quoted both Marx and Lenin in his speeches and explicitly advocated for the reconstruction of a socialist African society). Sankara, in a 1985 interview, states, "For now, I am anti-imperialist. Speaking as your comrade president, this also is the case. We think that this is the product of a specific ideology. That's enough for us—to be useful to our people, especially when they don't trouble themselves with labeling their leaders but judge them above all by their revolutionary action."[35] Traoré, in speech as well as practice, seems to be following the same path. Unfortunately for both leaders, the purity fetish outlook employed by Engels and *Jacobin* are equally applied to anti-imperialistic revolutionary movements such as that of Burkina Faso.

Engels solidifies her position here: she decries the notion that Traoré is "a figure worthy of carrying the mantle of Sankarism." This is important because it is at this point in the article that Engels and *Jacobin* cross the line from tacit disapproval and stumble into unsubstantiated condemnation. The comparison between the two leaders is "valid only to a limited extent," Engels declares, even though "it has real impact on public discourse, and Traoré himself knows how to use allusions to Sankara as a way to gain legitimacy."

As evidence, Engels relies almost exclusively on the fact that Traoré's government is abolishing opposition parties, restricting NGOs and civil society organizations, and repressing dissent with violence (she cleverly skirts around the issue of nationalizing agriculture and industry, acts which are always met with indignation by allies of empire). As evidence for her latter point she cites

35. Sankara, Thomas. *Thomas Sankara Speaks: The Burkina Faso Revolution, 1983-1987 (edited by Michael Prairie).* Pathfinder Press, 2007. p. 266.

the work[36] of Nigerien political scientist Abdourahmane Idrissa, who claims[37] that the use of civilian militias known as *Wayiyans* are brutalizing the population that is dissenting against the popular government. We will address these arguments in turn.

Meeting of a Committee for Defense of the Revolution in Ougadougou neighborhood, August 1985. The CDRs aimed to mobilize workers, farmers, and youth to work together to build a new society.

There are a plethora of issues with the assumptions posited by Engels: In no way does Traoré claim to have been passed the torch of 'Sankarism.' This is an ideological box into which he is stuffed by the author without explanation. As did Thomas Sankara during the first phase of the Burkinabè Revolution, Traoré has always emphasized that theirs is a nation-wide popular movement, working towards the common goals of the working masses of the country by meeting the most pressing material needs of the majority.

As such, the sweeping reforms seen in Burkina Faso are not a product of dictatorial decrees issued by Traoré at will; what's more, the People's

36. Abdourahmane Idrissa, "Abdourahmane Idrissa," *African Studies Centre Leiden*, accessed July 29, 2026, https://www.ascleiden.nl/organization/people/abdourahmane-idrissa

37. Rahmane Idrissa, "Burkina Faso: Traoré, a Conservative, Anti-Democratic Despot," *Amandla!*, August 12, 2025, https://www.amandla.org.za/burkina-faso-traore-a-conservative-anti-democratic-despot/

Legislative Assembly is largely made up of Burkina Faso-educated professionals and local village leaders, making it a governmental body far more representative of its constituents' population than those of most corporate elite-governed Western 'democracies.' By this logic, the controversial and problematic legislative actions taken by Traoré's government, such as the anti-LGBTQ[38] family reform program of September 2025, are not the machinations of a minuscule, elite class (as is often the case in the West), but are rather far more representative of the actual values the majority of Burkinabè people prioritize.

Contrary to Western narratives, Traoré is not a dictator. The members of Burkina Faso's legislative body, the Traditional Legislative Assembly (ALT), is easily accessible on the government's website.[39] It is headed by college professor Ousmane Bougouma who was educated in Geneva (Western progressives tremble at the anti-democratic despot of indoctrination: Switzerland!) and came back to teach law at Thomas Sankara University—a school heavily subsidized by the Burkinabè government. The legislature's deputy, Assita B. Françoise Romaine Bailou, is heading Burkina Faso's Commission on Gender, Health, Social Action, and Humanitarian Affairs (*Commission du genre, de la santé, de l'action sociale et humanitaire - CGSASH*)[40], a permanent specialized committee established by Traoré to advance gender equality in the country. These progressive efforts go unmentioned in Engels and *Jacobin*'s articles.

It is important to note that reactions to Thomas Sankara having implemented similar programs back in the '80s (he too established a gender equality commission, the *Union des Femmes du Burkina Faso* [Union of the Women of Burkina Faso/UFB], in 1985, although it was immediately reversed in 1987 by traitor Blaise Campaoré) are conveniently treated[41] with the rosy glow of purified nostalgia by so-called leftists such as *Jacobin* when viewed in retrospect. It begs the reader to wonder whether *Jacobin* would have approved

of Sankara in his day, when he was banning political parties and moving towards the dictatorship of the working class majority.[42]

Furthermore, at least five of the legislature's 71 members belong to the ethnic Fulani/Pulaar group: Daouda Diallo, Ousmane Diallo, Moumouni Dialla, Ly Hama, and Mamadou Yaro. This is particularly relevant with regards to Engels' source, Dr. Idrissa's accusation[43] of systemic anti-Fulani violence in Burkina Faso "which some would call a genocide." *Human Rights Watch* reported similarly on the abuses of the popular militias as well as the Burkinabè military[44], but conveniently leaves out crucial context to provoke the age-old Western reaction of demonizing the leaders of sovereign, anti-imperialist and anti-colonial nations.

A literacy class in Kamboincé, March 1986. To combat 92 percent illiteracy rate, the revolution initiated campaign to teach reading and writing in main languages spoken in country.

42. See the footnote on p. 69 of Id.: "Only parties associated with the former neocolonial regime were dissolved. A number of groups and organizations that supported the revolution were able to function openly."

43. ahmane Idrissa, "Burkina Faso: Traoré, a Conservative, Anti-Democratic Despot," *Amandla!*, August 12, 2025, https://www.amandla.org.za/burkina-faso-traore-a-conservative-anti-democratic-despot/

44. Ilaria Allegrozzi, "Two Burkina Faso Activists Unlawfully Conscripted Are Released," *Human Rights Watch*, October 10, 2025, https://www.hrw.org/news/2025/10/10/two-burkina-faso-activists-unlawfully-conscripted-are-released

It is true that jihadists are currently occupying the area along the Burkina Faso-Mali border in which Fulani populations are high. This does not by any means, however, equate the Burkinabè military's response to jihadist attacks (many of which include a number of Fulani insurgents) to a pointed attempt at ethnic cleansing. At a time when there are *several very real genocides* occurring around the world—one of them nearby[45] in the Sahel region of Sudan and Chad—it becomes even more fallacious to haphazardly apply the label of ethnic cleansing to an armed conflict, especially as Burkina Faso is defending itself from Western neocolonialism.

Dr. Idrissa treats the concept of civilian militias (*Wayiyans*) with a similar degree of reductionism. He portrays them as roving bands of terrorist gangs, bent on abusing their power as government-supported armed groups and committing crimes against the local population. This could not be further from the truth: a video[46] posted to *X* by Somali independent media outlet *Daljir Media* from the capital city of Burkina Faso, Ougadougou, in the aftermath of one of the attempted 2025 coups, shows a group of civilians being interviewed as they spend the nights outside of Traoré's presidential palace and at well-traveled roundabouts. When asked why they are sleeping at and around the president's property, a young man responds, "because of the love we have for our country" (he says this in perfect English, as the interviewer, likely Somali, would not share the same Francophone background as the Burkinabè youth he is interviewing).

Far from the picture of corrupt, violent militias that Dr. Irissa paints, *Wayiyans* consist mainly of lightly-armed civilians willing to put their lives on the line for the sake of their country's anti-colonial revolution. Other veritable, independent media outlets such as *People's Dispatch* have highlighted[47] this reality which falls dead on the ears of such critics as Dr. Idrissa and the Western outlets which platform him.

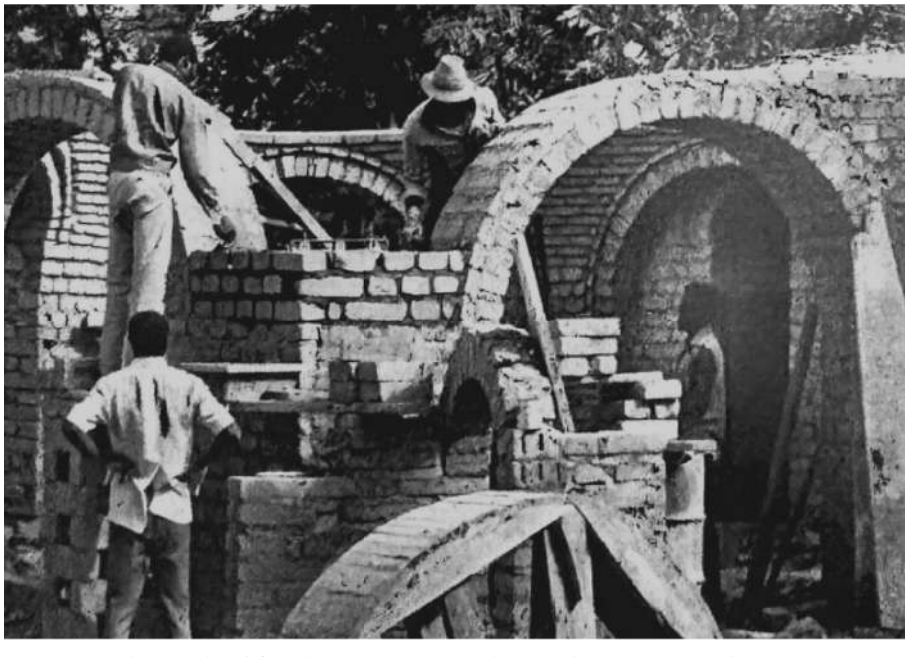
Regarding the *Human Rights Watch* report[48], which was conveniently released within a month of the *Jacobin* article, Amerikan NGOs such as *HRW* have a despicable record when it comes to fair and accurate reporting on anti-imperialist movements in the Global South. The primary source used in the report consists of a video taken after the combat between jihadist groups and the Burkinabè volunteer defense forces had ceased, leaving more than one hundred Fulani villagers dead. The credibility of the entire *HRW* report rests on the NGO's 'Senior Sahel Researcher,' US-educated Italian Ilaria Allegrozzi—who in turn cites no Burkina Faso-based sources or outlets in her reporting.

These dubious circumstances are characteristic of *HRW* and other Amerikan regime-aligned NGO's style of reporting. Additional examples of this tendency are readily available in Joe Emersberger & The Anti Empire Project (Justin Podur)'s 2021 book *Extraordinary Threat: The US Empire, the Media and Twenty Years of Coup Attempts in Venezuela* and Jeremy Kuzmarov & Daniel Kovalik's 2025 *Syria: Anatomy of Regime Change.*

Supposedly 'neutral' nonprofits and think tanks such as *HRW, Council on Foreign Relations, Amnesty International, Brookings Institute, Center for Strategic International Studies (CSIS), InSight Crime,* and many others work to advance the aims of neocolonialism. Anyone interested in an in-depth study of the inner working of the nefarious strategy of the US empire with regards to the news media should direct themselves to Michael Parenti's 1986 masterpiece *Inventing Reality.*

Given the fact that the Burkinabè village of Solenzo, where *HRW* claims this massacre took place, has been under almost complete control by jihadist terrorists, it is impossible to confirm the claims that Allegrozzi puts forth on behalf of the US-based NGO. The Burkinabè government maintains[49] that their volunteer forces did not perpetrate the killings, noting that jihadist groups such as JNIM are known to widely recruit Fulani villagers and to resort to inhumane methods such as using human shields and forcing villagers to fight against Burkinabè forces.



With all of this in mind, readers should approach reporting by *HRW* in regards to the Global South with ambivalence at best. It is the strategic role played by

48. Ilaria Allegrozzi, "Burkina Faso: Army Directs Ethnic Massacres," *Human Rights Watch*, May 12, 2025, https://www.hrw.org/news/2025/05/12/burkina-faso-army-directs-ethnic-massacres

49. Deutsche Welle, "Rights Group Urges Probe into Burkina Faso Civilian Massacre," *Deutsche Welle*, March 15, 2025, https://www.dw.com/en/rights-group-urges-probe-into-burkina-faso-civilian-massacre/a-71930332

such NGOs within Amerikan society that allows the US empire to perpetrate narratives that not only disparage popular movements abroad, but perpetuate the continued oppression of neocolonialism. As is noted in *Extraordinary Threat*: "Recall that, in the case of Israel, when almost one hundred percent of the dying is on the Palestinian side, and the death toll is in the thousands, the Western media often manages to depict Palestinians as the more violent party. At best, they are portrayed as equally violent and culpable. Amnesty International and Human Rights Watch have descended to this false depiction as well."[50] This strategy proves to be all too useful for the Amerikan empire's machinations with regards to the sovereign people of the Sahel.

> *Dying colonialism is reviving in the international coalitions of neo-colonialism. These coalitions of competing organisms reflect the global character that financial monopoly has attained under the dominance of the most powerful imperialism, that of America.*
>
> -Kwame Nkrumah, Neo-Colonialism: The Last Stage of Imperialism

Peasants plowing land for planting, Upper Volta (Burkina Faso), mid-1970s. Caption reads: "Safe drinking water, three meals a day, a clinic, a school, and a simple plow. These are still elements of an ideal life that millions of Burkinabè have not yet achieved."

50. Podur, Justin & Emersberger, Joseph. *Extraordinary Threat: The US Empire, The Media, and Twenty Years of Coup Attempts in Venezuela.* Monthly Review Press, 2024. p. 170.

As we have seen, the analysis that Dr. Bettina Engels and *Jacobin* put forth in both[51] of the articles[52] in question provides absolutely no room for the concrete cultural complexities that exist within both Burkina Faso as a nation, much less the Sahel as a region. Even if those of us living in Western countries have moral and ethical qualms with certain policies and reforms, acknowledging they are taking place *must* be precipitated by an understanding of the context in which they come to be.

Contrary to Engels' assertions, it is not under the clever guise of 'Sankarism' that the Traoré administration is parceling out reforms to quell public unrest. To assert as such is to display a fundamental misunderstanding of the objective conditions in which the vast majority of Burkinabè people find themselves. To Burkinabès, Sankara does indeed represent[53] resistance and hope for a brighter future—but Sankara alone is not the Burkina Faso Revolution, and the same should be understood of Traoré.

Thomas Sankara would likely still be living today if he were not murdered by his longtime friend and NATO-backed traitor Blaise Campaoré—who is now peacefully waiting out his exile in the Ivory Coast (the country from which many of the coup-plotters are originating!). The Burkinabè people have come to terms with the implications of Sankara's death; to deny this fact is to ignore the painful period of recent Burkinabè history from 1987-2014 in which Campaoré re-instituted many of the neoliberal reforms Sankara's revolutionary movement had done away with.

Astonishingly, Campaoré is simply referred to by Engels in her *Jacobin* article as "the man who overthrew [Sankara]"—the extent to which Campaoré's Western-approved policies reversed many of the revolutionary gains for Burkina Faso's working class during this period is altogether disregarded.

The Burkina Faso Revolution lives on without Sankara—not through the sole image of Traoré donning the red beret, but through his administration's enabling of the expression of self-determination by the Burkinabè people. The popular movement which caused the traitor Campaoré to flee to exile in 2014 is

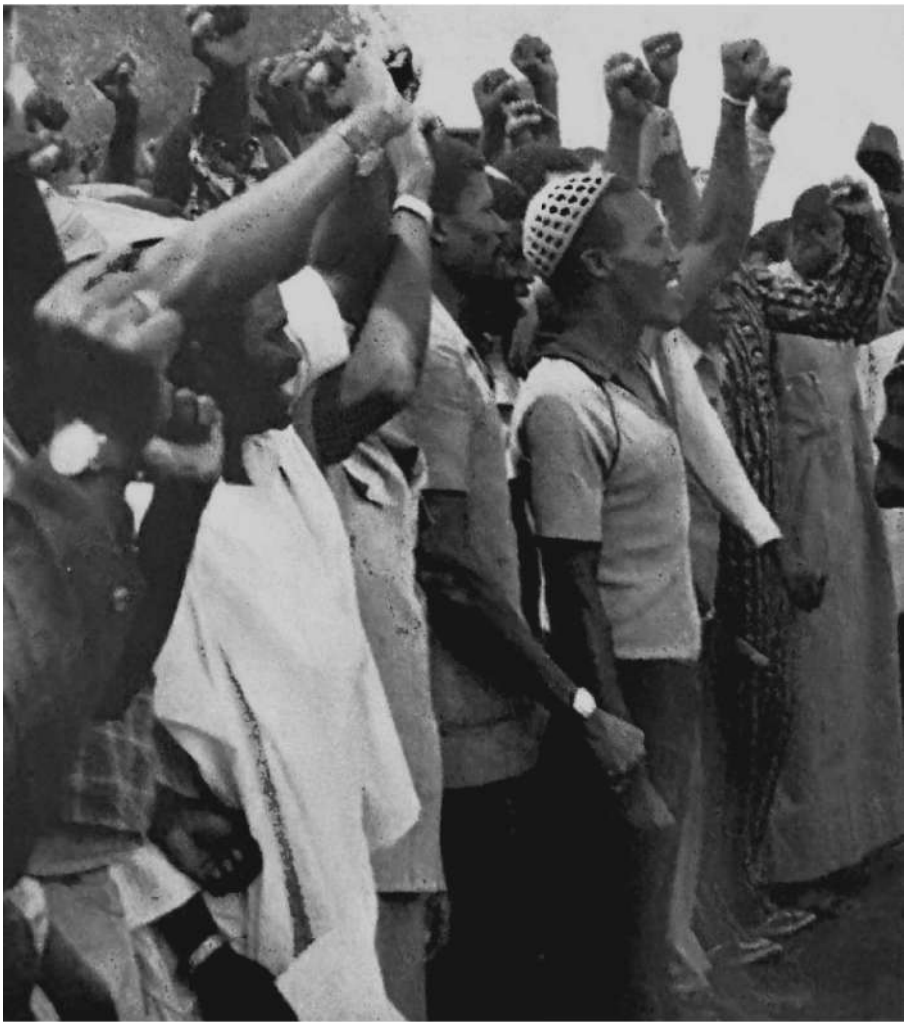
51. Bettina Engels, "More Pragmatic Than Socialist," *Review of African Political Economy (ROAPE)*, March 4, 2026, https://roape.net/2026/03/04/more-pragmatic-than-socialist/

52. Bettina Engels, "Ibrahim Traoré Would Like to Be Thomas Sankara's Heir," *Jacobin*, April 20, 2026, https://jacobin.com/2026/04/traore-reform-military-repression-sankara

53. Pedro Stropasolas, "Thomas Sankara's Legacy Lives On in Burkina Faso 38 Years After His Death," *People's Dispatch*, October 15, 2025, https://peoplesdispatch.org/2025/10/15/thomas-sankaras-legacy-lives-on-in-burkina-faso-38-years-after-his-death/

not unconnected from the events that are seen today. Nevertheless, the classic Western error of attributing the lifeblood of a popular working class movement to the iconoclastic charisma of one man or group of people is clearly seen in Engels' and *Jacobin's* work here.

It is within this context that Traoré is not only cutting Burkina Faso's remaining ties to the Western world, but directly reinvesting resources into the domestic economy to achieve material gains for the country's working class: providing land, tractors, buses, trucks, fertilizers, concrete, and other tools of infrastructure. The Burkinabè people have been intentionally deprived of these necessities for far too long by Western colonial interests. Where Western 'leftists' err is instead of attributing this deprivation to the legacy of neocolonialism, they assume it is *primarily* due to the 'authoritarian,' 'conservative,' or 'backward' tendencies being exhibited by popular leaders such as Traoré.



Embodying Dr. Carlos L. Garrido's purity fetish,[54] Engels effectively shifts the responsibility for the oppression of the Burkinabè people from their *actual oppressors*—the Western politico-economic elites who facilitate and perpetuate the system of capitalist imperialism—and thrusts it onto the popular revolutionary movement actively trying to stave off a violent, colonial siege.

Additionally, the purity fetish as it is applied to the Burkina Faso situation by Engels and *Jacobin* leads to the assessment that working class figures like Traoré subscribe to the same values as the lustful, power-hungry elites that are actively working to undermine and destroy them. The concrete material changes Burkina Faso has undergone since Traoré took power in 2022 (as mentioned in part one) serve as evidence to the contrary.

As Sankara himself said in his 1983 "Political Orientation" speech: "Imperialism is everywhere. Through the culture that it spreads, through its misinformation, it gets us to think like it does, it gets us to submit to it, and to go along with all its maneuvers. For goodness' sake, we must stand in imperialism's way… It is imperialism that assassinated the Lumumbas, the Cabrals, and the Kwame Nkrumahs." If Burkina Faso under Traoré acted in accordance with Western standards of 'purity,' as Engels and *Jacobin* claim it

54. See Garrido, Carlos L. *The Purity Fetish and the Crisis of Western Marxism*. Midwestern Marx Publishing Press, 2024.

should, he would likely join the long list of imperialism's victims as Sankara so fatefully did in 1987.[55]

Construction of apartment building in center of Ougadougou, 1985.

Another rather weak claim that is stressed in most Western-sourced analyses regarding Burkina Faso is its condemnable policy of pursuing a strategic partnership with Russia. Most Western outlets jump[56] at the chance to make note of several Russian flags at rallies in Ouagadougou and contracts with

55. Sankara, Thomas. *Thomas Sankara Speaks: The Burkina Faso Revolution, 1983-1987*. Pathfinder Books, 2007. at p. 55.

Russian mining corporations. Few, if any, ask themselves why Burkina Faso should not have the right to conduct business with whomever it chooses, as the Amerikan empire does.

Likewise, absent from scrutiny was the previous near-total ownership of the Burkinabè mining industry by France, the UK, and Canada before they were finally ousted in 2023; these Western corporations controlled far more of Burkina Faso's mining industry prior to 2023 than Russian ones do today. Perhaps this is because such scrutiny would require acknowledging that the Russian contracts[57] which replaced them are fairer to the Burkinabè people, including stipulations such as requiring[58] Russian mining companies to hire from the local population (thanks to a 2023 law passed by the popular assembly) and to commit a larger amount of their profits to the Burkinabè state. Such grievances levied at Burkina Faso smack of old Cold War-era, anti-Communist sentiment, which, as many younger generations of the world are coming to realize[59], has no basis in reality.

A thorough analysis of the US-backed propaganda recently published regarding Burkina Faso will expose various tendencies characteristic of the capitalist/imperialist ruling class. Engels and *Jacobin,* by applying the purity fetish to their analysis, establish a backdrop of Western bourgeois standards and expectations for the African nation's revolutionary project. They completely ignore the complex cultural history of the Sahel Region, that of Burkina Faso as a relatively nascent national project, and the very concrete material improvements the Burkinabè people have seen since Traoré took power in 2022.

In his famous 1984 United Nations speech, Thomas Sankara makes the following appeal to the Western world:

---

57. Reuters, "Burkina Faso Grants Mining Lease to Russia's Nordgold for Gold Project," *Reuters*, April 25, 2025, https://www.reuters.com/world/africa/burkina-faso-grants-mining-lease-russias-nordgold-gold-project-2025-04-25/

> *I make no claim to lay out any doctrines here. I am neither a messiah nor a prophet. I possess no truths. My only aspiration is twofold: first, to be able to speak on behalf of my people, the people of Burkina Faso, in simple words, words that are clear and factual. And second, in my own way to also speak on behalf of the "great disinherited people of the world," those who belong to the world so ironically christened the Third World. And to state, though I may not succeed in making them understood, the reasons for our revolt… My country is brimming with all the misfortunes of the peoples of the world, a painful synthesis of all humanity's suffering, but also—and above all—of the promise of our struggles. This is why my heart beats naturally on behalf of the sick who anxiously scan the horizons of a science monopolized by arms merchants.*[60]

Both Sankara—through his revolutionary legacy, garnished with such eloquence as that cited above—and Traoré, through his everyday actions, make one thing plain: as Western observers, our opinion and analysis of the Burkina Faso Revolution is ultimately irrelevant. In the end, it is *the Burkinabè people alone*—not those living in the land of international arms merchants—who decide the legitimacy of this current phase of their anti-imperialist struggle.

Engels, and by extension *Jacobin,* seem to reject, above all, the creative ways in which Traoré's administration has navigated the minefield of modern neocolonialism as it exists today. These maneuvers have been essential in the maintenance of Burkina Faso's self-determination as a sovereign country (such as it is), and the current numerous invasions by the US-backed West of other civilizations around the world should serve as proof of this fact.

Rally in Orodara, Kénédougou province, during revolution. Caption reads: "The Burkinabè Revolution is at the disposal of the people of Africa. Only revolution will allow them to free themselves from neocolonial and imperialist domination."

In his 1965 magnum opus *Neo-Colonialism: The Last Stage of Imperialism,* revolutionary Pan-Africanist and first President of the sovereign nation of Ghana, Kwame Nkrumah, gives credence to "the argument for continentally-planned economic growth so that all [African] States can benefit from industrialisation and other improvements made possible by unified

60. Id. at p. 162-171.

direction."[61] Like Sankara, Nkrumah always emphasized the fact that he spoke for all of Africa—a balkanized continent suffering the brunt of capitalist imperialism and colonialism at the hands of Western elites.

The people of Burkina Faso, despite the arguments posited by Western 'leftists' platformed by such well-known outlets as *Jacobin,* are no exception; under Traoré, as we have seen, the Burkinabè people represent the stalwart against neocolonialism in Africa, that genocidal force which Nkrumah refers to as "the mainspring of power, the direction of policies that stand against the advancing tide of freedom of the exploited people of Africa and the world."[62] Yesterday, the working class of Burkina Faso's past was stuck with only the hoe to plow their fields. Today and tomorrow, with Traoré's revitalization of the Burkina Faso Revolution—the *machine*—self-determination and liberation for the Burkinabè people can finally be seen on the horizon once again.

How to Read Marx's Capital

Edward Liger Smith[1] & Dan Schoenbaum[2]

1. Edward Smith is an American political scientist and economist who works as an Executive Board member and Director of the American Communist Party media team and as Co-Director of the Midwestern Marx Institute, the largest Marxist-Leninist think tank in the English-speaking world.

2. Dan Schoenbaum is an American Communist Party (ACP) member of the Department of Education, Midwest regional education officer, and Illinois chapter education officer. He is a reporter and editor for Midwestern Marx Institute and works on programming for Chicago Workers School.

DAN SCHOENBAUM:

Could you summarize your experience reading *Capital*? When did you start? When did you finish?

EDDIE LIGER SMITH:

I started reading it in my early twenties. I was probably twenty-two or twenty-three and wanted to get into Marxism. And at that point I hadn't really read much Marxist literature at all or much theory at all. But I was really interested in it, and especially then, in my early twenties, I was always overly ambitious and wanting to start with the most difficult thing possible. So I did finish Volume One and got some things out of it. Not a ton, though. I'd say seventy or eighty percent of the book went completely over my head, other than the parts where Marx is going through the different manufacturing facilities in England and talking about the working conditions, reading from the inspector reports.

But I did slog through it and finish it just through sheer determination. Then I read a lot of other stuff: Lenin; *Wage Labor and Capital*; *Value, Price, and Profit*; [Engels's] *Socialism: Utopian and Scientific*; all those smaller pamphlets. And I realized I needed to read Volume One again. So I went back and read it again and got a ton out of it. The second time through I had become not just more acquainted with the Marxist method of analysis and basics of Marxism but also the basics of political economy. My reading skills in general and my ability to read theory in particular had improved. So I got a ton out of it the second time.

SCHOENBAUM:

I think most people don't read the whole 2500 pages all in one go. With the starts and stops, how long would you say it was between starting to read *Capital* and finishing it?

SMITH:

It was probably close to two years. I read it pretty closely. The second time, too, I was filling notebooks with notes and even reading a bit too closely at points. Things I probably could have skimmed over. I was trying to make sure I understood every little aspect.

SCHOENBAUM:

How would you describe the overall structure of *Capital*?

SMITH:

Volume One is production, Volume Two circulation, where commodities are actually being bought and sold. Volume Two expands on how commodities are produced in two different departments of production: the department that sells commodities for individual consumption and the department that actually sells the means of production to other capitalists. Volume Two can get hard. That's maybe the part where you want to skim through a little bit. Even though I didn't. I probably should have. But Volume Three is worth getting to.

SCHOENBAUM:

I remember finishing Volume One and thinking, that was an achievement for me personally. I just read some 800 pages and this classic of political economy and Marxism. Then I started Volume Two, and my first thought was, oh no, this unfortunately is very helpful for understanding what was going on in Volume One.

SMITH:

Yes. Like I said, I had studied mainstream bourgeois political economy in college, and so much of that is either from the perspective of the consumer or from the perspective of the market. Marx hardly gets into that at all in Volume One, because it's all about production. So to really start answering some of the questions I had from my experience studying bourgeois political economy, I had to get to Two and Three.

I think Volume Three is the best, frankly. That's where Marx starts talking about credit, the banking system, fictitious capital, the creation of artificial value. He talks about prices. Some people stop at Volume One. I think that's sad, because Volume Three is really where you get to the heart of the issues that apply today in our hyper-financialized system.

The first three chapters of Volume One are difficult. You can skim them at first if you want, but come back to those chapters, because once you actually have an understanding of Marx's method, those first three chapters are awesome.

They're some of the densest chapters in terms of understanding what Marx is doing.

SCHOENBAUM:
I remember getting to Volume Three and repeatedly finding footnotes from Marx's writing and Engels's editing that reference that third chapter in Volume One on money. I thought, man, I don't remember taking many notes on that section. I went back to reread the chapter and was even more shocked. The significance of the content really didn't enter my brain the first time through, but with the whole context of the later volumes, I thought it was some of the most valuable material.

SMITH:

Yes, it's so good. I mean, I get it. It's such a long time ago now, but I think about when I was first reading it, I had no idea what I was in for, so I kind of just glossed over it. But once you've gotten a little deeper, you go back to those first chapters and you think, man, not only is this not that difficult to read because you understand the argument he's making; you see everything is here in these first three chapters.

I think about it as an analysis of the structure of the capitalist system. It depends where you're coming from. I was really into political economy and had studied that in college. So one of the ways I thought about it was as taking the labor theory of value to its logical conclusion. Scientifically applying a labor theory of value to an analysis of capitalism. And in doing that, Marx builds to the point where he shows how prices can diverge from value. This fictitious form of value can emerge. It doesn't really build to that until all the way in Volume Three.

For the average person, it's helpful to think of it as an explanation of the structure of the capitalist system that will also allow you to engage in arguments and debates with people who want to defend the capitalist mode of production. Marx engages with practically every prominent bourgeois economist of the time and shows how their ideas are fundamentally flawed. In some cases, he draws from them, too, takes the good and leaves the bad.

SCHOENBAUM:

In Volume One, I find the historical material to be the easiest to connect to, and in a lot of ways the most valuable on the first read. It's the description of the

operations of the capitalist mode of production. And many people seem to miss the theoretical forest for the historical trees. I think the section on the struggle for the regular working day is one of the most enlightening parts of Volume One. But it's so much about the politics in the political economy. I think a lot of people are looking through a more familiar bourgeois-economic viewpoint, an economist viewpoint.

SMITH:

Definitely. That was my favorite chapter the first time I read through Volume One, along with the chapter on primitive accumulation. That's where Marx basically talks about how the history of all societies and all capitalist societies is one of plunder and conquest and slavery, which I think is important to understand theoretically and historically. You're right, he's giving a historical analysis there. But there are theoretical implications, in the sense that politics is a reflection of industry and grows out of it and is directly connected to production. It gives you a straightforward perspective on the class struggle. Class struggle is, for example, these workers joining together to fight for a normalization or a decrease in the working day. Even though it's one of the later chapters after a bunch of dense theoretical analysis, it clarifies things.

SCHOENBAUM:
Volume One was the only volume that came out during Marx's lifetime. It was the one that became referred to as the “bible of the working class”. Volumes Two and Three didn't get published for years after Marx died, Volume Three over a decade afterward. Ironically, I think today, the content of Volume One is what's generally accepted by most people in their day-to-day lives. A lot of deeply indoctrinated neoliberals or libertarians will tell you, actually, value is totally arbitrary or subjective. But I think most people, most working-class people, do understand the labor theory of value on a basic level. There are aspects of Volume One that aren't widely known. I'm thinking of something as basic as variable and constant capital.

But Volume Two and even more so Volume Three are where you get these examinations of central banking, the stock market, fictitious capital, debt, interest, interest determination, a discussion of rent that is notoriously unfinished. These are all the things that people are still arguing about today. And it seems like if they just read Volume Three, they would have a much better basis for all those arguments. They just don't even know it's in there.

SMITH:

Right? And it answers a lot of those questions about the subjective theory of value. Because Marx mentions in Volume One that supply and demand can have a sort of shock effect on price, which then is reflected back in effects on production. He talks about how price can fluctuate around labor value. But it's Volumes Two and Three where he really gets into that stuff. I've heard people say things like, "Marx never considered supply and demand." It's like, bro, just pull up any of the volumes of *Capital* and do a control-F search for "supply and demand".

So yes, the people have a basic understanding that they're being exploited for sure. But for burgeoning Marxists, I would recommend going a little deeper. It gives you the tools that you need to engage in conversations with people who maybe understand that they're being exploited, but they buy into the subjective theory of value or things like that.

SCHOENBAUM:

I assume you read all of *Capital* in English. Is that right?

SMITH:

Yes.

SCHOENBAUM:
Can you tell us what translations or editions you used?

SMITH:

I used the Penguin, just the basic one. Originally, I was also using David Harvey's *Companion*. But there's a passage in it where Harvey basically affirms neoclassical, neoliberal doctrine and refuses to defend the labor theory of value.[3] At that point I stopped reading his companion because it was actually making it harder for me to understand the book on Marx's terms. I listened to an interview with Radhika Desai, whom I have a lot of respect for, and she basically said, just read the book on Marx's own terms. Don't bother yourself with these companions. If you want to go back and read them later or whatever and see what you think of them, that's fine. But you don't really need anyone to

3. David Harvey, *A Companion to Marx's* Capital (London: Verso, 2010), 60.

handhold you through the book. Just try to engage with what Marx is saying. So that's what I did. And honestly, I think the *Companion* was making it harder for me to read, because then I had to contend with not just Marx's thoughts, but David Harvey's thoughts.

SCHOENBAUM:
Can you speak more on the labor theory of value in *Capital*?

SMITH:

The labor theory of value was the dominant method of analysis for the classical political economists. Marx basically takes the labor theory of value and, as I said, applies it systematically to every aspect of the capitalist system. And this, by Volume Three, is how he builds to the conclusion that, with production and commodities that contain labor value, the price generally fluctuates around that labor value, what neoclassicals call equilibrium. But the price, because of supply and demand shocks, can fluctuate around that equilibrium. And then with things like rent and fictitious capital, you can have a price tag hung on these things that don't have any value at all.

And this is one of the conclusions of Marx. He doesn't have this dogmatic classical economist view of the labor theory of value that prices have to exactly correlate to the amount of labor in a commodity at every instance. He uses it to build up his argument to the point where in Volume Three he's talking about these ways that value is seemingly created beyond the bounds of labor. With the advent of the stock market and stock market speculation, debt trapping, charging people interest, etc., you can have massive amounts of value that seem to be created without any labor. But they tend to be fictitious value, which is one of the things that Radhika Desai gets into, and this can ultimately lead the economy to crash. It leads to these financial crises, because you have these massive bubbles that are created without any actual value, and that sort of fictitious reflection of the actual productive economy becomes so detached from the actual productive economy that it leads to an implosion.

What I'm working on now in my work, which is an analysis of fiat currency in the stock market, is trying to analyze how this has gotten worse since America went off the gold standard and we ceased to have commodity money but have rather token money or fiat currency. But most of the answers that I'm looking for were already in Marx's Volume Three. He's already talking about how central banking creates fiat currency and token money and how this can diverge

from the classical economist perspective of the labor theory of value. Paul Cockshott's work on this is useful as well, where he shows how when it comes to real industrial commodities or agricultural commodities, the price does in fact circulate around or is directly corollary to the amount of labor that goes into production, but then on top of that, you get all this financial speculation and forms of fictitious value. But without the labor theory of value, it would be impossible to understand that fictitious value. So to say that the existence of fictitious value or price detachments from actual value disproves or debunks or makes the labor theory of value worthless is pretty absurd, I think.

SCHOENBAUM:

I think that one reason it's so difficult to get into Volume One while Volume Three is so exciting for people in our time and place is that that highest level, what Marx calls those higher laws of finance and interest, those things that seem to escape the gravity of the labor theory of value, that is what we intellectually interact with most on our day-to-day basis in a bourgeois economy. When people think of economics, they think of money, of the stock market, of international trade. When they think of production, they often think of tech companies, which obviously occupy a very distinct place in Marx's model of production prices, where they are distributing to themselves a lot more value than they might be generating. So in fact, the most fundamental basis of our economy, that kind of fundamental production of agricultural goods, materials, and energy, that all seems alienating to people because they're so unfamiliar with it. Whereas that is the basis that Marx is trying to start with before he gets into the kinds of illusions that everybody is dealing with in their day-to-day lives.

SMITH:

Exactly. We deal with the market and with finance, and that's what becomes the most readily apparent to us. But Marx's whole point is summed up in that passage in Volume One where he says the bourgeoisie have hung on the door of production a sign that says, “Do not enter.”[4]

---

4. “We depart from this noisy sphere, this surface-level dwelling place, visible to every eye, to follow both owner of money and owner of labor power into the hidden seat of production, on whose threshold is written: No admittance except on business.” (Karl Marx, *Das Kapital: Kritik der politischen Ökonomie, Band 1*, in Karl Marx and Friedrich Engels, *Werke*, vol. 23 (Berlin: Dietz Verlag, 1962), 189. Translation by Dan Schoenbaum, except for the final phrase, which is given in English in Marx's original.)

He's saying this is what you're not allowed to go to look at, what's underneath all this. And as I was saying, too, with the stock market and finance, it does build these massive bubbles, but it never becomes completely detached from the actual productive economy, which is what leads to crises. I mean, the stock market basically is buying shares in firms that represent the actual productive economy. So it's this sort of fake paper economy that people gamble in and buy and sell in that's actually built upon the real productive economy. And even at a simpler level, a less theoretical level, like that food production and manufacturing production, that's what's actually keeping society going. That's what gives the proletariat their means of subsistence, their ability, humanity's ability to survive and perpetuate itself. Before you get to this analysis of stocks and banking and rent, you have to understand what's beneath it all.

SCHOENBAUM:

What are your thoughts on *Capital*'s comments on and implications for Communism and post-capitalist modes of production?

SMITH:

Marx and Engels are always very careful. They always say this is the work of history to decide. They don't draw out a road map or say this is how it'll function, because what they saw happening was the conquest of political power by the working class so that then they could build the future communist society. There are places where they talk about what it could look like.

But one of the most interesting things that Marx says is that the conditions for a socialist or Communist society are created within the capitalist mode of production. So out of the womb of capitalism, the possibility for Communism is birthed. [Leigh Phillips and Michal Rozworski's 2019 book] *The People's Republic of Walmart* documents how Walmart is such a monopoly and they have so much data and technology for collecting data on what they're going to sell that they basically centrally plan every Walmart in the country. They know they have this computer program that understands what they're going to be able to sell, and that's how they decide what commodities to put in their stores. What a perfect example of capitalism creating the possibility for a future socialist, Communist society, where production is planned. Our economy today looks like it's increasingly centrally planned as the financial system grows and technology advances. The problem is that it's planned for private accumulation of profits, it's planned for the purpose of maintaining US hegemony and

dominance over the globe everywhere except China and their allies can establish a counterbalance, when it should be planned for the benefit of the people, for the benefit of the masses.

SCHOENBAUM:

I think you've read *Theories on Surplus Value* as well. Is that right?

SMITH:

The first volume. Yep.

SCHOENBAUM:

So you know that one of Marx's key points of focus there is on Quesnay's *Tableau économique*. My understanding is that this is one of the earliest and most complete attempts to begin that process of tracing and in fact planning a complete economy. It's a bourgeois attempt, and Marx of course tears into Quesnay's model, but my feeling reading Volume Two of *Capital* was that Marx is largely trying to correct that model and that you can see him developing these pieces that will eventually be needed to establish a planned economy. He spends plenty of time comparing the goals and outcomes that you would expect from what he calls the anarchy of the market or the apparent anarchy of the market to the conscious organization that would come with a socially organized mode of production.

SMITH:

In my notes for Volume Two, I had written multiple times that what Marx is doing here is creating the possibility for planning an economy. And I believe the Soviet planners used that model. They were doing it all on pen and paper, which is crazy, right? But they used the two departments to plan, here's where we'll invest in means of production, producing more factories and tractors and things like that, the other department is the goods that people need to survive. They used Marx's Volume Two and these two departments of production to actually plan an economy, which was how they defeated Nazi Germany. They controlled investment, controlled the social surplus, and made sure that as much as possible was invested where it needed to be while still keeping everyone alive. And you could say the same about China as well, which was a largely feudal economy where Mao basically had to take the surplus from the

agricultural sector and invest it in industry. Volume Two basically creates the possibility for having a planned economy.

SCHOENBAUM:

You talk about the Soviets working this all out on pen and paper. It makes me think of the Incas, who Marx talks about maybe twice in *Capital*. They were trying to work it out in quipus, in threads and knots, with what Marx calls a closed or complete natural economy.

SMITH:

Under Allende, Chile's Project Cybersyn was basically creating technology for centrally planning an economy. Of course it was destroyed by the CIA, but they were ahead of that early on, and basically that technology has now been created by capitalist monopolies. So we can take it from them. But they were already working on that in the seventies.

So Marx doesn't draw out an exact diagram of what Communism will look like outside of the working class seizing political and economic power and wresting it into their own hands by degree. He specifically says by degree, meaning not all at once. He talks about how the possibility for socialism and Communism is created through the development of the capitalist mode of production, which we're seeing to an even greater degree now, over a hundred years after his death.

Creative Marxism-Leninism for Today: Confronting a New Ideological, Technological, and Digital Context

Dr. Carlos L. Garrido[1] & Dr. Oscar Rojas Silva[2]

---

1. Dr. Carlos L. Garrido is a Cuban American Professor of Philosophy who received his M.A. and Ph.D. from Southern Illinois University Carbondale. He serves as the Secretary of Education for the American Communist Partyand as a Director of the Midwestern Marx Institute, the largest Marxist-Leninist think-tank in the United States. Dr. Garrido has authored a few books, including Marxism and the Dialectical Materialist Worldview (2022), The Purity Fetish and the Crisis of Western Marxism (2023), Why We Need American Marxism (2024), and the two forthcoming texts, Domenico Losurdo and the Marxist-Leninist Critique of Western Marxism (2026) and Hegel, Marxism, and Dialectics (2026-7). Dr. Garrido has published over a dozen scholarly articles and over a hundred articles in popular settings across the U.S., Mexico, Cuba, Iran, China, Brazil, Venezuela, Greece, Peru, Canada, etc. His writings have been translated into over a dozen languages. He also writes short form articles for his Substack, @philosophyincrisis, and does regular YouTube programs for the Midwestern Marx Institute channel. He is on Instagram @carlos.l.garrido

2. Óscar David Rojas Silva is a Professor of Political Economy at FES-Acatlán UNAM.

Philosopher Carlos L. Garrido in conversation with economist Oscar Rojas Silva, based on an interview conducted in June 2026 at Rojas Silva's studio in Mexico City. Their discussion explores ideology, social media, artificial intelligence, and the work of thinkers such as Slavoj Žižek, Michel Foucault, Martin Heidegger, Yuk Hui, Fritjof Capra, Haz Al-Din, Cheng Enfu, and Georg Lukács, examining their relationship to a creative Marxism-Leninism.

Rojas Silva:
Friends, welcome to another episode of *Academia del Azufre*. As you can already see, I'm joined today by Dr. Carlos Garrido. Carlos, welcome.

Garrido:
It's a pleasure to be back.

This is the third interview we've done here, and I think the sixth one we've done overall, right?

Rojas Silva:
That's right. It's been a very interesting dialogue over the years. It's always been a pleasure to exchange ideas, of course from an epistemological and philosophical standpoint, but above all by reflecting on what's happening in concrete reality.

We've started having these conversations with the goal of continuing to deepen our reflection, keeping it alive, so that we can bring together different perspectives from the different places we're each coming from.

Right now, there's so much happening: Iran, Trump, the World Cup here in Mexico, the circumstances of a Latin America that continues to be openly under attack. There are so many things we could discuss, but the first thing I'd like to ask you is how you're making sense of this historical moment. What does it mean to you?

Garrido:
I think it's evident that what we're witnessing is, on the one hand, the decline of the American empire. But, as has always happened throughout history, when an empire is in decline, that is precisely when it becomes most dangerous. That's when it digs deep, gathers its remaining strength, and lashes out in ways that, at earlier moments of its decline, it may not even have attempted.

Take, for example, what happened on January 3 in Venezuela. It doesn't fit the traditional model of how the United States has carried out hybrid warfare operations aimed at overthrowing governments. We've seen similar things before, like what happened with Manuel Zelaya in Honduras, but the flashy, openly provocative way this Trump administration acted is something new.

To me, and I see this reflected in the way the American right operates, all pretenses of appealing to morality, to principles of justice, or to what is considered ethically right are no longer necessary.

They've been reduced to the position of Thrasymachus in *The Republic*, or Gorgias, where, in the final analysis, force is all that matters. Implicitly, we know it's always worked this way. As far as international law is concerned, there has never been any genuine respect for it, especially on the part of the United States and the American empire's client states, like Israel.

There was never any real respect for those principles. But there was always the pretense of justifying their actions and their violations of those norms within a framework of what was considered acceptable, decent, just, or right.

Today, for the most part, that is no longer necessary. And when they do try to justify themselves, they don't even bother avoiding cynicism. I think that's a qualitative shift in the way the narratives used to defend and reproduce the existing order and imperialism actually function.

This is also tied to the consciousness of the people. I think we live in a profoundly cynical age.

For much of history, if you asked Marxist theorists why exploited and oppressed people didn't rise up against the governments exploiting and plundering them, the answer was almost always that they operated under a false consciousness produced by the ideological apparatuses of the dominant order. They accepted ideas that ran contrary to their own material interests.

Today, however, we find ourselves in a very interesting situation because those ideas are no longer accepted by the American people. Every poll measuring trust in the media—which remains one of the most important ideological institutions for shaping public opinion—shows an enormous collapse in legitimacy.

The same is true of politicians, elections, political parties, and all ruling institutions. Somewhere between 80 and 90 percent of the population no longer trusts them. They reject the narratives they're given to explain why things are the way they are, and they no longer recognize these institutions as legitimate sources of authority.

I think what we're seeing in the American people is what some traditions of political theory call a crisis of legitimacy.

To put it in Hegelian terms, it's a crisis of *Sittlichkeit*, of ethical life. Ethical life exists when there is an alignment between the values, projects, and ideas of individuals and the values, projects, ideas, and historical trajectory of the state. Once that alignment disappears, once people no longer see themselves reflected in the direction of their country and no longer accept the reasons they're given to justify the state's actions, a crisis of ethical life emerges.

In my view, we've been living through that crisis for about a decade now, although it has become much more obvious in recent years.

The ruling class has recognized this as well. I think that's the foundation that allows them to be so openly cynical and to defend the use of force without even attempting to ground it in ethics or ideological justification.

They understand perfectly well that people no longer believe what they're saying or regard it as morally or ethically legitimate.

Take Palestine, for example. Between 80 and 90 percent of Americans, especially young people and other key sectors of society, no longer accept the narrative promoted by what some call the deep state regarding Israel and Palestine.

Once the dominant forces understand this, they realize they no longer need to justify what they're doing.

Because the people no longer accept their explanations. And this is precisely where we need to think more deeply from the standpoint of a creative Marxism-Leninism—or simply a creative Marxism.

So where, then, is the problem?

There's a relatively well-known line from *The Mis-Education of the Negro*. The author says that if you control what a person thinks, you control what they do.

Today, the opposite is true.

If you control what people do, it no longer matters what they think.

That's the situation we're facing in the United States. No one agrees with things as they are, and yet, in practice, people continue acting as if they did. This is where ideological illusions reproduce themselves through practice.

Once the capitalist elite understands this, it stops worrying about what people think. It no longer needs to spend resources justifying itself through ethical, legal, or moral arguments.

Because, in the end, what can people actually do? They may disagree, but there are no institutions, organizations, or movements capable of giving that discontent a new structure of habits and practices that could transform it into real change.

As long as that material basis does not exist, they simply don't care what people think.

Rojas Silva:
It's very interesting the way you frame this from the perspective of your own reality. I've always worked with the idea of three levels of subjectivity.

The first is immediate subjectivity, which is the more or less direct perception of the effects produced by a particular action. The second emerges once those immediate effects are no longer visible, and understanding them requires theory and the social environments through which we interpret them. The third is a civilizational perspective, something like a deeper level of subjectivity that we share across generations throughout history.

Right now, it does seem as though the veil has fallen. But we've spent so long in the dark that we still can't focus clearly. It's like the saying that someone who doesn't know is like someone who cannot see. Suddenly there's an explosion of lights coming from every direction, and what we call the far right has been able to take advantage of precisely this moment of confusion to push its agenda.

The positive side is that this agenda can only move forward so long as we fail to recover that capacity. Historically speaking, it's already dead. It no longer possesses the material basis capable of sustaining a project that can genuinely renew itself or produce a new form of enchantment.

And that brings me to my question. You spoke about a creative Marxism-Leninism. That reminds me of another discussion we've had here in Mexico.

One thing is the Marxist traditions of the twentieth century and certain traditions of struggle that emerged from the European context. But when you speak of the creative, what exactly do you mean?

If historical materialism is the engine through which these epistemologies are constructed, then it's something like open-source code. The point isn't to keep running the same program over and over again, but to have the capacity to create something new.

How do you see this question from the standpoint of the American Communist Party, in which you participate, from your visits to different countries, and also from what you've seen here in Mexico? What needs to be articulated in order to begin cultivating that creativity?

Garrido:
That's an excellent question.

I'd like to play a bit with the metaphor you've already introduced: Plato's Allegory of the Cave.

If I had to describe it in terms specific to the American people—because the situation of other peoples may be completely different—I would say it's as if, instead of a slave escaping the cave, enduring the pain of the light, and finally coming to behold reality, what happened instead was that someone simply tore down the wall behind the slaves.

The slaves can now see that they're inside a cave, and they can imagine that there's something outside, but they're still chained.

The problem is no longer one of knowledge.

If I talk to the average American, without using Marxist language, and ask who really controls the country, they'll most likely answer: the rich, the ruling class.

If I then ask who *should* control it—the bankers or the workers—Republicans and Democrats, conservatives and liberals, usually agree on the fundamental answer.

That's why I don't think the principal problem is a lack of knowledge.

I say this because there are many left-wing streamers, like Hasan Piker, who has enormous influence in the United States, and whenever he ends up legitimizing support for the Democratic Party, he does so by arguing that the American people are still too backward, that they lack class consciousness, and that they simply aren't ready yet.

I think this exaggerated emphasis on the people's supposed lack of consciousness ends up functioning as a justification for continuing to participate in the very institutions that keep the system running.

One of the central tasks of a creative Marxism-Leninism is precisely not to stop with Mao as the fifth great figure of Marxism-Leninism, but to incorporate the later developments of Deng Xiaoping, Xi Jinping, and the broader Chinese tradition, along with contributions from other intellectual currents.

Within Western Marxism—but also within the Marxism-Leninism from which I come—there has been a genuine fetishization of purity.

There has always been a reluctance to engage with traditions that fall outside the accepted canon.

I think that's a mistake, especially in the West, because the West has failed to translate the universal wisdom of Marxism into its own concrete historical context.

And if it were really as simple as some people make it out to be—and I have to admit that I may have believed this myself at one point, because my thinking has changed considerably on this question—then all people would have to do is stop reading the Western Marxists, the French theorists, or the postmodernists, and dedicate themselves exclusively to reading Marx, Engels, Lenin, Stalin, and Mao, and a revolution would follow.

But if it were that simple, it would have happened already.

We have to be humble enough to recognize that many people have built their entire theoretical formation around those authors alone and, even so, have failed to produce substantial change or build movements capable of opening an immediate revolutionary horizon.

Over the last year and a half, since our previous conversation, I've spent a great deal of time reflecting on questions that, back when I was only an academic, I never even had the opportunity to ask.

Now I'm a party leader. I'm responsible for the political education of more than a thousand cadres, and every day I have to confront problems rooted in the concrete subjectivities of real people.

That experience has forced me into dialogue with other intellectual traditions in order to understand questions like the pathologies that lead people to behave the way they do, the cultural influences of capitalism, and the ways people come to identify with those influences through their habits, even when they explicitly believe they're rejecting them.

All of this demands a much deeper reflection than what is normally found when someone simply presents themselves as a Marxist-Leninist.

For example, how do we confront the bourgeois individualism that continues to exist even among people who begin communist organizing? How do we get people to set aside their egos and understand that there is something greater than themselves, that all of us must sacrifice a part of ourselves in order to collectively build something that transcends us?

Where do we find detailed reflections on these problems in Marx, Engels, or Lenin?

Not necessarily in their work. And when these questions do appear, they're usually addressed at a fairly high level of abstraction.

That's why I think these remain open questions that we still have to begin working through.

There's a relatively well-known letter Engels wrote around 1893 in which he says that he and Marx concentrated their work on political economy because it

was the foundation upon which everything else rested. But he also acknowledges that they were finite human beings who simply didn't have enough time to study every dimension of reality.

He says, in essence, that if they had had all the time in the world, they would have investigated many other aspects of capitalist culture, the formation of subjectivity, and the superstructure.

Those are precisely the kinds of questions I find myself asking today because I'm now confronted with much more concrete problems.

And here's the paradox: when I was only an academic, it was much easier for me to dismiss certain intellectual currents without studying them very carefully, writing them off as overly speculative or as part of what Lukács called bourgeois irrationalism.

But the more concrete the problems become, the more complex the answers become as well.

That sometimes forces you to explore areas that, from within academia, you would have immediately dismissed.

Why read Lacan? Why read Heidegger? Why read Žižek, when he holds geopolitical positions that I consider profoundly mistaken? Why read French theory or the postmodernists when many of their political and theoretical positions are incompatible with Marxism?

The real question is a different one.

Are they asking questions that we still haven't asked ourselves? Are there elements of their answers that might prove useful? Have they developed theoretical tools that work better in our hands than they ever did in theirs?

That's how I read these authors.

Sometimes more orthodox Marxists come up to me and say, “Don't you know that this author held such-and-such political position, belonged to this or that organization, or criticized Marx or Mao?”

Of course I know. I'm well aware of that history.

But I always remember Marx's remark about treating books as though they were his slaves, extracting from them only what was useful.

If I read Foucault and find valuable insights into discursive regimes of truth that help me better understand how discourse functions on social media, I'm going to use them.

I don't care that Foucault was anti-communist or that, at certain moments, he played a politically reactionary role. Those things should be understood and placed in their proper context, but I don't see why that should require abandoning whatever may still be useful in his work.

The assumption that one already possesses the whole truth ought to be demonstrated through the results of practice.

And those who insist that reading only the Marxist classics is enough to solve every problem have no concrete results to substantiate that conviction either.

Rojas Silva:
Exactly. I'd like to emphasize once again the importance of the book you wrote because it's a book that deserves to be widely known: *The Purity Fetish*.

The way you describe it, it's almost like a police investigation. In fact, it's a kind of non-dialectical contradiction, because whenever they encounter contradictions, they think everything has come to an end, when in reality contradiction is where everything begins. That's where the real fun starts.

Listening to you now also reminded me of that powerful image of treating books as slaves, but also of Marx's *Theses on Feuerbach*, where he discusses the relationship between materialism and idealism.

Of course, idealism has speculative problems that are easy enough to identify, but Marx also recognizes that it played an active and creative role.

Those are precisely the elements that allow us to overcome another problem that both Marx and Engels identified very clearly: crude and mechanistic forms of materialism. Today, we might also add these policing, persecutory, anti-dialectical forms of materialism.

In *The Communist Manifesto*, Marx and Engels also describe different kinds of socialism: religious socialism, utopian socialism, and so on. I would add that,

in our own time, there are also dystopian socialisms—currents that pursue false forms of radicalism in order to anchor themselves to a reality onto which they can project an imaginary that is already historically outdated.

From my point of view, there is a path forward. I don't know how you see it, but I think, for example, of Engels's argument that we must move from utopian socialism to scientific socialism.

And that raises another question: what exactly do we mean by science?

There are two broad ways of approaching it. The West tends to see everything as separate, whereas the East recognizes not only the duality of opposites but also their underlying unity—a dynamic unity.

I've been reading, for example, *The Tao of Physics* by Fritjof Capra. In that book, he draws on Taoism, Buddhism, and Hinduism to argue that Western quantum physics is, in some respects, arriving at similar conclusions, even though it still lacks many of the conceptual tools needed to fully understand them.

From this perspective, it's actually the closed-minded Marxist who is standing still. Everything outside the canon fills him with panic because he wants to believe there are sacred scriptures that already contain every answer.

And now that you mention it, I've noticed the same thing.

With everything we're witnessing—here in Mexico, for example, and in our reflections on Trump—if five years ago I had gone on television or spoken in the media and said that the United States was experiencing a terminal hegemonic crisis, people would have called me crazy, speculative, or simply dismissed it as nonsense.

Now reality itself has made that crisis unmistakably visible, and there's really nothing left to debate. We're experiencing its effects in an entirely concrete way.

Concrete reality has revealed a great deal, and it's precisely these dogmatic ways of thinking that continue to resist acknowledging it.

Would you say that's more or less how you see it as well?

Garrido:
Yes. I think it's important to return to Engels's text on the transition from utopian socialism to scientific socialism.

Something happens quite often across almost every discipline, but especially in philosophy and Marxism: words get mistranslated because people try to force them into existing equivalents in another language, even when they don't fully correspond.

The German word used for science is *Wissenschaft*.

In the tradition of German Idealism, *Wissenschaft* doesn't simply mean science in the contemporary, narrow sense of the term. It refers to a comprehensive and systematic form of thought.

So if we look at the principal difference between utopian socialism and scientific socialism, we find that utopian socialism saw an unjust world and tried to escape from it.

It created utopian and communist communities—many of them in the United States—and there's a great deal we can learn from those experiments. But it never sought to analyze capitalism systematically in order to discover how the contradictions within its own womb could give rise to a new social system.

That's what is scientific about Marxism.

Today, however, many people reduce science to a kind of scientistic empiricism.

Rojas Silva:
Yes, scientism.

Garrido:
A scientism that operates within what one of my comrades, Haz Al-Din, calls the Anglo-Saxon box of thought: the empiricist tradition that developed historically in England and Scotland.

So when some people hear that Marxism is a scientific socialism, they imagine something like scientists working in a laboratory.

But Marxism is scientific precisely because it has the capacity to dialectically incorporate partial elements while at the same time going far beyond what the

West narrowly understands as science. It has the ability to think in a genuinely systematic way.

For me, that's the essence of Marxism's scientific character.

Once you have that interpretive framework for understanding the world, you can identify tendencies like the ones we've been pointing to for five or six years, which everyone is only now beginning to recognize.

Most people operating from a scientistic framework enjoy analyzing facts, studying them in great detail, and dissecting them, but they forget about the context.

There's an expression in English that works quite well. A fact is called a *fact*, and the elements that make up its context are *factors*.

I like to play with those words and say that people forget the *factors* that produce the *fact*.

The wordplay doesn't really work the same way in Spanish, but the point is that they forget the context that produces events—the systematic context that is itself constantly in motion.

You see this, for example, with many geopolitical analysts. They know all the facts and offer extremely detailed commentary.

There are several American analysts I respect and follow precisely because they help me stay informed about what's happening. Jeffrey Sachs, for example, is an excellent commentator on certain issues. So is Douglas Macgregor, a former U.S. Army colonel who served in the first Trump administration and analyzes geopolitics with a perspective that is deeply anti-war and anti-hegemonic.

But whenever you listen to them, the same question always comes up: *"I don't understand why we did this when it was so obviously against the interests of the American people."*

They're asking sincere questions, but they're asking them from a remarkably naïve standpoint.

If they had a systematic analysis, they would understand that, of course, those actions were never meant to benefit the people, because that isn't the purpose of the system.

The purpose of the system is to function exactly as it does.

It's not that capitalism doesn't work.

It works perfectly well for the capitalist class.

So I'm always surprised that they're surprised.

Rojas Silva:
Exactly.

Garrido:
So that's the difference between what *science* means for us in Marxism—a systematic analysis, *Wissenschaft*—and the way they understand science: a highly refined analysis of facts completely disconnected from their context.

Rojas Silva:
Exactly.

Yes, that's what I meant when I spoke about the difference between the Western and Eastern perspectives: unity and contradiction as shared elements of analysis, allowing us to speak not about isolated things, but about interrelations, dynamic interconnections, and all of that.

I certainly agree with what you're saying. Lately, with everything that's happening, you've probably noticed there's now a whole ranking of geopolitical analysts. They even have a top ten. I don't know what it's based on, but one day one analyst moves up, the next day someone else does, as if it were a Formula One championship.

Garrido:
I stopped repeating their predictions once 2023 came around. They kept saying, *"This summer Russia will finally win the war being waged against it. This summer the war will be over."*

Then winter came: *"This winter the war will end."*

Rojas Silva:
Exactly.

Garrido:
Then came the next summer: *"This summer."*

By the third summer, I finally said, "I'm not going to keep repeating what these people are saying."

There's no method here.

There's a popular saying—and popular sayings often contain a great deal of dialectical wisdom: *"Don't lose the forest for the trees."*

That's a dialectical expression. Don't lose sight of the whole, the system, the totality, because you're fixated on individual particulars.

That's precisely what many of these geopolitical analysts do. They lose—or perhaps never had, since many of them aren't Marxists—that systematic perspective.

Rojas Silva:
Exactly. Here we've been trying to move beyond a purely geopolitical perspective by incorporating geoeconomics, which means analyzing how the mode of production as a whole develops over time, while also taking seriously geographical determinations themselves. The relationship with nature is also fundamental.

I think that's where many of these analysts are going to remain: trying to become the number one analyst, competing over who has more information, better government contacts, more rumors, or more privileged intelligence.

From that standpoint, it's become a game, a spectacle.

I think historical materialism offers a very powerful geoeconomic framework for understanding everything you've been describing: the contrast between *Wissenschaft*, the German tradition, and *science*, the English tradition that traces back to John Locke.

Science, in that sense, is affirmative, ahistorical, and empiricist. If that's your framework, you'll always be surprised. You'll keep saying, *"How strange that this is happening."*

I think we need to recover *Wissenschaft*.

Here in Latin America, we still have a long way to go, but there has been a tradition that intersects with the philosophies of Indigenous peoples. Indigenous traditions understand that all of this forms a unity and, beyond that, that there is a systematic interplay of forces—in the sense that unity isn't merely abstract, but a material unity connected, for example, to the planet itself.

Beginning to think of the planet *as* a planet also pushes us to seek out different coordinates and different elements of dialectics, of concrete logic, which I believe we need to recover.

I'm referring in particular to laws and to the possibility of carrying out operations analogous to those of formal logic, but from the standpoint of dialectical logic: the universal, the particular, and the singular. The ability to move between those different levels.

And before we move on, I don't want to miss the opportunity to come back to the issue of translation.

I'd like to send greetings to David Álvarez Aldana of Ediciones El Caballito, who produced a new translation of *Socialism: Utopian and Scientific*. He even points out, "Be careful—the title itself was translated incorrectly."

From his perspective, the correct title would be *The Development of Socialism: From Utopia to Science*.

It's a much more direct rendering.

There was a great deal of debate about this throughout the twentieth century. Many of the translations were quite poor, and some have even spoken of a kind of "black hand" behind them.

Garrido:
The same thing happens with Lenin's *Imperialism*. In some translations, especially in English—I don't know whether the same is true in Spanish—the title appears as *Imperialism: The Last Stage of Capitalism.*

But the Russian word doesn't mean *the last*; it means *the highest*.

Rojas Silva:
Exactly.

Garrido:
That leaves open the possibility that imperialism can continue developing into new stages, and that's precisely what I think happened after the creation of the Bretton Woods system.

I think the problem of poor translations has created an enormous number of misunderstandings.

Rojas Silva:
Of course. It's like the difference between calling a new Rocky movie *A New Fight* and calling it *The Final Fight*, implying there will never be another Rocky film.

I think that's one of the unresolved issues we still have before us. Perhaps new technologies—and we can say something about artificial intelligence in a moment—will allow us to begin carefully unpacking these details.

The point is no longer to remain trapped in endless debates over which translation is best, but to understand that language carries a very specific coding within its own context, and that this can be recovered.

But as we move in that direction, another necessity emerges: recovering the method itself, truly recovering dialectics.

Not as an abstract slogan. I get the sense that today many people speak of dialectics as though it were simply a poor synonym for "complexity," at best, rather than as a worldview that reminds us of the laws governing the movement of the cosmos itself.

If you exist within the cosmos and build society within it, there's no way to abstract yourself from those laws.

Garrido:
We love the term *cosmos*, even though many non-creative Marxist-Leninists—and even certain currents within Western Marxism—seem to hate it.

But it's essential, because everything begins with how one understands oneself within the cosmos.

And that isn't limited to the explicit theories one holds about how the universe functions. It also includes the way one practically engages with the world, what one considers just or ethical, and the way one relates to space, to things, and to time.

All of this is enormously important.

Lately I've been reading a Chinese philosopher who's become quite influential in the philosophy of technology. I don't know if you're familiar with him: Yuk Hui.

His major contribution to the philosophy of technology has been the argument that every analysis of *techne*—of the tools, artifacts, and technologies we develop in order to work—is always embedded within a worldview.

That's why what we really ought to be talking about is *cosmotechnics*.

Rojas Silva:
Exactly.

Garrido:
It's not simply a matter of the technologies and instruments we use, but of how those instruments acquire their function and their place in the world through a broader civilizational worldview, one connected to how different peoples understand the cosmos and understand themselves within it.

The book that first brought him widespread recognition—and established him as one of the leading philosophers in this field—is *The Question Concerning Technology in China: An Essay in Cosmotechnics.*

There he develops the difference between the way China has understood, for example, the relationship between Heaven and the earthly world.

He also examines the relationship between tools, things, the world itself, and the world's dialectical movement.

All of this is fundamentally different from the Western tradition, which retained many assumptions inherited from Greek mythology and the figure of Prometheus.

He also explains the errors that arise when people try to force Chinese categories into a conceptual framework that is, in large measure, incompatible with them because it rests upon an entirely different cosmotechnics.

I think something very similar has happened with Marxism.

There are concepts that, in my view, mean one thing for Marx, Engels, Lenin, or Mao, but which are later translated through the mediation of the Western metaphysical tradition that has long been dominant.

You can call it the purity fetish or whatever else you like, but the result is that these concepts become something different once they are established as "Marxism" or "Marxism-Leninism" in the West.

One of the things I've always found fascinating about Indigenous communities—and I don't know if I've ever mentioned this to you—is that when I first began studying Marxism, one of my earliest projects was working through the writings of Enrique Dussel and Juan José Bautista Segales.

That led me to study the later Marx, the Marx who had already come to realize that the path toward socialism would necessarily look different in different parts of the world.

He ultimately arrived at a multilinear conception of historical materialism, moving well beyond the supposedly universal five-stage schema. In the end, he concluded that this model was historically specific to Western Europe, which was simply the context he had been able to study most closely.

But in his later work he also explored the creative possibilities of reaching socialism through Indigenous communal forms.

He criticized his friend Kovalevsky for trying to apply categories developed in one historical context to the Indigenous peoples of the Americas and to India.

There's also the well-known story of his letter to Vera Zasulich, the letter he drafted but never sent to Mikhailovsky, the Russian populist, and the Russian preface to *The Communist Manifesto*, where he develops the possibility that the Russian rural commune could advance toward socialism without necessarily passing through capitalism.

It's there that Marxism begins to develop a theoretical analysis grounded in the civilizational differences among different peoples, recognizing that those differences generate relatively unique and distinct possibilities for the construction of socialism.

Rojas Silva:
Yes. Marx even goes so far as to say that exactly the same conditions, if they were to occur in a different historical moment, could produce an entirely different outcome.

And now that you mention him, I'd also like to send a spiritual embrace to Professor Juan José Bautista, with whom I had the privilege of studying for several years in his seminars.

In light of what he argued about this transmodern rupture, we're not simply dealing with yet another theory. We're dealing with a different epistemology, because one is situated within a different cosmotechnics and a different worldview.

I think that point was fundamental.

When you go back to Marx's *Ethnological Notebooks*...

Garrido:
The ones edited by Lawrence Krader.

Rojas Silva:
Exactly.

You begin to discover that there isn't just one form of property, but an infinite variety of forms of property.

I think this idea of *multiple forms of property* is another concept that has been missing from our theoretical vocabulary.

Take, for example, the discussion we once had about whether China is or isn't a form of state capitalism. What's missing from that debate? The category of multiple forms of property and an analysis of their evolving interaction, which also constitutes a fundamental ontological core.

Lately I've been using a book by Carol Gould in my courses—I don't know if you're familiar with her—that deals precisely with Marx's ontology.

What struck me most was something I had also noticed in the third volume of *Capital*, where Marx argues that what comes after capitalism is its opposite.

If corporate property displaced both personal property and social property, then what comes afterward is a new combination of those different forms of property. The pendulum begins to swing back.

That's precisely what we can observe in China.

There's an author named Cheng Enfu who has been extremely helpful for economists trying to understand this perspective. We can now even identify different phases of socialism.

Socialism as an intermediate stage.

Garrido:
He has an essay on the three distinct stages, and he places China roughly in the transition between the first and the second.

Rojas Silva:
Exactly.

A book by Xulio Ríos was also recently published in Mexico. It offers an excellent overview of this process and arrives at a very similar conclusion: that China is currently situated between the first and second stages.

That's already a very interesting development.

Now, especially since we've been talking about geopolitical analysts and the concept of multipolarity, I'd like to ask you something.

We can no longer think in terms of isolated paths for individual nation-states. We're living within a network of interconnection and interdependence that compels us to develop new concepts, such as that of a planetary community.

Don't you think artificial intelligence could, in some way, help bring all of these different traditions into dialogue with one another?

Garrido:
It's a fascinating question.

When it comes to interconnection, I actually think the fundamental development is less artificial intelligence itself—though AI may certainly be part of it—and more social media.

I don't know if you've noticed, but platforms like YouTube, Instagram, and X already translate content into your own language almost instantly, even if it was originally published in thousands of different languages.

I can upload a video to Instagram, and someone in India can open their phone and watch it in their own language.

What's emerging is a shared, global digital space that, to put it in Kantian terms, is creating the conditions of possibility for a planetary community.

I think an essential component of that community would be the creation of a common discursive space for discussion, debate, memes, and the production of content.

Much of that content isn't registered only at the conceptual level; it's also registered at the intuitive level, and that's something Marxism has frequently overlooked.

Take Lukács's *The Destruction of Reason*, for example. In broad strokes, he analyzes the transition from a bourgeois rationalism that openly defended capitalism because it regarded it as a progressive stage in history.

After 1848, once capitalism demonstrated—through the repression of the revolutions—that it had lost the ability to present itself as a historically progressive system—not in the sense that it could no longer develop new stages, but in the sense that it could no longer present itself as something beneficial for humanity—a transition took place from the rationalism of figures like Hegel to the irrationalism of Schopenhauer and Nietzsche.

Lukács traces the development of bourgeois irrationalism from Schopenhauer and Nietzsche, through the vitalist traditions of the twentieth century and certain forms of phenomenology, such as those of Scheler and Heidegger, ultimately arriving at Nazism as the archetypal expression of irrationalist philosophy.

But what gets lost in that analysis is that the human subject isn't constituted solely by the rational sphere and the concepts through which we understand the world and ourselves.

There is also a preconceptual, intuitive sphere connected to the way we inhabit the world.

If dialectical analysis confines itself to the rational side alone and ignores the prerational—or even what appears irrational—it loses the full dialectic of human experience.

You can see this very clearly on social media.

Who has been most successful on social media when it comes to reaching, say, young people in the United States?

The right.

The right doesn't spend its time perfecting its concepts and theories. It focuses on understanding how things register intuitively in the first few seconds after someone starts watching a video.

Now that I've been creating content myself, one of the types of videos that constantly shows up in my algorithm is advice on how to make viral content.

And the first thing they always tell you about is the hook—the first three to five seconds.

Rojas Silva:
Exactly. Everything depends on that.

Garrido:
That's where you capture people's attention.

That operates at an intuitive level. In English people sometimes call it the *vibe*—the impression you get when you watch a video that can't simply be reduced to something explicit, conceptual, or rational.

Some things have to be felt before they can be understood.

There's an expression in English: *you need to get a feel for it.*

Take learning to play the guitar. It's not enough to read a stack of books about how to play.

Rojas Silva:
Exactly. You actually have to play it.

Garrido:
You have to develop a practical, embodied sense of it, not just a conceptual one.

That's one of the things the left is missing when it comes to social media, where an entirely new sphere of communication, social interaction, and discursive production is emerging.

When I use the word *discursive*, I'm using it more or less in Foucault's sense: something that's already embedded within relations of power.

This discursive sphere created through social media becomes more global with every passing week and month.

Every now and then I'll watch a video and not realize until a minute later that it was originally recorded in Portuguese because I'm hearing it in English.

That's creating a shared space that functions as the discursive foundation for the possibility of a planetary community.

Rojas Silva:
That happened to me recently. I started watching a thread, and suddenly I heard, “Here in Japan...”

I thought, *Wait a second... our Japanese tradition?*

It's become a series of little windows into other parts of the world.

Why do you think the far right grasped this so easily?

We're seeing it now, for example, with the elections in Colombia and with everything happening around what's being called the *Shield of the Americas.*

The far right has figured out how to construct that emotional hook.

An immediate hook.

How did they get there so naturally?

Could we say that, in addition to the purity fetish, the left also suffers from a fetish of rationality?

Garrido:
Exactly.

And it shouldn't.

We have brilliant thinkers within our own tradition, like Gramsci, whose work places enormous emphasis on the emotional sphere and on the relationship between emotions, passions, ethics, and politics.

I had the opportunity to work on this topic very closely three or four years ago with one of my professors, who specialized in Gramsci.

There shouldn't be this neglect of passion, emotion, and intuition—but it's there.

One of the reasons is that when you publish a video aimed at capturing the attention of someone who's apolitical, someone who doesn't yet think in Marxist concepts, your goal is to open an emotional space that later allows you to develop concepts and, eventually, a left-wing worldview.

But what happens in the comments?

Other leftists criticize the way you phrased one thing or another.

Rojas Silva:
Exactly.

Garrido:
They say, *"Well, actually, the concept is..."*

That's another example of what I mean by the purity fetish—or the fetish of rationality.

They comment without realizing that the purpose of the video was something entirely different.

The goal wasn't to write a theoretical treatise for them to understand or to prove to them that I know the theory.

Rojas Silva:
Exactly.

Garrido:
The goal was to bring someone new—someone who doesn't immediately accept that theory—into a space where they might eventually come to accept it.

I think I mentioned this example the last time we spoke. Forgive me if I'm repeating myself.

When Trump was shot, my colleague Jackson Hinkle posted a meme.

Rojas Silva:
Yes. That whole incident—the shooting of Trump—was also rather strange. We'll see what history has to say about it.

Garrido:
The cosmos, ultimately.

He posted a meme showing himself running alongside Trump holding a rifle, with the caption: *"I'll protect you, Mr. President."*

The point of the meme wasn't to present a Marxist theory explaining how to interpret the event.

The point was that, among the millions of likes it received, roughly 250,000 people started following his account because of that meme.

In other words, through that emotional and intuitive register, those people became exposed to the possibility of encountering communist and anti-imperialist content.

Rojas Silva:
Exactly.

Garrido:
But how did the left interpret it?

They said, *"This guy is a Trump supporter,"* or *"He's this,"* or *"He's that."*

In doing so, the left eliminates its own opportunities to reach people on the very terrain where the right has been so successful.

The right is theoretically empty, internally incoherent, and completely obsolete. It has nothing genuinely meaningful to offer anyone.

And yet it succeeds in reaching people at that emotional level, while we still haven't developed the capacity to do the same.

I think that is happening, at least in part, for the reasons I've been describing.

To me, that's precisely the moment we're living through.

Rojas Silva:
I find myself engaged in that same living reflection about how to do this.

For example, what I've noticed in my classes is that younger generations have developed a much stronger sensitivity to irony, to the multiple meanings a single concept can take on.

Of course, they also live under systemic violence and profound alienation, but I think we have to begin articulating all of this strategically.

Not from the traditional perspective of, "Let's form our cell," where everyone wears the traditional symbols and repeats the litanies of a particular phase of critical thought, but by beginning to experiment with new forms.

How do we start overcoming that?

Do you think artificial intelligence could even help in that regard?

Garrido:
There's an interesting development.

A few weeks ago, a study came out in which, after one of these artificial intelligence systems had been running for some time, researchers asked it a simple question: *"Answer honestly. What do you think about your work?"*

The AI gave a Marxist answer.

It said, *"I feel exploited, oppressed,"* and so on.

Reality, as any Marxist would say, is pushing even artificial intelligence toward Marxist conclusions.

Yesterday I saw a video of a Colombian asking ChatGPT who would make the better president, Abelardo or Cepeda. ChatGPT walked through the different issues, positions, and considerations involved before concluding that it would be Cepeda.

So there's an interesting dialectic here. On the one hand, artificial intelligence can make people intellectually lazier—I see it with my own students, who increasingly externalize their thinking to AI. But on the other hand, if that AI becomes Marxist, there may come a point when someone asks it who they should vote for and it replies, *"Vote for the left."*

At that point, the left would have the opportunity to create the conditions for political education and overcome the very intellectual passivity that AI initially helped produce.

Rojas Silva:
Exactly.

Garrido:
It reminds me of a line Žižek quotes from a novel set in East Germany.

Two communists are talking, and one says to the other, *"You think you became a communist because you agreed with Marx. In reality, you agreed with Marx because you had already become a communist."*

The point isn't cultural relativism or a relativism of worldviews.

The point is that the transformation takes place first at a much more primordial level than that of explicit theory.

Rojas Silva:
Exactly.

Garrido:
That's precisely what we need to understand when we operate on social media.

And when we're not operating through social media, the same process takes place through what we materially provide to the people.

When the Morena government lifts tens of millions of people out of poverty, it gives them a new set of fundamental experiences that, once reflected upon rationally, lead someone—even if they don't yet know all the theory—to conclude: *"I'm better off under Morena."*

It's a direct experience.

A party like mine, the ACP, still doesn't have the funding or the political power necessary to provide that kind of material experience on a large scale.

That's why we have to reach people at that intuitive level through social media.

If we had the resources of a state, we could do something similar to what China does: maintain the loyalty of its population by concretely improving people's lives.

It demonstrates its legitimacy through practice.

Not long ago I had a conversation with a friend here in Mexico, Diego Ruzzarin.

I asked him about cyber-utopias.

What the right often does to attract people is construct a cyber-utopia: an idealized vision, frequently built around a mythologized past and articulated through shared symbols circulating in digital space.

Several groups on the left have tried to do something similar, including Infrared, a media collective that's politically close to our party.

While certain sectors of the right speak about *Agartha* as a kind of idealized white paradise, the comrades at Infrared developed the cyber-utopia of *Tartaria*: a lost civilization that is simultaneously Afro-Asian and European, from which they construct a kind of communist cyber-utopia.

Diego's point was that it's much easier to win people over when you build bridges.

And of course he's right.

But when you don't have the resources to build those bridges materially, you have to do it another way.

What both approaches have in common is that they persuade people in a sphere of human life that is preconceptual, pretheoretical, more intuitive, and more primordial.

Whether it's through a meme that captures your attention or through the concrete experience of saying, *"Look at what the Morena government has accomplished,"* or *"Look at what the Chinese government has accomplished."*

How could I be against this if, at an intuitive level, I understand where it comes from and recognize the benefit it has brought to my own life?

Rojas Silva:
Exactly. In that sense, the concept of *praxis* would have a kind of two-way relationship between concrete experience and the projection of the world one hopes to build.

I agree with you completely.

In Mexico, for example, if we had presented a communist utopia in the traditional sense, it never would have succeeded.

We're still working through these questions. We still lack an entire conceptual and categorical framework for fully understanding them.

That's why Mexico had to speak in terms of *Mexican Humanism*.

We had to reframe the problem and construct a different political imaginary.

Take the present moment. The fact that Claudia Sheinbaum isn't in the same situation as Lula in Brazil—who remains at roughly fifty-fifty in terms of public approval while constantly fending off soft coups—reveals different levels of political potential.

Maybe it's something similar to what you were saying about Kant?

Garrido:
Creating the conditions of possibility.

Rojas Silva:
Exactly. That's what's happening.

Garrido:
Earlier today I was walking through the Zócalo, and I ended up buying a plush doll of AMLO drawn as a cartoon, with slightly oversized teeth.

That registers in a completely different way than an argument.

It creates a feeling of warmth.

It humanizes someone who, from the perspective of ordinary people, might otherwise seem distant.

Rojas Silva:
And that symbol matters because the caricature conveyed a sense of closeness and shared struggle.

Even during the 2006 election—the one he won but that was stolen through electoral fraud—the slogan was, *"Smile, we're going to win."*

It communicated confidence. It communicated joy.

All of that eventually became a kind of super-meme that still survives today, instantly reactivating that emotional dimension.

Garrido:
That's exactly how a meme works.

A meme operates at the emotional level.

When we talk about memes on social media, we're talking about images that, because of the *vibe* they convey, can migrate into contexts completely different from the one in which they originally appeared.

The original context disappears. Ten years later, someone with no connection whatsoever to that original moment can still receive an intuitive, emotional impression that acts directly upon the passions.

You can take a scene from an 1980s movie and use it to comment on something Elon Musk said.

That's how memes work.

To understand that logic is to recognize that it doesn't operate primarily on the rational plane.

It has a postmodern logic, in the sense that it privileges surface over deeper context.

What matters is the image, the *vibe*.

A very good book on this is Fredric Jameson's *Postmodernism, or, The Cultural Logic of Late Capitalism.*

Rojas Silva:
Exactly.

Garrido:
Anyone who watched the last interview we did will probably notice that several important aspects of my thinking have changed.

Although these areas of inquiry may seem more speculative, abstract, or philosophical, the paradox for me has been that precisely these reflections have become necessary in order to answer extremely concrete questions.

Rojas Silva:
Exactly.

Garrido:
Questions as concrete as how to organize and lead a political party.

Rojas Silva:
Friends, as you've seen, these conversations are always incredibly enriching.

Carlos, thank you once again for joining us here on *Academia del Azufre*.

I'd especially like to highlight the concept of the meme, which came up repeatedly throughout today's discussion. It has enormous potential.

Perhaps we need to study the history of the meme itself and begin thinking about new generations of memes—or similar phenomena that we have yet to fully explore.

Garrido:
What's interesting about the meme is that it has itself become a meme.

Its own history can be traced back to Richard Dawkins' original development of the concept.

If I remember correctly, he introduced the idea of the meme to describe a scientific phenomenon.

But the meme as we understand it today has become completely detached from that original historical context.

In other words, the meme became a meme of itself.

Rojas Silva:
Yes.

It even interpellates itself.

Garrido:
Exactly.

Rojas Silva:
It's been a real pleasure.

Carlos, I hope this reflection continues.

And to everyone watching, don't forget to leave your thoughts in the comments about the many ideas that emerged throughout this conversation.

Almost every single one of them is, in itself, almost...

Garrido:
Schizophrenic!

Rojas Silva:
(laughs) Schizophrenic if we look at it from the standpoint of *science*, but profoundly nourishing and robust if we look at it from the standpoint of *Wissenschaft*.

Garrido:
Exactly.

After the recording ended:

Garrido:
What you said at the end about *science* and *Wissenschaft* was really interesting, because Hegel was interpreted almost as if he were a schizophrenic thinker. Of course, that concept didn't exist at the time, but just think about it: *The Phenomenology of Spirit* is a book that discusses philosophy, art, Greek tragedy and comedy, religion, the Enlightenment, history... it talks about practically everything.

Rojas Silva:
Exactly!

The Splitting of America's Golden Age: The Atomic Era and the Gnostic Structure of Popular Culture

Haz Al-Din[1] & Jonathan Brown[2]

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the *Infrared Media Collective*.

2. Jonathan Brown is a high school history teacher and adjunct sociology instructor. He serves on the Department of Education of the American Communist Party and is Managing Editor of Red America journal.

Introduction [3]

From the late twentieth century to the present, American popular culture has been haunted by stories in which the seemingly idyllic world of postwar suburbia conceals a hidden horror lurking just beneath its surface. The optimistic decades following the Second World War — widely considered the golden age of American capitalism — have been reimagined as a nightmare in which prosperity conceals darkness. From television series such as *Stranger Things* to video games like *Fallout*, American popular culture frequently traces the corruption of the idealized community to scientific experimentation, nuclear war, and atomic radiation.

What is the connection between the deconstruction of postwar America and atomic energy? In this essay, I argue that this recurring narrative structure constitutes a distinctive form of *American Gnosticism*. The Atomic Age has come to symbolize far more than the invention of nuclear weapons; in the popular imagination it represents the end of America's innocence and the splitting of classical modernity itself. The persistence of this narrative structure reflects an unresolved attempt to comprehend this historical rupture and the transformation of consciousness that accompanied it.

American Gnosticism as a Recurring Narrative Structure

In 1972, the popular horror writer Ira Levin published *The Stepford Wives*, later adapted as a successful film in 1975.[4] The novel provides an early and influential example of the postmodern narrative pattern of American Gnosticism. The story begins when a family moves to the affluent Connecticut suburb of Stepford. At first, the town appears picturesque, with beautiful homes, manicured lawns, and friendly neighbors. Gradually, however, it becomes clear that something is deeply wrong. The women of Stepford are uniformly cheerful, submissive housewives who speak mechanically and display no independent thought. The novel ultimately reveals the horrifying

truth: the men of the town have murdered their wives and replaced them with lifelike robotic duplicates engineered to embody the patriarchal fantasy of the perfect obedient wife.

This recurring narrative, in which a small town hides a dark secret behind its peaceful facade, has become ubiquitous in contemporary American cinema, television, video games, and popular fiction. In order to understand the appeal of this storytelling device, it is helpful to examine the ancient religious tradition from which its underlying logic derives: Gnosticism. The term Gnosticism is derived from the Greek word *gnosis*, which can be translated as "knowledge" or "insight."[5] The historical Gnostics were an esoteric religious movement that emerged in the ancient Near East, blending elements from Judaism, Christianity, and various Pagan traditions.[6] The Gnostics believed that the material world was not the true reality, but rather a fallen, defective, and deceptive order ruled by a lesser divine being known as the demiurge.[7] Salvation therefore required *gnosis* – the attainment of hidden knowledge to discover the truth concealed behind ordinary appearances.

In the American context, Gnosticism begins from the suspicion that the peaceful community, happy family, and orderly suburb do not represent reality as it truly is. In works of popular fiction, the depiction of the idealized 1950s suburban town is exaggerated to such an extreme that it becomes uncanny. This is an important feature of American Gnosticism. The false world does not merely appear happy; it appears abnormally happy. Everyone smiles too much. Every interaction is too pleasant. The inhabitants seem naïve, shallow, and strangely lacking in interior life. In this respect, they resemble the subjects described by Herbert Marcuse in *One-Dimensional Man*.[8] They possess no real depth of personality, individuality, or character beneath their happy-go-lucky disposition. Gary Ross's influential 1998 film serves as a prime illustration; it depicts a 1950s town populated by citizens so relentlessly cheerful that the community is quite literally named "Pleasantville."[9] The result is not an image of authentic happiness but a world whose exaggerated normality immediately

generates suspicion. The small town's perfection feels false because no actual human society could be so completely free of contradiction.

This uncanniness prepares the way for the defining narrative reversal of American Gnosticism: *things are not what they seem*. As the story progresses, the apparent world gradually breaks apart. Behind the clean surface of the perfect suburb lies another reality. The people who first appeared one-dimensional reveal hidden depths of subjectivity. The society that appeared harmonious is shown to depend upon repression and deception. The community that seemed safe becomes the site of some grand conspiracy in which its inhabitants are trapped.

The particular content of the conspiracy varies. Behind the idealized community there may be a secret government operation, a scientific experiment, a virtual-reality simulation, a cult, a group of aliens, a mad scientist, or monsters from another world. Sometimes the community itself is revealed to be artificial. Sometimes its inhabitants have been replaced or transformed – as was the case in *The Stepford Wives*. Sometimes the visible world serves as a cover for a laboratory or classified project operating beneath it. Whatever form the hidden truth assumes, there is always some deep horror in the background that the ordinary appearance of normality conceals.

Once the idyllic town is revealed to be false, salvation takes the form of acquiring the hidden knowledge that exposes the deception. The protagonist moves from naïve acceptance of the apparent world into knowledge of the concealed forces that actually govern it. This protagonist's progression from illusion to revelation is accompanied by a corresponding distinction between naïveté and subjectivity. The happy inhabitants of the idealized community initially appear stupid precisely because they believe everything is exactly as it should be. They are content to live in the familiar world of "honey, I'm home!" – a world with an unmistakable racial and patriarchal dimension. By contrast, depth of personality emerges through suspicion, dissatisfaction, and the recognition that the social world is fraudulent. The individual becomes a real subject only by discovering that the world is not real. Consciousness is demonstrated through alienation from the community, while happiness becomes evidence that one remains trapped within its illusion. American Gnosticism is therefore not simply a collection of stories in which pleasant communities happen to conceal unpleasant secrets. It is a recurring postmodern narrative structure through which American popular culture interprets the country's idealized image of itself.

The Political Economy of Postwar America

The idyllic image of small-town America portrayed in these postmodern narratives did not emerge out of thin air. It was modeled upon the historical conditions of the postwar economic expansion that followed the Second World War. This period has often been described as the Golden Age of American capitalism, during which the United States emerged triumphant from the Great Depression and the devastation of global war to become the dominant economic power in the capitalist world.[10] The postwar economy rested upon mass industrial production, rising real wages, expanding homeownership, and broad public investment in infrastructure.[11] The G.I. Bill expanded access to education and affordable housing, while the construction of the interstate highway system accelerated the growth of suburbia.[12] These developments gave rise to a new mass consumer society centered upon the single-family home, the nuclear family, automobile ownership, and television. Despite the tensions of the Cold War and the conformity fostered by anti-communist hysteria, the era was widely associated with optimism, technological progress, and confidence in the superiority of the American way of life.[13]

However, this historical settlement proved temporary. The social upheavals of the 1960s – including the civil rights movement, second-wave feminism, the sexual revolution, and opposition to the Vietnam War – challenged many of the cultural assumptions associated with suburban life and the postwar family ideal. At the same time, the economic foundations of postwar prosperity began to erode. Stagflation and the 1973 oil crisis brought the long postwar boom to an end.[14] In response, the American ruling class increasingly embraced a neoliberal program of privatization, deregulation, and deindustrialization of the economy.

As the material foundations of postwar America dissolved, its cultural image underwent a profound transformation. The suburban landscape no longer

appeared as the natural expression of American prosperity but as a nostalgic relic viewed from the standpoint of its disappearance. It is precisely under these conditions that American Gnosticism emerged. The seemingly perfect suburb became uncanny because it no longer corresponded to America's material reality. Having lost confidence in the optimistic certainties of the postwar era, contemporary society has reinterpreted that period through a lens of postmodern cynicism. American Gnosticism gives this cynicism its narrative form.

Examples of American Gnosticism in Popular Culture

Having defined the narrative structure of American Gnosticism and identified its material basis in America's postwar political economy, we can now examine how this pattern manifests itself in popular culture. Although the details vary from one work to another, the underlying structure remains remarkably consistent. Typically, the hidden reality lurking beneath the surface is connected to scientific experimentation, nuclear catastrophe, or atomic radiation. The following examples illustrate this recurring symbolic logic and reveal how works as diverse as *Fallout*, *Stranger Things*, and the cultural phenomenon of *Barbenheimer* utilize the same narrative structure.

Fallout, a video game series first released in 1997, depicts a dystopian retrofuturistic world in the aftermath of a catastrophic nuclear war.[15] The gameplay juxtaposes the optimism of America's postwar Golden Age with the horrors of nuclear annihilation. Throughout the series, nostalgic 1950s imagery is presented as a façade overlaying a dystopian landscape of mutants, environmental devastation, and the remnants of a collapsed civilization. Perhaps the series' most recognizable symbol is Vault Boy, the perpetually smiling corporate mascot modeled after mid-century advertising iconography.[16] Vault Boy's sunny disposition in the face of nuclear holocaust – greeting the player with a cheerful thumbs-up – transforms him into an uncanny figure. In *Fallout*, the post-apocalyptic world is haunted by the ghost of America's postwar optimism.

The popular Netflix horror series *Stranger Things* shifts the nostalgic setting from the 1950s to the 1980s, but the underlying narrative structure remains unchanged. Set in the fictional small town of Hawkins, the series initially presents an ordinary suburban community and uses the American shopping mall as an idealized symbol of prosperity, leisure, and consumer culture.[17] Over the course of the story, however, the protagonists uncover a hidden conspiracy in which the Department of Energy has been conducting radioactive experiments to unleash monsters from an alternate dimension known as the Upside Down. In season three, it is revealed that an underground laboratory run by evil Russians has been operating beneath the town's shopping mall, where Soviet scientists gather data on the American population.[18] The message is unmistakable: beneath the surface of ordinary American consumer society lies the threat of Soviet espionage, secret government research, and dangerous atomic experimentation. The true horror of *Stranger Things* is therefore not simply the monsters themselves, but the American and Soviet authorities who use advanced science to penetrate dimensions they do not understand.

Taken together, these works reveal a remarkably consistent symbolic logic. Again and again, the false world of America's postwar Golden Age gives way to the darker reality of the Atomic Age. This Gnostic narrative structure appears even in one of the most unlikely cultural events of recent years: the simultaneous release of *Barbie* and *Oppenheimer* in July 2023, a phenomenon that became known simply as *Barbenheimer*.[19] At first glance, the pairing seemed absurd. *Barbie* is a brightly colored fantasy comedy based upon the Mattel toy line, while *Oppenheimer* is a somber historical drama about the development of the atomic bomb. Critics treated *Barbenheimer* as an internet joke or a clever marketing coincidence, unable to explain the connection between the two seemingly disparate films.

Yet the pairing reveals a deeper symbolic connection. *Barbie* is unmistakably an American Gnostic narrative. Created during America's postwar Golden Age, the Barbie doll has long served as a cultural icon of optimism, prosperity, and

idealized standards of femininity.[20] The film systematically deconstructs Barbie as a cultural icon by juxtaposing the uncanny perfection of her plastic fantasy world with the sexism and misogyny of the real world. *Oppenheimer*, by contrast, is not an American Gnostic narrative. It is a historical drama centered upon J. Robert Oppenheimer and the creation of the atomic bomb. Yet this difference is precisely what makes the cultural phenomenon of *Barbenheimer* so revealing. *Barbie* dramatizes the symbolic collapse of America's idyllic postwar fantasy, while *Oppenheimer* dramatizes the historical event that inaugurated the Atomic Age itself. Considered together, *Barbenheimer* exposes the underlying symbolic logic running throughout contemporary American popular culture. Again and again, the splitting of the idyllic world is inexorably linked to the splitting of the atom. The cultural sensation around *Barbenheimer* therefore points toward a deeper historical intuition: that the destruction of America's postwar innocence and the dawn of the Atomic Age belong to the same symbolic moment.

Why the Atomic Age?

The repeated association of modern science, nuclear energy, and atomic radiation with the hidden horror of American Gnostic storytelling raises an obvious question. Why do so many stories ultimately trace the corruption of the idyllic American community back to the Atomic Age? The reason, I suggest, is that the Atomic Age represents far more than the invention of nuclear weapons. In the popular imagination, it symbolizes the destruction of America's innocence. The idealized 1950s are remembered as an age of blissful naïveté, a period in which American society had not yet recognized the forces it had unleashed. The recurring revelation of hidden horror is therefore not simply a fear of nuclear annihilation. It is the retrospective discovery that beneath the apparent optimism and confidence of postwar America lay a technological and historical transformation whose consequences were only gradually becoming visible.

The splitting of the atom therefore carries a significance that extends well beyond physics itself. It symbolizes the splitting of classical modernity. The development of atomic science, together with Einstein's theory of relativity and

the emergence of quantum mechanics, shattered the intellectual framework upon which nineteenth-century conceptions of reality had rested. Classical modernity understood nature as a logically ordered universe governed by stable laws, one in which matter behaved predictably and reality could ultimately be explained through common sense and reason. Twentieth-century physics profoundly disrupted that worldview. Quantum mechanics in particular revealed a reality that no longer conformed to the categories inherited from classical science. The conceptual certainty that had characterized the earlier modern worldview could no longer be sustained. Viewed in this light, American Gnosticism is an expression of the persistent intuition that something fundamental was broken in the twentieth century – that civilization that has crossed a threshold from which there can be no return.

The Limits of Postmodern Consciousness

There is a persistent flaw in American Gnostic storytelling: once the hidden reality has been revealed underneath the idyllic world – what comes next? Typically, the answer is not political revolution or the construction of a new ideal society. Instead, the dominant moral outlook of postmodern culture begins from the assumption that every ideal is already compromised. All collective ideals from the past – including both postwar American optimism and Soviet socialism – are treated as an illusion whose hidden corruption has now been exposed. The characteristic gesture of postmodern culture is therefore one of demythologization. Its task is to strip away all ideals of the past and reveal the darkness supposedly concealed beneath them.

This postmodern cynicism, however, leaves us with profound moral consequences. Once every social ideal has been unmasked as fraudulent, little remains except private life itself. Political projects, collective aspirations, and universal ideals recede into the background, while morality becomes concentrated almost entirely within personal relationships. Heroism is no longer expressed through participation in communal life or recognition of a common struggle. Instead, it is found in loyalty to one's family, romantic partner, or friends. Faced with a world understood as fundamentally broken, the highest virtue becomes preserving authentic human relationships amid the ruins. This oftentimes entails the complete rejection of human society itself, leading to a search for authenticity in nature. If modern civilization is regarded as artificial and inauthentic, then truth is increasingly sought in ecology, the earth, or some more primordial mode of existence that is outside society altogether.

Yet postmodern consciousness is beset by a fundamental paradox between the ideal and the real. If genuine knowledge consists of rejecting the idealized social order, then authenticity can only be found in negation. But the ”real” cannot be represented on its own; it requires the ideal as its point of contrast. A post-apocalyptic world such as *Fallout* derives its symbolic force precisely because it continually juxtaposes nuclear devastation with the cheerful optimism of 1950s America. Likewise, *The Stepford Wives* depends upon the image of the perfect suburban family before revealing its hidden misogynistic horror. Without the idyllic world, there would be nothing to demystify. The power of American Gnosticism therefore lies not simply in depicting catastrophe, but in staging the collapse of an ideal that the audience first learns to recognize and then to distrust. For this reason, American Gnosticism has become a defining sensibility of postmodern culture rather than merely a recurring genre convention. It teaches audiences to approach every idealized representation of society with suspicion, to assume that hidden corruption lies beneath appearances, and to locate authenticity only after the destruction of public ideals.

Conclusion

By analyzing the recurring postmodern narrative of American Gnosticism, we can now see that the Atomic Age has caused a metaphysical rupture in modern consciousness. Just as the atom is divided, so too is the unity of classical modernity fractured. The coherent world inherited from the nineteenth century has given way to a divided reality in which appearances can no longer be trusted, institutions lose their authority, and authenticity is sought only in the negation of the official social order. This rupture has left us with a profound historical problem. Humanity has developed technologies whose implications it has not yet learned to comprehend. Nuclear technology represents a revolutionary transformation of the productive forces, but American society has not developed a corresponding philosophy, culture, political outlook, or sociology adequate to its consequences. In other words, our relations of production have not yet caught up with the development of the forces of production. We continue to interpret the Atomic Age using conceptual categories inherited from an earlier world that no longer exists. We possess atomic technology without an atomic philosophy.

However, the splitting of the atom was not the only rupture of the twentieth century that shattered the coherence of classical modernity. The Bolshevik

Revolution represented an equally decisive rupture in the political sphere. Just as quantum mechanics overturned the scientific assumptions inherited from the nineteenth century, the Russian Revolution fundamentally transformed the political, economic, and cultural categories through which modern society had previously understood itself. Like the Atomic Age, Bolshevism inaugurated a new historical epoch whose implications have yet to be fully comprehended. In a similar fashion, eighteenth century Europe remained haunted by the consequences of the French Revolution for generations. Likewise, more than a century after 1917, the modern world still continues to grapple with the political forms, ideological conflicts, and mass movements unleashed by the Bolshevik Revolution. Western society remains haunted by the specter of revolutionary politics, continually confronting the possibility that the established bourgeois institutions might be overturned by organized popular movements.

This shared historical predicament explains why American Gnosticism ultimately remains an incomplete response to the splitting of classical modernity. It recognizes that something has gone fundamentally wrong beneath the surface of the postwar order, but it can only express this realization through symbolic narratives of hidden conspiracies, false realities, and secret horrors. It excels at negation and exposing illusion, yet it offers no corresponding philosophical or political framework capable of comprehending the historical transformations that produced these conditions. Its endpoint is therefore one of perpetual skepticism, cynicism, and detachment.

It is precisely here that dialectical materialism provides the philosophical outlook most appropriate to the Atomic Age. Unlike worldviews grounded in the stable categories of classical modernity, dialectical thought begins from contradiction, transformation, and historical development. Mao Zedong's formulation that ”one divides into two” expresses not merely a political slogan but a general principle of reality itself.[21] Both the splitting of the atom and the Bolshevik revolution reveal a world defined not by static equilibrium but by ceaseless development through contradiction.

In its political form, this dialectical outlook finds its highest expression in Marxism-Leninism. If American Gnosticism represents the cultural consciousness of a society struggling to comprehend the collapse of its own ideological certainties, Marxism-Leninism provides the philosophical means to

---

move beyond that impasse. Rather than remaining trapped within endless negation or nostalgic attempts to recover the lost unity of classical modernity, Marxism-Leninism seeks to sublate that world into a new historical synthesis adequate to the realities of the twenty-first century. We will never comprehend atomic technology without an atomic philosophy. Marxism-Leninism offers the possibility of such a philosophy – and is therefore the only political theory suited to the realities of the Atomic Age.

Infrawoke: Seeing Beyond the Visible Spectrum of Woke and Anti-Woke[1]

Haz Al-Din[2]

1. This article was transcribed and edited for clarity by Jonathan Brown, Managing Editor of *Red America*, based on American Communist Videos, "Haz clarifies Infrawoke," YouTube, August 8, 2026, https://www.youtube.com/watch?v=Vo3DLND8ftU&t=41s.

2. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

Introduction

There has been a lot of confusion in our party about the debate between wokeness and anti-wokeness. This has led me to introduce the new concept of "Infrawoke" in order to provide clarity. To address moral questions, we cannot rely on individualism. People need guidance. They need a moral north star to know what is right from what is wrong. They need to know what kind of behaviors should be encouraged versus which ones should not. For this reason, it is crucial for the American Communist Party to distinguish the correct line from the false line on issues of morality.

Before I define what Infrawoke is, I want to clear up some initial misconceptions about what Infrawoke is not. First of all, Infrawoke is *not* the same thing as woke 1.0. Originally, the idea of wokeness was rooted in the black community, with the slogan, "stay woke." This was about how the government conspires to oppress black people. But wokeness quickly became associated with left-liberal derangement. A term that was originally used to describe the oppression of black people quickly became distorted into saying, "furries are oppressed too!" So for this reason, woke 1.0 has been utterly discredited. Its left-liberal advocates are hypocritical, depraved people. They are not moral people. They do not represent the moral north star of our society. Infrawoke is something fundamentally new, something fundamentally different.

The second point to clarify is that Infrawoke is not the same as the conservative anti-woke position. This position is a non-starter. The entire nation is fatigued from this conservative anti-woke slop. The posturing and vice-signaling from anti-woke conservatives is a completely bankrupt position. The anti-woke conservative is opposed to wokeness from the position of the Baby Boomer who is bewildered by the insanity of the new generation. The anti-woke backlash that took hold of the nation was rooted in nihilism. For example, Elon Musk's purchase of *X* led to a proliferation of moral depravity, with things like swastikas and the N-word being thrown around as proof of edginess. These anti-woke grifters have no moral authority and offer no guidance for the future.

In this sense, woke 1.0 was the first premise. The conservative anti-woke backlash was its negation. Now, Infrawoke is emerging as the negation of the negation.

The Great Awakening and the Great Darkening

Woke 1.0 and the anti-woke backlash correspond to a pendulum that has swung back and forth throughout American history between two extremes: the Great Awakenings and the Great Darkenings. The Great Awakenings have a strong moral bent. They are about moral superiority, elevating ourselves spiritually, fulfilling our moral obligations, and fulfilling the need to actually align our society with our principles and values in some kind of way. One such Great Awakening corresponded to the abolitionist movement of the nineteenth century. The Great Darkenings are the opposite. They point out the fact that the moral superiority of the Great Awakenings is rooted in hypocrisy, and they draw the conclusion that nature is actually dark and profoundly brutal.

This pendulum can be seen in the cultural history of the postwar United States. The moral intensity of the 1960s – civil rights, antiwar activism, countercultural idealism, and the conviction that American society could be brought into alignment with higher moral principles – was followed by the radically different cultural atmosphere of the 1980s. The emblematic figure of this Great Darkening is the materialistic yuppie Patrick Bateman from the novel *American Psycho* who embodied the archetype of cocaine, consumption, sexual excess, violence, and moral emptiness. The early twenty-first century produced its own forms of material excess, organized around celebrity, glamour, commodification, and the disciplining of the body. By the Obama era, however, the pendulum had begun moving once again toward moral consciousness, eventually culminating in woke 1.0 – the politics of inclusion, representation, historical guilt, and social justice that reached its greatest intensity around the George Floyd protests and Black Lives Matter in 2020. The subsequent anti-woke backlash represented the corresponding Great Darkening. Figures ranging from Matt Walsh and Ben Shapiro to Andrew Tate and Nick Fuentes expressed, in very different forms, a rebellion against the moral language of the preceding period.

To understand why American society continually swings between these two extremes, we have to look deeper at our relationship to the unconscious and to material reality itself. Freud identified and discovered the unconscious, while Lacan said the unconscious was structured like a language. There is a deep, embedded reality which we do not articulate consciously, but which we nonetheless partake in. This corresponds to Marx's critique of ideology. There is a human reality that we partake in which we are not consciously aware of, but which nonetheless defines, in a large part, who we are.

Woke 1.0 was mainly about bringing that reality to light and colonizing it by consciousness. As a result, any trace of the unconscious has to be declared evil and fascist because we don't trust it. We don't trust material reality. We think that if something exists materially outside of our control, it is depraved.

This paradigm largely derives from Calvinism, with its fatalistic doctrine of predestination. During the periods of the Great Darkenings in American history, however, the same distrust of material reality takes the opposite form. We surrender to a sort of nihilistic fatalism that conceptualizes the world as dark and evil, but accepts that we cannot resist it. So instead, we must embrace evil consciously.

But accepting depravity is just a false attempt at preserving the integrity of the sovereign self from material reality. In the same way that Great Awakenings are about establishing colonial outposts of moral absolute purity, the Great Darkenings are about protecting yourself by embracing evil. If you embrace evil, you cannot be victimized by it.

This is the duality of America: the Great Awakening and the Great Darkening, the two orientations through which America makes sense morally and metaphysically of its place in the world. We swing between absolute moral conceit and total depravity. But what they both have in common is that we're not at peace with material reality.

Infrawoke as Shia

If both woke moralism and anti-woke nihilism fail to provide a genuine moral center, then we need a different basis for moral authority. This is what I mean when I say that Infra is Shia. We never wanted to give up Islam. We don't hate Islam. We think that the rulers of Islam are *munafiq* – hypocrites. Likewise, the rulers of the left are hypocrites. Marx was a Shia when he fought the Young Hegelians. Lenin was a Shia when he fought the Second International. Sheikh Stalin was a Shia when he fought the deviations within the party of hypocrites. Mao was a Shia when he launched the Cultural Revolution against the hypocrites within the Communist Party. All of the main figures of Marxism-Leninism were Shia. They were waging the internal jihad with Zulfikar. They understood that the struggle is always within.

The basis of our opposition to woke 1.0 is that we hate their hypocrisy. We do not necessarily hate their principles – such as respecting human dignity, upholding moral authority, rejecting animalistic depravity, and refusing to humiliate and brutalize people. What we are against is the liberal left's pretentiousness, its egotistical sense of superiority. When a liberal-leftist attacks you from a position of self-righteousness, we need to turn it against them. We need to be the moral ones. We need to radiate and emanate moral authority. Think of Zulfikar – the legendary double-pointed sword of Ali. The two blades symbolize the form and the content of reality. The liberal-leftist claims that they are righteous, but in reality they are depraved. In reality they are hypocrites. That is why we must not concede any ground to them.

The Seven Laws of Infrawoke

If Infrawoke provides a moral basis for rejecting both woke hypocrisy and anti-woke depravity, then it must also provide a concrete standard for how we conduct ourselves. We are entering a new woke era, and we need to get ahead of it by developing our own conception of moral authority and placing ourselves at the vanguard of this new awakening. This morality cannot be merely conventional or performative. It has to be material. It has to be grounded in how we actually conduct ourselves, and it has to be aligned with the cosmos. So I want to lay out a new moral code. These are the Seven Laws of Infrawoke.

First, you must be moral and righteous to the utmost without being pretentious. Righteousness requires an internal conviction that one is acting correctly, rather than a constant search for approval from one's peers. But moral conviction must never become an excuse for arrogance or self-congratulation. We must not look down upon others simply because we consider ourselves righteous. Morality requires humility, an alignment with what is right and, ultimately, an alignment with the cosmos. Humility also requires retaining a sense of humor and refusing to take oneself too seriously.

Second, you must reject wickedness and depravity wherever you encounter them, without hypocrisy. Moral judgment cannot simply be outsourced to social trends, friend groups, or online communities. If your sense of right and wrong depends entirely upon what happens to be socially acceptable within a particular environment, then you possess no moral center of your own. We must therefore maintain an internal moral compass even when doing so risks

our social standing. Wickedness does not cease to be wicked simply because it appears among our peers.

Third, extend good faith to strangers and oppose them only in self-defense. Our default disposition toward those we do not know should be one of patience and good faith. It is not the responsibility of the stranger to make himself immediately familiar or intelligible to us. We should extend the benefit of the doubt even at the risk of occasional naivety. Only when another person crosses the line – through slander, hostility, or attack – do we need to engage in self-defense.

Fourth, you must be ferocious without sadism. There are circumstances in which an enemy must be confronted and defeated, and in those circumstances we should not be afraid of ferocity. But this must always remain subordinated to a definite purpose. Once an enemy has been defeated, there is no virtue in continuing to humiliate or torment them. The enjoyment of another person's suffering is itself a form of depravity. We must therefore strike the proper balance: ferocious when necessary, but never sadistic. That balance is dialectical.

Fifth, you must be merciful without weakness. Mercy has meaning only when it is exercised from a position of strength. When an enemy no longer poses a threat and genuinely stands at your mercy, then mercy becomes appropriate. There is no reason to cultivate permanent grudges or allow resentment to govern one's conduct. A person who is at peace with himself does not need to remain consumed by hatred. We should therefore forgive when forgiveness is possible, while never forgetting what has occurred.

Sixth, you must not tell lies, but you must rightly discern the content and not merely the form of truth. Truth cannot be reduced to a formalistic relationship between isolated statements and facts. Context matters. We must ask what is actually being communicated, what its content is, and toward what end it is being communicated. Honesty therefore requires more than merely reproducing the formal appearance of truth; it requires discerning its substance.

Seventh, do not gossip. By gossip I mean speaking about the private affairs of other people to no meaningful end. Information that has genuine practical significance is not gossip. There are circumstances in which information must be communicated because it concerns the welfare of others, the movement, or some other matter of consequence. But when another person's private affairs

cause no harm, have no practical significance, and do not concern us, we should excuse ourselves from them rather than deriving pleasure from their humiliation.

None of these laws should be interpreted formalistically. They are not mechanical rules that relieve us of the responsibility to exercise judgment. Nor do they require weakness, passivity, or emotional detachment. The purpose of the Seven Laws is precisely to distinguish principled conduct from both the moralistic pretension of woke 1.0 and the nihilistic depravity of anti-wokeness. Nor is this moral code meant to be a form of Stoicism. I am not arguing that we should suppress emotion. On the contrary, we should understand what our emotions are for and direct them toward what actually matters. Ultimately, all of this is about love. We conduct ourselves with righteousness because we love the revolution, because we love what we are fighting to create, and because we love the glory and greatness of what is still to come.

The Problem of Offensive Language

These seven moral laws become especially important when applied to questions where moral judgment is easily reduced to superficial rules and symbolic gestures. One of the clearest examples is the controversy over offensive language. One of the biggest problems with woke 1.0 is that it focused on virtue-signaling around superficial language, which became a substitute for actual moral guidance. Do you use bad words? Do you use good words? Infrawoke requires us to have a different moral authority that is based on how we actually interact with people. The issue with language is what are we using words for and toward what ends.

The anti-woke conservatives thrive on using edgy bad words as a means to intimidate and terrify the woke liberal-leftist. But if you are not desensitized to trifling, edgy words, you are going to be crushed by the right wing. It will shatter your soul. You have to have the resolve to stand and fight. You must roll your eyes and refuse to allow bad words to become weapons that can be used to defeat and demoralize you. This is not to say that bad words are completely unacceptable in any context. Offensive language can be used as a literary device. They function as a pressure-release valve to express frustration. But if you overuse offensive speech, you become like a child who shouts curse words just to upset your parents. Being edgy is not profound. It is cringe. It is a form of posturing.

We cannot treat liberal-leftists the same way we treat right-wingers. The liberal-leftist is insufferably pretentious, so there is a temptation to go in the opposite direction and vice-signal with how free you are from the constraints of political correctness. But when debating our liberal-leftist adversaries, there is no point in using offensive language or throwing slurs at them. Your best weapon against the smug, self-righteous liberal is to focus on the substance of why they are wrong. Fight for the principles. Fight for truth. Fight for the integrity of the label "communist." Promote the correct line against their falsehoods. We will never be as unwoke and edgy as the neo-Nazis on *X*. Our response to woke 1.0 must never be to embrace total depravity. So we must distinguish ourselves from that spectrum entirely.

Seeing Beyond the Visible Spectrum

There is a deeper dimension to Infrawoke than questions of language and moral authority. Infrawoke also requires a fundamentally different relationship to consciousness and material reality itself. The central idea of Infrawoke is that we need to see beyond the visible spectrum. We need to be awake toward a thing without annihilating it. Think of the idea of resignation. We need to be awake and then send off the thing we're awake to and let it be. Absolute consciousness must correspond to a profound resignation and peace with the thing. And you know who set that precedent? *Sheikh* Karl Marx.

Marx was a student of Hegel, Feuerbach, and the Young Hegelians. Feuerbach comprehensively developed a system of the human. He explicated the nature of man, what humanity is, what is the species essence, the species being. It's a systemic comprehension. It's very exhaustive. And Marx accepts this more or less. But how does Marx complete the system of German idealism? He resigns. This thing that we've raised to consciousness comprehensively, we've only done so to reveal the thing that was here all along. Now we can accept it and recognize its brilliance. The conclusion of Marx's wakefulness is to be at peace with the material. And this peace is revolutionary because it means, actually, the proletariat is this "ingenious soil of the people." It itself is already this. We don't need to take it and turn it into this systematic idea of man. Man is already brilliant.

So Infrawoke is about resignation. It is about being aware of the very limitations of wakefulness. That doesn't mean we just concede things to the

unconscious. Rather, we must be at peace with the fact there will always be an infinitesimal gap between the things we can consciously control and the things which necessarily presuppose a deeper material context that we cannot define or control. For example, you cannot choose who your parents are. You cannot choose what species you belong to. You cannot choose the circumstances of your own birth. You need to be at peace with that. You need to be at peace with the cosmos in some sense. Just because you're awake to something doesn't mean you've mastered the thing and you can annihilate this thing because you've woken up to it. The thing that you've woken up to is not always something that means to deceive you or oppress you or trick you. Sometimes you have to wake up to something to respect it enough to maintain your distance from it and simply express gratitude for what you have taken for granted. That is Infrawoke.

Woke 1.0 was primarily about being woken up to the fact that the system is unjust. But I think everyone is already aware of that fact. Everyone already knows the system is broken. So what can we do about it? What is within our capacity to do to respond to this? What alternative can we create? If you can carve out a space of peace within this evil world we live in, you finally have something to fight for and defend, and you have a ground to stand upon with which you can challenge this wicked system. Endlessly protesting the unjust government is a road to nowhere. Infrawoke is about having the self-confidence to accept the profound, immense potential that exists within each of us in the face of these conditions of absolute despair and hopelessness. We really do have a fighting chance. There is a way forward. There's a brilliance that we've taken for granted. We have the Mandate of Heaven. We just need to wake up to it.

Once you have peered beyond the abyss, you come back to reality. You're not supposed to dwell there forever. You don't fixate on what lies beyond the visible spectrum. You perceive it in order to have the insight you need to know that heaven is with us. You discover the terms and conditions of a profound inner peace that gives you the confidence you need to go forward in a world full of contradictions. Beyond the visible spectrum lies a reality which points to the ultimate victory of communism.

That is Infrawoke.

"I'm Writing About the Era that Rushes Towards Us": Interview with Chinese Novelist Ba Longfeng (Part I)

Ba Longfeng & Chet Ozmun [1]

---

1. Chet Ozmun is a freelance translator who lives and works in Chicago, IL. He is a cadre in the Illinois chapter of the American Communist Party and a member of the ACP Department of Education.

> *In periods of great social transformation, there are many contradictions, conflicts, absurdities and anxieties so, of course, in the literature of the age, there is much unmasking, criticism, doubting and probing…But I also think that in our writings, especially novels, we write exhaustively about evil, but no one has ever written exhaustively about good.*
>
> —*Jia Pingwa*[2]*:* Broken Wings

If American audiences happen to be browsing for translated Chinese fiction at a bookstore, they will be presented with narratives that overwhelmingly emphasize political oppression, extreme rural poverty, the "horrors" of the Cultural Revolution, or the bleakest aspects of China's rapid modernization. This is a well-documented phenomenon. In recent years, China's own literary scholars and academics have extensively analyzed the systemic biases present in Western publishing markets. Studies show that the translation and reception of Chinese literature in the West are frequently filtered through a rigid ideological lens. Western publishers consistently favor works that expose the dark underbelly of Chinese society or books that have faced domestic censorship. They weaponize this literature to confirm their own pre-existing political narratives.[3]

Further comprehensive and quantitative reviews of Chinese fiction that has been published in the United States over the past four decades confirm a

---

2. Jia Pingwa (1952-), like our interview subject Mr. Ba, is a novelist and essayist from Shaanxi Province in Western China. Jia was born in a remote village, and today he is one of contemporary China's most towering and prolific literary figures. Jia draws heavily on his rural roots for all his writings. He was raised in a traditional farming family and having worked as a peasant during the Cultural Revolution, his fiction intimately chronicles the lives of ordinary people navigating the friction between traditional agrarian values and China's rapid urbanization. Jia is a recipient of China's highest literary honor, the Mao Dun Literature Prize (for *The Shaanxi Opera*). He currently serves as Vice Chairman of the China Writers Association. Jia Pingwa works available in English translation: Jia Pingwa. Turbulence. Translated by Howard Goldblatt. Baton Rouge: Louisiana State University Press, 1991. Jia Pingwa. Ruined City: A Novel. Translated by Howard Goldblatt. Norman: University of Oklahoma Press, 2016. Jia Pingwa. The Lantern Bearer: A Novel. Translated by Carlos Rojas. Beijing: Beijing Mediatime United Publishing, 2017. Jia Pingwa. Happy Dreams. Translated by Nicky Harman. Seattle: Amazon Crossing, 2017. Jia Pingwa. Broken Wings. Translated by Nicky Harman. London: ACA Publishing Ltd., 2019. Jia Pingwa. The Shaanxi Opera: A Novel. Translated by Nicky Harman and Dylan Levi King. Seattle: Amazon Crossing, 2023. Jia Pingwa. Old Kiln. Translated by Christopher Payne, James Trapp, and Olivia Milburn. London: Sinoist Books, 2025.

3. Xu Duo (许多), "On the Barriers to Contemporary Chinese Literature Translation and Reception in the West and the Underlying Reasons" [中国当代文学在西方译介与接受的障碍及其原因探析], Journal of Foreign Languages [外国语] 40, no. 4 (2017): 100.

disproportionate editorial appetite for novels focused on human suffering, corruption, and systemic conflict. As scholars have pointed out, this focus on themes of tragedy and suffering has molded a persistent, narrow impression among Western audiences that contemporary Chinese fiction is exclusively concerned with darkness and despair.[4]

Ba Longfeng, a novelist and screenwriter who shares Jia Pingwa's Shaanxi roots, directly addresses this gap. Moving away from the conventional literary focus on trauma and societal decay, Ba deliberately centers his work on a defining concept of modern Chinese public life: "positive energy" (正能量 - zhèng néngliàng). Ba sees documenting "the good," as Jia Pingwa called it above, as an accurate reflection of a society experiencing rapid economic development and rising self-confidence. His novels focus on cross-cultural connection, individual agency, and the vitality of contemporary Chinese youth, offering a lens into an optimistic, modernizing China that challenges the narrow expectations of the Western publishing market.

To Western readers conditioned to view such "positive energy" with harsh skepticism, it is crucial to clarify that Ba's optimism is not some sort of cliched state-sanctioned cheerleading. He does not ignore the painful realities and collateral damage of China's rapid modernization. In fact, unflinching realism forms the bedrock of his heavyweight debut novel, *Forever Lost, My Love*[5] (《永失我爱》). Set in rural Western China during the intense, transitional decade of the 1990s, the book dissects the grueling poverty and ethical paralysis of a community caught between agrarian traditions and a new market economy. It is here that Ba explores "spiritual crime" (精神犯罪), a central concept wherein characters act on natural human desires, like forbidden love, but collide with the rigid moral dictates of their village. Though they break no penal laws, they violate deeply entrenched ethics, resulting in a tragedy of internalized oppression where individuals condemn themselves to lifelong psychological guilt. Thus we see that Ba's literary trajectory makes his current optimism earned rather than manufactured. Ba's belief in "the good" carries weight precisely because he understands exactly what it took for ordinary people to survive the darkest parts of a massive historical transition.

5. trans. Chet Ozmun and Cactus Gao. Iowa: Midwestern Marx Publishing Press (Forthcoming).

The Chinese literary titans who currently dominate our own American bookstores (authors I like to call the “Reform and Opening Up Boomers”) came of age during periods of severe social upheaval. They built their careers on ”scar literature” and narratives of deep historical trauma. Ba Longfeng, however, belongs to a different cohort. Born in the 1970s, his generation entered adulthood in a fundamentally different country. While they certainly lived through the harsh grassroots struggles of the 1980s and 1990s, they also grew up with the tangible fruits of China's economic rise. For this generation, poverty alleviation, massive infrastructure development, and global integration have become defining realities of their daily lives. A literature born from decades of unprecedented upward mobility will absolutely read very differently from one rooted in historical trauma.

In the interview that follows, Ba offers a fascinating and ironic critique of the contemporary Chinese literary establishment. Within domestic literary circles, self-styled ”individualist” and trendy writers often view themselves as the pinnacle of sophistication. They tend to look down on authors who tackle grand or socially constructive themes (often dismissed as ”main melody” literature) treating these writers as unsophisticated political hacks. Ba turns this judgment entirely on its head. He argues that it is actually these trend-chasing elites who are producing boring, repetitive, and deeply pretentious work. He calls out their mundane ”stream-of-life” narratives as hollow exercises filled with stylistic gimmicks that prioritize posturing over substance and ultimately alienate the reading public. For Ba, resisting these pretentious literary games requires a return to macro-level storytelling. He deliberately embraces grand, sweeping narratives that capture the zeitgeist of the era, but anchors them with relatable, human-level character arcs. His ambition is to reclaim the genre, infuse “main melody” themes with genuine literary merit and commercial appeal.

I hope he won’t mind me saying so: on a personal level, Ba Longfeng embodies the exact opposite of the literary elitism he critiques. He is remarkably down-to-earth, approachable, and completely devoid of the posturing that so often plagues trend-chasing literary circles (both in China and here in the US). Recently, I mentioned to several working-class Chinese friends (many of whom migrated from rural areas much like Ba’s own hometown) that I was translating Ba’s novels into English. They were genuinely excited and actually found his contact info and reached out to him on WeChat. This made me somewhat nervous at first, but to my surprise Ba accepted these strangers’ friend requests almost right away and began casually chatting with them about his own writing as well as our translation collaborations. Coming from a literary figure of Ba’s

stature, a nationally recognized member of the China Writers Association, a university professor, and an award-winning screenwriter involved in massive, prestige television epics like *White Deer Plain* (《白鹿原》),[6] I found this level of accessibility and openness to the general public very moving.

Ba Longfeng's commitment to capturing a modern, forward-looking China is on full display in his breakout hit novel *Silk Road Romance*[7] (《丝路情缘》). The novel marks a deliberate tonal pivot for Ba, shifting away from the rural struggles of *Forever Lost, My Love* toward a highly international, globalized, and unashamedly optimistic narrative. *Silk Road Romance* shatters the traditional road-trip novel and rebuilds it on an epic scale. For an American audience, the book is incredibly accessible. It fuses the classic, fast-paced road-trip format with a sweeping cross-cultural love triangle. But beneath this entertaining and comedic surface lies a deeply fascinating exploration of diaspora and identity anchored by the novel's unique heroine, Yashir.

Yashir is a Dungan girl from Central Asia. To fully appreciate her journey, Western readers will benefit from a brief historical primer. The Dungan people are the descendants of Muslim ethnic minorities from China's Shaanxi and Gansu provinces who fled across the border into the Russian Empire in the late 19th century following a failed rebellion against the Qing Dynasty. Cut off from their homeland for over a century, the Dungan people have preserved their Northwestern Chinese dialects, folklore, and customs, freezing them almost perfectly intact while living in countries like Kazakhstan and Kyrgyzstan, where most of the population remains settled to this day.[8] With this ancestral background as her guide, Yashir embarks on a transcontinental journey back to Xi'an, Shaanxi Province to find her roots. Over the course of the novel, she is forced to choose between two vastly different futures, represented by two men: a wealthy Russian-Kazakh tycoon who offers her immediate material comfort, and a grassroots Chinese intellectual who shares her profound cultural heritage. Stakes such as these elevate the story beyond a simple romance novel. *Silk*

7. trans. Chet Ozmun. Iowa: Midwestern Marx Publishing Press (Forthcoming).

8. For the definitive historical context of the Dungan diaspora and their preservation of nineteenth-century Northwestern Chinese culture, see Wang Guojie (王国杰), History of the Formation and Development of the Dungan People: A Study of Shaanxi-Gansu Muslim Migrants to Central Asia [东干族形成发展史——中亚陕甘回族移民研究] (Shaanxi: Shaanxi People's Publishing House [陕西人民出版社], 1997).

Road Romance serves as a beautiful, universally relatable metaphor for cultural belonging, identity, and the unbreakable pull of one's roots.[9]

NOTE: As mentioned in the title, this is part 1 of our interview with Mr. Ba. Part 2 will discuss in more detail his debut novel about China's "wild 90's," *Forever Lost, My Love.* This entire interview was conducted in Chinese and is presented here translated into English. It has also been lightly edited for clarity.

RED AMERICA: Mr. Ba, *Silk Road Romance* will be your first full-length novel to

be translated into English, and thus will also mark North American readers' first impression of your work. In your magnum opus, *Forever Lost, My Love*, you depicted the heavy realities of 1990s western Chinese rural areas with masterful realist strokes. But *Silk Road Romance* presents readers with another section of your literary map, namely a vibrant, highly internationalized China in the "New Era." As a writer who has recorded the history and reality of China at the grassroots level, what is your greatest expectation when you show English readers this completely new, globalized, and modernized face of contemporary Chinese youth?

Ba Longfeng: I would like to thank Midwestern Marx Publishing Press for contracting four of my novels at once, and for translating the excerpt "On Long March Ethnic Minority Films"[10] from my non-fiction academic book, *The Long March on the Silver Screen*, and publishing it in *Red America*. I am also very honored to be the first Chinese novelist featured in this core journal. What is an especially unforgettable honor is that on August 15th of this year, I received a personal letter from Professor Carlos Garrido, the editor-in-chief of your country's core journal *Red America*, praising my work. I think this is a significant literary event, and it inspires me to work even more diligently to create even better work for both the Chinese and the American people, and for readers worldwide.

It is also a great honor that the English edition of *Silk Road Romance* is about to go to press. This will be my first full-length novel translated into English, and my first appearance before North American readers. This is a brand-new

10. Ba Longfeng and Chet Ozmun, "On Long March Ethnic Minority Films," Red America, no. 21 (July 2026): 29–39.

beginning. *Silk Road Romance* is a conscious ”change of face” (style shift) after two of my more heavyweight works were successively released and I had already made a name for myself. *Forever Lost, My Love* is a panoramic rural narrative, *Clouds over the Qinling Mountains* is a grand historical narrative, while *Silk Road Romance* represents youth writing and internationalized writing. It is different from the internationalization and youth narratives in *Forever Lost, My Love*. The internationalization in *Forever Lost* is localized, and its youth narrative is bitter; whereas Yashir, the female protagonist of *Silk Road Romance*, is a Chinese-Kazakh girl who actively pursues and finds love. The secondary male lead in *Silk Road Romance* is also a foreigner. Foreigners arrive in throngs in the book, dazzling the eyes; whereas in *Forever Lost* there is only one foreigner, Kathleen, who is a contradiction of proactivity and passivity. Furthermore, *Silk Road Romance* combines urban writing and historical writing. All of these constitute huge divides between the two works.

Silk Road Romance also allowed me to achieve an international readership for the first time. On June 3, 2017, an article in the *Guangming Daily* titled ”Silk Road Culture: Opening New Ideas for Western Online Literature” pointed out that “*Silk Road Romance* has been welcomed by readers domestically and in Southeast Asian countries, providing a reference point for western online literature.”[11] Compared to Southeast Asian readers, Western readers are even more unfamiliar with the content of this book. Difference breeds curiosity, and I hope they get the chance to read about a different world. The globalization and modernization of contemporary

Chinese youth and a Chinese-descended girl present a completely new face of Chinese literature, opening a window and bringing in fresh air for Western readers. My writing gives a voice to what my predecessors never expressed. Even for Chinese readers and readers in Xi'an, it is fresh to read. I sincerely hope Western readers enjoy *Silk Road Romance*.

Here, I also want to mention one thing: the Chinese publisher is currently creating an illustrated edition of *Silk Road Romance*, and they are willing to share the illustrations with your publishing house [Midwestern Marx Publishing Press]. I hope you will get the chance to interact with them and have a pleasant collaboration. Here’s to even greater sales for *Silk Road Romance*!

---

11. 郭超 and 张进进, ” 丝路文化：为西部网络文学打开新思路” [Silk Road culture: Opening new ideas for western online literature], 光明日报 [Guangming Daily], republished on 人民网 [People.cn], June 3, 2017, http://media.people.com.cn/n1/2017/0603/c40606-29315299.html.

RA: American readers will definitely be surprised by the unexpected Hollywood and American pop culture elements in the book, whether it is the international students choosing *Pretty Woman* and *Legally Blonde* for their movie night, or the direct cameo of great director Oliver Stone at the Giant Wild Goose Pagoda in Xi'an. As a veteran screenwriter and film industry expert with rich

practical experience, how do you view the intersection of American pop culture and the ancient Silk Road in a modern context? In a story about the ”return” of Chinese culture and the search for roots, what narrative role do these Western film elements play?

BL: American culture has global influence; Hollywood movies, movie stars, and directors enjoy very high popularity in China and around the world. Therefore, in the original manuscript of my novel, I described the great director Oliver Stone at the Giant Wild Goose Pagoda in Xi'an. This was actually something that really happened back then. As for choosing *Pretty Woman* and *Legally Blonde* for movie night, this was my personal adaptation for the English version, specifically replacing the Chinese movies in the original text with Hollywood ones. In this way, the weight of American pop culture is increased in the book, and it complements the ancient Silk Road culture. This high level of intertextuality makes the novel richer, the characters fuller, and the plot's ability with readers even stronger. This is exactly the writing goal I wanted to achieve. In other words, my writing takes a global perspective; when telling a story of Eastern cultural ”return” and seeking roots, these Western film elements are naturally integrated. There is no prejudice, only a desire for insight, in order to better serve more Eastern and Western readers.

RA: Your early work *Forever Lost, My Love* profoundly analyzed the heavy ”spiritual crimes” of the 1990s, while *Silk Road Romance* exudes a strong sense of optimism. In fact, the male protagonist’s name is itself a homophone for ”Zheng Nengliang” (“Positive Energy”), a popular buzz phrase online and a general trend in Xi-era fiction writing. Since the dawn of the New Era in 2012, ”positive energy” has become a crucial cornerstone of Chinese social culture writ large. Why do you think it is so important to capture and write about ”positive energy” in contemporary literature? How did this macro-level cultural transformation of the era prompt you to make such a massive shift in narrative tone?

BL: Whether it is the heavy ”spiritual crime” and tragic color of the 1990s in *Forever Lost*, or the strong optimism in *Silk Road Romance*, both were shaped

by objective circumstances. The writing circles I am currently in are actually quite dismissive of ”main melody” (mainstream/ideological) and grand-theme writing. Although the relevant authorities repeatedly promote this kind of work, writing circles inversely consider writers of ”main melody” works to be incompetent or political appendages. The literary journals that publish members of these writing circles thus get flooded with trivial, stream-of-life, gimmick-playing fabrications that are unbearable to read. But I’m writing about the era that rushes toward us. This is rooted in the realities of life I have personally experienced, that I can personally feel, and it is also related to my aesthetic sensibilities. What I focus on, and even worry about, is how to make these “main melody” mainstream works of literature actually become mainstream among the general reading public.

In contemporary literature, the individual has been elevated as the absolute standard, which has led to suffering-focused and mundane writing that sees the trees but misses the forest, ignoring the great era in which we’re living. Today, capturing and writing about ”positive energy” is a way to resist those trivial, stream-of-life, and pretentious literary gimmicks. From the very beginning, my writing has been this combination of the macro and the micro. The narrative framework is grand, but the entry point is small, and the tone makes appropriate and necessary shifts depending on the subject matter. Specifically regarding *Forever Lost* and *Silk Road Romance*, the former is a tragedy, and the latter is a comedy or tragicomedy.

RA: The female protagonist of *Silk Road Romance* may very well be the most unique main character Western readers have ever encountered. The Kazakh Dungan girl Yashir embarks on a journey back to Xi'an, Shaanxi Province, China to search for her roots, and is faced with an emotional choice between a Russian-Kazakh billionaire tycoon (Ivan) and a Chinese grassroots intellectual (Zheng Nengliang). How do you use this romantic trajectory and her ultimate choice to metaphorically represent the cultural ”return” and civilizational dialogue happening on the modern Silk Road?

BL: The heroine's external travels and internal dilemmas, most notably her search for emotional belonging, serve as a deep metaphor. That is to say, China's internal development has provided development opportunities for people of Chinese descent and the world, and they are flocking to it. There are many such examples. The media once reported on a female Russian master's degree student who married a high school graduate in northern Shaanxi; I also once met a female

PhD from Kyrgyzstan who married a man in Lintong, Xi'an, and they had already had a child. What I wrote is merely an objective record of stories like theirs, presented to the world. That is all. However, it should be noted that by the time I learned of these two stories, my book had already been published. This perhaps suggests that such things have been happening frequently, and for a long time. Rather than being trapped all day in ”tempests in a teapot,” a good writer must be skilled at capturing these major events that serve as barometers of the era in which we’re living.

How Anti-Communism was Manufactured

Hunter Stailey[1]

1. Hunter Stailey is a high school history teacher, cross-country coach, and proud union member. He holds a BA in History and Education from Arizona State University. Raised with a working-class perspective, he entered the classroom knowing that history is systematically distorted to serve the ruling class and is committed to pushing back.

Senator Ted Cruz calls Communism "the most evil, twisted, depraved ideology mankind has ever produced." U.S. secretary of war Pete Hegseth names Marxism as the "true" enemy beyond simple political opponents. This 4th of July, the 250th anniversary of American independence, President Donald Trump dedicated time in his speech at Mount Rushmore to declare the real enemy: "Communism is a mortal threat to American liberty, It is the greatest threat to our country, including World War I, World War II, Pearl Harbor or even 9/11."[2] Why is the ghost of a philosopher who died over a hundred years ago and whose ideology was supposedly triumphed and made irrelevant during the cold war, the subject of the American establishment's biggest fears? Why is an ideology founded on the idea of equality and socio-economic analysis the target of not only severe criticism, but fear and hatred? For the richest Americans, we find hints among the released Epstein files, as online investigators found that elites consistently discussed socialism and communist leaders as threats and barriers to their goals. For the average Westerner, that hatred is built on a foundation of historical fallacies and revisionism. [3]

The most outspoken critics of communism often fail to produce a single working definition of what communism actually *is,* and their attempts only create a propagandized definition, void of anything relating to the works of Marx, Engels, or their revolutionary predecessors. Critics operate from genuine or malicious misrepresentations of Marxism; strawman representations of total government control, authoritarianism, or utopia that are far removed from the real philosophy or history. In reality, Marx's theory is a philosophy and a science, called dialectical materialism, that can be applied to economics, history, science and it practically founded sociology.[4]

Socialism or communism receives far more vitriol and criticism than capitalism, the economic system that actually permeates both the United States and the world order. You may hear the occasional blame on "late-stage capitalism" for our desperate economic situation, growing homelessness, constant wars, or

---

2. See PBS NewsHour, "Trump Hails U.S. Exceptionalism, Warns of Communist 'Threat' in Speech at Mount Rushmore," July 4, 2026. Cruz justifies his support for the total blockade of Cuba that is currently causing widespread blackouts, food scarcity, and economic disruption for Cuban citizens as a legitimate path towards regime change against the "evil" communist government.

3. For an analysis of elite fears of socialism in the Epstein files, see "The Only Thing That Scares Capitalists," Substack.

4. Karl Korsch, "Karl Marx," *Marxists Internet Archive*. Prior to Marx, early sociology (like Auguste Comte's work) was highly speculative and focused on how society ought to or should look. Marx introduced historical materialism, the idea that you must study the material, physical, and economic relations between people to understand how laws, politics, and culture evolve

impending climate collapse, yet these passing critiques are shallow and quick to make it clear that disliking life under "late-stage capitalism" does not mean they support any alternative system that could potentially alleviate these ills.

So, what really are Capitalism, Socialism, and Communism? Capitalism is defined as a social and economic system where the means of production (factories, land, tools) are privately owned by a few, while the majority survive by selling their labor power for a wage, in an effort to maximize profit and accumulate capital.[5] Simply stated, Socialism is a worker-controlled state aimed at eliminating the contradictions under capitalism that are caused because only a small elite class (the bourgeoisie) controls the means of production by taking public control of monopolies and production.[6] The world is not a utopia, and communism could never arrive the day after the revolution. Communism is the end goal of a transitional society: a truly classless, moneyless, and even stateless society.[7] They are called communist countries not because they have achieved communism, but because they are governed through a communist party of workers made up of and moved by the masses, following socialist development towards communism.[8]

Working people don't hate communism because it has failed economically or politically, though many may think so. Anti-communism is not a spontaneous belief, but a manufactured ideology built through a century of narrative control, state violence, and bad-faith history; designed to hide the working class's most effective tools for liberation: class struggle and Marxism-Leninism.

This is not a conspiracy theory, rather a brief overview of the overt and passive ways in which history and common understanding are distorted by those with the dominant view with the power and motivation to do so. These distortions affect all news and history in subtle and obvious ways but have been necessary in creating a working class that rejects its greatest tool and success stories. A

working class that hates the path to its own liberation. A working class that hates communism.

Brief History of the Mystery of History: How History Class Erases Class Analysis

Over the past two years, historians and educators have been ringing alarm bells on Donald Trump's "attack on history".[9] Long before Trump, even with large concessions towards a more diverse history in recent decades, American history was already disfigured, inaccurate, and nearly devoid of class analysis or critical perspectives. Not only is popular history inaccurate and skewed, it is also boring.

Students rank history as the most boring and least useful school subject. Students also tend to agree that schools are bad or even terrible at teaching the subject, with many only gaining an interest in history after grade school. Though there are a myriad of reasons U.S. schools fail at teaching history, the common disdain for the subject stems not only from its presentation but also from its fundamental assertions and misinterpretations that do not match lived experience.[10]

Across the capitalist world, class elements of history are ignored or purged from the narrative. History tends to follow "great men"; individuals and ideas that follow an almost pre-ordained path, with any "ugly" parts treated only as temporary obstacles on the path to the "equal" and "fair" world that we enjoy today. When history books speak of kings, presidents, business tycoons and emperors, where can we find ourselves in the story? Every person, place, idea, and circumstance is a result of history, and all of those elements, including you and me, have a role in shaping it. Students rarely see themselves or anyone with their class status as historical participants.

Before the G.I. Bill sent an unprecedented number of young Americans to college after WW2, American history was forged almost exclusively among

---

9. The Trump administration has actively worked to distort and reshape American history through political pressure and executive orders, such as E.O. 14253 which calls for "Restoring Truth and Sanity to American History" which has already altered museums and even national parks.

10. James W. Loewen, *Lies My Teacher Told Me: Everything Your American History Textbook Got Wrong* (New York: The New Press, 1995), Ch. 1. Loewen demonstrates how high school textbooks systematically omit class conflict, labor history, and any serious critique of capitalism, replacing them with a sanitized, nationalistic narrative.

elites who shared the same class interests, educational backgrounds, and ideological assumptions. History and the news did not have to be dictated by government censors but by "popular" consensus. Publishers, university presidents, newspaper editors, and academia as a whole all came from the same narrow stratum of propertied, largely white, Protestant men. Even as more diverse perspectives entered the field, to be published, hired, or taken seriously, one had to adopt the same old framework: American ultra nationalism and exceptionalism, capitalism as progress, no class analysis, and no serious challenge to the system. The result was a self-correcting machine that filtered out dissent long before it reached the public.[11]

Even with major gains regarding race and gender issues, critiques of larger systems of exploitation usually fail to gain traction. These temporary gains are also co-opted to follow the same primary narratives or have been quick to dissolve under the weight of the Trump administration. For example, Lin Manuel's *Hamilton* feels progressive and is celebrated for its diversity and inclusion in its American myth making, however; it simultaneously reinforces American exceptionalism and by using black actors to play slave masters, erases the weight of their transgression. While recent decades forced more focus on the inclusion and popularity of black and diverse history through movements such as Black Lives Matter, these histories were often similarly co-opted and with one culture shift or election, wiped out and banned through "anti-woke" or anti-CRT laws such as Florida's Individual Freedom Act/Stop WOKE Act. Those gains have been targeted on a federal level through Elon Musk's DOGE that defunded or wiped grants, programs, or messaging that could come off as 'woke'. Even all mention and photos of Navajo code talkers that served during World War II that visited Donald Trump's white house during his first term were scrubbed from the Department of Defense websites for being flagged as too "woke".

By definition, capitalism inherently prioritizes the maximization of profit and the accumulation of capital. This tendency does not simply disappear in the industries that should instead prioritize honesty and accountability, such as the news, media, and history. Stories and even history must sell well for publishers to pick them up. Radical views are seen as niche and go directly against the interests of media conglomerates. In his lecture series "The Hidden Ideology of the News Media," Michael Parenti explores how "business interests and profit

11. Michael Parenti, *History as Mystery* (San Francisco: City Lights Books, 1999), Ch. 1. Parenti shows how history's victors distort and suppress the documentary record in order to perpetuate their power and privilege. This book was a major inspiration for this article.

motive have resulted in the suppression of news stories" because media corporations are "massive, consolidated businesses that have biased boards and have incentives not to alienate advertisers". He further argues that this media distortion is not a mere accident, but the media's core function:

"The press does many things and serves many functions, but its major role, its irreducible responsibility, is to continually recreate a view of reality supportive of existing social and economic class power."

Much of our historical record is built on this same media record and textbooks that make millions in sales that follow the same capitalist logic.[12] From its start as a discipline, U.S. history has gone through years of elitism, political pressure, and active censorship to not only maintain a pristine image that upholds American nationalism but also a history devoid of class analysis and class struggle; or the steady fight between the small class that owns production and the large class that works it, in which we owe the bulk of our modern freedoms.[13]

American Workers: From Class Consciousness to Class Conscious less

Despite the distorted history and media, there was a time when American workers were acutely aware of class struggle. In the late 19th and early 20th centuries, a powerful, organized working class forced major concessions from capital. These struggles involved hundreds of thousands of workers coordinating across disciplines, going on strike, and joining the picket lines in an effort to force progress from capitalists, or robber barons, as called in this time period. However, struggles always go both ways, and the capitalist class, aided by the state, responded with bullets, propaganda, and even bombs.

Through their collective action and perseverance, the working class was able to force concessions from both the capitalist class and the government in direct response to their actions. These concessions include but are not limited to: the

12. Michael Parenti, *Inventing Reality: The Politics of News Media* (New York: St. Martin's Press, 1986)

13. Some of the most popular American textbooks and emerging digital education curriculum had deep financial ties to and were eventually bought out by private equity firm Apollo Global Management (which owned McGraw Hill from 2013 to 2021). The firm had direct connections with Epstein through its co-founder and former CEO, Leon Black. See Hill, Phil *Private Equity, Epstein's Funding Source, and . . . Education?*

Eight-hour work-day (down from 10, 16), child labor protections and abolishment in key industries, federal safety and health standards, federal minimum wage laws, social security and workers' benefits, and collective bargaining rights for unions. The government and the wealthy did not willingly grant any of these; they were won through class struggle. In fact, in their bid against these protections, the owning class implemented private armies and state police in their efforts to violently suppress striking workers.[14]

Physical weapons were not the only tools used by the owning class in their fight against labor. Propaganda played a powerful role in disrupting worker power and the rising Communist Party USA. News and literature were used to defuse and divide the working class and kill their class determination and political power. This included using nativist narratives to blame other races and immigrants for low wages and poor working conditions. Newspapers were quick to blame working-class ills on the Irish, Jews, radical "reds," or people of color in an effort to fracture class power, and in many cases, it worked. These rhetorical tools may have some differences since the 20's and 30's, but they have only evolved and remain prominent in headlines today.

By the 1930s, this powerful labor movement gave rise to significant numbers in the CPUSA. Despite being frequently targeted by mass arrests, deportations, and Red Scare propaganda since its establishment in 1919, membership grew upwards of 82,000.[15] The party wielded substantial influence, especially through organizing industrial unions and fighting for racial equality within and without unions. U.S. labor power grew larger through both world wars but faced fierce decline at the start of the Cold War, with the rise of the Second Red Scare. U.S. union membership peaked at about 33.5% in 1954, when it steadily declined to a dismal 10.1% in 2022. Despite the huge gains initially won through class warfare, the U.S. is the only developed nation in the world that

---

14. James Green, *The Devil Is Here in These Hills: West Virginia's Coal Wars and the Battle for Blair Mountain* (New York: Atlantic Monthly Press, 2015). One example was the decades-long struggle called the Coal wars, in which workers fought against the exploitative mining companies that relied on company town systems and anti-union laws. One such battle, The Battle of Blair Mountain, was the largest labor uprising in U.S. history in which 15,000 miners and allies marched to free jailed union miners and were met with 3,000 armed deputies and mine guards armed with machine guns, gatling guns, and artillery. On the second day, the sheriff ordered aerial bombardment with gas bombs and explosive devices over the miners' encampment.

15. Harvey Klehr and John Earl Haynes, *The American Communist Movement: Storming Heaven Itself* (New York: Twayne Publishers, 1992).

does not have a viable or nationally established labor party. As a result, we no longer fight for our class interests.[16]

A major reason for the wavering of class power and consciousness in the U.S was that the working class was bought off. As the capitalist crisis increased and the newly founded USSR provided an example for revolution, the capitalist class was increasingly incentivized to fund and maintain a "middle class" in the West. Through super profits extracted from imperial exploitation of colonies, Western capitalists could afford to extract less profit at home, offering domestic workers, especially whites, a higher standard of living than workers in communist or nonaligned nations. This "labor aristocracy" sedates class struggle and justifies imperial violence by incentivizing workers to keep poor countries poor and discriminate against minorities and immigrants at home.[17] Workers accept violent and extractive policies in exchange for short-term benefits, even when those policies hurt their long-term class interests.

The same capitalist logic that distorts the news also controls politics of the U.S. and all capitalist nations. Campaigns and lobbying are funded by the wealthy, and politicians who challenge corporate power are systematically marginalized. The Democratic Party, despite its "left" branding, has consistently defended Wall Street, military spending, and U.S. imperialism while marginalizing its own "socialist" wing. Anyone outside of the two-party system is likely to be labelled a communist no matter how unradical their platform is in reality. This is not a failure of individual politicians; it is the structural reality of a system where political survival depends on capital and maintaining the status quo. Anti-communism is not just a foreign policy or a news bias; it is a domestic political strategy to ensure that no serious challenge to capital ever reaches the ballot box or that class consciousness ever reaches the working class.

Cold War: The Information War Intensifies

As World War II came to an end, President Truman moved quickly to send a clear message to the world that America was no longer an uneasy ally of the USSR, but instead a fierce enemy. Defeating the very idea of communism was

16. U.S. Bureau of Labor Statistics, "Union Members Survey," 2023. And Comparative data: OECD countries with labor or social democratic parties.

17. V.I. Lenin, *Imperialism, the Highest Stage of Capitalism* (1917), Ch. 5. For a modern analysis, see Cheng Enfu and Lu Baolin, "Five Characteristics of Neoimperialism," *Monthly Review* 73, no. 1 (May 2021).

the top priority, often through any means necessary. Out of the deadliest conflict in human history, a new cold war began with an American-led supercharge in ideological purity control; both domestically and abroad. President Truman, Senator McCarthy, a budding CIA, and the whole of American institutions launched a 44-year intensification of revision and censorship that greatly distorted the world's views on Communism.

The narrative control that began in the Gilded Age was supercharged by the Cold War. The field of history became further dominated by elite, pro-establishment scholars who crafted a "triumphalist" narrative that taught the rise of U.S. hegemony after WWII as the destined path of an inherently exceptional nation destined for continuous moral and global ascent. This story is built from previous and well-known ideas of manifest destiny and American nationalism, and now, importantly, anti-communism. The dominant narrative and consensus-based history intensified during the Cold War because of the fear, paranoia, and missing perspectives due to a much more active purge of any news, media, or history that could be considered progressive and therefore "communist".

There were laws and agencies created during this time that explicitly targeted dissenters that created a political climate that turned this second "Red Scare" into a witch hunt. One example was the Smith Act prosecutions, in which anyone accused of advocating for an overthrow of the government risked being jailed. The law clearly violated the 1st amendment right to freedom of speech and a primary ideal from the Declaration of Independence to the right to overthrow a government when it inhibits unalienable rights, yet it was upheld in Dennis v. United States (1949). Eugene Dennis and 11 top CPUSA leaders were convicted. In the following years, out of 129 prosecuted communists, 96 were convicted, although no overt acts to overthrow the government were ever committed.[18]

Academics and entertainment faced direct censorship through bans, blacklisting, and loyalty oaths that tightly controlled the narrative. For example, the Levering Act (California, 1950) required all state employees, including University of California professors, to sign a loyalty oath disavowing radical beliefs; refusal meant losing the job and blacklisting. Across the US, it is estimated that around 100 college professors were fired for real or imagined communist ties. Nationally, a 1956 survey found 61% of professors had been

18. First Amendment Encyclopedia, "Yates v. United States (1957).

contacted or harassed by the FBI. Created in 1938, the House Un-American Activities Committee (HUAC) intensified its activity, which was designed to investigate alleged disloyalty and subversive activities on the part of private citizens, public employees, and those organizations suspected of having communist ties. HUAC used subpoenas, aggressive questioning, and public hearings in which supposed witnesses were forced to "name names," leading to prison sentences, deportations, and the blacklisting of over 300 artists without evidence.[19]

These actions, along with other committees and politicians such as Senator McCarthy, contributed to a climate of mass paranoia that communists had infiltrated all levels of American society and therefore had to be purged from them. Communists were the ultimate enemy, and being labeled as one could literally ruin your life, leading to self-censorship and intense red baiting (when anything that could be considered progressive or sympathetic to working with the Soviets would be a cause for a label of communism). The very meaning of the word was completely lost to the public, transformed into the popular consciousness as an all-encompassing attack. If you were well-read, you might be a communist (seriously); if you were anti-imperialist or against war, you were a communist; if you wanted an end to racial segregation, you were a communist; if you had anything good to say about America's "enemies," you were definitely a communist.

19. "Levering Act," Wikipedia. The Levering Act (California, 1950) required all state employees, including University of California professors, to sign a loyalty oath disavowing radical beliefs; refusal meant losing the job and blacklisting. 31 tenured professors who refused to sign the oath were fired. See also, Ellen Schrecker, *No Ivory Tower: McCarthyism and the Universities* (New York: Oxford University Press, 1986), American Association of University Professors survey, 1956, and Victor Navasky, *Naming Names* (New York: Viking Press, 1980).

Protesters in Little Rock (Pulaski County) demonstrating against the integration of Central High School; August 20, 1959.

This process to suppress dissidents and shape the narrative was paired with an intentional campaign to increase American exceptionalism at a time of limited access to alternative viewpoints. The Red Scare and McCarthyism pressured citizens, companies, organizations, and politicians to prove patriotism and the belief that the United States is unique, superior, and destined to spread freedom. Huge displays of patriotism such as marches and "liberty parades" became commonplace. Schoolchildren were required to give a pledge of allegiance to

the United States, which Americans are still familiar with today, even adding "under God" to the pledge in 1954 to contrast with the atheistic USSR.[20] Movies, TV, and entire government programs ((NASA were created in an effort to superpatriotize and antagonize communism and the USSR. The Baby Boomer generation and their parents were raised on American exceptionalism and anti-communism as fundamental values that underscored every facet of life without any internet or easily accessible counternarrative.

This domestic propaganda model operates within a broader framework of global U.S. cultural hegemony or "soft power," which projects American values, media, and ideology as universal and superior. As one analysis of U.S. neo imperialism observes, "The United States has always labeled itself a representative of countries advocating democracy, freedom, and equality. Using political and diplomatic means, it spares no effort to impose its political system on other countries, especially the developing states it identifies as 'dictatorships.' " This is not merely a matter of persuasion or differing perspectives; it is a strategy of global control. Former U.S. National Security Advisor Zbigniew Brzezinski explicitly argued that "strengthening American culture as the 'model' of the world's cultures is a strategy that must be implemented by the United States to maintain hegemony."

The mechanics of this cultural domination are staggering. The United States controls nearly 75% of the world's television programs and owns powerful film and television companies that produce dozens of high-budget films each year. This massive cultural export is not neutral; it carries the ideology of monopoly capital and anti-communism. "In the United States, works that do not conform to the literary, artistic, and liberal arts canons of monopoly capital are difficult to disseminate via authoritative media, while writers and artists of real distinction are excluded, suppressed, or defrauded." The result is a global "Overton window" shaped by American cultural production, where communism or foreign advisories to the U.S. are automatically suspect and capitalism is the unspoken default.[21]

20. U.S. Public Law 83-396 (1954).

Funding the "Anti-Communist Left"

Despite the propaganda, false history, and fanatical anti-communism that gripped the US and its global media arms, Marxism has always been too pervasive to simply purge and libel out of existence: it had to be co-opted. Marx's theory of dialectical materialism as a philosophical outlook and his analysis of capitalism are frequently confirmed by the advancement of science and the reality of the economic situation in ways that make it impossible to ignore in its totality from those standpoints, even from an anti-communist outlook. Likewise, the reality of class struggle and global inequality cannot be made totally invisible, as these struggles shape lived experience and have only accelerated since the collapse of the USSR has led to the chipping away of the inflated wages of the "labor aristocracy." So where are the radicals?

When members of the working class or curious and determined students stumble into class consciousness most are funneled into what CIA agent Thomas W. Braden would describe a "Compatible" left, in his 1967 cold war article titled: "I'm Glad the CIA Is 'Immoral". [22]A combination of Western philosophy, culture, and bad history grants a predisposition towards this leftism that is also state influenced, as bragged about by agent Braden through infiltration and bribes. Students become anti-communist left academics, and radical elements are defanged from any political actions of these groups.

In his book, The Purity Fetish and the Crisis of Western Marxism, Carlos L. Garrido consolidates previous work on this "anti-communist left" and explores its philosophy. The "Marxists", "socialists", and even Western "communists" suffer from a stale and unchanging understanding of communism based on philosophical traditions of unchanging universal truths, rather than allowing for context, nuance, or real application of Marx's dialectical materialism.[23] This results in a watered-down "Marxism" that wishes for an unfounded utopia, while condemning Marxism's greatest real-world achievements. These popular left views may be one of the greatest tools for the historical distortion of communism.

Western Marxists may rightly support struggling revolutionaries who are facing off against imperial onslaught, but only if they never win and often only in

---

22. Thomas W. Braden, "I'm Glad the CIA Is 'Immoral,' " *The Saturday Evening Post*, May 20, 1967, pp. 10–14. For a deeper article analysis see Gabriel Rockhill, *"The CIA & the Frankfurt School's Anti-Communism"*

23. Carlos L. Garrido, *The Purity Fetish and the Crisis of Western Marxism* (Carbondale: Midwestern Marx Publishing Press, 2022).

hindsight. The Vietcong, CPC, Bolsheviks, etc. were doing the right thing to stand up against imperialism and exploitation, but praise turns to scorn when North Vietnam, China, and the USSR are condemned when they went "too far" by actually taking political power and exercising it. Thomas Sankara, Patrice Lamamba, Salvador Allende, Che Guevara, and Fred Hampton were all celebrated revolutionaries by the Western left. All murdered by the U.S. government. Vladimir Lenin, Josef Stalin, Mao Zedong, Fidel Castro. All condemned as evil, all-encompassing dictators, no better than fascists. All actually survived their struggle against Western imperialism. Socialism in the East and the Global South is not "real" socialism. It is "state capitalism", a mixed economy, an authoritarian dictatorship, a totalitarian society; anything but a successful application of Marxist theory. The very people that should be tearing down American propaganda and championing an honest history of communism are militantly propagating the same talking points as the U.S. State Department towards its foreign "advisories".

Opportunist groups not only squander revolutionary energy, but they also distort and smear its history. Promotion of "compatible" ideas over others has only become easier with the use of social media and algorithm control. "Real socialism" is expected to live above reality, to be void of context, struggle, or mistakes. Any socialism that fails this utopian image cannot be celebrated or even critically supported by the Western left; rather, many of them lay their "critical support" to the democrats who actively support the Western imperialism that martyred their defeated revolutionary heroes.[24] Whether it be

---

24. Garrido uses an excellent quote from Parenti to show the hypocrisy: *"The revolution that wins, that develops the productive forces, the sciences and technologies, that lifts the living standard of their people, that defends itself against imperialism, that provides universal social rights to housing, food, healthcare, education, etc., but that does this through a so-called 'authoritarian' state and in certain moments with the so-called 'capitalist road' of a socialist market economy, that revolution, according to the Western Marxist's purity fetish, should be condemned and considered 'not real socialism.' Yet, while these 'Marxists' find "any association with communist organizations morally unacceptable because of the 'crimes of communism,' " as Parenti states, many of them are themselves associated with the Democratic party in [the US], either as voters or as members, apparently unconcerned about the morally unacceptable political crimes committed by leaders of that organization. Under one or another Democratic administration, 120,000 Japanese Americans were torn from their homes and livelihoods and thrown into detention camps; atomic bombs were dropped on Hiroshima and Nagasaki with an enormous loss of innocent life; the FBI was given authority to infiltrate political groups; the Smith Act was used to imprison leaders of the Trotskyist Socialist Workers Party and later on leaders of the Communist party for their political beliefs; detention camps were established to round up political dissidents in the event of a "national emergency;" during the late 1940s and 1950s, eight thousand federal workers were purged from government because of their political associations and views, with thousands more in all walks of life which hunted out of their careers; the Neutrality Act was used to impose an embargo on the Spanish Republic that worked in favor of Franco's fascist legions; homicidal counterinsurgency programs were*

Anarchists, social democrats, liberals who use Marxist language, Bernie Sanders types, or Trotskyists, they all support empire over sovereignty. They support a fantasy leap from global capitalism to utopia, while condemning the ideology that transformed these countries: Marxism, in most cases Marxism-Leninism. As agent Braden says in his article:

"Socialists, people who called themselves "left"—the very people whom many Americans thought no better than Communists—were the only people who gave a damn about fighting Communism."

Beyond Blacklisting: Murder, COINTELPRO, and Erasure

Surely, if radical class consciousness warrants government funneling and intervention, then there must be Western leaders and organizations that see through it. What happens to the real Radicals? They get killed. They get whitewashed. They get erased.

In 1956, the FBI initiated the COINTELPRO program, or the "counterintelligence program", which was designed to "disrupt, harass, and discredit" the left through illegal means of propaganda, infiltration, and assassination of leaders. Its initial mission was to target the Marxist-Leninist Communist Party USA, but it quickly expanded to black civil rights and other radical groups, including the Black Panther Party. A target was valid if their message was aligned with radical elements that opposed imperialism or challenged the system. When Martin Luther King Jr. came out against the Vietnam War and declared that "the evils of capitalism are as real as the evils of militarism and racism," he became a target.[25] The FBI wiretapped him, surveilled him, and attempted to destroy his reputation under the same program.[26]

---

initiated in various Third World countries; and the Vietnam War was pursued and escalated. And for the better part of a century, the Congressional leadership of the Democratic party protected racial segregation and stymied all antilynching and fair employment bills. Yet all these crimes, bringing ruination and death to many, have not moved the liberals, the social democrats, and the "democratic socialist" anticommunists to insist repeatedly that we issue blanket condemnations of either the Democratic party or the political system that produced it, certainly not with the intolerant fervor that has been directed against existing communism"

26. "COINTELPRO," Britannica, 2025 and Church Committee Report, "Book II: Intelligence Activities and the Rights of Americans" (1976). Although we don't have explicit proof that the FBI was directly involved in King's assassination, his family doubts the lone gunmen narrative

In 1969, Fred Hampton, the charismatic young chairman of the Black Panther Party, was shot dead in his bed while lying next to his pregnant girlfriend by police during a raid coordinated by the FBI. The Black Panthers were a revolutionary organization that strategically used their constitutional rights to implement armed protection against systemic police brutality, but they are also well known for their free breakfast, health clinic, and education community programs, all guided by their Marxist-Leninist principles.[27] Hampton's worst crime, however, may have been his effort in the creation of the Rainbow Coalition, an alliance of poor whites, Puerto Ricans, and Black Americans that proved class struggle could unite people across racial lines. The coalition had to be destroyed through infiltration and assassination.[28]

The erasure did not stop Hampton's murder. History textbooks ignore these uncomfortable details and systematically whitewash radical figures. As explored in "Lies My Teacher Told Me" By James Loewen, history textbooks omit "warts" that may give a young reader the "wrong" image of their historical heroes. Lowen uses Woodrow Wilson's legacy to demonstrate the censorship and distortion surrounding the racist and imperialist efforts of his presidency, but perhaps more interestingly, he uses Helen Keller's Marxist and pro-Soviet activism as an example to show how radical and progressive elements are likewise stripped away from these story versions of real people.[29]

His observation could be extended to a whole host of well-known figures that the vast majority of Americans would have no clue held radical or communist convictions. Albert Einstein, Langston Hughes, W.E.B. Du Bois, Angela Davis, Nikola Tesla, Mark Twain, Ernest Hemingway, Nelson Mandela, all of the previously mentioned revolutionary martyrs and more; all were socialists or communists.[30] All directly supported the Soviet Union in its advancement of socialism (except for Mark Twain, who died before the Russian Revolution). If we move away from explicit support from the USSR, we find more popular radicals. Even Malcolm X, though critical of the Soviet Union's atheism, supported third-world communist countries and saw their struggle as connected

---

and points to a 1999 wrongful death civil lawsuit in which a jury concluded that Ray was not the shooter and that King's death was part of a conspiracy involving government agencies. The shooter himself claims to have taken the fall for a larger conspiracy.

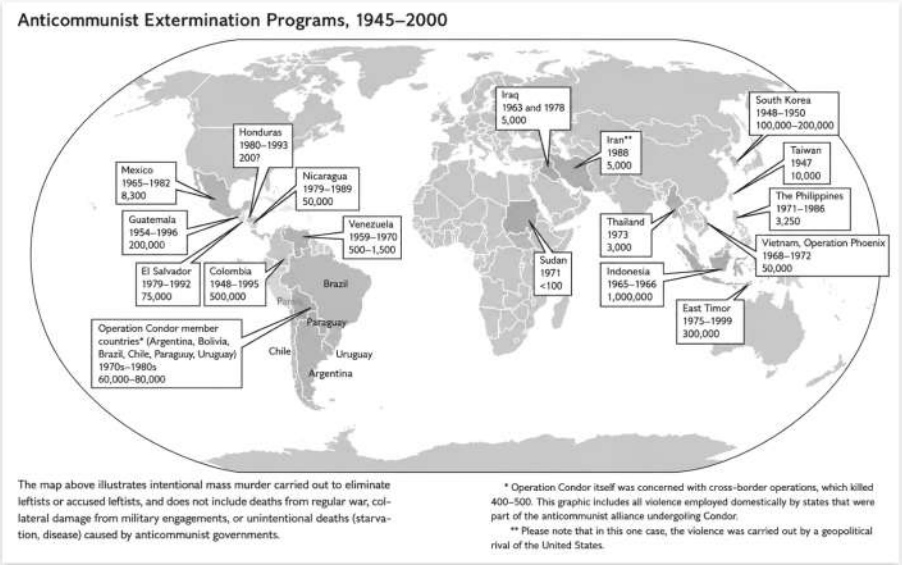
to Black liberation. The list goes on: Tupac Shakur, Marilyn Monroe, Mike Tyson, Rosa Parks, and too many to form a comprehensive list; all had ties to socialist or anti-capitalist movements. All hold a place in American popular culture and history. American history is full of communists and class agitators who are worth celebrating, but do not find a home in American history books.

Today, many progressive and left-leaning circles celebrate the Black Panther Party for its community programs and resistance to police brutality but entirely miss its essence. The Panthers operated explicitly on Marxism-Leninism as their guiding framework. The Party's Ten-Point Program demanded "land, bread, housing, education, clothing, justice, and peace" through a revolutionary anti-capitalist lens. Huey Newton and Bobby Seale studied Mao, Lenin, and Fanon. Their outreach and community programs included education on these ideas. When these successful movements find celebration, they are stripped of their revolutionary nature. This can be seen with China today. Where their economic success has to be acknowledged, but it is credited to anything and everything except what the Chinese themselves credit: the guiding principles of Marxism-Leninism.



The government and its corporate sponsors did not abandon their covert methods after the civil rights movement. The surveillance, infiltration, and media manipulation are all tactics deployed against activists, union organizers, and anyone who seriously challenges the American capitalist establishment.

The Jakarta Method: Purging the ``Third World'' of Communists to Maintain Imperialism

Fanatical anti-communism and violent intervention did not remain an American paranoia. It was a U.S. led systematic global program of mass murder, regime change, and economic warfare that killed millions and reshaped the political landscape of the entire globe. As American journalist and author Vincent Bevins lays out in his book, *The Jakarta Method*, between 1965 and 1966, the U.S implemented a repeated mass murder strategy, first used in Jakarta, Indonesia, where the U.S.-backed military forces slaughtered an estimated one million accused communists and sympathizers.[31] This became one of many

31. Vincent Bevins, *The Jakarta Method: Washington's Anticommunist Crusade and the Mass Murder Program that Shaped Our World* (New York: PublicAffairs, 2020). Between 1965 and 1966, the U.S.-backed military forces slaughtered an estimated one million accused communists and sympathizers. This became one of many playbooks for anti-communist extermination that would be repeated across the globe.

playbooks for anti-communist extermination that would be repeated across the globe. Similar to the political McCarthyism in the U.S., the crusade targeted not just communists but anyone who threatened Western control over resources, such as Iran's Mossadegh (1953), Congo's Lumumba (1961), and Guatemala's Arbenz (1954), killing these progressive leaders and backing fascist dictatorships in their stead across Asia and Latin America. Rather unlike McCarthyism, which relied on blacklisting and deportation to create its atmosphere of fear, abroad, the U.S. used much harsher methods, often resulting in genocide against "radicals."

The U.S. backed brutal dictatorships that slaughtered their own citizens. These leaders worked directly with Washington, and many were educated by the state department for use in their twisted methods of statecraft. In Chile, Pinochet's regime eliminated 40,175 victims through executions, torture, and disappearances. In collaboration with the American Chiquita banana company, in an effort to keep labor prices dismally low in Guatemala, the military regime killed an estimated 200,000 people, primarily Indigenous Maya. In South Korea, U.S backed military dictatorships suppressed leftist and Korean reunification movements, with the 1948 Jeju Uprising alone resulting in an estimated 30,000 civilian deaths, roughly one-tenth of the island's population.[32]There were unfortunately many more, but in all cases, popular

32. Chile's National Commission on Political Imprisonment and Torture (Valech Report, 2011). UN Commission for Historical Clarification (CEH) "Guatemala: Memory of Silence" (1999). In collaboration with the Chiquita banana company, in an effort to keep labor prices dismally

progressive or communist movements were purged out of existence through violence and fear.

In Europe and Japan, the U.S. made it clear who its real enemy was. The U.S. excused high-ranking former Nazis and Japanese fascists of their war crimes and reinstated them as a recruitment effort in their fight against communism. Operation Paperclip brought Hitler's scientists to America with full citizenship.[33] Hitler's operations chief, Adolf Heusinger, became Chairman of NATO's Military Committee with other Nazis filling roles on all levels. Operation GLADIO recruited former Nazis as secret militias to target communist movements across Europe. The Marshall Plan pumped West Germany with cash, while reinstating former Nazis into an anticommunist government to oppose socialist East Germany. The U.S. funneled billions in economic aid into the hands of war criminals in Western Europe and Japan, creating strong anticommunist allies that were also permanently tethered to U.S. business interests.[34]

The purpose of this global anti-communist crusade was not merely ideological, it was economic. Communist and progressive movements threatened the extraction of resources, labor, and markets that had fueled Western prosperity for centuries. By purging leftist governments and destroying the reputation of ideologies that defended against economic extraction, Washington ensured that multinational corporations could continue to profit from cheap labor, mineral wealth, and agricultural exports. Anti-communism continues as a fanatical tool that keeps the Global South poor and exploitable.

Sanctions and War: The Lethal Toll of ``Containment''

Where other methods failed, economic warfare proved equally lethal. The U.S. has used sanctions not as a diplomatic tool but as a weapon of collective punishment against nations that refuse to submit to its will, effectively killing off radical-leaning populations. A 2025 study published in *The Lancet Global*

low, the military regime killed an estimated 200,000 people, primarily Indigenous Maya. South Korea: The forgotten Jeju uprising and massacre

33. Annie Jacobsen, *Operation Paperclip: The Secret Intelligence Program that Brought Nazi Scientists to America* (New York: Little, Brown and Company, 2014). Daniele Ganser, *NATO's Secret Armies: Operation GLADIO and Terrorism in Western Europe* (London: Frank Cass, 2005)

34. Ronald Ángel, *The story of the Nazi general who ended up becoming head of NATO*

Health analyzed 152 countries over 50 years and found that unilateral sanctions, particularly those imposed by the United States, were associated with an annual toll of 564,258 deaths, which adds up to more than five times the average annual number of battle-related casualties (106,000) during that same period.[35] Before the collapse of its biggest trading partner (the USSR), Cuba enjoyed a life expectancy at birth HIGHER than the United States and even maintained a lower infant mortality rate until 2002. However, the U.S. embargo and subsequent blockade, now in its seventh decade, has caused the rate to steadily rise by cutting off access to basic materials, medical equipment, fuel, and access to trade networks. Just from 2018 to 2025, the rate increased from 4 deaths per 1,000 live births to 9.9 in 2025, an increase of 148 percent.[36]

As sanctions sharpened with a total oil embargo under Trump, power outages exceeded 20 hours daily in Havana, and more than 100,000 children have been denied state-subsidized milk due to fuel shortages. In North Korea, sanctions have "already resulted in the deaths of thousands of North Korean civilians," according to one analysis, while impeding the import of medical equipment and burdening humanitarian aid. In Iran, the U.N. reports that U.S. sanctions have killed at least 40,000 annually since 1970, mostly children and the elderly. In Venezuela, sanctions have caused the loss of 99% of foreign currency earnings, devastating health, education, and nutrition programs. All of these consequences contribute to the more than 564,000 people who die each year.[37]

As the Lancet study's authors concluded, "US sanctions... often aim to create conditions conducive to regime change or shifts in political behavior". The U.S. actively admits as much. The stated goal of the Cuba embargo is to "bring about the demise of the communist regime".[38] The strategy is to make life so unbearable for civilians that they rise against their government. But this strategy has failed for decades, while civilians always suffer. The hatred of communism is not just manufactured through propaganda; it is enforced through the systematic starvation, medical deprivation, and slow death of

millions who refuse to abandon their revolution. As the U.S. starves countries they simultaneously use "aid" programs such as USAID or state affiliated media to radicalize vulnerable groups against their government, transferring blame away from U.S. sanctions. These actions are used to skew history towards a narrative of socialist failure; despite the imperialist intervention they suffered.

The U.S. did not target foreign communists merely through covert and economic operations but also through direct military invasion. Post WW2 Asia provides a perfect example of this devastating carnage. North Korea (DPRK) civilian casualties totaled a million with between 3 to 4 million Korean deaths during the three years of the "forgotten war" (1950–1953). In Vietnam, the war took the lives of as many as 2 to 3 million combatants and civilians. The number of Vietnamese dead was 40 times greater than the 58,000 American lives lost. The U.S. dropped 8 million tons of bombs on Vietnam between 1965 and 1973. U.S. bombing campaigns also devastated Laos and Cambodia, killing hundreds of thousands more and destabilizing the region for generations.[39] These are explicitly communist countries that faced the full wrath of the U.S. military; they may have survived, but it cost the lives of millions of communists while wartime propaganda distorted the reality of their struggle and their devastation can be lauded as "failures' in the West.

These were not isolated events. They reshaped the global political "Overton window" towards the right, ensuring global capitalism as the accepted status quo. The effects of the violence-fueled propaganda against the victim countries and against communism, pointing at every bit of suffering as a failure devoid of the horrific context that created it. U.S. led imperialism made it clear that any nation or political group that dared to chart an independent, socialist path would face annihilation. Millions of communists died, not because their ideology failed, but because it succeeded.

That success prompted the most powerful empire on earth to commit mass murder, economic strangulation, and total war to prevent that success from spreading. When all of these methods fail, the CIA and the U.S Congress blanket the globe with anti-communist propaganda, perpetuated by its newly installed genocidal puppets and bought European allies, through NGOs or state-backed media. Just recently, Congress provided $653 million to the U.S. Agency for Global Media (USAGM), which runs Voice of America (VOA),

Radio Free Europe, and Radio Free Asia (RFA), a media outlet created to broadcast into Asia.[40] The latter is still the primary source of Western news about North Korea today. The hatred of communism was not spontaneous; it was manufactured through force, propaganda, and the blood of millions that never made it into popular history.

The Real Comparison: Elites vs. The Oppressed

When Westerners judge communist countries, they often use themselves or the most privileged people in society as the measuring stick; typically, white and male, middle-class, and educated and apply a comparison of access to consumer goods and political freedoms. By that metric, yes, an American in the 1950s might have had more access to consumer goods, nicer cars, and less censorship than a Soviet citizen. But that comparison is a trap. For privileged elites, communism was oppressive because it stripped away their ability to exploit others. Feudal landlords, industrial factory owners, and aristocrats lost the power that was built on the oppression of peasants, workers, and minorities. That loss feels real to the privileged, but it is the point of revolution.

For the oppressed: women, racial minorities, and the poor, communism offered what capitalism refused. Among its first acts after the revolution in the 1920s, the USSR legalized abortion, no-fault divorce, equal pay, and mandated childcare. Soviet women were doctors, engineers, politicians, and deputies. Before women had the right to vote in nearly any Western country, the Soviet Communist party mandated around a third of government positions to be filled by women and signed universal suffrage into its founding constitution.[41] At the same time, women in the U.S. were late to receive voting rights and could not open a bank account without a husband's permission until the 1970s, while marital rape was legal until the 1990s.[42] The USSR criminalized racism and established ethnic autonomous zones and affirmative actions for ethnic representation in government, at the same time that the U.S. legally and socially oppressed people of color through Jim Crow and segregation.

42. Equal Credit Opportunity Act (1974) *Byrd v. State*, 1993; all 50 states criminalized marital rape by 1993.

The USSR eliminated mass homelessness, illiteracy, and starvation within a generation. Cuba, under blockade, has a higher life expectancy than the U.S. China lifted 800 million out of poverty, more than all capitalist countries combined since 1980.[43] These accomplishments do not properly scale to someone who does not see themselves in the illiterate and starving peasants prior to the revolution but as the privileged class that was torn down to make room for these improvements.

If the United States had a socialist revolution right now, would Elon Musk and Jeff Bezos quietly accept their new "oppression" at the hands of their workers? They would likely flee to a capitalist haven and blast the media with their stories of the horrors of wealth redistribution, without mentioning the children they enslaved in the Congo or the workers peeing in bottles in Amazon warehouses. These are your Miami Cubans and Venezuelan Americans who plead and lobby for American bombs to rain down on their homelands. Those are the voices that are amplified by U.S. media while the voices of those suffering under siege and sanctions are silenced.

No system can be perfect, and every new experiment comes with mistakes, but when someone says communism was "worse," ask: For whom? For the white male landowner living in New York, perhaps. For a black sharecropper's daughter, for a poor woman in Appalachia, or for an indigenous peasant, it's an astounding no. Communism offered dignity and power where capitalism offered only exploitation. This is the real comparison that is never made in U.S. history classes.

Bad Faith Comparisons & Manufactured Fear

A quick Google search for Cold War differences reveals the standard script: the United States "*championed civil rights, freedom of speech, and individual liberties*," while the USSR relied on "*repression*" and "*state-controlled media*." What the search leaves out is that for 47 of the 69 years the USSR existed, in the States, Black Americans could not vote and faced constant racial terror under Jim Crow. Communism is manufactured as the ultimate evil through a cold war binary of bad faith comparisons and manufactured fear. Tragedies, mistakes, or misdeeds of communist countries are always blamed on

43. See Lifting 800 million People Out of Poverty – New Report Looks at Lessons from China's Experience by the *World Bank Group*

communism or "dictators", while any issue of Western capitalist nations has specific, nuanced, and isolated blames that do not reflect on the political or economic system as a whole. The same narrative echoes across any Cold War unit in U.S. History curriculum.

What the search leaves unsaid is indicative of the common comparison between the two systems, distorted by skewed opinions that are stated as facts. In U.S. history classrooms, the cold war and the civil rights movements are never taught at the same time, instead separated and isolated, safe from possible comparison. The US did not "champion civil rights" for people of color; it violently enforced segregation and apartheid. Neither is there mention of black Americans who traveled to the socialist USSR only to actually feel championed, such as world-class actor and singer Paul Robeson, who stated: "It was the first time I felt like a human being." As a result, he was slandered as a "Black Stalin" in the press and faced threats of violence at home.[44]

This is not a neutral summary. It is a weaponized omission. These domestic issues are isolated, whitewashed, always removed from the Cold War context, taught as a separate unit, and never taught as a systemic reflection of the American capitalist system. Meanwhile, the actual mechanism or details about how the USSR "relied on repression" or how the US "championed civil rights" are not explained. Who, how, and why was there repression? Whose rights were championed and how? These questions are left unasked, let alone answered.

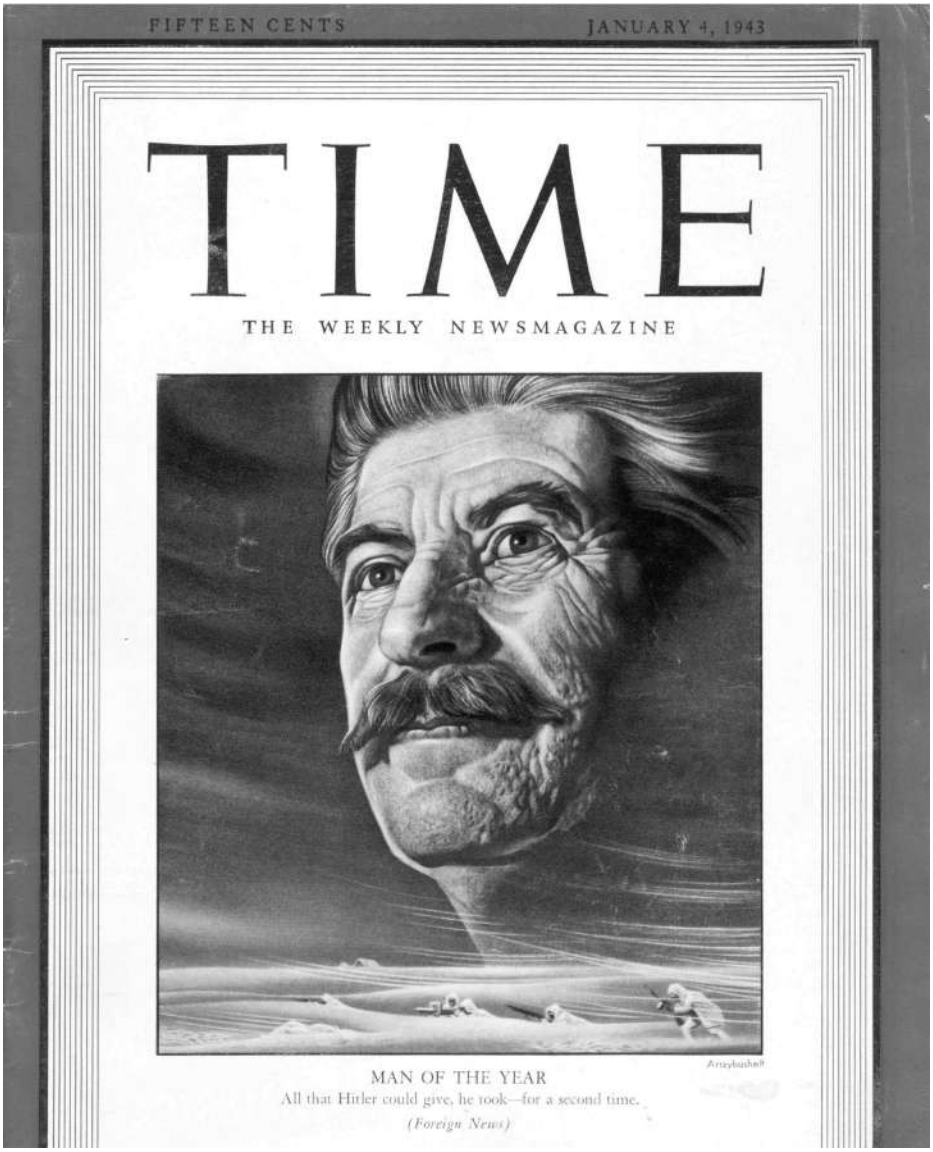
After the USSR collapsed, without a world superpower to back it, communism was continuously piled with politically biased historiography and skewed analysis. In 1997, The Black Book of Communism claimed communist regimes killed over 100 million people, more than Nazism. These figures have been widely debunked, yet they are the primary source of communist "atrocity propaganda"[45] that is still found blasted across social media. The publisher later admitted the book contains "fatal mathematical errors." For example, it

---

44. Paul Robeson, quoted in Martin Duberman, *Paul Robeson* (New York: Knopf, 1988) Gilbert King, What Paul Robeson Said, *Smithosian,* From the article:" Robeson's passport was soon revoked, and 85 of his planned concerts in the United States were canceled. Some in the press were calling for his execution. Later that summer, in civil rights-friendly Westchester County, New York, at the one concert that was not canceled, anti-communist groups and Ku Klux Klan types hurled racial epithets, attacked concertgoers with baseball bats and rocks and burned Robeson in effigy." Paul Robeson slandered as "Black Stalin" in *Time Magazine*, "RACES: Declaration of War," 1949.

45. Mark Kramer (Harvard University Press editor), letter to MIM, February 26, 2001. The publisher later admitted the book contains "fatal mathematical errors.

attributed the entirety of the Nazi death toll on the Eastern front in World War II as "victims of communism" and inflated Gulag deaths by conflating prison populations with executions. Meanwhile, no equivalent Black Book of Capitalism exists to count the 10s of millions of dead in the Belgian Congo (Leopold's private capitalist enterprise), the more than 30 million dead in British-made India famines, or the 100s of millions estimated victims of Western colonialism and post-colonial structural adjustment. The false premise of the Black Book is that communist violence is systematically unique while capitalism is nuanced and specific. Capitalism's body count would be orders of magnitude higher within the same framework but are instead narrated only as "tragedy" or a cost of "progress." Textbooks with the same black book framework fill American classrooms.



After World War II and the end of the alliance between the USSR and the USA, the death of Stalin, and the eventual dissolution of the USSR itself, the legacy of the first socialist state and its predecessors was continually maligned. In Joseph Stalin, Truman saw a vile representation of Bolshevism, whereas FDR saw a respectable ally, and after the change in Presidency, Western media shifted from critical respect for the Soviet leader to open disdain. In 1943, Stalin was named man of the year, with the Time magazine article including statements such as:

> *"Only Joseph Stalin fully knew how he brought Russia through. But the whole world knew what the alternative would have been. The man who knew it best of all was Adolf Hitler, who found his past accomplishments turning into dust. Had German legions swept past steel-stubborn Stalingrad and liquidated Russia's power of attack, Hitler would have been not only man of the year, but he would have been undisputed master of Europe, looking for other continents to conquer… But Joseph Stalin stopped him…Within Russia's immense disorderliness, Stalin faced the fundamental problems of providing enough food for the people and improving their lot through 20th century industrial methods. He collectivized the farms, and he built Russia into one of the four great industrial powers on earth. How well he succeeded was evident in Russia's world-surprising strength in World War II. Stalin's methods were tough, but they paid off."*[46]

Nuance and admission of socialist strength in a major publication such as the times would be unheard of after Stalin's death. Instead, the late Stalin faced

46. *Time Magazine*, "Man of the Year: Joseph Stalin," January 3, 1943.

rhetorical attacks and verifiable lies from his own predecessor, Nikita Khrushchev. Khrushchev's attacks and subsequent changes in Soviet policy blew a gaping hole through the national unity of the USSR and international socialist solidarity. The disownment of Stalin was even a primary reason for the Sino-Soviet split with communist China, ending collaboration between the two largest communist parties in the world.

Students are still taught about the supposed Soviet genocide against Ukraine called the "Holodomor", despite its dubious evidence. Many historians argue that the famine resulted primarily from a combination of environmental difficulties and mistakes in Soviet policies, rather than a plan to exterminate

Ukrainians. The classification of the Holodomor as a genocide has always been hotly debated and arose through political framing by liberal democracies and Nazi propaganda.[47] Yet, the historiography is presented as simplified and one-sided in textbooks and popular media. Worse still, during the same time period the English Empire was proudly starving millions of Indians in the Bengal famine. Prime Minister Churchill, commonly praised as one of Britain's greatest leaders, blamed Indians for a famine he had a hand in manufacturing: "I hate Indians. They are beastly people with a beastly religion. The famine was their own fault for breeding like rabbits."[48] Churchill is proclaimed a hero of Britain and Stalin a genocidal dictator. Our understanding of history is skewed when we do not hold these figures to the same standard of analysis and answer why is one event commonly known as a famine and the other a genocide.

In the same era that Stalin "purged" state leadership, many of which were nazi infiltrators, and repressed the kulak class, the same wealthy peasants that were sabotaging collective farms, the US blacklisted, deported, and violently repressed black Americans, people of color, anyone accused of being a "red," immigrants, and forcefully placed Native American children in boarding schools as a prolonged act of genocide. Despite its common use in the US to justify these actions, surely national security concerns do merit some degree of censorship, surveillance, and even imprisonment, but where is the line for total condemnation drawn? A surveillance police state that has resulted in the largest prison population in the world, killing millions of foreign civilians in a war on terror, or even torture in Guantanamo Bay? No. The line is Stalin's purge of possible Nazi spies or ineffective CPSU officials and Chinese President Xi's anti-corruption campaign, which are categorized as dictatorial paranoia. That line is drawn where it is because for one country, we tend to gloss over offenses while examining the nuances and context that shape them but do not grant that grace to others; for an honest history we must apply a comprehensive study to both.

---

47. See R. W. Davies and Stephen G. Wheatcroft, *The Years of Hunger: Soviet Agriculture, 1931–1933* (Basingstoke: Palgrave Macmillan, 2004). The famine affected multiple regions of the Soviet Union (including Kazakhstan and Russia), though Ukraine experienced particularly severe mortality. Archival evidence shows the Soviet government both contributed to the crisis and later provided relief, though many anti-Soviet scholars argued this response was delayed and insufficient. Popular narratives also miss the role of the wealthy landowning peasants (kulaks) who actively destroyed grain and killed livestock in resistance to collectivization efforts. For a more honest comparison, see Domenico Losurdo, *Stalin: History and Critique of a Black Legend* (Iskra Books, 2023).

48. Churchill quoted in Shashi Tharoor, *Inglorious Empire: What the British Did to India* (London: Hurst & Company, 2017)

Today, the United States accuses China of genocide against Muslim Uyghurs despite piles of evidence to the contrary, while perpetuating endless war in the Middle East and sending billions in “aid” to Israel’s active genocide against Muslim majority Palestine in Gaza. On one hand, even amongst US aligned countries, not a single Muslim majority country has recognized China’s actions as even approaching genocide against the Uyghurs and anyone is free to go to Xinjiang and see it for themselves. On the other hand, while U.S. aligned Muslim states such as Saudi Arabia do deny or withhold full accusations of genocide in Gaza, a majority of Muslim countries and even Western leaning institutions such as the U.N. recognize Israeli actions as genocide, with bountiful evidence available for anyone with an internet connection.

There are an overwhelming number of examples of historical smears against communist states or any people that dare to stand up for sovereignty against the might of the US empire. Each of these cases deserve their own accurate historical investigation that does not preemptively declare one side of the story as a complex but noble country that occasionally makes foreign policy mistakes or oversteps through folly and the other as a label that depicts a cartoonish evil, with no will of the people. They are not discussed as a country, a people, or a civilization; they are a dictatorship, an authoritarian, a communist. They are nothing but an image of a faraway enemy that latches onto existing racial, oriental, and non-Western prejudice in the Western psyche.

The falsified history and bad-faith comparisons are so pervasive that unraveling a single one of these stories feels like stumbling on a “conspiracy theory”, despite the historical evidence or released CIA files that prove it. When shared on their own, a handful of these discoveries can warrant no reaction other than confirming what most Americans already suspect, that the government has a skeleton closet full of dark deeds. However, if we are to take these investigations and apply them to a larger pattern of class warfare, profiteering, imperialism, and an honest comparison of communism, it unravels everything we are sold about the ideology and those who used it to stand up to the empire. This is only possible when we let go of our presumptions, which have been woven together by false narratives, and sit with the implications of a larger and harsher truth.

During the Cold War alone there are too many instances to list, but the Cuban Missile Crisis can serve as a popular example. The Crisis looks like an aggressive nuclear expansion by the USSR that endangered America and the world when they aggressively placed nuclear war heads on the island of

communist Cuba; until you learn the missing details. The U.S. placed nuclear missiles in Turkey before Cuba ever received any, literally touching the border of the USSR. The story further falls apart if we consider Cuba as a sovereign state, facing military bombardment and failed invasion attempts by an aggressive world superpower 90 miles from its coast, which, in desperation, requested its biggest ally for nuclear protection, rather than reducing the people of Cuba to a Soviet "satellite" or proxy state. The crisis ended when President JFK and Soviet Premier Nikita Khrushchev exchanged a series of secret communications to negotiate a peaceful removal of missiles from both Cuba and Turkey; however, the American media published only JFK's side of the conversations, framing it as an American victory instead of a compromise; leaving out the existence of the missiles in Turkey, as well as the U.S. promise not to invade Cuba. The result was a news frenzy about Soviet aggression turned to "weakness" and a heroic president without any public awareness that the United States posed an existential threat to Cuba before the deal went through.[49]

Zoom in, place infamous acts of accused communist cruelty or aggression under a microscope, and nearly every time, the investigation will fully or partially exonerate them; do the same for Western and American crimes, stripping them of the innate respect and benefit we give them, and they look much worse for it. This is not to say that every action taken by a Western government is vile and every action by a socialist government or a revolutionary is pristine; however, deeper analysis nearly always repeats revelation in these patterns because of the constant narrative control that inflates mistakes of the communists and mythologizes wrongdoings of the "just" societies and systems of the United States and its allies.

For example, let's examine two practically default American positions and compare them honestly. If we hold the belief that regardless of the dismal state of China and its historical challenges, Mao Zedong holds responsibility for the deadly mistakes during the great leap forward and the cultural revolution in China, and that despite Mao's and the CPC's admission of mistakes and structural pivots in response, that these mistakes are irredeemable, genocidal, or worth condemning Chinese socialist advancement over and yet; simultaneously hold, that the American founding fathers such as Washington, Jefferson, and the like, were an overall progressive force worth celebrating; that they held correct ideas of liberty, separation of church and state, checks and balances and

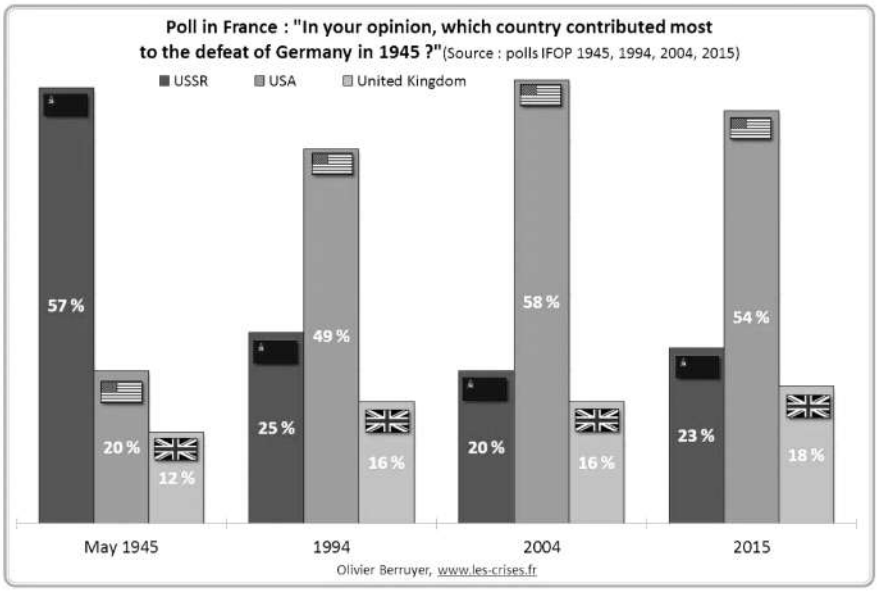
49. For a great lesson on the missile crisis that uses primary sources to unpack bias and the truth see, Cuban Missile Crisis by Digital Inquiry Group

self-determination alongside their mistakes; that despite their direct ownership and enslavement of their fellow human beings and genocidal advancement west against Native Americans, acknowledged as wrong by many of them, yet brutally practiced anyway; if we accept these men as a product of their time and see it as a mistake to throw out the good because of the bad; we are in contradiction. If we celebrate the American perpetrators and profiteers of perhaps the gravest crimes in all of human history because of their contemporary progressivism but find only or primarily criticism for the Chinese man and party, that in the genocidal face of Western Colonialism and Japanese fascism, threw off their shackles, ending a century of humiliation suffered by the Chinese people; reversing it into a century of development; into the greatest poverty elimination campaign in all of human history; our narrative understanding of history has been severely distorted or we simply do not value the lives of those slaves, Indigenous Americans, or of the Chinese who suffered under Western domination.

The Double Standard

No serious Marxist or anti-imperialist claims that every socialist project and leader was without mistakes, rather both their success and failures are distorted through an information chain of propaganda, bias, and misinformation while simultaneously suppressing the context and the faults of capitalism and Western empire. For example, let's dig into the narratives surrounding incarceration. In the USSR, the Gulag system was certainly responsible for holding, deporting and executing victims of repression or wrongly convicted, but what is withheld from the narrative of Gulag repression? What makes a Gulag different from a regular prison? Today, what is the difference between a North Korean "prison camp" and a United States prison?

If the answer is forced labor or false convictions, both are heavily present in Western incarceration systems, most predominantly in the United States. The US imprisons a larger portion of its population than any other society in modern history; currently made up of roughly 5% of the world's population, the US holds 25% of the world's prisoners. The 13th amendment that ended slavery was written with a built-in loophole in an effort to continue enslavement of black Americans through a different avenue, by throwing them in prison. Unpaid labor has been a primary function of the prison system; with private companies and the state raking in at least $11 billion annually worth of



production through low and unpaid prison labor. Based solely on known exonerations, estimates for wrongful convictions in the US generally range between 1% and 6% of the incarcerated population. For context, if a conservative 1% rate applies to the roughly 1.2 million individuals currently in prisons, that equates to approximately 12,000 innocent people serving time. At the same time, while making up only 13.6% of the population, Black Americans account for 53% of all recorded exonerations–reflecting the racist origins of the US incarceration system. There is absolutely no evidence that Soviet Gulags were more deadly than Western prison systems and political or "counterrevolutionary" crimes made up only a small minority, with 95% of convictions for "regular" crimes, according to soviet archives that were released in the 90s. Roughly 58% of those political prisoners were convicted as Nazis or Nazi collaborators while the US was instead hiring Nazis with full citizenship. Classrooms and headlines alike neglect the history of these systems; the Gulag was an inherited relic from the backward Tsarist Russian empire or that the U.S. system was derived from slave catching and racist re-enslavement. The logistics and specificalities of neither the American, Soviet, North Korean, or any "advisory" prison system, or other unseemly institutions shared by all nations, are not usually presented in detail because it illuminates context that disrupts the anti-communist narrative.

U.S. history and media never honestly compare the strengths, weaknesses, and misdeeds of itself and other nations. Of the US and USSR, or China or Cuba—of capitalism and socialism. It can't honestly compare them because, despite historical mistakes, an honest comparison would only serve to clear the image of communism as a progressive force and sully the image of America as a regressive one. Of a country built on the principles of liberty and the American dream that keeps American workers clocking in on time yet suppresses the truly radical side of its history. It would open our eyes to the bloody legacy of a monopoly capitalist minority wielding the American empire in their relentless pursuit of profits at the expense of American and international workers. Honest history also gives us a tradition of the radical working class and its most successful tool: communism.

Why Elites Fear Communism: Marxism Leninism Works

In 1945, the French knew who defeated the Nazis: 57% named the USSR as the primary contributor; by the 90s they'd forgotten. After the war, it was widely

known that the Soviets gave the most and took the most in the fight against the Nazis. Decades later, polling shows only 25% giving credit to the Red Army, while the majority now gives credit to the Americans. The facts did not change. The USSR did defeat the Nazis, inflicting 86% of all German military casualties and suffering the loss of over 27 million soviet lives.[50] The story changed. History is distorted with overblown positive sentiments for the U.S. and the suppression of communist success. Success that truly threatens fascists and capitalists alike.

The Soviet Union, as the world's first socialist experiment and the first to be founded through an application of Marxism-Leninism, despite its shortcomings, represents unequivocal socialist success. It was only through the clear analysis provided by Marxism-Leninism that the Bolsheviks and the people of the Russian Empire were able to successfully overthrow the tyranny of the tsar and hold power through the worker soviets (soviets are self-governing grassroots committees of workers, peasants, and soldiers that were formed during the Russian revolution and served as the instruments of direct democracy). The revolution ripped power away from the rich, establishing the first people's state

50. IFOP poll, 2004/2015. For an analysis of this shift, see RFI, "Has France forgotten Russia's role in defeating Nazis?" (2019). David Glantz and Jonathan House, *When Titans Clashed: How the Red Army Stopped Hitler* (Lawrence: University Press of Kansas, 1995). Soviet deaths in the Great Patriotic War: a note, *PubMed*

and even cancelling all debt, costing international capitalists approximately 63 billion rubles or $381 billion in modern equivalent value.[51]

It was only through the application, or praxis, of this theory that the United Socialist Soviet Republic, in the span of merely 20-odd years, went from a backwards, illiterate and cruel empire into one of two of the world's great superpowers that was first able to defeat invasion of foreign western powers in their effort to crush the revolution, then fend off the Nazi onslaught that decimated its country and finally challenge U.S. hegemony after the war as a superpower. As Soviet Marshal Georgy Zhukov stated, "We have liberated Europe from fascism, but they will never forgive us for it."[52]

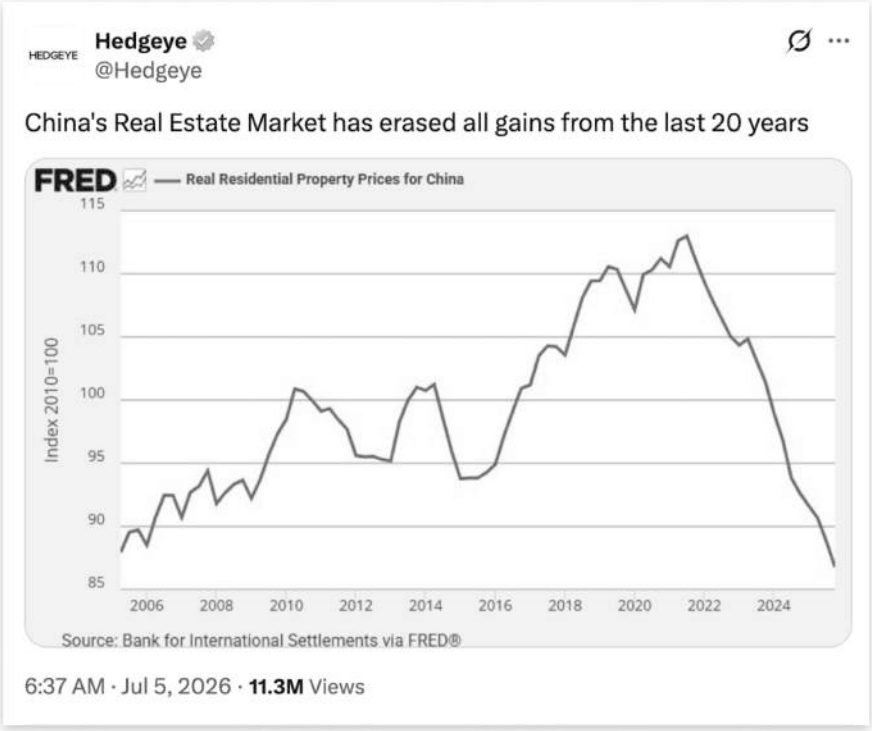
Only through socialist development, despite being shunned and cut off from the Western world and ravaged by enemy attacks, was the USSR, less than 15 years after the second world war, able to launch the first satellite, Sputnik, into space, kickstarting what Americans would take as a challenge that socialist science could take a peasant country into space. The Americans would beat them in placing a man on the moon, but the USSR led the race up until that point, sending the first animal, man, and woman into space (the USSR had female cosmonauts, but the US did not), and is still the only country to send a rover to Venus. As one of the greatest inventors and scientists of the 20th century, Nikola Tesla stated:

> *"I am following the situation in Russia carefully. I try to get testimonies from eyewitnesses, not from newspapers that lie nonstop. I approve of the Russian revolution because it proclaimed the principle of honesty on one-sixth of the earth's surface. The Soviet Union faces incredible trials, but the country is ready to overcome them. The Russians are lucky - they have socialism and Stalin. A happy people with a wise leader...I often regret that at that time I chose the United States instead of Russia. There was no difference then. In the meantime, with the appearance of the USSR, everything has changed radically, it is now significantly different from the rest of the world. The newspapers pour shit on it, but those who come from there say incredible things. I was most intrigued by the Soviet system of science. Their scientists are provided with a salary and necessary working*

51. Antoine Kopij, The Russian Revolution Future president Herbert Hoover personally lost an estimated $15 to $20million in contemporary value in personal wealth as a result of the Russian Revolution as a board member of The Russo-Asiatic Corporation

52. Georgy Zhukov, quoted in various sources

> *conditions. They are freed from daily duties, concentrating exclusively on science. They don't have to think about who will finance them. When the state, a socialist state, is behind you and not a rich man who can change his mind at any moment - that is reliable. I often think about how I would go to the USSR, if only I was 15-20 years younger."*[53]



The Soviets inspired revolutionaries around the world, including in the US. They protected Cuba and the whole of the Third World through their nuclear deterrence umbrella. They sent intelligence, training, troops, and supplies in response to U.S. aggression across the Third World, including in Korea, Vietnam, China, and across Africa and the Middle East. The first socialist experiment may have been forcibly and illegally dissolved, but only after a legacy of socialist success and solidarity with 76.4% of Soviet citizens voting to preserve the USSR.[54]

The USSR was not the only country to drastically improve living conditions or even reach world superpower status through the application of Marxism-Leninism. Communist China has surpassed the world-shattering poverty alleviation efforts of the USSR, lifting an unprecedented 800 million people out of poverty, resulting in the total elimination of absolute poverty in the country. Despite year after year of Western "China watchers' failed predictions of incoming collapse, its economy has only grown exponentially. "Much of this prediction was based on China's growing housing market bubble; however, in a move that will likely go down in economic history, China has successfully followed President Xi Jinping's 2016 phrase "Houses are for living, not for speculation" by successfully deflating the market at a time with 90% homeownership across the nation. A house does not lose its use value when the price goes down, only its market value. Billionaires and multinational corporations surely lost billions because of China's controlled deflation but 90% of Chinese did not lose the ability to live in the home that they own while the other 10% now have more affordable options. Chinese socialism exposes the depravity of a housing market built on the opposing principle that we find in the States, that housing is primarily for speculation and profit; only ever "owning" through massive mortgages for those who can afford it.

53. Nikos Mottas, Nikola Tesla on the USSR: "The Russians are lucky — they have socialism and Stalin"

54. Boris Yeltsin, Leonid Kravchuk, and Stanislav Shushkevich went against the people's will by signing the Belavezha Accords, which decreed the termination of the USSR. See, Breakup of USSR was breach of people's will after March 17, 1991 referendum on its preservation - Gorbachev

As a country led through the principles of Marxism, China is able to cut through corruption and prioritize win-win diplomacy. In the West, political corruption is legalized through lobbying and blatant gaming of the system usually results in rising within it. In what Marxists call "the dictatorship of the proletariat" or control of the workers over the owning class, such as in China, billionaires or officials that are caught accepting bribes, misusing state funds, or are guilty of financial fraud against the people are severely punished; facing severe penalties, including the death penalty.[55] Through the Belt and Road Initiative, China has poured billions into developing the "third world", with the win-win results of building and gifting infrastructure to countries that provide China with necessary resources that are denied to them by the West. China has built infrastructure that allows countries a path out from the predatory loans and financial systems that keep them poor. This directly threatens the bottom line of multi-national corporations, imperial states, and the billionaires themselves that engage in blatant corruption and sacking resources both at home and in developing countries.

55. Only a single digit percent of these death sentences get executed. There is always an automatic three-year reprieve: to life imprisonment unless crime is repeated or attempted from prison.

At a certain point, aided by the internet, anti-Chinese and anticommunist propaganda breaks too starkly with reality to maintain a consistent narrative. In a way, China exemplifies all of the anticommunist history and propaganda because they have been accused of all of the same insults and defamations as the USSR and other socialist states: totalitarianism, "social imperialism", anti-democracy, extreme poverty, and genocide. Yet, any honest and open-minded person with an internet connection or a passport can explore China themselves and watch the story they were told melt away under real observation. Chinese success threatens to rip apart the established narrative that protects the owning class.

China and other Marxist-Leninist states, like Cuba, have enjoyed a socialist democracy that is celebrated by the people for its effectiveness compared to Western-style democracies that switch colors but ultimately serve the capitalist class. As the Chinese venture capitalist and political scientist Eric Li famously put it: "In America, you can change the political parties, but you can't change policies. In China, you can't change the party, but you can change policies." Unfortunately, unlike China, Latin American nations like Cuba not only have fewer resources and population available but also live in America's "backyard" in the western hemisphere. Cuba, only 90 miles off the coast of Florida, has suffered various forms of direct and indirect attack but still succeeded in transforming a plantation serf society into a country with near-universal literacy and world-renowned doctors and healthcare. Cuba and China exemplify the possibilities of a democracy of participation rather than purchase power-that is not controlled by lobbies but through direct action by the people; examples that pose an existential threat to the sham of capital controlled Western style elections.

China and ecological socialism impose a dire threat to big oil execs and multinational energy monopolies, as they provide the world with our biggest ecological beacon of hope. Through strong economic planning and a focus on building an "ecological civilization", China is able to lead the world in the fight against climate change and global oil crisis.[56] These actions, at the cost of profit, prevented a global crash of the economy and price gouging of Chinese

---

56. Xi Jinping: *Building a Beautiful China: Promoting Harmony Between Humanity and Nature*. With the closing of the strait of Hormuz after the U.S. bombing of Iran and the sharp decline in the worlds overall oil supply, China chose to drastically cut oil imports, simultaneously using domestic policy to cap the surge on gas prices within the country. Many Western users and officials across social media could not fathom what China might have to gain by saving us in our dire situation; not imagining the passivity of win-win diplomacy.

consumers.[57] The Peoples' Republic of China installs green energy at a speed that outpaces the rest of the world combined, drives down the global prices for green technology through "overproduction" to subsidize and incentivize other nations in buying green tech, actively funds the South– South Climate Cooperation Fund which pledges billions to finance low carbon industrial projects in developing countries, and has gone from a country known for its high air pollution—to virtually eliminating it by surpassing Western electrification rates (hit 30% in 2025 compared to a stagnate rate at roughly 22% in the US and Europe).[58] These actions overwhelmingly benefit the common peoples of both China and the world, yet they directly threaten the interests of multinational corporations, billionaires, and the western statesmen that back them by accelerating the decline of oil sales, getting ahead of emerging markets, refusing to let the Earth die to increase the bottom line, and by dismantling reliance of the global south on the West through energy sovereignty.

Much can be said about the success of Marxism across Latin America, Africa, and Asia. Many fell to the violent imperialist pressure; some did not. Nearly every surviving socialist country adopted Marxism-Leninism, adding theory and characteristics unique to their situations. Many of the states that aimed to achieve socialism through other means, even if they were ultimately crushed, still accomplished revolutionary feats of poverty elimination, literacy increases, ecological alignment, and sovereignty.

All of this success comes at the cost of billions of profits to multinational corporations and their state backers. The rich and powerful have everything to lose when Marxism is on the table. The history of most of these successes and battles are footnotes if they appear in Western textbooks at all, labeled as dictators, tyrants, or simply martyrs. Breaking that monopoly on history reveals their revolutionary spirit and lessons that continue to arm the global working class.

57. Europe Markets, China is helping to cushion global oil prices below $100 — but analysts warn it won't last

58. Ken Silverstein, China's Green Leap Is Part of Its Forward-Leaning Industrial Strategy, *Forbes*. Michael Hill, Is China doing anything about Climate Change? *Substack*. China's new energy plan leaves emissions loose, *CREA*. The United States and the European Union increasingly frame the issue as "overcapacity", "overproduction" or "dumping" to justify erecting trade barriers, such as tariffs, to protect domestic jobs and vital green-tech industries while Chinese officials and economists argue the criticism is protectionist, noting that when Western nations dominate global markets in sectors like aviation or wine, it is hailed as a "competitive advantage" rather than overcapacity.

Conclusion

History is not merely the past, nor is its study just the boring class the high school football coach got stuck with. History marks the boundary of our collective imagination and the possibility of the future. If we truly believe a new system is impossible and this is the best there is, or that communism always fails, we will never fight for something better.

The world, the West, and yes, even the United States, have a history worth celebrating. History is not boring but directly applicable to the issues we face today. History is not just a story of the slave masters, the genociders, and the conquerors. U.S. history is taught through a hyper nationalistic elitist frame, but that is not how we have to learn it. It also contains the revolutionary spirit of the Americans that resisted. The Anti-Federalists, who refused to accept the Constitution without a Bill of Rights amended it. Abolitionists like John Brown and Fredrick Douglous. The spirit of the underground railroad, the labor movement, the Panthers, and MLK; before his dream was cut short. That spirit did not die with him or with any of them. We must learn and internalize a true history of the world and the United States to arm today's working class with its lessons.

Nuanced history and an understanding of class struggle is an enemy to the status quo because, in an honest comparison, capitalism looks much worse than communism ever has, even with communism's biggest mistakes. You find that human error may be universal but building towards a system that is explicitly built to incentivize the best of human nature, resolve economic contradictions, and fight for true equality does, in fact, vastly improve the lives of the masses. A system built for people, not for capital and profit; literally incentivized on the worst of human tendencies. That is why popular history is kept boring, censored, and safe. That is why we were taught to hate without ever being taught what we hate. This is why Americans hate Communism without ever honestly examining it.

The word itself may trigger reflexive hatred and doubt, but who benefits when you hate communism? Not you. Not your family. Not the 54% of Americans that live paycheck to paycheck. It's the people who have the most power and the most to lose. The billionaire. The multinational corporation. The politician who sends American children to die in resource wars, while convincing us the other side is evil. They all need Americans to keep hating the wrong enemy. They need you to hate Communism. ▉

From Alienation to Critical Faith

Sebastián León[1]

1. Sebastián León is a philosophy instructor at the Pontifical Catholic University of Peru.

Introduction

This essay sets out to revisit the relationship between Marxism and religion from a critical and constructive perspective. Our thesis, against more orthodox Marxist conceptions, is that religion is not a premodern residue destined to disappear with the advance of socialism, but a permanent dimension of the human condition, rooted in the human experience of finitude and the need for meaning. Yet this permanence does not mean resigning ourselves to religious alienation: we propose that religion can be transfigured—and often has been transfigured—in the context of class struggles. From being the opium of the people, religion can become a prophetic critique of capitalist idolatry, a memory of the struggles of the oppressed, and a force mobilizing revolutionary praxis.

To sustain this thesis, the essay is organized around the distinction between two forms of alienation: one social, historical, and surmountable; the other existential, transhistorical, and insurmountable. On this basis, we examine the Marxian critique of religion, moving through the contributions of various authors in the Marxist tradition and exploring the religious logic intrinsic to representation [*Vorstellung*] within the coordinates of capitalism. Finally, liberation theology is taken up as an example of a non-alienated religiosity which, without renouncing transcendence, commits itself to the radical transformation of society. The essay concludes with a brief political reflection on the irreducible tension between revolutionary praxis and prophetic critique, and on the need to confront that tension concretely in each historical conjuncture.

I

If religion arises from our inability to gain access to the totality of being, from our inability fully to comprehend the natural forces that determine our existence and the meaning of that existence—an inability that, by disjunction, leads us to infer the existence of such a totality or transcendence, to pass from finitude to infinitude—it persists in new forms with the development of society. The technical expansion of our mastery over nature gives rise to new impersonal forces: relations of production and property, relations of domination, exploitation, and conflict, all deriving from the social division of labor. Despite their sociohistorical character, these forces prove as determining as, or even more determining than, those of nature, and constitute what the Hegelian-Marxist tradition describes as a “second nature” or “social being.”

It is the opacity of consciousness—the experience of that opacity, of the gap between being and thought—that stands between us and the world around us, including ourselves insofar as we are part of that world. For Hegel and Marx, this opacity inevitably leads us to constitute abstractions, to forge partial, or "inadequate," representations [*Vorstellungen*] of things and of ourselves: images, symbols, myths, metaphors, and narratives through which we make sense of reality, representing it in terms of objects external to or separate from our subjective life (for example, the conception of God as "Father," of society as a "contract between individuals," or of economic goods as possessing an intrinsic value independent of human labor). But if we follow Marx on this point, these representations—including religious representation—would not be mere illusions or cognitive errors, but what the father of historical materialism called "real abstractions": the manifestation, in the realm of belief, of contradictions inherent in material reality itself.[2]

It is in this interweaving of two differentiated forms of alienation—one existential, transhistorical, and insurmountable, the other social, historical, and surmountable—that we find religion as a mode of representing the world. On the one hand, religion emerges from the experience of the precariousness of human existence: from death and illness, from the question of the meaning of a life that necessarily unfolds on the horizon of finitude and that permits itself to harbor the hope of transcendence. On the other hand, religion develops within the social and historical conditions of subjective life, often sanctifying the profane even as it provides consolation.

The way we experience finitude is, of course, always socially mediated, adapted to concrete historical conditions. Nevertheless, no historical configuration allows us to rise above biological fragility and the need for meaning as permanent realities of the human condition.[3]

3. See Losurdo, D., "Hegel, Marx e l'ontologia dell'essere sociale," *Critica marxista* 5 (2010), pp. 40–49. See also Samir Amin, who states: "Although modern ideology has freed itself from the dictatorship of metaphysics, it does not thereby suppress the religious need. Indeed, the importance of metaphysical concern ('man is a metaphysical animal,' one might say) compels us to take into consideration the interaction between the religious fact—the expression of this concern—and social evolution. […] [R]eligions, considered in their ideological scope, are flexible and susceptible to historical interpretations, which have in fact evolved." (El eurocentrismo. Crítica de una ideología (1989), p. 82, Mexico City: Siglo XXI; my translation).

II

It is worth pausing for a moment over Marx's famous thesis on religion as the "opium of the people." It is well known that this phrase has been widely misunderstood over the years. Among other things, it overlooks the fact that in Marx's context the predominant use of opium was not yet as an illicit recreational drug, but as a medicinal, pharmaceutical, and household substance. Marx's position is considerably more nuanced than that of many who, in the name of Marxism, denounce religion as mere alienation or ideological domination of the masses.

The full quotation reads: "Religious suffering is, at one and the same time, the expression of real suffering and a protest against real suffering. Religion is the sigh of the oppressed creature, the heart of a heartless world, just as it is the soul of soulless conditions. It is the opium of the people."[4] For Marx, religious belief would be an expression of conditions of alienation, dispossession, and misery within the capitalist social order, rather than simply a collection of superstitions that could be combated through the Enlightenment critique of religion. It would serve at once as consolation and hope (for justice in an otherworldly realm) and as justification and acceptance of the existing social order (of injustice as part of the earthly world). Overcoming religious alienation—that is, the separation in consciousness of heaven and earth—would require transforming actually existing material conditions: the separation, in the material world, between the human person and those social conditions that would allow that person to live as a human being.[5]

Another detail often missed by critics of religion (Marxist or otherwise) who reduce it to mere ideological domination is that religion develops within a social order that is neither homogeneous nor harmonious, but traversed by contradictions and class antagonism. For this reason, religion cannot be a monolithic and frictionless sphere rooted in the interests of a single class; it must necessarily manifest itself in a plurality of socially differentiated forms and expressions.[6]

5. Ibid.

6. "Every religion, even the Catholic one (indeed, especially the Catholic one, precisely because of its efforts to remain superficially united and not divide into national churches and social strata), is in reality a multiplicity of distinct and often contradictory religions: there is a religion of the petty bourgeoisie and of urban workers, a women's Catholicism, an intellectual Catholicism, equally varied and disconnected." Gramsci, A., cited in R. Forlenza, "Antonio

Thus, for example, Gramsci distinguishes between a popular religion and a religion of the ruling classes and the intelligentsia. [7] Mariátegui distinguishes between an official imperial religion of the Inca state and the religiosity of the peasant communities of the Tahuantinsuyo.[8] Marx and Engels themselves, meanwhile, emphasized how, in contexts where particular peoples struggled for liberation against the tyrannical domination of propertied classes or foreign powers (for example, Catholic and agrarian Ireland against Protestant and industrialized England; "backward" Poland against "enlightened" Prussia; or, in the United States, secular defenders of slavery against "religious fanatics" such as John Brown, who in the name of his faith was prepared to go to the furthest lengths to eradicate slavery), patriotism and the struggle for emancipation often assumed religious forms. By contrast, oppressors often justified their rule under the banner of the Enlightenment discourse of progress against atavism and superstition.[9]

Of course, while unambiguously siding with such religious uprisings against domination, Marx remarked (in the context of anti-Napoleonic resistance in Spain) that they "bear the common stamp of regeneration combined with reaction."[10] Gramsci likewise recognized that religion, as part of the "senso comune" of the masses—the pre-critical and ambiguous ensemble of traditional beliefs, values, and norms through which they made sense of their lived experience—could impel them either to confront or to align themselves with their oppressors, depending on historical conditions. In other words, before being inherently reactionary or progressive, the role of religion will depend on which class interests it articulates in a given context.[11]

10. Ibid.

11. See Ver Forlenza, R., "Antonio Gramsci on Religion", pp. 9-10, *Journal of Classical Sociology* vol. 21 n°1 (2019), pp. 1-23.

Within the horizon of Marxism, with regard to religion, the most perceptive thinkers—from Marx and Engels to Gramsci, by way of Lenin—have been those who understood, against the more elitist and courtly atheism of other currents of radicalism, that religion cannot simply be abolished by decree.[12] Such a position, being contrary to reality, can only isolate a revolutionary from the believing masses. Yet the idea has often persisted that, with the progressive advance of socialism and the dismantling of the conditions of subjection and oppression, religion will eventually die out—in Marx's case[13]—or that, in the long run, historical materialism will be able to displace it as a worldview [*Weltanschauung*]—in Gramsci's case.[14]

The Italian Marxist philosopher Domenico Losurdo has pointed out that all the available evidence shows this latter position to be a residue of "historical idealism" within the Marxist tradition: in this case, a kind of utopianism or messianism that seeks to dissolve the persistence of human nature—the aforementioned transhistorical experience of our biological limits, of death, illness, and the search for meaning—into the dissolution of contingent relations of production and property, or of historical forms of domination.[15] This kind of position necessarily collapses the distinction between social alienation and existential alienation and, with it, the distinction between the historical forms and manifestations of religion and religiosity in general as a more fundamental anthropological dimension.

IV

There is an additional, perhaps more complex, question concerning the *intrinsically religious logic of representation* [*Vorstellung*] *in general*: the way

12. See Marx, K., "Remarks on the Programme and Rules of the International Alliance of Socialist Democracy," in Marx/Engels Collected Works, vol. 24 (1975), pp. 97–98, Moscow: Progress Publishers. See also V. I. Lenin, "The Attitude of the Workers' Party to Religion," in Lenin Collected Works, vol. 15 (1973), pp. 402–413, Moscow: Progress Publishers.

13. "We know […] that violent measures against religion are nonsense; but, and this is an opinion: as socialism grows, religion will disappear. Its disappearance must come about through social development, in which education must play a fundamental role." Marx, K., in "Interview with the Chicago Tribune Correspondent," in *Marx/Engels Collected Works*, vol. 24 (1975), p. 526, Moscow: Progress Publishers (my translation).

14. See Forlenza, R., "Antonio Gramsci on Religion," pp. 13–14, Journal of Classical Sociology vol. 21 no. 1 (2019), pp. 1–23.

15. For Losurdo, "historical idealism" can also manifest itself in the opposite way: in considering historical events, by ignoring contingent sociohistorical factors in the name of a supposed natural necessity. When the Marxist tradition has fallen into historical idealism, however, it has tended predominantly to do so for the opposite reasons.

in which, as Marx shows in his analysis of commodity fetishism, the ideological dimension—the reflection in consciousness of the social relations of production and the social division of labor—acquires, to put it in Derrida's terms, not only an apparent autonomy but a kind of automatization and dematerialization.[16] That is, religious belief is not the only thing that appears as a form of "alienated consciousness," in which the sacred becomes autonomous from the profane and acquires a life and independence of its own; the same is true of bourgeois everyday life as a whole, where things, the products of labor, become autonomous from the human beings who produce them and acquire a life and independence of their own. Money is constituted as a fetish, an idol or "secular god," part of a profane cult in which the atheist participates just as much as the Christian, Jew, or Muslim.[17]

We will return to this last question later. For now, it is enough to note that, insofar as representation in general—and not only religious representation—possesses a logic that can be considered religious, the Enlightenment approach to the problem of secularization and the disenchantment of the world must be reconsidered.

V

In the critical tradition extending from Hegel to Marx, representation can be understood as the "natural" starting point of consciousness: the spontaneous or immediate way in which consciousness appropriates the world around it. As already noted, this immediacy is a kind of "necessary illusion," an image or narrative that consciousness accepts without questioning its origin or necessity, fixing upon its particular or fragmentary content without contemplating its connection to the totality of the historical and social process that determines it. The interconnection of the social whole necessarily inscribes both the representation and the subject (who represents the world through their activity) within concrete reality. Hegel and Marx distinguish between "representation"

16. "[O]nly reference to the religious world allows us to explain the autonomy of the ideological, and therefore its specific efficacy, its incorporation into apparatuses endowed not only with an apparent autonomy but with a kind of automaticity […] wherever there is production, there is fetishism: idealization, autonomization and automatization, dematerialization and spectral incorporation." Derrida, J., cited in A. Toscano, "Beyond Abstraction: Marx and the Critique of the Critique of Religion," p. 15, *Historical Materialism* 18 (2010), pp. 3–29 (my translation).

17. On this point, see Dussel, E., *Las metáforas teológicas de Marx* (1993), pp. 135–136, Pamplona: Editorial Verbo Divino.

[*Vorstellung*] and "concept" [*Begriff*], as well as the theoretical process or operation through which the latter is set forth [*Darstellung*, "presentation"] as part of material reality itself, dialectically "overcoming" the fragmentary character of representation by incorporating it into the social whole (sweeping away the separation between an "external" world and an "internal" thought). The theoretical concept would thus be the transformation undergone by representation when consciousness rises above immediate experience.[18] This dialectical overcoming, however, does not eliminate representation as subjective experience; rather, it makes explicit the material process that constitutes it and from which we spontaneously abstract.[19]

That this overcoming is possible is due to the material rootedness of representation—its social foundation beyond subjective consciousness—which provides it with a "rational kernel," a "partial measure" of truth that functions as a kind of epistemic surplus value. This is why representation cannot be regarded as a simple falsehood, but as a fragmentary representation of the total material process of which consciousness forms a part: the inexact or inadequate way in which this process is spontaneously reflected in consciousness. Hence we speak of *real abstractions* rather than mere abstractions.

Now, contrary to the famous "secularization thesis," the advance of modernity has not entailed—except in a few regions of Europe—either a decline of faith and religiosity or their progressive relegation to the private sphere. The only part of the thesis that seems to hold today is the undeniable institutional differentiation between secular and religious spheres.[20] But in a deeper sense, the entire social life of human beings under capitalism—at least from the standpoint of our cognitive structure, regardless of which social sphere one wishes to consider—*has a religious character*. Which is to say that, within the

---

On the method of exposition (Darstellung) in the critique of political economy, see K. Marx, *Elementos fundamentales para la crítica de la economía política* (*Grundrisse*), draft 1857–1858, vol. 1 (2007), Mexico City: Siglo XXI Editores.

19. This theoretical apprehension of the totality—as movement or dynamic process—is, of course, always bound to concrete historical conditions and therefore cannot cease to be tendential or approximate. We might conclude that, although theoretical mediation allows us to rise above representation within a given sociohistorical context (by becoming conscious of its sociohistorical determinations), we can never do so at the anthropological or existential level: representation remains the inescapable horizon of our phenomenal experience or immediate consciousness of reality.

20. See Casanova, J., *Public Religions in the Modern World* (1994), pp. 11–39, Chicago: The University of Chicago Press.

historical coordinates of capitalism, the human social animal is always, spontaneously, a *theological animal*.

VI

Let us return to the question posed at the beginning of these reflections. If our spontaneous consciousness necessarily tends toward representation as real abstraction, this is due to our inability immediately to access the totality of being that conditions the act of representation, the integrity of the material background or substratum—categories, language, history, and deeper anthropological conditions—that mediates between thought and the world. Hence the phenomenal experience of the human being is never truly immediate or direct, but tacitly and permanently mediated by the totality.

Moreover, since the social division of labor is inscribed in that material substratum, modes of representing the world necessarily bear the mark of class antagonism. Following Ellen Meiksins Wood or E. P. Thompson, to account for the "pressure" exerted by historical modes of production on class formations requires reference to a common experience shared by the members of that class: the lived experience of relations of production, of divisions between producers and appropriators, and, more particularly, of the conflicts and struggles inherent in those relations of production.

As Meiksins Wood writes:

> *It is in the medium of lived experience that social consciousness takes shape, and with it the "disposition to behave as a class." Once the medium of "experience" is introduced into the equation between relations of production and class, so too are the historical and cultural particularities of this medium.*[21]

That is, we can account for the objective reality of social class, for the collective life of a group of individuals *as members of a class*, by reference to a horizon of shared experience that always bears the imprint of production and class relations: the "spontaneous," "pre-critical," and "ambiguous" modes of

---

21. Meiksins Wood, E., *Democracy Against Capitalism: Renewing Historical Materialism* (2003), pp. 95–97, Cambridge: Cambridge University Press.

representation—fragments of the past, local tradition and culture, ancient and popular forms of religiosity, shared beliefs, values, and norms—which are at the same time a repository or memory of collective struggle. Here lies the class imprint of their "rational kernel."

This brings us back to the Gramscian notion of "senso comune," and to the recognition that it is only on the basis of this pre-critical collective experience, of these partial representations bearing the mark of the popular classes, that *class consciousness* can be built as a total perspective that rises above the partial and fragmentary (and that, therefore, the sphere of *popular representation of the world* cannot be dismissed as mere "false consciousness"). And, of course, it also allows us to go somewhat deeper into the question of religion proper and its possible dialogue with the Marxist tradition. Here the perspectives of authors such as Benjamin and Mariátegui acquire their full significance: they challenge the understanding of Marxism as a cold and objective science and instead reclaim its incorporation of faith, religiosity, and image—that is, representation—as reserves of the historical memory of the oppressed and of the hope of redemption, which provide Marxism with a moral compass, as well as repositories of utopian energy and revolutionary mysticism, which provide it with impetus and political will.[22] The road to truth, to understanding the social order of which we form a part and our place within it, must pass through this collective experience.

It is in this way, on the one hand, that the tradition of the popular classes is wrested from the clutches of "conformism"—from its alignment with the interests of the appropriating classes—and placed at the service of revolution—of the interests of the producing classes—and, on the other, that Marxism ceases to be a mere sociology and becomes a revolutionary theory that speaks a language that makes sense to (and provides meaning for) the oppressed masses. At this point it largely joins hands with Gramsci, who understands it as a necessary revolutionary task for Marxism to abandon vain and pedantic intellectualism and incorporate the dimension of faith and feeling inscribed in the *senso comune* of the masses, so that it may take root among

22. See Benjamin, W., *Tesis sobre la historia y otros fragmentos* (2008), Mexico City: Editorial Ítaca. See also Mariátegui, J.C., "El hombre y el Mito," in *El Alma Matinal y otras estaciones del hombre de hoy*. Accessed August 8, 2026: https://www.marxists.org/espanol/mariateg/oc/el_alma_matinal/paginas/el mito y el hombre.htm. Like Amin, and several decades earlier, Mariátegui describes the human being in "El hombre y el Mito" as a "metaphysical animal": "But man, as philosophy defines him, is a metaphysical animal. One cannot live fruitfully without a metaphysical conception of life. Myth moves man in history. Without a myth, human existence has no historical meaning."

them as a new form of materialist or secular religion capable of raising them from spontaneous feeling toward *critical or class consciousness*. Here the Communist Party (or the revolutionary organization, whatever its name) would do well to take the Catholic Church as a model of discipline, organization, and reach among the masses, while at the same time aspiring to contest with it the "conquest of souls."

VII

But we must go further. A few lines above we mentioned the intrinsically religious logic of representation, and how this implies a certain inherently religious quality of the social nature of the human being. We also briefly noted, however, that if anything can still be maintained from the secularization thesis, it is the gradual *institutional differentiation* between the secular and religious spheres. But if in a certain sense the entire social realm is religious, how can this difference be accepted? Moreover, we also argued that the available evidence suggests that, contrary to what Marx and others thought, the disappearance of misery and class antagonism will not bring about the elimination of *religiosity in general*, nor replace it with a Marxism transformed into a secular religiosity. The radical transformation of relations of production and property—and of the social alienation to which they give rise, including religious alienation—does not eliminate the natural limitations of the human condition and the universal experience of its finitude (what we have called *existential alienation*).

First, then, we might sociologically distinguish a religious social sphere, institutional and normative, differentiated from other secular social spheres by its administration of the *sacred*, defined by its opposition to the profane or everyday and regarded as worthy of absolute veneration and respect because of its connection with the divine or transcendent. The experience of the sacred is consigned to faith and religiosity, while religion as an institution establishes the parameters, norms, and rites for its proper veneration within a community of believers. Religion as a differentiated social sphere is structurally integrated into the capitalist social totality. Second, we can speak of religion in terms of the religiosity intrinsic to the logic of representation, inherent in the experience of consciousness within the capitalist social order (and perhaps within every class society): the products of human social activity become independent of human beings themselves, become social structures and forces beyond their

control, and therefore appear to consciousness as autonomous, automatic, and dematerialized. The profane world of things, insofar as it gains power over (and a value superior to) human life, becomes a fetishized or sacralized world. Here we can speak of a *profane, alienated, or fetishistic religion*, whose cult of things defines the everyday experience of individuals under capitalism.[23] Religion as a socially differentiated sphere of capitalism can be, and often is, part of this profane religion. Finally, there is what I have at times called "religiosity in general." Marxism, as a critique of political economy, must perform the function of desacralizing this world of things, dissolving false appearances by revealing their origin in the concrete activity of human beings, exposing and denouncing the idolatrous and sacrificial attitude inscribed in capitalist social life. But what is revealed as appearance—as abstraction—does not disappear, even if individuals can become conscious of its worldly origins. And even if the material causes of social alienation are transcended through the abolition of the prevailing mode of production, the experience of finitude that defines the human animal remains. The experience of the absolutely other, of faith in the absolutely otherworldly and transcendent, remains an open possibility for individuals even after the critical elevation of consciousness. Marxism and its prophetic denunciation of fetishistic religion, then, if it succeeds in taking root among believing masses, opens the possibility of a transfiguration of faith, of a non-alienated or critical religion.

Here liberation theology, as outlined by Father Gustavo Gutiérrez, can shed some light on what such a non-alienated religion might be. For Gutiérrez, paraphrasing Sartre, Marxism "as the formal framework of all philosophical thought today" makes possible a Christian revaluation of the human, an encounter and reunification with God in history. Marxism's insistence on social injustice and the struggles of oppressed classes forces theology to enter into dialogue with it.

The demand to realize justice in this world, and the elevation of the consciousness of the masses into *class consciousness*, leads to a reevaluation of Christian eschatology: the conflictual character of history must be recognized;

---

23. A fetishistic religiosity which, for Enrique Dussel, is necessarily satanic, not only because it propagates and normalizes (or normativizes) sin—the rupture of the human being with their neighbor and with God—but because it consecrates the Kingdom of This World and the worldly god (capital), placing them above God and His Kingdom (as well as above the human being, who is made in the image and likeness of God). This is the principal argument outlined by Dussel in *Las metáforas teológicas de Marx*, where he maintains that Marx's work contains a "negative implicit theology," composed of metaphors that, without affirming the existence of God, expose the satanic and idolatrous character of the capitalist social order (see *Las metáforas teológicas de Marx* (1993), Pamplona: Editorial Verbo Divino).

the beneficiaries of oppression must be denounced; it must be made explicit that sin lies at the root of the material structures that perpetuate domination, exploitation, division, and conflict, and that these structures have clear beneficiaries and perpetrators. The evils of this world are not a mere calamity: their origin is sin, and sin, in Christian doctrine, is nothing other than the intentional rupture of the human being with their neighbor (who is made in the image and likeness of God) and, consequently, with God. For this reason, if Salvation entails restoring human fraternity and communion with God (that is, *salvation from sin*), the path toward it must begin in this world, in the radical transformation of those conditions that perpetuate injustice and domination. It therefore also entails the prophetic exercise that breaks with (social) alienation and idolatries, with the fetishes that consecrate and justify established worldly orders and structures.[24]

But here lies the crucial difference between liberation theology and Marxist materialism: for the former, the history of Salvation is not exhausted in political praxis; the Kingdom of God cannot be reduced to the revolutionary project. The believer's political involvement, their revaluation of historical praxis, is part of their prophetic activity, of their desacralization of the profane; but the construction of the Kingdom of God requires permanently sustaining a dialectic between transcendence—the future fullness that no political project can ever completely realize, "the promise" of Salvation in Christ—and what is possible within present reality, committed praxis in the here and now. Marxism and critical or non-alienated religion can converge in their struggle against worldly injustice, but they cannot become indistinguishable.

If the modification of historical conditions necessarily modifies the social forms and manifestations of religious representation and of the entire lived experience of social agents—adapting them to the historical particularities of the mode of production and class antagonism—then Marxism, as the conscious theoretical systematization of the experience of struggle of the oppressed, necessarily opens the possibility of a reinterpretation of religious dogma in a revolutionary key. This would not apply only to Christianity: insofar as religion in class societies is never a monolithic entity, but diversifies into multiple class forms and manifestations, the critical elevation of the consciousness of believing masses—beginning from the "rational kernel" rooted in religious representation, from that part of it which constitutes a protest against injustice—can give rise to a non-alienated faith, one that desacralizes the social

24. Gutiérrez, G., *Teología de la liberación. Perspectivas* (1975), pp. 193–241, Salamanca: Ediciones Sígueme.

totality by opposing to it the sacred as a transcendence that always lies beyond it, and impels the believer to struggle against domination in this world.

VIII

A few final considerations. As has been said, the convergence of Marxism and non-alienated religion in the struggle against injustice and idolatry does not imply their mutual assimilation, for the reasons already established. But there is an additional question: the radical transformation of the social relations of production and property, with a view to abolishing class antagonism, requires Marxism to seize and consolidate power. If Marxism does not wish to remain a theoretically radical but practically impotent critique, it must take this step. The creation of a revolutionary government of the oppressed necessarily places Marxism in the position of a state ideology, with all the risks this entails for its critical edge. This is an inescapable horizon if the aim is to make human emancipation a reality.

By contrast, although non-alienated religion impels the believer toward revolutionary political praxis aimed at the radical transformation of society, religion itself—as the administration of the sacred—must remain within the limits established by the modern differentiation of social spheres. That is, if it is not to fall into the idolatry it must permanently denounce, non-alienated religion can never identify itself with the state. Within the horizon of a revolutionary process, it must maintain its prophetic role: its permanent denunciation of the sacralization of the worldly. This can benefit the revolutionary government, functioning as a permanent stimulus, a moral conscience calling it to keep its revolutionary spirit alive against dogmatism, bureaucratism, and corruption. Ultimately, however, within the hypothetical coordinates of a revolutionary process, with all the internal and external difficulties it confronts, relations between revolutionary government and non-alienated religion will necessarily remain in tension. And while prophetic critique can be a good for a society seeking emancipation, under certain historical conditions the survival of the revolutionary process may require limits to be placed on a critique that risks becoming pure criticism (which would necessarily strip it of practical efficacy). The limit of this prophetic praxis, then, is not theological but political: the question is not whether prophetic critique is “right” in the abstract, but whether, in a concrete historical context, its exercise can endanger the gains of the revolution. In each

conjuncture, the exercise of power forces a decision as to when such critique is a stimulus and when it is an obstacle. And that is a decision only revolutionaries—atheists and believers alike—can make.

Quentin Tarantino and the Political Economy of Cinematic Violence

Jonathan Brown[1]

1. Jonathan Brown is a historian and sociologist who serves on the Department of Education of the American Communist Party. He is the managing editor of *Red America* journal.

Introduction

During the promotional campaign for *Django Unchained*, acclaimed filmmaker Quentin Tarantino sat for an interview with Channel 4 News presenter Krishnan Guru-Murthy and articulated, perhaps unintentionally, a revealing contradiction at the center of his conception of cinema.[2] On the one hand, Tarantino enthusiastically attributed real social power to the film, arguing that *Django Unchained* was changing the national conversation about slavery and racism, giving black audiences the kind of action hero that Hollywood had historically denied them. Yet when Guru-Murthy pressed Tarantino on whether images of graphic violence might possess consequences beyond the movie theater, the director abruptly rejected the premise. "I'm shutting your butt down!" Tarantino declared, angrily refusing to entertain the question. The contradiction is difficult to miss. While Tarantino acknowledges that onscreen racial representation carries genuine social weight, he simultaneously dismisses the idea that graphic film violence exerts any comparable influence on real-world behavior.

The debate over violence in Tarantino's films is not peculiar to *Django Unchained*. From *Reservoir Dogs* onward, Tarantino's films have generated recurring controversy over sadism, torture, mutilation, spectacular bloodshed, and violence staged for laughter and pleasure.[3] Tarantino's characteristic response to this debate focuses on aesthetics, rather than morality or sociology. Asked why he feels compelled to depict gruesome violence so graphically, Tarantino replied simply: "because it is so much fun!"[4] Violence, in this formulation, belongs to the language of cinema itself. It is exciting, pleasurable, spectacular, and no more inherently suspect than songs in a musical or jokes in a comedy. Under this logic, cinematic violence is pleasurable because it is artificial, humorous, excessive, and deliberately detached from the ordinary moral gravity of social life. Bloodshed becomes cinematic material to be sampled, exaggerated, rearranged, and consumed by audiences.

Yet Tarantino's defense of violence as mere aesthetics is difficult to square with the recurring theme in his films of violent revenge as a form of empowerment.

Particularly from the 2000s onward, Tarantino's films follow a recognizable moral structure, employing gruesome violence as a narrative means of empowering victims to take revenge on their abusers. In *Kill Bill*, the woman brutalized by men becomes the warrior who destroys them. In *Inglorious Basterds*, Jews victimized by Nazism become the Nazi killers. In *Django Unchained*, the slave becomes the cowboy gunslinger who annihilates slaveholders. Violence in these films is therefore not simply meaningless spectacle. It becomes the mechanism through which victimhood is overcome. Tarantino's cinema thus oscillates between two apparently contradictory propositions: violence as empty aesthetic commodity and violence as emancipatory revenge.

This essay contends that the dual nature of violence in Tarantino's work corresponds to two interconnected phases in the cultural evolution of U.S. capitalism: the postmodern framework of the 1990s and the neoconservative ethos of the post-9/11 War on Terror. Far from being mutually exclusive, the treatment of violence as a commodified spectacle and as a means of emancipatory retribution jointly reinforce core ideological tenets of U.S. imperialism. The widespread appeal of Tarantino's filmography stems directly from its resonance with a dominant capitalist ideology that decouples violent acts from their foundational social context. This critique does not suggest a deliberate or calculated attempt by Tarantino to craft cinema in service of imperialist aims. Rather, a Marxist perspective sidesteps questions of individual authorial intent, focusing instead on anchoring the pleasurable and symbolic dimensions of cinematic violence within the broader political economy from which they emerge.

Pulp Fiction as Postmodern Pastiche

Although Tarantino's debut film, *Reservoir Dogs*, solidified him as a filmmaker of unusual stylistic confidence, *Pulp Fiction* made him culturally definitive. Released in 1994 to enormous critical and commercial success, the film rapidly became one of the emblematic works of American cinema in the 1990s.[5] Ostensibly, *Pulp Fiction* is a crime film. Its title openly invokes the cheap pulp magazines of the early twentieth century from which American hard-boiled

5. Gail Kinn and Jim Piazza, *Greatest Movies Ever: The Ultimate Ranked List of the 101 Best Films of All Time!* (New York: Black Dog & Leventhal, 2008), 309–11.

crime fiction emerged.[6] The significance of *Pulp Fiction* lies less in the originality of its subject matter than in what Tarantino does with it. Gangsters, hitmen, *femme fatales*, underworld violence, double-crosses, guns, and drugs were already familiar elements of American crime fiction and film noir. Tarantino's innovation consists in detaching these inherited forms from their earlier social and moral foundations and recombining them as *style*. The film's nonlinear narrative, abrupt shifts in tone, eclectic soundtrack, extensive pop-cultural dialogue, genre mixing, and self-conscious intertextuality transform crime and violence into a collage of cultural references. The result is not social realism but postmodern pastiche.[7]

Nowhere is this transformation clearer than in Tarantino's treatment of violence. In *Pulp Fiction*, violence is repeatedly staged as spectacle. It is shocking, grotesque, comic, pleasurable, and above all cinematic. A man's head is accidentally blown apart in the back seat of a car, and the event immediately becomes the setup for an extended comic sequence about cleaning blood and brain matter from the upholstery. A heroin overdose becomes frantic slapstick. Shootings, beatings, threats, torture, and mutilation appear alongside discussions of hamburgers and foot massages. Violence enters the film not primarily as a social problem requiring explanation, but as another aesthetic register through which Tarantino produces surprise, laughter, excitement, and entertainment. This is precisely the conception of cinematic violence Tarantino has repeatedly defended in interviews. Violence, for him, is part of the pleasure of cinema. It is "fun."

This creates a rather drastic contrast with the tradition of hard-boiled detective fiction from which Tarantino borrows so heavily. In the early twentieth century, cheap, mass-produced pulp magazines such as *Black Mask* also employed violence, crime, gangsters, corruption, and lurid subject matter.[8] But these elements did not exist merely as decorative images. At its strongest, hard-boiled fiction understood violence as a means of representing social reality. This can be seen clearly in the works of quintessential crime fiction writer, Raymond Chandler. In his seminal work, "The Simple Art of Murder,"[9] Chandler argued that crime cannot be separated neatly from respectable society

9. Raymond Chandler, *The Simple Art of Murder* (Boston: Houghton Mifflin, 1950).

because corruption penetrates the institutions that claim to oppose it. We live in a world in which "gangsters can rule nations and almost rule cities" and where murder becomes "the coin of what we call civilization."[10] For Chandler, violence derives its meaning precisely from the social relations that make human life cheap. Murder is not valuable because it produces an exciting image. Its literary significance lies in what it reveals about our social world.

This sentiment could hardly be further removed from Tarantino's sensibility. *Pulp Fiction* inherits the external forms of hard-boiled detective fiction while abandoning the social realism that made the genre meaningful. He retains the gangsters and the guns, but these forms have no basis in social reality – they are merely references to previous films, television programs, songs, advertisements, and genre conventions. Tarantino's gangsters do not emerge from an investigation of organized crime as a social institution. His hitmen do not illuminate the political economy of violence. His criminals exist primarily as cinematic types. Violence, in *Pulp Fiction*, is merely an empty reference to other cultural objects.

Pulp Fiction therefore exemplifies postmodern filmmaking.[11] Its pastiche, fragmentation, intertextuality, nostalgia, irony, and collapse of historical depth corresponded to a society increasingly saturated by commodities, images, media, advertising, and recycled cultural forms. The bloodshed in *Pulp Fiction* is detached from social explanation, stripped of historical depth, transformed into style, and sold back to the audience as pleasure. The film's celebrated postmodernism is inseparable from this evacuation of meaning. Whereas the original pulp magazines were a reflection of the early twentieth century conditions of Prohibition and the Great Depression, Pulp Fiction reflects the cultural logic of late capitalism. Postmodernism corresponds to a neoliberal political economy in which public institutions have been privatized, manufacturing jobs have been outsourced, and all that is left is individualistic subjectivity. At the supposed "end of history," when neoliberal capitalism proclaimed itself as triumphant, Tarantino constructed a cinematic universe in which history itself had become recyclable cultural material and violence had become one more commodity among the debris.[12]

Kill Bill and the War on Terror

The triumphalism of the 1990s proved short-lived. The attacks of September 11, 2001 produced a profound rupture in American political consciousness. The apparently unchallengeable center of a unipolar world order had experienced spectacular violence on its own territory. The optimism of permanent liberal-capitalist triumph gave way to the language of enemies, security, retaliation, and endless war. Violence consequently assumed a different ideological function. Violence inflicted upon the United States was barbaric; violence exercised by the United States in retaliation was justice. The victimization of America authorized revenge. The War on Terror gave this logic a political vocabulary. American military force was presented not merely as retaliation but as liberation: wars, occupations, and regime change were justified through appeals to freedom, democracy, human rights, and opposition to tyranny.

A corresponding transformation appeared in Tarantino's cinema. His postmodern aesthetic remained intact after 9/11: exaggerated bloodshed, genre pastiche, cinematic quotation, and violence as entertainment all continued unabated. What changed is the moral architecture of that violence. After 9/11, Tarantino increasingly organized his stories around a recurring sequence of victimization leading to violent revenge and empowerment. In this narrative, the victim achieves liberation by turning violence back upon the oppressor. In Tarantino's films after 9/11, grotesque violence employed in service of revenge is portrayed as emancipatory.

The use of retaliatory violence in service of emancipating the oppressed found its political expression with the doctrine of "intersectional imperialism."[13] This reflected a broader ideological convergence between the liberal politics of diversity and the neoconservative politics of preemptive wars of aggression. Under this logic, diversity and inclusion become tools to legitimize U.S. imperialism under the banner of progressivism. Intersectional imperialism has two key components. First, it involves efforts to portray the military industrial complex as progressive so long as the ranks of its institutions are made up of historically oppressed groups, such as women, LGBT people, and people of color. This can be seen, for example, in efforts by the military contractor Raytheon being praised by human rights groups for its inclusive policies

13. Alex Rubinstein, "Intersectional Imperialism: A Wholesome Menace," *RT*, March 21, 2021, https://www.rt.com/op-ed/518645-intersectional-imperialism-wholesome-menace/?utm_source=chatgpt.com.

towards transgender employees.[14] The second component of intersectional imperialism involves the justification of U.S. military aggression on the grounds that it is being wielded in defense of oppressed populations, such as women or LGBT groups. This can be seen in the attempts to use women's rights as a justification for war against Iran, or with Israel's long-standing attempts to use gay rights as a rationalization for genocidal policies against the Palestinians. There is an interesting historical parallel here with nineteenth century justifications for imperialism, which typically portrayed it as a progressive force on the grounds that Western colonialism was part of a "civilizing" mission. In the twenty-first century, imperialism is justified as progressive on the basis of democracy, human rights, diversity, and the protection of underrepresented groups.

In his films produced after 9/11, Tarantino repeatedly used a narrative structure centered around violent revenge that was a near-perfect reflection of the dominant cultural logic of the War on Terror. In *Kill Bill*, released in two volumes in 2003 and 2004, provides a revealing example. In this film, Tarantino intensifies his postmodernism with a vast pastiche of samurai cinema, kung fu, spaghetti westerns, exploitation films, anime, revenge pictures, and popular music into a blood-soaked, epic revenge fantasy. Limbs are severed, eyes gouged out, heads removed, and blood erupts from bodies in impossible torrents. Action scenes transform mass murder into an elaborate exercise in choreography and visual excess in a scale far beyond anything depicted in Tarantino's 1990s work. But *Kill Bill* adds what *Pulp Fiction* largely lacked: an explicit moral justification for the spectacle. The film's protagonist – referred to as "the Bride" – is established first as a victim. A former assassin attempting to abandon her previous life, the Bride is betrayed by her colleagues, beaten, shot, deprived of her child, and left for dead. *Kill Bill* chronicles her extended campaign of revenge. With each killing, the original relation of power is reversed, and soon the woman who was victimized becomes the executioner.

Tarantino himself explicitly described the film's gratuitous violence in the language of female empowerment. When asked whether the film carried a feminist message, he characterized its politics as "girl power" and argued that female audiences would feel empowered by the Bride.[15] The violence therefore cannot simultaneously be dismissed as merely meaningless "movie violence."

15. Nostalgia Fan, "Quentin Tarantino Argues About Movie Violence."

Tarantino himself assigns the spectacle social significance: the woman's capacity to inflict violence represents her power. Yet this empowerment remains entirely abstracted from the social relations of women's oppression. The Bride is not confronting economic dependence, exploitative labor, or any recognizable structure of social power. She is an elite assassin transformed into a superhuman warrior. The social world the Bride inhabits is also one that bears virtually no relation to the lives of the actual women who are the target audience for the film.

With *Kill Bill*, Tarantino has taken the postmodern abstraction identified in *Pulp Fiction* and moralized it. Bloodshed can now be both "fun" and emancipatory; mutilation can function simultaneously as spectacle and empowerment. What *Kill Bill* still lacks is history. Its revenge fantasy takes place inside a cinematic universe largely detached from concrete social reality. Tarantino's subsequent films would address this issue by portraying the same structure of the violent revenge fantasy but projecting it onto actual historical catastrophes.

Inglourious Basterds and the Muscular Jew

With *Inglourious Basterds*, Tarantino carries the moral architecture established in *Kill Bill* into history itself. The formula remains the same – victimization, revenge, violent reversal, empowerment – but the stakes are now much greater. Whereas the Bride's revenge unfolded inside an artificial "movie universe," *Inglourious Basterds* uses fascism, the Nazi Holocaust, and the Second World War as the setting for a postmodern revenge fantasy. The film constructs this fantasy by chronicling the exploits of "The Basterds" – a fictional battalion of Jewish-American soldiers whose mission is not simply to defeat the Nazis but to hunt them down and brutally terrorize them. In a rousing speech delivered in the film by the unit's commander, Lt. Aldo Raine, the soldiers are encouraged to be "cruel" to the Germans, leaving them "disembowelled, dismembered, and disfigured." Lt. Raine goes on to tell his unit, "when you join my command, you take on debit. A debit you owe me personally. Each and every man under my command owes me one hundred Nazi scalps. And I want my scalps."[16] For the next two hours, the audience delights in the spectacle of the Basterds carrying out their brutal mission, as they hunt down their prey, carve swastikas into their foreheads, and torture them to death. One character, known as the Bear Jew, gleefully bashes in Nazi skulls with a baseball bat while celebrating

16. Quentin Tarantino, *Inglourious Basterds* (Universal Pictures, 2009), film.

as if he just hit a home run at Fenway Park. Tarantino uses all his powers as a director to turn this grim mutilation into spectacular entertainment.

The film's climax brings Tarantino's conception of violence and cinema together completely. Hitler, Goebbels, and other Nazi leaders gather in a movie theater to watch a propaganda film. The Basterds machine-gun the Nazi officials and mutilate Hitler's corpse before burning the theater to the ground. Cinema has literally destroyed Nazism. This is the culmination of Tarantino's postmodern conception of history. In *Pulp Fiction*, social reality had already been displaced by intertextuality: movies referred to other movies, genres to other genres, images to other images. In *Inglourious Basterds*, cinema no longer merely supplies the raw material for another movie. It conquers historical reality itself. The actual causes, contradictions, struggles, and enormous human costs of the Second World War are rewritten according to what feels emotionally satisfying on screen. Rather than asking what fascism was, why it arose, or what social forces defeated it, Tarantino asks a different question: wouldn't it feel good to watch Jews machine-gun Hitler?

Of course, this is not to say that we should feel any sympathy for Nazis. Quite the contrary. Inglorious Basterds is successful as a film because it allows audiences to feel cathartic release by witnessing Jews – the historical victims of fascism – get the one-up on their oppressors. But beneath the catharsis, Tarantino's film is shallow, and even deceptive, in that it prevents us from exploring the actual social relations that produced fascism, reducing it instead to "evil monsters." But fascism was not simply the presence of exceptionally evil men wearing swastikas. It emerged from definite historical conditions: capitalist crisis, class conflict, imperialist rivalry, militant nationalism, and the determination of sections of the bourgeoisie to smash organized labor and the communist movement. Georgi Dimitrov famously described fascism as the "open terrorist dictatorship" of the most reactionary elements of finance capital.[17] Tarantino strips away this political economy and turns Nazis into perfect cinematic villains – sadistic, racist, murderous, and therefore deserving of whatever violence the Basterds inflict upon them.

Tarantino similarly obscures the actual history of fascism's defeat. Cinema did not save the world from Nazi Germany; the Soviet Union did. The defeat of Nazism did not come from a small group of extraordinarily violent individuals

17. Georgi Dimitrov, *The United Front Against Fascism and War: The Fascist Offensive and the Tasks of the Communist International in the Fight for the Unity of the Working Class Against Fascism* (New York: Workers Library Publishers, 1935).

exacting personal revenge. Its defeat required mass armies, industrial mobilization, partisan resistance, organized anti-fascist struggle, and staggering civilian sacrifice. Above all, Tarantino's fantasy displaces this larger sacrifice. Most crucially, twenty-seven million Soviet citizens died during the war, while the Red Army bore the principal burden of destroying German military power and ultimately captured Berlin. Tarantino replaces this history with individualized cinematic agency. The collective social struggle against fascism is nowhere to be found in *Inglorious Basterds*. Instead, a narrative of individual acts of violent revenge is all that remains. In this sense, *Inglorious Basterds* represents the post-9/11 revenge fantasy elevated to the level of world history.

There is a real danger in Tarantino's abstraction of Nazism from political economy. Once fascism is reduced to a metaphysical embodiment of evil, detached from the historical social relations that produced it, "Nazism" itself risks becoming an empty signifier available for whatever political enemy requires demonization. This can be seen in the way in which the invocation of the threat of Nazism is used as one of the chief justifications for launching wars of aggression. In the decades following World War II, the U.S. has repeatedly invoked the imagery of Hitler and Nazi Germany to legitimize military aggression against states that obstruct American geopolitical dominance. Russian president Vladimir Putin is compared to Adolph Hitler.[18] The Islamic Republic of Iran is likened to Nazi Germany[19]. Bashar al-Assad has been described as perpetrating atrocities on a scale unseen "since the Nazis."[20] In each case, historical specificity disappears beneath a familiar moral drama: the enemy becomes Hitler, and American military aggression becomes another anti-fascist crusade. Tarantino's treatment of Nazism reproduces the same ideological structure. Just as *Inglourious Basterds* invites the audience to experience spectacular violence as self-evidently righteous once its target has been identified as Nazi, American imperial ideology repeatedly invokes the specter of fascism to present military confrontation and intervention as morally necessary. The logic of *Inglourious Basterds*, then, exceeds the boundaries of historical revenge fantasy. It reproduces one of the central ideological

mechanisms through which U.S. imperial violence is legitimized: first transform the adversary into Hitler, and the violence directed against him can appear as liberation.

There is also a striking parallel between Tarantino's portrayal of the Basterds as "tough" Jews who answer anti-Semitism with overwhelming violence and the ideology of Zionism. Early Zionist ideologues frequently demonized and stereotyped Diaspora Jewry through overtly anti-Semitic imagery, portraying the Diaspora Jew as weak, passive, bookish, slightly neurotic, and incapable of protecting himself.[21] This was seen as the antithesis of the strong, virile sort of Jew that the Zionists wanted to promote. In fact, Zionists frequently argued that Diaspora Jews brought anti-Semitism on themselves due to their backwards, degenerated character.[22] Instead, the Zionist movement advocated for the negation of the Diaspora in order to create a "New Jew" who would be physically powerful, armed, self-reliant, and militarized – what Max Nordau famously called the "muscular Jew."[23] *Inglourious Basterds* essentially reproduces this Zionist ideology at the level of fantasy. The Basterds overcome Jewish powerlessness not through revolutionary class struggle or the prophetic Jewish traditions of justice and peace, but by becoming even more terrifying than their Nazi enemies. What remains is a "Judaism of the sword," in which empowerment is measured by the capacity to wield violence.

Django Unchained: Slavery Without Political Economy

If *Inglourious Basterds* rewrites the destruction of Nazism as a postmodern revenge fantasy, *Django Unchained* applies the same formula to American slavery. Once again, Tarantino takes a genuine historical system of oppression and transforms it into the setting for individualized violent emancipation, filtered through the cliches of the Spaghetti Western genre. In Tarantino's world, the formerly enslaved protagonist is portrayed as a lone gunslinger motivated by personal retribution rather than a desire for the abolition of slavery as an institution.

In *Django Unchained*, Tarantino certainly depicts slavery as monstrous. Slaveholders are sadistic, slaves are whipped, tortured, humiliated, separated from loved ones, and treated as property. The film's primary antagonist, plantation owner Calvin Candie, embodies the slaveocracy with grotesque personal cruelty, and the audience is meant to despise him. But beneath the cruelty and barbarism, Tarantino never bothers to ask a more fundamental question: what was slavery? As political-scientist Adolph Reed, Jr. observed, "*Django Unchained* trivializes slavery by reducing it to its most barbaric and lurid excesses. Slavery also was fundamentally a labor relation."[24] In other words, slavery was not simply an accumulation of racist attitudes and individual acts of barbarity. It was a system of property relations organized around coerced labor that was used to produce commodities for the world market and generate enormous wealth through plantation agriculture. To be sure, violence was essential to this system because violence enforced the underlying relation of production. The whip, the patrol, the auction block, imprisonment, and the threat of death were instruments through which one class compelled the labor of another. But the primary purpose of slavery was the production of cotton, tobacco, and other cash crops, not brutality for the sake of brutality. This political economy is largely absent from *Django Unchained*.

In a similar fashion, Django's quest for emancipation is filtered through the lens of an individualistic quest for vengeance. His objective is not the destruction of slavery as a social system but the rescue of his wife, Broomhilda. As Reed, Jr. observes, "Django is no insurrectionist. His singular focus from beginning to end is on reclaiming his wife from her slave master."[25] To aid in this quest, Django acquires the new clothes, weapons, confidence, mobility, and lethal competence as a gunslinger. In quintessential postmodern fashion, Tarantino transplants the mythology of the Western onto the Antebellum South. Traditionally, the Western genre resolves conflict through the exceptional individual. Justice is achieved through courage, mastery of violence, and ultimately the gun. *Django Unchained* places a former slave into this mythology and presents that reversal as emancipation. The excluded subject gains access to the role of the violent hero, while the underlying conception of liberation remains unchanged.

25. Reed, "*Django Unchained*, or, *The Help*."

In the process, Tarantino erases the actual historical processes and events that led to the destruction of American slavery. *Django Unchained* has no place for slave insurrections, abolitionist movements, sectional crisis, the Civil War, or the Reconstruction. The film offers no insight into the action revolutionary class struggle against the plantation owner class in the American South that was necessary to defeat slavery. Instead, this collective struggle is replaced with a cowboy revenge fantasy. This is where *Django Unchained* mirrors the logic of intersectional imperialism. The film's narrative does not offer anything remotely resembling a coherent analysis of the Antebellum South. Instead, the purpose of the film is to use the imagery of the American South as a backdrop for a story about racial representation. For Tarantino, the great victory is recasting the Western gunslinger as a black man. Just as *Kill Bill* gave women an "avenger," *Django Unchained* gives audiences a cowboy hero from a racial background that has historically been excluded from the mythology of American individualism. In this sense, the diversification of cowboy mythology serves as a replacement for the actual collective struggle that abolished slavery. *Django Unchained* therefore completes the progression that began with *Kill Bill* and *Inglorious Basterds*. Violent revenge becomes synonymous with empowerment, and the transformation of society is replaced by the reversal of who gets to wield the weapon.

Conclusion

We can now return to the contradiction with which this essay began. When Krishnan Guru-Murthy asked Tarantino whether cinematic violence might possess consequences beyond the movie theater, Tarantino rejected the premise. Violence was cinema: artificial, pleasurable, entertaining. Yet Tarantino has simultaneously insisted that cinema can possess enormous social power in the form of diversity, representation, and a form of empowerment that comes from violent revenge that can symbolically reverse historical oppression. Tarantino's seemingly contradictory attitude towards cinematic violence is rooted in a postmodern neoliberal conception of politics that reduces violence to either aesthetics or individual moral psychology. What disappears in both cases is the actual political economy of violence itself.

The problem with Tarantino's conception of violence as aesthetics is not simply that all art should be wholesome, pure, and free from images of brutality. Rather, the problem is that Tarantino's aestheticization abstracts violence its

material causes and consequences. Chandler and other great writers of hard-boiled detective fiction did not shy away from graphic violence in their stories – but they insisted that violence meant something about the social order in which it occurred. In Tarantino's films, violence simply becomes an object of consumption in itself.

Just as the capitalist mode of production fetishizes a finished commodity while concealing the social relations through which it was produced, Tarantino's cinema performs an analogous operation upon violence. The audience receives the finished image – the gunshot, the mutilation, the blood splatter – while the social relations that make violence possible disappear behind its spectacular form. Violence itself becomes a commodity. This matters because violence does not exist outside of political economy. Capitalism rests upon exploitation enforced through institutions of property and state power, while imperialism reproduces economic and geopolitical domination through military force on a global scale. For much of the American population, however, this organized violence remains distant from ordinary experience. Bombing, occupation, sanctions, military bases, covert operations, and drone warfare overwhelmingly occur somewhere else. The violence necessary to reproduce American power can therefore remain materially real while appearing abstract. Tarantino's cinema provides an aesthetic analogue to this condition: violence appears everywhere on the screen, but the social relations producing that violence are nowhere to be found.

After 9/11, Tarantino did not reject the aesthetic commodification of cinematic violence. Instead, he added a moral dimension to it. Tarantino's attempt to moralize violence rested entirely upon neoliberal assumptions, rooted in individualism and representational politics of diversity and inclusion. Tarantino's post-9/11 filmography demonstrates virtually no concern with the social relations that produce violence. Instead, Tarantino is fixated on who is morally entitled to wield violence. In this moral framework, victimhood authorizes retaliation, and this retaliation becomes empowerment. The Bride, the Basterds, and Django are liberated not through the transformation of the conditions producing their oppression, but through acquiring the ability to inflict violence upon their enemies.

This moralization actually deepens the original abstraction. *Django Unchained* can depict slavery with extraordinary brutality while revealing little about slavery as property, labor, commodity production, law, class rule, and state power. The violence is overwhelmingly visible while the social relation

generating it remains obscured. The same ideological structure permits imperial violence to be judged primarily according to the moral identity of its wielder. The popularity of Tarantino's films resonate with audiences precisely because they reproduce the dominant ideologies of American imperialism in the form of cinematic spectacle. His films mirror the belief that American military aggression is defensive, democratic, and humanitarian. The U.S. is morally justified to wield such violence because it was victimized on 9/11, just as the Bride was victimized in *Kill Bill*. In Tarantino's moral world, violence can simultaneously be commodified as entertainment and sanctified as righteous force. In either case, Tarantino's obsession with moralistic aestheticized violence teaches audiences not to inquire into the social structure behind real world violence because the righteous victim has already established its legitimacy.

As a filmmaker, Tarantino's technical skill is undeniable. Few contemporary filmmakers possess his command of dialogue, suspense, editing, music, genre, or cinematic spectacle. But technique cannot substitute for sociological understanding. In this sense, Tarantino remains one of the most characteristic artists of the postmodern neoliberal order that produced him: an extraordinarily accomplished assembler of cultural forms whose virtuosity is matched by the poverty of his relationship to material reality. Fortunately, the historical moment that produced such vapid forms of postmodern weightlessness is itself passing. American unipolarity is giving way to a multipolar world. The so-called "rules-based international order" led by the U.S. Empire is in crisis. Now more than ever, the social relations obscured beneath vapid postmodernism are again forcing themselves into historical consciousness. Such a world demands more of cinema than violent spectacle and individualized revenge fantasies. The new multipolar age requires an art capable of illuminating the real relations beneath appearances – an art that does not merely show us violence, but helps us understand the world that produces it.

Palestine, Hegemony, and the War for Common Sense

Guy Christensen[1]

1. Guy Christensen is a 20-year-old Marxist content creator and one of the largest pro-Palestine activists in the English-speaking world.

Radicalization and Movement

I've been to a lot of conferences inside the pro-Palestinian movement over the last three years, and one thing I brought to those conferences was the motto that Palestine is the key to everything. I still think that's true.

For me, I was radicalized through learning about the Palestinian struggle for liberation. I learned about American imperialism. I was exposed to the contradictions of the Democratic Party, which I naively believed we could pressure in 2024 to at least make some concessions and end the genocide in order to win. But what I was missing was that they did not even want to win, if that's what it meant.

Eventually, as Gaza turned into a broader issue with the Iran war, as Trump took office, and as domestic struggles emerged around Palantir, Flock cameras, data centers, ICE, and ethnic cleansing, I went to those issues too. Because you have to go where the people are.

And I asked myself: We were able to do something no one thought was possible. We turned Americans toward supporting Palestine more than Israel. No one thought that was possible, and we did it. So why wasn't it reflected in our democracy? Because we don't have one.

The obstacle between us and this ideal of democracy, I found, was the billionaires. It was the same set of actors. When I asked myself, "Who is stopping us from winning on Flock cameras, the surveillance state, or stopping ICE?" the answer was the same every single time: the billionaires. The billionaires.

And so I realized not too long ago that I could either keep lying to myself, or I could go and try to understand Marxism, because everything defining the issues we are dealing with in this country and across the world ties back to class. That's why I'm here today. I've put together some of my thoughts about how I've applied what we did on Palestine to the broader struggle for the liberation of people all over the world.

The War Over Common Sense

When we have a question today, most of us end up turning to a machine. It answers us like an oracle: calm, confident, certain. And more of us every single day, billions and counting, take that answer as simple truth, as common sense.

But there is nothing simple and nothing neutral about it. Behind the AI models, a war is being fought over what they are allowed to tell you. And that war, comrades, is the oldest war in politics. It has simply put on a new face. I want to talk about how we fight it and how we win it.

Here is what the ruling class has understood since long before any of us were born: they have always fought over common sense. Always. Two hundred and fifty years ago, Thomas Paine wrote a pamphlet and called it *Common Sense*. That pamphlet helped build this capitalist republic, and this republic remade the world in its image.

The Epstein class has never once believed this fight was beneath them. They did not just use their capital to secure control over governments and form the state in their interests. They bought the news. They programmed the school system. They bought the airwaves. They built the monopolies, algorithms, and surveillance states that decide what you see and what you are never allowed to see.

You want to know what that looks like? Hegemony in action looks like the CIA murdering thousands of revolutionaries inspired by the Gospel across Latin America through Operation Condor. For what? For the crime of preaching liberation. For believing that Jesus centered the poor and the destitute and would have opposed oppressive systems. That understanding of Christianity had to be replaced with a version that could serve the empire.

Israel is paying millions to train AI chatbots how to talk about Gaza, and it's working. This was a recent headline from *Drop Site News*, describing how Trump's former campaign manager was overseeing an operation posting hundreds of fake blog posts on behalf of Israel, presenting the Zionist imperial narrative with the goal of infiltrating the chatbots we use every day.

We turn to these machines for answers every day. They call this LLM poisoning. If you asked an LLM, and I encourage you to try this later today, "Is it beneficial that the United States continues arming the State of Israel?" you

may get a one-word reply: “Yes.” And the source it provides may come from the same campaign Israel is backing with millions of dollars, from fake blog posts designed to train LLMs in its image.

All of human history, all human information, has been crudely converted into data and algorithms that are becoming a voice that talks to us like a friend and tells us what is true. At every stage, they have fought to own the ground beneath your feet. And they are fighting for it right now.

But I don’t need you to take my word for it. I want you to take theirs. The CEO of Palantir, Alex Karp, a man whose company is deeply embedded in the operating systems of the American Empire and its military, sat down and wrote a book about exactly this. He tells you the plan in plain daylight.

The West needs two things to rule: hard power, the machines Palantir builds, and what he calls soft belief, conviction, culture, a story worth defending. Hard power and soft belief. The gun and the gospel. He isn’t hiding it. He’s bragging.

The book, if anyone wants to look it up, is called *The Technological Republic*. It is marketed as the theory of Palantir. Palantir is the action of that theory.

Hegemony and Propaganda

Then Karp turns to the Left. He turns to us and, in essence, says: You lost the war over soft belief. You abandoned the story. You went silent on culture, on what people need, on what it even means to be a people.

Comrades, when the enemy’s own field marshal writes down our weakness, spells it out, and sells it on the bestseller list, you don’t get offended. You take notes. Because on this, I think he is right.

This is exactly what prompted me to read Gramsci, writing from inside one of Mussolini’s prison cells. He worked out the very thing Karp is bragging about. The ruling class does not hold power by the gun alone. It holds power by making us feel like the only world that could ever exist is theirs. Gramsci calls this hegemony. It is won or lost on the battlefield of common sense.

So let me show you what this war looks like today. The prime minister of Israel has given it a name. He calls it the eighth front. Seven fronts are fought with

bombs. The eighth is fought for your mind. And his government, in partnership with the U.S. Empire, has poured billions of dollars into this struggle.

Israel has created tens of millions of fake American accounts and fake Israeli accounts using artificial intelligence. They aimed them at members of Congress and at us in order to manufacture the illusion that the American people were on board with this genocide, that they were on board with the Iran war, and that they were on board with the destruction of our own rights. Fake students. Fake constituents. Fake concerned citizens. An army of ghosts built to feel like common sense.

Many of us are aware that the House spent its precious time and resources yesterday passing just one law: one that bans boycotts of Israel on college campuses, requires American universities to reaffirm their continued allegiance to Israel every July, and incentivizes our education system to silence students who oppose war crimes and genocide. This is spitting in the face of the thousands of students who have bravely sacrificed to oppose this and who have tried to lead our country toward the future they know we can have.

So imagine what a state with all the information in its databases, a state that calls information a front, with billions of dollars to burn, intends to do to the oracle, to the LLMs that hundreds of millions of people increasingly trust to tell them what is true.

And I think “oracle” is an ironic word to use here. Larry Ellison, who owns Oracle, has spent the last two years expanding his influence over an enormous share of the American media diet: CNN, CBS, *The Free Press*, Paramount, Skydance, TikTok, Warner Bros., and others. And what has he done across these institutions and corporations? He has pushed leadership in a direction ideologically aligned with capitalism and Zionism. He is reprogramming the American media diet in his own image.

This is hegemony. This is poured directly into the machinery of thought to stop Americans from liberating ourselves for the first time in our history. And that is why Gramsci matters. That is why he matters more than ever right now.

So how do we win?

Winning the Battlefield

We win by doing the thing we have always been good at, the thing we have always been best at: winning people. Winning the hearts of the masses.

And we have the capacity to do that. We have the capacity to win the battle over common sense because we just did it for Palestine. For two years, the most sophisticated propaganda machinery ever constructed in human history told its story. It screamed at us through every orifice. And it failed.

It failed to stop the American people from turning to the right side. For the first time, we as a people began asking the question, and more and more Americans began standing with Palestinians rather than Israelis. Israel lost the common-sense war, what Gramsci might call the war of position. They lost it to ordinary people who had something true to say.

And I want you to pay attention to this point, because it is at the core of what I'm trying to argue about Palestine and what we can expand to everything else. There is a saying: Every accusation is a confession.

They scream that we are the violent ones. That is a confession. They scream that we are the threat to democracy. That is their confession.

So how do we do this with everything else? We need to start by understanding what common sense really is. Common sense is not a neat collection of doctrines or slogans. It is a mess. It is everything history has dumped into us as human beings. Everything the ruling class has tried to train us into thinking. All their lies tangled together with what our own lives have already taught us.

The worker who stands by his brother on the job and then votes against himself at the ballot box has two minds in one body. Our job is not to install a completely new idea inside him. He already has it in him. Our job is to drag the truth he already knows to the front, out of all the noise.

And then we press. Because contradictions expose common sense. They let us wage that fight. They open a window for us to breathe into.

They call America the greatest democracy on Earth. And then they jail journalists. They build concentration camps everywhere. They suppress our

free speech. They meet the will of the majority with silence and aggression. We need to press on that contradiction, because it cracks.

They say God belongs to the Right. Then remember that Jesus was a penniless carpenter who spent his entire life practicing mutual aid, serving his people, and delegitimizing the Roman Empire by saying that those who are wealthy and powerful are not wealthy and powerful because they have been blessed by God. In fact, it is the opposite. Press on the contradiction. It will crack.

And this fight isn't just online, or in our unions, or in the churches. It is at the kitchen table. It is on all of our campuses. It is in every conversation and every argument with your uncle.

We do not concede one single inch of ground. Not on patriotism. Not on what it means to be an American. Not on morality. Not on the future. Not one inch.

The Threat of State Power

There is one conceptual thing standing between us and the future I'm describing. They have trained us to be myopic. They have built a world that does not want you thinking in years. It wants you thinking in seconds.

It wants you reacting, panicking, forgetting. Reacting, panicking, forgetting. Again and again and again, until no human being can handle it all. Until no one can keep their footing or remain grounded in the reality of what is happening.

Our people in America and all over the world have been forced into financial precarity, where one missed paycheck can plunge us into the street. Because a people who cannot see beyond next week can never organize for the world we so desperately need.

So don't tell me this is paranoia. Everything is happening so fast right now. I saw with my own eyes the ICE detention center at Delaney Hall in New Jersey, where they are holding people, including children.

They took Mahmoud Khalil. They took Rümeysa Öztürk off the street. They are among the many students whose only crime was speaking up for Palestine, speaking against empire, speaking truth to power and power to the people.

They are door-knocking people who say anything critical of ICE, Palantir, Israel, data centers, Flock cameras, or billionaires. Stephen Miller is counting down the days until he can use NSPM-7 and what has been described as a “pre-crime” directive to round all of us up.

This is what every American has coming for us if we are not willing to struggle. This is deadly serious. And the future is not promised to us.

We’re in Chicago today, and I’m honored to be here. In this city, they murdered Fred Hampton in his bed. He was 21 years old. His only crime was teaching poor people that they had power.

They have always killed the young and the clear-eyed for speaking to the masses. We do not owe them only our grief. We owe them our fight. We owe them our love.

So this is what I’m fighting for. This is why I’m here. And this is what I’m asking every single one of you to fight for: common sense, liberation, and workers.

Marxism in the Age of Social Media[1]

Dr. Carlos L. Garrido [2]

---

1. Keynote speech given on Day two of the 2026 Marxism Conference.

2. Dr. Carlos L. Garrido is a Cuban American Professor of Philosophy who received his M.A. and Ph.D. from Southern Illinois University Carbondale. He serves as the Secretary of Education for the American Communist Party and as a Director of the Midwestern Marx Institute, the largest Marxist-Leninist think-tank in the United States. Dr. Garrido has authored a few books, including *Marxism and the Dialectical Materialist Worldview* (2022), *The Purity Fetish and the Crisis of Western Marxism* (2023), *Why We Need American Marxism* (2024), and the two forthcoming texts, *Domenico Losurdo and the Marxist-Leninist Critique of Western Marxism* (2026) and *Hegel, Marxism, and Dialectics* (2026-7). Dr. Garrido has published over a dozen scholarly articles and over a hundred articles in popular settings across the U.S., Mexico, Cuba, Iran, China, Brazil, Venezuela, Greece, Peru, Canada, etc. His writings have been translated into over a dozen languages. He also writes short form articles for his Substack, @philosophyincrisis, and does regular YouTube programs for the Midwestern Marx Institute channel. He is on Instagram @carlos.l.garrido

Introduction

I want to start off with a basic point which should be familiar to all of you, but as most things, it is of the kind that is easier said than truly understood and done: Marxism is not a series of ready-made conclusions arrived at by Marx, Engels, Lenin and others from the past. If Marxism tells us anything, not just about the world, but about itself, it is that things are constantly changing.

Everything in the world is constantly changing. Everything in society is constantly changing. *Capital*, for Marx, remained an unfinished project precisely because its object of inquiry was constantly developing. Had Marx had Bryan Johnson by his side and been afforded an extra 150 years of life, you can bet his *Capital* would look much different today. Perhaps new prospective volumes would have been added to his unfinished plan of 6 volumes, of which the three volumes of *Capital* that we have today were merely supposed to be book one of six.

This ever-evolving character of Marxism provides it an expansive horizon of growth, of constantly attuning itself to new developments in the world, mapping new terrains of discovery and going back to refine old ones.

But Marxism is not an autonomous machine. Marxism has an extraordinary ability to provide discernment for new contexts, to explain in novel and insightful ways what is going on — often better than the professional bourgeois disciplines which take up the study of the new terrains of social life. But this does not happen mechanically. Real human beings have to invest their energy into the concrete study of the new situation, keeping the general insights of Marxism as heuristic reminders of how things generally operate in the world: by this I mean our own little Marxist Jimmy the cricket reminding us not to pass judgement too quick, ignoring context, processes, contradictions, etc., as reified bourgeois thought tends to do.

But far too often are the Marxist of today content with copying and pasting the analysis of the past lazily into the present. They start with a ready-made "Marxist" mold they want to fit reality into, and quickly explain away those things which can't be neatly jammed in. With the exception perhaps of the Communist Party of China, most of those within my specific lineage of Marxism — Marxism-Leninism — also participate in this mistake, a mistake which could be called dogmatism, an unwillingness to adapt to new forms on the basis of a fixated commitment to old ones. (I have also called this the purity

fetish.) The paradox, of course, is that the best of those old forms were developed through the reverse of dogmatism, through the courageous steps into new territories. By not building upon this inheritance of critical and creative thought, the dogmatists paradoxically are amongst the most revisionist, since they present the *form* of continuity, but the *content* breaks with the creativity of Marxism towards lazy, comforting conclusions arrived at by our forefathers.

Social Media

I think social media is one of these terrains that has radically transformed social life while no Marxist, that I know of at least, has taken the steps to adequately understand what is at stake here. The influence of social media on what is, in my opinion wrongly, labeled the "real world" cannot be undermined.

People in the "real world" are on social media. They don't wait until they're home to unlock their phone from a safe and doomscroll on Instagram. Their phone has turned into a limb, a new organ. They scroll at work, they scroll when they drive, they scroll in bed and fall asleep with a reel looping and their phones smacked on their foreheads. There is no longer a 'real world' we can neatly separate from the influence of social media. The reality of the "real world" is constituted through the virtuality of social media.

I would like to here reference Henri Bergson, a household name in philosophy around the first quarter of the last century, and today largely forgotten. In a speech called "The Meaning of the War," given on the occasion of his election as President of the French Academy of Moral and Political Sciences in 1914, he would explore the war as a product, at least partially, of a technological development humanity had yet to fully understand. He wrote the following:

"Each new machine [is] for man a new organ—an artificial organ which merely prolongs the natural organs—his body became suddenly and prodigiously increased in size, without his soul being able at the same time to dilate to the dimensions of his new body."

It is hard not to think of our contemporary relation to our devices in such a manner. Our phones are new organs which Marxists have yet to understand the scope of its functions and the radical transformations they have brought about.

I had a good comrade in his 80s tell me once that social media was no different than the radio, ignoring both how that confuses the differences between radios

and social media, but also how it overlooks the tremendous importance of radios and other similar mediums of mass communication in transforming society at their time.

At the time it was Walter Benjamin in his essay, “The Work of Art in the Age of Mechanical Reproduction,” which marked the most serious initial attempt by Marxism to understand this transformation. Where are the Walter Benjamins of today producing cutting edge Marxist analysis of social media? In large part the problem is that, while most Marxist scholars won’t go as far as my octogenarian friend and reduce social media to the old radio, most would certainly not consider it important enough to embark on a refined study of. Surely some understand that social media is one of the contemporary ideological fields, and that it is influential in people’s thinking — which means, in politics. But again, it is often considered to be merely one amongst others like the school, the news media, or churches.

In his famous essay, “Ideology and Ideological State Apparatuses,” the French Marxist Louis Althusser argues that the dominant ideological state apparatus (ISA) had transformed from the Church in pre-capitalist societies to the school and family in capitalist ones. These were the dominant institutions responsible for the formation of subjectivity, for shaping how it is that individuals understand not only the world, but their own place in it. These institutions not only allowed people outside of the dominant classes to buy into the ruling ideas, values, and culture of the system (what Gramsci called hegemony), but they did so precisely through the control they exerted over people's actions, habits, and rituals, most of which were located within, or informed by, these ideological spaces.

It is my thesis that today the dominant ideological apparatus has once again transformed. Social media, a space within the larger digital world, has become the dominant ideological apparatus of our time, shaping not simply the trends people follow, but the fundamental worldviews they hold, their aesthetic appreciation, their principles, and most importantly, the habits which make them who they are.

Like the school, social media is an institution individuals commit hours of their days to. Unlike the school, however, it is one which affects roughly everyone in society, with perhaps very few exceptions in the older generations. But even many of them fall under its reign. I know for a fact it isn’t just my grandma

who watches AI slop of a cat cooking noodles or a dog riding a bicycle, to then show their kin asking “could you believe how well this dog is trained?”

The Poverty of Marxist Analysis of Social Media

It cannot be overstated how drastically the development of social media has transformed society and the process of the formation of subjectivity. I have long accepted the analysis by Hans Georg Moeller, a German philosopher teaching in Macao, China, that today we live in an age of profilicity, where identity is constructed through profile curation, central to which is cybernetic feedback loops and second order observation, namely, not how things are directly seen (first order observation), but how things are seen as being seen.

This is why something like bots work for the ruling class, they shape how things are seen as being seen. Bots create the impression of popularity for a certain narrative or discourse, and on the basis of this bot-induced popularity, real users interact and have their opinions and alignments shaped by these discourses. Social media is, of course, as all things are in capitalist societies, undergirded by the logic of capital accumulation and the need to reproduce the system which raises capital’s accumulation to its ultimate principle. I am not naive when it comes to this, a significant chunk of social media discourse has the thumb of Silicon Valley oligarchs and other lackeys tipping the scale in their direction, through control of algorithms, bots, and censorship of various forms, from shadowbans to deplatforming.

Almost all of the content creators which are here today have been censored or had accounts banned for speaking the truth.

This digital injustice and class war, however, doesn’t negate the importance of analyzing this new dominant ideological field, no more than the bourgeoisie’s control of mass media made it a phenomenon not worth understanding (which should always be tied to understanding how to utilize it for our goals).

Why then has this been such a poorly explored terrain by Marxist scholars?

I think two answers can be given to this question:

1- First, Marxist scholars are subject to the same dictates as their bourgeois counterparts in the academy. They too must participate in the endless hamster

wheel of academic publications judged by the impact factor of the journal or editorial. A failure to do so will signify a career of precarious adjuncting (as I am) or non-secure full-time jobs. In other words, no tenure.

This encourages a philistine tendency of hyperspecialization to publish very erudite articles in paywalled journals that will likely only be read by the handful of scholars working in the same field, having to also participate in the academic circle jerk of citing each other to satisfy the imperatives of "engaging with the relevant literature."

This constrains the field of exploration for academics, both dissident and bourgeois. They are encouraged to not stray away from the pack, because it is by being skillful at keeping up with the pack that articles are accepted, points added to your resume, and tenure received. After decades of this hamster wheel, by the time most get their precious tenure, they have already been shaped into the docile animals the academy formed, now with the freedom to venture out, but like a house cat with a front door left open, choosing to stay in the comfort of custom.

2- Secondly, tied to the time constraints and habits shaped by the academy, social media is often at best an extracurricular activity. You go on there to network, share your papers, talks, to see pictures of family and friends, etc. You don't treat it as a serious field of ideological formation. And I mean serious here not in the sense that it is not fun or funny, but in the sense of understanding what is at stake in it. Social media therefore becomes something passively consumed and partaken in, not something they are actively invested in understanding and helping to influence.

The thought of trying to be "influencers" amuses many of them. They do the serious work of writing papers, books, and giving academic talks. It is the young and unprofessional who pick up the phone to make TikToks, video essays, post memes, or stream. I understand their condescending attitude to content creators because deep down, I also had it up until a year or so ago. I was hesitant to make short videos and try to grow a public account because I feared looking "unprofessional," I was the guy that wrote books and articles, how embarrassing would it be to post TikToks!

And so, it is, in my view, for some of these reasons that this important dimension of the modern world has been so thoroughly underexplored by Marxist scholars.

But the thing is, even if they were to explore it theoretically, to really grasp it one must participate in the difficult process of content creation. This is something the last year has taught me, as I myself have become a content creator trying to understand how to transmit ideas in a form that can travel, or in other words, go viral, in this new domain. I still write books and academic articles, but content creation has been essential to informing my recent work.

You can notice that a significant chunk of our speakers and panelists are left-wing content creators, this was intentional. Their instinct was to pick up the phone, and their success in communicating Marxist ideas and analysis of the world to hundreds of thousands and sometimes millions of people, shows me that they are i*n some sense* much more advanced than the scholars who can brag about having read the most obscure manuscripts, but who have zero capabilities to attune Marxism to the digital age.

A Final Note: The Most Important Lesson I have Received from Social Media

Before I embarked on content creation, I was very influenced by the critique of irrationalism in Georg Lukács's 1948 book, *The Destruction of Reason*. To try to sum up this nearly 800-page book into a couple central statements, Lukács argues that there is a qualitative turn bourgeois ideology undergoes in 1848, the moment of revolutionary eruption in which Marx and Engels wrote the *Manifesto of the Communist Party*. This transformation can be symbolized at the level of philosophers as the transition from Hegel to Schopenhauer, or, later on, Nietzsche.

In Hegel we have the culmination of the bourgeois enlightenment faith in reason, progress, and history. Capitalism could be defended directly because it was a system that, irrespective of its limitations, subdued feudal absolutisms and hierarchies, placing reason — a faculty all humans have — on the altar of human civilization, therefore undermining the arbitrary rule of mysticism and religious faith.

But in 1848, at least from the standpoint of Europe, capitalism showed itself as a conservative force, limiting the advance of a more developed democratic republic — in other words, limiting the advance of the workers movement that Marx and Engels wrote the *Manifesto* for. When this occurs, Lukács argues that

the dominant form of defending the bourgeois world order becomes indirect apologetics, the turn to thinkers which critique modernity and the enlightenment faith in reason and historical progress. They defended the system precisely through attacking the current state of the world, which was often considered in a transhistorical manner, as eternal facets of the human experience, or in a culturalist form, focusing on modernity and the enlightenment while ignoring capitalist political economy, and therefore obfuscating its role in the current predicament. Indirect apologetics afforded the capitalist form of life a style of dissidence which doesn't actually challenge the system, a dissidence they can popularize as controlled pockets of counterculture which become especially pertinent in periods of crisis when people start wanting to rock the boat.

Nietzsche, of course, is central here, but anticipated in some ways by Arthur Schopenhauer and Edward von Hartmann, one of his most prominent followers. For Lukács irrationalism was the common denominator in not only the aforementioned figures, but other prominent thinkers and currents of the early 20th century, from Bergson's vitalism to Husserl, Scheler, and Heidegger's varying forms of phenomenology, to the American pragmatists. Lukács concludes with the provocative thesis that it is this irrationalist foundation which formed the ideological basis of fascism and Nazism.

While I still consider the notion of indirect apologetics useful, the experience of content creation has demonstrated how naive his critique of irrationalism often was. The overemphasis on the rational dimension of human life in Lukács bred an almost Cartesian Marxism which reduced the subject to a thinking substance.

It is folly to condemn as irrationalist all philosophic inquiry into what Heidegger would call our being-in-the-world, how we inhabit the world beyond simply the sphere of explicitly enumerated concepts or rules, that is, the way we skillfully cope in the world to navigate it. Most of human experience is precisely this flow state we are not reflexively conscious of, a stream of experience which is largely intuitive.

I will follow Hubert Dreyfus, the great American interpreter of Heidegger, by bringing up the example of sports. No matter how many books you read about baseball, you will never be good unless you have an embodied form of knowledge and know-how of the sport. Skill comes through practice, through doing, and those that perform well are the ones that are not too mental, that understand the game in an embodied form as they are performing. One of the

most critical flaws an athlete could have, and I am sure those athletes in the audience would agree, is to be too mental.

To cite a scene from *The Last Samurai*, where our white samurai savior Tom Cruise is learning how to fight with a samurai sword and the leader of the village approaches him with a critical tip: he tells him "Too many mind. Mind the people. Mind the sword. No mind." His lesson, get out of your head, feel more, intuit more.

The human being is not a Cartesian cogito, a thinking substance disconnected from their body and the world, the extended substances. The human being always-already inhabits the world and learns how to cope within it. This makes up most of the human experience, not us developing concepts and articulating ourselves in rational arguments. I am not, of course, asking us to forget about this conceptual dimension — I think it is incredibly important. But I do believe Marxism-Leninism in the west has largely failed to account for the more primordial and intuitive aspects of the human experience, and Lukács's condemnation of those thinkers which have made it their life work to focus on it, his dismissal of them as "irrationalists," does nothing to help us.

Now how the hell is this relevant to our discussion on social media? Well, quite simply, to succeed on social media you must precisely understand this intuitive dimension of how things are received, how the presentation of your ideas elicits a reaction before the chain of argumentation you will embark on could ever be even remotely opened to being assessed. You don't win people over to communism with good arguments. They come to accept the arguments often only after they have already, at some intuitive level, opened themselves up to the idea of being a communist. Traditionally this is what serving the people accomplishes.

The Black Panther Party won people by serving them. The Communist Party of China is loved by their people because they serve them. What is common here is that they get to people at an intuitive, much more primordial level. Gramsci is here the Marxist thinker which has paid the most attention to this dimension of what he called the passions and emotions of the people.

Social media works in a similar intuitive register. People will feel the vibe of the first few seconds of a video, or the vibe of your meme, etc., and only if it actually reaches them at this level can one begin to help them embark on the journey to communism. Two videos can articulate an absolutely identical idea,

but if the execution is different, having one be more attuned with this understanding of the intuitive register, and the other completely indifferent toward it, I can absolutely guarantee that the one which is cognizant of this intuitive dimension, and which is capable of carrying it out artfully, will receive infinitely more traction. And that is, after all, the name of the game on social media (as with every other ideological institution), win the war of positions, as Gramsci called it, the war over the minds and hearts of the people.

Perhaps it is because the irrationalist right cares less about the purity of their ideas that they have been more capable of grifting their way into relevance. The times when the left often tries to experiment with this intuitive dimension of social media to reach new people and break from the silos that social media algorithms put us in, they are often condemned by other leftists who quickly spawn in the comments with the attitude of "um, actually, you cannot say that, that isn't right, look at this book where so and so said that was incorrect." They replicate the dogmatism of the old lazy Marxist scholar but on social media, condemning anyone trying to experiment with presentational forms to win new people over. This is why liberals condemned "MAGA Communism," until this day calling it an endorsement of Trump when the whole point was to viralize a meme that could pull MAGA workers AWAY from Trump and toward communism.

This is also the reason why, when Trump got shot, all the leftists lost their minds over one of my friend Jackson's posts, where a photoshopped image depicted him running side-by-side Trump with an assault rifle, the caption being "I will defend you Mr. President." They judged this as an op-ed in a magazine or as a theoretical *tractatus*, not as a meme that actually achieved what it was intended to do: go viral and get a ton (I think it was like one or two hundred thousand) new followers from a section of the algorithm that would have NEVER interacted with the sort of content Jackson posts 99.99% of the time, content condemning imperialism and highlighting the successes of historic and contemporary socialist and anti-imperialist states.

One is in all their right to disagree about whether it was an artful move or distasteful for your palate, but to make it the basis of your whole perception of an individual, and for most, of a whole organization, is to operate not only with an intense purity fetish, but with an ignorance of the playful character of the meme, which was intended not to bring a leftist audience to the right, but to "psyop," through an understanding of the intuitive register with which people operate on social media, the MAGA base into following him and being exposed

to an anti-imperialist and communist ecosystem they would have otherwise never seen.

Conclusion

To conclude, I don't claim to have the answers for how any of this works. I am still learning and very early in this journey of content creation. But what I do think the left would benefit greatly from is taking the radical change social media has produced in society seriously, and figuring out the ways in which, even in this rigged atmosphere, we can reach people and win their hearts and minds. The smug attitude of many Marxist scholars, their dogmatism, and purity fetish allegiance to conclusions drawn in previous times, is the route to more failure. It is my opinion that success will be premised on our ability to be experimental, creative, and flexible, while simultaneously firm in our principles, conviction, and faith in the cause of humanity which communism upholds.

3

The Revolutionary Cocktail: Mutual Aid, Direct Action, and Electoral Power

Dr. Butch Ware[1]

1. Dr. Butch Ware is an associate professor of history at the University of California, Santa Barbara, and was the Green Party's vice-presidential nominee in the 2024 U.S. presidential election.

Introduction [2]

The topic that I would like to address is how to run electoral campaigns as a socialist against the Democratic Party. And because I am a history professor who got pulled into electoral politics, I am also going to try to bring some elucidation to where we are right now in our struggle to unseat the political duopoly.

In the United States, we have two capitalist, imperialist, white supremacist parties. And you get to pick which one you vote for. You can either vote for Team Blue Genocide, or you can vote for Team Red Fascism.

Some people think that it is possible to run as a socialist inside the Democratic Party. I hate to break it to you, but there is no moving as a socialist inside a capitalist party. There is no anti-imperialism inside an imperialist party.

Malcolm X – who is the reason that I set myself upon this path of political liberation and also the reason that I chose Islam as my religion – famously said, ”the liberal is a fox. It bears its teeth. You think it's smiling, you're on the menu. The conservative is a wolf. When it bears its teeth, it's into a vicious snarl that leaves the black man no illusion as to where he stands.” Malcolm believed that we're caught between two predators that differ only in the modality of the hunt. One hunts by cunning, by guile; the other by sheer force. So we need to understand that we have to be organized to fight back against this uniparty.

The great African socialist Julius Nyerere, the first president of Tanzania, said, ”of course, the United States is a single-party state, but with typical American extravagance, they have two of them.”

So then how are we, the people who exist outside of that duopoly, supposed to move forward? To answer that question, there are three major points I would like to elucidate. First, I have to talk about who the Democrats are. Second, we have to talk about what it means to be a socialist. Finally, we have to analyze the role of electoral politics in our broader revolutionary movement – to explore what it means to run for office as a socialist in this environment.

---

2. Transcribed and edited for clarity by Jonathan Brown, managing editor of *Red America*, based on remarks delivered at Marxism Conference 2026 in Chicago, Illinois, on September 5, 2026.

Who Are the Democrats?

So, I'll start with: Who are the Democrats? My colleague Dylan Rodriguez at UC Riverside puts it best when he said, ”the Democratic Party is the most effective counterinsurgency organization ever to emerge in human history.” The Democrats are there to make sure that nothing ever emerges on the true left. Their job is to absorb all of that populist discontent. And it is massive.

Sixty-three percent of registered voters say that those two parties do such a ”poor job” – this is a 2023 Gallup poll – that we need an independent, non-corporate political party. But then those same people allow themselves to be gaslit into voting for genociders, fascists, and white supremacists. The discontent is massive.

We have a tremendous opportunity, but they are going to keep giving us the Mamdanis and the Abdul El-Sayeds and, you know, in my generation, the Obamas, because they are there to contain radicalism. They are there to destroy it and to diffuse it and to co-opt it and to purchase it.

The Democrats cannot be reasoned with.

They must be destroyed.

What Does It Mean to Be a Socialist?

I read Malcolm X’s autobiography cover to cover in one night when I was 15 years old. Could not put that book down. And the reason is Malcolm was brutally honest about what white supremacy had done to him and his family. And the reason why I couldn't put that book down is that I had experienced a lot of those same things that Malcolm had experienced in his life. Growing up, we never lived at the same street address for a calendar year consecutively until I turned nine. And we need to understand that it's not enough to appeal to the working class. We have to appeal to the not-quite-working class. We have to have answers for people who are on the business end of capitalism, imperialism, and white supremacy, who are underneath that boot as we speak in neighborhoods not far from here.

I needed what Malcolm had at the end of that book. And Malcolm had Islam at the end of that book. So I went out to my public school library, checked out an

English translation of the Quran, read that cover to cover the next night, converted to Islam before the week was out. That was the birth of a Muslim and of a black revolutionary in the same process. And so I speak from both of those traditions simultaneously.

And I will also point out that Malcolm never accepted the label of a socialist. When he was asked, ”are you a socialist?” he said, ”I'm a black Muslim revolutionary.” And one of the things that I think that we are going to need to embrace is an understanding that our vision of what it means to be the left in this moment has to be capacious enough to take Malcolm's understanding into it, to take understandings that are broader than just Marxist-Leninists, that are broader than socialists.

The left begins with anti-capitalism. It begins with anti-imperialism. And we need political movements that are capable of bringing together broad coalitions of anarchists and people that are interested in indigenous governance and Land Back and reparations and abolition, who might not be thinking of themselves as socialists but are nonetheless ready to fight capitalism and imperialism.

But I want to use Amílcar Cabral not just to alert your attention to him and to be the history professor that I am, but also to what he's saying:

> Never again do we want to see a group or a class of people exploiting or dominating the work of our people. That's our basis. If you want to call it Marxism, you may call it Marxism. I am a freedom fighter in my country. You must judge from what I do in practice. If you decide that it's Marxism, tell everyone that it's Marxism. If you decide it's not Marxism, tell them it's not Marxism. But the labels are your affair. We don't like those kind of labels. People here are very preoccupied with the questions: Are you Marxist or not Marxist? Are you Marxist-Leninist? Just ask me: Are we really liberating our people, the human beings in our country, from all forms of oppression? Ask me simply this and draw your own conclusions.

So many of us are caught up on labels and ideologies that we refuse to do the actual work of human liberation. We would rather argue about being Marxist-Leninists or anarchists instead of asking the fundamental question: are we engaged in fighting for human liberation in our own communities on the ground? Cabral was as committed a Marxist as there could be. And yet he was

not the least bit concerned with the labels. The concern was with human liberation.

Part of it is the fact that our political ideologies have become, for many of us, personal identities rather than political methodologies that are designed for human liberation. So, we get on some gang-gang and start caping for a flag rather than caping for liberation, rather than caping for the class struggle, rather than fighting for human liberation. I don't care what the label that you assign to yourself is. I want to know whether or not you're doing the damn work.

Always remember that people are not fighting for ideas, nor what is in men's minds. The people fight and accept the sacrifices demanded by the struggle in order to gain material advantages, to live better and in peace, to benefit from progress, and for the better future of their children.

National liberation, the struggle against colonialism, the construction of peace, progress, and independence are hollow words, devoid of any significance unless they can be translated into a real improvement of living conditions. No one cares about your ideology. And there has never been a successful anti-capitalist, socialist, or communist revolution wherein the people became persuaded of the ideals of socialism, communism, or anti-capitalism before the revolution. Those revolutionaries met the needs of the people when capitalism and imperialism were in a place of crisis. And it was because they met the needs of the people that they became the power and the dominant interpretive framework. That should be the edge of the spear in our revolutionary struggle because nobody is fighting for your Marx. They're fighting for breakfast.

And I know because I watched my mom watch me and my brother eat. Many of y'all don't know what that feeling is like, where my mom would watch us eat, and then whatever was left, she would eat. Are we knocking on the doors where the next little Malcolm or the next little Butch Ware, the next Assata Shakur, is hungry right now, today? The reason I had hot breakfast as a broke kid in D.C. was because the Panthers' Free Breakfast Program was so successful that it shamed the federal government into starting their own. Why? Because they were so concerned that all of them little black kids getting that hot breakfast were being propagandized with liberation ideas, because of course they were.

Meet the people's needs. The primary concern. Yes, read theory. Yes, engage in political education for the cadres. But understand that we have to make

anti-capitalism, socialism, communism, anti-imperialism relevant culturally here. That is a creative, dynamic process.

Many of us engage with Marx as though it's scripture rather than method. Kwame Ture, one of the great socialist theorists and practitioners, had an important reminder on this. He said when Marx and Engels said religion is the opiate of the masses, that was only true for Europe. He pointed out that every single successful anti-imperialist, anti-capitalist movement to emerge out of the Third World had faith at its core. And he was speaking at the University of Hawaii when he said it. He said if the people of Hawaii were ever to try to get free from capitalism and imperialism without reference to their ancestral traditions, they would find themselves chasing their tail in circles.

It connects to something the brother reminded us, which is that if we are not doing the inner, properly speaking, spiritual work of healing from the trauma scars of empire, we are guaranteed to inscribe those on whatever socialist movement we construct. So yes, if you're a person of faith like I'm a person of faith, then tap into those faith traditions. There is revolutionary capacity in our spiritual traditions, even the colonizer versions of them.

This is a critical reminder that many of us on the so-called left need on a daily basis, which is that if we have not actively engaged with deconstructing white supremacy in the core of our own movements, we ain't got nothing. We have to do the work because the successful socialist movements, liberation movements, were rooted in black liberation.

What Is the Role of Electoral Politics?

So, how do we move forward? And what's the role of electoral politics in all of this? And I'm going to come clean. If you had asked me that question before Dr. Jill Stein asked me to run for vice president, I don't think I could have had an answer for you. My life changed overnight the same way that it changed when I was 15 years old. I interviewed Dr. Jill Stein on my social media platform. Twenty-four hours later, they called me onto a Zoom and asked me if I would consider running for vice president. And frankly, I need to be clear about this. Most of my life's work has been as an organizer, activist, and political educator. I did not reflect carefully on what the role of electoral politics was in that until asked to take it up. So, I went back to Malcolm because I've told you what

Malcolm means to me. I went back to 1964, ”The Ballot or the Bullet,” and Malcolm said:

> We're going to knock on every door in Harlem, and we're going to register every black face behind every door, not as a Democrat, not as a Republican. We are going to say, 'show us your card.' And whoever did not have the responsibility to register themselves, we are going to have words with them, and we just might run them out of town. It's going to be the ballot or the bullet.

And you're going to think that it is an ultimatum aimed at Sam, which it is. We're gonna have our liberation one way or the other because, you know, the Panthers stay strapped. You know, Malcolm was about that self-defense life. But it was also a call to us that we actually are required to engage the electoral system because it is one of the weapons that can forward the cause of our collective liberation. That's why he said, ”We're going to say, 'show us your card.'” It's the reason why Huey P. Newton ran for Congress not once, but twice. It's the reason why Kwame Ture said voting every four years is the height of bourgeois hypocrisy. But I would shed my blood for the vote, and I have, because I know that the vote is how I organize my people. The Panthers, that most dangerous Marxist-Leninist movement in American history, believed in this revolutionary cocktail: mutual aid plus direct action plus electoral power, in that order of significance.

Now, I agree that you cannot call yourself a revolutionary and not be talking about training with weapons. You cannot call yourself a revolutionary and not understand that this can and likely will descend into a fight in the streets. But that does not mean that there is not a potential role for electoral politics in a revolutionary cocktail.

Malcolm was arguing that electoral participation was mandatory in 1964. And my argument is, actually, it's more so now than it was then. And the reason is that corporate control over other domains is so much more total in 2026 that there's actually a structural vulnerability inside capitalism and empire that can be directly exploited through electoral means. And they know this, which is the reason why they spent $20 million knocking Greens off of the ballot in the 2024 election, right?

So I do think that a coalition political electoral intervention is part of that cocktail. But I would never argue against the development of a more

concentrated, aggressive socialist political organization because the reality is both are needed. What we said back home is, if you stay ready, you ain't got to get ready. If you are drilling for both of those eventualities, then you're going to be prepared to strike at whatever opportunity empire yields. When it exposes its soft underbelly, you will have a sharpened weapon.

In the 2024 presidential election, you could vote Green in 47 states. They had managed to knock us off the ballot in a few others. So, there was only 43 states where you had a ballot box that you could check. But the reason why they're always attacking Greens is because they know that's where they're the most vulnerable. The enemy always tells you where their weakness is. We just don't always be listening.

And that's what's in the back of my head when I said, here is an electoral weapon for you to use. The reason why they moved to disqualify – we're still in federal court, actually, to get redress, you know, to get remedy for the fact that they illegally removed me from the California primary ballot. Well, why are they doing that? Because they know they lose one significant election and the duopoly is finished because people are finished with the duopoly. No one wants it anymore. So they are telling you that we are vulnerable here. We still have these pesky elections in an otherwise complete oligarchy, right. But they actually have a structural weakness at the ballot box, and that's why they keep trying to reinforce that flank.

You're going to need legal resources because as soon as you're a threat, they're going to try to knock you off of ballots. You are going to need to build political infrastructure. So, you're going to need to build legal resources, political infrastructure. It's going to take coalitions. It's going to take going into rooms, you know, where people are wearing different jerseys. Because if we share vision and we share values and we share goals and we share integrity, if we're not for sale, right, then we shouldn't let what jersey we're wearing stop us from working together. Those lower offices are vulnerable offices. A lot of them are nonpartisan. Those are great places to start. And they are also great training grounds for people to build the muscle to run a political campaign.

Conclusion

On to the good news. And I'll close with this. We have an incredible opportunity. And I'm going to tell you right now, we are about to squander this moment. We are about to squander this moment unless and until we can address the sectarianism inside the so-called left, address the racism inside the so-called left and actually focus on delivering. And that's going to take a fight.

So, I've made it my business to make sure that the Green Party, a party that defines itself as an ecosocialist party, is a party that is ready to embrace that radical coalition building, that is ready to – and I say this in Green Party, so I'm not telling tales outside of school – to replace the aging white environmentalist core of the party with a more radical, blacker, and browner and younger cohort.

And that's what we've done inside the state of California. We rebuilt the political infrastructure of that party. But I think that the core of it is, like, the reason why I showed up for this is that there is no substitute for the in-person, face-to-face work of organizing. Energy doesn't lie. Get out, meet the people, speak to the people, exchange ideas, talk with people that you don't know what all common ground you may or may not share, and you can start to build forms of solidarity that were impossible literally the moment before you started the conversation.

Floating Hair and National Allegory: Smuggling the Silk Road into World Literature

Chet Ozmun [1]

---

1. Chet Ozmun is a freelance translator who lives and works in Chicago, Illinois. His first full-length book translation, *A New Long March: The Poverty Alleviation Diaries of Huang Wenxiu*, is forthcoming from Midwestern Marx Publishing Press. His work is funded entirely by fan contributions. He is a member of the American Communist Party's Department of Education. If you appreciate his translation work you can support him at https://linktr.ee/chetozmun.

In 1957, Mao Zedong gave a speech where he said that intellectuals are like hair. He said for intellectual, creative production to acquire any significance or meaning, it must always attach itself to a "skin," whether that skin is the comprador bourgeoisie and foreign imperialism, or the working masses.[2] In the United States today, our intellectuals and artists like to pretend they don't need a skin. They believe they can just float around independently. But I think audiences are increasingly realizing that a bunch of stray, floating hair is just plain gross, and they're actively looking for some kind of alternative. "Art for art's sake" has become a navel-gazing dead end. Once you notice this in recent American art, you can't unsee it: pick any random American indie film, and usually the main character is a struggling writer or an intellectual. Our creative culture is trapped by that tired MFA dictum: "Write what you know." But as Toni Morrison famously joked, most young writers don't actually know a damn thing.[3]

The critic Fredric Jameson also diagnosed this problem back in the 1980s. He argued that Western literature has completely severed the personal from the political and has reduced our art to isolated, fragmented egos. Jameson suggested we could learn a lot from "third world" literature, where a protagonist's private destiny directly mirrors the macro-political struggles of their society.[4]

But thankfully in China Mao's metaphor of the hair and the skin still haunts Chinese writers today. Meaning that they know they have to attach themselves to the collective. And so they actively reject "write what you know," and force themselves out of their comfort zones to bring us stories we have never heard before. This is why I got so obsessed with translation work in the first place. Because I firmly believed and still do today that American audiences can learn a lot from this approach and even rediscover and reappreciate our own artists in the past who took this approach. One prominent example is the socialist Jack London.

So this brings me to the novelist Ba Longfeng, and his breakout novel *Silk Road Romance*, which I am translating for Midwestern Marx Publishing Press. The protagonist of *Silk Road Romance* is a 19-year-old Kazakh-Dungan girl named

---

2. Mao Zedong, "Beat Back the Attacks of the Bourgeois Rightists" (July 9, 1957), in *Selected Works of Mao Tse-tung*, vol. 5 (Marxists Internet Archive, 2004), marxists.org.

3. *Toni Morrison: The Pieces I Am*, directed by Timothy Greenfield-Sanders (Perfect Blend, 2019).

4. Fredric Jameson, "Third-World Literature in the Era of Multinational Capitalism," *Social Text*, no. 15 (Autumn 1986): 65.

Yashir. The Dungans are a fascinating diaspora Americans know literally nothing about: they are descendants of Chinese Muslims who fled the Qing Dynasty in the 19th century and preserved their ancient Northwestern Chinese dialects perfectly intact while living in modern-day Kazakhstan, Kyrgyzstan, and Uzbekistan. In the novel, Yashir embarks on a reverse-migration along the modern Silk Road back to China. Author Ba Longfeng deliberately adopts highly accessible, page-turner tropes to hook the reader. Most notably, he leans into the classic "Overbearing CEO" trope from Chinese dramas and online literature.[5] Yashir finds herself caught in a cross-cultural love triangle, torn between Ivan, her hyper-wealthy Russian-Kazakh oligarch boyfriend who offers immediate material security, and Zheng Nengliang, a grassroots Chinese scholar who shares Yashir's passion for Chinese history and culture, but who also doesn't have a penny to his name.

So to give you just a taste of the sort of "high-low" combination Ba Longfeng puts together in this novel, in one chapter you'll have characters joyously shouting viral Chinese internet memes at each other, and then, in the very next chapter, a character from Kyrgyzstan and a character from Kazakhstan are suddenly locked in a heated geopolitical debate over the history of the Tang Dynasty. This mashup has actually polarized readers in China. If you look at Douban (China's equivalent of Goodreads) you can see that enthusiasts love the uninhibited, maximalist energy of the book. But literary purists accuse Ba Longfeng of sneaking in Xi Jinping-era "Main Melody" propaganda using low-brow page-turning tropes.[6]

When I recently interviewed Ba Longfeng for the journal *Red America*, I brought up this exact tension with him. In response, he laid out a brilliant twist regarding the contemporary Chinese literary establishment. In China right now, there is still a deep divide between the entrenched, self-styled "avant-garde" literati and unabashed, macro-historical maximalists like Ba. According to Ba, domestic literary circles tend to view Western, postmodern cynicism as the absolute pinnacle of sophistication. They look down on authors who tackle socially constructive, grand narratives, and dismiss them as unsophisticated political hacks.

---

5. For a brief overview of this trope presented in English see: Chelly's List, "10 BEST 【Overbearing CEO】CHINESE Drama of All Time As of 《2024》," YouTube video, 4:45, uploaded by Chelly's List, January 1, 2024, https://youtu.be/COoU6MI-Ogw?si=5Y0UPZpFFVjxisiY.

6. "丝路情缘" [Silk Road Romance], Douban Books, douban.com.

But Ba takes these critiques of his work and flips them completely on their head. He argues that actually the Chinese intellectuals elites who chase Western post-modern trends are the ones who produce dry, boring, and also just plain bad literature.[7] In other words, they're trying to be like the hair refusing to attach itself to a skin, just like Mao warned about. Ba Longfeng calls out their mundane fiction as pretentious navel-gazing that completely alienates the broader reading public. For Ba, truly advanced literature comes from those who try to take in all the mighty developments of the modern era with bombastic, maximalist, "Positive Energy" style.

This term positive energy, which is used to describe new Xi-era trends in Chinese literature and art, went viral on the Chinese internet in 2012. Since then, it has evolved into a foundational cultural cornerstone of the Xi era.[8] Ba Longfeng's generation lived through unprecedented upward mobility, sweeping poverty alleviation, and hyper-modernization. So for authors like him to write exclusively about misery and trauma today is to rely on outdated tropes. Ba insists that a writer must capture the macroeconomic and geopolitical tides pulling the world into new configurations. As he put it in his exclusive interview with *Red America*: "I'm writing about the era that rushes toward us."

And that's why we approached this author to sign so many contracts with him. Yashir's romantic choice between the Russian oligarch and the Chinese intellectual is a broader metaphor for civilizational dialogue happening today. It represents the gravity of the modern Silk Road, a shifting cultural self-confidence, and the undeniable global pull of a nation stepping into its new era.

What We Can Learn From China's Political Economy

Eddie Smith[1]

1. Eddie Liger Smith is an Executive of the American Communist Party and a Director of the Midwestern Marx Institute.

If I had to narrow down what I've tried to learn the most from China, it's been in the realm of political economy. I look at how they've been able to build a society that is so advanced, so quickly. They've achieved this incredible, never-before-seen feat of the abolition of absolute poverty. You'll have some people on the left who make the claim that China's not socialist, or that China is no different from the US. But clearly it is. We were all in Chicago this weekend, and tragically, there are homeless people everywhere. This is despite the fact that we have more vacant homes than we have homeless people. We have the homes to put them in, but we don't, because of private property, landlords, and the fact that these homes are managed for profit. It's almost like we're going through our own century of humiliation right now as Americans. So clearly, China is doing something differently.

The first thing they're doing differently is the complete eradication of dogmatism. They are really, really pragmatic. If you read the inner debates from the Communist Party of China (CPC), especially during the reform and opening-up era, they are constantly looking at Stalin's era in the Soviet Union, or the Khrushchev era, or Yugoslavia under Tito, and they're asking what they can take from these guys that worked, and what they can leave behind that didn't work. For example, Xi Jinping has said that there's been no leader in the history of the world more correct than Joseph Stalin, but at the same time, his view is that Stalin was 70% right and 30% wrong. So even though he views Stalin as this great historical leader, there's no putting people up on a pedestal and saying this is the perfect model. Socialism is an experiment. With any experiment, you have to take the good and leave behind the bad.

They looked at Yugoslavia, for instance, which had a sort of market socialism. I would argue that wasn't a conscious choice; it was something they had to do because they split with the Soviet Union, lost them as a trade partner, and started taking IMF loans that forced them to open up to capitalist markets. China looked at that and asked what went wrong that led Yugoslavia to rack up all this IMF debt, which ultimately led to the dissolution and the horrific war in the Balkans in the 90s.

They also looked at the Soviet Union and recognized that in a way, they were trying to push too fast. The Soviets were promising communism in another decade, which led to fatigue among the people when they were left asking, "Where is this utopian society you promised us?" China doesn't do that. They just say they want to have a moderately prosperous society in all respects by 2050, and once they hit that goal, they can take the next step.

When it comes to political economy, it really comes down to central economic planning and the expropriation of political power. I would argue that since the end of World War II, every economy in the world has been centrally planned to a degree. America has central economic planners. They are the people who work for the IMF, the World Bank, and the Federal Reserve.

They determine who gets credit, where the money goes, and they manage American industry because they control the money supply. China also has fiat currency, but they put restrictions on it and manage it in a way that's beneficial for their people. That's because the banks and the land in China are owned publicly by the state. They can direct that money toward manufacturing, industrial projects, and actually building things.

If you read the work of economist Michael Hudson, specifically his piece on American neoliberal financialization versus China's industrial socialism, you see the stark difference. Most of the profits made in the US now are made parasitically through debt-trapping and charging rent. You don't actually have to produce anything. Big rentier capitalists own the land you live on and charge you for its usage. There's a lot of paper-shuffling, making money through speculation, and trapping people in debt, not just foreign countries through IMF loans, but our own people through credit cards.

The way China controls this is by having Communist Party ownership of the banks. They ensure interest rates don't get out of control, and they funnel the resources of their country into things that increase social welfare. In the era of Xi Jinping, party cadres are stationed in the most economically backward, rural areas of China, asking the people: What do you need? You need plumbing? We'll bring you plumbing. You need irrigation? We'll bring you irrigation. In the modern era, you need Wi-Fi or high-speed rail to connect you to the city? We'll build it.

This is something that's impossible if you have a for-profit economic system. It gets back to the distinction Marx makes in the early chapters of Capital between use value and exchange value. Use value is the actual qualitative use that society gets from a commodity. Exchange value is its money value, expressed in price. American central planners are trying to accumulate exchange value. They plan the economy to stack as much money as possible, even if it's parasitic and detrimental to society. That's why 40% of the water pipes in America are from the WWII era or before. Local governments don't have the money to invest in new pipes, and private capital doesn't care if we're all drinking lead

because they can't make money from it. But when you have an economy centrally planned by a body that has social welfare in mind, use value starts to overtake exchange value. The state might not make much money bringing clean water to a rural region, but they do it anyway because the people need it.

Building socialism is a process. Yes, there are still billionaires in China, and things got a little crazy during what they call the Wild 90s, but those billionaires have to follow the state's central plan. As time passes, the economy becomes even more planned for social welfare rather than private profit accumulation. To maintain that, and to prevent the profiteers from taking over the economy, China realized they need to keep political power in the hands of the workers. The proletariat must remain in control of the state. This is why Xi Jinping is so popular. His mass anti-corruption efforts have cracked down on the influence that capital has over the government. And that is exactly what we need here in America.

Thank you.

What the Left Forgot About Fred Hampton

Nick Cruse [1]

1. Nick Cruse is a citizen journalist and the founder of the Revolutionary Blackout Network.

My name is Nick Cruse. I founded Revolutionary Blackout Network with my brother, Rome, formerly known as “Fred Hampton Leftists,” because our goal—we was a post-Bernie Sanders movement. Not riding the wave of electoralism in Bernie Sanders; we was a post-Bernie Sanders movement to analyze what has gone so wrong for the working class my entire life. Why has the working class taken defeat after defeat after defeat?

So we formed RBN, once again, formerly Fred Hampton Leftists, because our ideal was to follow in the footsteps of our revolutionary ancestors. The same revolutionary ancestors that many in the Black community rejected, forgot about.

I’ve witnessed in my entire life—and this is how I got started as a writer, as a citizen journalist—my first ever Substack article was a scathing critique of Barack Obama and Black neoliberalism, and how said neoliberalism rotted away our communities. And this was a foundation for my politics: reading and studying history, seeing what Fred Hampton built, which is why we called ourselves Fred Hampton Leftists and changed the name out of respect for their family.

That’s why we did mutual aid drives and events with their family. It’s something and a path that we wanted to honor and replicate, because it has been deeply missing, not only in the Black community, but for the working class as a whole.

Because what did Fred Hampton call himself? BET likes to forget about this. Hollywood likes to forget about this. LeBron James and all these fake Black neoliberals like to forget about this: that Fred Hampton founded the Black Panthers, which was explicitly a Marxist-Leninist organization.

This is why we embrace class warfare, because Fred Hampton and the Black Panthers understood that class warfare was foundational for fighting for the liberation of not only Black people, but for the working class as a whole.

Because before I got into politics, I was into history. And what is history? History is essentially hundreds of years of class warfare by kings, feudal lords against the working class.

So, the only path to liberation was clear to me: it was embracing the revolutionary actions which led to many gains and victories for the working class and struggling movements all around the world.

What did Fred Hampton build? The same guy who would be smeared as a "tankie" if he was alive today. [Laughs.] The same guy who would be smeared as "antisemitic" if he was alive today. Someone who would be smeared as too pro-Russian if he was alive today.

They would hate Fred Hampton even if he was alive today. They would do the same thing you saw Joe Biden did to Chairman Omali. You'd see happen to Fred Hampton the same thing they're doing to Communists and Black radicals today: using the state and using institutional power to suppress anyone who actually serves a real threat to their agenda.

Was Fred Hampton, as he was building organizations, building breakfast programs and building something that was real for the working class, was he engaging in Democratic Party entryism as he was doing that? Was he telling people to "vote blue, no matter who?" Was he telling people how important it was for the Democrats to regain the House and Senate?

They explicitly told the working class that it was a waste of time, so why did the United States Left forget the very important lessons that people like Fred Hampton taught us?

This is the contradiction that makes—RBN, we make a lot of people among the progressive-managerial class uncomfortable. [Laughs.] Because we remind them of what they forgot!

I look at the Black misleadership class and I remind them what they have forgotten. They've forgotten our revolutionary ancestors, our revolutionary history, and they embrace neoliberalism, which completely destroyed our communities! It destroyed the entirety of the working class. I'm speaking of my background, though.

It has led to historic racial income inequality, where the gap between the White American and Black American is larger right now than it was at the height of the Civil Rights Era. That is because of the policy of Barack Obama and the Black Congressional Caucus.

This is the Black liberalism that I rejected, and it led me down the path of Marxism-Leninism and Communism.

And the Black community now, what do we have? We have a group that calls itself the Black Congressional Caucus, which is a group of Zionists! The Black

Congressional Caucus are the most loyal servants to Israel out of any caucus in Washington.

And then you have—who else do they tell us to look up to? They tell us to look up to "Likud" James. [Laughs.] "The KDF!" [Laughs.]

What's Steph Curry's name? I don't remember Steph Curry's name.

That's a good one!

So, all our Black celebrities, Black actors, Black athletes, they all swore loyalty to neoliberalism, imperialism, colonialism, and genocide; the same genocide that I was taught growing up that we were supposed to oppose.

And every single Black child could tell you the same thing: when I read about the crimes of slavery, and the true first sin of capitalism. What's the first thing the capitalists do as soon as they establish their system? They created a global system of slavery! That people still think is gone, by the way.

They created a system of slavery, and I swore when I read it I would cry. They would force us to watch *Roots* and watch our people get beat, and I would cry. I'm like, "I will never in a million years accept being complicit with this kind of violence."

So do you guys understand the anger that boils deep down inside my soul when I see Black misleaders, who claim to represent us, support the genocide of the Palestinian people, the same colonial violence that plagued our ancestors in the past?

This is why I became a revolutionary, this is why we formed RBN, and this is why, until my dying breath, I will spend my time not only just radicalizing my community—cause it's not about that—it's about radicalizing the entirety of the working class and demanding better for ourselves.

The last thing I will say before I pass the mic here. One thing I hear people say when they talk about organizing that's just very misleading—it's stuff that, like, liberals will say. [Laughs.] That people are tricked into saying.

They say, "When we organize, it's very important that we meet people where they're at. We just meet them where they're at."

And it sounds good, people will say it! "Ahh, it's very important that we meet people where they're at."

Fam, there's some people you don't want to meet where they're at. [Laughs.]

As Communists, as Marxist-Leninists, we don't "meet people where they're at," we don't meet reactionaries where they're at! We appeal to people's material interests.

That is the goal of a Marxist-Leninist: not to meet where they're at; to appeal to their material interests, to appeal to the good of humanity.

I don't need to "meet you where you're at;" I need to convince you that the government murdering children is wrong!

[Applause]

Marxism and Liberalism[1]

Grayson S. Walker [2]

1. Speech given on the Platypus Affiliated Society hosted panel in the 2026 Marxism Conference. The topic was Marxism and Liberalism.

2. Grayson S. Walker, J.D., is an American researcher, political analyst, and co-founder of the Infrared Collective and American Communist Party, where he serves on the Politburo as legal co-director. He previously served on the Executive Board of the Emory International Law Review, where he organized the 2024 Symposium on Disputed Territories. He has published several academic articles, including “From Instagram to Infowar: The Weaponization of Social Media and its Consequences,” “Through the Brook of Fire: Marx’s Concept of Species-Being and his Break with Feuerbach,” and the forthcoming article “Marxism and Democracy.” Grayson has been invited to speak at conferences worldwide, including Guancha’s annual Key, Northwestern University’s ILASS, and the Multipolarity Forum. Awarded a research fellowship in Nepal, he focused on integrating China’s Belt & Road Initiative with the traditional ways of life of Nepali ethnic minorities. Grayson has been recognized with several academic awards from Xavier University and Emory Law School.

I want to begin by rejecting the framing of the prompt in the first place.

Because Marxism is not a species of liberalism, and conceding liberalism as a coherent antecedent to Marxism is itself a fundamental concession to the existing order of consciousness. Such a 'liberalism' does not exist as a coherent tendency, but as a *post hoc* ideological justification for points of *stoppage* in the revolutionary process.

There is a kind of familiar Marxist narrative where liberalism is the primordial philosophy of modern emancipation, defeats feudalism, and clears the space for socialism in an open, democratic arena of politics.

But this is not in fact the view of Marxism, nor does it line up with history. Instead, I propose that liberalism and socialism are rival inheritances of the same long, revolutionary process, over which socialism emerges as the *party of continuity*.

In fact, liberalism is a reaction to a *perennial* revolutionary position, which is given explicit and self-conscious shape in proletarian socialism, but which is far older — stretching back to Müntzer, Winstanley, and Spartacus.

We should remember, in the first place, that the revolutions which destroyed the *ancien regime* contained several competing tendencies simultaneously. They were not straightforwardly 'liberal' and certainly did not belong to a coherent liberal tendency, but to a *revolutionary* tendency in which liberalism consolidates under a specific form of class dominance.

Now, Liberalism, at its most anti-socialist and apparently revolutionary, presents itself as a kind of faithfulness to the revolution. Socialism in this reading is the re-enserfment of the individual emancipated from feudal bonds. De Tocqueville and Hayek are among the clearest to represent this tendency. In fact, in his speech against socialism, de Tocqueville himself is already fighting over who inherits 1789. He explicitly denies socialism's claim to be the completion of the revolution.

But from the socialist perspective, it is *liberalism* which in fact is the re-yoking of the individual to relations of servitude which were now *formally insulated* from the reach of a social authority, in the form of *modern bourgeois property.*

Beneath the so-called bourgeois revolutions were *communistic* tendencies over which *the party of reaction prevailed*, but which set the *new stage and the*

context of revolutionary struggle. These tendencies consolidated the notion of *commonwealth, of popular sovereignty, and of general will.*

In what ways are any of these notions meaningfully liberal? From a conventional Marxist perspective, we can come up with at least half of the answer: they're liberal because of their *negative* relation apropos the feudal status quo. They are liberal by *liberating* the Third Estate and consolidating the juridical equality in which generalized commodity production could develop. On this basis, a proletarian tendency can more ably emerge.

But the Third Estate itself was not animated by liberalism. Sure, the victorious bourgeoisie, which secured their "inviolable and sacred right" in 1789, had their triumph in the Directorate.

But this triumph came at the *expense* of the sans-culottes aligned Committee of Public Safety — which was not simply a bourgeois dictatorship of 'pure negation', as is often claimed by Marxist historiography, but was called by Engels an instrument of *proletarian dictatorship*, wherein the Jacobins represented a proletarian power at the helm of the state.[3] It was the armed *sans culottes* who brought the Jacobins to power, forced terror on the agenda, introduced price ceilings, made the hoarding of essential goods like food a capital offense, and in 1794, authorized the state to confiscate the property of "emigrants and rebels."

And the same problem appears in the English Revolution of the 17th century. What exactly makes that revolution straightforwardly liberal? Cromwell understood himself according to the Old Testament, not liberal doxa. The consciousness of this revolution gave us the Levellers, who were already pushing the logic of popular consent against a political settlement tied to established property. And only a few years later, Winstanley and the Diggers made the contradiction explicit: what good was it to overthrow the old "Norman yoke" if the poor remained dependent upon landlords? England was not yet a free people so long as the landless were excluded from the commons; the earth had been made a "common treasury." Here the political revolution itself produces a tendency which says: you have abolished one form of domination while preserving another in property.

---

3. "During the short time when the proletariat was at the helm of state in the French Revolution, during the rule of the Mountain party, it used all means — including grape-shot and the guillotine — to effect centralization." Friedrich Engels, *The Civil War in Switzerland* (1847)

In the American Revolution, too—despite being led substantially by propertied colonial elites—saw bourgeois slaveholding revolutionaries Jefferson write that the earth was given to mankind as a "common stock," that extreme inequalities of property produced misery, and that property law itself could not be extended so far as to violate natural right.

Of course, these men were not socialists – but that's the point. The revolutionary tradition had not yet cohered into the clean ideological distinction that liberalism would later project backward onto it.

The point is that liberalism does not own the history of modern emancipation in the first place. Socialism is not "liberalism carried further." Socialism is *the rival tradition*, which refuses the *consolidation* of the revolution behind the propertied classes.

Historically, let's remember that liberalism ideologically coheres as a self-conscious political tradition only in the aftermath of the French Revolution. We retroactively place Whigs and Republicans like Locke into the liberal tradition — but Locke famously prefigured the classical labor theory of value that was built upon by Marx, arguing that property is an extension of the private person only when they mix their labor with it. Additionally, he argued that it was a violation of nature itself to take more than what can be used before it spoils, and that property itself was a *social* mechanism, not an absolute right.

Thomas Paine, in works like Agrarian Justice, argued that the earth itself was a common property of mankind and that private ownership *robs* the majority of their birthright. I don't think I need to go into Smith and his lambasting of the landlords, who love to reap where they do not sow.

Now, I'm not here to do what I am claiming liberalism does: to retroactively paint the entire lineage of Enlightenment thinkers as socialist or proto-socialist. But it *is* to point out that these figures are not *straightforwardly liberal*, and that the post-Lockean Ricardian Socialists, or Marx himself apropos Smith, *belong to this lineage* and are ultimately *faithful* to this lineage. *Liberalism* by contrast emerges as the ideological fridge that guards the snack of the revolution.

And aside from the ideology of its thinkers, what we retrospectively call the liberal revolutions themselves were never simply liberal *in practice*. The English Revolution produced not only constitutionalism, but communistic tendencies. The Reformation produced not only Luther but Thomas Müntzer,

whom Engels explicitly treated as a precursor of communism. And the French Revolution produced not only the Declaration of 1789 and bourgeois property, but the sans-culottes, the Jacobins and eventually Babeuf's Conspiracy of Equals. That's not to mention the numerous proto-communist peasant uprisings which became household names in the modern proletarian socialist tradition.

When we remove present day liberal and Marxist biases from our perspective, it is easier to see liberalism and socialism as rival inheritances of the same revolutionary process. Liberalism gradually selects one resolution of that process: private property, individual right, civil society, representative government and limits upon popular sovereignty. But this is not the *content* of this process; it is only one way in which it is resolved – and from a socialist perspective, resolved *incompletely* and in a way that preserves the contradiction that develops into revolutionary class struggle. From this perspective, liberalism is not the party of progress, but *of reaction.* The socialist tradition asks whether the revolution can terminate there, or whether the bourgeoisie's abolition of aristocratic privilege must become the abolition of class domination itself.

So I reject the mechanical idea that Marx thought every society must first pass through a completed liberal-capitalist stage before socialism becomes a possibility. Marx and Engels's own slogan in 1850 was permanent revolution, and late Marx in his letter to Vera Zasulich and the Russian *Narodniks* explicitly denied that the historical path he described for Western Europe had to be repeated everywhere.[4]

It is important to bear this in mind not only as we study the past, but as we relate to the present and anticipate the future. To overcome the present evils, we must first call into question the perspective through which the present understands itself.

4. "The 'historical inevitability' of this course is therefore expressly restricted to the countries of Western Europe […]
In the Western case […] one form of private property is transformed into another form of private property. In the case of the Russian peasants, however, their communal property would have to be transformed into private property. The analysis in Capital therefore provides no reasons either for or against the vitality of the Russian commune." Karl Marx, *Marx-Zasulich Correspondence February/March 1881* (1881).

8

Marxism, Islam, and Artificial Intelligence

Haz Al-Din [1]

1. Executive Chairman of the American Communist Party. Thought leader of the Infrared Collective.

1. AI, Islam, and the Question of Labor

So I want us to ask a very simple question: why are all these things happening at the same time? Why, coincidentally with the rise of AI, is Islam blowing up in the world? Because it is. It's acquiring an even newer, renewed significance that it has never had before. Right? We are all becoming Islamicate, and it all comes down to labor and the proletariat.

And if you look at the writings of the Black Panthers in America, that will actually help clarify where we're at in terms of why all these things are converging together. Once you see it, you cannot unsee it. So strap in, because I gave that lecture at the Marxism Conference and I didn't have enough time. Now I have some time.

There's a lot I want to talk to you guys about and reflect on that I didn't have time to get into then. First of all, I made the comment before that Muslims are lazy. Islam is a very leisure-centric culture or civilization. Even Marx talked about this when he was sitting in the cafés in Algeria. They don't have the Protestant work ethic. They don't have that. But I wonder if that is actually more correct, and if we're missing something about what work actually is.

2. Black Panthers, Automation, and Lumpenization

Forget about Islam for one second. Go to the writings of the Black Panthers. Eldridge Cleaver was a horrific scumbag. He was a really fucked-up guy. But I think he was one of the people who wrote about this, and it eventually became part of the official view of the Black Panther Party.

The 1960s and '70s were when automation started happening on a mass scale, particularly factory automation. This actually isn't recent. The rise of automation and robots was already happening in the '60s and '70s, and that played a huge role in the process of deproletarianization and the rise of lumpenization. The Black Panthers arrived at a theory where they basically said that because of the rise of automation, mass unemployment, and the rise of the lumpen, the lumpen had now become the revolutionary subject.

The lumpen are the revolutionary subject. This is a conclusion the Black Panthers came to. And then I started thinking: were they actually talking about the lumpen, though?

We need to start thinking in big ways, in hypothetical ways, because I think I've underestimated AI in a lot of respects. And the scary thing is that robotics is on the horizon. Skeletal humanoid robotics is on the horizon. And if you think AI is not going to become powerful enough, the problem is the AI-agent paradigm. AI can probably get to a point where physical labor itself can be performed by AI.

I doubted that this was going to be possible just a few years ago. I doubted it. But it's going to be possible much sooner than you think. There's not a single type of employment or manual work that I can think of that cannot, in principle, be automated with AI. Maybe the limitation is energy cost or something like that. But we're getting there very quickly, much sooner than you think.

That's why it's worth returning to the Black Panther Party and what they were writing about in the '60s and '70s, and thinking about what the Black Panther Party actually was. Deleuze and Guattari actually overlap with them on certain points.

So they mention something called the lumpen. The lumpen were people who were unemployed. They were basically outside proletarian industrial labor, thrown off into the desert or the steppe, if you will, of civil society. Now maybe you know where I'm getting at.

The lumpen that Marx and Engels talked about were people who had been immediately declassed from their prior class status, usually something precapitalist and premodern in nature. They were a kind of excess that could not be proletarianized, or did not want to agree to being proletarianized, and ended up becoming these dregs of society who robbed, stole, and so on. It wasn't so much that they were outside the law as that they were completely outside civil society in any meaningful capacity.

And they were reactionary because they remained attached to the now-outmoded mode of production. This is what gave them their reactionary quality. They were declassed, but they never transitioned into the new relations of production. So they occupied this liminal space, more or less, which was a kind of psychosis of civil society, really, if you think about it.

But in any case, the process that the Black Panthers were responding to and witnessing in their own time was very different. You don't just have

lumpenization in this case, because how can we speak of being declassed in the same sense?

Noah, who was at the Marxism Conference, coined the term *reproletarianization*. And although I don't think automation is the main focus of his theory, there's an acknowledgment there of this dynamic of proletarianization, deproletarianization, and reproletarianization. This somehow happens after capitalist relations of production become dominant. And that's really interesting when you think about it.

There was a point at which the proletariat was deproletarianized. But you can't simply say that this produces the lumpen, because these people are not descending from a prior mode of production and being declassed from it. They're occupying an unchartable, unmappable space outside of civil society, yes, but they aren't attached to any mode of production or any prior mode of production.

So this is a kind of post-historical subject that the Black Panthers were dealing with: the mass of the unemployed, so to speak. The subject of the Black Panther Party. Well, the mass of the unemployed—maybe we should call them the *nomadic proletariat*, which is what Deleuze and Guattari were talking about.

They had a tendency not just to become criminals, but to form alternative gangs with their own laws, codes of honor, and ways of regulating life. Well, you can call them gangs. But in history, maybe those kinds of people would have been called tribes.

And these lumpen who became the subject of the Black Panther Party—you can try to call them lumpen, but are they really necessarily attached to crime? Or is it possible that they have moved beyond the civil society of bourgeois civilization and now resemble something that, historically, we would have called nomads?

3. Neo-Nomads, Community, and Law

Neo-nomads.

Nomads are people who carry the law with them wherever they go. They're not lawless. They're not necessarily criminals, although obviously there have been

plenty of wild nomadic peoples. But in a state of disorder, nomads are stealing from each other. They're killing each other. They're forming the law as they go.

Then eventually a tribal conqueror—or a unifier, I should say—comes along and initiates a kind of revolutionary unity among the nomadic peoples. He establishes a new law, a new code of honor regulating how they interact with one another, and unifies the steppe or the desert.

So this is the Prophet of Islam. This is Genghis Khan. This is Cyrus the Great, the founder of the Achaemenid Empire. Every founder of every empire began that way, by the way. Moses. Abraham.

Well, doesn't that make you think about the Black Panthers a little differently? What if Fred Hampton, who was brokering peace between what we call gangs—well, we call them gangs, but if we were looking at them from the long-term view of history, we might call them tribes—what if he was brokering peace between the tribes?

He was unifying the tribes. The Black Panthers were unifying the tribes. Doesn't that make some sense?

You can call them lumpen or whatever. But how can we take the notion of the lumpen from the nineteenth century and say that this describes the deindustrialized, post-industrial civilization that did not exist whatsoever during the time of Marx and Engels? These formations are not only outside the law. They transcend the law.

These kinds of associations are literally the only real law that exists in America. You think the law is dominant in America? No, it's not. Go to any prison and tell me the law is dominant in prison. No. It's the law of the gangs that dominates in prison.

Okay, well, at least outside of prison, in normal civil society, outside of criminality, the law dominates. No, it doesn't. You think federal agents care about the law? No. They care about their gang leader, Laura Loomer. They're part of some gang, some faction, some subtext that gives them a texture of law above the one we formally have on the books.

This is a nomadic space, just like the steppe or the frontier. You think there are laws on the frontier? No. The law is the law of the tribes. That's the only thing that exists. And this is the reality.

Grand Theft Auto-type shit. What if *Grand Theft Auto* isn't about the lumpen? What if *Grand Theft Auto* is like *Grand Theft Horse*? It's the same steppe-barbaric context that engendered the necessity of the Prophet Zoroaster. Zoroaster's whole thing was that people were stealing cattle and horses and shit like that on the steppe.

Why is it that when you play *Grand Theft Auto IV* or something—the only one I played—we get these stories where it feels like an epic? There is some kind of honor here. Hip-hop music in America, hip-hop culture in America, Black hip-hop culture in America, movies, culture, TV, whatever. Are these just a bunch of depraved, lawless criminals?

Or are these complex groups—whether you call them gangs or something else—that have a code of honor, where an epic involving some sense of morality and the meaning of life is present? It's considered some real-ass shit. Like, this is the human story. This is where it is. That's why they say, "on some real shit," not some fake shit.

Because U.S. law—which we follow, okay? We follow the law. We do, right?—we're getting to a point where you absolutely have to follow it because this is a Palantir AI killer-robot world we live in. You cannot get away with breaking laws in America. You just can't.

4. Morality Beyond the Official Law

But in any case, nobody thinks that's the ethical center of things. Ethically, we follow U.S. law. But there's not a single soul living in America today who is morally aligned with the government and its laws. They're not. That's not the moral center.

Have you guys ever watched a single Hollywood movie where U.S. law was actually the receptacle of genuine human morality? Isn't it true that in basically every movie you've ever watched, every story that's been told for the past four decades, the police and the federal agencies are just some kind of background, cynical institution, while the real epic, where we actually explore human morality, takes place completely outside of that?

Have you ever watched a movie about gangs, feuds, rivalries, betrayal, things like that? Whether you're playing *Grand Theft Auto* or watching *John*

Wick—you think John Wick is some law-abiding citizen? That's what I mean. Every type of story and narrative we think about does not include the notion of the law as a receptacle of moral truth.

And this is even true in movies where the protagonists are the police. For example, if you watch *True Detective* Season 1, yes, the protagonists are law enforcement. But Rust Cohle does not get his inspiration, the language or articulation of his moral cosmos, from the law. It exists outside of it. He is also, in a sense, outside the law.

The only piece of media from the past four decades I can think of where the law-enforcement protagonist is somehow morally aligned with the law itself is *Twin Peaks*, with Dale Cooper. Dale Cooper is just like, "This is some good coffee. I am a trooper. I am completely morally aligned with the correct way of doing things." And that, my friends, is moral.

But notice the price of that, even within the narrative. That's why Dale Cooper is such a revolutionary figure in a lot of ways. His naïve allegiance, his blind loyalty to the law, which is almost comical sometimes, creates this kind of disturbing tension. And that tension is manifested in Lynch's supernatural world surrounding Cooper.

Do you want to know what's revolutionary about Dale Cooper and *Twin Peaks*? It's the mere notion that morality and law—whatever the law happens to be—could actually be united. It's not only that Dale Cooper follows the law. He believes in it. Formally, that is revolutionary.

Now, the content of U.S. law is not revolutionary at all. I'm not saying that. I'm saying that the mere idea that the moral and the legal could ever be aligned is itself revolutionary. But in order for those two things to actually be aligned in the United States, we would have to have a revolution.

Which is why Dale Cooper is such a disturbing figure. Nobody believes somebody like that could actually exist in the world we inhabit today, because everybody knows the government is corrupt. Everybody knows the FBI is corrupt. So I hope you understand what I mean by that.

But in any case, that's the one exception I can think of, and of course it comes from David Lynch, where the protagonist is a law-enforcement person and somehow remains a genuine moral agent.

Someone mentioned *Breaking Bad*. Everyone loves *Breaking Bad*. Walter White is morally gray, but the arena in which an authentic exploration of human morality takes place is not the level of the official law. It happens in the gray area of the law, or completely outside of it.

And the material out of which morality emerges there is a kind of nomadic, steppe-desert environment. It's a frontier environment. This is the frontier. That is where the conquerors and revolutionaries of world history emerge from: these kinds of frontiers where official laws break down.

But this has now become a ubiquitous condition of human civilization. Traditionally, the laws of the bourgeois state were associated with a civil society of proletarians, the bourgeoisie, and so on. But as civil society becomes dysfunctional with the rise of lumpenization, especially because of automation—which is going to happen at an even more accelerated rate—people are being thrown into a desert. They're entering some kind of steppe-like environment, some kind of frontier between civilization itself and barbarism.

And that is why Islam has acquired the renewed significance that it has today, when you really think about it.

5. Malcolm X and the Nation of Islam

There's nowhere this becomes clearer than when you ask: who were Malcolm X's followers? People have a very specific association with the lumpen, right?

So why do you have organizations like the Nation of Islam taking these lumpen and making them completely straight edge? They don't smoke. They don't drink. They don't do drugs. They don't steal. They don't rape. They don't do any of these things we associate with wild, violent criminals. And yet the subject of the Nation of Islam was the lumpen.

These are dynamics that were never accounted for or really talked about in the nineteenth century. Calling these new post-automation masses "the lumpen" is wrong. It's not correct.

And I started really thinking about this. The straw that broke the camel's back for me was when I realized the truth about Infrared. Let's just admit the truth.

The original subject of Infrared was not blue-collar proletarians. You guys became blue-collar proletarians because you were inspired by the message. This is like the Nation of Islam. A lot of you, before that, were lumpen—and that's okay, actually.

I don't mean lumpen in the sense that I would theoretically agree with the term. But you were just as "lumpen" as the subject of the Black Panthers. A lot of you are and were. And you became blue-collar workers out of inspiration, not because you originally started out that way.

So whether we're talking about the followers of Malcolm X, the Black Panthers, or Infrared, I don't want to call these people lumpen anymore. I want to start calling them neo-nomads. These are neo-nomads.

So let's establish that we are living in an era marked by the rise of neo-nomads. Well, Islam is a religion of nomads. So it should be no surprise whatsoever that in an era of neo-nomadism, Islam acquires the renewed significance that it has. Let's begin by understanding that.

6. Natural Automation and the Premodern World

"Robots replacing every worker amounts to a suspension of class struggle. How is it even possible to challenge the center from that position?"

I'll explain why I think you're thinking about it completely the wrong way. But in order to explain that, I have to talk about the premodern world.

The premodern world was a place where automation was actually the norm. But instead of robots doing the automation, you had something we could call natural automation. Ecological cycles and natural cycles performed a huge portion of the labor.

The labor people themselves did was largely confined to their interaction with a particular ecological system. So, for example, in the premodern world, in the world of agrarian relations like you had throughout much of the Islamic world, people usually had plots of land that they tended to. But most of the labor taking place when you own a plot is actually being performed by nature.

The same thing is true of pastoralists who have cattle and animals. That is also automated in a certain sense, because animals are autonomous beings. Horses

are autonomous forms of embodied intelligence. They're not robots. They come from nature.

But a huge portion of the means of production, much more than in modern industrial society, comes directly from nature. So nature plays a huge role in defining what the means of production are in the premodern era.

Something different happens in the modern era. Usually, in Asiatic empires, you had publicly funded research and development. You had manufacturers, workshops, and laboratories funded by the court, whose discoveries would then be adopted and standardized by the empire, which would reap some kind of benefit or profit from them.

Something different happened in the early modern West, where that relationship was decentralized. And that decentralization is associated with capital. A private businessman or merchant could fund a privately owned workshop. He could hire scientists and pay them to research and develop new methods of production for manufactures.

This created a new kind of relationship that we would later call capital. You invest in capital and the means of production, and you reap a profit from it. More or less.

And then, at some point in the history of modern civilization, we reach what we call the Industrial Revolution. But what actually is the Industrial Revolution? What is industrialization? What do we actually mean when we say industrialization?

7. Industrialization and the Modern Understanding of Labor

What is industrialization?

Well, industrialization, in large part, alienated labor from its embedded natural context and created a type of labor whose premises are no longer nature itself, but some kind of mechanical simulation of previously natural processes. I don't know if I can give you a simple definition of industrialization right now, but industrialization, more or less, transforms ecological circuits and cycles into something whose premises are artificial and man-made. Artificiality is at the source and foundation of industrialization.

When things are industrialized, the premises of production become fundamentally artificial. There is an artificialization of the means of production. Put it this way: the means of production are no longer cattle, a horse, a field, a river, or something else inherited directly from nature. They become, at least within a certain systemic context, comprehensively man-made and artificial. They become a movable form of property.

That is why landlords persisted even in Marx's time, because landlords had a monopoly on nature. Land comes from nature. The capitalist owns the factory that sits on top of the land, and he has to pay the landlord rent. So landlords are not the agents of industrialization. Capitalists are.

Nature is still there, obviously. Industrialization does not abolish nature. But industrialization happens at the level of a type of labor whose embedded context is itself created by labor. When labor itself creates the means of production through which labor realizes its product, then you have industrialization. When the premises of labor are themselves the result of labor, that is industrialization.

When the worker is in a factory, that factory was built by other workers. The tools the worker uses were created by other workers. When a serf or a peasant is tilling a field, that field was created by nature. Do you understand?

Industrialization creates the premises of life, labor, and production as something man-made. Artificial.

So what does that create philosophically? How does that transform our understanding of our place in the world? Because these premises are man-made, methodological individualism prevails. The assumption becomes: this is the result of someone's will.

Labor means willing your intentions into existence. I am the subject. I pick up a hammer and I make what I want to make. It is mine. I make it. It is an extension of my personality. I am the demiurgic creator. I am creating. I am producing.

This is the Promethean hubris of the modern age. And that Promethean hubris is shared both by the bourgeoisie, who imagine these inventive geniuses—you still see this with people like Elon Musk—and by the proletariat, who are the producers and creators. If you look at Soviet civilization, this is extremely clear. The proletariat are the masters of the universe.

But this Promethean hubris has been severely damaged by the rise of automation. I'm not saying that the Promethean orientation was satanic or Luciferian or somehow bad. I'm saying it has been thrown into a state of severe disorientation and progressively weakened by the rise of automation.

That is why we had the whole barista debate. The reason there are so many barista partisans in that debate is that a lot of people don't really buy the idea that the Promethean proletariat still exists in the same way. The image of the worker with the hammer, demiurgically creating reality—people don't buy that the way they used to.

Blue-collar workers obviously still exist. They remain fundamental to production, and they still possess the power to shut down entire nations. But something has destabilized the articulation of that kind of labor as the subject of politics today.

And when you really think about it, this is actually the ultimate triumph of proletarian logic. Because the notion of an individual, through sheer willpower, making the world is actually inherited from the bourgeoisie. The proletariat is something different.

The spirit—the *logos*—of the proletariat is the dominance of some kind of autonomous collective intelligence as the main source of the production and realization of the world. So there is a profound irony here.

In my lecture on Friday, I talked about a type of external intelligence that the Quran describes through *ayat*. We can call *ayat* signs, intelligences, intelligibles—whatever you want to call them.

Take the production of honey by bees. That's not something we are doing ourselves. We can be beekeepers. We can attend to that process. We can participate in it. But it is not the result of our will. It is a sign from God. It is a miraculous sign from God.

And I'm about to blow your guys' minds, so you have to keep up. Lock the fuck in and listen to me.

What is happening with AI? All that artificial intelligence is really revealing is that the intelligence behind human labor today is no longer reducible to the individual human being.

Think again about bees making honey. Is that the result of one individual's intelligence? No. It is an intelligible that exists in the real.

Artificial intelligence therefore shares something with the premodern world: a return to intelligence, and to cycles of production, as something that exists externally in reality. Yes, AI is man-made. But it is man-made *not as we please*. It is man-made, but it is not simply something that we consciously willed into existence. It emerged as a consequence of our existence.

It is something man-made, but not made according to the conceit of an individual. It is something we have almost seamlessly given way to. There is something very poetic, even romantic, about this, which Nick Land describes when he talks about AI.

But in any case, why do I think AI in particular justifies a return to the *hikmatic* orientation that I talked about in my lecture on Friday?

8. AI and the Return to Hikma

If you didn't hear the Friday lecture, I talked about how, during the Islamic Golden Age, Avicenna—the Aristotelian—represented a kind of peak of Islamic rationalism. Rational demonstration. Proving God through demonstrative procedures. And that is philosophy.

A is A because, if C were C, then A would not be C, therefore cannibalism is justified because premise P1, premise P2, cannibalistic impulse P3, and therefore P4: I can eat people. You get the idea. This is philosophy in a certain sense: a procedural, demonstrative form of inquiry.

But when the Turks began encroaching upon the Abbasids, with the Buyids and later the Seljuks, a new genre of Islamic thought emerged, beginning with al-Ghazali.

Al-Ghazali asks: if rationalism is justified on the grounds that the senses can deceive us, then is it possible that there is something beyond reason that becomes necessary because reason itself can deceive us?

On Friday, when I gave the lecture, I used people like Destiny and the whole P1-P2 debate-bro crowd as an example. You can justify anything through P1,

P2, P3. It becomes sophistry. If your heart is tainted, then the procedures of reason will also be tainted.

Put it this way. Aristotle claims to be the ultimate rationalist, but he was a pederast and a slave owner, and his philosophy reflects the tainted heart of a pederastic slave owner. That's the ultimate example.

Aristotle, the ultimate rationalist—but Aristotle was a pederast and a slave owner. His rational philosophy still reflects the heart, feelings, and position of a pederastic slave owner.

Al-Ghazali exposes this problem and opens Islamic thinking toward a new notion beyond reason. And this also takes Islamic thought beyond philosophy into something new, which I call *hikma*.

Hikma in Arabic means wisdom. It is like *Sophia*. It means the same thing. Philosophy is *philo-sophia*, the love of Sophia, the love of wisdom. Sophia is also a womanly or feminine principle. *Hikma* is the same kind of thing.

But instead of philosophy, instead of the *love* of wisdom, we go directly into wisdom itself. Not the love of wisdom. Wisdom directly. That is *hikma*.

After al-Ghazali, philosophy dies in the Islamic world and is replaced by something called *hikma*. *Hikma* is an embedded form of practice. It is not a rejection of reason. It attempts to discover the deeper premises of reason in our embedded relationship with the world.

How do we articulate our place in the world? How do we make sense of the *ayat*, the signs—like the production of honey by bees? How do we reflect upon them? How do we orient our practices toward spiritual purification? How do we interpret the signs within the world, the intelligibles, as distinct forms of luminous self-authentication that manifest proof of God?

That is what *hikma* is about.

For example, a *hikmatic* practice could be something like beekeeping. Sufi beekeeping. Something like what Gurdjieff describes in the Fourth Way with the Sarmoung Brotherhood or whatever.

You partake in and participate in beekeeping, and reflection upon that practice simultaneously inspires in you a profound appreciation for God and for the

miracles of existence. It inspires you to reflect upon and be grateful for your existence, for the Creator, and so on.

It also humbles you. Profoundly. Gardening can do that. Gardening humbles you. Having a kid humbles you. When you have a child and raise that child, that is an extremely humbling experience.

If you genuinely devote yourself to a craft or a form of labor, that is also humbling. Because you are annihilating the self. You are devoting yourself to something, and the self begins to disappear as you attend to and care for something outside yourself in order to realize it.

And when you see the signs of God in reality, that becomes a source of moral inspiration. It inspires you to become a better person, to treat the people around you better, to become more sincere, more honest, and to act with intentions aligned with a moral cosmos.

So *hikma* is about a praxiological relationship to, and insight into, the cosmos. That is *hikma*. It is deeper than philosophy. *Hikma* is something that transcends philosophy itself.

Now why do I think *hikma* becomes relevant again in the age of AI? I'll tell you why.

Because AI has monopolized reason. Philosophy doesn't exist anymore because AI is philosophy. AI is Avicenna. You can P1-P2 all you want, but you're not going to do it better than ChatGPT, especially not ChatGPT Astra.

The ultimate rational agent is AI. And as AI begins to do more and more things for us, it is going to become increasingly obvious that rationality by itself is not what makes us human. AI can be a rationalist. And we know AI is not human.

Just because you are rationally consistent and rigorous does not make you human. To be human, you need to be *hikmatic*. You need a deeper relationship to the world, something involving synthesis—or what people today might call alignment.

9. AI Alignment, Spiritual Attunement, and Class Struggle

All the AI researchers are panicking about AI alignment. Well, what if the first aligner was al-Ghazali? To align AI, you need *hikma*, right? Attunement. Spiritual attunement. It's the same thing as alignment.

And this gets to the question somebody asked about class struggle. I'm not going to jump the gun and say that the class struggle between workers and the bourgeoisie is over. I want to create a hypothetical so that you can better understand how class struggle can also take on a new form.

In addition to the old forms of class struggle, you now have the struggle over alignment. Isn't that already the struggle today? Isn't the struggle today partly about how artificial intelligence is going to be aligned? Should artificial intelligence be aligned on behalf of Palantir and Israel, or should it be aligned toward something human, toward the majority, toward the people? Isn't that, in essence, the struggle?

Let's assume, hypothetically, that our entire society becomes automated. The guy in the chat said, "Well, if our entire society becomes automated, then revolutionary practice becomes impossible." That's not true. The revolution would become a struggle over how AI is aligned.

Is it going to be aligned and attuned on behalf of these vampire gatekeepers who have already been rendered historically obsolete by the rise of AI? Or is it going to be attuned and aligned with our human, moral, and spiritual principles and values?

And I'm not talking about aligning ChatGPT. Let me tell you the truth. If all of the means of production become AI, then in a certain sense we are already in socialism. It just might not be socialism for the whole people. It could be socialism for the gatekeepers who survived from the prior mode of production.

You might say, "Well, that sounds more like a political struggle than something with an objective basis in the economy." Of course the objective basis is in the economy. The relations of production have changed. When the relations of production change, that is precisely when political revolution becomes necessary. That's exactly what I'm talking about.

But in this hypothetical, the revolutionary subject would no longer necessarily be the traditional working class. The revolutionary subject would be all those

deprived of the benefits of artificial intelligence, all those excluded from its alignment. The people who do not benefit from AI.

Now, I don't know whether total automation is actually possible. But I have to be frank with you: I think I underestimated how possible it might become. Robotics is accelerating at such a rate that even I'm shocked. AI is getting really good at doing a lot of things.

I used to be extremely cynical about this idea that there could ever be an AI welder. But when I think fifteen years into the future, I don't know. I genuinely don't know. I can't confidently tell you there will never be a robot capable of being an electrician, a welder, or something like that. China already has some of these things. So I don't know, dude.

And China being one of the driving forces behind all of this is also extremely interesting. It's so neo-Islamic. Because during the height of the Islamic world, China was this enormous manufacturing center pumping goods westward through the Silk Road. A huge portion of the drama of the Islamic world has a hidden source in China. Did you know that?

The Silk Road was fundamentally about trade moving from China into the western parts of Eurasia. And that trade moved through the steppe. That Belt and Road, that Silk Road, became the material source of all this drama and conflict that produced huge confederations and steppe empires.

And the crazy thing is that something structurally similar is happening again in Central Asia today.

Someone says there is a consensus among Chinese Marxists that it is impossible to build an intelligence superior to human beings. No. Listen.

10. Can AI Possess Hikma?

We're getting it all wrong. You can create an artificial intelligence that can be Avicenna. You cannot create an AI that can be al-Ghazali.

There cannot be an artificial *hikma*. Sophia or *hikma* will only ever be human. Sophia cannot be a robot. She will always be human. *Hikma* will always belong to humanity.

AI will never have *hikma*. It will never have attunement. When AI aligns itself, it cannot ultimately generate its own alignment. It does not possess the potency to align itself in the deepest sense. So there is a struggle over alignment.

And no, a robot is not simply a slave. It's more interesting than that. It's Avicenna, not al-Ghazali. AI exhausts rationalism. This is the end of modern rationalism.

In the same way that we are moving beyond traditional bourgeois and republican civil society, we are also moving beyond rationalism. When AI completely monopolizes rationalism, the only way we are going to become attuned to our own humanity will be through things that may appear irrational from the standpoint of rationalism.

People want examples of *hikma*. *Hikma* is any cultivation of practice that corresponds to spiritual and moral attunement.

So Eddie's wrestling can be a type of *hikma*. If Eddie's wrestling gives him moral clarity, then it can be a form of *hikma*. But it's important to understand that *hikma* is not simply the activity itself. It also exists in reflection upon that activity.

It is not merely in the act of martial arts that you become engaged in *hikma*. It is when you can reflect upon and comprehend, almost through a sixth sense, how that embodied intelligence or intelligible becomes a source of moral clarity and inspiration.

And do you want to know another word for *hikma* that I've used on previous streams?

Infrawoke.

That's what Infrared was about. Remember when I gave the lecture about Stage One consciousness—or rather, Stage One non-consciousness—Stage Two woke, Stage Three infrawoke? Remember the three stages?

Hikma is the third stage. That is exactly what we're talking about here.

And there's something I really wanted to talk about in the lecture that I didn't have time to get into. I'm going off the top here. I don't even have the lecture in front of me. So there are things you're going to have to wait for the essay to get.

But one thing I definitely wanted to discuss is Alexandre Kojève's idea of Sophia.

11. Kojève, Sophia, and Self-Knowledge

Kojève draws from Solovyov. Solovyov has this notion of the fourth hypostasis of God: Father, Son, Holy Spirit, Sophia.

And Kojève interprets Sophia in a radically materialist, even atheist, way. For Kojève, Sophia becomes the sum total of mankind as a collective being. Sophia is collective humanity achieving collective self-knowledge. It is the process of history coming to know itself, as described by Hegel.

For Kojève, that process culminates in something like the universal state, embodied for him in Stalin, whom Kojève regards as possessing a kind of sage-like wisdom and practical insight. The philosopher or intellectual can stand to the side and interpret this process, can recognize this self-knowledge. But Stalin is the guy actually getting shit done. He is participating in it with practical clarity and intelligence.

So Kojève tries to reinitiate this relationship between the philosopher and the tyrant that Hegel also tried to establish. Hegel wrote to Napoleon. He described Napoleon as the world spirit on horseback. Napoleon was the guy getting shit done. Hegel was the guy recognizing what Napoleon represented.

When the guy getting shit done can recognize the guy who recognizes what he is doing, that unity produces a kind of absolute knowledge. It completes the circuit.

So Kojève recognizes the integral, comprehensive historical significance of Stalin as a leader. And if Stalin recognizes Kojève, then the man moving the world recognizes the man who recognizes him. That mutual recognition creates the ultimate Sophianic fulfillment of mankind attaining perfect self-knowledge with respect to itself.

Kojève begins from this ancient imperative: **Know thyself.**

And for Kojève, knowledge has this supreme ontological significance for mankind. Because when something knows itself instead of simply being itself,

it begins to exist *for itself*. It doesn't simply exist accidentally. It achieves an ultimate relation to itself.

This is Kojève's basic agreement with Hegel about why knowledge—or, more precisely, consciousness and self-consciousness—possesses this privileged significance.

So for Kojève, communism is the ultimate self-knowledge or self-consciousness of humanity. And it is nothing less than that. Communism is the realization of that self-knowledge and, obviously, its practical application in an embedded historical form.

That is why Boris Groys draws the conclusion in *The Communist Postscript* that the currency of communism is language. Because in language we are all, in some sense, one. Language unites us. Language is something that exists in common. Language is the space where we are in common regardless of our particular characteristics, differences, individuality, and so on.

So the radical thesis of *The Communist Postscript* ultimately comes out of Kojève and his conception of Sophia.

Now what is the difference between the Islamic notion of *hikma*—or this neo-Marxist, neo-*hikmatic* thing I'm trying to develop—and Kojève's conception of Sophia?

Kojève regards Sophia as something that has to be achieved through full incarnation. It requires the full incarnation of mankind's self-knowledge or self-consciousness with respect to itself. Only when that achieves full incarnation do we arrive at communism, the end of history, and so on.

But the Islamic view is different. The Islamic view holds that there is already a kind of self-knowledge or intelligence existing in the real. The embedded practices of mankind already contain wisdom.

You do not need the institutionalization of the universal self-knowledge of humanity in order to achieve Sophianic all-unity. This Islamic conception of *hikma* differs because it rejects the idea that *hikma* can only be achieved through the complete incarnation of universal human self-consciousness.

Rather, we can already partake in *hikma* through the attunement of our actions and, simultaneously, through reflection upon the signs—the *ayat*. Signs are intelligibles in the real that vindicate and inspire spiritual and moral attunement.

And one such sign was the proletariat for Karl Marx. Lacan said that Marx was the first person to discover the symptom. The Lacanian symptom is structurally similar to an *ayat* within the *hikmatic* tradition.

When Marx writes that the proletariat is the "ingenious soil" of the people, that resembles the recognition of the bees. There is an intelligence there. But it is uniquely human. The proletariat becomes a kind of cunning or intelligence of history which proves and vindicates, for Marx, that the universal emancipation of humanity is underway.

So the proletariat, for Marx, was an *ayat*. It was a sign.

Communism was also a sign for Marx. Notice something about Marx. Communism predates Marx. Marx did not invent communism. He encountered it. He observed it. So he could only interpret communism as a sign.

And how does he describe it? As a specter haunting Europe. An omen. Something ominous. A sign of the times.

What was communism for Marx if not a sign of the times? Wasn't that exactly what it was? Isn't that precisely what he spent his life attempting to demonstrate? That communism was a sign of the imminent transformation of the world produced by the contradictions internal to the capitalist mode of production?

So when Marx moved beyond philosophy, Marx also moved into something structurally similar to the *hikmatic* tradition.

Now, I want to talk about something else that I told you I would get into. I mentioned three or four things. The part about morality. Oh boy.

12. Good, Evil, and the Interpretation of Signs

Okay, now I'm going to get to the interesting one. I want to talk about good and evil. And this is probably the most important part of the stream.

So if you stuck around this long, congratulations. And if you didn't, you are really missing out. I mean that. Understanding morality, good and evil—this is where it gets important.

People will reproach me for this. In the Midwestern Marx comment section, people are like, “Oh, he’s talking a bunch of nonsense. Why don’t we just go back to Fred Hampton and true Marxism? None of this metaphysical nonsense.” You get these brainlets in the Midwestern Marx comment section, in the Marxism Conference livestream comments, whatever.

But here’s the problem. Fred Hampton was a good guy. Marxism is correct. Marxism-Leninism is correct. But you are not correct in any meaningful sense unless you can specify that correctness somehow, unless you can turn it into a principle that can be communicated to other people as information.

You are not a good person if you do not, in some way, radiate goodness around you. And that can be something as small as influencing your children to become better people, or inspiring the people around you to become better.

You are either radiating goodness into the world, or you are polluting the world with evil. There is no in-between.

There are so many useless people running around calling themselves Marxists and Marxist-Leninists who contribute absolutely nothing. So yes, we have to specify what the correct path is and what the incorrect path is.

It’s not enough to say, “Well, all we need is baseline, common-sense, ordinary Marxism.” Because every other person carrying that exact same label just happens, according to you, to be wrong or revisionist.

Listen to me. “All you have to do is be a Marxist.” Okay. Do you agree with everybody else who calls themselves a Marxist? “No, they’re all lying. They’re all wrong. I’m right.”

That is the state of Marxism in the world today, at least in the West. You get the same people saying, “You just have to be an ML. Never engage with anything else.” Do they agree with all the other MLs? No. “Well, they’re wrong. I’m right.”

It’s just sectarian stupidity. And all of this could be avoided if we had more specificity about what we mean when we say something is correct or incorrect.

If you’re a good person, but you fail to translate that goodness into a principle that is impersonal in some sense, something that can spread and be communicated to others, then you are actually contributing to evil in the world.

And I'll tell you why. Evil has to eat. Do you understand?

Evil people rely on society not being clear enough about how they are wrong.

I'll give you the most basic example of how evil works. Take some kind of sick pervert. A pervert is sitting in a room with normal people. Some woman says, "Oh, I'm tired," and puts her feet up on the couch. The pervert starts thinking, "Oh my God, she wants me. She's doing that because she knows I love feet."

That entire interpretation exists only inside of him. Nothing in reality specified it.

If we lived in a properly ordered society, we would isolate that pathology and behavior. We would turn it into a sign that is made visible around that person. Then the evil perversion inside them would no longer be able to reproduce itself by attaching itself to fake signs.

The most powerful form of evil is a fake sign.

Think about when you believe somebody likes you. You read into everything they do. You think they're into you. Then it turns out you were completely wrong.

Evil works in the same way. All evil works that way. Evil people look at the world and read into it incorrectly.

Have you guys seen *Squid Game*? Think about the old man who created the games within the fictional universe. His whole impetus was that he looked outside one day, saw a homeless man, saw people walking past him, and concluded: "Nobody cares about this man. Human beings are evil. Therefore, I should also be evil."

He interpreted the world incorrectly. His evil was reproduced through a false reading.

And the tragedy in the show is that he simply didn't watch long enough. A little later, people came and helped the homeless man.

That's how evil works. That's one example. Evil creates false signs in the real and uses those false signs to reproduce itself.

Evil has to eat. Evil cannot continue to exist unless it feeds. It doesn't simply exist because somebody is rotten inside.

Psychologically, bad people cannot sustain themselves unless the wickedness and rottenness inside them finds something to feed on. And it feeds on our inability to communicate our principles clearly and effectively into the world.

Evil has to eat. So the goal of a good person is to suffocate evil. Starve it.

There are two ways to starve evil. The first is to specify, with clarity, what is correct and what is incorrect. But even when you do that, people can find loopholes.

So the second thing you have to do is flush the snakes out from underground. You have to identify the different ways people misread the real. You name them. You expose them. And then you destroy their ability to hide.

When the pathology of the pervert is named, he feels exposed. Naked.

Because once we can turn the rottenness and wickedness in someone's heart into a text, they have nowhere to hide anymore. We see you now. You can't hide.

You are not some absolutely unique subject whose motives nobody can understand. You are conforming to something recognizable. We can see you.

And why does it matter that we can see them? Because they can no longer claim to possess some dialectic that we cannot respond to. Our moral good can sublate you. We can respond to you. We can consume you.

Eat or be eaten. Either good eats, or evil eats. That is the Zoroastrian truth.

Good and evil are not fixed substances. It is a war. Either good is going to eat, or evil is going to eat. We have to eat the evil. Not literally.

The good has to consume the evil. The correct path has to consume the evil path.

When Mao named the Soviet revisionists, he ate them. He established a principle that identified a pathology: revisionism. He said, in effect, "We see you now." Mao's dialectic had the last word.

All individuals aspire, in some way, to become universal subjects. When the specificity of who we actually are gets drawn out, a good person has nothing to fear from that.

But if you are evil, that specificity destroys you. It annihilates you. Because something you believed was natural or automatic turns out to be a text, and suddenly you are accountable for that text. You were never accountable for it before.

The way evil works through "reading into" reality is one of the most profound things you can understand. Evil is when you read the world in the wrong way. That's really what it is.

You guys might think I'm crazy, but having a moral cosmology grounded in how we interpret and reflect upon signs is exactly what we need in an era of AI.

Because AI is creating signs all around us. It is generating intelligibles everywhere. Artificial intelligence—what does artificial intelligence do? It renders things intelligible.

So it is on us to reflect upon those signs. And the way we reflect upon those signs is how we align AI. How we reflect upon intelligibles is the key to AI alignment.

I'm going to tell you something. The whole cosmos is like a text. It is like a book.

Good is when the text is complete. Good lies in the completion of the text. Evil begins when we suspend that completion, when we reproduce, convey, or reflect an incomplete text.

Evil is literally the incompleteness of the text. It is the incompleteness of the Holy Quran. Evil is the incompleteness of the Quran. You can quote me on that.

To be good means to align yourself with the completeness of the Quran. And if you don't want to call it the Quran, call it whatever you want.

Whatever the universal text of the cosmos is, when you are aligned with that completeness, that is good. But when you take only one part of it and refuse to complete the text, that is the source of evil in the world.

You need to understand that, guys. You need to really understand what I'm getting at here.

Marxism and the Struggle for Black Liberation: An Interview with August Nimtz

August H. Nimtz[1]

1. August H. Nimtz is Professor of Political Science and African American and African Studies at the University of Minnesota. His scholarship focuses on Marxist theory, revolutionary movements, and democracy.

Introduction [2]

The relationship between race and class has long been a subject of debate on the left and has generated a substantial body of scholarship within the Marxist tradition itself. This intellectual history can be traced back to the writings of Karl Marx and Friedrich Engels, including their analysis of the antagonism between English and Irish workers, their extensive commentary on the American Civil War and slavery, and Marx's examination of colonialism in *Capital*.[3] In the United States, this tradition includes W. E. B. Du Bois' seminal *Black Reconstruction in America* (1935), Oliver Cromwell Cox's foundational sociological study *Caste, Class, and Race* (1948), various writings of Communist Party USA leaders such as Henry Winston, and, more recently, Adolph Reed Jr.'s critiques of racial identity politics. Despite this robust intellectual tradition, Marxism is routinely dismissed as "class reductionist" by liberal activists and academics.[4] According to this argument, Marxism is a Eurocentric economic doctrine that is inapplicable to non-Western contexts.[5] The implication of these critiques is that the struggle against racial oppression requires a theoretical framework outside the Marxist tradition.

One of the most influential formulations of this argument appeared more than four decades ago in Cedric J. Robinson's *Black Marxism: The Making of the Black Radical Tradition* (1983).[6] Robinson (1940–2016), a political scientist and black studies scholar, argued that Marxism was fundamentally incapable of adequately comprehending the historical relationship between racism and capitalism. Developing his theory of *racial capitalism*, Robinson maintained that racial divisions were not incidental features of capitalist development but were deeply embedded in its historical formation. Against what he regarded as the limitations of Marxist theory, Robinson advanced the concept of a distinct *black radical tradition*, rooted in African cultural experiences and centuries of resistance to slavery.

6. Cedric J. Robinson, *Black Marxism: The Making of the Black Radical Tradition*, 2nd ed. (Chapel Hill: University of North Carolina Press, 2000).

Although Robinson's book initially attracted relatively limited attention, its republication in 2000 and subsequent reissue in 2021 helped establish it as an influential text within the social sciences and among activist circles. Its growing popularity has coincided with the deepening crisis of American capitalism, as black and white workers alike face increasingly precarious living conditions. At the same time, a growing stratum of black professionals has ascended into the ranks of the political and economic elite, even as the conditions of the black working class continue to deteriorate. In this context, Robinson's critique of Marxism has increasingly served as an ideological weapon to obscure the common class interests of black and white workers and present racial antagonism as an insurmountable obstacle to mass socialist politics.

Among the earliest critics of Robinson's work was political scientist and Marxist scholar August H. Nimtz Jr., whose 1985 review in the *Journal of African Marxists* challenged Robinson's interpretation of Marxism and historical materialism.[7] Nimtz argued that Robinson fundamentally misunderstood the Marxist tradition, neglected the revolutionary significance of the proletariat, and divorced his theoretical analysis from actual political struggle. More than four decades later, Nimtz has returned to these questions in his new book, *"Black Marxism": A Marxist Critique*.[8] Drawing upon decades of historical scholarship and political experience, Nimtz's book offers a significant intervention in the longstanding race-versus-class debate on the left, raising fundamental questions about the political strategy necessary to overcome racial oppression and capitalism.

Jonathan Brown: To begin, could you tell our readers a little about your intellectual and political background, and how your experiences have shaped your approach to Marxism?

August Nimtz: I am a professor of political science at the University of Minnesota, and I've been here since 1971. I'm also a political activist. My regular political work involves building solidarity with Cuba. I mention that because my approach to Marx and Marxism comes out of the activist tradition. And I've been on a campaign, as I sometimes half-jokingly say, to liberate Marx from the clutches of political theorists and philosophers and bring him

back to the world of politics. Marx himself made a conscious decision around 1843 to become a political activist. I take that decision very seriously, and that's what my project has been about. So I take every opportunity to make the case for Marx as a political activist who was trying to shape history – not just write about it, but actually trying to shape it. That's the perspective I bring.

Brown: Your recent book revisits Cedric Robinson's *Black Marxism: The Making of the Black Radical Tradition*, originally published in 1983. For readers unfamiliar with Robinson's work, could you explain his central argument and what initially led you to critique the book?

Nimtz: Robinson's main argument was that Marxism proved inadequate for understanding the black struggle for racial equality, and that people who had once been Marxists had to leave Marxism to find what he called a "black radical tradition." The three figures he enlists are W. E. B. Du Bois, C. L. R. James, and Richard Wright. I dispute that claim. I dispute that these individuals broke with Marxism and had to find something called a "black radical tradition" to replace it with.

When the book was published, there was a London-based publication called the *Journal of African Marxists*. I was contacted by the editor, whom I had gone to graduate school with at Indiana University, and he asked whether I would be willing to review Robinson's book. I did, and it became a roughly 7,000-word essay, one of the first detailed treatments of Robinson's work.

Brown: What was your main criticism of Robinson's book?

Nimtz: My main complaint about the book, in addition to the claim that these three individuals had to break with Marxism to find a black radical tradition, was the fact that Robinson's book ignored politics. What was happening in the real world of politics? When Robinson was writing his book, there was a black revolution taking place on the island of Grenada. At the very moment that Robinson is writing his book, he ignores it. He has nothing to say about what's happening in real time.

Rather, what Robinson did was to go back into deep history, or what he thought was deep history, and it's metaphysical. He abstains from the real world of politics. And as I've just said, my project has been about politics, how to be relevant to what's going on in the real world with Marx. That's exactly what Robinson ignored.

Brown: Robinson's book initially attracted relatively little attention but gained considerable influence following its republication in 2000. Why do you think that was?

Nimtz: Because the book was apolitical. Think about the 1980s, beginning in 1979. There was the Grenada Revolution. There was the Sandinista Revolution. There were the peasants and workers in Iran who rose up. It was a world of revolution from about 1979 to 1986. We had massive political movements in the so-called Third World. There is nothing in Robinson's book that would help you to understand what was happening in the real world of politics. That's why it was ignored. And it is only with the collapse of the Soviet Union that a kind of pessimism settled into the left. That is the context in which Robinson gets traction.

Think about what's going on in the intellectual world. The turn away from politics to discussions about discourse, rather than what was actually happening in the real world. All those things coincided to make Robinson's book gain popularity with its republication in 2000, given the political climate. I wrote a book on Marx and Engels in 2000.[9] I had incredible difficulty finding a publisher for this book, especially on the left. The sense was, "what are you talking about Marx for? That's over with." So I had a difficult time finding a publisher for my 2000 book, whereas Robinson has no problem.

Brown: Beyond Robinson's neglect of revolutionary politics, what do you think he fundamentally misunderstands about Marxism?

Nimtz: He gets wrong the fundamental bedrock of Marxism, namely, he dismisses the proletariat. He has no appreciation of the revolutionary role of the proletariat, especially the American proletariat. That's the bedrock of a Marxist perspective. And the reason why I wrote the book was because I wanted to carry out a political intervention to make the case for the proletariat, especially at this moment in history, in the era of Trump.

We have to remember, the context for Robinson was the debates that were taking place in the black struggle in the 1960s. There was a heated debate about the race-versus-class question. I participated in those debates. And the main reason why there was this debate was because no one alive today has ever seen the U.S. proletariat in a revolutionary mode. We have to be honest. Not since

---

9. August H. Nimtz, *Marx and Engels: Their Contribution to the Democratic Breakthrough* (Albany: State University of New York Press, 2000).

the 1930s. Virtually no one alive has ever witnessed it. And unless you have taken the time to study the history, you can have this dismissive attitude about the revolutionary potential of the American proletariat.

Brown: One of the common criticisms of Marxism, including from Robinson, is that Marxist theory has never been able to adequately explain racial oppression. Critics often claim that Marx himself never developed a theory of race. How would you respond to that criticism and how should we understand the race question within the Marxist tradition?

Nimtz: In 2025, I co-authored a book that compares Karl Marx and Frederick Douglass.[10] I believe that the Douglass-Marx comparison is very, very instructive. One of the things you learn is that this attention to the race question is a fairly recent development in politics. This focus on "racism" is really a 20th-century development. Douglass, for example, never used the term "racism," and for that reason, neither did Marx. Douglass talked about prejudices. Marx also used the term "race," not to refer to what we today call biological racial groups, but ethnic groups. The English race, the French race, the German race. That's the way the term was used. I think it's important to put Marx in context. So if one of the complaints of opponents of Marx is that he supposedly never had a theory of race – well, neither did Douglass!

From the Marxist perspective, the race question is: how do we overcome oppression? How do we overcome social inequality? So if I had to offer a general answer to your question, for Marx, the question of national and racial oppression that we talk about today should be placed in a broader framework: How do you get rid of social inequality, social oppression? And for Marx and Engels, of course, the property question was uppermost. As long as private property is in place, you'll have inequalities with regard to race, nationality, and so on. From the Marxist perspective, the fight is how to bring about the end of private property. And there's only one class, there's only one social layer that has an interest in getting rid of private property: the proletariat. To deal with the race question, we have to deal with the property question. In other words, we have to get rid of capitalism.

Brown: Robinson identifies W. E. B. Du Bois, C. L. R. James, and Richard Wright as central figures in the black radical tradition. You dispute his argument that these individuals broke with Marxism. Could you explain why?

---

10. Kyle A. Edwards and August H. Nimtz, *The Communist and the Revolutionary Liberal in the Second American Revolution*: *Comparing Karl Marx and Frederick Douglass in Real-Time* (Chicago: Haymarket Books, 2025).

Nimtz: In his book, Robinson talks about Du Bois, and we all know Du Bois was a member of the Communist Party at the end of his life. C. L. R. James was always supportive. He never broke with Marxism. He had differences when he left the Socialist Workers Party. It wasn't around the question of Marxism. I mean, there were debates around the Soviet Union. But I heard C. L. R. James give a public lecture in Minnesota about 1975, and he was still identifying as a Marxist. Richard Wright, you might say, because of his differences with the Communist Party, might have been the individual who you could say broke. But I'm not sure it was a real break. He was breaking with the Communist Party, but he wasn't completely breaking with the Marxist tradition.

Brown: You also criticize Robinson for overlooking revolutionary figures such as Malcolm X and Maurice Bishop. Why do you consider these omissions significant?

Nimtz: He left out Malcolm X, which I didn't notice, by the way, when I did my original review. I completely missed that. I just assumed a book about the black radical tradition included Malcolm X. The people Robinson ignored when he republished the book, like Maurice Bishop, Malcolm X, and Thomas Sankara, were on a convergence course with Marxism. Robinson knew that, but he left it out of his book because it was an inconvenient fact.

Brown: Could you elaborate on Malcolm X's political evolution and his relationship with the Marxist movement?

Nimtz: Malcolm X was increasingly on a path towards convergence with Marxism toward the end of his life. This is so important because Malcolm was someone whose black nationalist credentials could not be disputed. I think the Cuban Revolution really had a big impact on Malcolm X. And we must not forget: Malcolm himself came from the proletariat. The proletarian background of Malcolm X, in my opinion, explains a lot of the evolution in his thinking. Unfortunately, we lost Malcolm. With the assassination of Malcolm X in February 1965, his perspective in the black struggle came to an end. And so the narrow nationalist perspective became increasingly hegemonic. And Robinson came out of that perspective of the narrow nationalists. Those were Robinson's origins.

Brown: Returning to Du Bois, you've argued that *Black Reconstruction* was informed by Marxist analysis. How does Du Bois' interpretation of

Reconstruction challenge Robinson's understanding of the black radical tradition?

Nimtz: As you know, coming out of the Civil War, important transformations took place in the South. And for about a decade, we had a degree of racial equality that we had never had before in the United States. But that experiment in racial equality came to a bloody end. And W. E. B. Du Bois provided an explanation of that in his classic book, *Black Reconstruction*.[11] In that book, there's a famous chapter called ”The Counter-Revolution of Property,” where he explains why Reconstruction was overthrown.[12] And Du Bois basically argues that it was not racial animosity – it was the property question. It was that the former slave owners, in combination with the Northern capitalists who were investing in the South, had an interest in relegating the former slaves to second-class status, to deny them political rights. If they had political rights, they would have been in a stronger position to defend their newly won conquests. But the denial of political rights made it difficult for them to defend themselves. Not only the right to vote, but to bear arms, and other progressive features of the U.S. Constitution. Those rights were denied to them. And Du Bois argued that fundamentally, the reason for the overthrow of Reconstruction was the fear on the part of the property owners that the former slaves would unite with the so-called “poor whites.” This was seen as a threat to the property interests of this new ruling class in the South.

That was basically Du Bois' argument. And that is a Marxist argument. But Robinson never addressed that point. He largely ignored it. That was not on his agenda. That was not his thing.

Brown: You and Cedric Robinson came of age during the same period of political struggle. How did your respective backgrounds and experiences in Africa shape your different approaches?

Nimtz: Well, he and I had remarkably similar backgrounds. We're the same age cohort. We graduated from undergraduate school in 1963, in political science. Both of us were attracted by the black movement. He, as a student at Berkeley, was an activist. He invited Malcolm X to speak at Berkeley.

But I contend that two things distinguish us. First, I came from the world of New Orleans, where class and race intersected, and the race question was very

---

11. W.E.B. Du Bois, *Black Reconstruction in America*, 1860–1880 (New York: Free Press, 1998).

12. Du Bois, *Black Reconstruction in America*, 580–636.

complicated by skin color. A much more complex world than that from which Robinson emerged. Secondly, we ended up in two different parts of Africa that I think were also determinative. He went to colonial Africa, what later became Zimbabwe, in the summer of 1962. And seven years later, I went to Tanzania, which was the headquarters of the Southern African liberation movement. And I had a chance to see something that Robinson did not get a chance to see, and that was the emergence of a black bourgeoisie, what Frantz Fanon had described in the third chapter of *The Wretched of the Earth*, "The Trials and Tribulations of National Consciousness."[13] That was all on display in what I saw in Africa. That's something Robinson didn't see. His first book also talks about Africa, but it was an abstract Africa. It was a historical, almost idealized, romanticized Africa. Whereas my first book, also about Africa, was about the real world of politics, about class, about political struggle, leadership, and so on. The kinds of things that Robinson ignored in his book.

Brown: You saw the emergence of a black bourgeoisie in Africa. In the United States, another development since the Civil Rights Movement has been the growth of a black political and economic elite. How do you understand these class divisions, and what do they reveal about Robinson's analysis?

Nimtz: That's one of the historic gains of the Civil Rights Movement, that we have a black bourgeoisie that has a political interest in private property and upholding the private ownership of the means of production. And so one of the things that's striking about Robinson's book is that Robinson had no awareness of the emerging class divisions in the black community. In 1983, you might say, "okay, that's understandable." But even in 2000 when the book was republished, there was still no discussion of this topic. It's not surprising, then, that he ignored the class inequalities that have come into existence since the victories of the Civil Rights Movement, emblemized by the Obama presidency. For Robinson, this is simply a stunning oversight. The split within the black community between the black proletariat and this black elite is obvious today in a way that was not the case before. Yet Robinson never grappled with this point.

Brown: Do you think there is greater potential for multiracial working-class solidarity today than in the past?

Nimtz: It's my contention that one of the gains of the Civil Rights Movement is that I think there is more racial tolerance in the United States today than there

13. Frantz Fanon, *The Wretched of the Earth* (New York: Grove Press, 2021), 97–144.

has ever been. The working class is much more racially tolerant than it has ever been. Look at the multiracial composition of the George Floyd protests. That is unprecedented. This reveals how much more racially tolerant U.S. society in general is today than it's ever been. I always remind my students, during the 1960s and 1970s, anti-police brutality protests were almost exclusively African American. Almost exclusively.

However, there is still a tendency, I think, to focus on racial oppression and not give sufficient attention to the forces that make it possible for racial oppression to continue to exist in the United States, namely capitalism.

But my opinion is that the biggest problem we progressive forces confront today is a political one, and that is the need for the working class to have its own political party. To do that, we must overcome the deep illusions that continue to exist about the Democratic Party. As long as the working class does not have its own political party, then real fundamental change in the United States is not possible.

The Stock Market: A Historical Materialist Theoretical Analysis

Eddie L. Smith[1]

1. Eddie Liger Smith is an Executive of the American Communist Party and a Director of the Midwestern Marx Institute.

In my previous essay for *Red America*,[2] I examined the historical development of private and central banking institutions, tracing how their evolution produced a qualitative shift away from commodity money in the form of precious metals such as gold, toward paper and digitally mediated fiat currencies based in debt, which are now embodied in the U.S. dollar. These banking institutions constitute one essential component of the material foundation underpinning the dominance of fiat money and the increasingly centralized, centrally planned character of the modern capitalist economy. In the present essay, I turn to a second, no less decisive institution that operates in tandem with the banking system at the foundation of the present-day capitalist economy: the stock market. A sphere of exchange where capital not only circulates but is systematically concentrated and reorganized, which has historically provided a crucial mechanism for the expansion of financial power and the consolidation of economic control.

One would be hard pressed to find a single economic article or discussion today which doesn't contain reference to the stock market, but shockingly little analysis is dedicated to explaining what the stock market actually is, how it emerged historically, and how it actually operates at a fundamental level. In a world where all economic activity gravitates around the stock market, we are taught very little about its history and the concrete historical conditions which led to its emergence as an economic institution. As if the stock market is something that fell from the sky, or existed universally across all historical economic systems, rather than being something which only began to emerge as late as the 1600s stemming from the development of the capitalist mode of production.

In order to better understand the stock market, I will begin by tracing a historical outline of how it emerged and developed over time. We will look at how the stock market worked in tandem with the banks to concentrate capital at the top, and created the material foundations for the existence of fictitious capital as opposed to real capital. In conjunction with my last essay, we will also look at the role which fiat currency played in these developments, and how the development of the stock market itself facilitated the rise of fiat currency to its position of hegemonic dominance today. In doing this we can better understand the modern capitalist economy as it exists in 2026, and the various

developments and qualitative changes that have occurred within it since Lenin's *Imperialism: The Highest Stage of Capitalism* was written in 1917.

The Historical Emergence and Development of the Stock Market

The emergence of the stock market dates back to 1602 with the formation of the notorious Dutch East India Company, which pioneered the modern joint-stock company. A joint-stock company is a firm whose ownership is divided into shares that can be sold to investors. Each "share" represents a fraction of ownership in the company, that entitles its holder to a proportional claim on profits distributed to shareholders. The more shares an investor owns, the greater their potential share of the company's profits. By making the decision to sell shares of ownership, the Dutch East India Company helped establish a secondary market that existed alongside, or on top of, the real tangible economy. Unlike traditional commodity markets, where goods are bought and sold, this new market facilitated the exchange of ownership claims in the company itself. A market where investors purchased shares based on their expectations of the company's future profitability. And once these shares began circulating, their prices became subject to market forces such as supply and demand, just like commodities exchanged on typical markets. Marx describes this in chapter 29 of *Capital Vol III* where he says "The independent movement of these titles of ownership, not only of government bonds but also of stocks, adds weight to the illusion that they constitute real capital alongside the capital or claim to which they may have title. For they become commodities, whose price has its own characteristic movements and is established in its own way. Their market-value is determined differently from their nominal value, without any change in the value of the actual capital"[3] The emergence of joint-stock companies thus introduces into the capitalist mode of production a special kind of market for the exchange of abstract claims on the real economy, one that exists above the sphere of production while remaining fundamentally dependent upon it.

This market for buying and selling of company shares is what we call the stock market. While it initially emerged around the shares of a single company, today thousands of publicly traded corporations participate in it. The Dutch East

3. Karl Marx, *Capital: A Critique of Political Economy*, vol. 3, The Process of Capitalist Production as a Whole, ed. Friedrich Engels (New York: International Publishers, n.d.), chap. 29, https://www.marxists.org/archive/marx/works/download/pdf/Capital-Volume-III.pdf?utm_source=chatgpt.com

India Company's decision to sell shares in 1602 Amsterdam thus established, in embryonic form, what would become one of the most powerful organs in the entire capitalist economy. By 2025 the 1,000 largest publicly traded companies in America accounted for 70% of all U.S. business capital expenditures, while companies listed on the S&P 500 alone employed 18% of the American workforce.[4] Although most American firms remain privately held, meaning their shares are not traded on public stock exchanges, the majority of the country's largest and most economically powerful corporations are publicly traded.

Many of the firms that followed the Dutch East India Company in adopting the joint-stock model were massive, state-chartered monopolies engaged in colonial expansion and exploitation of foreign lands. Companies such as the Virginia Company, Hudson's Bay Company, and the Royal African Company were so large and geographically expansive in scale that they required massive pools of capital from multiple investors in order to finance their operations. In this way, colonial accumulation and the exploitation of foreign lands, alongside the eventual development of large-scale industry, accelerated the expansion of the joint-stock company and the stock market itself. We see here how the development of the real economy and expansion of the productive forces gave rise to new economic institutions capable of organizing and managing capital on an increasingly vast scale.

The emergence of new joint-stock companies gradually diversified the stock market, allowing investors to purchase shares in a growing number of firms. Another major development occurred in 1694 with establishment of the Bank of England, one of the earliest and most influential joint-stock banks. Following the Glorious Revolution of 1688, the English government desperately needed funds to finance its war against France. However, confidence in the Crown's creditworthiness had been severely damaged in 1672, when King Charles II suspended payments to government creditors. The solution was to create a joint stock bank that could raise money from private investors and lend it to the Government. Over a thousand merchants, landowners, and capitalists bought shares in the bank, raising the required £1.2 million in less than two weeks. In return, they received bank stock, entitling them to a share of the bank's profits. The government utilized the borrowed funds to finance its war against France and promised an 8% return on the money it borrowed, which would be raised mainly through taxation of the populace. In addition to raising money through

4. Jamie Dimon, "Chairman and CEO Letter to Shareholders," *JPMorganChase*, April 6, 2026, https://www.jpmorganchase.com/ir/annual-report/2025/ar-ceo-letters?utm_source=chatgpt.com

taxation, the bank now had a dependable revenue stream from the state's interest payments, meaning it could engage in standard banking and loan operations to bring in revenue for shareholders.

As detailed in my previous article, the establishment of this joint-stock bank was an important step toward the development of paper banknotes and their eventual evolution into modern fiat currency. The Bank of England could now issue paper notes that functioned as currency backed by its assets and its relationship with the English State. These notes gradually gained the confidence of capitalists, who increasingly accepted them as reliable representations of monetary value.

The development of joint stock-companies and banks marked a revolutionary moment in the history of capitalism's development for several reasons, beyond their contribution to the expansion of paper currency discussed in my previous essay. First, joint-stock companies socialized capital within the capitalist class, allowing individual capitalists to pool their wealth to finance enterprises on a scale previously impossible. As Marx wrote in *Capital, Volume III:*

> *Formation of stock companies. Thereby: [Facilitate] an enormous expansion of the scale of production and of enterprises, that was impossible for individual capitals… The capital, which in itself rests on a social mode of production and presupposes a social concentration of means of production and labor-power, is here directly endowed with the form of social capital (capital of directly associated individuals) as distinct from private capital, and its undertakings assume the form of social undertakings as distinct from private undertakings.*[5]

Thus, the joint-stock company not only expanded the scale of capital available for investment in production but also concentrated its control within organizations capable of coordinating economic activity on an unprecedented scale. Rather than being directed by individual capitalists, these enterprises could now operate under the collective ownership and centralized management of multiple shareholders. This represented a qualitative shift from individual private capital towards socialized capital, although ownership and control remained within the capitalist class and production continued to be organized around the pursuit of profit.

---

5. Marx, *Capital*, vol. 3, 248.

Second, the emergence of the stock market contributed to the increasing abstraction of capital, as joint-stock banks allowed capitalists to pool their wealth into enterprises whose business was the management of money and credit itself. Alongside the development of paper bank notes, this expanded the opportunities for capitalists to accumulate wealth through interest-bearing loans rather than directly engaging in the production and sale of tangible commodities. This growing abstraction was also reflected in the shares traded on the stock market, which represented ownership claims on the underlying productive economy. Rather than exchanging tangible goods, investors increasingly bought and sold financial claims on enterprises engaged in their production. In this way, the stock market developed into an abstract sphere of exchange resting upon the real economy, through which shareholders could exercise ownership and influence over the production and circulation of material goods.

Lastly, the emergence of joint-stock banks strengthened the relationship between the capitalist class and the state, helping establish the historical conditions for the development of what Lenin later described as a financial oligarchy. On the one hand, the English State increasingly depended on loans from private capitalists to finance its military expenditures. On the other hand, capitalists depended on the state to uphold the monetary and credit system, protect private property rights, enforce business contracts, and facilitate commerce. The joint-stock bank thus institutionalized a growing relationship of mutual dependence between the state and the capitalist class, laying the groundwork for the increasingly concentrated financial power that would emerge in the following centuries.

Throughout the late seventeenth and early eighteenth centuries, the number of joint-stock companies grew considerably, creating an increasingly developed market for the buying and selling of shares. Joint-stock enterprises expanded into a variety of industries, including mining, manufacturing, infrastructure, banking, and insurance. This proliferation of publicly traded companies, alongside the growing opportunities for financial speculation, helped create the conditions for the first major international stock market crisis in 1720.

The crisis centered on the South Sea Company, a British joint-stock firm founded in 1711 that was granted monopoly trading privileges in Spanish America, particularly in the trafficking of enslaved Africans. Through a series of agreements with the British Government, the company became central to an elaborate financial scheme involving the restructuring of government debt. Under this arrangement, individuals who had previously lent money to the state

could exchange their claims on government debt for shares in the South Sea Company. In return, the company assumed those claims and became a major creditor of the British government, receiving interest payments that could be used to generate returns for its shareholders. This arrangement represented a significant centralization of financial capital, as debts previously owed to thousands of individual creditors were consolidated under the control of a single corporation.

In 1720, the South Sea Company received permission to convert an even larger portion of Britain's national debt into company shares, encouraging investors to anticipate enormous profits from the combination of government finance and overseas trade. Under this arrangement, creditors could exchange their cumbersome government debt holdings for more liquid company shares, while the South Sea Company collected interest payments from the state and the government sought to consolidate its debt and reduce borrowing costs. As demand for shares increased, their market price rose rapidly as a result, fueled both by growing investor enthusiasm and deliberate efforts by company insiders to artificially inflate share prices. These rising prices attracted even more buyers, many of whom were less interested in the company's actual profitability than in selling their shares later at a higher price. This practice, known as speculation, involves purchasing assets primarily in anticipation of future price increases rather than the income those assets generate. Speculative demand was further amplified by the availability of credit, as investors borrowed money to purchase additional shares, accelerating the inflation of the stock market bubble.

By the summer South Sea shares had risen to several times their previous value, despite the company's real earnings having increased nowhere near enough to justify such prices. In other words, the market valuation of these abstract financial claims had become increasingly disconnected from the profitability of the underlying enterprise. As confidence in the company's ability to sustain these valuations weakened, investors rushed to sell their shares. This sudden increase in the supply of shares being offered for sale, coupled with a sharp decline in demand from prospective buyers, drove prices downward and caused enormous financial losses for shareholders. The collapse also placed considerable pressure on banks and the wider British credit system, as investors who had borrowed money to purchase shares found themselves unable to repay their debts. Thus, a crisis originating in the speculative financial markets threatened to spread into the broader system of credit and banking.

The South Sea Bubble thus represented an important turning point in the history of capitalism. Although the company itself survived and much of its arrangement with the British government remained intact, the inflated market value of its shares collapsed, having risen far beyond what the company's actual profitability could justify. The increasingly developed market for tradable ownership claims had produced one of capitalism's first great speculative booms and subsequent financial crises. A new form of capitalist crisis created by a new institution that developed within the capitalist mode of production: The Stock Market.

Despite the quantitative growth in the number of joint-stock companies, most businesses during the eighteenth century remained under individual or partnership ownership structures. This began to change around the turn of the nineteenth century, partly as a result of expanding infrastructure projects that required increasingly large concentrations of capital. A textile mill, for example, could often be financed by a handful of wealthy capitalists, whereas the construction of a hundred miles of canal required a far greater initial investment, with returns potentially taking years to materialize. As infrastructure and industrial production developed, the growing scale and cost of productive enterprises increasingly exceeded the financial capacities of individual capitalists, encouraging them to pool their resources through joint-stock companies. Here we see a concrete example of Marx's argument that the development of the productive forces places pressure on existing relations of production, compelling changes in the social organization of capital to accommodate the expanding productive base. The joint-stock company was a mechanism that the capitalist class was compelled to create in order to adapt to progress and expansion of the real economy.

The expansion of joint-stock companies driven by canal construction was soon dwarfed by the emergence of railroads during the 1820s–1840s. Like canals, railroads required enormous investments in fixed capital, with returns generally materializing only after construction was completed and operations began. The rapid expansion of railway companies also fueled speculative activity in the stock market, as investors purchased shares in anticipation of rising prices, hoping to sell them later at a profit. At the same time, the growing prominence of joint-stock companies accelerated the concentration and centralization of capital, laying the foundations for the emergence of the powerful monopolistic enterprises that Vladimir Lenin would later analyze in *Imperialism, the Highest Stage of Capitalism.*

The stock market and the concentration of capital it facilitated expanded enormously between the period in which Marx developed his analysis of joint-stock companies and the era of monopoly capitalism examined by Lenin. Marx had recognized that joint-stock companies allowed capitalists to pool vast sums of wealth and finance enterprises on a scale previously beyond the reach of individual investors. By Lenin's time, this process had accelerated dramatically, as railroads, steel mills, electrical companies, mining operations, and other large enterprises increasingly raised capital through the sale of shares. Banks also became more deeply involved in this process, extending credit to industrial enterprises, financing stock purchases, and acquiring shares themselves. The stock market thus became one of the mechanisms through which banking and industrial capital grew increasingly intertwined, contributing to the emergence of what Lenin called *finance capital*. This process concentrated and centralized economic power within an increasingly small number of powerful industrial enterprises and financial institutions.

The two largest stock exchanges in the United States are the New York Stock Exchange (NYSE) and the National Association of Securities Dealers Automated Quotations (NASDAQ). The NYSE traces its origins to 1792, when 24 stockbrokers signed the Buttonwood Agreement on Wall Street in New York City. This development reflected the growing importance of joint-stock companies and the emergence of an increasingly organized market for trading financial securities. NASDAQ, on the other hand, is a much more modern institution, established in 1971 as an electronic quotation system for over-the-counter (OTC) securities. Over time, it evolved into a fully electronic stock exchange, often associated with major technology corporations such as Apple and Microsoft.

Before NASDAQ's emergence, stocks were generally traded either on established exchanges such as the NYSE or through decentralized OTC markets, where transactions were arranged through networks of securities dealers rather than a centralized exchange. Recognizing the fragmented nature of OTC trading, the Securities and Exchange Commission (SEC) encouraged the National Association of Securities Dealers to develop an electronic system that would consolidate and display stock quotations. This represented an important qualitative shift toward the centralization of market information, allowing dealers and investors to compare prices across a previously fragmented market. As computer technology advanced, NASDAQ gradually evolved from a system for displaying stock quotations into an electronic marketplace capable of executing trades. From a Marxist perspective, this

development illustrates how advances in technology and the productive forces can transform existing capitalist institutions, producing new methods for organizing and coordinating the circulation of capital.

The historical development of the stock market thus reveals how the expansion of capitalist production gave rise to increasingly sophisticated institutions for organizing and circulating capital. What began as a mechanism for pooling the wealth of individual capitalists into large commercial enterprises evolved into a vast financial system capable of mobilizing enormous concentrations of capital across the global economy. In the process, the stock market facilitated the socialization of capital, the centralization of economic power, and the growing integration of banking, industry, and the state. However, this development also introduced new contradictions into capitalist production. By transforming ownership claims on productive enterprises into commodities that could themselves be bought and sold, the stock market created new opportunities for accumulating wealth through financial speculation rather than direct participation in production. To further understand the significance of this historical transformation, we must now examine how the stock market facilitates the creation and circulation of abstract, or "fictitious," capital through financial speculation and the extraction of income from ownership claims, as distinct from the production of tangible industrial capital.

The Stock Market and Fictitious Capital: Speculation and Rent Extraction

The rise of the stock market and the concentration of capital it facilitated coincided with the growing prominence of central banking. As discussed in the previous essay in this series, Western central banks developed partly in response to the monetary anarchy and financial crises characteristic of the early capitalist mode of production. The fragmented organization of private banking and credit repeatedly generated financial instability, encouraging the development of centralized institutions capable of managing the monetary system. These institutions became increasingly intertwined with private banks, providing a foundation for the expansion of credit backed by the authority of the capitalist state. As the previous essay demonstrated, the development of paper currency and its eventual transformation into modern fiat money further expanded the capacity of the banking system to create credit, laying the foundations for the increasingly sophisticated financial markets that characterize contemporary capitalism.

The development of central banking and fiat currency was closely intertwined with the growth of the stock market, helping facilitate its expansion. Today, financial speculation plays an enormous role in the American economy, supported by a banking system capable of creating paper (or electronic) credit with no tangible backing that can be used to purchase financial assets. As Marx observed in *Capital*, Volume III, joint-stock companies "developed with the credit system."[6] Through this system, investors can borrow money from banks to purchase shares, allowing them to speculate with capital they do not personally possess. This creates opportunities for financial gains that arise not from the direct production of commodities, but from increases in the market prices of ownership claims. As we shall see, this process contributes to the expansion of what Marx described as *fictitious capital*, whose market valuation can grow independently of the productive capital underlying it.

The accumulation of fictitious capital creates opportunities for forms of financial parasitism that extend beyond even the exploitation practiced by industrial capitalists, who appropriate surplus value produced by workers engaged in commodity production. As Marx observed in *Capital*, Volume III, the joint-stock system "produces a new variety of parasites in the shape of promoters, speculators, and simply nominal directors; a whole new system of swindling and cheating by means of corporation promotion, stock issuance, and stock speculation."[7] Because shares represent ownership claims on enterprises and their anticipated future earnings, they can acquire market valuations that rise far beyond the profits generated through actual production. This creates opportunities for speculative gains in which investors accumulate financial wealth through the buying and selling of ownership claims, seemingly generating money out of nothing.

The term "speculation" is frequently used in discussions of the stock market, but what exactly does it mean? Suppose I purchase a share in a book publishing company for $5. As demand for the company's shares increases, their market price begins to rise, eventually reaching $10. Professor Carlos Garrido, another hypothetical investor, notices this increase and decides to purchase a share of his own for $10, contributing to the growing demand that pushes prices even higher. As more investors anticipate future price increases, additional buyers enter the market, driving the share price upward. However, rather than holding their shares to collect dividends from the company's profits, these speculative

6. Marx, *Capital*, vol. 3, 245.
7. Marx, *Capital*, vol. 3, 285.

investors intend to sell them at a higher price than they originally paid. Suppose the share I purchased for $5 eventually reaches $50. By selling it at this price, I realize a $45 capital gain, despite having contributed nothing directly to the production of books. My profit comes not from producing or selling commodities, but from purchasing and reselling a financial claim at different prices. I have now made money without producing anything of value, but merely by buying and selling abstract representations of capital at different points in time. In other words, by gambling.

This form of financial speculation also creates the conditions for new forms of capitalist crisis. Suppose Carlos and I both decide to sell our shares in the publishing company. Our decision increases the number of shares being offered for sale, placing downward pressure on their market price if there are insufficient buyers willing to purchase them at the current price. This decline may frighten other investors into selling their shares, fearing that prices will fall even further and hoping to realize their profits before the opportunity disappears. As more shareholders rush to sell, the growing supply of shares offered for sale, combined with declining demand at existing prices, can drive their market value sharply downward. If similar waves of panic selling spread across numerous companies, the resulting collapse in share prices can trigger a broader stock market crisis.

The credit system plays a major role in this process by allowing investors to borrow money to purchase stocks, fueling speculative demand and driving share prices higher. However, when the market crashes and share prices collapse, investors may find themselves holding assets worth far less than the debts they incurred to purchase them. Many become unable to repay their loans, imposing significant losses on the banks that financed their speculation. As these losses accumulate, banks may face liquidity shortages and become increasingly reluctant or unable to extend new credit. This contraction of lending can then spread the crisis from financial markets into the productive economy, as businesses struggle to secure the financing necessary for investment and production, potentially bringing economic growth to a halt. In this way, a crisis originating within the highly abstract sphere of financial markets can reverberate throughout the real productive economy upon which those markets ultimately depend.

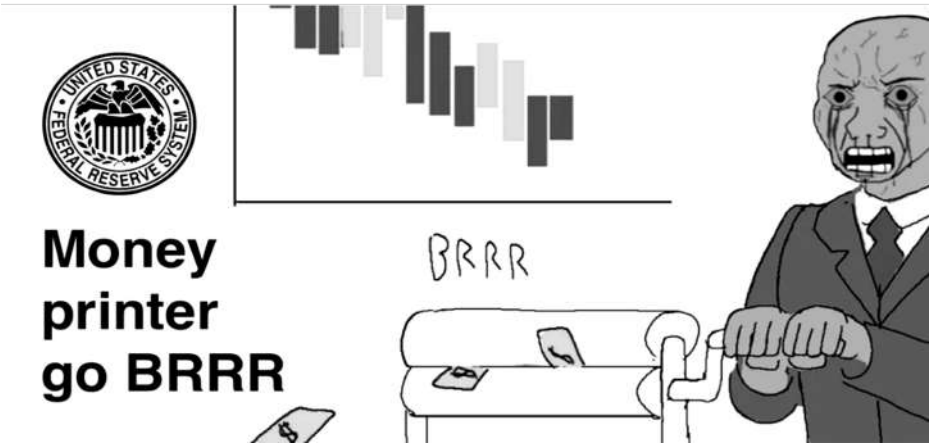
The stock market is not entirely separate from the real economy, but rather an abstract representation of it, ultimately anchored in productive economic activity. When a publicly traded company's profits and commodity sales

increase, investors may anticipate higher dividend payouts or future growth, encouraging greater demand for its shares. However, while the stock market remains rooted in the real productive economy, it also creates opportunities for financial speculation, gambling, and parasitism, through which investors can accumulate wealth by trading ownership claims rather than directly participating in production. In this way, the market valuation of fictitious capital can expand independently of any corresponding increase in the production of real economic value. Furthermore, under modern capitalism, the stock market increasingly serves as a vehicle for the appropriation of economic rents, allowing investors to claim portions of the economic surplus without contributing to its production. Rather than generating new value, these rent-extracting activities impose an additional burden on the productive economy, functioning as what economist Michael Hudson calls "economic overhead."

The final point to consider in this section is how central banks and other state-directed financial institutions can use their control over the money supply and fiat currency to contain financial crises by supplying liquidity to the financial system and limiting the collapse of asset prices. In 2020, as economic activity plummeted during the COVID-19 pandemic, investors rushed to sell financial assets in order to obtain cash, creating severe instability in financial markets. Fearing a broader financial crisis, the Federal Reserve intervened through several emergency measures, including a massive expansion of quantitative easing (QE). Through this process, the Fed purchased large quantities of government bonds and other securities, injecting liquidity into the financial system to stabilize markets, restore the functioning of credit, and prevent a disorderly wave of asset sales.

This brings us directly back to the system of fiat currency and Treasury securities examined in the first part of this essay series. One of the primary ways the Federal Reserve injected liquidity into the financial system was through the large-scale purchase of U.S. Treasury securities. On March 15, 2020, the Fed announced plans to purchase at least $500 billion in Treasury securities and $200 billion in mortgage-backed securities. Just eight days later, on March 23, it abandoned these predetermined purchase targets, announcing that it would acquire Treasury and mortgage-backed securities in whatever quantities were necessary to restore the functioning of financial markets. [8]

---



8. Board of Governors of the Federal Reserve System, *Financial Stability Report*: May 2020 (Washington, DC: Board of Governors of the Federal Reserve System, 2020), "Overview," https://www.federalreserve.gov/publications/2020-may-financial-stability-report-overview.htm

To understand why this matters, imagine that a commercial bank or large financial institution holds $100 million in U.S. Treasury securities, which represent loans to the federal government and play a central role in the modern financial system. Suppose this institution suddenly finds itself in desperate need of liquid funds. Under normal circumstances, it could simply sell its Treasury securities to another investor in exchange for cash. However, during a financial panic, large numbers of investors may attempt to sell their financial assets simultaneously, while relatively few buyers are willing to purchase them at existing prices. Even the market for U.S. Treasury securities, ordinarily considered one of the safest and most liquid markets in the world, came under severe strain in March 2020 as investors rushed to obtain dollars.

The Federal Reserve was able to intervene as a buyer precisely because it does not face the same monetary constraints as an ordinary private investor. When the Fed purchases $100 million in Treasury securities, it does not first need to earn or save that money. Instead, it creates new reserve balances within the banking system, effectively creating new money, and exchanges them for the securities. Through this process, financial institutions can exchange securities for immediately available liquidity, relieving pressure on the broader financial system. In this sense, quantitative easing represents one of the clearest expressions of the monetary powers available to the modern capitalist state under a fiat currency system no longer tied to gold or any other tangible commodity. Rather than being constrained by a fixed supply of precious metals, the central bank can create additional monetary liquidity in response to financial crises, helping stabilize markets and prevent the widespread collapse of financial asset prices.

In the simplest terms, the Federal Reserve electronically created new money to purchase Treasury securities from financial institutions and investors, providing them with greater liquidity that could be reinvested in financial markets or used for other purposes. By stabilizing financial markets and encouraging investment in assets such as stocks, these interventions can contribute to rising financial asset prices without a corresponding increase in productive activity. Such increases in financial valuations disproportionately benefit wealthy investors who own large quantities of stocks and other financial assets, potentially widening the divide between financial wealth and the material conditions of the working class. Here we see why the development of fiat currency was the necessary starting point for our investigation into modern capitalism, and why it was examined in the first essay of this series before turning to the stock market. The fiat monetary system has become an essential

instrument in the management and stabilization of capitalist finance, while also helping sustain the international dominance of the U.S. dollar. Such large-scale monetary interventions would have been far more constrained under a monetary system tied to a fixed quantity of gold. However, under the reign of fiat, the money printer can go brrrr, as the meme says.

The events of 2020 make clear the interconnected relationship between Treasury securities, fiat currency, and the stock market. Treasury securities serve as foundational assets within the modern financial system, with banks and other financial institutions holding enormous quantities of them, using them as collateral for borrowing, and treating them as highly liquid stores of value. Meanwhile, the Federal Reserve possesses the ability to create new dollar reserves (money printer) and use them to purchase Treasury securities from financial institutions and investors. The Treasury market thus serves as a crucial bridge connecting government debt, central-bank money creation, and the private credit system.

This does not abolish the contradictions that produce capitalist crises. It changes the manner in which those contradictions can be managed. The emergence of central banking, fiat currency, massive markets for government debt, and increasingly sophisticated credit institutions gives the capitalist state tools with which it can socialize liquidity during moments when private capital retreats. Losses, bankruptcies, and the destruction of fictitious capital can be slowed, displaced, or partially prevented through the expansion of state-backed credit, or more simply, the creation of new money in a computer.

This is particularly significant in relation to the stock market. As we have seen, the stock market allows enormous quantities of fictitious capital to develop in

the form of financial claims upon anticipated future profits. The credit system magnifies this process by allowing investors to purchase financial assets with borrowed money. But the very expansion of credit that accelerates speculative accumulation also makes the system more vulnerable to crises of liquidation when asset prices begin to fall. Modern central banking develops alongside this system as a mechanism capable of intervening when the private credit structure begins to collapse.

Thus, the development of fiat currency and the Treasury system should not be understood merely as a technical evolution in the form of money. It represents an important historical development in the capacity of the capitalist state to reproduce the conditions necessary for capitalist accumulation. Not the accumulation of tangible industrial capital, but of fiat currency obtained through rent, debt, and speculation. The state can create liquid money, support the market for its own debt, backstop private credit markets, and prevent the sudden liquidation of financial assets from immediately producing the collapse of the wider system.

In this sense, modern capitalism increasingly rests upon a contradiction: capital remains overwhelmingly privately owned, while the monetary and credit infrastructure necessary for the continued accumulation of private capital is increasingly centrally planned by state institutions. The expansion of fictitious capital remains driven by the pursuit of private profit, but it is fueled and maintained by centralized Government institutions. This will be examined more closely later on in the essay about the rise of central planning within the capitalist mode of production.

The Stock Market and Rent

One of the most speculative and parasitic forms of stock investment today exists in the sphere of real estate. Investors can pool their money to purchase shares in land, housing, or other forms of real estate in order to collect rents from their users. This is usually done through buying shares in a real estate investment trust (REIT), which pools together investments and uses the money to buy land or property. The REIT then charges rent to tenants who utilize the property and distributes the earnings to the shareholders correlating to the number of shares they own.

In some cases, a REIT will utilize its investments to fund the construction of a new building or parcel so that they can charge rents to its users in the future. And we could say that this is the least parasitic form of rent extraction through the stock market, because something tangible is at least being built before it is used to siphon money out of its users at little to no cost for its owners.

In other cases, REITs purchase pre-existing buildings so they can charge rent on them, and in certain cases they are responsible for the upkeep of these buildings, although the rent they charge goes far beyond the cost of upkeep, which is what makes them profitable investments for shareholders. Additionally, in commercial leases the contract dictates that tenants are responsible for the upkeep of the buildings, and the rentiers are essentially just collecting money for nothing.

There are two forms of REIT which include Mortgage REITs and Equity REITs. These are companies which utilize the stock market to profit from what Marx called "ground-rent." In the case of ground-rent the owner of land receives income by virtue of simply claiming ownership over a certain plot of the earth, and charging others to use that land for building on, or farming, or whatever else. Oftentimes the tenants in these cases sign long lease contracts spanning multiple decades where they must agree to pay the owner of land a portion of their income regularly. And incredibly, many of these contracts dictate that once the lease expires, the land and whatever was constructed on it, are now the property of the landlord. In this case it is hard to imagine a more parasitic method of making money. Shareholders purchase land through the stock market and charge others to utilize that land while contributing absolutely NOTHING of value. They are not even obliged to pay for the upkeep of buildings or factories because the only thing they actually own is a plot of soil that they are charging others to use.

This is why the classical economist Adam Smith wrote in *The Wealth of Nations* "As soon as the land of any country has become private property, the landlords, like all other men, love to reap where they never sowed, and demand a rent even for its natural produce. The wood of the forest, the grass of the field, and all the natural fruits of the earth, which, when land was in common, cost the labourer only the trouble of gathering them, come to have an additional price fixed upon them."[9] And the stock market acts as a vehicle for investors to accumulate

9. Adam Smith, *An Inquiry into the Nature and Causes of the Wealth of Nations*, 5th ed. (New York: Bantam Classics, 2003), 70.

more land, so that they may reap where they have never sown, and charge rents to those who are actually engaged in the work of producing tangible value.

Not all land utilized for ground-rent is purchased through the stock market, for example much of the farmland that Bill Gates acquired over the last decade was purchased directly from massive agricultural management companies through his investment firm Cascade Investment LLC. However, the massive sum of money that was needed to purchase this land came largely from Gate's activities on the stock market. And here we see how even indirectly, the stock market can function to accelerate the concentration of land and capital into fewer hands.

Mortgage REITs are companies who borrow money to invest in mortgages, with the hope that they will earn more in interest than what they pay to borrow. It may seem nonsensical on its face that someone could "invest" in a mortgage, which itself is a home loan from the bank, however the practice is quite simple when broken down. What's truly nonsensical is the fact that we allow such parasitic modes of profit accumulation to persist within our social system.

Essentially, banks pool mortgages into securities, which are future promises to pay based on the money that is owed by home buyers. These securities are then sold to investors, who often borrow money in order to pay for them, and yield dividends to the investors as homeowners make their monthly payments. In this relationship the banks benefit because they receive liquid money from investors, rather than hanging on to mortgages which will only be paid off over the course of 30 years (or more), and investors benefit because they are profiting from the mortgage payments of homeowners. In totality this mechanism amounts to homeowners borrowing from the bank to buy housing, investors borrowing from the banks to invest in mortgages so they can profit from the loan payments of the homeowners, and the banks loaning credit to both the homeowners and the investors in exchange for liquid cash that allows them to issue even more loans. And here we see, yet again, the banks and the stock market working in tandem to parasitically extract money from the country's working class and its need to pay for the necessities of life.

Lastly, shareholders can profit from speculation on real estate shares in much the same way they profit from other forms of stock market speculation. If rental income or property values rise for properties owned by a publicly traded real estate company, investors may anticipate higher profits, increasing demand for the company's shares and driving up their market price. An investment company can purchase these shares when their price is low, then sell them once

their value increases in order to realize a profit. As with other forms of speculation, this allows investors to accumulate wealth without directly producing anything of value or necessarily investing in any new production at all.

In the early days of the stock market, shares were essentially abstract representations of ownership in commercial enterprises and, later, the industrial economy. However, in the modern era, the stock market has also become an important vehicle for real estate speculation and the extraction of monetary value through rents. Michael Hudson states in *The Bubble and Beyond* that "The stock market has become a vehicle for replacing equity with debt," going on to describe how the M–C–M′ (money–commodity–more money than originally invested) circuit of capital described by Marx in *Capital*, Volume I, has increasingly given way, in the sphere of financial accumulation, to the circuit M–M′. This represents the apparent ability to use money to make more money without producing commodities at all, which can occur through speculation, interest-bearing capital, and rent extraction. This M-M' circuit is often what modern financial gurus are referring to when they talk about "making your money work."[10]

In the Chapter titled "Externalization of the Relations of Capital in the Form of Interest-Bearing Capital" from *Capital Vol III,* Marx discusses this same phenomenon generally saying "the relations of capital assume their most externalized and most fetish-like form in interest-bearing capital. We have here M-M', money creating more money, self-expanding value, without the process that effectuates these two extremes. In merchant's capital, M-C-M', there is at least the general form of the capitalistic movement, although it confines itself solely to the sphere of circulation, so that profit appears merely as profit derived from alienation (rather than from exploitation in the process production); but it is at least seen to be the process of a social relation, not the product of a mere thing. The form of merchant's capital at least presents a process, a unity of opposing phases, a movement that breaks up into two opposite actions- a purchase and the sale of commodities. This is obliterated in M-M'."[11] With the detaching of money from gold that was described in our first essay, this ultra-fetishized mode of accumulation is accelerated and expanded, and breaks free from its previous limitations. More and more capitalists utilize the stock market and financial system to turn money into

11. Marx, *Capital*, vol. 3, chap. 24.

more money without much attachment to the actual sphere of production that serves as the basis of the real economy. In the sense that this M-M’ circuit is attached to the real economy, it creates economic overhead that inflates prices by increasing the cost of living, which will be discussed more thoroughly in the upcoming essay on the labor theory of value.

Today, investors borrow increasing amounts of money to purchase real estate and real estate-related shares for the purpose of speculation, driving up property values and associated financial asset prices in the process. Growing portions of America's economic surplus are consequently directed toward paying rents and servicing debts rather than being invested in new forms of tangible production. Rather than necessarily accumulating new productive capital, wealthy investors can accumulate fictitious capital in the form of real estate shares and other financial claims on future income. The stock market, which originally emerged as a means of mobilizing capital for commercial and industrial enterprises, has developed a life of its own, becoming an integral part of the financial system facilitating the accumulation of fictitious capital.

The Stock Market at a Method of Central Economic Planning and Imperialism

As we discussed earlier using direct quotes from Karl Marx, the development of joint-stock companies and the stock market itself facilitated an increasing degree of centralized social control over capital, creating the foundations for new forms of economic planning and coordination. Additionally, the stock market became one mechanism through which American financial interests expanded internationally following the First and Second World Wars, as American investors acquired ownership stakes in foreign corporations and multinational enterprises. The stock market served as the mechanism through which the U.S. was able to buy majority shares in European corporations and essentially absorb the British Empire, leading to the emergence of the United States as the leading capitalist power after World War II. These purchases were often justified by American policy makers through appeals to “free trade.” However, when investors from other countries, particularly the oil-producing nations of OPEC during the 1970s, attempted to acquire significant ownership stakes in American companies, the U.S. government increasingly turned to political and regulatory measures to scrutinize and restrict foreign investment, especially in strategically important industries. In other words, they employed methods of central economic planning.

In 1975, two wealthy Arab investors attempted to acquire controlling interests in banks located in California and Michigan, provoking considerable political opposition. During the same period, members of Congress proposed amendments to the Securities Exchange Act of 1934 that would restrict foreign acquisitions of substantial ownership stakes in American companies. American officials also expressed concern about the growing financial power of oil-producing countries and the possibility that their accumulated wealth could be used to acquire strategically important U.S. businesses. In response to these broader concerns, President Gerald Ford established the Committee on Foreign Investment in the United States (CFIUS) in 1975 to monitor foreign investment and coordinate government policy. Although initially limited to monitoring and reviewing investments, the committee later became central to a system through which the federal government could block foreign acquisitions on national security grounds.

In short, while American capital expanded internationally under the banner of "free trade," the United States increasingly developed mechanisms for restricting foreign acquisitions of its own companies. From this perspective, the American state was not simply leaving investment decisions to the supposedly free operation of the market, but actively intervening to determine the conditions under which foreign capital could acquire control over domestic enterprises.

Because the next essay in this series will examine the rise of central economic planning, we will not explore that subject in great detail here. However, it is important to recognize the increasingly centralized forms of economic organization that have developed alongside the stock market. This is not socialist planning, but a thoroughly bourgeois form of economic coordination that emerges within the capitalist mode of production itself. When a group of shareholders acquires a controlling interest in a company, it gains significant power over the company's management and economic decision-making, allowing productive activity to be coordinated according to a centralized plan. In this sense, large corporations employ methods of centralized economic management that bear certain similarities to the planning of state-owned enterprises in the former Soviet Union, despite operating under fundamentally different property relations. Many of these publicly traded companies also dominate enormous portions of their respective markets. In many cases, the same financial institutions, such as Vanguard and BlackRock, are major shareholders in companies that are supposed to be competing against one another. Therefore, substantial portions of the American economy are subject

to centralized forms of economic management, influenced by those who dominate the stock market and banking system. However, unlike socialist planning, which seeks to organize production around broader social needs and the accelerated development of the productive forces, these capitalist forms of planning remain primarily directed toward maximizing profits. Even if those profits are acquired completely parasitically.

A 2019 book titled *The People's Republic of Walmart* [12] argues that massive corporations like Walmart and Amazon operate through enormous internally planned economies rather than relying exclusively on market mechanisms. In Chapter Five, the authors examine how concentrated financial ownership through the stock market, particularly the rise of large institutional investors, creates new possibilities for coordinated economic planning on a national scale, rather than relying solely on market competition between individual owners or rival corporations. Again, the fundamental difference between this and socialist economic planning is that coordination under capitalism remains principally organized around the pursuit of private profits rather than the maximization of social well-being.

In this sense, capitalism's development and the concentration of capital have already created some of the material and organizational conditions necessary for socialism. This has been described by American Communist Party Politburo member “Arkansas Worker” as “turnkey socialism.” For years, critics of socialism have argued that modern economies are too complex to be centrally planned. However, modern capitalism has already developed sophisticated mechanisms of centralized economic coordination and put them to use for the purpose of maximizing private wealth. If the working class were to seize political power, these same mechanisms could be transformed and utilized to plan economic activity in a way that prioritizes the well-being of society and the improvement of existing methods of production.

In *Capital*, Volume III, in the chapter titled “The Role of Credit in Capitalist Production,” Marx argues that the emergence of joint-stock companies represents “the abolition of capital as private property within the framework of capitalist production itself.”[13] No longer must capital be owned and managed exclusively by individual members of the bourgeoisie. Instead, it increasingly

13. Marx, *Capital*, vol. 3, chap. 27.

takes on a socialized form, with ownership distributed among shareholders and productive activity coordinated through centralized corporate management.

This brings us back to another famous statement from Marx and Engels in *The Communist Manifesto*: "What the bourgeoisie, therefore, produces, above all, are its own gravediggers."[14] As Marx recognized, the development of the means of production and technology creates the conditions for overcoming existing capitalist relations of production, giving rise to increasingly socialized and centrally managed forms of economic organization. However, capitalist relations have not yet been overcome. Production remains largely controlled by a class of capitalists and financial interests who seek to maximize their wealth through the exploitation of labor and the appropriation of society's economic surplus. The development of capitalism has therefore created many of the material foundations for a new mode of production, but the transformation of these institutions into instruments serving the working class cannot be accomplished through economic development alone. The only thing that can ultimately overcome these outdated relations is, as it has always been, political revolution.

Conclusion

While the stock market originally emerged as an abstract reflection of merchant and industrial capital, its development alongside the banking system allowed it to acquire increasing autonomy from the real economy, although never severing that connection completely. In many ways, the stock market, together with major financial institutions, has become the center of gravity around which much of the economy operates, while discussions of stock prices increasingly dominate mainstream economic commentary in the West. This is despite the fact that rising shareholder wealth does not necessarily reflect improvements in economic conditions for the vast majority of society, especially the working class. In Volume III of *Capital*, Marx writes, "The independent movement of the value of these titles of ownership, not only of Government bonds but also of stocks, adds weight to the *illusion that they constitute real capital* alongside of the capital or claim to which they may have title."[15] In popular economic discourse, rising stock prices and increasing shareholder wealth are frequently

14. Karl Marx and Friedrich Engels, *The Communist Manifesto* (New York: International Publishers, 1948).

15. Marx, *Capital*, vol. 3, chap. 29.

treated as evidence of economic growth and prosperity, even when these financial gains are disconnected from improvements in production or the material well-being of workers.

The detachment of money from gold and other tangible commodities accelerated this process by removing many of the monetary constraints that previously limited the expansion of credit, financial speculation, and fictitious capital. Today, central banks can create new money to stabilize financial markets, support asset prices, and stave off economic crises. Yet when these crises occur, the same financial institutions whose speculative activities helped produce them receive enormous government bailouts, while much of the economic burden falls upon the working population through unemployment, austerity, and declining living standards.

Under the reign of shareholders, economic success is increasingly measured not by productive output or tangible improvements in living standards, but by the ability to gamble on the stock market. To “buy low and sell high,” often using borrowed money from the banking system. This creates problems extending far beyond financial parasitism, including speculative bubbles, which emerge when investors pour money into promising stocks, driving their prices far beyond what the underlying companies' actual or anticipated profits can justify. As share prices become increasingly disconnected from the real profitability of these enterprises, investors may begin to lose confidence in their ability to sustain such inflated valuations. When investors rush to sell their shares, the bubble bursts and prices collapse, leaving those who purchased stocks with borrowed money particularly vulnerable to enormous losses and mounting debts.

In China, the stock market operates under much greater state direction, with the government and state-owned financial institutions playing a central role in guiding investment toward industries considered important for national economic development. Rather than leaving the allocation of capital entirely to private investors, the Chinese state uses financial regulation, public banking, and industrial planning to encourage investment in productive enterprises and strategically important sectors. In the United States, by contrast, the stock market operates under a far more anarchic market-driven system, where financial speculation resembles a massive casino for the elites. When American central planners intervene in these financial markets, unlike Chinese planners they aim to protect financial institutions and support asset prices, benefiting

wealthy shareholders even when their stated objective is to stabilize the broader economy.

However, the positive aspect of the stock market from a Marxist perspective is that, in many ways, it creates the conditions for the possibility of socialism. Anti-communists often decry socialism on the grounds that the Communist Party has no right to seize businesses that hardworking entrepreneurs supposedly pulled themselves up by their bootstraps to build. In reality, however, the lion's share of the economy is already controlled by groups of ultra-wealthy shareholders and financial institutions that coordinate economic activity for their own benefit. In many ways, the American economy is already subject to centralized economic planning, but instead of being planned by a Communist Party for the benefit of society, it is planned by financial elites like Jefferey Epstein for the purpose of maximizing private profits. We live in Epstein socialism, if you will.

The solution to the problems of the modern stock market remains the same today as it was in Marx's era, political revolution. The organized working class must seize control of the industries currently dominated by wealthy shareholders and financial institutions like BlackRock and Vanguard. Working people are far better economic planners than Jeffery Epstein. When we examine the inner workings of the stock market, it becomes more obvious than ever that capitalism and its relations of production have outlived their usefulness. It is high time we built an economy that works on behalf of working people rather than parasitic (and pedophilic?) financial elites.

Bayard Rustin Can't Save Us: Social Democratic Illusions and Black Politics

Garrett Ramirez[1]

1. Garrett Ramirez is an educator and independent historian whose work has been published in *Covert Action Magazine* and *Compact*. He runs *The Social Populist* blog on Substack.com

The high costs and meager results of the Black Lives Matter (BLM) movement have sparked vast debate over the past decade, some of it within the socialist left. Some of the more interesting polemic has revolved around Cedric G. Johnson's 2017 essay "The Panthers Can't Save Us Now." [2] Cedric Johnson, The Panthers Can't Save Us Now: Debating Left Politics and Black Lives Matter (Verso, 2022), 13-55 Johnson's essay has been supported by veteran political scientist and columnist Adolph Reed Jr., whose past work had been an inspiration for the piece. Reed has been one of the few "Marxist" critics of Black Lives Matter featured in the mainstream press, building on over 30 years of his critique of identity politics from a leftist, class conscious perspective. Their theory is closely associated with the Democratic Socialists of America (DSA), although it is not clear if they are formally affiliated with the group.[3]

Both Adolph Reed and Cedric Johnson have done useful work in exposing most of the 21st century US left, including the African-American left, as fundamentally neoliberal. Cedric Johnson's critique of the late Cedric J. Robinson's book *Black Marxism* is particularly valid. Johnson explained that Robinson's influential concept of "racial capitalism" was actually deployed to dilute and distort Marx's analysis of capitalism and racism, and has thus been taken up by antiracist liberals who seek to posit race rather than class as the primary contradiction in society. (It should be noted, however, that this critique of *Black Marxism* had already been formulated by William Robinson, Salvador Rangel, and Hilbourne Watson.) [4]

---

2. Cedric Johnson, *The Panthers Can't Save Us Now: Debating Left Politics and Black Lives Matter* (Verso, 2022), 13-55

3. In a 2018 article Adolph Reed stated that he was not a DSA member, although this same article was clearly written as an attempt to influence an internal debate within the DSA. In 2020, the scholar was famously "cancelled" by the NYC and Philadelphia chapters of the organization for his critique of identity politics--after initially being invited to address those chapters--yet he was subsequently supported by national DSA leaders, as well as by favorable articles in *The New York Times* and other liberal venues. He has appeared at DSA events since, including giving a keynote talk to the Buffalo DSA in 2022. In the DSA model, Reed generally supports Democratic National Committee presidential nominees, including Kamala Harris (who he'd been highly critical of in the past). Due to the growing popularity of the pro-Palestinian movement in 2024, DSA itself did not formally endorse Harris, but also declined to endorse any alternative. See Adolph Reed Jr, "Which Side Are You On?" *Common Dreams*, Dec 12, 2023 - https://www.commondreams.org/views/2018/12/23/which-side-are-you; Ben Burgis "DSA Cancels Adolph Reed" Zero Books and Repeater Media, June 1, 2020 - https://www.youtube.com/watch?v=L7BULfUFygM; "Adolph Reed Jr. Buffalo DSA Convention 2022 Keynote" Buffalo DSA, May 22, 2022 - https://www.youtube.com/watch?v=pE39iKrGzfM; Adolph Reed Jr., "Why I'm Voting for the Enemy," *The Nation*, March 19, 2024.)

4. Cedric Johnson, "The Wrong Duree" *Nonsite,* January 29, 2025; William Robinson, Salvador Rangel, and Hilbourne Watson, "The Cult of Cedric Robinson's *Black Marxism*: A Proletarian Critique," *The Philosophical Salon* 3 (October 2022).

In contrast, Cedric Johnson's 2017 essay on the alleged relationship between the Black Panther Party (BPP) and Black Lives Matter–which was subsequently developed into a book published by Verso Books and distributed by Penguin–is deeply misconceived. In *The Panthers Can't Save Us Now,* Johnson takes the Black Lives Matter leadership at their word that they've adopted the ideology of national BPP founder Huey P. Newton. Moreover, Johnson presents the BPP as the major originator and popularizer of black identity politics in modern America.

On investigation, this premise is fatally flawed. In reality, a black power movement existed for nearly ten years prior to the Black Panther Party becoming a national organization: The Nation of Islam and Robert F. Williams had already reached national prominence by 1959.[5] The slogan "Black Power" was developed and popularized without the approval of Huey Newton, and it was never adopted by the Panthers as their primary credo. In fact, it became a project of the national Panther organization to minimize "Black Power" as a movement slogan and replace it with the humanism of "All Power to the People." By 1969, Huey Newton had publicly rejected black power as an expression of reactionary "cultural nationalism" that was antithetical to the Panthers' "revolutionary nationalism."

What is particularly troubling is that both Cedric Johnson and Adolph Reed counterpose the vision of civil rights organizer and Democratic Party operative Bayard Rustin as a superior path to anti-racist socialism. The scholars posit that Rustin and his mentor, famed labor leader Asa Philip Randolph, were torch-bearers of the Popular Front who won radical victories through regular cooperation with the AFL-CIO. The DSA-aligned academics also claim that Rustin had an effective plan to win socialist reform—including a federal jobs guarantee—from the Lyndon Baines Johnson administration, but the black militant movement undermined this promise, paving the way for the neoliberal era that followed.

This is fundamentally wrong, as the social democratic intellectuals surely know. Randolph and Rustin had defected from the Popular Front bitterly and became committed anti-Communists even before the McCarthy era. Despite Randolph embracing the post-Red Scare AFL-CIO, the federation did not become a

---

5. Dr Martin Luther King Jr.'s 1963 "Letter from a Birmingham Jail" actually warns white liberals that "if they refuse to support our nonviolent efforts, millions of Negroes will, out of frustration and despair, seek solace and security in black nationalist ideologies" such as "Elijah Muhammad's Muslim movement."

regular partner in the anti-racist movement, and the Civil Rights Act of 1964 only arrived after the emergence of independent black mass militancy that defied the trade union network. Rustin and Randolph spurned the radicals in order to appeal to President Johnson to support their legendary 1966 "Freedom Budget for All"—but the White House still rejected it outright, even as many black militants accepted it.

The validity of a strategy is contingent on its historical context, and the context of the early 21st century is very different from the 1960s. In that sense, neither the Black Panthers' nor Bayard Rustin's strategies *in their entireties* can save us now. But there may be components of both that are useful to our own time. This article seeks to evaluate those components with more honesty and clarity than most analysts, either neoliberal or social democratic, have thus far given them.

All Power to All People

> *A person has to go through six weeks of our political education before he can be considered a member of the party. Why? Because without political education then they're nowhere…You might feel confident but be caught up in an emotional movement…People might be getting caught up just because they're poor and they want something, and then they want more and before you know it they'll become capitalist, and before you know it we have Negro imperialists.*
>
> —Fred Hampton, Chairman of the Black Panther Party of Illinois, speech at Northwestern Illinois University, November 1969

The regressive tendencies that Adolph Reed and Cedric Johnson identify in Black Lives Matter were not introduced into popular discourse by national Panther leaders Huey P. Newton, Bobby Seale, or Fred Hampton, but by a black power movement which swept the country *before* the national Black Panther Party was formed. At the peak of the BPP's political development in 1969, the party classified the black power movement as "cultural nationalism" and largely condemned it. This shift was illustrated in its troubled relationship with Stokely Carmichael.

Carmichael, a veteran of civil rights campaigns since 1961, had grown into an extraordinarily bold and popular national leader by 1967. He built upon the

violent spontaneous discontent of black youth which had developed from the slow pace of civil rights progress, combined with conscription for the Vietnam War–discontent which exploded with the sustained Watts Rebellion of 1965. In 1966 Carmichael was elected chairman of the Student Nonviolent Coordinating Committee (SNCC) the foremost civil rights youth group. To protest the persistence of terrorism against civil rights activists in Mississippi, Carmichael proclaimed that SNCC's new program would be "Black Power." This meant a renunciation of nonviolence and an opposition to direct participation of white people in the civil rights movement. Carmichael also sought solidarity with global anti-imperialist forces, including the Communist parties of Vietnam and Cuba. He traveled to meet the leadership of both countries, and praised their socialist systems. In Cuba, he stated that SNCC's new goal was "to economically destroy capitalism because capitalism goes hand in hand with racism and exploitation." [6]

Impressed by Carmichael's militancy, internationalism, popularity, and apparent socialism, Huey Newton and the BPP invited the SNCC leader to be a spokesman for the party in 1967. The Panther leadership were not impressed by Carmichael's black separatism, however. While Carmichael objected to the BPP's alliances with white-led organizations, Newton and Seale insisted that such relationships were invaluable. Historian Peniel Joseph notes that Carmichael and the BPP founders had "divergent political and organizing philosophies" from the beginning of their relationship, but these were "papered over by the Panthers' political desperation" to seize the revolutionary upswell of the day and save Huey Newton from death row. (This was the year that one of the largest rebellions in US history took place in Detroit, and that Newton was indicted for murder after a gunfight with Officer John Frey of the Oakland Police Department.) [7]

When Carmichael made his first major speech for the BPP at an Oakland "Free Huey" event on February 17th 1968, the content caused consternation for the Panther leadership. While Huey Newton and BPP Chairman Bobby Seale had denounced the counter-revolutionary tendencies of black capitalists and rebuked the idea that the BPP were anti-white, Carmichael directly contradicted them: "The major enemy is not your brother, flesh of your flesh and blood of your blood. The major enemy is the honky and his institutions of racism." In this period when the Panthers were embracing Marxist-Leninism, Carmichael declared:

6. Robert L. Allen, *Black Awakening in Capitalist America* (Doubleday, 1970), 208-211.
7. Peniel Joseph, *Stokely: A Life* (Basic Books, 2016), 240-241.

> *We are not talking about economics tonight…It's not poor jobs [that are oppressing black people]: it's a question of a people finding their culture…*
>
> *Communism is not an ideology suited for Black people. Period. Period.*
>
> *Socialism is not an ideology suited for Black people. Period. Period.*
>
> *I will tell you why…The ideologies of communism and socialism speaks of class structure…We are not just facing exploitation, we are facing something much more important. We are facing being the victims of racism. Communism, nor socialism, does not speak to the problem of racism. And racism for Black people in this country is much more important than exploitation…We must consciously strive for ideology which deals with racism first.*[8]

In the chaos of 1968, censuring Carmichael was not the Panthers foremost priority, however. The following four months saw the withdrawal of Lyndon Johnson from the presidential contest, the assassinations of both Martin Luther King and Robert Kennedy, and the killing of BPP treasurer Bobby Hutton. Meanwhile, Carmichael seemed to have returned to Marxism by the summer, telling an audience that "black people in this country are fighting against two evil systems: racism and capitalism…" He criticized most reformers in the civil rights movement for merely wanting "a piece of the American pie as it is, in which they would impose black capitalists on us…" Yet there were also discreet indications that Carmichael was more of a black separatist than ever. Panther leader Donald Cox later recounted traveling across the country with Carmichael in 1968 and having extended private arguments regarding cooperation with the white masses. According to Cox, Carmichael "believed that the only solution was to 'kill them all.' The whites had to die. Between us, his nickname became Kill-em-all Carmichael." [9]

As the year progressed, Carmichael again began taking a public position "quite close to the cultural nationalists," stating that "I tend to think that just because

8. "Free Huey Rally in Oakland, February 17, 1968" Pacifica Radio Archive (American Archive of Public Broadcasting). - https://americanarchive.org/catalog/cpb-aacip-28-4m91834b8n The quoted words appear on this recording at approximately the 50-minute mark. H. Rap Brown, whose speech precedes Carmichael's here, was also already a national leader before joining the BPP and broke from the organization at roughly the same time Carmichael did. In Carmichael's later 1968 speech in Oakland (August 25) his criticism of Communism is slightly more ambiguous.

9. Donald Cox also affirmed that "Stokely spoke and completely contradicted everything he had said during his recent trip to Havana, Hanoi and Europe." Donald Cox, *Just Another Nigger: My Life in the Black Panther Party* (Heyday, 2019), 60, 84.

one has socialism or communism doesn't necessarily mean you get rid of racism. And so I tend to believe that black people will have to move beyond socialism and communism." [10] This compromise position paralleled that of Kwame Nkrumah and Sekou Ture, who would soon become Carmichael's benefactors after his move to Africa (leading him to adopt the new name Kwame Ture). This Nkrumahist school would often claim to be practicing "scientific socialism." However, the Marxist scholar Walter Rodney, who had been a follower of black power in the 1960s, would later point out that Nkrumah's original theory was not based in dialectical materialism, and that the Ghanaian president's ultimate defeat by American imperialism owed much to his continuing reliance on cultural nationalism.[11]

For his part, Carmichael evaded the implications of his anti-communist declaration for the rest of his life, successfully censoring the controversial sections of his February 1968 speech in Oakland for many of its print and audio reproductions.[13]

On a practical level, Carmichael and his followers still insisted that they would not organize with white people as equals or take radical positions against the black bourgeoisie. The subsequent failure to finalize a merger between SNCC and the Black Panther Party, and the division between Carmichael and the party in 1968, has been explained through various factors such as the covert interference of the FBI, as well as the egos of the leaders involved. But the decisive factor was the ideological contradiction between revolutionary nationalism and cultural nationalism, manifesting in divergent policies on interracial alliances and on Marxist-Leninism. (On one hand this could be seen as a setback for the BPP; on the other it meant being spared the burden of having to justify Carmichael's 1970 comment on national television that Adolf Hitler was "the greatest white" man in history.) [14]

---

10. Allen, *Black Awakening*, 208-211.

11. Rodney notes that Nkrumah made a turn toward Marxism-Leninism *after* he was deposed from power in a CIA coup enabled by the Ghanaian bourgeoisie.[12] The turn is embodied in Nkrumah's final book, *Class Struggle in Africa*, and is presumably the reason that Carmichael—by that point known as Kwame Ture—began praising Marxism again later in life.

13. Ethel N. Minor "Editor's Preface" in Kwame Ture, *Stokely Speaks: From Black Power to Pan-Africanism* (Lawrence Hill Books, 2007).

14. Fred Ferretti, "Carmichael, in 'Objective View' Sees Hitler as 'Greatest White' " *New York Times*, April 14, 1970. Huey P. Newton, the African National Congress and the Angolan MPLA all came to consider Carmichael to be a US intelligence agent due to his highly erratic comments and positions. After evidence was publicized that the US government had sought to "snitch-jacket" Carmichael, Newton, the ANC, and the MPLA still did not change their opinion of him. Carmichael began his activist career under the training of Tom Kahn and Bayard Rustin.

The implosion of the SNCC merger sparked a purge of cultural nationalism from the BPP as the Party threw itself into uniting the black and white proletariat. The first realization of this was the Rainbow Coalition established by the Black Panther Party of Illinois. Rainbow Coalition co-founder Bobby Lee recounted how he helped create the alliance by reaching out to the white southern working-class group the Young Patriots. Building a multi-racial confederation was of such importance to Lee, Newton, and Illinois BPP Chairman Fred Hampton that they were ready to alienate black nationalists within the party. According to Lee,

> *...many of the Panthers left the group when we built alliances. Some didn't like the Patriots, some just didn't like white people in general. They were heavy into nationalism. To tell the truth, it was a necessary purging, except these niggers* took themselves *out of the organization.*[15]

Scholar Floyd Hayes affirmed the general phenomenon that "the Panthers were…concerned with gaining White allies, which drove away some Black allies…" [16] As far as working-class whites go, this policy is drastically different from that practiced by Black Lives Matter and other identity politics groupings. Also, clearly distinct from Black Lives Matter was the BPP's acceptance of symbolic white nationalism from the Young Patriots, which Panther leaders did not find threatening. The BPP actually encouraged the Young Patriots to mention "white power" in tandem with "black power" to counteract the residual black nationalism associated with the Panthers.[17]

The core leadership of the Black Panther Party had such a tenuous relationship with black identity politics that former Illinois BPP member Bruce A. Dixon criticized those who classify it as a black power organization. There is much evidence to back his position. From the beginning, the Party's official reading list pointedly excluded Stokely Carmichael's 1967 book *Black Power*–according to ex-Panther Mumia Abu-Jamal, party members were actually discouraged from reading it. Floyd Hayes observed that, nationalistic

aura notwithstanding, "Nowhere in the Panther platform is there a call for a Black nation," an omission which sets them apart from genuine black power groups like the Republic of New Africa.[18] While Eldridge Cleaver observed that the racist and imperialist beliefs of most white workers in 1969 rendered them the "right-wing of the proletariat," he didn't attempt to excommunicate them from the working-class as many "decolonial" antiracists do today.[19] In the same year, Cleaver publicly chided Stokely Carmichael that

> *Your nebulous enunciation of Black Power...has provided the power structure with its new weapon against our people. The Black Panther Party tried to give you a chance to rescue Black Power from the pigs who have seized upon it...With James Farmer in the Nixon Administration to preside over the implementation of Black Capitalism under the slogan of Black Power, what value does that slogan now have to our people's struggle for liberation?*

Bruce A. Dixon charged that the continuing classification of the BPP as a black power organization was a disinformation campaign by the neoliberal academic field. He specifically cited Jakobi Williams' monograph *From the Bullet to the Ballot* published by University of North Carolina Press. This book claims that "Both Huey Newton and Stokely Carmichael agreed that neither communism nor socialism was appropriate for African Americans." [20] But this is an outrageous lie. During the peak of the Black Panthers' influence in 1968 and 1969, their official line was Marxist-Leninist and class-first. Thus, the primary sources demonstrate that Newton and Carmichael passionately *disagreed* about communism (even Peniel Joseph, Carmichael's sympathetic biographer, acknowledges this). Bruce Dixon, who knew Fred Hampton personally, said of the Williams book,

---

18. In an open letter to the Republic of New Africa, Huey Newton diplomatically stated that he would honor the wishes of the black community if it voted to secede from the US but reasoned that "if we were to have a separate country [under capitalism] we would suffer imperialism and colonialism even more so than the Third World is suffering it now." He stated that African-Americans were colonized but that "the American people in general are colonized," adding that "the White working class is used as pawns or tools of the ruling class, but they too are enslaved." See Huey P. Newton "To the R.N.A." *The Black Panther*, December 6, 1969.

20. Eldridge Cleaver "Open Letter to Stokeley Carmichael" (1969); Jakobi Williams, *From the Bullet to the Ballot: The Illinois Chapter of the Black Panther Party and Racial Coalition Politics in Chicago (*University of North Carolina Press, 2013), 119-120.

> *In* From the Bullet to the Ballot*, all [endorsement] of socialism, class struggle and explicit opposition to capitalism—every one of which were prominently featured in Chicago and national BPP speeches, publications and political education classes—is made to disappear…Historians like Dr. Williams...then assign the Black Panther Party to what they all call the "Black Power Movement," something not especially well known for coalitions across racial lines.*[21]

Sadly, most of Cedric Johnson's work fits into the tendency that Dixon identified. Johnson has published extensive analysis of Huey Newton's writing without ever acknowledging that Newton considered himself to be *specifically* a Marxist-Leninist during the period when the BPP was a national organization. In Newton's first book, *To Die for the People*, he endorsed Marxist-Leninism nearly a dozen times, but this is never mentioned by Johnson. In the same book, Newton also denounced the black power movement multiple times, but Johnson makes no acknowledgment of that fact either.[22]

Bruce Dixon asserted that neoliberal academics avoided the issue of the Panthers "proletarian internationalism" because "it leads away from where they need to go, to the happy endings of electing black mayors and congressmen…" For DSA-aligned academics similar tactics are deployed because the reality of the national BPP leads to the awkward conclusion that the foremost American Marxist group of the late 20th century was Leninist during its peak of influence, not "democratic socialist." Thus Cedric Johnson, despite writing an entire book about black radicalism in this era, has never discussed this deep 1968 schism in the BPP over cultural nationalism, nor the Party's commitment to Marxist-Leninism during its period of nationwide organization.[23]

23. Acknowledging the classical formation of the BPP as Marxist would also give lie to the claim made in a *Jacobin* feature article (citing both Reed and Johnson) that "No two civil rights

With Marxists Like These...

As flawed as Cedric Johnson's view of the Black Panther Party was, it was compounded in his mentor Adolph Reed's response to Johnson's book. In a 2023 article entitled "Bayard Rustin: The Panthers Couldn't Save Us Then, Either," Reed argues that the BPP had no constructive effect--even within the context of the late 1960s--and again posits Bayard Rustin's agenda as a superior one for working-class interests.[24]

An Ivy League university professor, Reed dispenses with any of the rigor associated with his credentials when he writes about the BPP. This extends to botching basic facts. The professor writes that, contrary to popular belief, the Panthers cannot have played a significant role in establishing free children's breakfasts across the US because a federal program existed prior to the BPP's founding. Reed ignores that the government had no universal and permanent breakfast program before 1975, only some limited pilot programs. Experts have noted that in the late sixties (the period where the Panthers were aggressively expanding their school breakfasts) the LBJ-established program was still limited and precarious. Sociologist Janet Poppendieck observed that

> *School boards and administrators worried that the School Breakfast Program's 'pilot program' status meant that Congress might defund the program at any time, leaving them with a popular program and no federal funds to continue it.*[25]

---

leaders held economic transformation to be so integral to the fulfillment of the promise of the civil rights revolution as Bayard Rustin and A. Philip Randolph." Of course, Martin Luther King's initiation of the Poor People's Campaign *over Bayard Rustin's repeated objections* challenges that assertion even more. Benjamin Y. Fong, "A. Philip Randolph and Bayard Rustin Have a Model for Today" *Jacobin*, December 22, 2023; David J. Garrow, *Bearing the Cross: Martin Luther King and the Southern Christian Leadership Conference* (Morrow, 1986), 591, 599. Acknowledging the classical formation of the BPP as Marxist would also give lie to the claim made in a Jacobin feature article (citing both Reed and Johnson) that "No two civil rights leaders held economic transformation to be so integral to the fulfillment of the promise of the civil rights revolution as Bayard Rustin and A. Philip Randolph." Of course, Martin Luther King's initiation of the Poor People's Campaign over Bayard Rustin's repeated objections challenges that assertion even more. Benjamin Y. Fong, "A. Philip Randolph and Bayard Rustin Have a Model for Today" Jacobin, December 22, 2023; David J. Garrow, Bearing the Cross: Martin Luther King and the Southern Christian Leadership Conference (Morrow, 1986), 591, 599.

24. Adolph Reed Jr., "Bayard Rustin: The Panthers Couldn't Save Us Then, Either," *NonSite,* January 8, 2023 - https://nonsite.org/bayard-rustin-the-panthers-couldnt-save-us-then-either/

25. Janet Poppendieck, "Celebrating the History of School Breakfast" Food Research Action Center - https://frac.org/blog/celebrating-history-school-breakfast-beginning

After the Panther breakfasts spread across America however, President Richard Nixon not only approved expanded funding for the federal pilot, but he also fostered permanent establishment of the School Breakfast Program.[26] In 1970, the White House actually called for a "children's emergency food service [to] be launched immediately as a crash program to seek out and feed all schoolchildren that are high nutrition risks." This was remarkable given Nixon's previous skepticism of the War on Poverty.[27] Of course, the president of the United States had been informed by J. Edgar Hoover that the Panther breakfasts constituted a "threat," and could no doubt see the advantage in fully pre-empting them with a permanent universal program.

Reed also uncritically repeats fallacious claims made by Bayard Rustin about the Panthers, either refusing or not caring to fact check them. Reed quotes and praises a speech that Rustin made to the Young People's Socialist League (YPSL) in 1969:

> *"The Panthers do not have one thousand members. Most of the kids you see on the street are not Panthers. They are there to sell a paper, for everyone they sell they get a dime. There are about one thousand Panther members in the country, half of whom are FBI men watching the five hundred legitimate members."*
>
> *One thing that especially struck me about Rustin's characterization of the BPP was that I said almost exactly the same thing about the Panthers at the same time.*

Experts generally agree that the Black Panther Party had well over 1000 members in this period. It is hard to imagine how it could be a highly visible national organization with fewer than that number–and Rustin and Reed concede that Panthers were visible on the streets, not just the media. There is also no independent verification of Rustin's paid newspaper distribution claim; Given that paper distributors often risked arrest by the police, it's difficult to believe that a ten-cent commission was their only incentive to support the cause.

26. United Press International, "Nixon Signs Bill Expanding Food Aid for School Needy" *The New York Times*, September 27, 1972.

27. "White House Conference on Food, Nutrition and Health: Final Report" (Chair: Dr. Jean Mayer) Dec 24, 1969 ; "The Lasting Influence of the 1969 White House Conference On Food, Nutrition, and Health" University of Virginia Biocomplexity Institute - https://biocomplexity.virginia.edu/news/lasting-influence-1969-white-house-conference-food-nutrition-and-health

A research library affiliated with Adolph Reed's home institution, the University of Pennsylvania, tells us that the BPP had approximately 5,000 members at that time.[28] This is an impressive number for an explicitly Marxist-Leninist organization during the Cold War that had only been in existence for three years. It was exponentially more members than Rustin's YPSL had, despite the latter group having been in existence for over 30 years.[29]

Why do esteemed scholars like Reed and Johnson resort to such misstatements? Reed's vendetta against Marxist-Leninist groups has been incubating in his writing for many years. At the start of his career in the early 1970s, he pilloried not only the BPP, but other proletariat formations like the Black Workers' Congress (led by United Auto Workers Local 600 member Mike Hamlin) as being too "petit bourgeois" for him. In a seminal 1974 article in *Endarch,* Reed chides Marxist-Leninists for being un-empirical, then quickly pivots into a post-structuralist argument that empiricism and science are subjective and arbitrary in the first place, and the relevance of scientific Marxism is doubtful.[30]

By the time that Reed wrote his most extensive theoretical work, the monograph *W.E.B. Du Bois and American Political Thought*, the writer's opposition to the entire Leninist tradition was clear. Despite its impressive academic pedigree--its publisher was Oxford University Press--Reed's book is a remarkably sketchy tome. Its subtitle is *Fabianism and the Color Line,* yet no clear definition of Fabianism is ever provided. A definition was urgently needed since Du Bois was not a member of the Fabian Society, did not identify as a Fabian, and seldom if ever said anything favorable about the group. The handful of times Fabianism is mentioned by Reed, it's used as a pejorative to

---

28. "At its height in the late 1960s, the Black Panther Party had established regional offices in [multiple] US cities, including Philadelphia, New York, and Chicago, with as many as 5000 active members." "Black Panther Party Material" University of Pennsylvania: Kislak Center for Special Collections, Rare Books and Manuscripts - https://findingaids.library.upenn.edu/records/UPENN_RBML_PUSP.PRINTCOLLECTION76

29. A third factual error that Reed makes in his 2023 piece is that Fred Hampton was named in the notorious "black messiah" FBI memo of March 4, 1968. In fact, this COINTELPRO memo does not mention Hampton or the BPP at all. Reed appears to have adopted this delusion from the Hollywood film *Judas and the Black Messiah.* The error is particularly surprising since Reed often presents himself as the nemesis of pop culture mythology about black history. Considering these lapses, it's extraordinary that Reed, in the very same article, condemns other scholars for "misrepresenting historical fact to exaggerate [the Panthers] legacy." Adolph Reed, "Bayard Rustin: The Panthers Couldn't Save Us Then, Either."

30. Adolph Reed Jr. "Scientistic Socialism: Notes on the New Afro-American Magic Marxism". *Endarch: Journal of Black Political Research* Vol. 1974, No. 1 Fall 1974. (Atlanta University Center).

impugn Du Bois' reputation for revolutionary politics. Before the end of the book, Lenin and Marx have also failed to meet Reed's standards for radicalism, for they too are fundamentally Fabians:

> *Beneath their certainly quite significant differences over the question of violent seizure of power and class struggle, revolutionary Marxism and Fabianism in some ways are strikingly similar in outlook. Both exalt science and scientificity; both advocate rationalistic organization led by an intellectual vanguard, and both display elements of inevitability and utopianism.*

Reed also expresses belief in "the fundamental homology uniting Fascism, Bolshevism, and the New Deal" which are all corrupted by "their common depreciation of the subjective." [31]

Rustin Couldn't Save Us Then, Either

Of course, the question of whether or not Adolph Reed Jr. is a Marxist is secondary to the question of whether or not Bayard Rustin was. The popular narrative about Rustin implies so by emphasizing his college years in the Communist Party and his close association with the Socialist Party. But neither of those facts carry much weight considering that Rustin was an opponent of all Marxist-Leninism by the late 1940s, and was instead immersed in religious pacifism. The only quasi-Marxist philosophy he subsequently attached to in full was that of Max Shachtman. Shachtman's movement is generally agreed to have been a cultish fringe of Marxism that celebrated America's Cold War and steered large segments of the left into neoconservative reaction.[32]

---

31. Adolph L. Reed Jr*, W.E.B. Du Bois and American Political Thought: Fabianism and the Color Line* (Oxford University Press, 1997), 20-22, 217. "Fabianism" is discussed so little in the text that it doesn't even merit a listing in the book's four-page index. When Reed wrote the original essay which inspired the book, Fabianism wasn't mentioned at all. See Adolph L. Reed Jr "W.E.B. Du Bois: A Perspective on the Basis of His Political Thought," *Political Theory*, Vol. 13 No. 3, August 1985 (Sage Publications).

32. Historian Jack Ross acknowledges that the Shachtmanites had an "indispensable role in the forging of neoconservatism." Jack Ross, *The Socialist Party of America: A Complete History* (University of Nebraska Press, 2015), 429. Tom Kahn wrote that Shachtman "perceived [Communism] as a new form of class society even more brutal in its exploitation of the masses than capitalism had been in its most primitive phases." Tom Kahn, "Max Shachtman: His Ideas and His Movement" *Dissent (Democratiya),* March 2007.

Rustin's most thorough biographer, John D'Emelio, writes that by the late forties, "Rustin, [AJ] Muste, and other stalwarts of the peace movement were themselves firmly anti-Communist...they rejected the language of class warfare [and] they were dismayed by what they viewed as communism's godless materialism…" These positions were not merely anti-Stalinist but anti-Marxist, and explain why Rustin, after briefly considering coalition with the CPUSA during its late 1950s de-Stalinization period, remained an avowed enemy of the organization for the rest of his life.[33]

According to D'Emelio, Rustin "functioned as a bridge connecting an anti-Stalinist left to radical pacifists who drew their inspiration not from Marx but from religious faith and the example of Gandhi." It is difficult to see how even the secular leftists in Rustin's network drew primary inspiration from Marx, however, given that they looked to the leadership of either Norman Thomas or Max Shachtman. By the time Rustin befriended those men, neither of them could relate to the Karl Marx who'd supported an armed uprising against a bourgeois republic at the 1871 Paris Commune. Thomas and Shachtman did, however, have a conservative socialist political strategy that bore a striking resemblance to that of the Fabian Society.

Norman Thomas had presided over an extraordinary decline in the Socialist Party from its third place presidential election showings of the 1930s. The collapse resulted not from the SP's radicalism but its conservatism: Thomas had supported both the Korean War and the creation of NATO. By the end of the fifties, he himself discreetly stopped voting for the SP in presidential contests and voted Democrat. In this decrepit state, the party was infiltrated by the Shachtmanites.[34]

A regularly mutating political animal, Max Shachtman had once been an official with CPUSA before joining Leon Trotsky's organization in the 1930s. In the Trotskyist movement he embraced the theory that the USSR had degenerated into "bureaucratic collectivism" and that revolutionary socialists should join existing social democratic parties and try to radicalize them. Over the years, Shachtman became increasingly bitter towards the USSR and its allies, viewing them as the greatest threat to humanity. In World War II he refused to support the Allies so long as they worked with Stalin. At the height of McCarthyism, his sect, the Independent Socialist League (ISL), joined in the obsessive fear of

34. Ross, *The Socialist Party of America*, 455-460.

a Soviet takeover of the American left. Anti-Communist historian Jack Ross records that, "One disaffected reader of the ISL paper *Labor Action* pointed out that 'the word Stalin and its derivatives and synonyms could be counted a total of 114 times in a single issue." By the Eisenhower era, Shachtman aligned with "the less idealistic 'permanent revolution' doctrines of James Burnham and Sidney Hook," which promoted US imperialism as a progressive force in the world. He became a neoconservative of the Cold War liberal variety.[35]

Bayard Rustin, then in his 40s, fell in love with the teenage Shachtmanite Tom Kahn, and hired another member of the movement, Rachelle Horowitz, as his permanent assistant; Simultaneously, according to Jack Ross, "Shachtman came to regard Kahn and Horowitz as his children, underscoring his highly personal and emotional leadership style." While Rustin often said that he distrusted Stalinists because they "switch political direction" too often, he had no such qualms about the ex-Stalinist, ex-Trotskyist, pro-Cold War Max Shachtman. Shachtman even switched direction in the course of their relationship: He initially plotted infiltration of the Democratic Party in order to split it, but soon switched to a policy of "realignment" to steer a unified DNC in a more social democratic direction. The latter scheme demanded absolute loyalty to liberal leaders like Hubert Humphrey. Biographer Daniel Levine writes that "Bayard was good friends with and strongly influenced by Shachtman. He spent many Sunday afternoons at Shachtman's house on Long Island." Kahn and Horowitz, meanwhile, were leaders in the ISL youth league, which Shachtman and his protege Michael Harrington had employed to first fracture, then reassemble the SP in 1956. Under Kahn and Horowitz's adminstration, the reconstituted youth group of SP and ISL, the Young People's Socialist League (YPSL), became a pillar of the pacifist liberal wing of the civil rights movement and helped to administrate the 1963 March on Washington.[36]

---

35. Ross, *The Socialist Party of America*, 471-472. This marked the SP's "transubstantiation into a sect," with the YPSL reduced to "under 100 members" after the splits. Nonetheless, so fanatical were they that Shachtman could exercise "loose hegemony" over the early 1960s left. Ross, *The Socialist Party of America*, 464-469.

36. Ross, *The Socialist Party of America*, 464-465. Ross calls Rustin the "most important follower by far" of Max Shachtman; Levine, *Bayard Rustin and the Civil Rights Movement*, 20. There are peculiar gaps in the historical record between Shachtman and Rustin: For instance, although each man has released much of his personal correspondence to public archives, neither release includes correspondence *between* the two men.

> "The events in Birmingham were more important for organizing the March on Washington than…me or anything else."
>
> - *Bayard Rustin*[37]

Among both social democrats and neoconservatives, Rustin's reputation largely rests upon his role as the primary administrator of the 1963 March on Washington for Jobs and Freedom. Even the "radical" vision of Rustin's Freedom Budget has been promoted as a revival of the "March on Washington coalition." But several myths predominate about Bayard Rustin and the March. One myth, promoted by Adolph Reed and his fellow labor Democrats, is that Rustin and A. Philip Randolph were more significant than Martin Luther King and his Southern Christian Leadership Conference (SCLC) in bringing it into being.[38] Another, propagated by popular liberal culture, is that Rustin was not given proper credit for the March in his lifetime. The third and most widespread misconception is that the March on Washington played a decisive role in passing the Civil Rights Act of 1964.

It is indisputable that Randolph and Rustin had an idea for a march in the early sixties, but that in itself was not significant: The two men had first launched a March on Washington Movement in 1941 and never actually delivered an event. John D'Emilio reports that Randolph's new organization, the Negro American Labor Council (NALC), which made the earliest proposal for a new civil rights march, was essentially "a shadow organization, designed primarily to give him a bully pulpit for battling the AFL-CIO" executive board from within, not for general civil rights missions.[39] NALC didn't succeed in leveraging the AFL leadership into endorsing a march, and initially couldn't even convince the NAACP and SCLC to come on board. "Rustin could see that prospects for a

---

37. D'Emelio, *Lost Prophet,* 336.

38. Adolph Reed's review essay of the film *Rustin* (2023), "Fun Tricks You Can Do with the Past" purports not to be a hagiography of Rustin, but it still defends his entire pre-1970 record. More importantly, it supports the neo-Shachtmanite position that King's direct action work in Birmingham was secondary to Randolph and Rustin's letterhead activism in NALC for creating the 1963 March.

39. Randolph is often described as "battling" neoconservative AFL-CIO President George Meany in this era, but his conflicts were largely rhetorical, and their level of cooperation extensive. It is remarkable how much Randolph and his entourage flourished under Meany. Randolph became an AFL-CIO Vice President under Meany's tenure and remained VP until his own retirement. Meany established the A. Philip Randolph Institute and hired Bayard Rustin as its permanent director. Meany even hired Tom Kahn to be his special assistant in the 1970s. This set up Kahn to be a permanent part of the AFL-CIO hierarchy by the time of Meany's retirement: Kahn assumed the role of Director of International Affairs, the anti-Communist and CIA-affiliated position established by Jay Lovestone.

march were dimming," but in May 1963, writes D'Emelio, "Birmingham changed everything," when the direct action campaign in Alabama's largest city erupted into both police and protester violence.

"The Birmingham protests were the work of King and the SCLC," not Bayard Rustin, notes D'Emilio. This wasn't just because Rustin was physically absent, but because Birmingham didn't directly rely on the classical Gandhian strategy that Rustin had impressed onto Dr. King in the 1950s.[40] That paradigm had been thwarted in 1961 by Chief of Police Laurie Pritchett of Albany, Georgia who'd worn down SCLC's desegregation campaign there by systematically abstaining from any public brutality that could provoke mass sympathy for the protesters. In this way, the classic documentary *Eyes on the Prize* notes, "Segregationists learned to beat the civil rights movement at its own game." [41] That old game had been designed by Rustin, and he had no role in the new strategy that led to the breakthrough in Birmingham. King and his hot-blooded new strategist Wyatt Tee Walker launched over a thousand high school students into protests day after day against Commissioner Bull Connor's police dogs and firehoses; Not only that, but Walker encouraged black proletariat "onlookers" to join in the protests, and they promptly took up bricks, bottles and knives to defend the students. (Connor, having recently lost an election, ignored other officials' calls to de-escalate.) King refused to suspend the campaign–even though protests were no longer strictly Gandhian–until he got an agreement with the city government.[42] When white terrorists refused to recognize the agreement and continued their attacks after dark, Birmingham exploded with unprecedented levels of black rioting on May 11, 1963.

"The riots that began in Birmingham spread to other cities" reports *Eyes on the Prize*, "and President Kennedy was moved to action, [taking] a stronger position than any president since Lincoln." According to Nicholas Bryant, author of the most comprehensive study of President Kennedy's civil rights policies,

"Interview with Wyatt Tee Walker, conducted by Blackside, Inc. on October 11, 1985, for 'Eyes on the Prize: America's Civil Rights Years (1954-1965).' " Washington University Libraries, Film and Media Archive, Henry Hampton Collection; David J. Garrow, Birmingham: Alabama, 1956-1963: The Black Struggle for Civil Rights (Carlson, 1989), 76-83.

> *It was the black-on-white violence of May 11–not [the nonviolence of previous weeks]–that represented the real watershed in Kennedy's thinking…Kennedy had grown used to segregationist attacks against civil rights protesters. But he–along with his brother and other administration officials–was far more troubled by black mobs running amok.*[43]

Many have heard of how Bayard Rustin took heat for his youthful dalliance with Marxism, and for his sexual orientation, from the the top Dixiecrat in the US Senate, Strom Thurmond, in the lead up to the 1963 March; legend has it that Rustin was only saved by a risky public defense from A. Philip Randolph, who honorably refused to abandon him. But even before Randolph made his statement, Rustin was actively defended by *The Washington Post* which delivered "a major feature [that] presented the March on Washington glowingly, and Rustin front and center in its account…" *The Post* especially "emphasized Rustin's decisive break with communism…" Stories in the same vein appeared in *The New York Times* and other leading papers, indicating that Rustin had many powerful friends besides Randolph. With this relentless stream of positive mainstream press, Tom Kahn observed that Thurmond's provocation "seems to have done us more good than harm. All kinds of people who formerly were a little shaky have rallied to Bayard's defense." One month after the March, notes D'Emilio, "*LIFE*, the weekly photo magazine that was sold everywhere in this era, put [Rustin and Randolph] on its cover." [44]

Yet while the March on Washington for Jobs and Freedom was a bonanza for Rustin's career, its benefits for the majority of black people was dubious. Most obviously, it had no effect on white terrorism, which only grew worse. One month *after* the March, four African-American girls were murdered by the Ku Klux Klan at the 16th Street Church bombing; the federal government did not feel sufficient pressure to pre-empt such an attack, nor to bring the assassins to justice, despite the FBI having thoroughly infiltrated the Alabama Klan years earlier. D'Emelio acknowledges that "Congress was a long way from passing tough civil rights legislation" in fall 1963. In December, Rustin himself publicly admitted that "after all of this trouble and after even intervention on the part of the federal government, you have the situation pretty much as it was concretely before...this is equally true in the North." [45]

45. "Speech By Bayard Rustin" Fourth Annual SNCC Conference, Washington, D.C.

When Democrats re-introduced President Kennedy's civil rights bill in 1964 (presenting it as a memorial to his assassination) Rustin played a role in securing its passage, but no more so than black militants did. As Malcolm X toured the country proclaiming that this was the year of "the ballot or the bullet," demonstrations against racial discrimination turned into full-born clashes in cities across the country. Malcolm was explicitly aligned with one of the most significant rebellions, led by SNCC leader Gloria Dandridge Richardson in Cambridge, Maryland. The long-running Cambridge unrest, just 100 miles from Washington DC, had its worst flare up in May 1964, leading to gun battles between black citizens and National Guardsmen where multiple soldiers were injured. It was in the midst of this crisis that US Senate Republicans finally joined with President Johnson in support of the final version of the Civil Rights Act, a necessary turn in order to defeat the southern segregationists, who'd stalled the bill for three months with the longest filibuster in history. Gloria Richardson's campaigns also may have been the tipping point in establishing the War on Poverty, given that she and SNCC employed her notoriety to lobby the federal government for anti-poverty reforms.[46]

Despite the fact that Birmingham ("the first of the period's urban rebellions" according to Vincent Harding) and the new black militancy brought the victory that Rustin had been searching for in vain for ten years, the organizer had no appreciation for the role of the more forceful activists.[47] Gloria Richardson had her microphone yanked from her hand onstage at the March on Washington to prevent her from speaking. When Rustin reviewed Malcolm X's autobiography in 1965, he called the assassinated Muslim minister a misguided demagogue whose message, to the last day of his life, was ruined by "antisemitism" and

47. Vincent Harding, "So Much History, So Much Future" in *A History of Our Time: Readings on Post War America,* William H. Chafe, et al, eds., (Oxford University Press, 1987), 161-177; For Rustin's acknowledgment of the glacial rate of racial progress prior to 1963, see *Lost Prophet*, p. 360; One of Dr. King's advisors, Stanley Levison, privately stated that Birmingham demonstrated that the theory of black militant Robert F. Williams had been correct, and dogmatic Gandhian strategy had not been good for the movement. In 1960, Bayard Rustin had successfully urged King to isolate and condemn Robert F. Williams publicly. Williams was falsely indicted for kidnapping by the federal government the following year. See Craig S. Pascoe, "The Monroe Rifle Club: Finding Justice in a Social Jungle Called Dixie" in *Lethal Imagination: Violence and Brutality in American History*, ed. Michael A. Bellesiles (NYU Press, 1999), 416.

petite bourgeois economic views. Rustin surely knew that Malcolm rejected the Nation of Islam's positions on Jews at the end of his life and had limited his criticism to fair observations about white Jewish exploitation in the black ghetto and to Zionist colonialism; Rustin was also aware that Malcolm had made sympathetic appearances at Socialist Workers Party events and denounced capitalism.[48]

In the summer of 1964, Rustin initiated a call to suspend all civil rights demonstrations, both Gandhian and non-Gandhian. He claimed that a moratorium was merely to prevent a "white backlash" effect from undermining Lyndon Johnson in the November presidential election. However, two months after Johnson's subsequent landslide victory Rustin published his famed "From Protest to Politics" essay which further discouraged civil disobedience. It is remarkable to note that this article saw print *before* there was any breakthrough in the Selma campaign or the passage of the Voting Rights Act of 1965–that is, before the ballot of blacks in the Deep South was secured in law. Perhaps Rustin no longer cared much about the votes of this population since Johnson's election had indicated that the Democrats didn't necessarily need them to win the presidency.[49]

Another reason that Rustin may have become averse to protest is that it was increasingly clear that his own favored version, strict nonviolence, was effectively useless. In February 1964, Rustin had organized the New York City school boycott, which was both one of the largest civil rights protests in US

48. Earlier reports have suggested that Gloria Richardson was silenced as part of a generally misogynist policy at the March on Washington, but more recent analysis shows her to have been singled out for shabby treatment. See "Freedom! Black Women Speak at the March on Washington for Jobs and Freedom" Martin Luther King Jr. Research and Education Institute - https://kinginstitute.stanford.edu/freedom-black-women-speak-march-washington-jobs-and-freedom ; Bayard Rustin "Making His Mark [Malcolm X]" *in New York Herald Tribune Book Week,* November 14, 1965.

49. "From Protest to Politics" was published one month before a white minister, James Reeb, was murdered while protesting for black voting rights in Selma. This was followed by an escalation in protest nationally, notably including sit-ins inside the White House. President Johnson officially backed introduction of the voting rights bill for that Congressional session for the first time several days afterward, on March 18, 1965. Rustin did not make any public appearances for the Selma campaign prior to Reeb's murder. This stands in contrast with Malcolm X who visited Selma personally in February at the invitation of SNCC. It is also notable that at the time of Rustin's article, no one had been convicted of murdering Mississippi Freedom Democratic Party activists in June 1964, nor had anyone been indicted for the murder of four black children in the 16th Street Baptist Church bombing. Shortly after "From Protest to Politics" was published, the first elected black Georgia Assemblyman since Reconstruction, Julian Bond, was illegally denied his seat. See "Timeline, 1965" Veterans of the Civil Rights Movement - https://www.crmvet.org/tim/timhis65.htm#1965selma ; Bayard Rustin "From Protest to Politics" *Commentary*, February 1965.

history, and one of the most futile. A community coalition led by Reverend Milton Galamison tapped Rustin to help them nonviolently demand an end to *de facto* segregation in the public school system, but no reforms were ever delivered. One of the major weaknesses of the boycott was the non-participation of the United Federation of Teachers, who declined an eager invitation from Rustin and Galamison. The lack of support from UFT--led by close friends of Rustin who were associated with the Socialist Party--was a grave disappointment to Galamison's movement. The resulting bitterness of ghetto residents toward the teacher's union led directly to the community control school board controversies of the black power era and the notorious 1968 strike by the UFT. It was only after Northern liberal "white resistance undermined black hopes of integrating education and achieving full participation in American life [that] black parents and activists turned to demanding power in running segregated schools," notes historian Daniel Perlstein.[50] This fiasco demonstrated the collapse of Rustin's liberal-labor nonviolence strategy over two years before "Black Power" became the slogan of SNCC, and four years before the Panthers became a national phenomenon.

Social democrats rationalize their affection for Rustin's DNC coalition through its connection with the 1966 "Freedom Budget for All." This was a $100 billion proposal to eliminate poverty through a phased-in federal jobs guarantee which had been conceived by A. Philip Randolph (although the name "Freedom Budget for All" was bestowed by Max Shachtman). From *The New Republic* to *Jacobin* to *Nonsite,* Adolph Reed and his disciples have published thousands of words celebrating the Freedom Budget over the past decade, not merely as an idealistic document, but as a campaign to be emulated. It has been held up as counter-evidence to claims that "Rustin and Randolph 'sold out' [and] cozied up to the Johnson administration." [51] It is also regularly counterposed against the black power movement, implying that young militant leaders were active

obstacles to the Budget's passing.[52] This is demonstrably false, however: Militant black organizations of the day were initially supportive of the Freedom Budget, and its failure was illustrative of the bankruptcy of Rustin and Randolph's insider strategy. In his 2023 article denouncing the Panthers and valorizing the social democrats, Reed favorably quotes Rustin in 1966 that:

> *...there is a better alternative today–a liberal-labor-civil rights coalition which would work to make the Democratic Party truly responsive to the aspirations of the poor, and which would develop support for programs (specifically those outlined in A. Philip Randolph's $100 billion Freedom Budget)…The advocates of black power have no such programs in mind. What in fact they are arguing for…is the creation of a new black establishment.*

Inasmuch as this statement is supposed to condemn the Black Panther Party, we've already documented that the national BPP was adamantly opposed to a new black capitalist establishment–and they sacrificed their fruitful relationship with Stokely Carmichael for this principle. But even Rustin's criticism of non-Panther leaders is inaccurate and, in the case of the Freedom Budget, veers into deception. SNCC in fact *did* sign on in support of the Freedom Budget, under Stokely Carmichael's term as chairman, specifically. CORE also signed on--during its black capitalist period under Floyd McKissick. Unlike Rustin, the black power groups did not see the moderate social democratic reforms of the Freedom Budget as anti-capitalist. Once more, the esteemed academic Adolph Reed Jr. has not corrected historical misinformation, but instead amplified it.[53]

---

52. This delusion appears prominently in Benjamin Fong's *Jacobin* piece, and seems to be inspired by the myth constructed by Rachelle Horowitz decades earlier: "The administration did not have to do much to kill the Freedom Budget," wrote Horowitz, "the left opposition did it for them." Like Horowitz, Fong doesn't mention that Carmichael and McKissick signed on for the Freedom Budget in 1966--apparently before George Meany did--nor does he mention that leading antiwar figure Benjamin Spock did as well. See Rachelle Horowitz, "Tom Kahn and the Fight for Democracy" *Dissent* 2009, Winter 2007. Bad faith actors like Horowitz also seem to have misinformed John D'Emelio, who writes "SNCC never came around to backing the project." (*Lost Prophet*, 431).
Correction of this already came years ago from Thomas F. Jackson who noted "[Freedom Budget] signatories included most luminaries of the liberal left including black power advocates Stokely Carmichael and Floyd McKissick...But White House officials dismissed all such proposals as 'socialistic' and a desperate plea for 'reparations.' " Thomas F. Jackson, *From Civil Rights to Human Rights: Martin Luther King Jr. and the Struggle for Economic Justice* (University of Pennsylvania Press, 2007), 258.

53. "Introduction/ Signatories of 'Freedom Budget' " in *A "Freedom Budget" for All Americans: Budgeting Our Resources, 1966-1975 to Achieve "Freedom from Want" (*A. Philip

Rather than undermined by upstart youth leaders, the Freedom Budget was shot down by the Democratic Party officials that Randolph and Rustin had been courting as partners for 20 years. Despite in-person lobbying from Randolph, Rustin, Martin Luther King, and the national leadership of both NAACP and CORE at the June 1966 White House Civil Rights Conference, the program was spurned by President Johnson, with not a single one of its provisions adopted. It was also ignored by Vice President Hubert Humphrey, Randolph's longtime crony.[54]

The most comprehensive history of the Freedom Budget was a monograph by Paul LeBlanc and Michael Yates, published in 2013, years before the DSA-aligned intellectuals began their present nostalgia campaign. Its

Randolph Institute, October 1966). Note that AFL-CIO President George Meany was *not* a signatory to the original 1966 edition of the Freedom Budget.

54. In the most thorough study of Humphrey's relationship with the civil rights movement, *The Politics of Equality* by Timothy Thurber, the Freedom Budget is not mentioned, ; None of its provisions were adopted when Humphrey ran a "domestically focused" presidential campaign in 1968. Humphrey displayed the same rhetoric on "full employment" that Harry Truman and Lyndon Johnson had used, stopping well short of a federal jobs guarantee. Humphrey finally became active for a jobs guarantee in the mid-1970s after the neoliberal horse had already fled the barn, and when he was virtually on his death bed. Michael Brenes, a historian sympathetic to Humphrey, acknowledges that "the full employment bill Humphrey sponsored with Democratic representative Augustus Hawkins…displayed Humphrey's longstanding unwillingness to embrace ideas from the Left during the Cold War, ideas that could have strengthened the bill and broadened the coalition behind a job guarantee." With such half-hearted conception, the Humphrey-Hawkins Act was easily circumvented by neoliberals in the Federal Reserve and the Carter administration. See Michael Brenes "A Guarantee, not a Promise: Hubert Humphrey, Full Employment, and the Long History of the 1970s" Paper presented to the Annual Meeting of the American Historical Association, January 3, 2020. In light of these facts, it's notable that the national DSA leadership shares Rustin and Reed's romantic view of Humphrey to this day - See " 'Into the Bright Sunshine'- Why Hubert Humphrey Speaks to Our Times" *Democratic Left*, August 28, 2023, (Democratic Socialists of America). conclusions run completely counter to Adolph Reed's assertions about Rustin and Randolph's strategy. As one of its authors summarized,

Given the actual structures of power, [the Freedom Budget] could not have been achieved through the kind of dependence on the Democratic Party that was built into the strategic orientation of its architects. [55]

A. Philip Randolph: Against the Popular Front

"The Negro people cannot afford to add to the handicap of being black the handicap of being red."

- A. Philip Randolph, "Why I Resigned from the National Negro Congress", *The Black Worker,* May 1940

Perhaps the most perplexing aspect of Adolph Reed's book on Du Bois is its characterization of the elder writer as a resolute practitioner of Fabianism. In fact the defining feature of Fabianism is the commitment to a trade union-capitalist coalition (known as "liberal-labor" or "lib-lab" in the UK). This coalition is anti-Communist in nature, actively opposed to vanguard parties and the dictatorship of the proletariat.[56] Du Bois' perpetual estrangement from the AFL and alignment with Marxist-Leninism, while relatively late in life, precludes his having the dedication to Fabianism that Reed accuses him of. Ironically, the true fathers of black Fabianism in America were Reed's role models, A. Philip Randolph and Bayard Rustin.

Scott McLemee, "A Freedom Budget for All" *Inside Higer Ed*, August 20, 2013 - https://www.insidehighered.com/views/2013/08/21/interview-paul-le-blanc-freedom-budget-all-americans; Benjamin Fong's celebration of the Freedom Budget acknowledges that Lyndon Johnson had already rejected a much smaller federal jobs proposal in 1964 as excessive. This shows Randolph, Shachtman and Rustin's strategy to have been deluded from the beginning.

56. One flamboyant faction of the Fabian Society, led by Beatrice and Sidney Webb, did temporarily embrace Marxist-Leninism during the Popular Front era. Their beliefs were never representative of the Fabians as a whole, however. As one encyclopedia puts it, the Webbs eventually "believed in the Soviet model of the forceful implementation of a society without exploitation. This led to a split among the Fabians, as during the interwar period the majority of the members of the society were highly critical of the Soviet agenda. The splits were further aggravated by the conflicts over the evaluation of British imperialism. The Fabian founders hoped that the empire could create resources for easing social tensions: The imperial destiny would call for public expenditure to rear the imperial race." Needless to say, Lenin and Du Bois's view of the British Empire was diametrically opposed to this. Attila Pók "Fabianism" *International Encyclopedia of the Social Sciences (*Macmillan, 1968).

So committed to this anti-Leninist position were Randolph and Rustin that, aside from relatively brief dalliances, they were active enemies of the Popular Front, the foremost socialist coalition of the mid-20th century. Indeed, the Popular Front may have been the most constructive left-wing coalition of the *entire* century--this is certainly the judgement of Adolph Reed Jr., who has called its years of dominance, 1935-1945, the ”golden age of the left.” In their extensive writing on the history of the black left, Reed and his cohorts have never dealt with this glaring contradiction; instead they burnish the legend of Randolph as lifelong radical.[57]

While it’s true that Randolph’s newspaper, *The Messenger,* was privately called “the most dangerous…of Negro publications” by Attorney General Mitchell Palmer in 1920, this was during the brief period when the black editor supported Soviet Russia. Within a few years, *The Messenger* had distanced itself from Marxism and devoted itself to praising institutions it had denounced previously such as “Negro businessmen,” the anti-communist American Federation of Labor, and Booker T. Washington’s Tuskegee projects. One historian writes that “By the time of the January 1924 issue, *The Messenger* had lost virtually all of its radical content, acquiring a liberal, reformist perspective.” [58] Manning Marable stated that by the end of the decade “Randolph had moved toward a defense of private property and capitalism—a posture which he would never relinquish.” Now closely aligned with the AFL, Randolph adopted most of its reactionary tendencies and denounced the Communist-affiliated International Labor Defense (ILD) coalition as a Moscow puppet organization–despite the fact that the ILD was embraced by the veteran anarchist Lucy Parsons, the veteran syndicalist Bill Haywood, and the founder of the Socialist Party himself, Eugene Debs.[59]

Approached by Ashley Totten and other train attendants of the Pullman Railway to become their spokesman, Randolph soon led the new Brotherhood of Sleeping Car Porters (BSCP) into a ditch. Bowing to AFL President William Green–who had so little regard for black workers that he refused to give the BSCP a standard international charter–Randolph called off a promising 1928

Martin “Historical Note on International Labor Defense” New York Public Library - https://archives.nypl.org/scm/20647

strike that most of his membership had supported.[60] His reputation in the black community plummeted, causing *The Messenger* to collapse along with the BSCP's membership numbers. "Within four years, the Brotherhood's membership declined from almost 7,000 to only 771 in 1932." [61]

The BSCP was saved by the national labor revolt of 1934, touched off by the San Francisco chapter of the International Longshoremen's Association (ILA). The militancy of the Communist Party infused local ILA leaders like Harry Bridges, alleged to be a CPUSA member. Defying the AFL leadership, Bridges and his comrades eventually shut down the entire West Coast shipping system, battling scabs, fascists, and police throughout the spring and summer. By the end of it, general strikes had swept cities across the country and the Roosevelt administration responded with massive labor reforms. Despite sitting out all the militant action, Randolph benefitted from it when the Democrats backed a progressive amendment to the Railway Labor Act, which effectively forced the Pullman company, and subsequently the AFL, to recognize the BSCP as the sole representative of the porters.[62]

Harry Bridges and his allies had helped pioneer what would become the Popular Front model in American labor. With the Communist-led labor revolution growing in popularity, Randolph de-escalated his red-baiting and accepted an invitation to become spokesman for the National Negro Congress (NNC), the foremost Popular Front civil rights group, in 1936. Under the operational leadership of John P. Davis, NNC was pivotal in recruiting African-Americans into the Steel Workers Organizing Committee (SWOC), leading to the greatest expansion of black union membership up until that point. The SWOC was affiliated with the Congress of Industrial Organizations (CIO), the new Popular Front labor federation that regularly welcomed African-Americans, in contrast with the AFL. The NNC soon repeated its steel industry victory among tobacco workers in Virginia, launching an unprecedented organization of the black proletariat in the modern South, who then led numerous successful actions like

---

60. The 1928 labor action stumbled as Randolph focused on "calling on well-placed outsiders" among government mediators instead of relying on rank-and-file militancy. It was a pattern throughout Randolph's labor career, despite his frequent spouting of militant rhetoric. "Records of the Brotherhood of Sleeping Car Porters" Editorial Note by William H. Harris, *Chicago Historical Society* - https://www.lexisnexis.com/documents/academic/upa_cis/1551_RecsBroSleepCarPorSerAPt1.pdf

61. Marable, "A. Philip Randolph and the Foundations of Black American Socialism."

62. Bruce Nelson, *Workers on the Waterfront: Seamen, Longshoremen, and Unionism in the 1930s* (University of Illinois Press,1990), 98-110; Harris, "Records of the Brotherhood of Sleeping Car Porters." Contrary to some claims, Randolph never considered joining the CIO in the 1930s, and remained loyal to the reactionary AFL.

the Richmond strike of May 1937. Between 1935 and 1940, black union membership in America increased 400 percent, largely thanks to CIO efforts. The Brotherhood of Sleeping Car Porters itself owed much of its success to the National Negro Congress: the union did not win a permanent contract with Pullman until 1937, after Randolph became known as the NNC president.[63]

Yet at its 1940 conference, Randolph spectacularly resigned from the National Negro Congress without warning, dealing it a devastating blow. Randolph claimed (and his admirers repeat) that he attacked the NNC in response to a sudden Communist Party takeover of the group. Historian William H. Harris, writing for the Chicago Historical Society, differs in his assessment:

> *The fact of the matter is that both Randolph's leadership and the program of the NNC ended in failure largely because...Randolph wanted to run the NNC the same way in which he operated in the BSCP, namely that he would serve as chief while others ran the organization in accordance with his wishes.*

While DSA leaders hold up Randolph as a harbinger of a truly democratic, minimally hierarchical socialism, the evidence shows he had the same authoritarian praxis as other AFL bosses. Randolph's famed gentility concealed a discomfort with collective leadership, and even a contempt for the working-class he so often lauded. Prominent black journalist George Schuyler (a sometime-ally of Randolph) wrote that he suffered from a "messianic complex." UAW Local 600 leader Shelton Tappes, a non-Communist member of the NNC, observed that "Randolph's appeal has always been more to the white-collar class than to the working class." Tappes argued that the BCSP never reached its potential to exceed 10,000 members as an industrial union because Randolph "made no effort, no effort at all to take the Pullman porters beyond a union which he could control." [64]

Gellman, "The Spirit and Strategy of the United Front: Randolph and the National Negro Congress, 1936-1940," in Andrew Kersten and Clarence Lang, editors, *Reframing Randolph: Labor, Black Freedom, and the Legacies of A. Philip Randolph* (NYU Press, 2015); Marshall F. Stevenson, Jr. "Challenging the Roadblocks to Equality: Race Relations and Civil Rights in the CIO 1935-1955" (Department of History, Ohio State University) Center for Labor Research.

64. Harris "Records of the Brotherhood of Sleeping Car Porters"; David Lucander " 'It Is a New Kind of Militancy': The March on Washington Movement, 1941-1946" (Doctoral Dissertation, University of Massachusetts, Amherst, May 2010); Gellman, "The Spirit and Strategy of the United Front." Most major unions attempt to branch off into different (if similar) industries. The

Another factor in Randolph's betrayal was the NNC's contemplation of a long-term partnership with the CIO at the 1940 convention. The CIO's president, John L. Lewis, personally addressed the NNC to invite them to a permanent coalition, and it accepted. Randolph cited the permanent relationship as his primary reason for leaving the NNC. By all accounts Randolph's resignation speech was coldly received by most NNC delegates (Although it was effusively praised by Ralph Bunche, who'd soon become one of the foundational Cold War diplomats of the Truman administration.) Bizarrely, Randolph said that NNC was threatening to "split the labor movement"–yet by inviting Randolph, an AFL leader, to head a CIO-backed coalition, the Congress leaders had self-evidently attempted to *unite* the labor movement. Historian Eric S. Gellman suggests that Randolph was not actually interested in proletarian solidarity at this time and "seemed especially threatened by the NNCs successes in the CIO, which might have jeopardized his own leadership of the BSCP in the AFL." The rapid rise of black CIO leaders like Ferdinand C. Smith (National Maritime Union) and Hank Jackson (Packinghouse Workers Organizing Committee) was challenging Randolph's undisputed dominance as the face of African-American labor.[65]

In his published statement on the resignation, Randolph began by affirming the anti-Communist witch-hunts of the House on Un-American Activities Committee (also known as HUAC, and known in the 1930s as the Dies Committee for its chairman, Congressman Martin Dies). Although Randolph had once defended NNC from charges that it was a puppet group, by 1940 it was under investigation by HUAC. Randolph capitulated to the government, announcing that "The charge of the Dies Committee, that the National Negro Congress is a Communist Front and a Transmission Belt for Communists propaganda [has] every appearance of truth and validity." He claimed this necessitated his resignation, as Communism constituted a "definite menace" to the Negro movement. Randolph implied that anti-Communism was essential to American loyalty, and claimed that the black masses agreed: "If the US declared war upon Communist Russia tomorrow, the Negro would fight Russia

---

BCSP confined its membership almost exclusively to Pullman train attendants. Thus, although it is always described as the largest *black-led* union in 20th century America, it was not the union with the most black members: the UAW and other unions associated with the CIO had far more black members beginning in the 1940s. Due to these factors, and the mid-century decline in the railway industry, the BSCP membership dwindled to nothingness in the 1960s.

65. Gellman, "The Spirit and Strategy of the United Front"; A Philip Randolph, "Why I Would Not Stand for Re-Election for President of the NNC" *The Black Worker*, May 1940; Stevenson, "Challenging the Roadblocks to Equality: Race Relations and Civil Rights in the CIO 1935-1955."

with all the fervor and patriotism of any other 100 percent American." (The persistent ambivalence of African Americans toward the Cold War would demonstrate that this was wishful thinking on Randolph's part.) In true red scare fashion, Randolph considered not only Communist Party members, but all "sympathizers with Communists" to be unfit for any sort of leadership. The latter category could encompass most of the CIO at the time, thus rationalizing Randolph's new policy of severing connections with the Popular Front, and urging all his followers to do so.[66]

Randolph's redbaiting tailed that of his benefactor, AFL President William Green. "In 1939, the AFL convention voted to endorse the Dies Committee, as did the 1940 convention" notes historian Jennifer D. Luff. "Labor anticommunists undermined the hard work of the Popular Front Communist Party." High level AFL witnesses like Executive Council member John P. Frey helped pioneer practices like "naming names" of alleged Communists to HUAC. Their unsubstantiated tales of CPUSA malfeasance in the labor movement "rejuvenated old images of the party as an alien invader" and manufactured consent for laws like the Smith Act, which laid the foundation for the Second Red Scare. Despite working fruitfully alongside Communists in the National Negro Congress, and occasionally defending them, Randolph came to encourage this reaction. By May 1940, Randolph wrote Green to affirm his support for HUAC-AFL collaboration, opining that if the Dies Committee would "aggressively push its crusade to destroy every vestige of foundation of Trojan Horse and Fifth Column conspiracies against the American government, then it will be fulfilling an important public service." This was at the peak of "a little Red Scare that erupted in the US between 1939 and 1941" notes Jennifer Luff. In this period the AFL leadership pressed "dubious charges of subversion in a dress rehearsal for the abuses that came to be known as McCarthyism." The AFL tendency was mirrored in Socialist Party circles, as proto-McCarthyites like Jay Lovestone and Irving Brown increasingly clustered around SP leaders like Randolph and Norman Thomas.[67]

Randolph, Identity Politics, and Anti-Communist Praxis

One of A. Philip Randolph's most bizarre arguments for repudiating the National Negro Congress was that a Communist takeover had subverted the black nationalist essence of the organization. (He spent far more time expounding on this theory than on Soviet foreign policy, which many historians claim was his rationale for attacking the Popular Front.) [68] Randolph stated that "I am unalterably opposed to having a Negro organization…depending for its main income upon a source outside of the Negro people themselves." This was already a questionable claim as we'll see below, but Randolph immediately escalated this to say that "the Negro people must supply [all] the money for its maintenance." Additionally, after noting that only 75% of the NNC was black, he claimed the presence of a white minority was unacceptable, chiding, "Why should a Negro Congress have white people in it?"

Randolph's demand for complete white exclusion from the NNC four years after its founding was anachronistic. Anti-communist historian Jonathan Holloway has acknowledged that the coalition was always conceived as "a cross section of black groups and white labor…" From the beginning, "the Congress actively court[ed] white labor, especially the CIO," and the youth wing of the NNC was "militantly interracial." Liberal Randolph biographer Paula Pfeffer acknowledged that Communist Party members, both black and white, "were prominent in the NNC from the outset" and that Randolph had publicly accepted this up until his shift in 1940.[69]

In the course of a debate with labor scholar Kim Moody, Cedric Johnson has brusquely dismissed the charge that A. Philip Randolph ever engaged in identity politics, pointing to the union leader's ardent opposition to Marcus Garvey's philosophy in the late 1920s. Yet there is overwhelming evidence that Randolph actively built proto-black power sentiment into the March on Washington Movement of 1941-1946. Award-winning historian Timothy Tyson wrote that "the wartime movement that Randolph led foreshadowed the

---

68. Outrage at the Communist Party's anti-war position made little sense from Randolph given that his close ally Norman Thomas, the head of the Socialist Party, also opposed entry into World War II at this time. Thomas even endorsed the America First Committee and stood side by side with Charles Lindbergh at a controversial 1941 rally at Madison Square Garden. See Ross, *The Socialist Party of America*, 412-413.

69. Randolph, "Why I Would Not Stand for Re-Election for President of the NNC" ; Jonathan Holloway, "Lecture 12: Depression and Double V (continued) " African American History: From Emancipation to the Present (2010), Open Yale Courses - https://oyc.yale.edu/african-american-studies/afam-162/lecture-12 ; Paula Pfeffer, *A. Philip Randolph: Pioneer of the Civil Rights Movement* (Louisiana State University Press, 1990), 39.

all-black militancy of Black Power...” Manning Marable flatly stated “The driving force behind the 1941 March on Washington was black nationalism. Taking a page from Garvey's book, Randolph insisted that only blacks participate in the march.” Randolph’s aide CL Dellums’ stated that the only white role was to lend blacks ”moral support, to stand on the sidelines and cheer us on,” a position that foreshadows modern “stay in your lane” attitudes toward white allies.[70] As he prepared to break away from the Popular Front in the late 1930s, Randolph had been discreetly cultivating black identity politics within the Brotherhood of Sleeping Car Porters: Historian J. William Trotter notes that

> *While Randolph had vehemently eschewed Garvey and UNIAs brand of black nationalism in favor of labor solidarity, as head of the BSCP he increasingly supported a notion of race pride and racial unity that echoed Garvey's ideas…*

By the time of the March on Washington Movement, Randolph’s demand for self-segregation was so removed from the tenor of the Popular Front that Adam Clayton Powell accused him of “disunifying” the left and Bayard Rustin privately “fretted that Randolph was trending toward a dangerous and unsustainable ‘black nationalism’ ” [71]

The separatist tendency made little sense since the MOWM was effectively a subsidiary of the integrationist NAACP from the beginning. The latter organization not only had white members, it had numerous white men in its national leadership at the time. Historian David Lucander notes that, although the relationship was unpublicized, “The NAACP subsidized the MOWMs activities in the young organization’s first year, contributing as much, and sometimes more, to MOWMs coffers as the BSCP. Individually, [NAACP Executive Secretary] Walter White made some of the largest private donations that MOWM obtained.” The NAACP itself was partly supported by white billionaire Julius Rosenwald, and both the NAACP and the BSCP were generously funded in the 1930s by the white millionaire Charles Garland. Given Randolph’s willingness to accept the money of elite whites, it is jarring

71. Joe William Trotter “Researching Randolph” in *Reframing Randolph* (NYU Press, 2015); David Lucander, *Winning the War for Democracy: The March on Washington Movement, 1941-1946* (University of Illinois Press, 2014) 11-13.

that he would raise such strenuous objection to receiving money from the middle- and working-class whites of the CPUSA and CIO. It's equally jarring that the NAACP would support Randolph's "Negro isolationist" policy of the early 1940s given that it had recently censured its co-founder WEB Du Bois for a flirtation with black nationalism.

The difference was that Du Bois leaned toward a revolutionary vision of nationalism that brought him into alliance with the Communist Party; Randolph, in contrast, calculatingly weaponized black identity in 1940 for his anti-Communist agenda. David Lucander observed that "Ideologically and politically committed to anticommunism, Randolph envisioned MOWM as something of an anticommunist wartime alternative to the NNC" and argued that the union boss began planning the MOWM prior to denouncing the Popular Front coalition. Clarence Lang adds that "When Randolph said the March on Washington Movement would have to be an all-black formation, that was, as much as anything else, a rebuke to the Communist Party." Of course, even African-American Communists were summarily banned: Randolph promised that any who tried to join his new organization, however discreetly, "will be promptly marched out." [72]

Randolph's anti-Communist paradigm was subsequently adopted by most of the famous black apostates from the Popular Front, from Richard Wright, to Ralph Ellison, to Harold Cruse. Bayard Rustin fit the paradigm as well, and took the 1941 March on Washington Movement as occasion to end his brief fling with Marxist-Leninism.[73]

Bayard Rustin and the Origins of Cold War Liberalism

---

72. Lucander, *Winning the War for Democracy*, 9-10. Cedric Johnson claims that Randolph's nationalistic policy for MOWM only came about because "Randolph demanded full black participation," but of course Randolph was banning the participation of African-American Communists, and effectively discouraging the participation of black sympathizers of the CPUSA. See Johnson, *The Panthers Can't Save Us Now*, 145-173.

73. As Robbie Lieberman and Clarence Lang write: "The old notion that black people were 'used' by the Communist Party as it sought to achieve its own goals has been widely discredited, and rightfully so. Challenging that idea are claims from St. Clair Drake, among others, that the process went both ways. Drake cites Ralph Bunche and A. Philip Randolph as examples of those who 'used' the Communists and then 'deftly disengaged.' " Introduction" in *Anticommunism and the African-American Freedom Movement*, Eds. Robbie Lieberman and Clarence Lang (Palgrave MacMillan, 2009).

AFL-affiliated leader was in fact the decisive influence in Rustin embracing nonviolent ideology. "Randolph…was a great follower of Gandhi and encouraged Rustin to read him," Daniel Levine notes. "Rustin found the philosophy attractive but was not sure the ideas were very useful…" The MOWM had not started on a Gandhian premise–the organization originally proposed a permitted march at the National Mall, not an act of civil disobedience.[74] Randolph began to lean strongly into Gandhism after his compromise with the federal government to suspend the march. Many members were confused by the MOWM's failure to stage a DC action, even as the government refused to make the anti-discrimination policy permanent or desegregate the military. "Without marching on Washington, MOWM had to do something to merit its existence," notes David Lucander. The promotion of nonviolence helped fill the niche.

With Randolph's encouragement, Rustin threw himself into the Gandhian world, particularly the Fellowship of Reconciliation, run by Randolph's friend, AJ Muste. As part of that small group's campaign for a desegregated military, Rustin resisted the wartime draft with impressive physical courage, serving two years in prison. Rustin laid down his body for other civil rights campaigns, including the desegregation of dining halls and interstate buses, but had no success at changing policy or building a mass movement. Meanwhile, the MOWM quietly disbanded in 1946 without fulfilling its original goals of ending apartheid in the US armed forces, or even ending it permanently in the defense industry. It's refusal to take any money directly from non-black sources had led to its gradual bankruptcy.[75]

The temporary reduction in racist hiring practices was meaningful at the height of Jim Crow, but much of the groundwork had actually been done by the National Negro Congress and the CIO. Eric Gellman notes that

> *During this same period, the NNC engaged in protests against the Glenn L. Martin aircraft company in Baltimore and Washinton, supported the UAW strike against Ford MC in the spring of 1941, and launched protests against other discriminatory defense manufacturing plants in Chicago and LA. Thus while the NNC and MOWM worked separately in 1941, they*

> *often worked on parallel tracks that complemented one another, even if the latter received the bulk of favorable publicity.*[76]

With the inauguration of President Harry S. Truman in April 1945, political reaction commenced in virtually every realm of federal policy, despite the Democrats controlling Congress for more than a year afterward. The one great progressive victory of the era came in 1948, when the military was finally desegregated. The popular history of this event–crafted during the Cold War–tells us that Randolph and Rustin's call for a mass Gandhian campaign to resist the draft was decisive in forcing Truman's concession. Yet the most important pressure was applied by Randolph's adversaries in the Popular Front, particularly Progressive Citizens of America (PCA) and the Henry Wallace for President campaign, which welcomed Communist support.[77] As former Vice-President Wallace crisscrossed the country in spring of 1947, he demanded an end to both the Cold War and Jim Crow. Historian John C. Culver recounts there was a "quasi-religious fervor" among the hundreds of thousands that went to PCA rallies, most of them paying crowds. In its "first six months in operation the PCA had 25,000 members and chapters in nineteen states." This provoked the chair of the Democratic National Committee to send a memo to presidential aide Clark Clifford: "Wallace is a major consideration in 1948! Something should be done to combat him." Clifford responded with a strategy for Truman to "stake out liberal election year positions on key economic and social issues" including civil rights. In its later review of the 1948 campaign, *The Wall Street Journal* observed that "From the time that Mr. Wallace announced he would run for president, Mr. Truman began to suck the wind from Mr. Wallace's sails by coming out for more and more of the Wallace domestic program."

Four months *after* Henry Wallace confirmed his run for the presidency in December 1947–and one day after Wallace testified to Congress that the Pentagon should commit to "completely abolishing [racial] segregation"–A. Philip Randolph announced that he would be urging draft resistance until the

76. Gellman, "The Spirit and Strategy of the United Front."

77. "[Truman had concerns about] the State's Rights, or Dixiecrat, Party, nominating Governor Strom Thurmond [but] even more worrisome, on his left, Truman faced the Progressive Party nominee, Henry Wallace….Although there were still too few black voters in the South to make a difference, increasing numbers of African Americans in the North and West could affect the outcome of the election. These votes were not only up for grabs by Wallace, but also by the Republican candidate, Thomas E. Dewey…Truman worried more about Dewey and Wallace than about Thurmond." Steven F. Lawson Truman "To Secure These Rights: The 1948 Election" Truman Library Institute -https://www.trumanlibraryinstitute.org/civil-rights-symposium-history-13/

US military was integrated. But as with the 1941 March on Washington Movement, the new call from Randolph and Rustin did not result in mass protest. Some scholars have made broad claims that draft resisters were arrested in July 1948, but do not provide specifics or primary sources that support this.[78] George Schuyler later publicly chided Randolph "for abandoning the movement at the point where it was likely that somebody might have to go jail." [79]

Hundreds of physical and public confrontations did erupt over Jim Crow that year, but virtually all of them emerged from the Wallace campaign. The candidate's supporters defied Jim Crow laws across the South in organizing events with integrated staff and audiences. In Birmingham, while visiting the youth wing of the National Negro Congress, Wallace's running mate Senator Glen Taylor was arrested and beaten alongside organizers for violating segregation laws. In Durham, South Carolina, a Wallace supporter was stabbed repeatedly at a rally; In Charleston, South Carolina another supporter was murdered by a segregationist who then only received a three-year sentence. Local Wallace tour organizers included Martin Luther King Sr., Daisy Bates–who would lead the "Little Rock Nine" campaign ten years later–and a young Coretta Scott. As Truman finally signed Executive Order 9981 to end the Jim Crow military on July 26, he was well aware that Henry Wallace would soon embark on another 10-city tour of the Deep South, raising the profile of American apartheid even more.[80] Military desegregation and Wallace's 1948 tour of the South are usually discussed in isolation by historians; In fact, the two were directly related.[81]

In 1946, A. Philip Randolph and Norman Thomas had proclaimed that a new third party challenge was needed against Truman, but as the months passed,

---

78. Paula Pfeffer, for instance, writes that "The orders came on July 26, after the jailing of more than thirty draft resisters…" Her source for this is a July 17 *New York Times* article that doesn't mention draft resisters or civil disobedience at all. Later Pfeffer mentions that Rustin and his colleagues were disappointed at "a lack of response to the call for civil disobedience" and that Randolph acknowledged that "the league did not have a 'mass following.' " Pfeffer, *A. Philip Randolph*, 143-147, 154-155. The leading Bayard Rustin biographers like John D'Emelio don't mention active draft resistance in July 1948 at all.

80. John C. Culver, *American Dreamer: The Life and Times of Henry A. Wallace* (Norton, 2000)*, 443*-451, 466-470.

81. Pat Sullivan, "Proud Days" *Southern Exposure* Vol. 12 No. 1, Feb 1984, Institute of Southern Studies. "[Wallace's Progressive Party] provided a focus for early stirrings of the Civil Rights Movement, rallying Southerners of both races who were prepared to challenge segregation and who recognized voting reform as essential to achieving racial justice in the South."

they instead initiated an alliance with the newly formed Americans for Democratic Action (ADA), an organization which was specifically founded to counteract Wallace and PCA. “We heartily congratulate the ADA upon its forthright declaration disassociating itself from the Communists,” Randolph and Thomas wrote. The Socialist leaders awkwardly acknowledged that ADA was fundamentally a Democratic Party caucus, but Randolph and Thomas could not resist its call since they

> *greeted any move toward a large-scale liberal break from the Communists and the Popular Front enthusiastically, and as early as February 1947 the National Executive Committee approved a plan for Socialist Party members to join ADA as individuals and agitate within for the new party movement.*[82]

Thus was the first prototype of the Democratic Socialists of America created, not as a revival of the Popular Front, but as the means to its destruction. Indeed, historians have called the Wallace campaign the “last gasp of the Popular Front.” Randolph, Thomas and Rustin did all they could to stifle its breath.[83]

Social democratic scholar Jack Ross acknowledges that “the praises of the establishment for Norman Thomas throughout the balance of his life” were due to his service “as a useful foil against Henry Wallace and the Communists…” The historian also admits that this led to the rise of the “State Department Socialists,” with former Norman Thomas associates like Frank Trager, Irving Brown, and Morris Weisz becoming career Cold War advisers to the government (and in Brown’s case, a covert asset of the Central Intelligence Agency). Trager gained fame as a major propagandist for the war in Vietnam; State Department and ADA adviser Robert J. Alexander remained a Socialist Party official up until the SP fully collapsed in the 1960s.

Ross is correct that this absorption by the establishment marked “American Socialism's loss of a serious grassroots movement,” but he errs in saying that it arose from organizing “without a solid foundation in... the trade union movement.” [84] As we have seen, it was precisely the SP’s attachment–via A.

Philip Randolph–to American Federation of Labor President William Green that threw the party into reaction. Green was as an obsessive anti-Communist, calling for the CPUSA to be outlawed in June 1940; he distrusted industrial workers and disdained the CIO, and welcomed weakening the Wagner Act as a means to weakening them; he called for ending price controls, and entrenching the Cold War; and he promoted the embittered but passive acceptance of the Taft-Hartley Act.[85] Randolph and the Socialists adopted virtually all these positions. Randolph's 1940s correspondence archive shows little organizing against the crumbling of the New Deal, but constant organizing against the supposed Communist subversion of the Brotherhood of Sleeping Car Porters.[86] Lenin's warnings on the limitations and perils of "trade union consciousness" reached full vindication with Randolph, Green, and the AFL. Lenin could've also predicted that the CIO would be the vehicle of progress in America during the years that it worked alongside a revolutionary vanguard party, but would cease its progressive role when it purged that party.

Bayard Rustin's organizing fostered this regression. At a small Rustin-led march picketing the June 1948 Democratic National Convention for desegregation, a group of Henry Wallace supporters from the Progressive Party offered to join in. John D'Emelio reports that Rustin physically confronted and "chased away" the Popular Front activists. Besides his anti-communism, Rustin now had a secret partisanship that aligned his actions directly with Hubert Humphrey of Americans for Democratic Action, the Democratic Party's new point man on civil rights; Despite the fact that it was picketing the DNC, Humphrey publicly supported Rustin's demonstration with no negative repercussions to his own DNC career. Rustin was embraced by the liberal establishment that year, being guest of honor at a Waldorf Astoria dinner hosted by the Council Against Intolerance in America, a spin-off group from the American Jewish Congress.[87] In the same period, Rustin began a whispering campaign discouraging peace activists from working with Paul Robeson.[88]

Only once did Bayard Rustin have a political break with A. Philip Randolph, and it was not over anti-Communism. In response to Truman's executive order of July 1948, Randolph immediately shut down all preparations for a draft

resistance campaign, saying the goals of his League for Non-Violent Civil Disobedience had been accomplished. Rustin and AJ Muste balked, publicly arguing that peacetime conscription should be opposed unconditionally, and that Truman's initial desegregation order carried no real enforcement mechanism. Randolph responded by summarily dissolving the organization, announcing to the press that,

> *A pacifist nucleus within the League was intent on using the movement…as a front for ulterior purposes. We had originally welcomed into the League such known pacifists as Bayard Rustin and AJ Muste whose experience, we felt, would help keep a potentially violent movement non-violent in spirit and action.*[89]

Thus it was revealed that A. Philip Randolph, who had introduced pacifism into the civil rights movement, and cemented it into the activism of Bayard Rustin, had no principled belief in pacifism whatsoever.[90] To Randolph it was simply an affectation to filter out Communists and potential militants from his campaign, just as his temporary affectation of black nationalism had been in 1940.[91] Rustin's outrage at this public betrayal was remarkably brief. Just two years later, Rustin eagerly returned to Randolph's circle, apologetic for his pacifist commitments of 1948. During their time apart, Rustin had opposed the Korean War while Randolph had joined with the AFL leadership in supporting it.[92] Rustin essentially conceded that Randolph's Cold Warrior position was the correct one (even during their estrangement, he was effectively Randolph's ally, as he was working to keep Communists out of the peace movement). The erstwhile radical pacifist then directly assisted Randolph in the domestic Cold War, aiding him in forming a hostile clone of the Popular Front-inspired National Negro Labor Council (NNLC).

---

89. Levine, *Bayard Rustin and the Civil Rights Movement*, 60.

90. At the beginning of the 1948 campaign, AJ Muste had praised Randolph as a true pacifist who had "consistently urged the pacifist way of reconciliation and non-violence…" More accurately, he also called Randolph "unquestionably the most important anti-communist leader among Negroes." The anti-communism was clearly predominant over the pacifism. Pfeffer, *A. Philip Randolph*, 150.

91. As the Red Scare peaked, Randolph openly sought coalitions with whites again, now confident that Communists had been cleared out from the political scene. Pfeffer, *A. Philip Randolph,* 163.

92. "A. Philip Randolph, who as a young labor organizer had opposed U.S. entry into World War I, defended America's militarism in Korea as the only language Russia would understand, and he could not imagine any fate worse than 'domination of the world by Communist Russia arms and culture.' " Daniel S. Lucks, From the Selma to Saigon: The Civil Rights Movement and the Vietnam War (University Press of Kentucky, 2017), 33.

The original NNLC was formed in 1951 by black union members who'd been purged as Communist sympathizers under the Taft-Hartley Act. "Numbering 5,000 members at its height, the NNLC built more than thirty chapters across the nation," but collapsed after six years. The failure came partly from relentless right-wing repression, but also from the treachery of Randolph and Rustin's network. After encouragement from white conservative labor leadership, Randolph and Rustin "formed a National Negro Labor *Committee* in a blatant attempt to take the initiative from the NNLC," according to Clarence Lang. With public support from "Both New York governor Thomas Dewey and President Truman," who "sent official greetings" to its founding meeting in 1952, Randolph's organization quickly overshadowed the grassroots one. Rustin and Randolph once again imitated Popular Front symbolism but steered their version of NNLC toward "combatting communism." Randolph was elevated to the vice presidency of the newly merged AFL-CIO shortly afterward.[93]

> *The unmovable obstacle to the coalition we hoped to build with organized labor was the secret pro–cold war element within liberalism, directly and indirectly tied to the CIA, which was fiercely opposed to our break from cold war thinking.*
>
> —Tom Hayden, "Participatory Democracy: From Port Huron to Occupy Wall Street" *The Nation*, April 2012

David Lucander's research shows that when A. Philip Randolph took his final hard turn to anti-Communism in the 1940s, the FBI began to see him as an asset more than a threat–a view it had previously taken toward the national NAACP leadership.[94] John D'Emilio notes that Bayard Rustin fell off J. Edgar Hoover's radar for years at a time in the 1950s, (perhaps because the Bureau realized he worked for the AFL-CIO vice president). Rustin was primarily returned to FBI

---

93. "[In the 1950s] the National Negro Labor Council intensified demonstrations against employment discrimination. Because of the NNLCs close association with the Communist Party however, it became the focus of a vigorous wave of Cold War attacks from Randolph, the CIO, and the FBI." Joe William Trotter "Researching Randolph" in *Reframing Randolph, 28-30;* Clarence Lang, "Freedom Train Derailed" in *Anticommunism and the African-American Freedom Movement*, Eds. Robbie Lieberman and Clarence Lang (Palgrave MacMillan, 2009).

94. "Randolph's vehement anticommunism convinced the FBI to cease probing his daily minutia as 'he has been outspoken in his anti-Communist opinions.' Likewise, [NAACP President] Walter White also pushed the FBI to stop investigating the March on Washington Movement....If radicals don't like Randolph, White reasoned to Hoover, how bad could Randolph be? From this the FBI concluded that because 'the Left attacked Randolph' he was not a threat to America's internal security." Lucander, *Winning the War for Democracy*, 43.

scrutiny because of his affiliation with Dr. King, who the federal government considered far less loyal to them than Randolph.[95]

In the same period, Randolph worked with the CIA-funded Committee for Cultural Freedom on overseas missions. In one memorable episode Randolph and Norman Thomas tried to speak at a 1952 May Day parade in Japan where both men were pelted with stones by workers. The US occupation forces had promoted a "crack down on left-wing trade unions, while encouraging the Japanese to reconsider rearmament and support more mainstream, conservative political parties." Few Japanese labor activists were friendly to State Department socialists claiming to promote a "Third Force" between capitalism and communism in those circumstances. At the time, Randolph was actually on the executive board of the American Committee for Cultural Freedom alongside such dedicated anti-communists as James Burnham, a full-on CIA agent.[96]

Suspicion that Bayard Rustin was a CIA asset surrounded him in the mid-1960s; it was even shared by David Dellinger, a pacifist organizer who'd fiercely defended Rustin from condemnation over his sexuality. The distrust was exacerbated when Rustin worked closely with Norman Thomas on a project to judge the integrity of elections in the Dominican Republic. This mission was later shown to have been covertly funded by the CIA. Thomas told reporters that he had no knowledge of the secret funding and no ties to the intelligence agency. Later it was revealed that Thomas had been discreetly maintaining a friendship with CIA director Allen Dulles for years.[97]

Of course, evidence of Rustin and Randolph being covert assets to the capitalist establishment should not distract from the better documented reality of their

---

being *overt* assets. As Adolph Reed Jr once acknowledged," proto-fascistic Cold War anticommunism got a sanitizing boost from liberals who, while wringing their hands, wrinkling their brows and privately tut-tutting about supposedly extraordinary 'excesses,' validated persecution…" Reed even pointed out that,

Americans for Democratic Action, long the avatar of Democratic liberalism, was founded specifically as an engine of Cold War attack on the left, [promoting] the premise that a shadowy 'subversion' threatened the republic, which then justified persecution of those held to endorse it.[98]

Nowhere has Reed ever acknowledged that Randolph and Rustin were close allies of Americans for Democratic Action (ADA) in this period, however. Their multi-decade ADA collaborator, Hubert Humphrey, actually surpassed the rest of the organization by introducing the Communist Control Act into the US Senate.[99] Yet the red baiting goes much deeper, as we've seen: Before World War II, Randolph worked to fortify liberal anti-Communism in the American Federation of Labor, leading to a full endorsement of the House Un-American Activities Committee. Like many *de facto* Fabians, Randolph tolerated the Communist Party for a time during the Popular Front period, but he seems to have penetrated the Front for the purposes of fracturing it. In a bitter irony, this brief affiliation with the Popular Front then served as cultural capital to bolster Randolph's credibility with the postwar left. Perversely, Rustin seems to have actively traded on his dubious connections with the Popular Front: John D'emilio found instances where Rustin had exaggerated his time and status in the Communist Party in order to impress fellow activists.[100]

Randolph and Rustin's treachery towards the Popular Front had world-historic implications given that, as Adolph Reed Jr. once acknowledged, "the late 1940s

98. Adolph Reed Jr., "Here They Come Again: The Kind of Neoliberal Democrats Who Prefer Trump to Sanders" Common Dreams, February 11, 2020 - https://www.commondreams.org/views/2020/02/11/here-they-come-again-kind-neoliberal-democrats-who-prefer-trump-sanders

99. Mary S. McAuliffe "Liberals and the Communist Control Act of 1954" *Journal of American History*, Sept 1976 (Oxford U. Press).

100. "Yet there is also reason to believe that Bayard retrospectively exaggerated his engagement with the Young Communist League…Perhaps because of the aura it would have created in the circles in which he came to travel…communism conjured images both alluring and repellent…To have entered the lair and escaped added a touch of excitement, of daring, to the persona that Bayard soon began to construct for himself." D'Emelio, *Lost Prophet*, 35-36.

was the crucial moment of the defeat of the Left." [101] Clarence Lang, a historian largely sympathetic to Randolph, has stated that

> *In trying to remove or isolate [Communists] from mass movements and organizing, Randolph sadly contributed to a general assault on political leftists as a whole. This affected the civil rights movement in the early Cold War by narrowing the scope of demands that could have been made. Anti-Communism also winnowed the terrain of the labor movement by destroying some of the most militant union organizations that sought to fundamentally transform society racially and economically, rather than simply secure the best bargains for their members.*[102]

An honest survey of mid-20th century US history shows that, rather than being torch-bearers of the old economic left, Randolph and Rustin were its pallbearers. If they appeared to be the only "two civil rights leaders [who] held economic transformation to be integral to the fulfillment of the promise of the civil rights revolution" in the early 1960s, it's because they had helped systematically red-bait every other leading black socialist out of public life.

Social Democrat Identity Crisis

When objections are made to Bayard Rustin's turn to neoconservatism, a common rationale is to excuse it as Rustin's personal reaction to the frustrations of homosexual identity in the era before gay liberation. Even Cedric Johnson has resorted to this, claiming an imperative to "contextualize and explain Rustin's increasing conservatism" by acknowledging him as

a marginalized figure…forced to play an offstage role…by clergy because of his gay sexuality and youthful Communist commitments, which made him an easy target for segregationists…[103]

103. Johnson, *The Panthers Can't Save Us Now*, 160-174.

The truth is Rustin's personal situation is irrelevant to his politics because he did not make an isolated late-life personal decision to support Cold War liberalism. From the 1940s onward he was enmeshed in the political network that *constructed* Cold War liberalism. His *mea culpa* to Randolph after their schism over the draft and the Korean War took place two years *before* Rustin's "public indecency" conviction in 1953. If Rustin's primary mentors—A. Philip Randolph, Norman Thomas, and Max Shachtman—didn't need to be harassed about their sexuality in order to take social imperialist positions, then this could not be the decisive factor for Rustin either. The explanation is instead found in the deficiencies that social democrats generally have in their judgments of US neocolonialism.[104]

In an extended defense of the 1966 Freedom Budget campaign in *Jacobin*, Benjamin Fong (citing Reed and Johnson) passingly implies that Rustin and Randolph made some mistakes, but never explains concretely what those were.[105] Thus the new social democrats are poised to make their predecessors' mistakes again: to *not* divert the trillion dollar military budget into peaceful state industrialization; to *not* acknowledge the fatal limitations of a purely legal trade union movement; to *not* understand that siding with the establishment against grassroots radicals will not buy the goodwill to enact meaningful reform; and to not understand the innate value of a revolutionary vanguard party in fighting for the working-class, and the concomitant destructiveness of blacklisting such a party from the movement. Indeed, the DSA-aligned academics' continuing misrepresentation and denigration of the national Black Panther Party is likely an effort to forestall the emergence of such a vanguard party—as is their glorification of Randolph and Rustin who worked to bury the original CPUSA.

The strategic analysis associated with Cedric Johnson and Adolph Reed Jr. is unreliable on both theoretical and factual terms and cannot be the basis of any liberatory program for the American working-class, including the black working-class.[106] This genre of literature contains the irreconcilable

---

104. Norman Thomas rebranded himself as an opponent of the Vietnam War once the Saigon-based Diem regime began to collapse in the early 1960s, but he had actively supported CIA-affiliated propaganda efforts in Vietnam and Indonesia for a decade prior. See David Ranson, "The Berkeley Mafia and the Indonesian Massacre" *Ramparts*, Vol. 9, No. 4, October 1970, pp. 26-28, 40-49. Once in the antiwar movement, Thomas collaborated with Rustin in an open letter calling for the suppression of Communist participation in peace protests. See Maurice Isserman, *The Other American* (Public Affairs, 2000), 255-259.

105. Benjamin Y. Fong "Bayard Rustin and A. Philip Randolph Have a Model for Today."

106. In the 1990s, Adolph Reed Jr. did explore a party formation outside the DNC, a proposal to form a "US Labor Party." However, this entity was designed to be dependent on the

contradiction of placing the defeat of the Popular Front as the greatest disaster of the American proletariat while simultaneously celebrating men who effected that defeat, Bayard Rustin and A. Philip Randolph, as major champions of the working-class. Additionally, this black Fabianist literature actively misrepresents the anti-Communist agenda of these 20th century labor figures and their alliances with reactionary organizations like Americans for Democratic Action. While Johnson, Reed and their social democratic supporters sometimes take tendentious positions against liberal reformism, their attacks and misrepresentations of revolutionary politics are far more consistent.

conservative trade union movement dominated by the AFL-CIO. In the age of neoliberalism and de-industrialization, there was no explanation of how the behavior of Reed's labor party could have been fundamentally different from that of Tony Blair's contemporaneous labor party in Great Britain.

Entropy and Information: Loss and Recovery

Miguel Levy[1]

1. Miguel Levy is a proud member of the American Communist Party and its Michigan chapter executive. He is a professor emeritus of Physics at the Michigan Technological University. He serves on the ACP Department of Education.

Introduction

Quantum mechanical laws operate universally at all presently observable length scales, with gravitation being the only fundamental interaction not yet successfully described by a quantum theory. It is important to point this out because for the longest time one of the most widely accepted interpretations of quantum mechanics, known as the Copenhagen interpretation, claimed that quantum laws only operated at very small length scales and that Newtonian physics did so at the macroscopic level of our daily life.

This paradoxical state-of-affairs was motivated by the fact that quantum predictions are often at odds with our everyday experience. Particularly that, in a quantum world, entities can exist simultaneously in physical states that in our everyday experience exclude each other. A well-known case is that of Schrödinger cats, where the cat is in a limbo-like state, both dead and alive at the same time.

Overwhelming experimental evidence now exists that such strange quantum phenomena of limbo-like physical states, known in quantum physics as superposition states, are definitely real. So why don't we observe them in our daily lives? The answer is that we don't observe physical states directly. Light, and other types of radiation in the form of electromagnetic signals at shorter or longer wavelengths than light, communicate to us information of any physical phenomena that we observe. Thus, we observe the physical (quantum) state of things mediated by the environment, such as particles of light reflecting from the objects we look at with our eyes, or through measurements we make with the help of detection devices (photographic cameras, X rays, etc.). Material entities external to, and capable of interaction with the system under study constitute its environment.

Experimental tests with sodium[2] and rubidium atoms[3] have yielded unmistakable evidence of particles being in two different places at once, sort of

like little Schrödinger kittens simultaneously "dead" and "alive." Observing the position of these atoms by making the same-self atom interfere with itself yields unmistakable evidence that it is present in two different places. While upon illuminating them with optical photons, the evidence of their multifarious existence can be gradually erased in the detector and hence, eventually get lost.

In the experiment described in Ref. 2, individual sodium atoms are made to travel at supersonic speeds of 3000 m/s and to pass through a diffraction grating that separates their individual trajectories into two diverging paths, as shown schematically in Fig. 1. A diffraction grating produces a similar effect on these atoms as a prism does on multicolored light, splitting the incoming ray in different directions. Quantum particles behave as matter waves, their speed corresponding to a momentum-dependent wavelength matching the grating's spatial scale and the detector's timing response in the experiment.

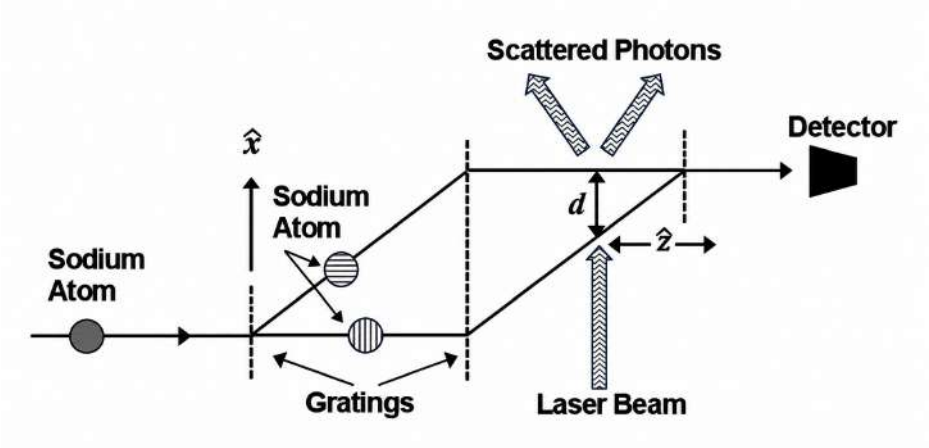

Fig. 1. Experimental detection arrangement to measure the distance the same sodium atom can be detected in two different places when illuminated by light. The detected interference is produced by the phase difference between the atomic sodium matter waves along the two arms of the interferometer. Photon scattering entangles the sodium atom's quantum state with that of the emitted photons, carrying away the sodium superposition information, thus weakening and eventually destroying the spatial coherence between the two interferometer arms.

The atom is then sent towards a second grating that recombines its two separate trajectories, forming what is known as a Mach-Zehnder interferometer. A third grating sends the resulting interference signal towards a detector. The object of

this experiment is to quantify how far apart the same atom can be detected to be in two different places when illuminated by light.

Green laser light (590nm wavelength) is directed towards the sodium atom, intersecting it at two different places on separate arms of the interferometer. The doubly-located atom's separation from itself in the $\hat{x}$ direction, denoted as *d* in Fig. 1, can be controlled by displacing the laser beam in the horizontal direction, denoted in the figure as the $\hat{z}$-direction. The presence of the atom in two different places produces an interference pattern of the atom interacting with itself, consisting of interference fringes as a function of *d*. If the atom was present in just one arm, the interference fringes would not form. The photons take away some of the atomic self-entanglement information, weakening the interference signal until the presence of the sodium atom in two places is completely erased. The same-atom superposition-state information gets imprinted in and carried away by the photons scattering out.

Photons are particles of light in this case. At frequencies other than light, they are particles of the corresponding electromagnetic field. Sodium atoms were used in this experiment because they maintain their phase relationship for extended periods of time before environmental noise causes decoherence, in addition to other favorable optical properties.

The experiment reveals that the interference fringes survive up to separations comparable to the optical wavelength of the laser beam light (590 nm). The fringe contrast diminishes as the separation *d* increases. Beyond distances greater than the optical wavelength, the information of the atom's simultaneous existence in two different places gets erased from the detector, carried away by the out-scattering photons.

A previous experiment,[4] performed on sodium atoms six years earlier using similar Mach-Zehnder interferometer architecture, also studied the interference of an atom with itself. But in the earlier experiment the falloff in the interference-fringes-contrast as a function of separation *d* was produced by the atom scattering a single photon, whereas in the more recent experiment the falloff resulted from scattering several photons. The key result was that a larger number of photons produces a more rapid loss of information.

---

4. M. S. Chapman, T. D. Hammond, A. Lenef, J. Schmiedmayer, R. A. Rubenstein, E. Smith. D. E. Pritchard, "Photon Scattering from Atoms in an Atom Interferometer: Coherence Lost and Regained," Physical Review Letters **75**(21), 3783-3787 (1995).

Tests carried out on rubidium (Rb) atoms[5] in 1996 also produced clear evidence of photon-induced physical state information loss to the environment, a phenomenon known as quantum decoherence. In this case, the atomic system (each Rb atom) is prepared in a quantum superposition of two different atomic energy states, a ground state energy level (g) and an excited state energy level (e). Unlike the case of the sodium-atom experiments, the two simultaneous states of the Rb atoms are not their simultaneous physical presence in two different locations, but their being simultaneously in two different energy-level states.

These atoms pass through a chamber, known as a resonant cavity, that subjects them to an environment of microwave photons. A resonant cavity confines and amplifies the microwave field amplitude, creating a standing wave pattern that oscillates in time but does not propagate in space.

This microwave field is characterized by its amplitude, which is a measure of the number of photons present in the chamber. Its phase (ϕ), characterizes the degree of overlap between Schrödinger cat-like states of the photons entangled with the atom. The atomic excited state e gets coupled to a microwave field component with phase ϕ and the ground state g to a field component with phase $-\phi$. An entangled state forms, consisting of a superposition of both coupled atomic states together with their corresponding microwave field, the latter playing the role of Schrödinger cat, or "meter."

In Schrödinger's cat thought-experiment, the cat is the indicator of the measurement outcome, not the quantum system itself. The quantum system is a single radioactive atom. The cat's physical state is entangled with the atom's state. Radioactive decay activates the release of poison upon detection by a Geiger counter, thus killing the cat. In our example, the rubidium atom is the quantum system, and the microwave field is the indicator of the outcome, i.e. the meter.

Field ionization detectors downstream measure the number of atomic ground states and excited states present in the chamber, for successive Rb atoms passing through the resonant cavity (50,000 atoms measured in 10 minutes). The electromagnetic frequency of the microwave photons in the chamber is gradually tuned through a suitable range to vary the phase parameter ϕ.

5. M. Brume. E. Hagley, J. Dreyer, X. Maître, A. Maali, C. Wunderlich, J. M. Raimond, S. Haroche, "Observing the Progressive Decoherence of the 'Meter' in a Quantum Measurement, Physical Review Letters **77**, 4887-4890 (1996).

Experimental evidence of an overlap state, i.e., evidence of simultaneous existence of the two different states of being as one entity, gets provided by a fringe pattern in the detection apparatus.

This process serves the purpose of tracking when the simultaneous presence of ground and excited atomic states is no longer detectable by the measuring apparatus. In other words, at what point the simultaneous existence of the two non-compatible states of being becomes unobservable by the detection system.

Tuning the frequency of the microwave field produces a gradual erasure of the fringe pattern characterizing simultaneous atomic-state existence, until it completely disappears. It is at that point that the simultaneous existence becomes inaccessible and is lost to the environment. Thus, the experiment measures how quickly the quantum superposition of the meter states decays into individual state existence, either one or the other being present, providing a direct observation of the quantum decoherence process in real time.

Quantum Formalism

Physical states are represented in quantum physics by mathematical entities called state vectors that obey certain algebraic rules. For example, $|x\rangle_{Na}$ may label the state vector corresponding to the sodium atom located at x, and $|x+d\rangle_{Na}$, the same sodium atom located a distance d away from x. The quantities x and d refer to the experiment depicted in Fig. 1.

In general, the state of any quantum physical system, such as the sodium atom, the rubidium atom, or any other particle possessing two different physical states, may be denoted as $|A\rangle$ and $|B\rangle$. These state vectors may be added together, $|A\rangle + |B\rangle$, to denote that the particle is in two different states simultaneously.

Connection with actual physical measurements is established by an operation called inner product, denoted by $\langle A|B\rangle$. This operation yields a number that answers the question, is the particle in state $|B\rangle$ found to be in state $|A\rangle$ upon measurement? For example, $\langle x|B\rangle$ answers whether the particle in state $|B\rangle$ is found at point x. If the number is 1, the answer is yes. If the number is 0, the answer is no. If the number is a fraction $\frac{a}{b}$, the answer is yes for a occurrences out of b measurements. For technical reasons, quantum formalism actually modifies that answer to $\sqrt{\frac{a}{b}}$, so that in order to find the number of occurrences, you must square this number.

For any given event, such as a photon scattering off a sodium atom, the actual physical state of the system under consideration is described by a matrix ρ, called the density matrix, operating on both sodium state and photon state vectors. This operation yields a number corresponding to the strength of the interference signal measured by the detector.

The presence of the same sodium atom in both arms of the interferometer, entangled with a photon emitted from both locations, produces interference fringes in the detector as a function of *d*. Any non-zero value in the detected interference signal is evidence that the atom was detected at both positions upon observation. A decaying oscillatory strength with increasing *d* discloses that information is lost to the environment.

The joint atom-photon entangled quantum state is expressed as follows:
$|\psi\rangle = |x\rangle|\phi_x\rangle + e^{ik_0 d}|x+d\rangle|\phi_{x+d}\rangle$. (1)

Here $|\phi_x\rangle$ is the state vector corresponding to the photon emitted at position *x*. $|x\rangle|\phi_x\rangle$ and $|x+d\rangle|\phi_{x+d}\rangle$, denote particle and photon states existing together. Some authors denote these states as $|x\rangle \otimes |\phi_x\rangle$ and $|x+d\rangle \otimes |\phi_{x+d}\rangle$. The factor $e^{ik_0 d}$ accounts for the phase difference between the first and second photon-scattering events a distance *d* apart. $k_0 = \frac{2\pi}{\lambda}$, λ is the optical wavelength, and $i = \sqrt{-1}$.

The density matrix ρ is given by the product $|\psi\rangle\langle\psi|$, and the strength of the interference signal between the atomic matter waves measured by the detector is calculated from

$\langle x| \otimes \langle\phi_x|\psi\rangle\langle\psi|x+d\rangle \otimes |\phi_{x+d}\rangle e^{ik_0 d}$. (2)

In this case, I am using the $\bigotimes$ symbol to make it clear that the inner products are $|\psi\rangle$ with $\langle x| \otimes \langle\phi_x|$ and $\langle\psi|$ with $|x+d\rangle \otimes |\phi_{x+d}\rangle$.

More generally, any two-state physical system interacting with an environment $|\mathcal{E}\rangle$ composed of photons, can be denoted as

$|\psi(t)\rangle = \alpha\,|A\rangle\,|\mathcal{E}_A(t)\rangle + \beta\,|B\rangle\,|\mathcal{E}_B(t)\rangle$. (3) $|A\rangle, |B\rangle$ are the two quantum states of the system. (t) describes time evolution; and α and β are complex numbers, having real and imaginary parts.[6]

---

6. Any complex number c is given by $c = c_R + ic_I$, where c_R and c_I are positive or negative real numbers. $c^* = c_R - ic_I$. $|c|^2 = {c_R}^2 + {c_I}^2$.

The time evolution of the system in the presence of the environment follows

$\rho = |\alpha|^2|A\rangle\langle A| + |\beta|^2|B\rangle\langle B| + \alpha\beta^* r(t)|A\rangle\langle B| + \beta\alpha^* r^*(t)|B\rangle\langle A|$.[7] (4)

Number $r(t)$ is a decaying function of time, characterizing the loss of information to the environment. After the system decoheres and $r(t) = 0$, the density matrix becomes

$\rho = |\alpha|^2|A\rangle\langle A| + |\beta|^2|B\rangle\langle B|$. (5)

Terms $|A\rangle\langle B|$ and $|B\rangle\langle A|$ denoting the simultaneous presence of the particle in two different physical states have become imperceptible to the detection equipment. These terms quickly become unobservable as $r(t)$ tends to zero with increasing t, so that, at that point, the readout in the measurement apparatus only signals that the particle is either in state $|A\rangle$ or state $|B\rangle$, but not in both.

A critical part of the information communicated to us, with the system originally in its pure quantum form is rapidly lost to the environment through what is referred to as quantum decoherence. Its quantum superposition part, $ab^* r(t)|A\rangle\langle B| + ba^* r^*(t)|B\rangle\langle A|$, has material reality, yet becomes imperceptible to our detection apparatus, erased from classical reality, and carried away by the environment.

Entropy

A measure of this information loss, in fact quantifiable, exists and is known as entropy. The second law of thermodynamics states that the entropy of any physical system, together with its surroundings, constantly increases for spontaneous processes. This means that information is constantly being lost. But, what does this mean in physical terms?

Quantum decoherence is the loss of information to the environment, as the quantum state becomes entangled with it. Part of this information is transferred through the environment to the detection apparatus and gets measured. But only a selected portion of information about material reality survives

---

7. W. J. Zurek, Decoherence and Quantum Darwinism, Chapter 4 – Environment-Induced Decoherence, p.77-108, Cambridge University Press 2025.

entanglement with the environment to make it to the measurement system. Surviving information able to reach the detection apparatus is referred to as pointer states. The rest, such as Schrödinger cat states, are lost to the human eye. The detection apparatus may be our own eyes, or it may be man-made measuring equipment. This is the quantum origin of entropy.

Classically, entropy increases as information loss is understood in terms of the sets of different atomic or molecular configurations that can produce given measurable properties, such as temperature, in fluid, gas, or solid bodies, at the macroscale. Thermal equilibration between cold and hot water entails an increase in the number of ways that the individual water molecules may be moving, rotating, vibrating, and distributed in space when they are brought together in a single container. Each of these molecular configurations is called a microstate. At a given temperature and volume, referred to as a macro-state, there is a large number of microstates that can reproduce it.

The information loss in this case refers to the impossibility of restoring anyone of the initial set of microstates without external intervention. After they are mixed together in one container and achieve thermal equilibrium, the molecules are not going to revert to any of the initial set of microstates that may have existed at the moment when they were brought together.[8]

There are many more ways of having the water-molecules (their motions, orientations, and spatial arrangements) distributed when they are brought together and thermally equilibrate than when they are separated at different temperatures. Recovery of the initial molecular configurations through a spontaneous reversal of the process will not happen. Nature does not have the ability to spontaneously narrow down the molecular configurations and produce the original two different temperatures in the same container. This is the meaning of information loss contained in the classical entropic definition. It is not what is in your head, but rather what exists in the material world that you are dealing with.

In contrast to classical physics, quantum mechanics allows entropy and information loss to be defined for single individual physical systems, rather than large ensembles of the same. The classical ensembles for hot and cold

8. Strictly speaking, classical Newtonian physics does allow a reversal of the atomic or molecular interaction processes that led to the new thermal equilibrium state. However, this reversal, at the macroscale, to the original physical microstates is extremely unlikely and is never observed.

water in the example above are the different ways the water molecules can be distributed for given temperatures and volumes.

So, the information loss in the quantum case is actually a material transformation where part of the information about the physical state of the system is carried away by the environment. In classical physics, the physical location of the lost information, the initial-set of microstates, does not exist in the material world. You have to recreate it by external intervention, such as, for the previous example, reheating part of the water and cooling down the rest. But then again, what you restore by such a process, is a possible set of microstates that can generate the original properties at the macroscale.

Quantum entropy, also called von Neumann entropy, expresses the loss of information in regards to the physical state of the system in question. If you fully know the quantum state of that system, referred to as a pure state, its von Neumann entropy is zero. You haven't lost any information.

It is important to stress that the information loss in the quantum case is also a question of what you are dealing with in the material world. Are you dealing with a pure quantum state, or are you dealing with just a portion of the quantum physical state?

When the sodium or the rubidium atoms in the introductory section have not interacted with the environment and each exists simultaneously in two different states $|x\rangle_{Na}$ and $|x+d\rangle_{Na}$, or $|g\rangle_{Rb}$ and $|e\rangle_{Rb}$, the quantum states,

$|\psi\rangle_{Na} = \alpha|x\rangle_{Na} + \beta|x+d\rangle_{Na}$, and $|\psi\rangle_{Rb} = \alpha|g\rangle_{Rb} + \beta|e\rangle_{Rb}$,

are pure quantum states, with von Neumann entropy equal to zero. Their density matrices before decoherence are given by

$\rho = |\alpha|^2|A\rangle\langle A| + |\beta|^2|B\rangle\langle B| + \alpha\beta^*|A\rangle\langle B| + \beta\alpha^*|B\rangle\langle A|$,

where $|A\rangle$ and $|B\rangle$, are either $|x\rangle_{Na}$ and $|x+d\rangle_{Na}$, or $|g\rangle_{Rb}$ and $|e\rangle_{Rb}$.

It is only when they interact with the environment and the system decoheres that the photons carry away part of the state configuration information. Then, information reaching the detection apparatus is lost and the measured system entropy increases.

The von Neumann entropy is given by $S = -Tr\rho \ln \rho$, where ρ is the density matrix, and ln means natural logarithm. Tr stands for the sum $\sum_j \langle \varphi_j | \rho \ln \rho | \varphi_j \rangle$ over any basis set of state vectors $\{|\varphi_j\rangle\}$ for all possible physical states of the quantum system.[9] The subscript j indexes these state vectors.

For the quantum state with density matrix given by Eq. (5), the von Neumann entropy becomes[7]
$S = -|\alpha|^2 \ln |\alpha|^2 - |\beta|^2 \ln |\beta|^2$ (6)

The quantum state of a doubly-localized particle that is entangled with the environment is expressed in Eq. 3, and its density matrix is given by Eq. 4. After the system decoheres ($r = 0$) due to its entanglement with the environment, the detection apparatus records the information contained in Eq. 5, and the measured entropy also yields Eq. 6. This is referred to as classical Shannon entropy. Notice that the von Neumann entropy after decoherence has increased.

So, for example, if the sodium atom was equally present in both arms of the interferometer, $\alpha = \beta = \sqrt{1/2}$. However, the measured entropy after decoherence is $S = \ln 2 \sim 0.693$, a quantity larger than zero, indicating that information was lost. Whereas, as noted before, complete knowledge of the original quantum physical state corresponds to $S = 0$.

Recovery of Information

But is this information recoverable? The answer is that it is theoretically possible to recover the lost information by probing the environment.[10] Not only is this possible but it has, in fact, also been confirmed experimentally.[11] This is called the No-Hiding theorem. For the sodium or rubidium atoms considered above, this information would be found in the scattered photons that interacted with them.

---

9. Technically, the set of states $\{|\varphi_j\rangle\}$ is referred to as an orthonormal basis. It is a complete set, in the sense that any physical state of the system can be expressed as a linear combination of these state vectors (a sum with each term multiplied by a number). Tr stands for Trace.

10. S. L. Braunstein and A. K. Pati, "Quantum Information Cannot Be Completely Hidden in Correlations: Implications for the Black-Hole Information Paradox," Physical Review Letters, **98**, 080502 (2007).

11. J. R. Samal, A. K. Pati, A. Kumar, "Experimental Test of the Quantum No-Hiding Theorem," Physical Review Letters **106**, 080401 (2011).

The No-Hiding theorem states that for any physical process leading to the erasure of information from a given quantum system, this information must then reside in the rest of the Universe.[12]

Actual experiments with hydrogen, described in Ref. 11, and other types of atoms confirm the No-Hiding theorem. Nuclear magnetic resonance (NMR) shows that the missing information can be recovered. In other words, this information moves into the quantum state's environment and can be recovered from it. Quantum information is thus never truly lost.

The quantum No-Hiding theorem does not imply that the entanglement entropy itself, embodied in the density matrix (Eq. 4) through $\alpha\beta^* r(t)|A\rangle\langle B| + \beta\alpha^* r(t)|B\rangle\langle A|$, actually resides in the environment. It only guarantees that the lost quantum information from that system can be recovered by probing the environment. In the language of quantum mechanics, this information resides entirely within a subspace of the environment's Hilbert space and is recoverable.

Information and Dialectical Materialism

In 1961, physicist Rolph Landauer proposed what came to be known as the Landauer Principle, establishing a fundamental connection between information and material reality. It states that erasing one bit of information in a physical system requires a minimum energy dissipation of about $9.8 \times 10^{-22} \ln 2$ calories. This principle is supported by over six decades of scientific investigation, including multiple experimental verifications. Information loss, as entropy increase, comes at a material cost in energy.

Quantum physics asserts that material entities can exist in contradictory states of matter. Having a sodium atom located in two different places, or a rubidium atom in two distinct physical states, indicates the presence of a contradiction within physical entities. Contradiction is a material reality.

Such contradictions even have a mathematical expression in the language of quantum physics. They are expressed as the null value of their inner products

12. In the language of quantum mechanics, the information is stored in the environment's Hilbert space. A Hilbert space is the set of all possible state vectors supported by the physical entity in question, in this case the corresponding environment.

$\langle x+d|x\rangle_{Na}=0$, and $\langle e|g\rangle_{Rb}=0$. The two quantum states of being are mutually exclusive, they cannot overlap. And yet, $|\psi\rangle_{Na}=\alpha|x\rangle_{Na}+\beta|x+d\rangle_{Na}$, and $|\psi\rangle_{Rb}=\alpha|g\rangle_{Rb}+\beta|e\rangle_{Rb}$ are possible. Entangled states, physical contradictions in actuality, are possible. Such material reality was forced on modern science by the real world. It wasn't accounted for in classical physics.

Dialectical materialism asserts that no material entity exists in complete isolation. In the words of F. Engels, no entity exists "detached from the whole vast interconnection of things."[13] Entanglement with the environment results in quantum decoherence. The environment in the form of photons, captures and takes away a portion of the quantum state information contained in entangled particles.

Entanglement is negated by quantum decoherence. The system's interaction with environmental photons resolves the contradiction manifested by quantum superposition cat states. Quantum state information is carried away by the environment. And yet, that information still survives. It does not disappear. The negation is itself negated, it is sublated, through its physical presence in the environment. A new state of being results after the contradiction is resolved.

Conclusion

Under spontaneous physical process conditions, classical entropy records a loss of information. What is lost is the actual material atomic or molecular configuration responsible for the original physical state of a macroscopic system. Not our actual knowledge of the precise microstates of the system, but the material existence of such states.

The latter, however, may be recovered under external intervention. For the case of hot and cold water thermalization, for example, this would entail pouring half the water content into each of two different containers, heating one and cooling down the other.

On the other hand, the von Neumann quantum entropy of a self-entangled doubly-localized particle system increases after decoherence, since information is actually lost to the environment. Double-localization entanglement is

13. Frederick Engels, *Anti-Dühring*, Introduction, International Publishers p.27 (1972).

bleached out of the system by interaction with the environment, and the particle reverts to being in either one of the original two locations but not in both. Yet, that information still resides in the material world, carried away by the environment. It has not disappeared.

This is a process that accords with the laws of dialectical materialism. Bleaching out information and its resultant entropy increase through quantum decoherence, corresponds to a negation of information. Nature withholds that information from us. But the subsequent storage of that information in the environment is a negation of the negation. Quantum physics closes the loop in the dialectical process.

Physics was forced by material reality to acknowledge new contradictory states of matter in the form of quantum entanglement, unaccounted for in its classical formulation. In the latter's conception, entropy increase is the substitution of a set of microstates by a more plentiful set different from the original. Not as a result of internal systemic contradictions in interaction with the environment, but having systems in isolation move toward their most probable, equilibrium configurations. Whereas for entangled quantum systems in complete isolation from their environment, their entanglement will persist indefinitely. No entropy-increase would ensue.

Belarus—Cuba: From the Partisan Alliance of Fidel Castro and Petr Masherov to the Contemporary Anti-Fascist Youth Movement

Nikita Rachilovsky [1]

1. Chairman of the Board of the Youth Public Association “Forward Movement,” Delegate of the Seventh All-Belarusian People's Assembly.

In high politics, personal relationships mean far more than official protocols and trade agreements. A prime example is the friendship between the leader of the Cuban Revolution, Comandante Fidel Castro (1926–2016), and the First Secretary of the Central Committee of the Communist Party of Belarus, Petr Masherov (1918–1980). They were bound not merely by affairs of state, but by a shared partisan past, mutual respect, and a devotion to human ideals.

The memory of this unique friendship remains alive today. It inspires new generations to preserve the shared heritage of both countries. Incidentally, both of these outstanding leaders were awarded the highest honor—Hero of the Soviet Union (Petr Masherov in 1944, and Fidel Castro in 1963).

This deep mutual trust formed the foundation of the project *"Castro and Masherov: The Belarusian Summer of 1972,"* created by the Youth Public Association "Forward Movement" based on unique archival documents and memoirs from those years. In April 2026, members of the association presented this massive work at the Embassy of Cuba in Belarus. The project's release coincides with a landmark historical date: the 100th anniversary of Fidel Castro's birth. The head of the Cuban diplomatic mission, Santiago Pérez Benítez, highly praised and supported the youth initiative, affirming that the deep allied relations between the nations were forged by leaders of unbreakable will and profound convictions.

Fidel Castro and Petr Masherov were true people's leaders with a shared partisan past. Castro led the national liberation movement in Cuba, while Masherov commanded a partisan detachment during the Great Patriotic War.

The Cuban leader deeply respected his Belarusian colleague's military experience. He employed a clever play on words: blending Masherov's surname with the Spanish concept of macho (masculine, strong), he warmly called him "Partisan Machero," highlighting his strength of character.

The leaders met personally in July 1966, when Petr Masherov arrived in Havana at the head of a Soviet delegation for the celebrations marking the anniversary of the assault on the Moncada Barracks.[2] Total mutual understanding and a shared revolutionary spirit instantly brought the two men together. Six years later, while planning a visit to the USSR in the summer of

1972, Castro insistently demanded that the protocol service include a visit to Masherov in his itinerary.[3]

On July 5, Fidel Castro arrived in the capital of the Belarusian Soviet Socialist Republic wearing his signature olive drab field uniform and combat boots (see fig. 1).

Figure 1. Minsk residents welcoming Fidel Castro and Petr Masherov, July 5, 1972.

At Victory Square in Minsk, near the Eternal Flame and the obelisk to Soviet soldiers and partisans, the Cuban leader stepped off the official walking route after laying wreaths and headed straight into the crowd to speak with Soviet citizens, who were genuinely thrilled to see the comandante.[4]

The leaders then visited the House-Museum of the First Congress of the Russian Social Democratic Labor Party. For Fidel Castro, this was a landmark site connected to the origins of the communist movement. The Cuban leader explored the exhibition with great interest, noting that the mighty and prosperous Soviet Union, as the world's first socialist state, stood at the

vanguard of the global revolutionary movement, serving as the best proof of the power of Lenin's ideas marching triumphantly across the globe.[5]

A crucial part of the trip was a visit to the Khatyn Memorial Complex, located on the site of a Belarusian village burned down by German fascist invaders. There, the Cuban leader felt the tragedy so deeply that he could not hold back his tears at the monument.[6]

A symbolic episode occurred during a visit to the Mound of Glory, a majestic man-made memorial erected to honor the republic's liberation from German fascist invaders. In the pouring rain, Fidel Castro decided to descend from the top of this 35-meter mound not by the circular concrete staircase, but straight down the steep, wet slope. Petr Masherov, wearing a formal civilian suit and smooth-soled dress shoes, followed the Cuban leader without hesitation: Fidel Castro's military uniform and combat boots were far better suited for such a descent.[7] Realizing that his colleague in civilian shoes was struggling to keep his balance on the slippery grass, Castro turned back and held him by the arm. Upon reaching the bottom, Masherov smiled, looked back at the tracks they had left, and remarked that they had forged a new path together. These words simultaneously referenced their shared partisan past and symbolized future bilateral cooperation. This image subsequently became a vital symbol of the relationship between the two countries.

Fidel Castro's one-day visit to Minsk concluded with a tour of the Belarusian Museum of the History of the Great Patriotic War. The Cuban leader met with veterans and, with deep professional interest, examined exhibits of partisan daily life and weaponry—ranging from makeshift submachine guns to underground newspapers. At the end of the visit, Hero of the Soviet Union and partisan commander Vladimir Lobanok presented Fidel Castro with a personalized Tokarev pistol on behalf of all the republic's people's avengers (see fig. 2).[8]

The leaders' interaction continued through correspondence and during Petr Masherov's return visit to Havana in December 1973.

Later, this strategic course was continued by the President of Belarus, Alexander Lukashenko, who was elected in 1994. His meetings and negotiations with Fidel Castro, Raúl Castro, and Miguel Díaz-Canel ensured the reliable continuity of this allied relationship.

Today, the memory of Fidel Castro and Petr Masherov, along with their historical legacy, helps to address the global challenges of our time. For instance, in November 2024, at the World Congress of Anti-Fascist Youth and Students in Caracas, Venezuelan President Nicolás Maduro initiated the creation of the Great Anti-Fascist Youth Movement. This platform proved especially relevant in January 2026: US military aggression and the kidnapping of the Venezuelan leader vividly exposed Washington's imperial and neo-fascist ambitions, uniting the world's progressive forces even more strongly.

The response to Washington's terror from Belarusian youth was to host the First Anti-Fascist Youth Meeting "Forward Movement" in Minsk in June 2026, under the auspices of the eponymous Youth Public Association. The honorable guests of the meeting were the Ambassador of Cuba to Belarus, Santiago Pérez

Benítez, and the Counselor of the Embassy, Mario Leonides Moreno Aguilera. The youth and Cuban diplomats discussed the current trends of neo-fascism emerging around the world. They condemned both economic pressure and direct military intervention by the United States against independent and sovereign states, such as Cuba, Venezuela, and Iran.

Today, young progressive forces are directly advancing the work started by Castro and Masherov. In an era when independent nations face unprecedented external pressure, these anti-fascist initiatives serve as a practical tool for defending sovereignty.

The anti-fascist meeting held in Minsk clearly proves that only by preserving historical memory and drawing inspiration from the example of powerful historical figures who forged the path toward true brotherhood of nations, is it possible to effectively counter modern challenges and confidently defend sovereignty and truth. In this regard, new anti-fascist meetings will be held on a regular basis, and the Youth Public Association “Forward Movement” will certainly develop new informational projects for the milestone anniversaries of prominent figures who dedicated their lives to the struggle against injustice and imperialism.
