Message from the Chairman

Haz Al-Din[1]

Comrades, I would like to extend you all sincere congratulations on having achieved genuine success for our Party in the first three months of its declaration, far surpassing the initial expectations of the Plenary Committee that originally gathered together in Chicago to officially reconstitute the Communist Party of this country.

In the three months since the declaration of our Party, dozens of chapters across the United States and Canada have since formed. They have performed monumental feats of community service, from clearing public spaces of hazardous materials, building relationships with local labor organizations, to providing relief to communities in need in the midst of environmental disasters. Such outstanding displays of initiative, determination, sacrifice, comradeship and solidarity have deeply impressed everyday Americans, and have begun the process of re-defining and changing the meaning of what Communism is within their consciousness.

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

The process of building local organization, autonomous decision-making, and giving expression to the collective will of individuals through chapters has thus far been an immense success. The petty rivalries and divisions of individual personalities and differences of opinion have thus far failed to surmount the collective discipline of Party association. And wherever these tendencies have shown themselves, comrades have responded almost instantaneously to re-assert the discipline of genuine collective association, in the proletarian spirit.

Comrades, it is necessary to take note of the fact that our greatest strength lies not in our numbers, which for now remain modest. They lie neither in our wealth and resources, which are likewise, for now, modest. Our strength lies in our collective discipline, in the precedent we have established which places the interest of the collective before the interests of the individual, which reigns in the impulses, passions, and emotions of the individual and properly situates them within the context of real, concrete association. The strength of our Party lies in its ability to temper the flimsiness, narrowness, pettiness, and egotism of the individual in the fires of collective struggle, producing unbreakable bonds of association made of steel.

The principal weakness of left organizations in Western countries has thus far been the predominance of petty bourgeois individualism, and the inability to subordinate the individual will to the will of the collective. Our Party has, in many respects, already achieved this tremendous feat, and in a country like America no less.

Simultaneously, it is necessary not to become complacent and comfortable in the conventions established collectively and institutionally. Such complacency has given rise, historically, to the tendencies of opportunism, liquidationism, and revisionism amidst new decisive circumstances that demand active initiative. Our Party was designed to balance the strength of collective organization typical of historical Communist parties with the experimental dynamism of the American spirit. Toward that end, chapters have already begun to take the initiative by taking risks, and pursuing ventures without precedent. It should always be remembered that creativity, novelty, and innovation are greatly appreciated and rewarded by the Executive Board. Without this, our Party risks becoming stagnant, lifeless, and eventually vulnerable to defeat.

Finally, our Party can now proudly declare itself as truly reconstituted in the fullest sense, after the ratification of our Party constitution during the First

National Convention of the American Communist Party held recently in Chicago. To the surprise and amazement of the Executive Board, the constitution was ratified according to unanimous decision. While this is a tremendous and exceptional display of unity for our Party, it is incumbent upon us to also cultivate a spirit of genuine criticism, self-criticism, dialogue and debate.

Comrades from throughout the country were able to come to know one and another during our first Convention, and a spirit of genuine comradeship, solidarity, and even friendship has been cultivated. But let us not forsake the need for criticism and debate in the name of maintaining friendships. Let us, in the spirit of genuine proletarian collectivism, regard questions of criticism and debate impersonally. Let no one feel offended or slighted by disagreement and detraction. Criticism and debate should occur on a comradely basis.

What unifies our Party is not an identical theoretical outlook on all matters pertaining to strategy and theory. What unifies our Party is the commitment to building one Communist Party, in the genuine spirit of democratic centralism, which guarantees freedom of criticism while demanding unity of action by and for all membership.

Toward that end, let us cultivate a genuine spirit of experimentation, inquiry, and ruthless criticism in our official Party journal. Let us, while acknowledging and paying proper tribute to the historical synthesis of Marxism-Leninism, commit to the unprecedented task of pursuing the synthesis of Marxism in America.

Let us make no mistake. Such a task is uncharted territory. There are no readily-made, dogmatic precepts to proscribe upon it. No one can claim that their position is beyond criticism or reproach. As the American Communist Party, we have yet to prove ourselves, and prove the successful application of Marxism in America.

As the Party continues to make practical strides toward success, let the journal serve as a genuine organ of real praxis. Let us not disregard the practical successes and achievements of our Party as we set ourselves to the task of rediscovering Marxism in a new historical and geographical context. Let us temper our speculative endeavors with what is concurrently being proven practically and concretely.

That, comrades, is how we will uphold the historical synthesis of Marxism-Leninism, the most advanced outlook acquired by mankind so far, which bases itself upon the unity of both theory and practice.

1

The Marxist Sublation of Hegel

Carlos L. Garrido[1]

While working on the seven notebooks we know today as the *Grundrisse*, Marx wrote to Engels in 1858 that he "very much [would] like to write 2 or 3 sheets making accessible to the common reader the rational aspect of the method which Hegel not only discovered but also mystified".[2] He makes a similar remark a decade later in a letter to Joseph Dietzgen, where he says that,

> *When I have cast off the burden of political economy, I shall write a 'Dialectic'. The true laws of dialectics are already contained in Hegel, though in a mystical form. What is needed is to strip away this form.*[3]

---

1. Carlos L. Garrido is a Cuban American philosophy professor. He is the Director of the Midwestern Marx Institute and the Secretary of Education of the American Communist Party. He has authored many books, including *The Purity Fetish and the Crisis of Western Marxism (2023)*, *Why We Need American Marxism (2024)*, *Marxism and the Dialectical Materialist Worldview (2022)*, and the forthcoming *On Losurdo's Western Marxism (2025)* and *Hegel, Marxism, and Dialectics (2025)*. He has written for dozens of scholarly and popular publications around the world and runs various live-broadcast shows for the Midwestern Marx Institute YouTube. Subscribe to his Substack: *Philosophy in Crisis*.

2. Karl Marx, "Marx to Engels," January 16, 1858. In *Marx-Engels Collected Works* Vol 40 (Moscow: Progress Publishers, 1983), 249.

3. Karl Marx, "Marx to Joseph Dietzgen," May 9, 1868. In *Marx-Engels Collected Works* Vol 43 (Moscow: Progress Publishers, 1988), 31.

A couple weeks after Marx's death, Engels would send a letter to the Russian philosopher Pyotr Lavrov letting him know he had gathered some of the manuscripts Marx had left. He mentions that the first thing he would look for was an outline on dialectics Marx intended to write. He tells him that,

> *Tomorrow I shall at last have time enough to devote several hours to going through all the manuscripts that Moor has left us, in particular an outline of dialectics which he had always intended to do. But he always refrained from telling us how far his work had progressed, for he was aware that, once people realised something was ready, he would be pestered until he consented to its publication.*[4]

Engels would eventually be met with the unfortunate surprise that Marx had never gotten to write his '2 or 3' sheets.

Since Marx never got to write his text on dialectics, and since Engels never put himself up to the task of doing so, what they considered to be the 'rational aspect' and the 'mystical shell' has been largely an open question for subsequent Marxist scholarship.[5] There are, nonetheless, three central and interconnected images they provide throughout their lives for how they view their relation to Hegel *in toto*, and to his dialectical method in particular.

1. Inversion: In various places Marx and Engels say that Hegel's method, as it stands, is "unusable," or "inapplicable."[6] This is because with Hegel the dialectical method "stood on its head" (*verkehrt*), their task is to "[turn] it right side up again," to have it be "placed on its feet."[7] This topsy-turvy language

---

4. Friedrich Engels, "Engels to Pyotr Lavrov," April 2, 1883. In *Marx-Engels Collected Works* Vol 47 (Moscow: Progress Publishers, 1995), 3.

5. To be clear, Engels does write about dialectics in a far more systematic manner than Marx. Specifically, in his unfinished magnus opus, published in 1925 as *Dialectics of Nature*, there are a couple loose manuscripts which might fit the role of Marx's task. However, these were 1- unfinished, and 2- not intended to be an 'outline' of dialectics. Therefore, we are left with the evidence in Marx and Engels' texts, manuscripts, and letters to help us infer what their response to the question would have been. The open character the question contains has allowed even diametrically opposed interpretations to arise.

6. Engels, *Ludwig Feuerbach*, 43. Friedrich Engels (1859), Review of "Karl Marx, 'A Contribution to the Critique of Political Economy," In *A Contribution to the Critique of Political Economy* (1859), International Publishers (1999), 223.

7. Engels, Review of "Karl Marx, 'A Contribution to the Critique of Political Economy", 224. Marx, *Capital*, 20. Engels, *Ludwig Feuerbach*, 44.

appears as early as 1844 in their joint text, *The Holy Family*, and can also be seen in Engels' review of Marx's *A Contribution to the Critique of Political Economy* (1859), and in Marx's afterward to the second German edition of *Capital* (1873).

2. Rational Kernel/ Mystical Shell: The second most used phrase states that there is a "rational kernel" in Hegel's dialectics that, because it is on its head, cannot be grasped.[8] Once the dialectic is on its feet, one could parcel out the rational kernel from the "mystical shell."[9] This phrasing is combined with the 'inversion' image in Marx's afterward to the second German edition of *Capital* (1873). It stands alone in the 1868 letter to Ludwig Kugelmann quoted above. The full quote from the second German edition of *Capital* is also referenced in the omitted preface to *Anti-Dühring*, which ended up being included in the more complete version of *Dialectics of Nature.*[10]

3. Sublation: The least used image says that Marx and Engels 'sublate' Hegel. The only place where this description could be found is in Engels' *Ludwig Feuerbach* (1886), where it appears once.

Although they make up three images, I will show that they're all compatible and somewhat overlap in meaning. To comprehensively understand what each of them means, they must be understood together. Let us attempt to do that now.

Inversion

The first thing that must be asked about the inversion image is – what is upside down about Hegel's dialectic? For Marx, what is upside down is also what allows his "dialectical method" to "not only be different from the Hegelian, but [its] direct opposite."[11] He says that for

> *Hegel, the life-process of the human brain, i.e., the process of thinking, which, under the name of 'the Idea,' he even transforms into an independent subject, is the demiurgos of the real world, and the real world*

8. Marx, *Capital Vol. 1*, 20.
9. Ibid.
10. Complete in the sense that it did not leave out any manuscripts.
11. Marx, *Capital Vol. I*, 19.

> *is only the external, phenomenal form of 'the Idea.' With me, on the contrary, the ideal is nothing else than the material world reflected by the human mind, and translated into forms of thought.*[12]

What he is referring to here is Hegel's notion of the actualization or realization of Spirit or Idea into both nature and human history, the former which is seen in the transition from his 'Logic' to his 'Philosophy of Nature' in his *Encyclopedia of the Philosophical Sciences*, and the later which can be seen in his *Philosophy of History*. Let us examine how this externalization thesis appears in Hegel's view of nature and history, and how it is inverted by the materialist dialectic.

1.0 The Idea and Nature

For Hegel, as Charles Taylor correctly depicts, "the world exists to realize the Idea."[13] The Idea, as the last category of Hegel's logic, "englobes all that has gone before," and shows itself (albeit at the end) to be – as Marx labeled it – the demiurgos of the world.[14] Thereby, "nature," as Hegel states, is merely "a representation of the idea."[15] "Nature," for Hegel, "is the creation of Spirit."[16]

In Hegel's logic, the Idea is the final category arrived at, having for its content the "whole breadth of ground" of all former 'moments.'[17] He says that

> *Its true content is only the whole system of which we have been hitherto studying the development. It may also be said in this strain that the absolute idea is the universal, but the universal not merely as an abstract form to which the particular content is a stranger, but as the absolute form, into which all the categories, the whole fullness of the content it has given being to, have retired.*[18]

17. Ibid, 293 (§ 237).
18. Ibid.

The previous categories in Hegel's logic are limited images of the Idea; he says, "each of the stages hitherto reviewed is an image of the absolute, but at first in a limited way, and thus it is forced onwards to the whole."[19] The Idea is not simply a final point, it is a whole whose emptiness necessitates its self-sundering; a process of "immanent dialectical" movement – first taking the form of transition (Being), then reflection (Essence), and lastly, development (Concept) – to arrive at its self-awareness as the "one systematic whole."[20] This mediated return to the immediacy of itself as whole then goes "forth freely as Nature."[21]

For Hegel, not only does nature require the Idea qua demiurgos to bring it into existence, but any development in 'nature' is only a development of the concept – nature itself can undergo no development. Hegel is unwilling to "confer" the dialectical power found in the concept to nature.[22] For Hegel, "the only thing which can really develop is the concept."[23] Hence, he argues that "nature has no history."[24] The various stages of Hegel's treatment of nature (from mechanism to organic life) is devoid of any conception of a dialectics at play in nature. At most what one finds is a very basic level of concreteness in his treatment of organic life, i.e., a still abstract understanding of the interconnectedness and complexity of organic life. For Hegel, as Evald Ilyenkov argues, "nature is abstract through and through, metaphysical in its very essence: all of nature's phenomena are *side by side* with one another, *isolated* from one another, lying outside one another. As Hegel puts it, nature falls within itself into its abstract moments, into separate things, objects, processes, existing side by side with one another and independently from one another. At best, genuine dialectics is only vaguely reflected or dimly looms in nature."[25]

23. Ibid.
24. G. W. F. Hegel, *Phenomenology of Spirit* (Oxford: Oxford Press, 1977), 178. – If we understand history as Hegel does in his *Philosophy of History*, then all would accept that indeed nature does not have a history, that is, there is no collective *conception* of progress. However, if we conceive of history as development, then one can say (especially after Darwin) that nature indeed has a history. I think that Hegel's emphasis on limiting developmental movement to the concept would allow him to hold the previous position on nature and history, even if one understands history in the later, broader sense.
25. Evald Ilyenkov, *The Dialectics of the Abstract and Concrete in Marx's Capital* (Delhi: Aakar Books, 2022), 150.

The young Marx had already criticized in his 1843-44 manuscripts the externalization thesis in Hegel. While for Hegel "nature [presents] itself as the Idea in the form of otherness," Marx rejected the primacy Hegel gave the Idea over nature and argued that Hegel places upon nature an 'intrinsic deficiency'; for him "nature is something defective… in itself – intrinsically – [it] has something outside itself which it lacks."[26] He was right, for Hegel, nature "estranged from the Idea… 'is merely the corpse of the understanding.' " [27]

The categorial character of the dialectical development present in Hegel's logic leads to the category of the Idea externalizing itself in nature and human universal history in order to pass from mere potentiality to actuality. For Marx and Engels this is upside-down. For them, it is only "from the history of nature and human society that the laws of dialectics are abstracted."[28] Although Hegel got the fundamental laws right, his "mistake lies in the fact that these laws are foisted on nature and history as laws of thought, and not deduced from them."[29] Instead, one must understand that "in reality it is the reverse: the dialectics of the mind is only the reflection of the forms of motion of the real world, both of nature and of [human] history."[30] The distinction between the dialectical character of the world and our understanding of it will be captured by Engels' concepts of objective and subjective dialectics. Objective dialectics "prevails throughout nature," and subjective dialectics "is only the reflection of the motion through opposites which asserts itself everywhere in nature, and which by the continual conflict of the opposites and their final passage into one another, or into higher forms, determines the life of nature."[31]

For Marx and Engels, the dialectical method needs to be flipped on its feet because in Hegel it is principally understood as the development of the Idea or Spirit, what Engels would call subjective dialectics. Subjective dialectics, for Hegel, requires its externalization into nature and history to actualize itself. It is here, then, subjective dialectics which breathes life into objective dialectics. In other words, it is the dialectical development of the Idea which leads to the dialectical development in nature, and in a more developed form in universal

history. For Marx and Engels, on the contrary, it is the dialectical character of nature, and the dialectical character of human societies necessarily grounded on nature, which allows us to know the dialectical character of the Ideal. In the Marxist view, "nature is the test of dialectics," not the other way around.[32] Even further, as we will see in the following section, it is the dialectical interaction, grounded on labor, of humans with each other and nature which allows for the development of thought as an emergent quality in the human being.[33]

Furthermore, to claim that nature is governed by dialectical laws is simultaneously to claim that nature has a history, that is, that all throughout nature one can see development, both gradual and abrupt, both quantitative and qualitative. This is one of the central reasons for Marx and Engels' immense appreciation of Darwin's theory of evolution. Although they had their critiques,[34] they saw Darwin's discoveries (along with the discovery of the cell and energy) as a colossal proof of dialectical interconnection and development in nature.[35] This historical understanding of nature was greatly appreciated by the Nobel Laureate chemist Ilya Prigogine, who stressed the importance of accepting a "historical development of nature" to overcome the prevailing "mechanistic world view."[36] The "idea of a history of nature," he said, "as an integral part of materialism was asserted by Marx and, in greater detail, by Engels."[37][38] The conception that nature itself has a history, one which we can

32. Engels, *Anti-Dühring*, 21.

33. This is what has been called as of recent emergentist dialectics. I treat this in the following chapter "On the Marxist Dialectic." For more, see Kaan Kangal, "Engels's Emergentist Dialectics," *Monthly Review* (November 2020).

34. An excellent modern version of a Marxist critique of Darwin can be seen in Richard Lewontin and Richard Levins 1985 text, *The Dialectical Biologist.* Specifically, they rigorously critique Darwin's view on species adaptation as 'Cartesian,' and hold that a dialectical understanding of organisms as subject-object (as changing and changed by their environment) is scientifically superior.

35. See Engels, *Ludwig Feuerbach*, 46-7.

36. Ilya Prigogine and Isabelle Stengers, *Order out of Chaos: Man's New Dialogue with Nature* (London: Verso Books, 2017), 287.

37. Ibid, 286

38. It is important to note that the question of dialectics and nature has been at the core of the 20th century 'Engels debate' in Marxist scholarship. This is, in my opinion, a debate which shouldn't exist at all – there is overwhelming evidence against the charlatans which attempt to split Marx from Engels on the question of dialectics of nature and other adjacent matters, and there is, on the contrary, nothing more than psychological speculation on the side of the anti-Engels crowd. However, if the reader is interested in further accessing this debate for themselves, I would recommend Kaan Kangal's *Friedrich Engels and the Dialectics of Nature* (2020), or, for a briefer glance at his arguments, my review of his book " 'Friedrich Engels and the Dialectics of Nature,' by: Kaan Kangal," *Monthly Review Online* (February 13, 2022).

know reflectively through the study of nature, is generally accepted today. For this, the Marxist tradition's inversion of Hegel's dialectic is in large part to be thanked.

However, Marx and Engels, unlike Hegel, had the opportunity to think alongside breakthroughs in the sciences which confirmed their hypothesis on the dialectics of nature. Hegel's limitation in this area might as well have been the general limitation of his time. In other words, the absence of dialectics in nature is, in Hegel, merely a projection onto nature of the undialectical understanding of nature prevailing in the sciences. This argument is eloquently elaborated by Evald Ilyenkov:

> *The idealist nature of Hegel's philosophy is here revealed in a very striking manner: he directly attributes the metaphysical limitations of contemporary natural science, the* knowledge of nature, to nature itself *as its eternal property… Wherein lies the falsity of this Hegelian construction? First of all in his taking the historically limited conceptions of contemporary natural science, which did not, indeed, contain conscious dialectics, to be the absolute characteristics of nature itself. As for the fact that nature as a whole is an actually developing integral system of forms of motion of matter mutually conditioning one another, that nature as a whole, including man, is the real,* objective concreteness, *this fact is mystified by Hegel in his system, in which the abstract, that is, the mechanism, is the manifestation of* spiritual *concreteness. He credits no form of motion, apart from the motion of thinking reason, the sphere of concepts, with an immanent concreteness, that is, with real mutual conditioning of phenomena within a natural whole.*[39]

2.0 The Idea and Universal History

Hegel doesn't just take the Idea to be the demiurgos of nature, but of human universal history too,

---

I would also highly recommend Paul Blackledge's article for *Monthly Review* (May 2020) "Engels vs. Marx?: Two Hundred Years of Frederick Engels."

39. Ilyenkov, *The Dialectics of the Abstract and Concrete*, 150-1.

> *Like the soul-conductor Mercury, the Idea is in truth, the leader of peoples and of the World; and Spirit, the rational and necessitated will of that conductor, is and has been the director of the events of the World's History.*[40]

For Hegel the Idea unfolds itself in universal history, it has a "design [that] is destined to be realized."[41] Put in religious terms, he says, this is the manifestation of providence in universal history. He writes,

> *Divine Wisdom, i.e., Reason, is one and the same in the great as in the little; and we must not imagine God to be too weak to exercise his wisdom on the grand scale. Our intellectual striving aims at realizing the conviction that what was intended by eternal wisdom, is actually accomplished in the domain of existent, active Spirit, as well as in that of mere Nature. Our mode of treating the subject is, in this aspect, a Theodicaea – a justification of the ways of God.*[42]

However, this unfolding in universal history is realized through human practice, through the activity of human beings. The "plan of existence" is "hidden, undeveloped essence, which as such – however true in itself – is not completely real."[43] As a non-actuated "plan of existence" the Idea is merely potential,

> *A second element must be introduced in order to produce actuality – viz., actuation, realization; and whose motive power is the Will – the activity of man in the widest sense. It is only by this activity that that Idea as well as abstract characteristics generally, are realized, actualized; for of themselves they are powerless.*[44]

Before it unfolds itself through human activity in universal history, the Idea is as empty as the category of Being was at the beginning of the logic. Being

43. Ibid, 22.
44. Ibid.

needed to take a determinate form, but the first determinate form it took, although more concrete than pure Being, was still too abstract. The logic depicts the process through which what was implicit, potential, and unactualized in Being, gets actualized (through immanent negations and sublations) in its dialectical development towards the Idea. It is a process that goes from abstract to concrete, from the indeterminate, to the most determinate. Similarly, before it unfolds into universal history the Idea stands in a commensurable position to Being; only by negating its immediate purity does it create the conditions for the possibility for its actualizing in the development of universal history. Having freedom for its essence, it is at first freedom in form merely, unrealized freedom. By actualizing itself in world history, it concretizes in the historical "progress of the consciousness of Freedom."[45]

This actualizing task is no longer merely achievable through logical deduction (as it was in the logic), it requires – for its unfolding in universal history – the activity of human beings exerting their "natural will."[46] In this unfolding of the "history of the world, the Individuals we have to do with are Peoples."[47] There is a dialectical interaction between the will of peoples and the ultimate 'plan of existence.' The former (will) implies freedom, the latter (plan) implies necessity. Yet, the two are necessarily bound together. This is what Hegel calls the "cunning of reason," namely,

> *manifestations of vitality on the part of individuals and peoples, in which they seek and satisfy their own purposes, are, at the same time, the means and instruments of a higher and broader purpose of which they know nothing – which they realize unconsciously.* [48]

As Terry Pinkard notes, this cunning of reason refers to the process through which "the teleological goal of history… elicits just those conditions that provoke individuals acting on their own interests to act in the service of some larger goal."[49] G. V. Plekhanov described it as a process whereby "whole peoples are blind instruments of the spirit," where spirit "forces them to work

for it by holding out to them the bait of their private aims and urging them on with the spur of passion, without which nothing great is done in history."[50]

We have then, in Hegel, the notion of what Marx and Engels would call *practice*. As early as the 1845 writing of the "11 Thesis on Feuerbach," [51] Marx set out to critique the "chief defect of all hitherto existing materialism," namely, its bifurcation of subject and object – its inability to understand the world "as human sensuous activity," as "practice."[52] It can be said that the critique of the young Hegelians given in Marx's '11 Thesis' is itself a Hegelian critique.[53] V. I. Lenin shares this sentiment in his 'Conspectus of Hegel's *Science of Logic'* where he says "Marx… clearly sides with Hegel in introducing the criterion of practice into the theory of knowledge: see the Theses on Feuerbach."[54] This notion of practice as the sphere in which thought is realized is fundamental to what makes Marxist dialectical materialism different from previous 'crude' and 'mechanistic' forms of materialism.

Human practice is also the ground for Marx's concept of the Ideal. However, neither Marx nor Engels developed this concept further. Instead, it was the Soviet philosopher Evald Ilyenkov who took upon the task of systematically developing the Marxist notion of the Ideal in his *Dialectical Logic* and other texts. Ilyenkov recognized the world-historic value of Hegel's depiction of the "objectification of thought" through human practice and said this development "made a fundamental advance in the understanding of thought and in the science of thought."[55] The Marxist conception of the Ideal, which Ilyenkov would systematize, held that the Ideal was the "real objective activity of man as the active agent of social production."[56] This development helped enrichen the materialist dialectic's conception of the realm of ideas. Ideas could be understood to have an objective character grounded in the material practices of a specific mode of life. Through the development of the concept of the Ideal we

can speak, from the standpoint of dialectical materialism, about the 'spirit of an age' (*zeitgeist*), and incorporate, in a materialist and more concrete form, something akin to Hegel's philosophy of history.

The kinship in the notion of practice in Hegel and Marx has led some to erroneously claim the pair have identical methods. For instance, the English Marxist philosopher Ian Fraser argues that "Hegel's and Marx's dialectic are not opposites, are not a supersession of one over the other, but are instead intrinsically similar, one and the same, two of a kind."[57] This is because, he argues, "the dialectical movement of the subject, real living individuals, is grasped, by Hegel, through the manifestation of the Will in society."[58] To defend Hegel, Fraser says that "Hegel is [wrongly] accused… of remaining at the level of theory, distinct from practice, and of ignoring man's self-activity in creating the world."[59] For Fraser, Marxists don't need to change anything about Hegel's dialectic, it is already, as C. L. R. James said, "a very materialist form of dialectic."[60]

These are the sorts of theoretical mistakes that take place when identity is not understood as mediated through difference. There is, indeed, great similarities in the Marxist and Hegelian dialectics. C. L. R. James is right in saying there is an embryonic potential for a materialist dialectic in Hegel. Engels himself said that the "Hegelian system represents merely a materialism idealistically turned upside down."[61] Joseph Dietzgen, a German worker and philosopher who Marx and Engels said had discovered the materialist dialectics independent of them, shared a similar sentiment with respect to Hegel. He said in 1873 that the "Hegelian system of philosophy…[was] a materialism in disguise."[62] Lenin would definitely agree that there is immense fruitfulness in interpreting Hegel's work "materialistically."[63] In his 1922 essay "On the Significance of Militant Materialism," he argued the journal *Pod Znamenem Marksizma* ("Under the Banner of Marxism") "should be a kind of 'Society of Materialist Friends of

Hegelian Dialectics.' "[64] For Lenin, "the germs of [dialectical and] historical materialism" were already "in Hegel."[65] Hegel, he said, "brings one within a hand's grasp of [dialectical] materialism."[66] Reading Hegel helped Lenin see how "intelligent idealism is closer to intelligent materialism than stupid [crude] materialism."[67] However, none of these accounts would go as far as saying, as Fraser does, that the Marxist and Hegelian dialectics are 'one and the same.'

Fraser's argument ignores that while there are definite similarities in the Hegelian and Marxist dialectics, and while it is certainly the case – as Lenin thought – that a materialist reading of Hegel is bound to bear fruit, he forgets, however, that there is also great difference. Such difference makes Fraser's homogenizing claims worrisome, since if accepted what makes the Marxist dialectic an advancement of the Hegelian is ignored, i.e., the historical advancement of dialectical philosophy into a richer worldview is nullified. Unlike Fraser claims, the Marxist position is not simply that Hegel ignores practice, but that practice is reduced to being merely the means through which the Idea actualizes itself. Practice is merely mediation, negation, for the ultimate actualization of the Idea. To borrow the language of Hegel's logic, the Idea in Hegel is the point of departure – it is empty immediacy which necessarily mediates itself through practice to return to itself as mediated immediacy. The Idea incarnates itself in human practice and develops through universal history in order to actualize itself. As Ilyenkov put it, in Hegel "thought was transformed into the only active and creative force, and the external world into its field of application."[68] This is, indeed, and "upside-down representation."[69] It is, as Ilyenkov noted, a rehashed version of John 1:1's 'in the beginning was the word,' except in the beginning was the Idea. "Hegel starts his dialectics," as Alfred Sohn-Rethel notes, "by a process of the mind within the mind."[70] The "Hegelian concept of dialectic," Sohn-Rethel writes, "finally entitles the mind not only to primacy over manual

work but endows it with omnipotence."[71] As such, it requires an inversion to be turned off its head and on its feet.

This is precisely what Marxism does, it gives primacy to the practical activity involved in securing human subsistence; it does not "descend from heaven to earth," but "ascends from earth to heaven."[72] For Marxists, the "first historical act is… the production of the means to satisfy needs" – [eating, drinking, habitation, etc.] – that is, "the production of material life itself."[73] As Marx and Engels wrote in 1845, "life is not determined by consciousness [the Idea], but consciousness [the Idea] by life."[74] If the history of the Ideal is "viewed apart from real history, these abstractions have in themselves no value whatsoever."[75] This is the direct antithesis of Hegel, who held that when devoid of the Idea neither nature nor human society is at all historical. In Hegel the Idea is the protagonist of history, practice is merely the suit it wears to do its stunts. In Marxism, practice – specifically relating to the production of material life – is the protagonist of human history; its reflection in the Ideal is but the reporter of this protagonist role.

Historical practice is also not simply, as Hegel conceived of it, a result of human will. As Marx says in his *Contribution to the Critique of Political Economy*,

> *In the social production of their existence, men inevitably enter into definite relations,* which are independent of their will*, namely, relations of production appropriate to a given stage in the development of their material forces of production.*[76]

Marx would go on to say that "it is not the consciousness of men that determines their existence, but their social existence that determines their consciousness."[77] The human will is understood to be historically conditioned, not by the 'plan of existence' of the Idea, but by the real material conditions of

the historical epoch the individual is situated in. These material conditions include Hegel's civil society, i.e., the "legal and political superstructure" where the "definite forms of social consciousness" of the epoch are institutionalized, but – and here is the key difference – civil society is understood to have its "real foundation" in the "economic structure of society," that is, in the forces and relations of production of a given historical period.[78] As Marx would go on to famously say in his *18th Brumaire on Louis Bonaparte*,

> *Men make their own history, but they do not make it as they please; they do not make it under self-selected circumstances, but under circumstances existing already, given and transmitted from the past. The tradition of all dead generations weighs like a nightmare on the brains of the living.*[79]

There is, then, in Marxism also an inverted reinterpretation of Hegel's cunning of reason. Human beings act as if they were expressing their individual will alone – but this individual will is determined by historical circumstances. Thereby, every human action contains the unity of individual will and historical necessity. Individual actions have latent effects which perpetuate – sometimes consciously, sometimes not – the larger and broader engine of historical progress. Engels makes this clear in his *Ludwig Feuerbach*,

> *Historical events thus appear on the whole to be likewise governed by chance. But where on the surface accident holds sway, there actually it is always governed by inner, hidden laws and it is only a matter of discovering these laws. Men make their own history, whatever its outcome may be, in that each follows his own consciously desired end, and it is precisely the resultant of these many wills operating in different directions and of their manifold effects upon the outer world that constitutes history.*[80]

This is, on the surface, the same teleological structure of Hegel's cunning of reason. The central difference is this – the engine of historical change, the inner

necessity manifesting itself latently through individual wills, is not some plan of existence set out by an empty Absolute Idea in need of actualization, but is materially inscribed in the dialectical development of both nature and human society. In human history, it is the dialectical struggle of classes with antagonistic interests which serves as the driving force; hence, "the history of all hitherto existing societies is the history of class struggles."[81]

Evald Ilyenkov summarized this distinction perfectly in his comparison of Hegel's and Marx's understanding of the concrete. I quote here at length:

> *For Hegel, economy, the universal concrete substance of anything that is human – reasonable will – appears in an extremely one-sided and abstract form. The sphere of men's economic activity is not, therefore, a* concrete *system of interaction of men and things, emerging and developing* irrespective of the will and consciousness *of individuals. It cannot constitute the subject-matter of a special science and can only be considered in a system of universal definitions of reasonable will, i.e. within the philosophy of spirit, within the philosophy of state law. Here it appears as one of the specific spheres of the activity of reason, as an abstract form of revelation of reason acting in history.*
>
> *It is not difficult to see the diametric opposition between the views of Marx and Hegel of economy, of the nature of its dialectical interconnection with all the other manifestations of social life, and of its role in the social whole.*
>
> *On this point, Marx opposes Hegel as a* materialist first *and foremost. The most interesting feature here is, however, that it is* materialism *that enables him to develop a more profound view of the dialectics of the subject matter.*
>
> *For Marx, the sphere of economic interaction of men is a fully* concrete *sphere of social life with its own specific immanent laws of motion. In other words, it appears to be relatively independent of all other forms of social activity of men and precisely for this reason constitutes the subject-matter of a special science. The system of economic interaction between men emerges as a historically arising and historically developed system, all aspects of which are mutually connected with one another through unity of origin.*

81. Karl Marx and Friedrich Engels, "Manifesto of the Communist Party," In *Marx, Engels, Lenin: On Historical Materialism* (Moscow: Progress Publishers, 1972), 84.

> *It is important to stress that the system of economic relations is a system that is not only* relatively *but also* absolutely *independent of the will and consciousness of individuals, although the latter's will and consciousness do play a most active role in its formation. The very nature of this participation of conscious will in the formation of the system is determined by the system of economic relations itself incorporating men endowed with will and consciousness, rather than by the 'nature of the spirit', beforehand and from the outside. In other words, will and reason themselves appear here as modi of some other substance, as its abstract manifestations and products. All definitions of the will and consciousness of individuals involved in the development of the economic system are literally* deduced *from the nature of internal self-movement of the system as a whole, interpreted as* products *of the movement of this system.*
>
> *Thus, from this point of view everything looks exactly the reverse as compared to the Hegelian construction: everything is right side up. It is materialism that acts as the principal cause and condition of the fact that dialectics is applied to the understanding of economy in a full measure and much more comprehensively than it is generally possible to do from the Hegelian positions.*[82]

The primacy of material practice and labor is further refined in Engels' 1876 essay "The Part Played by Labour in the Transition from Ape to Man." In this unfinished and posthumously published essay, Engels argues that labor allowed for the development of the modern hand, and subsequently, that the positive influence this development had on the rest of the organism, eventually led to speech, rational capabilities, and modern society. He concludes, then, with the proclamation that "labour created man himself."[83] Stephen Jay Gould, perhaps the most famous American paleontologist and evolutionary biologist of the 20th century, was extremely influenced by Engels' work and his understanding that the "hand is not only the organ of labor, it is also the product of labor."[84] In Gould's 1987 book *An Urchin in the Storm* he would go on to say that "the best

nineteenth-century case for gene-culture coevolution was made by Friedrich Engels in his remarkable essay of 1876."[85]

To claim the primacy of the Idea is, for Marxists, equivalent to putting the real state of affairs on its head. For Marxists, the point of departure is labor, the practice humans engage in – sometimes willfully, sometimes not – in the production of material life. The development of the species through labor creates the conditions for the possibility of reason, that is, human consciousness, the realm of the Ideal, are all dialectically emergent qualities and capabilities of labor-determined human development. Hegel is right to lay focus on interconnection, movement, contradiction, etc., but that which remains true in his philosophy is despite of, not because of, the primacy he gives to the Idea. Inverting Hegel's inversion is the first crack at removing the rational kernel's mystical shell. This materialist inversion of Hegel was an image provided already by Ludwig Feuerbach, who in falling short in his mechanistic materialism, was unable to complete the task of sublating Hegel through the rational kernel in his dialectical method.[86] Once the primacy of nature and human practice is established, then one can understand the dialectical character of these, and the reflected forms they take in the realm of the Ideal.

Hegel failed to see how the Idea presupposes and is determined by practice. In other words, he was unable to see how the ground (*grund*) of the Idea is found in the economic forces of society. The discovery of the dialectical character of nature and human practice grounds subjective dialectics and is a further step towards a more concrete knowledge of the world. In this Marxist inversion, the drive towards concreteness that is at the heart of Hegelian philosophy is recaptured and expanded in the Marxist critique of Hegel's idealism. Or in other words, Marxism takes one of the central principles of Hegelian philosophy further than Hegel himself – it is a Hegelian extension of Hegel beyond Hegel. In this sense, Slavoj Žižek is right in saying in *Absolute Recoil* that "dialectical materialism is the only true philosophical inheritor" of

86. In his 1842 essay "Provisional Theses on the Reformation of Philosophy," Feuerbach argues that "The truth of the finite is articulated by the absolute philosophy only in an *indirect* and *inverted* manner… Hence we need only *invert* speculative philosophy and then have the unmasked, pure, bare truth." Ludwig Feuerbach, "Provisional Theses for the Reformation of Philosophy," In Lawrence S. Stepelevich, *The Young Hegelians: An Anthology* (New York: Humanity Books, 1999), 160, 157.

Hegelian philosophy.[87] This is a sentiment shared by Henri Lefebvre, who says that dialectical materialism is "more Hegelian than Hegelianism."[88] It is also express by Evald Ilyenkov in 1970, where he says in an article for *Pravda* that "the rational kernel of Hegel's philosophy – dialectics as logic and contemporary materialism's theory of scientific cognition – lives these days only in one form, in its Marxist-Leninist interpretation and application to the study of the external world, to the scientific reflection on the objective laws of the material world and the perspectives of its development that takes place independently of human wishes and desires."[89] "The method of ascent from the abstract to the concrete [i.e., the dialectical method] as a universal law to which scientific development is subject," argues Ilyenkov elsewhere, "was formulated by Hegel… but it became an actual method of development of *concrete scientific* knowledge only in the hands of Marx who gave it a materialist substantiation."[90]

It is important to also note that Hegel cannot be fully blamed for this inversion, for the development of the productive forces had yet to occur in Germany as they had been already taking place in England in the first quarter of the 19th century. This universal law of human social history became available to human knowing only after the productive forces reached a level where the antagonistic character of the relations of production showed itself. Only at this specific historical point could that which was implicit in all human history become explicit and open itself to human knowing. Marx makes this clear in the third section of the introduction (Notebook M) of the *Grundrisse*, where he says that,

> *Bourgeois society is the most developed and the most complex historic organization of production. The categories which express its relations, the comprehension of its structure, thereby also allows insights into the structure and the relations of production of all the vanished social formations out of whose ruins and elements it built itself up, whose partly still unconquered remnants are carried along within it, whose mere nuances have developed explicit significance within it, etc. Human*

> *anatomy contains a key to the anatomy of the ape. The intimations of higher development among the subordinate animal species, however, can be understood only after the higher development is already known. The bourgeois economy thus supplies the key to the ancient, etc.*[91]

Hegel's flaw, then, has its source in the same undeveloped character of the productive forces which limited the socialism of Saint-Simon, Charles Fourier, and Robert Owen to a utopian character.[92] One can only provide a concrete understanding of the capitalist mode of life when this mode of life has itself matured and concretized. One cannot provide, for instance, a concrete assessment of the *Godfather* trilogy in 1973, before part two and three are released. It is only after the object of one's study has itself concretized to its matured form that one can have a concrete knowledge of it. Hegel's faults, in part, are rooted in the undeveloped stage of capitalism's existence he was limited to analyzing because of historical circumstances.

Towards the end of his life Hegel had begun to see some of the effects of capitalist industrial development and wrote in his *Philosophy of Right* that there was a tendency in the "inner dialectic of civil society" which "greatly facilitates the concentration of disproportionate wealth in a few hands" while "the standard of living of a large mass of people falls below a certain subsistence level."[93] Hegel's observation on this dialectic in civil society led Plekhanov to exclaim that "Hegel understood more clearly than all economists of his time, not excepting even Ricardo, that in a society which is based on private property, the growth of wealth, on the one hand, is inevitably accompanied by the growth of poverty, on the other."[94] Hegel's critique of this contradiction, however, remained in the realm or 'moment' of distribution (which is where the utopians also had their focus), and hence, was not seen as an effect of the moment of production, that is, as the result of productive relations between antagonistic classes.[95]

95. Plekhanov also sees a connection here between Hegel's critique of political economy and the utopians,' specifically in the most advanced form it took in the theories of Charles Fourier.

Rational Kernel and Sublation

The inversion image is by far the most often used by Marx and Engels. After having covered its meaning and significance thoroughly in the previous section, most of the ground has already been laid for answering the following two questions concerning the other two images they use to paint their relation to Hegel's dialectic – 1) what is the rational kernel in Hegel's philosophy? and 2) how does the Marxist dialectic sublate the Hegelian? Through answering the first, the second is simultaneously answered as well.

To sublate (*aufhebung*) includes the dual process of canceling and preserving. Sublation does not mean complete annihilation, and neither does it mean reproduction, that is, the Marxist dialectics is neither a wholesale rejection of the Hegelian nor an imitation of it. The process of sublation refers to the partial rejection, and partial preservation, of the old into the new. It is the process through which that which is implicit and potential in the old emerges out of it as something qualitatively superior. To say that the Marxist dialectics sublated the Hegelian simply means that the less rational part of the Hegelian system is rejected, and the most rational part of the Hegelian method preserved. At the same time, it is the making explicit of something which was already implicit in the Hegelian dialectics, that is, the drive towards a more concrete understanding of the world that is central to the Hegelian method was bound to clash with the upside down and idealist character it was dressed in as the functionary of the Idea demiurgos. As Engels said, Marxism would come to draw the "necessary conclusions from [Hegel's] method."[96]

In the last section we saw that the upside-down character of Hegel's dialectic is a result of the primacy he gives to the idea, and the mediational role he gives to nature and human practice. By prioritizing the primacy of nature and human social practice (specifically at the economic level), and the secondary and reflectional character of the Ideal, Marxism flips dialectics back on its feet – it becomes a materialist dialectic. In other words, Marxism "comprehend[s] the concepts in our heads… as images of real things instead of regarding real things as images of this or that stage of development of the absolute concept."[97] In this inversion, the lion's share of the mystical shell is already removed, namely, the idealist wrapping which turned the Idea (which is the ontologically last to

96. Engels, *Ludwig Feuerbach*, 12-13.
97. Ibid, 44.

emerge) into the demiurgos of the world. The rational kernel is what is left when the inversion removes the mystical wrappings, that is,

> *the science of the general laws of motion – both of the external world and of human thought – two sets of laws which are identical in substance, but differ in their expression in so far as the human mind can apply them consciously, while in nature and also up to now for the most part in human history, these laws assert themselves unconsciously in the form of external necessity in the midst of an endless series of seeming accidents.*[98]

Another way to describe what is taken from Hegel is to say that his method (dialectics) is kept, and his system (the idealist wrapping) is rejected. This is how Engels came to describe their relationship to Hegel in *Ludwig Feuerbach*. For Engels (and one may add Marx as well), there is a tension within Hegelian philosophy between a revolutionary method, which holds the truth enunciated by Mephisto in Goethe's *Faust* – "all that comes to be deserves to perish wretchedly," and the conservative system, best depicted by the frequently misinterpreted (and mistranslated) epithet from Hegel's *Philosophy of Right* – "what is rational is actual and what is actual is rational."[99] In addition, Engels adds Hegel's closing of the system, that is, his postulation of the "end of all history" (another historically misunderstood statement) arrived at when "mankind" gets to the "cognition of the absolute Idea" reached in Hegelian philosophy, as another central aspect of the conservative side.[100]

Remark: The Conservative Hegel Misreading

Although not directly related to the topic we are pursuing in this section, it is important to note how the 'what is actual is rational' and the "Europe is the absolute end of history" quotes have been misunderstood since Hegel's time.[101] The former has usually been used to defame Hegel as a conservative 'state-philosopher' and defender of the status-quo; the latter as a maniac who

98. Ibid.

101. Hegel, *The Philosophy of History*, 103.

thinks that "nothing new or important would ever happen again."[102] These are of course, incorrect readings.

The first quote is usually incorrect even in its translation – it sometimes (including how it appears in Engels' text) switches 'actual' for 'real.' This depicts a clear lack of familiarity with Hegelian philosophy, specifically, with Hegel's logic. Actuality in Hegel is the third major section in his "Logic of Essence," which is the second book of his *Science of Logic*. Actuality does not simply mean what is real, what is actual in Hegel is that which contains the "unity of essence and Existence," that is, for Hegel "what is actual is efficacious."[103] T. X. Knox provides the helpful example of a statesman: for instance, an ineffective statesman, unable to realize the duties he ought to, might be real (in the layman's sense of the word), but not actual, for he "lacks the essence" of what "statesmanship ought to be."[104] To provide an example baseball fans would understand, after a team receives a beating and is forced to put in the last innings position players to pitch, it is evident that while a position player is occupying the role of 'pitcher,' this is not an *actual* pitcher. The essence of what it means to be a pitcher is not what is manifested in existence. Reason is not present here. This is the way Hegel's statement ought to be understood. It is not a defense of political conservatism, and as Terry Pinkard notes in his *Hegel* biography, this misinterpretation (and sometimes mistranslation) was disastrous for Hegel's image, and "the consequences of [these] extend into our day."[105]

The misinterpretation of the second quote also depicts unfamiliarity with Hegel's *Philosophy of History*. When history is seen, as it is in Hegel, as the expansion of a peoples Idea of freedom, then his statement (although Eurocentric) is not as deranged. It simply means that Europe arrives (with the aid of Christianity) at the Idea that all men are free. Since there is nothing, in the realm of the Idea, beyond the universal recognition of human freedom, Europe represents the "absolute end of history."[106] Hegel divides his text accordingly to how a peoples understand freedom: 1) "the Eastern nations

knew only that *one* is free," 2) "the Greek and Roman world only that *some* are free," and 3) the German's "that all men absolutely (man as man) are free."[107]

Engels does seem to accept some of these incorrect readings of Hegel's two statements, claiming the first is a conservative justification for the actual state of things, and the second a dissolving of the dialectical method into dogmatism. However, there is one difference between Engels' treatment of Hegel's so-called conservatism and that of other readers, namely, that for Engels the revolutionary method triumphs at the end. He says, "the conservatism of this mode of outlook is relative; its revolutionary character is absolute – the only absolute it admits."[108] Engels considers Hegel to be both justifying the existing state of affairs and its destruction, the 'actual is rational,' but still, as Mephisto said, deserves to perish. For Engels the latter triumphs over the former, reason overcomes dogmatism.

Engels' misreading, however, has infected Marxist scholarship on Hegel's political philosophy since his death. The exception in the classical Marxist cannon can be seen in G. V. Plekhanov, who saw in Hegel's *Philosophy of History* the "clearing [of] the road for materialism."[109] Even when Hegel attempts to provide an idealist historical explanation for the development of one stage of history into another, Plekhanov argues, he consistently turns to concrete economic conditions. Plekhanov states that "every time he turned to it, economics freed him from the shallows into which his idealism had led him. Economic development turned out to be the premise determining the whole course of history."[110] Engels was greatly impressed with Plekhanov's article on the 60th anniversary of Hegel's death and wrote to Kautsky saying "Plekhanov's articles are excellent," a sentiment Kautsky agreed with by saying "he is our philosopher, certainly the only one among us who studied Hegel."[111]

109. Plekhanov, "For the Sixtieth Anniversary of Hegel's Death.," 412. A few pages after he adds "It is improbable that Hegel busied himself much with political economy, but here, too, as in many other fields, his genius helped him to grasp the most characteristic and essential aspect of phenomena. Hegel understood more clearly than all economists of his time, not excepting even Ricardo, that in a society which is based on private property, the growth of wealth, on the one hand, is inevitably accompanied by the growth of poverty, on the other."

110. Ibid, 416.

111. Friedrich Engels, "Engels to Karl Kautsky," December 3, 1891. In *Marx-Engels Collected Works*, Vol 49, 317. H. J. Steinberg (1967), Sozialismus und Deutsche Sozialdemokratie. Zur Ideologie der Partei vor dem I. Weltkrieg. Hannover: Verlag für Literatur und Zeitgeschehen. Latter retrieved from Kaan Kangal, *Friedrich Engels and the Dialectics of Nature*, 51.

This reading, however, did not catch much traction and the 'conservative' stain on Hegel was sustained in Marxist circles.[112]

Rational Kernel and Sublation (Returned)

In the 20th century various Marxist have argued that Engels' description of taking Hegel's method and leaving the system is unrealistic, for the method and the system in Hegel blead into one another. Louis Althusser, for instance, says that

> *It is unthinkable that the place of the dialectic in Hegel's system could be conceived as that of a kernel in a nut… [it is a fiction] that the Hegelian dialectic could cease to be Hegelian and become Marxist by a simple, miraculous 'extraction.'*[113]

Similarly, Evald Ilyenkov argues that "despite all its advantages over the old metaphysical logic," Hegel's method "cannot be adopted by materialism without a radical critique, without radical elimination of all traces of idealism."[114] However, it is often those who, like Althusser, wish to draw a wider wedge between Marxism and Hegel who lend a skeptical eye to this image. Others, like Mark Cowling – who paradoxically is a proponent of the anti-Engels crowd of the 'Engels debate' – agree with Engels and state that "there is a method which can be abstracted from Hegel's philosophy, but without necessarily bringing with it Hegel's idealism."[115]

---

112. In the recent years the prominent Marxist-Leninist Italian philosopher Domenico Losurdo breaks with this reading and postulates a revolutionary and anti-liberal Hegel in his 2004 masterpiece *Hegel and the Freedom of Moderns*. Marxist scholarship on Hegel's political philosophy has been changing along the Losurdo (and old Plekhanov) lines since, especially in the field of Chinese Marxism and its development of a Marxist human rights theory, the prominent theorist in the west for this movement has been Roland Boer. Back to Engels' reading of Hegel.

It is always important to note that these are mere metaphors, aimed at painting a general idea of how things are connected. If one loses themselves overanalyzing the image, you undermine the essential point it is trying to paint. The point of Engels' division of method and system – which is a rehashed version of the kernel and shell image – is aimed at letting one know that *if* one considers Hegel's method to be his approach at analyzing the world comprehensively, in a manner which grasps interconnections, movement, contradictions and their sublation, and further sees these dynamic interconnections governed by a set of very general laws of change, applicable to nature, human history, and thinking*, then* one may say that this aspect of Hegel's philosophy is recaptured in Marxism. This is the rational kernel, or the 'revolutionary method' which Marxists inherit from Hegel.

It is this aspect of Hegel's philosophy – the dialectical method, which Lenin recognized was necessary for understanding Marx's *Capital*. He says in his 'Conspectus to Hegel's *Science of logic'* that

> *It is impossible completely to understand Marx's Capital, and especially its first chapter, without having thoroughly studied and understood the whole of Hegel's Logic. Consequently, half a century later none of the Marxists understood Marx!*[116]

I can only wonder how many well-meaning communist workers opened the *Science of Logic* and found it more bearable to submit to the will of capital. In all seriousness, the essential message here is not that one must have a perfect understanding of Hegel's *Science of Logic* to have a chance at grasping Marx's *Capital* – for then we are all doomed to never understanding *Capital* – but that the dialectical method traced in the categorial development of Hegel's *Science of Logic* must be understood if one wishes to have a comprehensive understanding of the categorial developments in Marx's *Capital*. The dialectical method which Marx applies to political economy in *Capital* is the same method Engels argues Marxism inherits from Hegel. This is why Lenin stresses the seminal importance of understanding Hegel, and of creating reading groups and journals like *Pod Znamenem Marksizma* who should – amongst other things – provide a "systematic study of Hegelian dialectics from a materialist standpoint."[117]

---

116. Lenin, *Collected Works Vol. 38*, 180.
117. V. I. Lenin, *Collected Works Vol. 33*, 233.

While writing what we now know as the *Grundrisse*, which I have previously called a "dress rehearsal" for *Capital*, Marx sends a letter to Engels telling him he had "completely demolished the theory of profit as hitherto propounded."[118] He told him that of methodological help in doing this was his accidental reading of Hegel's *Science of Logic*. He said that

> *What was of great use to me as regards method of treatment was Hegel's Logic at which I had taken another look BY MERE ACCIDENT, Freiligrath having found and made me a present of several volumes of Hegel, originally the property of Bakunin.*[119]

The beauty of the *Grundrisse* and its unfinished character is that it shows explicitly something which is merely implicit and hidden in Marx's *Capital* – the method of work inherited from Hegel and sharpened in his 'accidental' leafing through the *Science of Logic* in 1858. This is a sentiment that Martin Nicolaus, who wrote the foreword to the first full English publication of the *Grundrisse* (1972), shares. Referring to *Capital* and the *Grundrisse* he says,

> *The inner structure is identical in the main lines to the Grundrisse, except that in the Grundrisse the structure lies on the surface, like a scaffolding, while in Capital it is built in; and this inner structure is nothing other than the materialist dialectic method. In the Grundrisse the method is visible; in Capital it is deliberately, consciously hidden, for the sake of more graphic, concrete, vivid and therefore more materialist-dialectical presentation.*[120]

Although Marx admits to having "coquetted with the modes of expression peculiar" to Hegel in *Capital*, the first to recognize the methodological similarity between Hegel's *Science of Logic* and Marx's *Capital* was Engels.[121] In an 1891 letter to Conrad Schmidt, Engels says that

Karl Marx, "Marx to Engels," January 16, 1858. In *Marx-Engels Collected Works*, Vol 40 (New York) International Publishers), 249. This dress rehearsal analogy is from Lenin, who described the 1905 revolution as a dress rehearsal for 1917 a few times in his writings.

119. Ibid.

120. Martin Nicolaus (1972), "Foreword," in Marx's *Grundrisse*, 60.

121. Marx, *Capital*, 20.

> *If you just compare the development of the commodity into capital in Marx with the development from Being to Essence in Hegel, you will get quite a good parallel for the concrete development which results from facts.*[122]

A similar connection would be seen by Lenin in his 'Conspectus to Hegel's *Shorter Logic,'* where he says that

> *If Marx did not leave behind him a "Logic" (with a capital letter), he did leave the logic of Capital, and this ought to be utilized to the full in this question. In Capital, Marx applied to a single science logic, dialectics and the theory of knowledge of materialism [three words are not needed: it is one and the same thing] which has taken everything valuable in Hegel and developed it further.*[123]

He would then, like Engels, draw a comparison between Hegel's first category (being) and Marx's (commodity) and say that the development of both proceeded from "the most simple" to the more complex. He also drew a connection between the relations of value and price, and wages and the price of labor-power, to Hegel's logic of essence and the dialectic of essence and appearance.[124]

There has since been a plethora of scholarship done on the methodological similarities between the development of the categories in Marx's *Capital* and those in Hegel's *Science of Logic* and *Encyclopedia of the Philosophical Science*.[125] It is worth mentioning how this connection has been viewed in Marxist scholarship since the death of Lenin, for it is one of the central aspects of the rational kernel that is retained in the Marxist sublation of Hegel.

The most lucid parallel between Marx's three volumes of *Capital* and the three books contained in Hegel's *Encyclopedia* is expressed by Pichit

Recent studies on the topic include the volume edited by Fred Moseley and Tony Smith (2014), *Marx's Capital and Hegel's Logic: A Reexamination*, Brill; and Manolis Dafermos (2021), "Rethinking the relationship between Marx's Capital and Hegel's Science of Logic: The tradition of creative Soviet Marxism," *Capital & Class*. doi:10.1177/03098168211029003

Likitkijsomboon in his 1992 essay 'The Hegelian Dialectic and Marx's *Capital*.' In Hegel's *Encyclopedia*, as was expressed briefly above, the logical development of the concept arrives at the final category of the Idea, which is then externalized or realized in nature. This negation of the Idea into nature is then itself negated (negation of the negation) in the transition to spirit, where the Idea returns to itself. As Ian Hunt and Roy Swan concisely put it,

> *the Logic presents the Idea as an immediately given subject, Nature is the estrangement of the Idea from itself, or its self-objectification, and Spirit is the return of the Idea to itself from estrangement, negating Nature as such, but affirming Nature as itself.*[126]

This triadic structure of Hegel's *Encyclopedia* – immediacy (Logic), mediation (Nature), and mediated immediacy (Spirit), mirrors the three volumes of *Capital* – production as such (vol. 1), circulation (vol. 2), and capitalist production as a whole (vol. 3). Capital is in *Capital* what the Idea is in Hegel's *Encyclopedia*.

Marx makes the relationship between the three volumes of *Capital* clear in the first chapter of volume three where he says that,

> *In Book I we analysed the phenomena which constitute the process of capitalist production as such, as the immediate productive process, with no regard for any of the secondary effects of outside influences. But this immediate process of production does not exhaust the life span of capital. It is supplemented in the actual world by the process of circulation, which was the object of study in Book II. In the latter, namely in Part III, which treated the process of circulation as a medium for the process of social reproduction, it developed that the capitalist process of production taken as a whole represents a synthesis of the processes of production and circulation. Considering what this third book treats, it cannot confine itself to general reflection relative to this synthesis. On the contrary, it must locate and describe the concrete forms which grow out of the movements of capital as a whole. In their actual movement capitals*

126. Ian Hunt, Roy Swan, "A Comparison of Marxist and Hegelian Dialectical Form," *Radical Philosophy,* 30 (Spring 1982), pp. 33-40, 35.

> *confront each other in such concrete shape, for which the form of capital in the immediate process of production, just as its form in the process of circulation, appear only as special instances. The various forms of capital, as evolved in this book, thus approach step by step the form which they assume on the surface of society, in the action of different capitals upon one another, in competition, and in the ordinary consciousness of the agents of production themselves.*[127]

The categories correspondent of capital in the first volume are too 'abstract,' that is, they don't yet resemble the "form which they assume on the surface of society."[128] This abstract character of the categories in volume one is "analogous," as Pichit notes, "to Hegel's Logic, [which is] the stage of the Idea in the abstract, positing itself without any explicit presupposition of Nature or human mind."[129]

In volume two capital externalizes or realizes itself in circulation. The categories in this volume (various capital circuits, turnover of various forms of capital, etc.) are subsequently more concrete, they contain (as Marx defined in the *Grundrisse*) a greater "concentration of many determinations… a unity of the diverse" categorial developments present in volume one (commodity, money, capital, absolute and relative surplus value, etc.).[130] Finally, this is all brought together in volume three, formulating a concrete image of the whole. This volume, which gave Engels a decade of troubles to edit, is recognized by him to have "the most important parts of the entire work."[131] This last volume deals with "capital at its mature stage, capital in and for itself, as explicit and real economic relations in all spheres."[132]

Another lucid example of the homological relation between Marx's *Capital* and Hegel's *Science of Logic* is seen in the Soviet Marxist philosopher L. Mankovsky in his 1962 article "Logical categories in K. Marx's '*Capital*.' " For Mankovsky,

128. Ibid.

129. Pichit Likitkijsomboon, "The Hegelian Dialectic and Marx's *Capital," Cambridge Journal of Economics*, 16(4) (December 1992)., pp. 405-419, 412.

130. Marx, *Grundrisse*, 101.

131. By 'entire work' he means *Capital* as a whole, the three volumes. Friedrich Engels (1894), "Preface," to *Capital Vol. III*, 1.

132. Likitkijsomboon, "The Hegelian Dialectic and Marx's *Capital"*, 413.

> *The commodity is the being of capital. The process of capitalist production is the essence of capital. The process of circulation of capital is the appearance of capital. The unity of the production process and the circulation process is the actuality of capital.*[133]

Whereas Pichit focused on drawing a relation between the three volumes of *Capital* and the three parts of Hegel's *Encyclopedia*, Mankovsky traces the three volumes of *Capital* to the central categorial developments of Hegel's logic of being and logic of essence. As Manolis Dafermos states,

> *Mankovsky proposed that ascending from the abstract to the concrete involves the movement from the being to the essence, from the essence to the appearance (phenomenon), and finally from the appearance to actuality (reality) as the unity and interpenetration of the essence and the appearance.*[134]

In so doing, Mankovsky's analysis of the homological relations between Marx and Hegel's work resembles the one Engels drew in the letter to Conrad Schmidt referenced above. Mankovsky's interpretation would be expanded and enriched by V. Vaziulin's 1968 book *The Logic of Karl Marx's Capital*.[135]

A good example of the concretization brought about by the negation of the negation in *Capital* volume three can be found in the treatment of price and rate of profit as sublated forms of volume one's analysis of value and rate of surplus value.[136] This development has led critics hostile of Marxism and ignorant of the dialectical method to claim this transition demonstrates an incoherence in Marx's project. These critics are incorrect; as Allen Wood notes, "volume 1 and volume 3 do not give us incompatible theories of prices, but only different

models of commodity exchange, one more basic and abstract, the other more complex and closer to surface phenomena."[137]

If one is to speak about the Marxist sublation of Hegel, then one must include within what is preserved the drive towards greater concreteness, that is, the search for a dynamic and systematic knowledge of totalities which methodologically incorporates within it the logical and historical development of the determinations it contains. This, as has been briefly shown, is one reason for the parallel structure of Marx's tracing out of capital throughout the three volumes of *Capital*, and Hegel's tracing out of the Idea throughout the three books of the *Encyclopedia*. Of course, some (Nicolaus, Althusser) argue that we cannot compare the starting point of a commodity with that of being, for the former is already infinitely more concrete than the latter. While this may be true, the fact that Marx's abstract point of departure is more concrete than Hegel's purely abstract category of being does not change the fact that the movement in both is towards concreteness. The difference in starting point is merely the result of 1) the inversion of Hegel, that is, of the fact that one is dealing with a materialist, and not an idealist, dialectical method and 2) it is also a difference rooted in the fact that the object of study that they are ascending to the concrete to in their respective texts are different, in *Capital* it is the capitalist mode of production, in the *Logic* it is the concept and its concretization throughout history. It is only natural that as a materialist dialectic, one studying the dominant mode of production, Marx's point of departure would already be tenfold times as concrete as Hegel's in his *Logic*. The treatment of both commodities and being nonetheless ensure in each case – because of their abstract character – a contradiction which is temporarily resolved by a new category; for the commodity this new category is money, for being it is determinate being.

Before we conclude, it is important to note a problem which muddies the waters with regards to the 'dialectical laws' Marx and Engels claim Hegel discovered, and which they appropriate without a mystical wrapping. The problem is the following – Hegel never lays down any 'dialectical laws.' What Marx and Engels end up referring to as dialectical laws - the transformation of quantity into quality and vice-versa, the interpenetration or unity and struggle of opposites (law of contradiction), and the negation of the negation – are merely categories (amongst many more) that Hegel's concept goes through in

137. Allen Wood, *Karl Marx*, (London: Routledge & Kegan Paul, 1981), 224.

the logic.[138] For instance, quantity/quality are categories introduced at the end of the 'Logic of Being;' the interpenetration (sometimes referred to as the unity and struggle) of opposites is derived from the 'Logic of Essence,' specifically the chapter on "The Essentialities or Determinations of Reflection," where the categories of identity, difference, opposition, and contradiction are introduced; and the negation of the negation is introduced at the very beginning of the 'Logic of Being,' sometimes referred to as the negation of the negation, other times merely as sublation (*aufhebung*).

Why Engels and Marx refer to these as 'laws' over other Hegelian categories they use (e.g., force/manifestation, coincidence/necessity, causality/reciprocity, shine/essence, part/whole, nodal point, etc.) is unclear. Similarly, why some of Hegel's categories are fully discarded is also left unexamined. Further, Marx and Engels are ready to discard the idea that the categorial development in Hegel's logic has a necessary logical sequence. As Engels says in a letter to Conrad Schmidt, "the transitions from one category or from one contradiction to the next are nearly always arbitrary."[139]

In his 2020 text *Friedrich Engels and the Dialectics of Nature,* Kaan Kangal draws attention to the difficulties presented by this vague appropriation of Hegelian categories. He says,

> *Engels is not concerned with such Logic-internal distinctions; he ignores them. This makes it difficult to locate the precise reference points of his categories in the Hegelian context, which brings about a further difficulty in figuring out the adopted and/or transformed meaning of these categories in Engels' usage.*[140]

Although Kangal is correct about the confusion this lack of clarity brings about, in Engels' defense (which is something Kangal splendidly notes), he is not trying to provide, in this largely unfinished work, anything like a systematic depiction of the Marxist dialectics. The goal of *Dialectics of Nature* is not to provide a clear framework concerning what is kept and how from the Hegelian dialectic.

---

138. These are the three presented in Engels, *Dialectics of Nature*, 63.

139. Friedrich Engels, "Engels to Conrad Schmidt," November 1, 1891. In *Marx-Engels Collected Works*, Vol 49, 286.

140. Kangal, *Friedrich Engels and the Dialectics of Nature*, 134.

However, I do think it is fair to say that the law of the unity and interpenetration of opposites – which is in Hegel the law of contradiction – is always directly present in the unfolding of the concept in Hegel. All categories in Hegel encounter an immanently derived contradiction, which subsequently forces its own overcoming through the development of a new category. One could say that in every 'movement' of the logic contradiction and sublation (negation of the negation) are present. Further, the dialectical transition from quantity to quality and back is itself another way of formulating sublation or the negation of the negation. What is a categorial sublation in Hegel's Logic if not a qualitative leap from one category to another, mediated by an immanently emerging contradiction which arises out of the continuous tarrying (quantitative accumulation) with a concept? Is it not fair to say, then, that if these three categories, or sets of categories, can be found in every movement of Hegel's logic, they duly deserve the qualification of law?

If Marx and Engels are able to point out – as they do – the presence of these laws in nature, human history, and thinking, then they certainly deserve to be called the most general laws of universal interconnection.

Conclusion

As I hope to have shown, the three images Marx and Engels use to describe their relationship with the Hegelian dialectic – inversion, rational kernel, sublation – are all compatible. However, out of the three it is the last one – sublation – which more fully describes the relation. This is simply because to sublate includes within it what is arrived at with the previous two images, and hence, it contains a greater explanatory power than the former two alone. To say that Marxism sublates Hegel is simultaneously to say that the mystical shell which keeps dialectics upside down is discarded, and the rational kernel kept and expanded.

2

Imperialism, Multipolarity, and the International Communist Movement

Christopher Helali[1]

The world is on the verge of a third world war. The ongoing genocide in Gaza, the brutal assault on Lebanon, and the US-EU-NATO imperialist war on Russia have destabilized the world, bringing it ever closer to nuclear confrontation, and ultimately, annihilation. Mirroring this geopolitical crisis is the ongoing struggle and split in the international communist movement over Russia's Special Military Operation, the role of China, the genocide in Gaza, the support for anti-imperialist nations (including Venezuela and Iran), and the emergence of a multipolar world. Ideologically led by the Communist Party of Greece (KKE), mostly Western parties have interpreted the current geopolitical landscape as a rivalry between imperialist powers. This so-called theory of "inter-imperialist wars" confuses the masses, attempting to take a dogmatic and unscientific approach under the banner of "neither Washington, nor Moscow,

1. Christopher Helali is the International Secretary of the American Communist Party.

nor Beijing." However, it is clear that international developments have revealed that a new, more progressive world order is on the horizon.

In *Imperialism, the Highest Stage of Capitalism*, Lenin outlines the main economic aspects of imperialism. It is important to identify them so that they help make informed ideological positions about our contemporary situation. This is ultimately the scientific outlook that we must stress. The five main economic traits of imperialism are as follows:

1. The concentration of production and capital reach heights that give rise to monopolies, which play a decisive and outsized role in economic life.
2. The fusion of banking and industrial capital gives rise to finance capital and the financial oligarchy.
3. The export of capital, unlike the export of goods, acquires special importance.
4. International monopoly groups are formed that divide up the world among themselves.
5. The world is divided and distributed among the major capitalist powers.[2]

We must then juxtapose this definition with the so-called illustration of the "imperialist pyramid" that was presented by the former General Secretary of the Communist Party of Greece (KKE), Aleka Papariga. She writes,

> *Today there are few countries which are at the summit, in the first positions of the international imperialist system (it is illustrated with the schema of a pyramid in order to show the various levels occupied by the capitalist countries) a handful of countries one could say according to the Leninist expression. But this does not mean that all the other capitalist countries are victims of the powerful capitalist states, that the bourgeois class of most countries has submitted to the pressure, despite its general interest that it has been corrupted. It does not mean that the struggle of the peoples must be directed against Germany in Europe while in the American continent it must have a direction merely against the US. It is*

2. V. I. Lenin, *Imperialism, the Highest Stage of Capitalism,* https://www.marxists.org/archive/lenin/works/1916/imp-hsc/ch07.htm.

> *not a coincidence that the opportunists in Greece present Brazil and Argentina as positive examples for the overcoming of the crisis, that they extol the policy of Obama. Their persistence in denying the existence of the imperialist pyramid namely the existence of international imperialist system (talking about a very small number of countries which can be characterized imperialist mainly due to their hegemonic position and their ability to decide on the launching of a local or general war) is not at all accidental or a product of a mistaken view but conscious. Their willingness to undertake responsibilities in a bourgeois government to manage the crisis arises from this.*[3]

This definition seeks to expand Lenin's definition of imperialism, conflating it with merely having a capitalist mode of production or, in the case of socialist countries, having any economic relations with a capitalist country.

> *The number of states is increasing which are regional powers, satellites of strong imperialist powers, countries which play a particular role in the alliance and partnership policy of the various powers in the pyramid. The inter-imperialist contradictions are in effect in every form of alliance, and all these multi-facetted relations, which embrace every capitalist country in the world without exception, constitute the imperialist pyramid.*[4]

The KKE is effectively saying that every country in the world is a constitutive part of the imperialist pyramid. While it is clear that some powers are greater imperialist powers according to the pyramid, every country in the pyramid is to a greater or lesser extent, imperialist. No exception is made for those countries which are socialist or those that are fighting against Western hegemony. Aleka Papariga says, "Today the number of imperialist centres has increased, while new forms of alliance have also emerged such as the alliance centred on Russia, the alliance of Shanghai, the alliance of Brazil, Russia, India, China, South Africa (BRICS), the alliance of the countries of Latin America ALBA, MERCOSUR etc." This idea that somehow all of these countries are

4. International Relations Section of the CC of the KKE, "The Leninist approach of the KKE on imperialism and imperialist pyramid," https://inter.kke.gr/en/articles/The-Leninist-approach-of-the-KKE-on-imperialism-and-imperialist-pyramid/.

imperialist compared to the USA and the European Union, even economically speaking, is categorically wrong.

From the ziggurats of Mesopotamia to the Egyptian and Mesoamerican pyramids, these structures have long symbolized hierarchies of power and authority. For over a century, pyramids have been a feature of revolutionary art and literature. Early uses include the caricature of the capitalist system entitled "Pyramid of Capitalist System" published by the Industrial Workers of the World. These classic images show the working and toiling masses holding up an entire structure that has different levels which say "we eat for you," "we shoot at you," "we fool you," and "we rule you." However, it is clear that the pyramid's base supports the top in a way which is not voluntary but imposed. The Marxist economist Paul Baran writes about the capitalist pyramid in his classic book, *The Political Economy of Growth*. In it he writes,

> *The momentous movement to do away with the entire edifice of imperialism, to put an end to the backwardness and prostration of the overwhelming majority of the human race, would by itself have created considerable consternation in the ruling class of the United States and other capitalist countries sitting on top of the imperialist pyramid. What has transformed this consternation into a state of near-panic, however, is the historic confluence of the restiveness in the underdeveloped countries with the spectacular advance and expansion of the world's socialist camp. The military performance of the Soviet Union during the war and the rapid recovery of its war-ravaged economy provided the final proof of the strength and viability of a socialist society. There can no longer remain any doubt that a socio-economic system based on comprehensive economic planning can function, grow, and withstand the most trying historical tests - without the benefits of private enterprise and without the institution of private property in the means of production. What is more, a large number of dependent countries went through a social revolution after the war, and thus entered the road to rapid economic and social progress. Eastern and Southeastern Europe, and even more importantly China, dropped out of the orbit of world capitalism and became sources of encouragement and inspiration to all other colonial and dependent countries.*[5]

5. Paul A. Baran, *The Political Economy of Growth,* (New York: Penguin Books, 1962), 117-118.

Baran's use of imperialist pyramid here is quite different than that presented by the KKE. Here, the imperialist pyramid is a pyramid that has at its peak the United States and other capitalist countries. However, beyond the pyramid's boundaries are the socialist countries which have "dropped out of the orbit of world capitalism." However, the KKE does not acknowledge this. In fact, as Joti Brar of the Communist Party of Great Britain (Marxist Leninist) notes, "according to the theory of the 'pyramid', every country that engages in trade, from Great Britain and France to Cuba and the DPRK, is guilty of imperialism – the various states of the world simply occupying different levels on the great global 'pyramid' of imperialism."[6] This is because, according to Brar, the KKE "bases itself on the incorrect assertion that *every economy in which trade takes place and commodities are produced is a capitalist economy*."[7] Thus, "According to this travesty of Marxism, the contradictions between the various countries are all 'interimperialist', to be explained by their competing imperialist interests and the desire to displace one another from the top of the 'pyramid' of world imperialism. Such a definition, we should note, includes within its scope even the Soviet Union of J.V. Stalin's time."[8] To conclude, Brar notes that the KKE's so-called "Leninist" pyramid is actually a reinvention of Trotskyism.

Regarding China in particular, the Communist Party of Greece is clear about China's position in the imperialist pyramid. Makis Papadopoulos, a member of the Central Committee of KKE and the one responsible for the Ideology Department, was quoted in an interview saying, "the Chinese economy is motivated from the capitalistic profits and not from the social needs. China, today, bears the characteristics of a strong state of monopoly capitalism, a creditor state and a leading force in the imperialist pyramid."[9] This completely rejects the tremendous success China has had in eradicating extreme poverty and developing an economy that serves the needs of people rather than profit.

For another theoretical rejection of the imperialist pyramid see, Gabriel Gonçalves Martinez, "The Leninist Theory of Imperialism and Misconceptions of the 'Imperialist Pyramid' Theory," *Hampton Institute*, (February 29, 2024), https://www.hamptonthink.org/read/the-leninist-theory-of-imperialism-and-the-misconceptions-of-the-imperialist-pyramid-theory.

7. *Ibid.*

8. *Ibid.*

9. International Communist Press, "The communists need to struggle decisively and methodologically against imperialism," (June 1, 2016), https://icp.sol.org.tr/interviews/communists-need-struggle-decisively-and-methodologically-againts-imperialism.

Sadly, the ongoing domestic crisis in Greece surrounding the Chinese ownership/management of the port of Piraeus has led the KKE down a path of Sinophobia and chauvinism.

The only correct view regarding imperialism today is to see the United States, European Union, and the NATO alliance, including their allies and lackeys (Zionist entity, Morocco, South Korea, Japan, Taiwan, Australia, New Zealand, etc.) as constituting one imperialist axis. Combined, they represent the real unipolar, hegemonic, and imperialist power in the world today. However, this power is declining. The rise of BRICS, the SCO, BRI, and other politico-economic projects seeks to challenge the decades long unipolar world order. This is the birth of a multipolar world and it is the duty of every anti-imperialist to stand against US-EU-NATO imperialism.

A true Marxist-Leninist perspective on the emerging multipolar world should be centered on the progressive nature of this new world order. The American Communist Party does not see multipolarity as the solution itself but as a progressive and strategic step for the peoples of the world to have more freedom than under the unipolar world of US-EU-NATO hegemony. It is this freedom and space that will allow social movements to thrive and develop new economic forms as we are already seeing in different countries around the world. The American Communist Party rejects the theory of the so-called "imperialist pyramid" and sees this as an attempt to obfuscate the theory of imperialism. The American Communist Party recognizes the progressive role played by Russia, China, DPRK, Iran, Yemen, Venezuela, Nicaragua, Cuba, and other socialist and anti-imperialist countries in the world today.

The American Communist Party, true to the historical legacy of Marxism-Leninism, understands the importance of uniting forces that are dedicated to anti-imperialism. Our historical duty is to unceasingly confront US-EU-NATO imperialism and all of its proxies around the world. This represents the greatest threat to humanity today. Given the various fronts and lines of demarcation facing the international communist and workers' movement today, we must sharpen our ideological positions and prepare for a prolonged ideological war with those who choose revisionism, opportunism, and factionalism. Our strategy is to be united in confronting imperialism under the banner of anti-imperialism. Today, the World Anti-Imperialist Platform is greatest force capable of uniting the forces of anti-imperialism. We must heighten and deepen our collective struggle against the US-EU-NATO

imperialist axis, the greatest threat to world peace. Only through the final confrontation with Euro-Atlantic imperialism can we open the possibility of constructing socialism-communism and building a lasting world peace for all.

3

Snakes in the Grass: The Fake Left, the 2024 Elections and Identity Politics

Danny Shaw[1]

The following article brings together several chapters from Danny Shaw's forthcoming book Social Death: The Fake Left, Identity Politics and Cancel Culture.

As the 2024 presidential elections approach, should we — the vast majority, the 99 percent, the working-class voters — be more concerned with who is the lesser of two evils or who is the more effective of two evils? Do we want to solidify the genocide in Gaza, the decimation of the Middle East and the Western capitalist-imperialist project or hasten its demise? This article addresses how the Democrats remain politically hegemonic and use wokeness

---

1. Danny Shaw is a Professor of Latin American Studies at various City University New York institutions. He is a Director of the International Department of the Midwestern Marx Institute and a member of the American Communist Party Political Bureau, where he serves in the International and Educational Departments. He is the author of *This is Genocide! (2024)*.

in similar ways to the purportedly anti-establishment "movement left" to shore up anti-class politics and reproduce the status quo. It is the conclusion of Red America that both parties of the dictatorship of capital are dangerous but that the Democratic Party represents the more effective danger.

This essay will then show how certain segments of the left have adopted the snake-in-the-grass politics of the Democrats, relying on hollow virtue-signaling, or identity politics and cancel culture, as our lives as workers plummet more every day. The NGO left, or the fake or compatible left — toeing the line of the liberals who exercise political and ideological hegemony in the West — promotes a brand of anti-dialectical identity politics blurring the line between the left and the liberals. Only a determined return to a class politics that can unite us instead of dividing us along the myriad lines of identity is a winning strategy for all of us who have been denied our slice of the American dream.

Snakes in the Grass

Italian historian Domenico Losurdo's *Liberalism: A Counter-History* makes the argument that liberalism has long been the ruling class's preferred ideology. Liberalism provides cover for brutal, colonial content with a glossy, "democratic," enlightened form. As one year plus of the Gaza genocide now expands into the West Bank and Lebanon, Haaretz and CNN can still publish headlines where they are the good guys, and the native Arabs are the despotic "terrorists." Liberalism allows the capitalist elite to devour markets, resources and surplus labor across the globe, all in the name of "human rights" and "humanitarianism." In *Socialism: Utopian and Scientific*, Frederick Engels cites Henri de Saint-Simon, the early French utopian socialist who "points out how everywhere [under capitalism] the most pitiful reality corresponds with the most most high-sounding phrases."[2] Social critic Chris Hedges examines the case of Libya and Western "humanitarian imperialism."[3] The colonial West invoked the R2P, Right to Protect, to justify their bombing, dismemberment and recolonization of what was at the time of the 2011 War on Libya the richest country in Africa. Though Losurdo stops his study at World War I, there are

chapters yet to be written about liberalism as the preferred ideology of the imperialists a century later. Syria, Nicaragua, Russia and beyond are in the crosshairs of woke imperialism. In fact, every sovereign or semi-sovereign state fights an everyday battle against ever-intensifying imperialist encroachment. The woke agenda has become part and parcel of the cultural and ideological machinery of imperialism. It is but one front in hybrid wars waged on Global South states and their quest for true independence.

Liberalism allows the snakes in the grass to present themselves as polished and civilized. The Trump-supporting conservative today, while generally a dedicated mouthpiece of capitalism and imperialism, is characteristically not as refined and says what they really think. It is enough to remember Prime Minister Emmanuel Macron welcoming the U.S. "back as a cooperative leader of the free world" when Joe Biden was inaugurated president in 2020.[4] The capitalist class always prefers bourgeois democracy, that is the semblance of democracy, to any form of proto-fascism which reveals its true nature. The sleek Barack Obama was the perfect antidote to the graceless George Bush Junior. I was in Western Africa in Cape Verde at the time Obama won and it felt like all of Africa was pregnant with hope that at last the United States had moved beyond imperialism because the son of a Kenyan was president. How wrong they were then. And how wrong identity politics is now. On Tuesday November 4th 2008, Barack Obama won the elections, and overnight our anti-war marches for Iraq and Afghanistan went from having millions involved across the country to hundreds. In Obama, the ruling class had found their antidote to class politics – identity politics. As Professor Christian Parenti and journalist Chris Hedges have shown us "Wokeness Kills Class Politics and Empowers Empire."[5]

Kamala the Fox

The essence of liberalism is to project the appearance of real change while ensuring that power remains concentrated in the same corporate elite hands. Liberalism is close-minded and non-dialectical at its core because it seeks to

4. *CNBC*. "America is back with Biden, France's Macron says." June 12 2021
5. The Chris Hedges YouTube Channel (Sep 25, 2024) "Wokeness Kills Class Politics and Empowers Empire (w/ Christian Parenti)" https://www.youtube.com/watch?app=desktop&v=xTpeQ4V-YeY&t=116s

preserve the present order. It is the fox Malcolm X warned us about who still "ends up with the lambchop on his plate."[6] Malcolm went on to explain who liberals are at their core: "The Negro community is controlled by the white liberal who usually poses as the friend of the negro, who actually differs from the white conservative in the same way that the fox differs from the wolf.[7] Their appetite is the same. Their motives are the same. It is only their mannerisms and methods that differ."

Kamala Harris is representative of the foxes the Democratic Party establishment parades out in front of its faithful. Harris showed moral outrage during the September 10th presidential debate when Trump accused Haitians and other immigrants of streaming across the border and "eating dogs and cats." What ABC and the rest of the legacy media ignored is the fact that as Trump spouts his customary ignorant xenophobia, the Biden-Harris administration is invading and occupying Haiti for the fourth time in the past century. Trump Derangement Syndrome is everywhere, preventing Democratic voters from seeing that Biden's health has dramatically deteriorated since he first assumed office.[8] The liberals can't sleep at night because of how "disgusting" they see Trump as being, and indeed he, his worldview and politics are anti-worker. Meanwhile, the Democratic administration in power is paying the neoliberal Kenyan government of William Ruto $333 million dollars to send mercenaries to invade, occupy and keep Haiti subjugated as a neocolony, because they could not get U.S. public opinion behind another invasion using U.S. boots on the ground.[9] This is but one example of how shallow, liberal moral outrage often masks far more dastardly and sophisticated crimes.

As political analyst Dr. Wilmer Leon discussed on his weekly show "Connecting the Dots," the Democrats specialize in " opportunistic outrage and morality." The liberal obsesses over and warns of Project 2025 as Project 2023 and 2024, aka Project Genocide, intensifies, as does the censorship and repression in the West to justify the forever wars against Palestine, the Middle East, China, Russia and any other country that does not cower before U.S. unipolar domination. Meanwhile at home, one in four of us does not have

work.[10] Our children and siblings are dying of overdoses at the highest rates humanity has ever seen.[11] Inflation, artificial intelligence and automation continue to bulldoze over working class lives, sparking a strike by the 50,000-member-strong International Longshoremen's Association.[12]

High-and-Mighty Hillary's Disdain for Workers

Let's return to Hillary Clinton's infamous "basket of deplorables" quote from the 2016 presidential campaign. At one of her fundraisers in New York City, where plates of food sold for $33,000, Clinton told us how she feels about tens of millions of Americans:[13] *CT Post*. August 9, 2016.

> *"You know, to just be grossly generalistic, you could put half of Trump's supporters into what I call the basket of deplorables. Right? The racist, sexist, homophobic, xenophobic, Islamaphobic—you name it. And unfortunately there are people like that. And he [Trump] has lifted them up."*

The butcher of Libya and coup-monger of Honduras, and promotor of other foreign coups, has a right to sermonize us?

A faithful supporter of genocide, aka a Zionist, lectures us on Islamophobia?

Hillary Clinton thinks she is better than you and me. At Georgetown and Yale and throughout their careers, the Clintons mingled with the Bushes, Trumps and other ruling class figures.[14] *Vanity Fair*. July 14, 2017. Liberals lecture about freeing Tibet, Hong Kong and Taiwan but what have they done for Houston, Cincinnati, and Brockton? "Freedom" in the (neo)liberal sense is the freedom of foxes to roam among chickens. All of the fancy, "globalist" (to use the Trumpian term, Marxists say imperialism) dogma seeks to "free" up any

corner of the globe from Zimbabwe, to Bolivia to Vietnam, for further capitalist penetration.

What a disdainful view this career politician has of millions of our class peers.

Trump, a showman and hustler of the oligarchical sort, along with his advisors who are not far behind, are ingenious to call her "Crooked Hillary." "Swamp," "deep state," and "Sleepy Joe" are sly, populist slang words that cut to the heart of liberal hypocrisy. No wonder my cousins talk about Trump like he is coming to their cul-de-sac in rural Manchester, New Hampshire to drink with them this weekend. He is their hero because he says what they feel. The problem is that this false prophet has tapped into their sincere anti-establishmentarianism with more racism, homophobia, xenophobia and misogyny designed to scapegoat and divide.

Sociology 101 teaches us that we are merely social creatures shaped by our social environment. No baby emerged from the womb saying "We're gonna put watchtowers on the border with Mexico and put the mafia in them to shoot the Mexican illegals." But this is exactly what we hear in Ohio and Indiana, and in "Trump Country" New York and Massachusetts. It is predictable. Study the means of communication. An uncritical populace consumes the media which manufactures consent. The nicest family man on earth sees his exploited neighbors to the south as "migrants" and "cockroaches," as threats and as their enemy. Trump, the dog whistler, knows exactly what he is doing, and Democrats bring him tens of millions of voters on a tray.

Are the liberal-left, coastal elites just going to abandon "Trump Country" to our class enemies? Have we forgotten how to speak to our neighbors, teammates and coworkers and how to organize them through local struggles? Carlos Garrido's book *The Purity Fetish and the Crisis of Western Marxism* was what first attracted this lifetime "leftist" to head (mid) west. I put the term "left" in quotations at various points of this essay because I no longer recognize certain parts or expressions of it. Garrido quips: "For these Marxists the traditional communist slogan is no longer "workers and oppressed people of the world unite," it is "socially enlightened workers and oppressed people of the world unite."[15] He cites Lenin who reminds us: "one can and must begin to build socialism, not with abstract human material, or with human material specially

15. Carlos Garrido, *The Purity Fetish and the Crisis of Western Marxism* (Dubuque: Midwestern Marx Publishing Press, 2023).

prepared by us, but with the human material bequeathed to us by capitalism."[16] The cancel culture left has disgraced itself in the eyes of the masses of workers. If we cannot find common cause to organize with our "deplorable" sisters and brothers, why call ourselves Marxists? Calling ourselves charlatans, dilettantes and Clintonites would be more accurate.

There is a psychology chestnut or proverb that comes into play here; all obnoxiousness is a cry for help. Poor white people have as little control over the mainstream media, educational curriculum, family apparatus and religious institutions as do working-class black and brown people.

There are 12 LGBTQ billionaries in the world. There are 17 black billionaires in the world, mostly from Nigeria and the United States.[17] There are 369 women billionaires in the world, almost all from the West or the colonizing countries.[18] There are no poor white billionaires.

Trump is our enemy. "Trump Country" is not.

Trump the Wolf

Trump's hateful rhetoric is not for liberals nor for us, the highly politically-literate, critical readers of this journal, , but rather it is for his base. Trump uses his billions to speak from a pulpit of class privilege to his voters, who are largely down-and-out, high-school-educated, working-class whites, and easy prey for his divisive, anti-worker scapegoating and conspiracy theories. Instead of correctly analyzing these class contradictions, liberalism in both its bourgeois and left iterations, has turned its back on the post-industrial working-class. "Trump Country" as the Midwest and other "deplorable" places are now often referred to, is nothing more than the inevitable product of neoliberal arrogance and economic neglect. These class contradictions, in both their bourgeois and petit-bourgeois manifestations, are partly what called the American Communist Party (ACP) into existence in June of 2024. The rejects,

castaways and “deplorables” of liberalism and leftism demand their day in the sun too.[19]

While *Red America* rejects the demagoguery and anti-poor worldview of the MAGA movement, on October 1st vice-presidential hopeful J.D. Vance said what has never been said on CBS news, a network owned by the billionaire, zionist Redstone family (originally the Rothsteins).[20] Vance questioned Russiagate, the Democratic Party’s handling of COVID and the big-tech censorship that has stunted the active thinking of America. His opponent, Governor Tim Walz of Minnesota, a mouthpiece of liberalism who has paid his dues to rise up in the ranks, had no response to these points.

Liberals feel most comfortable wading in surface-level or symbolic politics, afraid to go deeper, less they inconvenience their consciences and lives. The more privileged classes will never see what is behind a Biden or Harris because it would impact their interests. How do we reach everyday Americans when they have been so thoroughly conditioned to think a certain way? The shadowbans, demonetization and algorithmic censorship around us tightens every day to make sure liberals and conservatives remain right where they are. It was [21] the U.S. company Oracle and the House of Representatives that suspended hundreds of thousands of TikTok accounts for political content that was not favorable to empire.[22] Any account today that critiques the U.S.-NATO proxy war against Russia and its geopolitical interests is being taken off social media. @DD_Geopolitics is one of the latest victims.[23]

Though they hide behind their woke appearance, the Democratic Party today is the party of war and censorship. The GOP is by no means any less guilty, but

this article addresses a fundamental question: are the Republicans as effective? This is not a personal slight against the millions of Americans who identify as liberals or conservatives, who are indeed the vast majority of us. These everyday "liberals" and conservatives," including my family members, are good human beings on a personal level but are severely misinformed. Malcolm X reminded us: "Don't be in a hurry to condemn [someone] because he doesn't do what you do or think as you think or as fast. There was a time when you didn't know what you know today."

The More Effective Evil

This analysis is what led the late Executive Editor of *Black Agenda Repor*t, Glen Ford, to call Obama not the lesser of two evils, but "the more effective of two evils."[24] Ford wrote:

> *"No matter how much evil Barack Obama actually accomplished during his presidency, people who call themselves leftists insist on dubbing him the Lesser Evil. Not only is Obama not given proper credit for out-evil-ing George Bush, domestically and internationally, but the First Black President is awarded positive grades for his intentions versus the presumed intentions of Republicans. This is psycho-babble, not analysis. No real Left would engage in it."*

The liberal is ensnared by individual oppression and loses sight of the big, anti-capitalist picture. They insist that we have no choice and "must vote for Kamala or you're a fascist." Without nuance and a dialectical understanding, liberal analysis ignores the creeping fascism that surrounds us everywhere.

Liberalism relies on the political mouthpieces they themselves have groomed. Trump is a clumsy, untrained loose cannon. In fact, this is his appeal. At times, he tells it exactly like it is. Trump told the world what we all knew but had never heard from the centers of power themselves: the war on Venezuela is nothing more than another war for oil.[25] Imagine if other presidents told the

---

24. Glen Ford, "Why Barack Obama is the More Effective Evil," *Black Agenda Report* March 21 2012.

25. @Acyn. X. (June 10 2023) "Trump: When I left, Venezuela was ready to collapse. We would have taken it over, we would have gotten all that oil." https://x.com/Acyn/status/1667682589333659648.

truth in such a fashion? What impressionable young patriot would ever sign up for the U.S. military? The truth would throw into question the legitimacy of the entire system. Well-known and censored social media personality and organic intellectual Eddie Liger Smith explores the difference between Trump and a more polished, bewitching Obama who waged war on Honduras, Libya, Syria and beyond, but always claimed to do so in the name of democracy.[26] Precisely because the national wrestling champion Smith and others of his generation reached millions with an anti-NATO and anti-genocide message, the ruling class has censored them.

Trump disobeyed the cardinal rules of bourgeois democracy and questioned the results and legitimacy of the system in 2020, throwing the entire system into crisis. His refusal to peacefully and diplomatically pass on power as the Obamas had done in 2017, when Trump and his wife Melania moved into the White House, is an example of how he is "unpresidential" from an elite perspective. Homelessness, unemployment and budget cuts are fair game for the capitalists, as are genocides, invasions and the squandering of hundreds of billions on foreign aggression. But being a sore loser and not accepting the results of the elections are a grave transgression. That is why both Walz and Vance have received strict instructions to pretend to be civil and nice to each other. Trump's intransigence inspired the January 6th storming of Congress which as clumsy as it was could be analyzed as a type of coup attempt, albeit a pathetic one. Fox News declared Biden the winner in 2020 before any of the liberal outlets did.[27] The ruling class was solidly united behind Biden, as the "Weekend-at-Bernie's" puppet zombie they needed.[28]

Trump marches to the beat of his own transactional drum. He pursues his own interests. The U.S.-NATO Proxy War on Russia is the heart and soul of the Biden-Harris White House's foreign policy. The Kiel Institute for the World Economy tracks the total amount of military support the EU countries and the U.S. have sent to Ukraine which sits at about $100 billion dollars.[29] Imagine Trump, with his bloated ego and opportunistic nature, daring to declare that he will end this proxy war on Russia before he is even elected president again. The

---

29. *Kiel Institution For The World Economy*. "Ukraine Support Tracker." June 30 2024

two assassination attempts on his life have to be analyzed in this context. In fact the second would-be assassin admitted that "the Ukraine War," that is the liberals' propagandized version of the U.S.-NATO-Ukrainian ruling class war on Russia, motivated him to try to take out Trump. Trump would prefer to build 10 of his own hotels in Pyongyang and Moscow rather than see these handsome profits squandered in the coffers of the Military Industrial Complex. It is not that Trump is in any way morally superior to any other candidate, but rather that his style objectively clashes with the needs of the ruling class who are accustomed to grooming their own hand-selected politicians. This analysis has to be balanced with Trump's threats against women reproductive rights, to deport masses of immigrants and to use the military to repress leftist protestors. Though Trump has a penchant for such bombastic statements and is often bluffing, every "minority" in the U.S. has a right to feel under the gun if Trump again wins the presidency.

America's number one addiction is "The American Dream." From an internationalist perspective, this mentality and ideology is called "American Exceptionalism." To think that a Barack Obama or Kamala Harris became the CEO's of the U.S. empire through simple hard work is the illusion the liberals feed us. Trump did not pay his dues and genuflect before the real power structure. Though a sleazy, real-estate mogul born with a silver spoon in his mouth, Trump did not work his way up through the traditional political circles. An economic insider, he became a political outsider. An economic swamp monster, he dared challenge the unchallengeable, the political swamp. His boldness and appearance of integrity calling out the fake, opportunist politicians struck a chord across working-class America. The actor and conman, elevated by self-interested TV networks, opportunistically usurped the voice of the common American and his life-long resentments against the ruling elites like Hillary and Bill Clinton. How can those whose life savings are roughly 500,000 times less than Trump, see in Trump their savior?[30] (I arrived at this math by dividing Trump's net worth, roughly $4,000,000,000 dollars by the median amount of savings American families have in their bank accounts which is $8,000.) Do any of us honestly think that Trump, Governor Burgum of North Dakota or Governor Pritzker of Illinois would ever sit down with us and actually feel any concern for our American problems?[31] For so many of our

30. Joyce Bertilson, "Key Statistics on Average Savings Account Balances," *Market Watch* September 6 2024.

class to embrace filthy rich billionaires, imagine how much we must hate the traditional politicians.

Trump is not a true leader; he is a huckster. A true leader, like Fidel Castro, Rafael Correa or Joseph Stalin, would have been there, no matter how right or wrong they were, in the trenches on January 6th. Trump sent his followers off to battle and went to play golf.

The Abandonment of the Working Class

The liberal left has abandoned so many of us to the detriment of class unity.

The pro-NAFTA, highly educated liberal intelligentsia mocked and canceled the poor whites of Appalachia and the opioid addicts of Fitchburg, MA, resulting in the MAGA insurrection among "the deplorables" that the liberal establishment now excoriates. Though I am 100 percent east coast, I identified with the rest of the castaways and threw my lot in with the deplorables of the Midwest and the rest of the U.S. This was what brought me (mid)west to the Midwestern Marx Institute and eventually even more midwest to the American Communist Party. Large swaths of the left throw away the baby with the bathwater, ignoring the popular, anti-capitalist rage contained within the MAGA base.[32] It is into this void that the ACP seeks to strategically place itself to absorb this righteous anger and channel it against the system. While we could never embrace MAGA politics, we refuse to condemn and turn our backs on MAGA's base, millions of Americans who thrive for economic equality and justice.

General Secretary of the American Communist Party Haz Al-Din explains he and anti-imperialist social media influencer Jackson Hinkle's creative success in outsmarting algorithms and reaching everyday workers who identify as MAGA: "We have a saying, as MAGA communists, which is that when you go to McDonald's, you don't go for the clown, you go for the burger. Trump is the mascot of the movement."[33] Their approach, which reached tens of millions, mostly through Hinkle's twitter account which has 2.8 million followers, was designed to be offensive to liberals and their woke world views so as to win

32. Convergence Magazine. *YouTube*. "Marx over MAGA: The Socialist Left in the Fight Against MAGA. Oct 16, 2024. https://www.youtube.com/watch?v=p3HziF580Ek

over MAGA loyalists who were stuck in the cultural war but reject the liberal elites. Tongue in cheek and flippant, the duo even chided that mouthpieces of the woke left should be "deported." Where else can we "deplorables" turn, if the woke left thinks they are better than us? Both founders of the ACP, they pushed back against the spectrum of liberal leftists who they felt were playing right into the hands of the Scapegoater and Demagogue in Chief.

The American Communist Party aspires to replace the Misguider-in-Chief who has effectively cashed in on the social alienation that so many working-class voters feel. Because Trump and his pro-billionaire politics cannot concretely resolve any of our people's needs or demands, in 2028 or whenever, the pendulum will swing back to the liberal wing of the ruling class who will then cash in on Trump's failures. How do we get our people off the merry-go-round of the two parties of capital? Keenly aware of the dead-end nature of both wings of the ruling class, we seek to reroute the popular frustrations and rage towards an effective struggle to bury liberalism, capitalism and all its billionaires once and for all.

The Left-Liberal Slippery Slope and its Slovens

It is important that we understand our number one enemy through and through. It is the opinion of Red America that both Trump and Kamala are bad for the working man and woman of the United States, but that liberalism is our greatest threat because it lulls us deeper to sleep. The wolf remains outside of our circles, distant and recognizable, but the fox is crafty and able to infiltrate in beguiling ways. This essay will now concern itself with what happens when this devious enemy and its ideological expressions have seeped into "the movement." As a 30-year veteran of "the left," I no longer recognize a movement I helped build beginning in the 1990's. Nonprofits, Gender Identity Politics and cancel culture are three 21st century pillars of a new liberalism that is eating the left from within.

Never did I think the day would arrive when the left had more in common with the Kamalas and Hillaries and turned its back on the average working man and woman. This is what fuels the right-wing media's ability to pigeonhole and manipulate the movement. Despite the offensive nature of the comments, it is important to understand the perception of millions of American workers who

now see the left as "nothing more than blue-haired, matcha-latte drinking college students and privileged bubble boys who want to be women."[34] ACP Secretary of Education Carlos Garrido takes on the need for an authentic change in our organizing culture in *Why We Need American Marxism*, a must read for anyone in "the movement" who knows our salvation does not lie in Havana but in Harlan County, Kentucky and not in Caracas but in Cleveland, Ohio. How we wrest this movement back from the identity-obsessed, nonprofit foundations and alien liberal cancel culture is a question American Marxists can no longer delay.

The Trillion Dollar Nonprofit Noose

Fredrik DeBoer's *How Elites Ate the Social Justice Movement* takes on the burning question of "why so much of the political energy in this country gets diverted into affective and symbolic issues."[35] The former University of Rhode Island student organizer offers an overview of the George Floyd and Occupy organizing moments which mobilized millions but effected few if any real changes. DeBoer's new book addresses why "then, very little happened." DeBoer's thesis is that "elite capture" wrested control over our movement.

His fourth chapter "The Non-Profit Industrial Complex" (NPIC) builds on a necessary read *The Revolution will not be Funded*.[36] DeBoer dissects the deleterious effect that nonprofits have on organizing. Nonprofits grew out of the deregulation of the 1970's and Reaganomics of the 1980's which gutted the public sector. There are five main points the social critic raises:

1) Nonprofits siphon off revolutionary talent and channel it in a reformist direction. In the author's words, "It's the nature of nonprofits to take radicals and make them bureaucrats."

2) Quoting the National Association of Nonprofit Organizations and Executives, the author reminds us that "a successful nonprofit knows that their #1 Customer

34. This is what I have heard from many truck drivers, used car salesmen and other workers. The quotes are directly from them and from conversations we have had.

35. Frederick Deboer, "*How Elites Ate the Social Justice Movement.* New York: Simon and Schuster." 2023.

36. INCITE! *Women of Color Against Violence. The Revolution Will Not Be Funded: Beyond the Non-Profit Industrial Complex*. Duke University Press: 2017.

is their donors, period." An adverse class oversees our social prerogatives, budgets and tactics. If we speak up too loudly about serving the people, we risk our jobs and grants.

3) A high, undisclosed percentage of money goes to the maintenance and bureaucracy of an estimated 1.5 million nonprofits. A lower percentage of donations actually reach the "targets" or "shareholders," to use nonprofit doublespeak.

4) As the nonprofit Common Dreams explains, or admits, "the purpose of the nonprofit sector writ large is not to solve social problems—it is to perpetuate them." If the grant writers, Board of Directors or Executive Directors were to admit a problem was solved, though this is materially impossible under capitalism, how would they continue to justify the financing of their jobs? It is in their interest to only superficially address the opioid pandemic,[37] the random shootings crisis[38] or domestic violence.[39] These problems are intrinsic to capitalism. Band-aid liberal solutions do not touch the underlying causes of social crisis. This is by definition.

5) Nonprofits exist as tax havens for the rich, not as genuine instruments of working-class power. The women-owned executive search firm Battalia Winston asserts that 87 percent of nonprofit execs were white as of 2017. "Whiteness" is not just a racial measure in the United States; it is also a class measure. The bourgeoisie has captured the nonprofit world. There are more "member-led" grassroots groups who are ignored by the foundations precisely because they pursue social objectives independent of the NPIC.

The $1 Trillion NGO Republic

As of 2019, the Urban Institute's National Center for Charitable Statistics documented 1.5 million nonprofits in the U.S. registered with the Internal Revenue Services (IRS). These nonprofits spent a combined $1 trillion dollars, which DeBoer calculates as 5.5 percent of the U.S. Gross Domestic Product.

39. Daniel Shaw, "To Live Among Broken Men: Theorizing Rape and Incest," *Hampton Institute* July 26 2016.

The Non-Profit Industrial Complex employs more Americans "in terms of wages than finance, retail and food service."[40] Beginning circa 1973, neoliberalism reduced the number of unionized jobs, displaced many of the social services and other work done by this sector and rolled back, took back and cut back the safety net of welfare capitalism. The result was the proliferation of the non-profit sector which became the main site for social services and community organizing. This replaced a proud proletarian history of independent organizing, such as the Communist Party of the United States of America (the CPUSA) in the 1930's and the Black Panthers and Rainbow Coalition of the late 60's.

Parenti exposes the Professional Managerial Class (PMC) "tasked with managing a hierarchy, and protected by new [woke] armor in a Hobbsian war of all against all for posts and material incentives."[41] As organizers, are we aware of the disproportionate influence these professional activists have, backed by astronomical amounts of money? Contrast this with the resources that we have as everyday working-class volunteers. The liberal wing of the establishment uses their PMC agents to set agendas and priorities, and most importantly keep us divided into subcultures at war with one another.

The organizer and author DeBoer distrusts this "activist culture." In balanced writing, overly fair to liberals, showing some of his own liberalism (he was published by Simon and Schuster after all), he denounces that "expressions are often the ends themselves. Canceling, or making critiques or accusations with the intent of provoking widespread personal and professional shunning, is an example of where the political action stops at the level of expression. 'MeTooing' proved to be perhaps the most powerful version of canceling, and individual targets have had their public personae effectively vaporized."[42] For Harvey Weinstein and R. Kelly this makes sense. What about everyday men who knew patriarchy but never knew Hollywood? Did losing their jobs, social media or reputation help them transcend their mistakes? Are people traumatized from living in this dehumanizing society acting out their traumas on people who look like their enemies? How can comrades and fellow travelers

be held accountable without forgetting that they are human? Who is measuring this? Nonprofits who receive money according to their "Transformative Justice" (TJ) and "Restorative Justice" (RJ) results?

Is the point to isolate us into more acting out or to grow in community? Cancel culture isolates and atomizes; Marxist dialectical culture creates community and a way back.

Noah Khrachvik, Organizing Director of the Midwestern Marx Institute (MMI), levels the same criticisms against what he calls "the activist brain." The Cleveland-based carpenter and Marxist theorist and teacher challenges the students of the Institute, posing necessary questions: Are we seeking to please the hundreds of us in online or in-person organizing circles or win over the tens of millions who do not know about, much less relate to, these small circles? Khrachvik calls them out in a forthcoming piece from the Journal of American Social Sciences called "Against the Fake Left." Many at the MMI, Infrared and the joint project of the ACP consider themselves as refugees, rejects and survivors of the left, more than traditional activists.[43]. It was precisely the liberal-left slope evaluated here that pushed us away. When we sought to work with the established left, they dismissed us as "Pat Socs" and "Nazbols." In doing so, this fake, petty bourgeois left has shown their aversion to dialectics and their absolute disdain for us and everyday, humble Americans seeking to survive, fight back and win.

It is interesting to note that U.S. capitalist hegemony exercises the same strategy globally. If New York City and Los Angeles, as command posts of neoliberalism, are Republics of Nonprofits, how has the U.S. Agency for International Development (USAID) and the International Monetary Fund (IMF) converted countries like Haiti and Ukraine into Republics of Western NGOs? The Foreign Policy Establishment, through mouthpieces like CNN and the New York Times, attacked Vladimir Putin as anti-democratic, anti-gay and anti-women. The most undemocratic institution in the history of humanity — the U.S. Military Industrial Complex — determines who is a dictator and who is a democrat? Woke politics keeps the flow of our tax dollars into the war

43. Revolutionary Blackout. (September 4 2024). "MAGA Turns On Donald Trump After INSANE Zionist Interview. CNN Revives Russiagate! w/Danny Shaw." https://www.youtube.com/live/mhzhOn-4J64

chests. By learning about international struggles, we can more easily recognize the tentacles that suffocate us at home.[44]

The term “deep state” is understood to be a MAGA term. DeBoer asks, is this phalanx of nonprofits not an example of “the deep state?” From a Marxist view, the term deep state is redundant. The state are specially armed bodies of men tasked with protecting and reproducing property relations. Whether “deep” or highly public, whether armed with guns, batons or endless deep, nonprofit pockets, the state exists to keep us in our place. While it is easier to see the police’s role, can we see how nonprofits and NGOs form part of the ruling state machinery? What anti-establishment roles can well-intentioned “lefties” play within nonprofits that have a base of oppressed people in neglected communities? Perhaps we should ask the 171 million people of Bangladesh where the U.S. government-funded “International Republican Institute trained an army of activists including rappers and LGBTQI people, even hosting transgender dance performances, to achieve a national ‘power shift.’ ”[45]

“I Mistrust Sex Theories”

The German revolutionary leader Clara Zetkin sat down in Lenin’s study in the Kremlin to discuss women’s liberation in 1920.[46] *The Emancipation of Women: From the Writings of V.I. Lenin.* International Publishers. There is a reason the bourgeoisie spends so much time maligning and spreading misinformation about Lenin, the definitive leader of the Russian Revolution. The mentor of Trotsky, Stalin and two generations of Bolsheviks was crystal clear on questions of sex and sexual identity in the communist movement: “I mistrust sex theories expounded in articles, treatises, pamphlets, etc. in short, the theories dealt with in that specific literature which sprouts so luxuriantly on the dung heap of bourgeois society. I mistrust those who are always absorbed in the sex problems, the way an Indian saint is absorbed in the contemplation of his navel.”

44. Johnston, Jak. Aid State: Elite Panic, Disaster Capitalism, and the Battle to Control Haiti. January 30 2023

45. Kit Klarenberg and Wyatt Reed. ”Leaked files expose covert US government plot to 'destabilize Bangladesh’s politics.'" *Greyzone*. September 30, 2024.

46. Clara Zetkin, ”Lenin on the Women’s Question.”

What is the leader of arguably the most important event of the 20th century, the Russian Revolution, telling us? Stay focused on the class struggle. The gender-obsessed cottage industry of nonprofits, like that of "white privilege," is by design. It divides us. It castrates the unity and strength of the movement. It directs all the attention towards identity politics and away from class struggle.

As CPUSA leaders Claudia Jones and William Foster, and Comintern leader Georgi Dimitrov and so many others lay out, "Marxist-Leninists fight to free woman of household drudgery, they fight to win equality for women in all spheres; they recognize that one cannot adequately deal with the woman question or win women for progressive participation unless one takes up the special problems, needs and aspirations of women – as women."[47] Red America is not critiquing honest attempts to defend proletarian women and their class interests but rather liberal outsiders who use this rhetoric to divide our class along identity fault lines. Women and the queer community have every right to justice, in every realm of their lives. And queer activists are not all "man haters," as the right alleges. But the question stands for some who have not done their own healing but are on the front lines of "healing" others: does hating, punishing and isolating men or whites or any relatively socially-privileged group of our class bring women and the LGBTQ community justice? Who is the main enemy? Why are we attacking other people who are victims and organic opponents of the same system? What makes the entire "gay community" a community? A shared sexual orientation towards the same sex unites gay billionaires with gay homeless people? Giving up on any of our people is not an option. We sink together or we rise together. Which do you choose?

Now you know why the PMC hates Lenin. He was the chief theoretical force behind the emergence of millions of human beings from desperate prehistory into the realm of freedom. The PMC doesn't want liberation; they want pronouns, promotions and profits. Pats on the back and more grants from important white, liberal donors are the PMC's "revolution." Toeing the line, these nonprofits that come out of the movement against police brutality (which became known as Black Lives Matter in 2014) and the queer movement are unthinking, proponents of Washington counter-revolutions from Kiev to Managua. This does not take away from the rank and file of member-led

47. Claudia Jones, *Viewpoint Magazine*. "We Seek Full Equality for Women." February 21, 2015.

nonprofits who fight the system with everything they have; the critique is of the well-paid PMC agents who misguide the members.

Divide et Impera

Censored and fired doctor, Ranjeet Brar, puts the Gender Identity Politics phenomenon into the colonial continuum of capitalist ploys to divide and conquer the toiling classes.[48]. The labor organizer and his party The Communist Party of Great Britain sees these manifestations of Gender Identity Politics as "ultra-individualism" which "plays such a disorganising and reactionary role." For courageous ideological and organizational stances, Brar and his party have endured attacks from all quarters on the slippery slope of the liberal left.

The term Gender Identity Politics refers to the liberal mainstream media's obsession today with pronouns, "gender identity" and the entire edifice that has become known as the "Trans movement." While this is a principled critique of the liberal capturing of "the left," it is important to recognize how women, gay and trans comrades stood up to confront the racism, sexism and homophobia that plagued the movement itself. This analysis is not anti-people; it is anti-systemic.

It is of no concern to the communist, what any individual does with their body. What is of concern to the communist are petit-bourgeois theories and fads, what the right often calls "the transgender or activist agenda," that infiltrate the thinking and everyday lives of our class. Today, how many "left" or "movement" spaces are in fact anti-working-class?

The very same legacy news cycle that ignores labor struggles whips up hysteria about setbacks and advances for different subsets of the gay community. A school curriculum that ignores the truth about U.S. foreign policy now has special focus on what they frame as our ability or right to change our genders. This is not an attack on any individual and their personal expression which is everyone's inalienable right. It is a sociological evaluation which seeks to unearth the sources of the divisions and backbiting that characterize the left

48. Transgender Trend, "Transgender Trend Resource for Schools," accessed October 7, 2024, https://s3.eu-west-2.amazonaws.com/s3.cpgb-ml.org/TransgenderTrend_read.pdf

today. This new phase of gender politics is a priority of liberalism. It has a definitive ideological function. Making this connection does not seek to deny anybody their sexual freedom, but rather contextualize this new social phenomena.

Parenti reminds us that the Founding Fathers were the original proponents of Identity Politics.[49] In the Federalist Papers No. 10, James Madison replies to the ruling class fear that the constitution was over-empowering the dispossessed masses who made the 1776 American Revolution (for more on the protagonist of our ancestors see Herbert Aptheker's *The American Revolution 1763-1783*). A proponent of *divide et impera* (divide and conquer), the slave owner and aristocrat Madison had a surefire way to keep the propertyless from coming together to fight. He sought to divide the biggest faction, the have-nots, into subgroups or "factions" in order to obscure who the enemy is. The factionalism parachuted down between the rural and urban, black and white and different trades were the identity politics of that era.

In 1890, Frederick Engels wrote: "According to the materialistic conception of history, the production and reproduction of real life constitutes *in the last instance* the determining factor of history." What this means is the bourgeoisie consistently does everything in its power to reproduce social relations under its continuing control. Engels and Marx understood that every social phenomenon was perfectly explicable because they were rooted in the ruling class's domination of its rival class, the working class. Translated to 2024, nothing around is coincidental. Think of any social phenomenon — alcoholism, gangs, segregation, high-school, dropout rates, single parent homes or any others. Taken as isolated facts, they are difficult to understand. But as we unpack what factors caused them to inevitably occur, we shed light on the dialectical reality that what can be done, can also be undone. Nothing is inevitable. Nothing is eternal.

The elites through mass media and social media have set workers and society against one another over secondary and tertiary contradictions. One worker hates another because one side sees the other as "transphobes" and the other hollers back "Go get a job you lazy, America-hating hippie liberals." Lost in algorithm-fueled aggression are the central questions that plague society, mainly that eight individual billionaires now possess more wealth than half the

49. The Chris Hedges YouTube Channel (Sep 25, 2024) "Wokeness Kills Class Politics and Empowers Empire (w/ Christian Parenti)"

planet.[50] What appears to so many in the left of New York City or Los Angeles to be a life-and-death issue is the best of distractions from the issue leading to all of our annihilation, a small clique of billionaires who are burning the planet to the ground.

Canceled by the PMC

PMC is a term that writers Barbara and John Ehrenreich coined in 1977 in an essay for *Radical America*.[51] They were searching for a term to describe "activists" or "salaried mental workers" who came from privilege and had managerial ambitions. *Dissent* author Alex Press defines the "Professional-managerial class" (PMC), as technocratic liberals, or wealthier Democratic primary voters, or the median Democratic Socialists of America (DSA) member." POC stands for "People of Color." Black and brown communities or oppressed nationalities are another way of saying POC. We communists seek to unite all workers to fight against the common enemy while not denying for a second the history of white supremacy and xenophobia in the U.S. Is the goal to unite workers or further fragment them? Do the white and POC PMC seek liberty for all or chairs closer to the capitalist masters' table?

The communists don't want to cancel the MAGA workers conditioned to be racists from birth; we seek to cancel and rebuild the society that creates them. Chris Hedges' article "Cancel Culture, Where Liberalism Goes to Die" makes the point that over 50 percent of the protestors who attacked the capital on January 6th were in desperate financial straits. His point is that within that multitude, there are good people who want to fight the very enemy with whom this very essay is concerned. But our people do not know how. Do we have the luxury of turning our backs on this complex and stratified group of people and scoffing at them as CNN and the Washington Post have done every day since January 6th 2021, and long before?

We should study cancel culture empirically. What impact have all the movement suspensions, expulsions and cancellations had? Have comrades from more stable class backgrounds been subjected to cancel campaigns? Who

50. Aimee Picchi, "Meet the 8 men who are wealthier than half the globe." *CBS News*. January 17, 2017.

51. Radical America. Brown University. "The Professional Managerial Class." 1977.

has bounced back and rejoined the left? Who went a different direction in life feeling like they left behind a cult? What are the racial, gender and class dynamics of cancel culture? Who is canceling who? Have comrades come back stronger, more sensitive and more committed, meaning as better revolutionaries? Because if that is not our goal, what is?

Is it even their goal?

PMC "leaders" want to maintain top-down, corporate organizational structures, opposed to collective, critical thinking. To reference my own personal experiences, I have repeatedly received letters and commands isolating and suspending me from the movement since 1996. They read like they were written by the Human Resources departments of a Fortune 500 company. And indeed, they have been. 95% of Fortune 500 companies now invest in lawyers and Human Resource and Diversity Equity Inclusion (DEI) infrastructure to avoid expensive lawsuits over discrimination. The merger of capitalism and hollow DEI initiatives is what gave birth to Ibram X. Kendi and Boston University's Center for Anti-Racist Research.[52] The liberal establishment poured tens of millions of dollars into such projects as tens of thousands of families down the street in Dorchester and Roxbury live below the poverty line. This well-trained cadre of experts are able to become millionaires, as long as their concern remains with "etiquette and aesthetics," to again cite Parenti.

In a legal sense, their attitudes and "official" correspondence smack of bourgeois contractualism. The PMC agents are more concerned with walking a tightrope around legality than building an actual unifying movement. People can now be kicked out of small Palestine solidarity organizing groups if they make someone else feel "uncomfortable." Liberal bullying of others ensures that the bureaucrats stay on top. Identity politics and abstract talk about "structures of power" which focus exclusively on race, gender and sexual orientation is a convenient way to deflect from liberals' own class origins and interests. Identity Politics is their petit bourgeois shield to make sure they never have to give up their own sinecures and access to power.

This offers the Non-Profit Industrial Complex many "victories" to stand on. These are "victories" that include the disposing of revolutionaries, "victories"

52. Associated Press, "Ibram Kendi's Center for Antiracist Research Lays Off Almost Half Its Staff," September 15, 2023.

that keep the NGO complex going because it funds their machinery and "victories" that fragment our movement.

True dialectical leadership and dialogue potentially exposes an organization's shortcomings, forcing a new understanding, a resynthesizing or an ascension to a new concrete.[53] A true reckoning with the class dynamics of cancel cultures forces all of us to grow but liberal wreckers and cancellers only seek to grow their egos, power and savings accounts.

Cancel Culture: Appearance versus Reality

Anarchist AK Press's *Beyond Survival: Strategies and Stories from the Transformative Justice Movement* reads as an authoritative work on community strategies to keep everyone safe. It is nearly impossible to find anything objectionable in the eloquent words of the dozens of contributors and practitioners of this work. There is no intention of taking anything away from honest individuals who work with these collectives. In anticipation of the critics, trapped in their own "safe spaces" and liberal silos, who may refuse to engage with this work, no conclusions are ever black or white, that is cut or dry. They are dialectical. Even in the most well-funded liberal bastions of identity politics, there are kernels of truth. For example, no Marxist could deny that there is a history of hate crimes and murders of people because their sexual orientation is not the dominant societal one. Nor could we deny that there is a history of sexism that has hurt social movements. Discipline is a must; cancel culture is petit bourgeois.

For Ejeris Dixon and Leah Lakshmi Piepzna-Samarasinha the editors of *Beyond Survival*, the easy part is filling the pages with beautiful words and concepts; the challenging part is how to apply it in real time and real life. My own experiences and research confirm how some of the organizations and individuals who put this anthology together betrayed their very own creeds. Regardless, of my prefaces and disclaimers these liberal forces will continue to dox, bully and cancel us. They have to. That is their job under neoliberal capitalism. In fact, they already have. Too many times to count. Now, how can they accuse the accused, dox the doxed, or cancel the canceled? Most of us

53. Carlos L Garrido, "The Dialectical Ascension from the Abstract to the Concrete." *Midwestern Marx Institute*. 7/28/2022.

who have these critiques have already been threatened and marginalized and are on the outside of the movement. What do we have to lose at this point?

In a chapter entitled “Beyond Firing: How do we Create Community Accountability for Sexual Harassment in our Movements,” Amanda Aguilar Shank offers the compelling, feel-good-story of Francisco. Francisco worked at *Voz Hispana* (Hispanic Voice). He had a track record of stalking, intimidating and forcing himself onto women colleagues. Dozens of women avoided him while many others fell victim to his aggression.

Aguilar Shank walks the reader through the process of isolating Francisco from the movement. Francisco was a veteran of the Salvadoran resistance to the 1980’s U.S. Wars of Aggression against Central America. In his combat experience, the former FMLN guerrilla saw murders and massacres perpetrated by U.S.-trained and funded Contras.[54]. He had flashbacks of military intelligence officer Major Roberto D'Aubuisson and the other CIA-trained torturers who murdered an estimated 50,000 Salvadoreans to ensure that El Salvador remained part of the U.S.’s neocolonial backyard. In Franscisco’s case, we can observe a basic law of psychology, trauma and capitalism. The terrorized terrorize their comrades. The traumatized traumatize their coworkers. The denigrated denigrate their colleagues.

Ultimately, according to Aguilar Shank, Francisco did the work, was rehabilitated and rejoined the movement, making amends for the damage he caused. This was a tremendous tale. How motivating that someone misogynistic, sick and suffering had reinvented himself. There was only one problem with this happy-ending story. It did not line up with the reality of “the movement.” I have no way of confirming or debunking Aguilar Shank’s account and in theory her account deserves much praise. It was the right way to deal with an abuser and survivor like Francisco. However, neither myself nor any of the other survivors of cancel culture I work with knew of this particular case. The happy-ending blueprints *Beyond Survival* lays out is not how so many of us have experienced these nonprofits and their cancel culture. We have rarely seen these types of successful results in the world of “transformative justice.” We have a liberal left before us where TJ and RJ are preached by many and practiced by few. In dozens upon dozens of cases I’ve experienced or

54. Gregory Weeks, ”The Military and Politics in Postauthoritarian Chile,”*Human Rights Review* 4, no. 3 (April 2003): 12–28, accessed October 1, 2024, https://pages.charlotte.edu/gregory-weeks/wp-content/uploads/sites/43/2012/04/WeeksG_2003HRRarticle.pdf

observed, the PMC's preferred weapons are isolation and whispering campaigns. None of this is considered by Dixon and Piepzna-Samarasinha, two pop stars of the nonprofit industry.

While the fairytales of woke triumphs dominate their worldview, it is foolhardy for revolutionaries to ignore the reality on the ground. The triumph of wokeism sounds the death knell of Marxism. "The left" has become obsessed with finding purity in their ideology and methods. This was exactly what the ruling class foresaw and adapted to. Liberal foundations have armed and funded sections of "the movement" to do their dirty work for them.

``The Progressives'' and their Distorted Sense of Progress

Malcolm made it plain yet again: "I will never say progress is being made. If you stick a knife in my back 9 inches and pull it out 6 inches, there's no progress. If you pull it all the way out, that's not progress. The progress is healing the wound that the blow made. And they won't even admit the knife is there." This quote applies to all our struggles from Gaza to Greensboro, Beirut to Asheville. The reformist left has led us astray.

Parenti's work outlines the exploiting class's many underhanded moves to subvert the growth of class consciousness.[55] He begins with the post-WWII Taft-Hartley Law which banned solidarity strikes when unions wanted to stand with one another, the Congress of Industrial Organizations's (CIO) purging of Marxists and the Smith Act which enabled the government to hunt down communists as criminals. After undermining class politics, they swooped in with foundations to build a compatible left. Karen Ferguson's *Top Down: The Ford Foundation, Black Power, and the Reinvention of Racial Liberalism* tracks "the white liberal effort to reforge a national consensus on race which had the effect of remaking racial liberalism from the top down—a domestication of black power ideology that still flourishes in current racial

55. Class Unity, "Christian Parenti: Wokeness and Class Struggle," YouTube video, 1:14:24, posted by Class Unity, June 27, 2023, "The Cargo Cult of Woke," https://www.youtube.com/watch?v=Ap4PARqsq_k&t=158s. "One thing that is linked to this whole woke triumph over the left is the decline when we say the decline of class consciousness..."

politics."[56] The $16-billion Ford Foundation built its own "black movement" which was a cheap mimicry of Malcolm's fledgling Organization of Afro-American Unity and the Black Panther Party for Self Defense.[57] The owning class's entire focus was on race, black Nationalism and the co-optation of leadership and discourse to elevate divisive, race politics over class politics.

The former German parliamentary leader of the social democratic party Die Linke (The Left), Sahra Wagenknecht wrote the book *The Self-Righteous: My counterprogram – for Social Cohesion and the Public Good*. She critiques the German left who she sees as having abandoned workers to live in their own holier-than-thou, pharisaic bubbles.[58] She sees the two key features of "left-liberals" as "having extreme intolerance towards anyone who does not share their view of things and fighting for quotas and diversity, i.e. for the unequal treatment of different groups." She quotes a summer 2020 letter by 153 intellectuals from different countries, including Noam Chomsky and J. K. Rowling: "The free exchange of information and ideas … is becoming more restricted by the day. While we expect this from the radical right, an atmosphere of censorship is also spreading in our culture." With concern they see "Intolerance of dissent, public denunciation and ostracism and the tendency to turn complex political issues into moral certainties. We are paying a high price, in that writers, artists and journalists no longer risk saying anything because they fear for their livelihoods as soon as they deviate from the consensus and do not howl with the wolves."[59]

As promised prominently on their website, the Sparkplug foundation[60] which has total assets of $7.07 million awards grants to "Black, Indigenous, People of Color, people with disabilities, women, lesbian, gay, bisexual, pansexual, transgender, queer and other queer-identifying communities, organizations or organizers."[61] What unites everyone of these identity-based groups? They focus on specific tiny, ever-fragmented and shrinking demographics. The Sparkplug foundation embraces every shade of gender identity and sexual orientation and rejects every communist. Follow the money and we can learn to

what extent the state has its hand in the cookie jar of the merry-go-round of sectarian protests across the U.S. Having marched hundreds of times with every expression of the left for three decades, I do not speak from a place of bitterness, but rather one of recognizing the class character of "our movement" today.[62] To not do so, would be a disservice to the only struggle we can all be loyal to, the class struggle. Only along class lines can we unite the struggle to free everyone who is oppressed because of their race, sex or sexual orientation. Identity politics diverts us into liberal deadends. Class politics are the mighty tidal waves of internationalism the Bolsheviks of 1804 and the Haitians of 1917 rode all the way to power.[63]

Different groups in the movement to stop the genocide in Palestine are at war with one another. If anyone raises questions about disunity in a time of genocide, they are shut down. The irony is that almost all of these groups receive money from foundations that push a divisive, anti-dialectical agenda.[64]

Who would have thought that censorship, intolerance and repression would end up flowing from the woke liberal mobs and their social media shock troops? "A left" conditioned to think of the MAGA base or "the right" as the enemy cannot see the anti-proletarian, anti-dialectical hogwash in our midst because it masquerades as "progressive." Every day the holocaust in Gaza progresses, while they consider themselves more "progressive."

``We Don't Believe in Isolation, Just Don't Come Around Us or the Movement''[65]

The above quote captures how the liberal left talks left but walks right.

The gurus themselves Adrienne Maree Brown, Ejeris Dixon and others are but a few of the superstars of the LGBTQ non-profit movement.[66] It is a must to follow the money to locate what class forces support their stardom. If *Beyond Survival's* approach is truly part of dismantling this system, why would so

62. I often put "the left" or "our movement" in quotes so as to continue to pose the question, who really controls this movement?

66. @adriennemareebrown https://www.instagram.com/adriennemareebrown/?hl=en

many liberal foundations embrace it so wholeheartedly? What is missing is class analysis.

This impassioned, 10-chapter collaboration serves as a manual of sorts but where are the testimonies of those charged with harm who came out on the other end as better comrades? Who was not banished into spiritual Siberia, forever judged as a bad person? One of the most important things we can lead with as Marxists is that we never give up on our people. No matter how down and out and traumatized one may be there is a way forward.

Brown themself speaks for many of us when they critique the call-out culture many of us have succumbed to and participate in. Who can deny the dopamine hit from seeing a high-profile "as*h*ole" get outed in front of the world? They ask if it is "transformative justice when we are throwing knives and insults, exposing each other's worst mistakes, reducing each other to moments of failure." Those who consider the words of the PMC hypocritical are correct. It is this author's contention that through a dialectical lens there are kernels of truth we can rescue from these petit bourgeois politics.

Brown's provocative question, "Is it possible we will call each other out until there's no one left beside us?" reminded me of the poetic reflection inspired by the anti-Nazi, German, Lutheran pastor Martin Niemöller: "First They Came:"

First they came for the Communists
And I did not speak out
Because I was not a Communist
Then they came for the Socialists
And I did not speak out
Because I was not a Socialist
Then they came for the trade unionists
And I did not speak out
Because I was not a trade unionist
Then they came for the Jews
And I did not speak out
Because I was not a Jew
Then they came for me
And there was no one left
To speak out for me

While a comparison to the Nazi war machine is overblown, the question persists: Where is the woke left leading us?

First they came to cancel the white comrades
because they were taking up too much space.
Then they came to cancel the men
because they made us uncomfortable.
Then they came to cancel those over 35
because they were using the wrong words.
Next we came to cancel the heterosexual people
because they could not relate to our terminally-unique oppression.
Then we canceled ourselves
and there was no one left to speak for us.

Marxists Never Give Up On the Masses: Towards Dialectical Justice

Isolation or Social Death is not how we will treat our sisters and brothers in the class struggle. We will not give up on our fellow Americans and class sisters and brothers because of the hegemony of the Democrats and their left-liberal allies.

At this juncture, “Restorative Justice” and “Transformative Justice” are empty buzzwords and paradigms that have been thoroughly maligned and hijacked by the nonprofit world. These cliches have been used to purge the working-class movement of the poor and the impure. Objective necessity demands a new approach.

Dialectical Justice creates space for conflict and contradictions to exist without encouraging us to vilify, exclude and cancel one another. It admits that organizing the schools of communism Lenin helped theorize and build will necessarily involve finite steps back to take infinite steps forward. I use the term “Dialectical Justice” to differentiate the Marxist or class-struggle approach to ensuring there is justice, discipline and equality in our organizing ranks. While Dialectical Justice will surely never be a Department of Education or academic buzzword, it captures the spirit of the collective healing process a

truly revolutionary movement deserves. What unites these other groups who have got it wrong is the class reality that petit bourgeois politics were in command. We can do better when our parties and organizations are not infiltrated and dominated by class interests alien to our own.

Why are the liberals only interested in identities and feelings? Because that is where they can hide. Dialectical logic and growth, which Mao Zedong and the Chinese leadership referred to as "Unity, Struggle, Unity," exposes the deadend that is liberal identity politics.[67] If we cannot overcome this liberalism, we will continue to cannibalize ourselves. Dialectics is the real movement of history. If you are looking to join a fighting organization, search for one who doesn't just talk the talk, but walks the walk.[68]

Marxists have a dialectical sense of justice and see the folly and hand of the capitalists in the infantile Cancel Culture. It will be important to further elaborate on these concepts, first through practice, then through theoretical summations. The best way to critique the snakes in the grass in the Democratic Party and the liberal left is to build the dialectical pole of justice.

ACP Executive Board member Eddie Liger-Smith said[69] it best at the conclusion of the Free America to Free Palestine conference in Dearborn, Michigan in May of 2024: "And for those people who do nothing but deride, attack and smear us, guess what, the door will always be open. We'll be here building when you get over your purity fetish and you come and decide to help us change this social system into one that actually serves the people!"

Join us! We won't betray you. We won't turn our back on you. We won't cancel you. Because we never have. We are the Congress of the Canceled and the Convention of the Condemned.[70] Without over-glorifying the task before us, we see the potential in everybody. Materialist philosophy teaches us that what can be done, can be undone. We can combat and transcend centuries of

Hindsight Anti-Imperialism: The Compatible Critics of US Foreign Policy

Edward Liger Smith[1]

In March of 2023 the Iraq war architect and cheerleader David Frum published an article in the *Atlantic* titled "The Iraq War Reconsidered."[2] The article is riddled with factual inaccuracies and is far too charitable to the U.S. policy makers who made the decision to invade Iraq. However, what is interesting about this is that even David Frum, one of the Iraq war's greatest supporters, now had to admit in hindsight that the war in Iraq was based on lies, and that the toppling of Saddam Hussein's regime accomplished none of the goals that U.S. policy makers said that it would. Rather than bringing freedom and democracy to Iraq as the public was promised, the country was plunged into a state of civil war which allowed extremist groups like ISIS to rise to prominence.

---

1. Eddie Liger Smith is an Executive of the American Communist Party and a Director of the Midwestern Marx Institute.

2. David Frum, "The Iraq War Reconsidered." *The Atlantic*. March 13, 2023. https://www.theatlantic.com/ideas/archive/2023/03/iraq-war-us-invasion-anniversary-2023/673343/.

Of course, David Frum is completely wrong when he treats the US-led invasion of Iraq as if it were a well-intentioned mistake, rather than what it was: a deliberate and murderous regime change effort designed to secure Iraqi natural resources, particularly oil, for Western multinational corporations. The oil industry spent more money than they ever had on an election previously in order to get George Bush and Dick Cheney elected. One would have to be incredibly naive to believe that these politicians ever had any intention of bringing freedom and democracy to Iraq. They had a laser focus on the fifth largest oil supply in the world. In fact, representatives from Chevron, ExxonMobil, ConocoPhillips, and Halliburton met with Cheney and staff in 2003 to discuss their plans for Iraq's post-war oil industry. Prior to the invasion the oil was completely nationalized and in the hands of the Iraqi government, but within 10 years it had been almost completely privatized and monopolized by Western energy firms.[3]

And now, twenty years after Frum helped to lie America into a war in Iraq which was disastrous for everyone involved except for western corporations and shareholders. This stooge of capital or Imperialism personified still has the gall to lecture us about the colonial invasion and occupation while attempting to absolve himself of any guilt. Retroactively, he now condemns the regime-change operation that he helped to create. Frum's analysis of the war twenty years later, and his admittance that the war was "a grave and costly failure" constitutes what I have called hindsight anti-imperialism, which is a concept that I intend to expand upon in this essay.

Definition:

Hindsight anti-imperialism: The cheerleading of a regime change effort when it is being prepared, or is actively in motion, followed by the retroactive condemnation of said regime change effort, after it has been revealed to the public that it was based on lies, led to mass suffering, and/or failed to produce the promised results.

I began to notice the phenomenon of hindsight anti-imperialism after a handful of years being involved with the anti-war movement and covering the crimes of

3. Judith Juhasz, "The Iraq War and Oil," *CNN*, March 19, 2013, www.cnn.com/2013/03/19/opinion/iraq-war-oil-juhasz/index.html.

imperialism for the Midwestern Marx Institute. In 2019, when reporting on the US State Department's efforts to foment regime change in Syria, I was surprised to be criticized by "progressives" who were in favor of the active war in Syria, but against the war in Iraq that had been launched fifteen years prior. The same supposedly anti-war progressives who retroactively condemned the invasion of Iraq were now cheering on, or at least refusing to condemn, the NATO led war in Syria. Largely because they were afraid to be accused of supporting Syrian President Bashar Al-Assad. As a young anti-imperialist, something did not sit well with me. I wondered: "Why are these so-called leftists on the same side as the imperialists themselves?"

Not coincidentally, the same phenomena took place in the leadup to the Iraq war, as anyone standing against it was accused of supporting the Iraqi dictator Saddam Hussein. Looking back in hindsight it's easy to see that standing against the toppling of Hussein's government, which plunged Iraq into chaos, is not equivalent to supporting all the actions of his regime (which at one point was propped up by the CIA).[4] However, by the time the American public realized that fact, and by the time the corporate media admitted it, it was already too late. Hundreds of thousands of American and Iraqi lives had already been lost, and Iraq's oil industry had been seized by the western energy companies who lobbied for the war in the first place.

When the spin masters beat the drums of war it can be difficult for some to make the distinction between uncritically supporting a world leader and standing against a murderous regime change effort led by the American empire. It's more difficult to see through the lies of imperialism when every mainstream media outlet in existence is telling you that you're an immoral piece of garbage who supports genocide if you don't go along with the current regime change effort. Such as when they told the public that if we didn't support NATO's regime change efforts in Libya then we were actually in favor of Muammar Gaddafi giving his soldiers Viagra to encourage them to rape more, a story which was heavily pushed by the American media during the first months of the NATO (or western) bombing campaign that turned out to be completely fake[5] How many hindsight anti-imperialists fell for the atrocity propaganda about

4. Matthew M. Aid, "Exclusive: CIA Files Prove America Helped Saddam as He Gassed Iran," *Foreign Policy*, August 26, 2013, https://foreignpolicy.com/2013/08/26/exclusive-cia-files-prove-america-helped-saddam-as-he-gassed-iran/.

Gaddafi and cheered on the regime change effort in Libya, only to retroactively condemn the intervention after we predictably discovered that it was based on lies? How many so-called leftists started criticizing NATO's war only after it sent Libya spiraling into a political-economic disaster which saw their central government disintegrate and allowed slavery to return to the country?

As the decade drew to a close, after witnessing two disastrous wars in Libya and Syria, I found myself asking how many times are we, the American public, going to fall for the same lies from the same imperialist families like the Bush's, Clinton's, and Cheney's until we realize they're full of shit!?!

The Dismemberment of Libya

It is well known at this point that NATO's intervention in Libya turned the country from one of the most prosperous in all of Africa, to an impoverished nation in a state of perpetual civil war with no real central government to speak of. Is there anyone out there who still legitimately believes that this war in Libya was waged to promote freedom? "Freedom" equals destruction, death, and slavery if the US imperialists are to be believed.

Even Obama himself, the commander in chief at the time of the NATO intervention in Libya, now admits that the war was the worst mistake of his entire presidency.[6] And here we see that hindsight anti-imperialism can take two separate forms. The first form is the leftist who genuinely regrets participating in spreading regime change propaganda after looking back in hindsight and realizing the war they supported has had disastrous human impacts. The second type of hindsight anti-imperialist are the politicians like David Frum and Barack Obama, who retroactively claim to regret the wars that they helped to create in order to clean up their public image, and to gain credibility for the next time they try to push our country into a war. As if to say, "sure I was wrong about the last war… but you can trust me this time!"

The problem with hindsight anti-imperialist leftists is that many still fail to see the economic motivations that are actually underpinning US and NATO policy. Even when, at times, the ruling class is explicit about such economic

6. "US House Passes Bill to Prevent Gun Sales to People on Terrorist Watch List," *BBC News*, March 2, 2016, https://www.bbc.com/news/world-us-canada-36013703.

motivations, these leftists completely miss them. A good recent example is when NATO Secretary General Jens Stoltenberg admitted that NATO is good for the profits of US arms manufacturers.[7] Every US foreign policy action is masked in rhetoric expressing good intentions of promoting freedom and democracy. But this rhetoric is nothing except a mask for the actual animating force behind US foreign policy which is always rooted in political economy, particularly the accumulation of capital and the extraction of surplus value. The INTENT of US and NATO led regime change efforts is never actually to promote freedom and democracy, but to further the accumulation of capital by clearing any obstacles to the super exploitation of foreign nations by Western multinational corporations. The justifications given by U.S. policy makers for invading a country often have nothing to do with the actual reasons for launching the intervention.

Is it more likely that Obama, Susan Rice, Samantha Power, Hillary Clinton, and the other neoliberal architects of the war in Libya, actually intended to bring them freedom and democracy, but failed? Or is it more likely that Western multinational corporations wanted access to the resources that Libya had been reinvesting in their own economic development for years under Gaddafi, while preventing those resources from being extracted out of Africa by foreign multinationals? We must recall that Gaddafi planned to create an African development bank which would have financed the development of industry and agriculture throughout the entire continent and given African nations an alternative to the US dominated global financial system which revolves around the IMF and World Bank, which are notorious for trapping African nations in debt and using it as leverage to manipulate their political systems. The hindsight anti-imperialist politicians would like you to believe that it was an honest mistake, which is why they came to us to apologize years later.

The reality is that the US and NATO did not want Gaddafi's alternative system of African finance to come about, so they assassinated him. But NATO and Obama could not admit that they simply wanted to overthrow Gaddafi's government to protect their economic interests, so they justified the regime change effort by demonizing him and portraying him as a threat to humanity. Today they are forced to reckon with the disastrous human impacts of their war especially as tens of thousands of Libyan refugees flee across the

7. "Speech by NATO Secretary General Jens Stoltenberg at the Wilson Center Auditorium followed by Q&A," NATO, June 17, 2024, https://www.nato.int/cps/en/natohq/opinions_226742.htm.

Mediterranean Sea into Europe. Thus, our politicians come back to us and apologize, trying to convince the public that the war was just a well-intentioned oopsie-daisy, lest we might discover what their true motivations were from the beginning. The politician hindsight anti-imperialist is desperate to prevent the leftist hindsight anti-imperialist from understanding the true engine of US foreign policy, because such an understanding has the potential to turn the leftist into a REAL anti-imperialist, who will stand against the next regime change effort the politicians try to sell us. The American political ruling class deeply fears an American public, and especially an American working class, which realizes that US foreign policy is not rooted in abstract ideals of freedom and democracy, but rather, the material accumulation of capital and extraction of surplus value and profit.

The leftist hindsight anti-imperialist is actually one of the greatest weapons that the empire and the political hindsight anti-imperialist has, as the leftist can be relied upon to attack real anti-imperialists by smearing them as dictator supporters from within their own ranks. There is no better example of this than the Occupy Wall Street in 2011, when some of the organizers tried to bring an anti-imperialist element to the protests by standing against the developing war in Libya and passing out literature in an effort to show those who were there to protest corporate shareholders and big banks that it was these same entities who were pushing for the invasion. These anti-war protestors were smeared, derided, and even spit on by occupy protestors, many of whom would become hindsight anti-imperialists in the coming years as they learned more about what actually happened in Libya. And in this way the hindsight anti-imperialists helped to kill anti-war organizing on the American left while helping to justify a regime change effort being led by the very same people who they were in New York City to protest against.

If we hope to build a movement that can actually combat US imperialism and bring an end to these senseless wars for profit, we must overcome hindsight anti-imperialism by learning to see through the lies of empire and to stand against imperialism even when the media and politicians are beating the war drums.

Lenin and The Importance of a Theoretical Understanding

In 2020, after receiving my bachelor's in politics, I read a short book written in 1917 which helped me to understand global politics better than anything I had read in four years of undergraduate study. That book was *Imperialism: The highest Stage of Capitalism* by Vladimir Lenin. While I was very aware of US imperialism at the time, and the role that it played in impoverishing the global South while enriching shareholders on Wall Street, I had never seen someone so clearly and concisely explain the economic motivations that drive an empire. The most consequential war of Lenin's era was World War I, a conflict which I was never able to wrap my mind around in history classes. The explanations given by my teachers never made sense to me as I didn't understand why the world superpowers would allow themselves to be dragged into such a deadly conflict simply because Archduke Franz Ferdinand of Austria was assassinated and various countries had alliances with one another. However, the explanation given by Lenin, that these were imperialist countries fighting each other over control of the colonies… Now that was an explanation I could believe.

Not only did this book help me to understand World War I, but it also opened my eyes to see that the justifications given by American politicians and media figures as to why we launch certain regime change efforts in certain countries, actually have nothing to do with the real reasons motivating the imperialist aggression. The US empire's goal is never to protect freedom and democracy, it is to protect export capital, which is a brilliant concept that Lenin uses to describe oil drills and other forms of machinery, constant capital in Marxist terms, which is set up in foreign countries by imperialist multinational corporations in order to extract cheap resources and bring them back to the home country, or to sell them on various global markets. When countries attempt to nationalize or regulate these sectors of the economy, taking the constant capital out of the hands of Western multinationals and putting it into the hands of the state, the imperialists often look to foment regime change in order to prevent it from happening.

Additionally, these imperialist multinationals seek cheap labor, or what Marx calls variable capital. When a nation moves to increase wages or allows workers to unionize and fight for better pay and working conditions, the imperialist country often gets involved and attempts to destabilize their political system. This is always done at the behest of multinational corporations who use various means to control the political system. In the early 2000s it was large energy companies who spent millions lobbying for the war in Iraq and funding political campaigns in order to request favors later on from the

politicians they funded. A more recent example in 2019 is the country of Bolivia, whose socialist Government had nationalized some major industries, strengthened unions, and raised the wages of their working class. That was before a US backed group of fascists led by Jeanine Áñez orchestrated a violent and illegal coup that saw trade union leaders brutally murdered,[8]. and sent the democratically elected President Evo Morales into exile. Because Bolivia is known for its vast lithium reserves, and American capitalist Elon Musk is known for making electric cars which require lithium batteries to operate, many people on social media accused him of supporting the coup. In response to these criticisms Musk said that “we will coup whoever we want! Deal with it.” leaving little doubt in anyone's mind why this fascist coup had been carried out and at whose behest.[9].

Lenin’s *Imperialism* helped me to demystify US imperialism, and I began to see imperialism not as an action, but as the dominant world economic system which developed out of capitalism. The capitalist mode of production inherently necessitates expansion, and when the capitalists of one nation have attained full control of its markets, they go abroad to dominate and super exploit foreign nations. Imperialist capitalists then come to rely on the super profits they make abroad, and they make it their mission to prevent anything from impeding the extraction of surplus value from other countries, even if that means killing millions of people in murderous wars. This is the nature of US imperialism and the global capitalist system of today.

New Developments Since Lenin's Imperialism

However, a few things have changed since Lenin’s time, especially since the conclusion of World War II, and his analysis needs to be updated. For one, after the war the United States emerged as the hegemonic global superpower because most of the fighting had happened in Europe, which devastated their infrastructure, and made it almost impossible to hang on to their colonies in the

---

8. Sarah Jaffe, ”Orlando Gutiérrez: A Bolivian Union Leader on the Struggle for Democracy and Socialism,” *Jacobin*, October 2020, https://jacobin.com/2020/10/bolivian-mining-trade-union-leader-orlando-gutierrez-democracy-socialism

9. John P. Jackson, ”After Bolivia, Elon Musk Says Capitalists Can Overthrow Any Government They Want,” *People's World*, October 22, 2020, https://www.peoplesworld.org/article/after-bolivia-elon-musk-says-capitalists-can-overthrow-any government-they-want/

global South. The US replaced the UK as the most powerful empire in the world, enjoying almost unchecked power if not for the Soviet Union in the East, which would of course fall in 1990 removing the umbrella of protection that it had provided for many countries in the Global South, including Iraq. Today, rather than having a bunch of smaller competing empires, we have one dominant and hegemonic empire that has subordinated the former West European empires to its own interests.

At this time colonialism also underwent a transformation in form, as independence movements swept across the Global South, achieving more and more success as the European powers attempted to recover from the devastation wrought upon them by the German imperialists and the scourge of Nazism in World War II. Dozens of states across Africa and Asia fought and gained independence in the years following the war, and this time period is where we see a qualitative shift from colonialism into neo-colonialism. The Western powers could no longer subjugate poorer nations as formal colonies, as the world began to accept that every nation should have the right to self-determination and self-governance. However, the idea that colonialism ended here is nothing but a bourgeois imperialist myth. This simply marked the transition to neocolonialism where Western imperialist powers dominate the economies of poorer nations, and manipulate their political systems in secret, while claiming that these countries are actually free and independent.

Before the qualitative shift from colonialism to neocolonialism wealthy capitalist countries did not have to lie so much about their imperialist efforts around the world, as they unapologetically and directly controlled their colonies while giving some lame justifications about bringing them civilization and Christianity. However, after the world asserted its support for independence and the national right to self-determination, the imperialist countries, and especially the United States (the newly emergent imperialist hegemon), needed to adjust their strategy slightly. If they wanted to continue extracting endless surplus value out of the global South, they needed to convince the public that these nations still remained independent and free. They needed to give the impression of being democratic nations while allowing Western multinationals to pillage their resources behind the scenes. Therefore, propaganda and narrative control became more important to the imperialists than ever. When a regime change effort was carried out it either needed to be done so in secret, or the public had to be convinced that the war or coup was being done in the name of protecting freedom, human rights, and democracy.

Public support would not be given if people understood that the regime change effort was being waged in order to enrich big banks and shareholders who most of the American public already hates.

The Decimation of Life in Korea and Vietnam

After Vietnam, Laos, Cambodia, and their region of the world known as Indochina, gained independence from French colonialism in 1954 after a long anti-colonial struggle, the United States swooped in in 1955 and began waging the Vietnam War (termed, more correctly, the "American War" by the Vietnamese). And while the US tried to justify this war with rhetoric about freedom, democracy, and combatting communist totalitarianism, in reality, they were only trying to fill the colonial void that France had left. The goal was to set up a puppet dictatorship, like the one that lasted a laughably short amount of time in Saigon, and to control Vietnam from afar without having to assert direct political control over the government, unlike the French during the era of direct colonialism. This new era of neo-colonialism required that the US install government officials who masqueraded as legitimate leaders, while in reality acting as puppets of Western capital and handing their economies over to Western companies.

During this war in Indochina the CIA would covertly carry out the now notorious Phoenix Program, which assassinated, tortured, and captured Viet Minh soldiers, even attempting to brainwash them with mind-altering drugs like LSD, using techniques that were developed by the equally notorious MK Ultra project. The US also waged a completely secret bombing campaign in Laos which saw more cluster bombs dropped on the small agrarian country than any other nation in history. This is literally known as the Secret War, because Americans had no knowledge of its existence, and President Richard Nixon openly lied to the public and press claiming that there was no US military involvement in Laos. Nixon also lied about which areas were being targeted in Cambodia, where Henry Kissinger instructed the US Air Force to bomb "anything that moves." These secret operations highlight the covert nature of neocolonialism, which involves all the same violence of direct colonialism, but with more lies and secrecy to prevent the public from finding out that the ruling class is simply trying to subjugate another country to complete economic control.

There are countless examples of the US swooping in after World War II to try and control a country that recently fought and gained independence from the European colonialists. The Korean War began shortly after the Koreans gained their independence from the notoriously brutal Japanese occupation in 1945. During this war the US murdered 20% of the population in Northern Korea, decimated their infrastructure, manufactured a voting plan at the UN to split the Korean Peninsula in half, occupied the Southern half, and installed a fascist dictator named Syngham Rhee who was trained up in American universities. At the time, Americans knew next to nothing about what was going on, only being told that we were fighting for Democracy and against so-called Communist totalitarianism in Korea. In reality, our government and military were slaughtering their people and installing a totalitarian dictator who committed some of the worst massacres in human history. Syngham Rhee is a perfect example of the kind of puppet leaders that are set up by neo-colonial powers in order to control a nation's political system from afar, without having to assert direct political control, and while feigning support for independence. While Rhee was portrayed as an independent Democratic leader in Western media, the only reason he was able to stay in power was because he massacred all of his political opponents.

Another example is Mobutu Sese Seko in Zaire, now known as the Democratic Republic of Congo. Seko's US backed government became the quintessential example of a kleptocracy, i.e., a dictatorial and corrupt government that expropriates its own people in order to enrich government officials. The struggle against Belgian colonialism in Zaire was led by the heroic nationalist named Patrice Lumumba, who would have naturally been first in line to lead his country after gaining independence in 1960, and who had many exciting plans for African economic development. However, covert US support to Mobutu allowed his forces to capture, torture, and assassinate the freedom fighter Lumumba in 1961, which cleared the way for Mobutu himself to seize power in 1965. Mobutu proceeded to enrich himself and his cronies in the coming years while essentially handing over the Zaire/Congolese economy to Western multinational corporations. And yet another country that waged a long and arduous struggle against European colonialism fell to the control of US neocolonialism almost immediately after.

This shift to neocolonialism, to a new form of imperialism, is what allowed the hindsight anti-imperialists to emerge *en masse*. It is why so many people get confused when US regime change efforts are happening and when the media's

war drums are beating. Not only are people manipulated by the American media, which is almost totally monopolized by just six corporations, but they also believe that the era of colonialism has ended, and don't understand that the multinational corporations who run our country are reliant on extracting super profits from the global South. And this is why it is so important for us to combat hindsight anti-imperialism by helping people to gain a theoretical understanding of what is actually going on. Without understanding the economic motivations behind US imperialism, which could more accurately be described as capitalist imperialism, there is no way to understand these regimes change efforts at all, and they just appear as blunders made by well-intentioned politician hindsight anti-imperialists.

It is no coincidence that the IMF and World Bank were founded in 1944 as the second world war drew to a close, and three years later the most notorious arm of US imperialism in existence would be founded… The Central Intelligence Agency. These institutions helped usher in the new era of capitalist imperialism where regime change efforts either had to be justified to the public or carried out in secret. One of the first known CIA coups was the overthrow of Guatemalan leader Jacobo Árbenz who had plans to redistribute some of his country's land that was owned by the Western multinational corporation United Fruit Company, but which was not being used productively. The CIA was involved in the overthrow of Árbenz every step of the way helping to disseminate propaganda and train up the soon to be military dictator Carlos Castillo Armas, who would lead the coup with the help of his right-wing National Liberation Movement party and other reactionary sections of the Guatemalan military. Árbenz and his government were quickly deposed, and he would die in 1971 after his body was found boiling in a scalding hot bathtub.[10]

However, for years the CIA's involvement in this regime change effort was a mystery, and a leaked CIA document showed that in the 1950s the agency's strategy was to label anyone that accused them of involvement in Guatemala of being a "conspiracy theorist," which is a tactic that should sound very familiar to the anti-imperialists of today. The CIA's covert efforts in Guatemala did not become public knowledge until documents were leaked on May 23, 1997, including an instructional guide on assassination. The American public now knew that the conspiracy theorists had been correct, and many hindsight anti-imperialists emerged. Today almost every American citizen who knows

10. "Santa Barbara's Isla Vista," *The Daily Sound*, January 28, 1971, https://cdnc.ucr.edu/cgi-bin/cdnc?a=d&d=DS19710128.2.17&e=-------en--20--1--txt-txIN--------.

the story of Guatemala is opposed to what the CIA did there, but how much good does that do 70 years later? Hindsight anti-imperialism is completely worthless if you don't learn from your mistakes and stand up against the next act of imperialist aggression!

Another covert method of regime change and geopolitical influence are sanctions and embargo. This is where we see the importance of the IMF, the World Bank, and their thousands of subsidiary banks which make up the US dominated global financial system which was constructed after the second world war. Many in the American public do not view sanctions as an act of war, and these sanctions are always justified by the imperialist politicians who claim that they are only targeting specific contemptible individuals, and that the real intentions of the sanctions are to help the people of the country being targeted. However, this is nothing but a justification for what amounts to old fashioned siege tactics where the US tries to cut off target countries from global finance and trade in order to starve and worsen the living conditions of their people and turn them against the government.

A recent UN report on the effect of US sanctions on Venezuela exposed the real effects of the over 160 economic sanctions that the US has placed on the county, concluding that they had decreased Venezuela's government revenue by approximately 99%![11]. Far from protecting human rights and democracy, these sanctions are intended to both foment regime change, and to undo the gains that were made by Hugo Chavez and his Bolivarian Revolution that began in the late 1990s. Chavez had massively increased access to healthcare, education, literacy, and housing while creating pensions for elderly Venezuelans for the first time and massively decreasing malnutrition and extreme poverty. These enormous feats were accomplished by kicking Western multinationals and executives out of the PDVSA which is the Venezuelan oil company that had become subservient to western capital pre-Chavez. Now the US attempts to starve the Venezuelan people and turn them against their government so that they can once again gain access to Venezuelan oil, while telling the American public that these sanctions are intended to combat corruption and so-called authoritarianism. The US is able to do this with impunity because of the IMF

11. "Preliminary Findings of the Visit to the Bolivarian Republic of Venezuela by the Special Rapporteur," *Office of the United Nations High Commissioner for Human Rights*, February 12, 2021, https://www.ohchr.org/en/statements/2021/02/preliminary-findings-visit-bolivarian-republic-venezuela-special-rapporteur

and World Bank, and the dominance that they allow the US to have over the global financial system, although thankfully that dominance is now being challenged by nations like China and Russia who constitute an emerging multipolar world, and a real challenge to US unipolar hegemony.[12]

The Marxist View of International Relations

When we understand the economic motivations that underpin US imperialism, the foreign policy actions of our government no longer seem so confusing, and in fact they become quite simple. The US government is dominated by corporations who want to super exploit foreign countries and extract surplus value and profit. When pesky foreign governments get in the way of that surplus value extraction the US government, the IMF and World Bank, the CIA, or more modern arms of regime change like the NED (an institution created under Ronald Reagan to essentially be a private version of the CIA that does their bidding without being directly connected to the US government) get involved in order to overthrow or weaken that government, and clear the way for unimpeded surplus value extraction.

As socialists who want to create a better world by ending imperialism, we cannot fall into hindsight anti-imperialism, or at least we must learn from our mistakes. The empire is totally fine with you becoming anti-imperialist twenty years after a successful regime change effort has been carried out, and as we've explained the imperialists even do this themselves quite often, although usually only to further manipulate the narrative. However, what the imperialists fear is a public that understands why their government does what it does, and who stand against the regime change efforts even when the US media is calling us genocide supporting, authoritarian, communist, fascists, for doing so!

By studying theory and books like Lenin's *Imperialism* we can become nearly impervious to the corporate media's lies, and we can truly start to see American imperialism for what it is. Anybody can dissect a regime change effort years after it happened. Even the corporate puppets at the New York Times often do this, such as in 1991 when they vigorously supported the overthrow of the

12. Carlos L. Garrido, "The U.S. Is Fabricating Foes to Conceal Its Own Unfreedom," *The China Academy*, October 12, 2023, https://thechinaacademy.org/the-u-s-is-fabricating-foes-to-conceals-its-own-unfreedom/.

Haitian liberation theologist and priest Jean Bertrande Aristide by pumping out endless propaganda about his government, only to turn around after Aristide had been illegally and undemocratically removed from power to write a piece explaining that the US was deeply involved in the coup and retroactively condemning it well after it had already happened.

Friends, we must be better anti-imperialists than the New York Times if we actually wish to see the overthrow of capitalist imperialism in our lifetime. We need to educate ourselves and learn to see through the lies of our government and media. Millions of people across the country are already doing this, as trust in the US government and corporate media is now at an all time low. Yet there is still much work to be done, as evidenced by the fact that there are still people who know that the government lied to us about Iraq, Libya, and Syria, but believe for some reason that the US is now telling the truth about Ukraine or China. Folks, they were lying to us then and they are lying to us now. It is time to stand up for ourselves and stop being led by the nose into these disastrous wars that get young Americans killed. It is on us to study intensively and learn to see through the bullshit.

Marxism and Tradition

Grayson S. Walker[1]

Edited speech given by Grayson S. Walker for the "Traditionalism" Panel of the Multipolarity Forum held in Moscow, Russia (February 2024).

Marxism is, perhaps justifiably, usually seen as the vanguard of progress against tradition. At face value, it asserts a dogmatic, Western-centric secular methodology against the wealth of traditions that define and give body to a people. Concrete humanity, finding itself abstracted from the wealth of its real historical existence in the process of proletarianization, is "compelled to face with sober senses [its] real conditions of life and his relations with his kind."[2] It follows, according to Western Marxism, that the ideal forms to which man's social existence is given expression—forms already caught up in the process of

He has published several academic articles, including *'From Instragram to Infowar: The Weaponization of Social Media and its Consequences'*, *'Through the Brook of Fire: Marx's Concept of Species-Being and his Break with Feuerbach,'* and the forthcoming article *'Marxism and Democracy.'* Grayson has been invited to speak at conferences worldwide, including Guancha's annual Key, Northwestern University's ILASS, and the Multipolarity Forum. Awarded a research fellowship in Nepal, he focused on integrating China's Belt & Road Initiative with the traditional ways of life of Nepali ethnic minorities. Grayson has been recognized with several academic awards from Xavier University and Emory Law School.

2. Karl Marx and Friedrich Engels, *The Communist Manifesto* (New York and London: Verso, 2012).

destruction as they pass through the thresher of modernity—are a mere remnant of a past, pre-capitalist epoch condemned by history itself. Mankind asymptotically and forever approaches the absolute zero represented by Malevich's *Black Square* as it increasingly loses any semblance of humanity to the nihil of abstract progress and modernity, powered by the ultimate abstraction of capital as estranged human labor.

But this is a Marxism narrowly defined within the framework of modern Western metaphysics and its foreclosure of the question of Being, a framework which had no greater critic than Marx himself and which was practically confronted in the form of 20th Century Communism.[3] It is curious that "Western Marxism," as originally articulated by György Lukács (but whose origins can already be found before the Second International), has acquired the status of being "True Marxism," given that its consequences for the real world pale in comparison to the Eastern variety of Marxism.

For Western Marxism generally, nothing can be said of tradition except that it precedes the revolutionary moment. Within this conception, all tradition must be mercilessly swept away to clear room for the Communist future. Such was the immature view shared by the early Soviet avant-garde, whose reckless attempts at liquidating the past were rejected by Lenin and even more aggressively opposed by Stalin.[4]

Minimal consideration of reality forces us to consider Marxism not as an ideological abstraction, but as an index of acquired historical experience. In the 20th Century, Communism overcame its immature overenthusiasm for the Ideal and, in its response to the various convulsions encountered on the path through industrial modernity, began to cultivate a material basis in the national, historical, and civilizational realities of the countries over which Communists

---

3. Marx already furnished the basis for a materialist critique of Western rationalism, accomplished long before his supposed "epistemological break" in favor of science in his turn to political economy. Already in *The German Ideology*, Marx writes how "[t]he phantoms of [mankind's] brains have got out of their hands. They, the creators, have bowed down before their creations. Let us liberate them from the chimeras, the ideas, dogmas, imaginary beings under the yoke of which they are pining away. **Let us revolt against the rule of thoughts**." Karl Marx, *The German Ideology* (New York: Prometheus, 1998), 29. Marxism, already from the beginning of Marx's early thought, was already a rejection of Western rationalism and its idolatry of form.

4. *See* Boris Groys, *The Total Art of Stalinism*, trans. Charles Rougle (New York and London: Verso, 2011).

gained power. [5] The concrete meaning of class struggle itself acquired a significance that was only discernible in the tempering of abstract thought with its real material premises in the people of Eastern Europe and Asia.

This significance can be seen in the theoretical concessions Lenin made to the significance of the peasantry, in Stalin's promotion of national traditions and the rehabilitation of the Orthodox Church, and more explicitly in the Communist Party of China's Sinification of Marxism. While at first glance the "purity" of Marxism may seem sacrileged by the incursion of an "impure" national-historical element, a closer appreciation for the significance of these "turns" that Marxism-Leninism is defined by instead reveals that the flame of modernity was only ever a purifying flame distilling the *essence* of a people's real and living Being. What is genuine and enduring is proven in the fire. Communism, as *the real movement of history itself*, is the perseverance of humanity through the fires of capitalistic modernity and in the resubstantialization of its existence *through* this modernity.

Therein lies the "conservatism" of Marxist-Leninist states: forced to reconcile itself with the basis of its existence, the political state of the Soviet Union reflected "Great Russia" (*Velikaya Rus'*) and the People's Republic of China a Confucio-Marxist Celestial Empire (华夏). Communism distilled the essence of the real civilizational context the class struggle is born from; it did not liquidate real Being out of fidelity to some abstract dogma, but clarified it as the very site of the class struggle's meaning in the first place.

Marxism-Leninism defends the integrity and sanctity of history, and in giving expression to the common nexus that binds a particular people as a people, preserves the spirit of their real Being through its apparent dissolution in modernity.[6] The failures of the idealist excesses of socialist construction

---

5. The revival of "civilization states"/empires in the age of multipolarity/socialism can likewise be understood as the revenge of the pre-Westphalian civilizational being of humanity before its subjugation and division by European colonialism and its imposition of the nation-state as the absolute horizon for political sovereignty. History is actively proving the redundancy of this Westphalian nation-state, from the Russian Special Military Operation to the strivings towards re-delimitation of borders and regional integration across Africa and the Middle East. "The modern State is only truly a State if it is an Empire," i.e., a *civilization-state* (文明型国家). *See* Alexander Kojève, "Outline of a Doctrine of French Policy," *Hoover Institution* (August 1, 2004; originally written in French in 1945): https://www.hoover.org/research/outline-doctrine-french-policy.

6. Whereas the chief error in reactionary politics, in addition to its vain attempt to turn back the tide of history, is the reduction of a people's tradition to a mere *form* separate and apart from its

sobered Communists to an extent considered intolerable by liberals, who deride historical Communism and its "conservative turn" in Stalinism as a form of "red fascism."[7] The traditionalism and conservatism of historical Marxism-Leninism was not a "betrayal" of the revolution, but its maturation.

The essence of Communism is revealed to be the revival of the very traditions and civilizations it originally endeavored to overthrow. The flame of revolution was only ever a purifying flame, a flame which, far from consuming the historical traditions of mankind, liberated them from the bourgeois rubbish corrupting them to the core.

Only Marxism has, in spite of its tumultuous experience, succeeded in preserving the perennial tradition in the midst of industrial modernity. The conclusion of (don't laugh!) "traditionalist" German Nazism and Italian Fascism was the subjugation of the German and Italian peoples to international finance capital and modern abstractions of "progressive" ideology, which at the time was explicitly identified with eugenics and pseudoscientific "race science." The Communist East, meanwhile, remains the iron fist of humanity against the tyranny of Western finance capital and its mutilation of Being.

For in the end, what is tradition? Tradition is the accumulation of mankind's tried and tested practices, ways of life, and wisdoms — tested and adapted over the course of generations. It is what is *provably* antifragile and objective about a people's Being, the *objective footprint* of Dasein on history (*Geschichte*) itself.

Marxism is a science of history, a real method and wholistic worldview necessary for acquiring knowledge over and totally integrating mankind's social existence — an existence suspended in a process of ceaseless development. But in contrast to the "Western Marxist" view, this development does not occur according to the whims of consciousness, "reason," or ideology,

---

basis in the living being of a people. This idolatry of reaction is exemplified in the "vaporwave" aesthetics adopted by online fascists in the 2010s and in the inauthentic appropriation of national imagery and cultural iconography in a particularly urbanite and abstract manner. *See* Infrared, "Socialist Patriotism: America vs. America," YouTube, Oct. 26, 2021, 23:18, https://www.youtube.com/watch?v=eveOKE4Ones&t=984s.

7. Soviet intellectuals disappointed with the failures of the Soviet Communism but likewise rejecting liberal capitalism, such as Eduard Limonov and Aleksandr Dugin, initially and positively identified with this label of "red fascism," which had more to do with an appreciation for the "conservative turn" in historical Communist politics than any affinity for historical fascism. *See* Aleksandr Dugin, "Fascism: Borderless and Red" (1997): https://www.stephenhicks.org/wp-content/uploads/2022/03/DuginA-Fascism-Borderless-Red.pdf.

but according to a historical truth already immanent and suspended in the process of realization. This is, after all, exactly what Marx means by Communism: the *real movement* that sublates the present state of things.

The history of the Soviet Union and modern-day China proves what is already known by all, but scandalous only from the perspective of Western ideological confusion: that Communism's legacy, far from being synonymous with the historical nihilism of contemporary Western Marxism, is the defender of the perennial traditions of mankind. ▮

6

The American Oligarchy

Paul Cockshott[1]

In 2014 a study went viral across the US press and internet. Princeton scholars reported that, by using modern quantitative political science techniques they had been able to conclusively prove that the USA was a political oligarchy not a democracy.

The authors used data from opinion polls to look at a huge sample, 1779 different public policy issues from the 1980s onwards, to see what the opinions of Americans of average income and the opinions of richer Americans (>$140,000 per year) were on topics. To this they added data on the public positions taken by business lobbying groups on these policies. Next they looked at the legislative outcomes of these 1779 policy debates and compared the outcomes with what people on average income, rich people and business lobbyists wanted. Using a statistical technique called Multivariate Analysis they looked to see how influential the views of these three groups were in deciding the final content of the laws.

---

1. Paul Cockshott is an economist and computer scientist. His best known books on economics are *Towards a New Socialism (1993)* and *How The World Works (2019)*. In computing he has worked on cellular automata machines, database machines, video encoding and 3D TV. In economics he works on Marxist value theory and the theory of socialist economy.

The results were striking. They found that in only 3% of the cases did the views of average citizens have any effect on the laws that were finally passed, whereas the views of the rich were influential in 76% and those of the business lobby affected the outcome in 56% of the time[21]. They conclude:

> *What do our findings say about democracy in America? They certainly constitute troubling news for advocates of "populistic" democracy, who want governments to respond primarily or exclusively to the policy preferences of their citizens. In the United States, our findings indicate, the majority does not rule—at least not in the causal sense of actually determining policy outcomes* [23]

It is not surprising that this research was newsworthy. On the one hand it contradicted the self image of the USA as the world's foremost champion of democracy. On the other it chimed with the increasingly widespread popular feeling that politics in the USA was corrupt, and that monied elites and lobbyists were manipulating things behind the backs of the ordinary voter.

But of course to Marxists this came as no surprise. This is what they had been saying since the mid 19th century "the bourgeoisie has at last, since the establishment of Modern Industry and of the world market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern state is but a committee for managing the common affairs of the whole bourgeoisie. Marx and Engels 1848". Here was scientific confirmation of what they had always said. But how does this work?

How are the rich able to so completely dominate a state whose constitution is supposed to be democratic? The short answer is that the US constitution was never intended to be democratic. The long answer involves looking at the economic and class history of the USA to to see how its politics has operated. It is a mistake to see the American Revolution as a bourgeois democratic one. It was way different from great democratic revolutions like those in 18th century France or 20th century China. The radical character of the latter came from the peasantry rising up, taking over the estates of the landlords and completely

---

3. Page 576, ibid.

transforming property relations in the countryside. This expropriation removed the economic support for the old ruling classes, allowing a complete new state structure to be established.

The French, English and American revolutions all had a republican and anti-monarchial character, but repub licanism was more the political ideology of a landlord class defending itself from the encroachments of the King than anything democratic. In France, the rebelling aristocracy lost control, first to the urban bourgeoisie and were then consumed in the fires of peasant revolt. In America this loss of control never happened. The leadership con sisted of men of influence and standing, perhaps the most conservative leadership of any revolution in history[4]. To understand the constitution the Americans adopted you have to use the methods of On Contradiction[5] to examine the class contradictions of the day.

During the revolution, the fundamental contradiction was between the slave owning class of the colonies on one side and the British state and 4 Iroquois nations on the other. Against Britain, they aimed to gain exemption from taxes and tariffs, to get rid of restrictions that the King was imposing on large landed estates and to protect their holdings of slaves from being set free. Against the Iroquois, they wanted territory.

The fundamental contradiction governed the development of the secondary ones: between slave and slave owner, between landlord and tenant farmer. Because their direct oppressors were opposed to the British, slaves and tenant farmers tended to side with the British against the revolution. There was widespread loyalist (pro British) sentiment among the tenantry[6]. The British Governor Lord Dunmore issued a proclamation absolving the tenantry of their feudal quitrents owed to rebel landlords, and liberating all slaves who would take up arms against the rebels. The British raised several regiments of black former slaves during the war. There was a third order contradiction between free farmers and the local capitalists over debts owed by the farmers to the capitalists. The slave owning and capitalist leaders of the revolution were dependent on free farmers and artisans as soldiers, but feared that a directly

democratic government dominated by free farmers would either inflate the currency or pass laws cancelling debts.

The class structure after independence was unlike anything in early capitalist Europe. You had to go back more than 2000 years to find something similar : the slave republic Rome on which the Americans consciously and deliberately modelled themselves. At the top was the slave owning aristocracy who did no direct productive work, but lived off the labour of the slaves. Below the aristocracy was a class of free citizens who worked for a living. These would be small family farmers or artisans. At the bottom were slaves with no political or civil rights, the private property of aristocrats. The main class conflicts were between the slave owners and the slaves on the one hand, and between the slave owners and the free citizens on the other. Since the slaves had no political rights either in Rome or the USA the conflict between them and the slave owners was brutally physical, with the owners' dominance enforced by whips and chains. Free citizens on the other hand had civil rights, and the fact that they outnumbered the richer slave owners meant that the political power of the slave owners was potentially threatened by the free peasants and artisans. The main conflict between the slave owners and free peasants was typically over land ownership. The progress of slavery meant that more and more land tended to befall under the control of the big slave estates, threatening to proletarianise the free citizens. In both Roman and the US, the free citizen farmers and artisans were for a time induced to become allies of the slave owners by the apparent threat of surrounding free nations. As with expansionist Rome, the external contradiction was between the propertied classes of the Republic and the surrounding free peoples. The expansionary imperialism of both states was driven by both the desire of the senatorial classes to acquire further estates, and more significantly, to promote colonies in which a potentially threatening proletariat could be settled as independent farmers. As Weber 2013 argued, the parallels between Roman and American peasantry were exact right down to the geometry of landholding. In both cases the land was divided up on a square grid of farm plots with long straight roads - something that only a conquering empire could achieve.

The American constitution is almost a direct copy of that of Rome. The Roman constitution was cleverly de signed to give the semblance of power to these free citizens whilst actually concentrating real power in a senatorial class. The state structure in Rome was made up of :

(1) The two Consuls who were elected for a year and who alternated in office on a monthly basis. They were equivalent to the President of the USA today. They had supreme command of the army and civil administration.

(2) The Senate, which could pass decrees and provide the class from which the consuls were generally chosen. The US Senate was explicitly modelled on this.

(3) The comitia centuriata or assembly of the centuries which elected the consuls by indirect election: almost exactly copied by the US electoral college.

(4) The Plebian Council. This was a mass democratic assembly that could pass laws. It could not however set its own agenda, having to vote on motions put to it by magistrates who were invariably from the upper classes.

The effect of this structure was that executive power in Rome was always held by a member of the slave owning patrician class. The Roman Senate likewise was always made up of slaveowners rather than common people. Similar effects were achieved in the USA. Of the first ten presidents of the USA only two, John Adams and John Quincy Adams, were not slave owners.

But a republic also relied on the free citizens as soldiers. These people had to be given the semblance but not the reality of power. In Rome the two mechanisms used to achieve this were elections, specifically indirect elections, and control over the agenda at the popular assembly by upper class magistrates. Elections, ancient political theorists argued, always favour the wealthy. Aristotle said “it is thought to be democratic for the offices to be assigned by lot, for them to be elected is oligarchic ”Aristotle 1988. The alternative technique, forming a council from a random sample of citizens as used in ancient Athens was rejected for the Roman oligarchic approach.

The rich can spend to influence elections and have an education that prepares them as orators. Indirect election will increase the effects of any bias : for example Bush won the 2000 election on the electoral college system even though he had fewer popular votes than Gore. Having executive power concentrated in the hands of one elected official is great for the wealthy. It takes a huge sum of money to win the election so the candidates inevitably become dependent on oligarchs.

Whilst ancient Rome at least allowed some element of direct democracy, in the US this element, the popular assembly was removed and replaced by the

elected house of representatives, where again, money speaks. Election to this body is often funded by wealthy oligarchsWinters 2011.

There have been 3 periods in US history when there was a danger that democracy might triumph: the Civil War, the Populist movement of the late 19th Century and from the New Deal to the 1960s. But in each case the oligarchy re-established power.

The 1860s Civil War marked the transition between the slave and feudal modes of production in the US. Al though the war abolished slavery, freed slaves soon lost civil rights. Klu Klux Klan terror and lynchings reduced them to the semi-feudal status of voteless sharecroppers. Not until the 1960s was their right to vote re-established. The same happened in Russia in the 1860s where freed serfs also became sharecroppers. Neither Alexander nor Lincoln broke the power of their landlord classes. The next crisis came with the populist movement grounded in the contradiction between the free peasants and the financial oligarchy. Lincoln had moved America to a fiat currency which helped the peasantry since the inflation that accompanied it depreciated their debts.

The bankers pressed for ’sound money’ and the gold standard, which would have threatened the mortgaged farms of the peasantry.

The peculiarity of the settler economy was that the availability of frontier land meant that no classical landlord class remained to exploit the free peasants. Once the native nations to the West had been conquered, any tenant farmer or proletarian in the East could potentially move to the frontier. But land was only the most important means of production.

If workers from the cities, or dispossessed European peasants settled on the frontier they needed other means of production: horses, oxen, tools, seed grain. This could be had on credit from the banking class, against the surety of their land.

Look at Figure 1. The USA had originally had a currency based on a silver dollar. From 1873 it moved onto the gold standard. In the next 30 years the value of gold appreciated hugely in terms of silver. Loans which had been taken out either in silver dollars or in ’greenbacks’ now had to be paid back in a a rapidly appreciating gold backed currency. The dollar price at which their

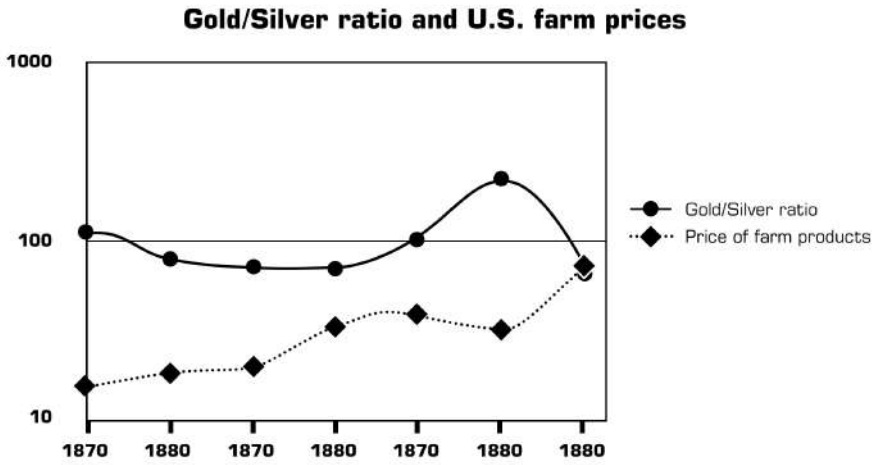

FIGURE 1. The movement of the price of gold measured in silver dollars alongside the price of farm products during the dispossession of the US peasantry. The Y axis is log scale to allow it to be seen in a small vertical space.

crops sold depreciated as gold became more valuable. The distress occurred in two great waves, the first during the late 19th century, the second from 1920 to the mid 1930s.

In the late 19th century a peasant populist movement fought for cheap money(return to silver) and democratic reforms : popular voting on legislation, the right of recall of officials; demands similar to those of Social Democracy in Germany and Russia. Despite victories at state level, they never gained power at the federal level.

The 20th century the US underwent a transition from a predominantly rural economy of semi feudal black peasants and independent white ones to a predominantly urban waged population. The agricultural depression from the 1930s allowed banks to foreclose on farms driving farmers into cities. In the South, the landlords made use of mechanisation[7] to dispense with and evict their black sharecroppers who also moved into the cities. The creation of a bigger working class population led to a strong labor union movement and black civil rights movement. It appeared by the 1960s, that the battle for democracy in America was at last being won.

7. Mechanised cotton picking machines went into production in 1935 and were widely adopted by the late 40s.

The period from the New Deal of Roosevelt to the Great Society of Johnston saw a decline in the share of income and wealth held by the oligarchy and a rise in the share going to the rest of the population but from the 1970s this reversed. Wealth in the US became concentrated in an ever smaller fraction of the population(Piketty and Goldhammer 2014) and as the study by Gilens and Page shows, this fraction exercised an almost total political control. The country has a police force that have reverted to their old slave patrol roles exercising internationally unprecedented levels of violence against blacks and poor white people, shooting over 450 dead in the first 5 months of 2015. When people protest this brutality they face police armed like commandos fresh from the war in Iraq.

Will democracy eventually come to the US? We can not just echo Zhou enlai on the outcome of the French Revolution and say it is too early to tell yet. After 240 years it is not too early. It is now certain that as long as the US retains its current constitution, the oligarchy there need have no fear of democracy. In the USA radical popular leaders from Lincoln to King had the delusion that the republic was democratic. I would tend to side with Lenin who wrote that a US type republic was the most perfect form of rule by the propertied classes. Once they gain control of it, no change of leaders or parties can shift them. The solid edifice of the republic will survive until some real cataclysm shakes it; something of the scale of those Japanese victories of 1905 and 1941 which unsteadied Russian and British empires. The USA has yet to meet its Tsushima in the South China Sea.

If we believe Mao, political power grows out of the barrel of a gun, without a people's army the population has nothing. The American people have the right to carry and bear arms, one of the key liberties they retain, but they have at no point succeeded, even at a local level, in raising popular militias able to resist the armed forces of the state. The state was able to suppress strikes, Black and Indian rebellions and even mass protests by ex soldiers. Until such a day as a defeated, mutinous army allies with a renascent populist movement, makes ’despotic inroads’ on the rights of private property and expropriates the oligarchy, the American oligarchs’ power will rest secure.

In Defense of 1776: Towards a Concrete Position on the American Class Struggle (A Comradely Response to Paul Cockshott)

Noah Khrachvik[1]

"The history of modern, civilized America opened with one of those great, really liberating, really revolutionary wars of which there have been so few compared to the vast number of wars of conquest which, like the

1. Noah Khrachvik is the Secretary of Treasury for the American Communist Party and a Director for the Midwestern Marx Institute. He is the author of the forthcoming *Reproletarianization: The Rise and Fall of the American Middle Class (2025)*.

> *present imperialist war, were caused by squabbles among kings, landowners or capitalists over the division of usurped lands or ill-gotten gains. That was the war the American people waged against the British robbers who oppressed America and held her in colonial slavery, in the same way as these "civilized" bloodsuckers are still oppressing and holding in colonial slavery hundreds of millions of people in India, Egypt, and all parts of the world."* –VI Lenin

This is a rather obscure quote from Lenin. It isn't in any of his primary texts, or his deeper philosophical works, his polemics, etc. It is instead from an open letter that he wrote to the American proletariat in 1918,[2] an era in which the American revolutionary spirit was aflame, and the guidance of Lenin was there to answer their call. Unfortunately, it is also a letter that no one in the old American Party even remembered when I had cause to ask about it a few years ago. It is only beginning to be re-circulated now, in the 2020's, as part of the struggle against national nihilism and the fake left being carried out by the reconstituted American Communist Party. Knowing what we do about the mistakes of the New Left era and the falsification of Marxism that occurred over the previous decades, it is almost self-evident how it could have been forgotten. It doesn't even enter into his collected works until the 28th volume, either, so you can see how it takes quite a bit of digging for someone to organically come across it. One has to be a very diligent student of Lenin to go through all of the collected letters. Or maybe they just need to be as obsessive as I am about it. Who knows? Regardless, I put it here at the outset of this paper for a very important reason. And that is to show the general conclusions that the worldview of Marxism-Leninism has arrived at in its historical analysis of the American revolution of 1776. Over the last few decades, this analysis has largely been forgotten in the West, drowned out by a deluge of falsifications, distortions, and outright lies that have been proliferated through Western society, and in particular the United States of America.

Before we begin, though, I want to make one thing very clear.

A person is only as good as the information they have, the atmosphere that creates and determines their character, and the areas within that atmosphere which develop into their areas of interest and expertise. Just as we would not expect a neuroscientist to teach us how to dismantle the engine on a motorcycle,

---

2. V. I. Lenin, *Collected Works Vol. 28* (Moscow: Progress Publishers, 1974), 62.

or a plumber to instruct us in the correct way to set up a personal computer, we should not expect those of us involved in the class struggle to have expertise outside of the areas they focus on, and around which the vast majority of their work revolves. And just as we do not expect our co-worker who grew up watching Fox News to have a comprehensive grasp of how anti-communist propaganda works, we cannot expect any of us to have information that is not provided by the resources they have on-hand. One of the primary goals of this journal is to bring Communists together in one place to discuss and debate the important topics of the day. In this way, we can allow those who specialize in one area to help those in another and all of us can share information with each other.

Paul Cockshott is a man I've gotten to know a little over the years, due to his excellent work in the areas of mathematics and cybernetics. His work empirically disproving the so-called "economic calculation problem" that saw a strange rise to prominence during the early 2000's is essential for understanding how a new, technologically-driven Communist economy can function. I have personally learned a great deal from it. He is nothing other than a dedicated man and a shining example of Communist excellence for younger comrades to learn from - an expert in his field. Basically, I am simply trying to impress upon you, the reader, that this essay is not canceling or picking fights with anyone or anything, but instead only intending to aid the goals that we share with Comrade Cockshott through a coherent and concrete reflection of social reality as it exists within its own development. The point of contention is not between personalities, or anything approaching the petty bickering that destroyed the last period of history's so-called "left" in the USA. We simply have different areas of expertise. American history and the dialectics of abstract and concrete just happen to be mine, so it's an area in which I can help.

Simple as, as the kids say.

Do the kids still say that? Ah, who cares. Let's get on with it, shall we?

The piece by Comrade Cockshott in this journal entitled, "The American Oligarchy," lays out his views on the current nature of the American state apparatus and elaborates some historical points that he believes are what make it this way. I would like to say, first and foremost, that on the issue of whether or not we can characterize the state apparatus of the USA as a democracy ruled by the working people, or an oligarchy ruled by an alienated class of capitalists

whose interests are diametrically opposed to those of its working people, we can only wholeheartedly agree with Comrade Cockshott. It is most certainly an oligarchy. In fact, we can predict with over 90% accuracy which political "candidate" will win a given election simply by betting on the horse who received the most campaign "contributions."[3] If that isn't a clear indicator of which direction our analysis must turn in regards to understanding the class character of the American government, I don't know what is. It is only when we delve a bit deeper into how this state of affairs came about, what shaped and determined its form, and the essential nature of American society that is rumbling beneath the surface, driving its continual internal development, that problems arise. Only when we begin to make an abstraction of its most basic elementary component, the component that creates the necessity of development, and determines in large part the character of what it creates, do we see that things are not always what they appear in the directly sensuous observation of facts. This state of affairs begins with the formation of the Republic, the ousting of the British, and the embryonic form of the American people. In order to view the whole, we must understand the interconnected, mutually determining, internal components leading from there to here. Only when we put all of those pieces together correctly do we get a concrete reflection of what exists in concrete reality.

This is, of course, the Marxist method of the ascent to the concrete. So we will be going over a very truncated version of this as we go through the comrade's paper, and hopefully, in this way, we can arrive at a clearer picture of the revolutionary character of 21st century America, as well as the path forward for its working class in its fight against the oligarchy.

The paper begins with an empirical investigation that backs up the primary thesis we have already agreed with: a recent study from Princeton University that exposes the lack of actual democracy in the USA. This is the Marxist starting point, an elementary observation of the material reality on the ground as it currently exists, and it reflects conclusions long-ago arrived at through Marxist analysis. Namely, that the ruling class in this country functions for its own class, and the working masses have no real say in the policies that affect our lives. This is a great place to begin and precisely how Marx himself begins

3. Wesley Lowery, "91% of the time the better-financed candidate winds. Don't act surprised," *The Washington Post* (April 2014): https://www.washingtonpost.com/news/the-fix/wp/2014/04/04/think-money-doesnt-matter-in-elections-this-chart-says-youre-wrong/

Capital (though, obviously with different subject matter).[4] The comrade is correct here. However, his method of analysis accidentally slips into metaphysics right after this point as he says, "It is a mistake to see the American Revolution as a bourgeois democratic one.

It was way different from great democratic revolutions like those in 18th century France or 20th century China." Honestly, slipping into metaphysics is easier than you'd think (metaphysics is, after all, how we are socialized and trained to process information in modern bourgeois society, of which we are all subjects; avoiding its grip would be like avoiding oxygen), so we aren't going to try to assign blame here or anything. Just try to investigate a bit deeper.

What the comrade is doing here, a little more precisely, is looking at multiple things that he considers to be within the same category and then abstracting characteristics within each thing away from the thing in question. He then compares these characteristics, looking for similarities. In this way, he seeks to find what is similar and dissimilar in these revolutions.

Unfortunately, when we view things in this manner, it makes whatever the thing is that we are studying static, and freezes it in time and space. Rather than figure out how these features developed, we simply remove the features we want to look at from it, and then we end up viewing the features of one abstract thing devoid of features and internal processes that create them in relation to another thing that gets its features and internal processes removed in the same manner.

We can't ever get to a concrete representation of it because of this. We've removed its component parts that are part of what makes it what it is. We're left sort of swimming in the realm of abstractions, never able to form a real, concrete picture of it in our minds as it actually exists in reality. I call this *"counting characteristics."* It's a very common mistake, and something we must consciously prevent ourselves from doing when we set out to analyze anything.

If we are to understand multiple revolutions, we must view them on another level of investigation entirely, as part of the world historical movement of

4. In their polemics against bourgeois apologists and professorial blowhards, Marx and Engels repeatedly clarified that Capital did not begin with anything other than the elementary material reality of "commodity relation". The concepts of value and everything else begin with this elementary relation.

society, and in this way in their interconnection and mutual determination of the entire process of world history, rather than as singular revolutions that are cut off from each other.

The characteristics in question are those of the American Revolution that the comrade considers essential to its nature. He compares them to the characteristics of the bourgeois democratic French Revolution of 1789 and the Chinese Communist Revolution of 1949. He then arrives at the conclusion that they are different.[5] This is correct, of course. They are different. But they are different only in form, and precisely because of this, they are similar in content when we perform our analysis on this other level of world history mentioned above.

Later on in the essay, comrade Cockshott quotes the legendary Zhou Enlai and his famous remark about the French Revolution, where he says that it is still too early to tell what its outcomes are. The comrade's mistake is made apparent to us here, as he tells us that it is not too early to tell. But this was not the level of theoretical analysis that comrade Enlai was speaking on. He was, instead, telling us that the French Revolution was part of this world historical process, and as such, it is still too early to tell what its outcomes are. We are still in the process of resolving them, and revolutions against capitalism are a vital part of that process, the effect resulting from this cause that becomes the cause of a new thing moving forward. As Carlos Garrido has written on the subject: "Enlai, as a proficient dialectician, was correct in his assessment of the French Revolution. It is still 'too soon to tell' precisely because the rational kernel, the progressive demands, of the revolution have yet to be fully realized. These find themselves unactualizable within the bourgeois form of life. They find their realization in the communist form of life, which, for most of the world, exists only implicitly/in-itself, as a hope which drives us to realize its latent potential."[6] These aspects of the concrete whole "world history" are mutually determining. Or, they are different precisely because they are similar - they are two particular, historically determined forms of the universal progress of society.

---

5. One could say that this revolution began roughly 20 years earlier, and one would not be wrong in that estimate. We are simply using this period to establish the difference in the history of the world's revolutionary process more clearly.

6. Carlos L. Garrido, " 'Too Soon to Tell': On Revolutionary Temporality," *Monthly Review Online* (April 02, 2024): https://mronline.org/2024/04/02/too-soon-to-tell-on-revolutionary-temporality/

In order to get to this conclusion, that they are different precisely because they are the same, we must view each revolution not in comparison to the characteristics of some other revolution, but in comparison to itself. We cannot count characteristics. We must, instead, look at the thing in question in relation to itself, and begin our abstraction-making at its most basic point of necessity, finding that relation within it that must overcome its own internal contradiction and drive the development of that thing forward. This can then become part of the same process on a larger scale. Or, in order to understand the abstract moments of development within society as a whole, we must go through this process in smaller scale as regards each revolutionary moment of development, consciously developing a theory of their interconnection as part of the larger process of world history.

In *Capital*, Marx does this with bourgeois society in general through finding that exact point in its most developed form to date. From there, he must look at the internally, mutually determining aspects that must lead to its development into what it is at the moment he sees it in sensual observation. In this way, Marx builds up an interconnected set of abstractions that describe the necessity of each next point and its mutually determining character with the point previous, and he creates a concrete whole concept, a reflection of what exists in reality as it exists, discovering its internal laws of development. Lenin does this same thing in relation to the continual development of capitalism past the industrial stage and into the imperialist stage, expertly applying this more developmentally-oriented form of logic. If he had instead compared characteristics, his conclusions would have led him to understanding some of the many problems within the Russia of his day, but not to their solutions, just as Comrade Cockshott can arrive at the problem of oligarchy, but cannot arrive at the essential process of development towards a new era and the necessity of the overthrow of the British Empire and establishment of the American Republic as laying the groundwork for the American class struggle as a mutually interdependent outcome of the same process.

In 1954, William Z. Foster's *The Negro People in American History* goes through this form of analysis in regards to the subject at hand: the bourgeois revolution of 1776. We can see a few of the necessary outcomes produced by differences in method here. In this account, Foster calls this revolution, "a bourgeois revolution with strong democratic currents within it," for instance - because he is comparing this particular revolution to itself and the necessity of

its development as that particular form of revolutionary transition.[7] He elaborates from there, characterizing 1776 specifically as an anti-colonial revolution; the necessity of the embryonic American bourgeoisie's development of capitalism coming into contradiction with the older capitalism of the British Empire. The necessity of development within this younger capitalism necessitated the ousting of the British occupier and the establishment of the first ever bourgeois Republic.

This anti-colonial angle is a common one in Marxist-Leninist analysis, and from everything I have read, seems to be the consensus of Eastern Marxism. It was the view held by Herbert Aptheker, the preeminent American communist historian of the 20th century, in his text, *The American Revolution*.[8] It is only in the post-Cold War West, where we are subject to so many distortions, and where we have so many facts hidden from us, that a view of a so-called "counter-revolution" has developed and the British Empire/King George III have been painted as somehow progressive. But we'll get to that shortly.

Foster wrote another account of this revolution as well, coming from another angle. Three years previous to *The Negro People in American History*, he published *Outline Political History of the Americas*, which has a much broader scope of examination. In this one, he characterizes 1776 as the primary revolution within a set of "hemispheric revolutions," and puts it in a place of prominence amongst the world's historical revolutions against feudalism.[9] It's important to note that the theory of hemispheric revolutions is an abstract component of what creates the Marxist view of the entire world's history. So, Foster has three levels of analysis here. In order to develop a concrete view of world history, he must abstract the hemispheric revolutions and their processes from it, and perform the same sort of analysis in order to get that component. In doing so, he must do the same for the American Revolution of 1776 on a third level. All of these are interconnected components of the overall analysis.

Before moving on to some of the distortions that are necessarily all around us by simply being in "the West," we must examine one other opening line from Comrade Cockshott. It's at this time that he comes out of metaphysical analysis

7. William Z. Foster, *The Negro People in American History* (New York: International Publishers, 1954), 43.

8. Herbert Aptheker, *The American Revolution* (New York: International Publishers, 1960), 23.

9. William Z. Foster, *Outline Political History of the Americas* (New York: International Publishers, 1951),121.

and into a more dialectical or developmental view. Unfortunately, he's missing some of the facts, and so we will try to elaborate on those in order to get a more accurate picture of the modern American oligarchy as we create that concrete reflection we mentioned.

As the comrade elaborates his point about the oligarchical character of the American state apparatus, he says that this information comes as no surprise to Marxists. In his own words:

> *"This is what they [Marxists - NK] had been saying since the mid 19th century "the bourgeoisie has at last, since the establishment of Modern Industry and of the world market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern state is but a committee for managing the common affairs of the whole bourgeoisie." Here was scientific confirmation of what they had always said. But how does this work?"*
> *"How are the rich able to so completely dominate a state whose constitution is supposed to be democratic? The short answer is that the US constitution was never intended to be democratic. The long answer involves looking at the economic and class history of the USA to see how its politics has operated."*

This is all correct, of course. But the comrade is forgetting that Marx and Engels considered the development of bourgeois states to be an incredibly progressive, revolutionary moment in world history. They considered the American anti-colonial revolution in particular to be revolutionary, in fact, and believed it created very ripe conditions for the progress of humanity past the bourgeois epoch. Engels, in the forward to the American edition of *Conditions of the Working Class in England,* for instance, describes how quickly American class consciousness was developing during his time without the burdens imposed upon her by European feudalism, calling the soil of America "more favored" for proletarian revolution.[10] Marx, in his famous letter to Abraham Lincoln after the victory of the second American Revolution at the end of the Civil War, writes that the working class of Europe look to the star-spangled banner (American flag) as their future.[11]

---

10. Friedrich Engels, *The Conditions of the Working Class in England in 1844* (New York: John W. Lovell Comp, 1887), 11.

11. Karl Marx, "Address of the International Working Men's Association to Abraham Lincoln, President of the United States of America Presented to U.S. Ambassador Charles Francis Adams

But these are just the feelings of Marx and Engels. We don't really have the space here to go over the analysis that led them to these views. Instead, I want to focus on the area in which Comrade Cockshott speaks of the American Constitution and its anti-democratic nature. We must compare this constitution not to the Constitution of some obviously more advanced country, such as People's China, or even one of a similar level of development that we view as more advanced, such as the French Republic, but to the conditions it arose from, and what necessitated its development, as we do everything else. In order to really get that concrete view of how it developed into what it is, we can't even compare it to older forms of social documents, such as that of the Roman Republic (which is the route the comrade takes). We must, instead, compare it to itself, and the internal processes leading to its development. What contradictions did its existence seek to overcome, and how were they overcome? Those are the questions we must ask.

The American Constitution is the document that directly followed the famous Declaration of Independence. It was the founding document which established the formal law of the land for the first bourgeois Republic, and it was written as a consolidation of often contradictory forces within the American British Colonies (now considering themselves independent) that organized them into a Republic of federated States. Its democratic nature, or the parts of it that are based in the notions we refer to as "Jeffersonian democracy" were already in conflict with more authoritarian views of the day. But before we get into the internal contradictions of the American Republic, Comrade Cockshott tells us a bit about the Sons of Liberty and their particular leadership, saying, "The leadership consisted of men of influence and standing, perhaps the most conservative leadership of any revolution in history."

While certainly, the leadership consisted of men of influence and standing, I don't think we can call the first anti-colonial revolution in modern history 'the most conservative' if we are analyzing this revolution in relation to itself, and its own context, rather than in relation to, say, the October Revolution, or our modern times now. In order to understand if this revolution and its leadership was 'the most conservative' or a genuinely progressive and revolutionary force, it must be placed into its proper context, and we must understand the conditions that gave rise to it. It is in doing this, that we must add some factual corrections to our investigation.

January 28, 1865," *Marxist Internet Archive*: https://www.marxists.org/archive/marx/iwma/documents/1864/lincoln-letter.htm

Certainly, the Sons of Liberty, including their primary and more radical theorists, Thomas Jefferson and Thomas Paine, were of the opinion that their class was the only class qualified to lead a nation. They even write of aristocracy. Thomas Jefferson, specifically, however, qualifies this, creating a progressive, or even revolutionary version of aristocracy, and this is part of why Foster speaks of the prominence of these revolutionaries in the overthrow of feudal absolutism. Now, at first glance, the phrase "progressive, or even revolutionary version of aristocracy" would make little sense. That is, if we abstract the phrase from its place in concrete reality, and how the notion developed, it would be a simple contradiction in terms, an oxymoron, for bourgeois revolutionaries to call for aristocracy. But as we add the context it was developing out of, we will see that it was precisely this: a revolutionary form of aristocracy.

Jefferson, the founder of the populist *Democratic-Republican Party* (which is the precursor to our modern Republican Party), considered the will of the people to be naturally represented within a concept he named the "natural aristocracy" in 1813 while in correspondence with John Adams, a political rival and friend.[12] This "natural aristocracy" was composed not of those with the "proper" blood lines and land holdings that were attached to those blood lines, but instead the naturally meritorious members of society, those who proved their virtue and talents through the actions leading up to their taking leading roles within society and acquisition of property. He counter-posed this against what he called the "artificial aristocracy" of feudalism, where only those who had the correct blood lines were considered meritorious, virtuous, and talented enough to lead. In fact, one of the questions that often vexed Jefferson (due to the limitations of how society had developed up until this point, the idealist philosophy of John Locke, etc.) was how to prevent such a thing from arising. His notion of limiting inheritance to a single-family house was one solution he came up with that shows us how progressive he was for the era. This was an incredibly radical idea in the early 19th century. And this is only one example.

This is why I went to such lengths to explain the importance of the analysis of a given revolution within itself, rather than compared to some other revolution. In order to understand whether or not 1776 was progressive, it must be put in its proper context, understood from the contradictions that it overcame as it arose, and what contradictions that created going forward. We cannot expect

12. Thomas Jefferson. "Thomas Jefferson to John Adams, 28 October 1813." *Founders Online*: https://founders.archives.gov/documents/Jefferson/03-06-02-0446

bourgeois revolutionaries of 1776 to be Communist revolutionaries of the 21st century, after all. An industrial proletariat would not come about in the American Republic until well after that point. The material premise for our existence simply wasn't there yet. There was still so much that had not yet developed that the Jeffersonian notions of localized democracy and yeoman farmers, small holdings, and what later Marxists would refer to as a petty bourgeois nation still seemed likely to him. It takes the social relations caused by the rise of industrial capitalism and the necessity of the robber barons to begin their domination of the entire country for the horrors of Western expansion to begin, and the revolutionary potential of the proletariat to develop.

The comrade does set up such a framework of examination, of course. He tells us that we must use the methods Mao used to analyze society, the categories that the great Chinese Communist spells out in his famous essay, *On Contradiction*, in order to arrive at a solution. This is all well and good, and we must agree that Mao's categories are very good for understanding the mutually determining aspects within any social change. But we must at the same time stress that the framework Mao lays out in *On Contradiction* must be used in its entirety, with each inter-related piece affecting the others. We must understand what leads to what and mutually determines what, or our answers will not properly reflect reality as it exists. Above all, we must understand the categories he calls the universality of contradiction and the particularity of contradiction, and on which level our analysis rests at a given moment. This is why we made such a fuss over it at the beginning of this essay. When we mix these up, or we don't have all the empirical facts relevant to understanding a given level of analysis, we can end up with a skewed view of the overall situation, and this is precisely the mistake in the comrade's paper.

He tells us, "During the revolution, the fundamental contradiction was between the slave owning class of the colonies on one side, and the British state and four Iroquois Nations on the other." Now, to be fair to the situation as the comrade sees it, this is not the only thing he says about it, only my distillation of its major premise so that we can point to the historical facts we must add in order to arrive at a more concrete reflection of the revolution. If we are to go from this characterization of the situation in 1776, however, it would seem to us that the Sons of Liberty were bent on chattel slavery and the destruction of existing nations within the land mass they were on in order to expand and have room to make profits from that slavery. These Iroquois tribes would be defending their property alongside those who have similar interests in the British Empire, who

were a progressive force in the situation. But in doing so, we would be freezing things in time and counting characteristics again. If we take a more developmental view of how the contradiction between the British Empire and its American colonies develops into what it became in 1776, then we can see how it is impossible to agree with the comrade's above assessment.

First and foremost: it was the British Empire that set up the institution of chattel slavery to begin with, and the writings of the Founding Fathers make it very clear that they held King George III and the British Empire directly responsible for forcing this barbaric institution on the colonies, and for setting it up as the backbone of the entire world's economy. In fact, in the original draft of the Declaration of Independence, Jefferson rails against King George III for this very thing, saying he was, "waging cruel war against human nature itself."[13]

When we frame things as "the slave owning classes of the colonies on one side, and the British state and four Iroquois Nations on the other," we are also missing the fact that such a thing as a slave-owning class simply did not exist. Beyond chattel slave owners being a minority of the bourgeois revolutionaries (and one the abolitionists would struggle very hard against within the internal contradictions of the revolution), Marx himself outlines this specifically as a bourgeois form of slavery in *Capital*, and W.E.B. Dubois, the father of American Marxism, goes into detail on its functions in *Black Reconstruction in America,* giving us the all-important category of the enslaved black proletariat as a particular, historically determined form of the proletariat, being used by a particular, historically determined form of bourgeoisie in service of the creation of surplus value in this time and place. This aspect of the situation is essential to understand if we are to apply Mao's categories - not just principle and secondary contradictions, but the universality and particularity of contradiction.

What have, instead of a slave-owning class, was the embryonic bourgeoisie of the USA struggling against the stifling of the British Empire in its development of capitalism. No more, no less. That is, on the one hand. On the other, the class contradictions within the Republic were already developing, as the comrade points out. Though, it is quite a bit more complicated and internally contradictory than the analysis Comrade Cockshott gives us would lead us to

13. Thomas Jefferson. "Transcript of the Rough Draft of the Declaration." *Thomas Jefferson's Monticello*: https://www.monticello.org/thomas-jefferson/jefferson-s-three-greatest-achievements/the-declaration/transcript-of-the-rough-of-the-declaration/

believe. As Jefferson was the primary theoretical mind of the Revolution, and he was very much both an owner of chattel slaves and staunch abolitionist, I believe we should once more go to his views on the subject, to further demonstrate the complications and contradictions inherent within such a thing as an abolitionist owner of slaves. Of the institution itself, Jefferson wrote, "But, as it is, we have the wolf by the ear, and we can neither hold him, nor safely let him go. Justice is in one scale, and self-preservation in the other."[14] He also wrote that he prayed for the absence of a just God, because his own participation in the institution would damn the souls of himself, his sons, and his entire family for eternity if that were the case.

But we are not here to make an apology for the internal contradictions of the American Founding Fathers. Only to express that the British Empire, having erected the institution of chattel slavery, fought for its continuation even after they outlawed the use of human beings as property on the island of England itself, and spent incredible effort to increase the slave trade in other colonies. In fact, it was chattel slavery that laid the economic foundation for the entire international system of world capitalism and laid the groundwork for the industrial era to begin. People speak of the spinning jenny and such inventions, but it was the profits derived from this bourgeois form of slavery's main primary raw material, cotton, that made the entire British Empire's textile sector possible, and formed the backbone of world trade. The Brits even almost entered the American Civil War on behalf of the southern slave owners, in fact, and most likely would have without the intervention of the organized British proletariat. The basic understanding of the Sons of Liberty was that the practice would die out of its own accord once they were able to outlaw the slave trade in all of the American states. Of course, they were wrong about this fact, and it took a second revolution to accomplish this, but it is evident in all writing on the subject at the time. In fact, there are zero parts of the prolific writings of the Founding Fathers that talk about the need to continue chattel slavery. Which makes sense when we begin looking into the individuals who made up the theoretical and practical leadership, most of whom (including Jefferson, as ironic as that sounds, I know) were staunch abolitionists. Benjamin Franklin, in fact, founded the first-ever abolitionist newspaper in the country.

The comrade does give us one point to back up the narrative that runs through the rest of the paper, in the Proclamation of Lord Dunmore at the beginning of

14. Thomas Jefferson. "Extract from Thomas Jefferson to John Holmes." *Thomas Jefferson's Monticello.* (April 20, 2020): https://tjrs.monticello.org/letter/377

the Revolution. This Proclamation basically offered freedom to any slave who agreed to fight against the Patriots for the British crown. It was not, however, nodding towards the British abolition of slavery as an institution or the end of the slave trade as such. And the Patriots did the same thing. I consider this something of a wash – a tactical necessity for both sides. But let's go once more to Jefferson's draft of the Declaration of Independence, which addresses the British Empire's attempts to incite slave rebellions against the Patriots.

> *"He has waged cruel war against human nature itself, violating it's most sacred rights of life & liberty in the persons of a distant people who never offended him, captivating & carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. this piratical warfare, the opprobrium of infidel powers, is the warfare of the CHRISTIAN king of Great Britain. determined to keep open a market where MEN should be bought & sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce: and that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, & murdering the people upon whom he also obtruded them; thus paying off former crimes committed against the liberties of one people, with crimes which he urges them to commit against the lives of another."*

This makes it quite obvious how nuanced the views of the Sons of Liberty were on the subject. Jefferson maintained that the Southern colonies would not sign on to the fight against the crown without removal of this section, however, and so he removed it in the final version. The basic history of the slave-owning plantation bourgeoisie of the South would tend to confirm this statement, as they shared both economic ties and cultural affinity with England until the second American revolution crushed their power and threw down the institution for good.

All revolutions are practical affairs, at the end of the day, and not won or lost through noble sentiments. They are won and lost based in defeating the primary enemy and winning the primary struggle, overcoming the principal contradiction of the situation, a contradiction that is historically determined, and which drives forward the development of society itself. Just as Mao was

able to, in one context, understand the struggle against Japanese imperialism as the principal contradiction, so too must we see the need to overthrow the yolk of British colonialism in 1776 as the principal contradiction the American revolutionaries faced. In regards to 1776, this can be nothing other than the removal of the fetters the older British capitalism had put upon the embryonic American capitalism, freeing it to become nothing other than a capitalist Republic.

The comrade continues past this point, of course, creating his view of the secondary and tertiary contradictions within the USA. He says, “The fundamental contradiction governed the development of the secondary ones: between slave and slave owner, between landlord and tenant farmer. Because their direct oppressors were opposed to the British, slaves and tenant farmers tended to side with the British against the revolution. There was widespread loyalist (pro British) sentiment among the tenantry.”

Unfortunately, if we are to use Mao’s categories, the fundamental, or principal contradiction was not that of a contradiction between a “slave owning class” on one side and “the British state and four Iroquois nations on the other,” as we show above. It was, instead, as Lenin told us, “... the war the American people waged against the British robbers who oppressed America and held her in colonial slavery.” Or a little less poetically, the embryonic American bourgeois struggling against the older British capitalism that was stifling its development.

This is not to say, however, that chattel slavery would play no role in the historical development of the American class struggle. In fact, it plays a very dominant role, as it is the social relations created by chattel slavery that create the black freedom movement, which is the form the universal contradiction of class struggle has taken on in particular to these conditions, and what led to not just the second American revolution at the end of the Civil War so expertly described by Dubois in *Black Reconstruction*, but to the political revolution we often refer to as the Civil Rights Movement, creating a new form of social reproduction once again through the overthrow of Jim Crow.

Comrade Cockshott takes some time to explain the lack of genuine democracy in the USA during the next section of the paper, and with this and his historical points in this regard, we most whole-heartedly agree. He bases this on a comparison of characteristics of the Roman Republic, however, the problems with which we have already addressed above. But we should still remain clear:

this was not the constitution of a proletarian revolution. It was impossible for the American bourgeois revolutionaries to institute democracy in any genuine sense of the word as explained in the passage from our comrade Carlos Garrido above. In fact, even the Founding Fathers of the Federalist faction were forced to assuage the fears of the big landholders of the day in the Federalist Papers. In Federalist number ten, Madison does this in reference to the fears of political democracy (or what we sometimes call formal or bourgeois democracy), saying that the property-owning classes had no fear of the "leveling" impulses of the landless proletariat specifically because of the inherent factions within society. It has been the job of these propertied classes to exacerbate those factions, and they have excelled at it to this very day - basing such actions on race, on religion, on gender, and on and on. Again, we must stress that the anti-colonial nature of the 1776 revolution could lead only to such a thing, due to the limitations of the conditions that drove its development.

Comrade Cockshott ends the paper by agreeing with something Lenin said, another area in which we can at least mostly agree. He says, "It is now certain that as long as the US retains its current constitution, the oligarchy there need have no fear of democracy. In the USA radical popular leaders from Lincoln to King had the delusion that the republic was democratic. I would tend to side with Lenin who wrote that a US type republic was the most perfect form of rule by the propertied classes."

I would add only two things here. First, that Lincoln and King were under no delusions about the victory of democracy being a struggle they were both engaged in. We do not have the space to get into such things here, but I would urge anyone interested in the view of Lincoln to refer to his Gettysburg Address for their answer, and anyone interested in the Hegelian dialectical theory of King to look into the many collections of his essays and speeches. And second, I would another reference to Lenin, who famously said a few things on the subject. He said, "Democracy for an insignificant minority, democracy for the rich - that is the democracy of capitalist society," in *The State and Revolution*, by which he meant that the democracy of any society is and can only be the democracy of the ruling class.[15] This is something comrade Cockshott also explains early on in his paper, where he quotes Marx.

I would also like to add another reference to democracy and how to discern its essential content that Lenin made. In the section of his famous polemic *The*

15. Vladimir Lenin. *The State and Revolution.* Progress Publishers. 1969., 80

Proletarian Revolution and the Renegade Kautsky that explains how Kautsky tried to turn Marx into a common liberal, he chastizes Kautsky for speaking like a liberal, of "democracy in general," explaining how a Marxist will never forget to ask for which class this democracy exists.

Our bourgeois revolutionaries were liberals, in the truest sense of the word. They could, of course, speak of democracy in general. But we Marxists, we must never forget to ask, "for which class?" because it is this question's answer which determines the aim of our modern struggles, and guides us in our actions of the day. We can forgive the liberals in the pre-Marxist era for their lack of understanding the objectivity of class struggle. What we cannot forgive, and will never forgive, are the actions of liberals in the modern day, who try to blind and distract us the way Kautsky did, who carry water for genocidal monsters and warmongers, and who seek to stop the advance of working class democracy through notions of "democracy in general" and other betrayals that would subsume the power of the working class to that of the war-mongers and monsters.

After all, the progress of the USA did not end at the ousting of the British Empire and the defeat of King George III. It only overcame one primary contradiction that laid the material basis for the contradictions to follow it. Without the anti-colonial revolution of 1776, the black proletariat never would have been formed in the way it was, and never would have forced the entire nation to settle the question of abolition once and for all. We never would have seen the first dictatorship of the proletariat in history during Reconstruction. We also never would have seen the rise of the industrial proletariat that is the direct outcome of the formation of the bourgeois state, which is the material basis for proletarian revolution. American capitalism would not have produced the middle class that arose during the mid-20th-century from its struggle, meaning that the middle class would not be decaying and dying away in our own era, producing the revolutionary potential of the re-proletariat.

But all of that, as I'm rather fond of saying, is a whole nother bag of bananas. A story for another time. For the moment, we will close with a thank you to comrade Cockshott and a tribute once again to the great VI Lenin, whose quote we will repeat here.

It is natural for a liberal to speak of "democracy" in general; but a Marxist will never forget to ask: "for what class?

I think that we all can agree on this, if nothing else:

It is time for democracy for *our* class.

8

The Ringing Call of The Gallic Cock: On Marx's Critique of Hegel's Philosophy of Right

Thomas Riggins[1]

This article aims to reprise Marx's 1844 article on Hegel's philosophy of law which ends with the memorable prediction that the Germans will only become conscious of their revolutionary destiny when they respond to the “the ringing

---

1. Thomas Riggins is a retired Philosophy Professor (NYU, The New School of Social Research, among others) who received a PhD from the CUNY Graduate Center (1983). He has been active in the civil rights and peace movements since the 1960s when he was chairman of the Young People’s Socialist League at Florida State University and also worked for CORE in voter registration in north Florida (Leon County). He has written for many online publications such as People’s World and Political Affairs, where he was an associate editor. He also served on the board of the Bertrand Russell Society and was president of the Corliss Lamont chapter in New York City of the American Humanist Association. He works as a Counseling Director at the Midwestern Marx Institute and is the author of Reading the Classical Texts of Marxism, *Eurocommunism: A Critical Reading of Santiago Carrillo* and *Eurocommunist Revisionism*, and many other books.

call of the Gallic cock." Well, the last time the Gallic cock was heard from was in 1968 and it was rather subdued compared to its noisy past (1789, 1830, 1848, 1871).

Fortunately for those who read this pre-*Communist Manifesto* work of the young Marx (he was 25 when he wrote it) it has many useful ideas packed into its 13 pages that are still of interest today even though no one is expecting the Gallic cock to make any ringing calls in the foreseeable future. Its greatest call remains that of 1789 which inspired the Russian, Chinese, Korean and Vietnamese Revolutions as well as the Cuban and which is echoed today in the Universal Declaration of Human Rights.

Now for Marx's ideas and how they relate to today's struggles. There are revolutionary movements at work in the contemporary world and some of the ideas expressed by Marx in relation to the French and German movements of the early nineteenth century can be applied to them. There are three areas where revolutionary ferment is currently occurring-- the Middle East and Africa where we see revolutions and counter revolutions breaking out in several different countries, Latin America where several countries are now led by pro socialist and/or progressive governments inspired by the Cuban revolution and threatened by US imperialism, and in south east Asia where both India and Nepal have active revolutionary movements based on exploited peasants and indigenous peoples.

This essay by Marx ("Contribution to the Critique of Hegel's Philosophy of Law: Introduction") maintains that the fight to improve the world involves a fight to criticize religion since we will not be able to focus on the real world and its problems if we spend our time engaged with a false world such as the one conjured up by religion. This essay by Marx is admittedly dated but still of some interest today.

This work is justly famous as the source of the quote that "religion is the opium of the people." While opium may be able to supply some relief from an intolerable reality, we can't expect people doped up on opium, spiritual or otherwise, to be involved in schemes for rationally based world improvement. We will get to the full quote in a minute. First, I want to note that in 1844 Marx thinks the basis of all criticism of the basic world order is the criticism of religion and that in his day this criticism has basically been completed-- at least

in western Europe (Germany in particular). “Man makes religion, religion does not make man.”

Marx is right of course for the Western world in general and large parts of Asia (China, Vietnam) religion is no longer a major factor in people's lives (except in a *pro forma* sense or within fringe groups or in backward areas). Unfortunately, this battle has not yet been won, or even joined, in large areas of the Third World. Religion thrives on oppression and only by simultaneously fighting oppression, and furthering progressive education, will religion wither and the people flourish. The following is Marx's full quote on this issue:

> *Religion “is the fantastic realization of the human essence because the human essence has no true reality. The struggle against religion is therefore indirectly a fight against the world of which religion is the spiritual aroma.”*
>
> *He continues: “Religious distress is at the same time the expression of real distress and also the protest against real distress. Religion is the sigh of the oppressed creature, the heart of a heartless world, just as it is the spirit of spiritless conditions. It is the opium of the people.”*
>
> *Finally, he says: “To abolish religion as the illusory happiness of the people is to demand their real happiness. The demand to give up illusions about the existing state of affairs is the demand to give up a state of affairs which needs illusions. The criticism of religion is therefore in embryo the criticism of the vale of tears, the halo of which is religion.”*

These three quotes form the basis of the materialist outlook on religion. But what is the difference between illusory happiness and real happiness? If a person is experiencing “happiness” what more is there to say? If we take an example from current history and say that the members of the Moslem Brotherhood in Egypt, being at heart members of a religious organization, are living in an illusory world and the Egyptian people demanding their removal from power was an example of the demand to abandon illusions about the nature of the problems facing Egypt and the existing state of affairs then, it would seem, the only justification for this action would be to revolutionize the state of affairs (i.e., the social, economic, and political status quo) to such an extent that religious illusions would no longer have any traction in that society.

But who is to decide who is delusional? In the first place, rather than speaking of illusory versus real happiness, it would be better to speak of a feeling of happiness based on a false belief about the nature of reality and one based on a true belief about the nature of reality. You may feel (temporarily) happy taking your laetrile for that lump, but you would be better off having it removed.

As for who decides, Marx was very specific (in 1844) as to whom this responsibility devolves. It is the role of philosophy in service to history. We will have to allow Marx to use this Hegelian way of expressing himself: while critical of Hegel he had not yet completely liberated himself from Hegelian ways of expressing his ideas. He says: "The task of history, therefore, once the world beyond the truth has disappeared, is to establish the truth of this world. The immediate task of philosophy, which is at the service of history, once the holy form of human self-estrangement has been unmasked, is to unmask self-estrangement in its unholy forms. Thus, the criticism of heaven turns into the criticism of the earth, the criticism of religion into the criticism of law and the criticism of theology into the criticism of politics."

Marx may have thought this battle was over in the Germany of his day, but it is still raging here in the USA: one only has to read the statements made by certain right-wing US politicians to see how retrograde religious references are put forth to justify reactionary social policies. And it is not just in the United States. Every day you can read in the papers how all over the planet religion is used to crush the human spirit, attack enlightenment, retard scientific understanding and further the goals of fascism, militarism, and imperialism. Although they are an important influence, all the religious progressives and pacifists in the world will not stem this backward tide of religious fanaticism without robust movements and political parties that are able to rally millions of oppressed people to fight against it.

Behind the religious facade stands a more this-worldly enemy. Marx writes that once the other worldly illusion has been mastered, we must focus on the reality of this world and the real roots of oppression and human self-estrangement. "The relation of industry, of the world of wealth generally, to the political world is one of the major problems of modern times." A 170 years isn't so long after all as our world today faces exactly this problem – from the Koch brothers, to big investment firms like Blackrock, Vanguard, and State Street, to big oil companies and the military industrial complex, to the economic crisis and the war against working people, to the world wide faltering of capitalism based on

domination by banks and financial institutions, and third world exploitation – it is all based on struggle over which countries and which classes are going to control industry and the world of wealth.

As this struggle intensifies, we can expect the world to become a more and more violent place. The past century may have been only a prelude of things to come. We read in the papers that Japan plans to rebuild its military, the US is building up its forces in the Pacific (aimed at China) and moving into Africa, NATO is carrying on wars of aggression far from its home bases and preparing for interventions anywhere that may threaten Western dominance. Afghanistan, Pakistan, Yemen, Somalia, Honduras, Haiti, Libya, Egypt, Syria (to name just a few of the most recent examples) no country is safe from Western intrigue, drones, outside interventions, or externally manipulated civil wars whenever the economic interests of the US and its allies and puppets are seen to be at risk. Today we see the US wage a proxy war against Russia, stemming from the US backed overthrow of the elected Ukrainian government in 2014 and the advance of NATO to the Russian borders.

Marx realized that journalism alone, philosophy and criticism alone, would never be able to change this situation or be able to overthrow the world system of human exploitation. "The weapon of criticism cannot, of course," he wrote, "replace criticism by weapons, material force must be overthrown by material force; but theory also becomes a material force as soon as it has gripped the masses." This is why Wiki-Leaks and people like Julian Assange, Chelsea Manning, Edward Snowden, Jackson Hinkle, the Midwestern Marx Institute, the Infrared Collective, along with other whistleblowers and investigative reporters must be silenced, for governments and their toadies know that once the people are informed, once they realize that the theories of their own governments are that information and democracy must be restricted (fascist policies introduced) in order for them to carry out their repressive domestic and international policies, they will fight back (or so they think) to ensure their rights and livelihoods.

A revolution in thought must precede a revolution in deed. Marx thinks there must be a material basis for any revolution. "Theory can be realized in a people only insofar as it is the realization of the needs of that people." People around the world are becoming more and more aware of their real needs which are the exact opposite of those they are told about by capitalist governments and their hand kissing mainstream media. They need jobs, peace, education, housing and

clean air and political parties and movements that truly represent working people and their allies, not bombs, drones, military interventions, no fly zones, fossil fuels, austerity and bank bailouts, and capitalist and fake socialist and labor parties that betray them.

A political revolution, such as we saw in the early 2010s in Egypt or Tunisia, was only a partial revolution.[2] Marx's thinking here is conditioned by the experiences of 1789 and 1830 in France. What are these partial revolutions based upon Marx asks [a complete revolution would change the social relations and economic base of a country – 1789 rather than 1830 – or even 1776.] His answer is that a "part of civil society emancipates itself and attains general domination; on the fact that a definite class, proceeding from its particular situation, undertakes the general emancipation of society."

In Egypt in 2011, for example, it was the middle class in alliance with the workers and peasants and some elements of the big national capitalists against the military dictatorship headed by Mubarak and representing comprador capitalists in alliance with US imperialism and its puppets (e.g., the EU).

> *"No class of civil society can play this role," Marx says, "without arousing a moment of enthusiasm in itself and in the masses, a moment in which it fraternizes and merges with society in general, becomes confused with it and is perceived and acknowledged as its general representative; a moment in which its demands and rights are truly the rights and demands of society itself; a moment in which it is truly the social head and social heart."*

It was Mohammed Morsi, and the political party affiliated with the Muslim Brotherhood that emerged in 2012 as the general representative of the forces that brought down Mubarak – it claimed to represent the incarnation of the most general (and contentless as it turned out) demand of the revolution: "Democracy" as incarnated in free and fair elections. Unfortunately for the Brotherhood its anti-democratic and dogmatic nature soon came to the fore as it tried to impose its sectarian doctrines on the rest of the revolutionary

---

2. It must also be remembered the role that imperialist outfits like the NED and others played in the so-called "Arab Spring," especially in countries like Syria and Libya, which upheld a form of Islamic "socialism."

movement, of which it was only one component, while relying on the military to maintain it in power.

This is why a mere political revolution is only partial. In Egypt one “tyrant” was removed from power, and a would-be tyrant was also expelled from office – both by the Egyptian military reacting to millions of people in the streets demanding rights and freedoms which are the norm in stable bourgeois democracies. The real rulers in Egypt remain the military, and the economic and social relations remain the same. To what extent they will allow bourgeois democracy to take hold in Egypt remains to be seen. One thing we can count on is that all the forces of US imperialism will be marshaled against the Egyptian masses and their democratic aspirations, the current US supported military dictatorship is proof of this.

Marx, in this essay, thought a complete revolution would have to be led by a class whose emancipation would free both itself and all other classes – by abolishing class differences. Of course, he is talking about 1844 Germany and the working class was very small and just beginning to develop so any coming revolutions would be bourgeois democratic in nature and not socialist. Yet Marx thought that only a full-fledged socialist revolution, one demanding the abolition of private property, would actually be able to free human beings from exploitation and oppression.

What then does Marx think will replace religion as the moving force in advancing historical progress. He said it would be philosophy. In his days what we call science was more or less considered a part of philosophy – natural philosophy. So, if we think of Marx as thinking that the road to liberation will be guided by a materialist philosophy based on scientific understanding we will not be misguided. The section of humanity that will traverse this road is that of the working people, including agricultural workers, and especially industrial workers who will finally be able to put the economic resources of the planet, the common property of all not the few, to work for the common good.

This day will come, following Marx, when scientific philosophy finds its material weapons in the working people and they find their spiritual weapons in scientific philosophy. But whether it will be the Gallic cock or some other whose ringing call proclaims this day remains to be seen.

human civilization has converged into the present space of virtual reality, where the masses are unconsciously constructing a metaverse. Powered by digital technologies such as artificial intelligence, high-speed networks, and distributed terminals, big data platforms have enabled the automated collection and analysis of data, delivering real-time and increasingly precise decision-making schemes for big tech companies. These companies now dominate international capital, mass media, finance, consumer markets, and everyday life, achieving a form of super-imperialistic control over the global economy, politics, and culture. The ultimate goal remains to systematically drive capital accumulation.

According to the logic of free markets under capitalism, the conversion of both material and immaterial resources digital capital is inevitable, leading to maximum aggregation and concentration, thereby facilitating digital planning. The tangible outcomes of this include the invasion of privacy, a relative surplus of labor, and the polarization of society – hallmarks of capitalism's acceleration in the post-colonial era. While right-wing elites celebrate the digital economy's revival of capitalism, left-wing intellectuals recognize the potential for socialist central planning to be realized through advanced digital technologies, thus surpassing capitalism's market logic and pricing system.

The debate over digital planning inherits the century-old dispute over economic calculation, becoming one of the central issues in contemporary political economy. Although mainstream discourse has been dominated by neoliberal schools of thought, this domination has not—and cannot—prevent digital socialism from emerging as a solution to the contradictions of modern capitalism.

1. The Problem of Socialist Economic Calculation

According to Karl Marx, social contradictions have increasingly crystallized into the opposition between two classes since Western history entered the modern era, with the ideological conflict between capitalism and socialism ever-present. In terms of economic history, the First World War marked a significant turning point.[5] The wartime economy provided socialists with a

model for future economic organization, sparking a protracted debate in Western political economy about the problem of socialist economic calculation. The core issue of this debate was whether and how central planning could be possible and feasible under a socialist system. Ultimately, the discussion underscored the importance of digital technologies—such as supercomputers, big data centers, and artificial intelligence—as the material foundation for achieving socialism. This debate has profoundly impacted the development of century-old political economic theory, with the advent of digital technologies now making socialist planned economy a valid proposition in the digital age.

A. Skepticism: The Logic of Negation in the Austrian School of Economics

From the victory of the October Revolution to the implementation of the Five-Year Plans, the revolutionary achievements of Soviet Russia greatly inspired the socialist visions among left-wing European scientists, while also provoking anti-socialist narratives from right-wing economists. Around 1919, Austrian scientific philosopher Otto Neurath actively promoted the establishment of central planning institutions aiming to embody the collective will of the people, which would function in correspondence with social organizational systems. He proposed appointing "social engineers" to formulate future development plans based on universal statistics and in-kind accounting, aiming to comprehensively guide the processes of social production and historical development. Neurath sought to replace the anarchic market mechanisms driven by money and their price systems with planning, thereby creating a new order of life rooted in justice for all and where all technological achievements and means of production would directly enhance the well-being of the people rather than merely increasing capital profits.[6]

In 1920, Austrian economist Ludwig Mises published an article titled "Economic Calculation in the Socialist Commonwealth," written from the perspective of the so-called "entrepreneur" and advocating for laissez-faire market principles. He emphasized that exchange value has clear advantages over use value, labor value, and other non-economical social values. He argued

6. Otto Neurath, eds. Marie Neurath and Robert S. Cohen, *Empiricism and Sociology* (Boston and Dordrecht: D. Reidel Publishing Company, 1973), 123-156.

that abandoning private property, free markets, monetary pricing, and other essential means of economic calculation would effectively eliminate the natural processes of price formation and resource allocation. Consequently, he asserted that dynamic expenditures and revenues, as well as production and distribution within the economy, would fail to achieve equilibrium, leading him to conclude that socialism is fundamentally and practically "impossible."[7]

Mises subsequently expanded his critique of socialism, which socialists confronted with theoretical counterattacks. Among the influential responses was that of Polish political economist Oskar Lange, who acknowledged that Mises' challenge brought attention to the issues of economic calculation and resource allocation within socialist economies. However, Lange pointed out that the equilibrium conditions in socialist economies could already be represented using a system of simultaneous equations, as demonstrated by Vilfredo Pareto and Enrico Barone.

Lange further identified three statistical prerequisites: preference scales, conditions for alternatives, and the quantity of available resources. Drawing on the ideas of Fred M. Taylor, he outlined a trial-and-error procedure and technical solutions for resolving issues in planned economies and deriving equilibrium accounting prices, attempting to establish market mechanisms within socialist economies. Thus, Lange highlighted Mises' error in narrowly defining the concept of price as merely an exchange ratio, thereby negating Mises' blanket rejection of socialism.[8]

Mises' intellectual heir, Friedrich Hayek, continued to cast doubt on the feasibility of the socialist planned economy, establishing the "second line of defense" for the Austrian School of Economics.[9] On the one hand, Hayek glorified the so-called "true individualism" embodied by the entrepreneur, recognizing only the individual or cooperative plans of participants grounded in dispersed knowledge within competitive markets while rejecting all forms of central and monopolistic planning. On the other hand, he absolutized the limitations of human knowledge in social sciences, arguing that rationality

cannot access all dynamic data, making it impossible to solve complex simultaneous equations or predict consumer preferences. Consequently, he thoroughly denied the feasibility of people understanding economic laws and systematically promoting the balanced development of social production and social justice through science and technology.

B. Integration: The Complementary Roles of Planning and Market Experience

During the Second World War, the Soviet Union once again showcased the powerful mobilization and organizational capabilities of socialism, particularly highlighting the significant advantages of the planned economy in concentrating resources to develop strategic heavy industries. In contrast, the Great Depression of the 1930s in Western countries and the military defeats at the onset of the war exposed the failures of laissez-faire market economies, signifying the theoretical bankruptcy of the Austrian School of Economics.

In the post-war capitalist bloc, pragmatic political elites embraced Keynesianism, shaping the "golden age" of capitalism.[10] Borrowing the "visible hand" of economic planning to intervene in the "invisible hand" of the monetary market, the U.S. extended an olive branch known as the Marshall Plan, while France established a centralized planning system and nationalized key economic sectors, and the United Kingdom actively explored economic planning models compatible with the free market. Practice has shown that within the framework of planned national income and social accounting, implementing expansionary government investment programs can ensure sustained high-level economic growth. This foundation enables the promotion of distributive justice and public welfare, particularly full employment, which helps reconcile class contradictions. Therefore, some argue that under capitalist conditions, moderate central planning can be combined with the free market.[11]

Conversely, socialist countries began implementing market-oriented economic reforms in the post-Stalin era, attempting to use the law of value to regulate

fundamental production relations and the supply and demand of consumer goods. Yugoslavia developed a form of market socialism, Hungary experimented with a socialist market economy, and the Soviet Union introduced market management models and monetary pricing tools on a limited scale. These reforms inspired other countries within the socialist bloc to independently explore various possibilities for socialism. At the time, some argued that orthodox socialist economists often overestimated the feasibility of central planning, asserting that, in reality, a planned reproduction process could only be achieved through a market mechanism that unified commodities and money. Proponents of this view advocated for integrating the law of value into the socialist theoretical framework to achieve an organic combination of market prices and planned prices.[12]

However, from the perspective of the Austrian School of Economics, Mises and Hayek have never been effectively refuted in theory nor in practice. As the disconnect between government investment and market demand continued to worsen in Western countries, inflation and economic stagnation became increasingly severe, paving the way for the supply-side reforms initiated by Reagan and Thatcher. Meanwhile, the Soviet Union was rapidly advancing along the path of marketization towards its disintegration, particularly through the deconstruction of central planning mechanisms, which gave rise to the free-market liberalism of entrepreneurs. The fall of the Berlin Wall marked the historical end of planned economies and socialism, giving way to the comprehensive victory of neoliberalism that swept across the globe.

C. Technology and Ecology: Key Issues in Social Planning

The events of 2008 represented not only an unprecedented crisis of the market economy but also a profound civilizational and ecological crisis, compellingly reaffirming the validity of Marx's political and economic theories. Public consciousness shifted from a singular focus on economic growth to an emphasis on social and ecological justice, rendering the development of socialist planning both more feasible and necessary than ever before.

Left-wing intellectuals have revisited the ideals of communism, with Alain Badiou perceiving it as a hypothetical proposition in the process of actualization.[13] For the "engineers" in Neurath's sense, this actualization represents a social plan that can be achieved through revolution in computer technology. Lange had previously predicted that a computer-based economic accounting servo system could effectively simulate the natural processes of market feedback and iteration while also avoiding delays and fluctuations. This capability would facilitate the dynamic analysis of projected future prices and market equilibrium prices, soundly enabling the formulation of long-term socialist economic plans.[14] Paul Cockshott and his co-researchers systematically developed mathematical models of planned and market economies, aiming to demonstrate that the speed of economic accounting in distributed computing significantly surpasses that of the capitalist free market, thereby establishing the concept of a "digital political economy."[15] This theoretical framework is adapted to the statistical and informational conditions of the digital age, examining specific issues such as knowledge encoding, labor value, and social relations, affirming the feasibility and superiority of socialist planned economies.

Ecological socialists draw on Marx's concepts of use value and technological progress, advocating for reduced labor hours to achieve total freedom. They attribute the sixth mass extinction to neoliberal globalization, underscoring the political and economic importance of planned regulation in the relationship between humanity and nature. John O'Neill revisited Neurath's ideas of "physical calculation" while opposing the technocratic approach to deliberative democracy, offering an ecological critique of Hayek's monetary price system.[16] Following this logic, Michael Löwy, Troy Vettese, and others explore alternatives to capitalism's "destructive progress," consistently grounding their arguments in distributed information technologies and degrowth-oriented social planning. The independent socialist journal *Monthly Review* continues to focus on contemporary ecological justice issues, with John Bellamy Foster systematically critiquing the myth of market self-regulation in a series of

articles and studies. He emphasizes that only a radically large-scale, organized socialist plan can fundamentally alter the course of the “global massacre” perpetrated by capitalism.[17]

In summary, neoliberalism is essentially an irrational system within capitalism – a form of economic mysticism that elevates money to the status of a deity, regards the market as a promised land, and seeks salvation through profit. The gospel of the free market it propagates merely serves to place global capital under the control of a select few elites on Wall Street, while compelling citizens and politicians worldwide to submit to a form of “fetishism.” This dynamic has prompted even Francis Fukuyama to express a somewhat ambiguous yearning for Marx and left-wing ideals.[18]

2. Digital Planning or Digital Market?

As Wall Street’s investment banks have fallen from grace amid the global economic crisis, tech giants in Silicon Valley have begun to strategically lead the regeneration process of capitalist market economies by leveraging their control over information technology and data resources. In other words, the economic regulatory mechanism is undergoing a transformation, with a data-driven value feedback system replacing the natural price formation system mediated by money. However, from the perspective of Marx's critique of political economy, as left-wing scholar Evgeny Morozov asserts, the necessary precondition for the digitization of capitalism remains commodity production, with capital accumulation as a key stage of this process. Therefore, even though digital technology eliminates the material form of money, it is merely an inevitable intermediary in the process of capital accumulation, never “playing the first fiddle.”[19]

A. Tech Giants: Digital Accumulation and Monopoly

The giant multinational tech companies represented by Apple, Alphabet, Amazon, Meta, and Microsoft are collectively referred to as "Big Tech," signifying their status as true monopolistic entities of the digital age in the global market. These companies are an inevitable product of advancements in computer and internet technologies. They acquire startup tech companies at exorbitant premiums and continually expand the realm of digital accumulation, which las led to the large-scale concentration and monopolization of digital capital.

Whether viewed as capitalists in the Marxian sense or entrepreneurs from Hayek's perspective, the economic activities of these entities are consciously planned actions, reliant on information and knowledge derived from market dynamics. As Schumpeter noted with his concept of "creative destruction," Alphabet's Google+ created digital colonies by acquiring nascent digital firms and providing users with free services. This approach bypassed moral, legal, ethical, and privacy boundaries, enabling the plundering and monopolization of digital resources, including the digitization of human ideas and knowledge, thus spearheading the primitive accumulation of digital capital.[20]

Meta's Facebook platform successfully emulated the Google+ initiative, exerting profound influence on people's daily lives and social interactions while systematically extracting and collecting personal data, encouraging users to generate and submit surplus data. Similarly, Apple's ecosystems, Microsoft's desktop operating systems, and Amazon's expanding online marketing systems integrate digital accumulation as a core element. This approach ensures the planned development, production, and sale of digital products, continually increasing the certainty of securing supernormal profits. Notably, digital terminals, software, algorithms, and related technologies have become the foundational infrastructure that determines the operation of the financial sector and even the broader economy. As a result, traditional financial institutions have been forced to initiate digital transformation strategies, with Citigroup and JPMorgan making substantial investments in digital finance.

The leaders of digital monopolies, often "engineers" functioning as entrepreneurs, continue Neurath's grand plan of organizing information and

20. Shohana Zuboff, *The Age of Surveillance Capitalism* (New York City: Public Affairs, 2019).

control over the world, thereby possessing both economic and political attributes. The social necessity of commodity production determines the natural inevitability of digital monopolies. Only by digitizing and privatizing market information can vast amounts of data be concentrated, allowing for the planned control of the monetary price system, the labor production process, and the entire market economy's dynamics. This control extends to influencing public policy and shaping social discourse.

If monopolies in the pre-digital era were defined by the dominance of capital circulation (M-C-M') over simple commodity circulation (C-M-C), monopolies in the digital age are characterized by control over capital circulation itself. This control is exercised through a process of digital planning aimed at expropriating surplus value, with profit growth and capital accumulation as the ultimate goals of this process.[21]

Since users are not customers, and there is neither an employment relationship nor a direct market transaction between platforms and users, the process of digital primitive accumulation is practically without compensation. However, the value of digital capital is appropriated by tech companies, reflecting the characteristics of primitive capital accumulation that Marx pointed out. From a historical perspective, big tech companies are not only replacing traditional financial monopolies by directly regulating the dynamic processes of the global market; as supernational entities, they are also transforming humanity's unconscious natural desires into purposeful digital capital.

B. Big Data Platforms: Digital Feedback and Forecasting

Advancements in information technology are accelerating the digitalization process. As direct products of digital accumulation and monopolization, big data platforms are increasingly demonstrating their crucial role in corporate planning. Data centers composed of supercomputers, high-speed storage systems, and artificial intelligence, interconnected with personal devices, can concurrently collect and analyze market information. This enables automated, efficient, and precise digital feedback and forecasting. Lange's equations have

21. Paško Bilié, Toni Prug, et al., *The Political Economy of Digital Monopolies: Contradictions and Alternatives to Data Commodification* (Bristol: Bristol University Press, 2021), 169.

evolved into digital algorithm models, while Neurath's concept of physical calculation is grounded in the Internet of Things. Big data platforms facilitate the balancing of consumer preferences and commodity production, with the "central planning department" emerging as the decision-making core for various large tech companies.

In the digital age, data is regarded as the new oil, indicating a shift in monetary mechanisms. According to the orthodox views of the Austrian School of Economics, the monetary price system functions as the optimal market mechanism for regulating demand and allocating resources. It relies on the free flow of knowledge (information and data) in commodity exchange, which generates commodity prices that fluctuate around product value. However, this price feedback mechanism, mediated by money, is inherently passive, lagging, and limited, rendering it ineffective in supporting rational predictions of market preferences and demand.

Recently, Austrian scholar-entrepreneur Viktor Schönberger and others have pointed out that when data-rich markets disrupt traditional money-based systems, humanity can overcome information scarcity and cognitive dilemmas. By leveraging digital feedback and forecasting, it becomes possible to mitigate price fluctuations, rectify competitive order, and promote rational planning aligned with social justice and sustainable development. This shift facilitates the transition of the socio-economy from financial capitalism to digital capitalism.[22]

According to classical Marxist theory, capitalist market economies operate on the foundation of private ownership of the means of production and fundamentally revolve around the processes of producing, expropriating, and distributing surplus value. This leads to the alienation and commodification of human production relations and social interactions. Within the framework of private ownership, large tech companies fundamentally reject the socialization of digital resources. Consequently, the feedback and forecasting mechanisms of their big data platforms inevitably exacerbate alienation and commodification, accelerating capital concentration, labor surplus, and polarization. Morozov explores this in detail, highlighting that data is essential raw material for the production processes of digital capitalism. The foundation of new social relations lies in the power structures of data "extraction," where data is

22. Viktor Mayer-Schönberger and Thomas Ramge, *Reinventing Capitalism in the Age of Big Data* (New York: Basic Books, 2018).

transformed into digital products that generate surplus profits through specific algorithms. User behavior data and privacy information become the price users pay for "free services," a dynamic that is touted as the symbiotic mechanism of digital capitalism.[23]

Google in particular serves as a prime example of leveraging big data platforms for digital feedback and forecasting. Especially after acquiring Android, millions of servers are connected to devices throughout the world, positioning Google as a full-stack artificial intelligence company. Google's engineers pioneered the development of the AdSense advertising algorithm model, where user behaviors such as clicks, searches, and interests altered the pricing mechanism for online advertisements, making the further "extraction" of user data inevitable. The digital feedback and forecasting algorithms of shared platforms like Google and Facebook aim to achieve personalized marketing, while the big data platforms of companies like Apple, Amazon, and Microsoft ultimately focus on the development and sale of personalized physical and digital products.

C. The Metaverse Model: Digital Production and Expansion

The metaverse is a term originating from cyberpunk literature, which Mark Zuckerberg used to describe the future digital realm. This concept led to Facebook's rebranding as "Meta," marking a new phase in the ongoing development of the digital landscape. The metaverse model has given rise to various digital frameworks, including virtual reality, augmented reality, mixed reality, and extended reality, guiding the development of a twin structure that enables comprehensive interaction between the material world and the realm of abstract ideas. Engineers at big tech companies are formulating comprehensive plans for digital production and expansion to realize this vision.

The digital twin concept originated from the U.S. Air Force's computer simulations and modeling of real-world scenarios and is regarded as a crucial foundation of the Fourth Industrial Revolution.[24] Engineers leverage the

23. Evgeny Morozov, *Big Tech: a ascensão dos dados e a morte da política* (Sao Paulo: Ubu Editora, 2018), 1, 120, 145, 161-179.

24. *Digital Twin Driven Intelligent Systems and Emerging Metaverse*, eds. Enis Karaarslan, Ömer Aydin, et al. (Singapore: Springer, 2023).

interactive capabilities of big data platforms for feedback and forecasting to create three-dimensional digital models of the physical processes involved in commodity production and reproduction. This approach seeks to enhance planned management across various stages, including demand analysis, product development, manufacturing, logistics tracking, and after-sales service. As a result, it drives the transformation of traditional manufacturing into digital intelligent manufacturing, thereby developing a form of digital Taylorism.[25] Digital factories are no longer confined to specific, enclosed spaces; rigorous labor monitoring now extends to all possible external environments, such as the "last mile" for delivery workers. Consequently, traditional workers are being replaced by smart robots, while highly fragmented labor is organized through platform algorithms and outsourced based on piece-rate standards that align with capitalist production methods, often to global gig workers who earn lower average wages. It is evident that digital capitalism promotes the automation, socialization, and globalization of production; however, it does not—and cannot—resolve the inherent contradictions of private ownership. Instead, it subtly and directly reproduces exploitative mechanisms that increase labor intensity and extend working hours.

Capitalist production is inherently expansive, with the extraction, plundering, and monopolization of digital resources being intrinsic requirements of big tech companies' metaverse plans. This approach contradicts the principles of entrepreneurial spirit and free markets, even from the perspective of the Austrian School of Economics. If every rational worker is also an entrepreneur, his actions in the market must stem from the knowledge and information he possesses. However, the foundation of capitalist digital production lies in the alienation of workers from their behavioral data, which is objectified as digital capital owned by specific others and transformed into a form of digital power. Under the discipline of this power, real individuals become digital entities, social relations transform into digital relationships, and natural ecologies are replaced by digital ecologies. Individuals themselves resemble unconscious, organ-less machines, as predicted by Gilles Deleuze and Félix Guattari, completely immersed in a digitally driven space of desire production, while digital monopolies hinder the free flow of data.[26]

26. Gilles Deleuze and Felix Guattari, *Anti-Oedipus: Capitalism and Schizophrenia* (Minneapolis: University of Minnesota Press, 1983), 116-121, 301-382.

With the expansion of the metaverse, particularly through breakthroughs in brain-machine interface technology, the collection of human behavioral data will increase exponentially. The intermediary status of traditional currency and its price production mechanism will gradually decline, while digital algorithms may play a decisive role in commodity production and reproduction processes. This, in turn, will profoundly impact political democracy and ideology, potentially giving rise to digital imperialism and digital colonialism.

3. The Digital Socialist Model

The digitalization of human society, dominated by big tech companies, has essentially innovated the technical foundation and algorithmic models of economic accounting, objectively validating and expanding the planned economy proposals put forth by socialist engineers. In the late 1980s, computer scientist Paul Cockshott and political economist Allin Cottrell collaborated on the book *Towards a New Socialism*, revisiting Marx's labor theory of value and re-examining the structural transformations that drive the transition from capitalism to communism through digital technology. They systematically explored the theories and practices of digital socialism, which has been regarded by the Austrian School of Economics as its only worthy opponent in debate.[27] In recent years, they have published works such as *Economic Planning in an Age of Climate Crisis*,[28] addressing the theoretical propositions and real concerns of "eco-socialism" from the perspective of digital political economy, thereby refining the theoretical model of digital socialism.

A. Digital Labor: A Measure of Value for Social Justice

Cockshott and Cottrell conceive of socialism as the initial phase of communism in the Marxian framework, stressing that rational economic calculation should

27. W. Paul Cockshott and Allin Cottrell, *Towards a New Socialism* (Nottingham: Spokesman, 1993).

28. W. Paul Cockshott, A. Cottrell, et al., *Economic Planning in an Age of Climate Crisis* (2022).

be based on labor time. They contend that making labor the sole legitimate source of income, along with ensuring that workers receive the entirety of their income, are fundamental prerequisites for social justice. Thus, under fully socialist conditions, the figures in workers' personal accounts reflect labor hours rather than monetary wages. These hours do not possess the same functions of currency, as they cannot be circulated, transferred, or saved, and can only be exchanged for consumable goods of an equivalent amount labor time within a specified validity period; utilizing them leads to their expenditure. By leveraging digital infrastructure, the entire process of recording, exchanging, and canceling labor hours can be automated through public big data service platforms, significantly reducing the interference and disruption typically caused by subjective biases and bureaucratic hurdles.

Of course, individual differences among workers determine the heterogeneity of labor, something Marx historically analyzed. Building on Marx's ideas, Cockshott and Cottrell developed a multiplier algorithm that accounts for the distinction between simple, skilled, and advanced labor. Using computers, they propose real-time estimation of the maximum total labor time, which then allows for calculating the rate of conversion between heterogeneous forms of labor into value, represented by the transmission rate *Rf*. Skilled and advanced labor can thus be multiplied by $1+Rf$, enabling dynamic and planned adjustments to the social production process.

If all labor forces are rated, with "B-level" workers' labor hours as the baseline, then "A-level" workers would be credited with more labor time, while "C-level" workers would be credited with less. The value of labor products would similarly consist of the indirect and direct labor hours embedded in them, ensuring the balance of total social wealth value. Theoretically, unemployment would not exist: "C-level" workers might have less demanding jobs and lighter consumption needs, but their social status would remain unaffected. Given the need for public services, both labor hours and labor products would be extracted by the government at a set proportion to support social welfare programs such as education, healthcare, pensions, and aid for disadvantaged members of society. At the macro level, the distribution of labor products would be a direct act of social planning, bypassing the need for commodification as an intermediary or the generation of monetary prices through market exchanges.

In the view of Cockshott, Cottrell, and others, once labor time truly becomes the measure of social wealth, production costs and use value can be directly

balanced through digital computation. This would dismantle the economic foundations of class oppression and exploitation, freeing future social planning from the dominance of monetary logic and commodity fetishism.[29] The essence of digital capitalism lies in the fact that products continue to exist as commodities, and the monetary prices that signify their exchange value are merely tools for entrepreneurs to manipulate supply and demand. Market demand is only expressed as the ability and willingness to consume, driven by desires, while the distribution of social wealth is shaped by fragmented advertising. Therefore, the development of private digital technologies favors labor exploitation, with mass unemployment and atomized workers becoming both inevitable outcomes and necessary conditions. In contrast, a key feature of digital socialism is that digital platforms used to calculate labor value operate independently of the market. These platforms directly provide feedback and predictive models for ”engineers,” and the speed of data collection, updating, and iteration far surpasses traditional market mechanisms, ensuring that social production is organized in a planned manner, closely aligned with actual social needs.

B. Digital Carbon Rights: The Opportunity Cost of Ecological Civilization

Marx pointed out long ago that capitalist mass production inevitably leads to a “rupture” between society and nature.[30] The capital expansion since the Industrial Revolution has also demonstrated that profit-driven free markets tend to destructively conquer nature, and this logic of alienation can never resolve the issues of sustainable development. Digital forecasts of global climate indicate that if humanity fails to effectively control carbon emissions in the 21st century, the Earth's ecological environment will inevitably deteriorate sharply over the process of capitalism's acceleration. Human civilization will face irreversible natural crises, including resource depletion, glacier melting, rising sea levels, flooding, frequent fires, and widespread famine. An increasing number of ecologists are rediscovering socialism, advocating for a rational

29. Paul Cockshott, *How the World Works: The Story of Human Labor from Prehistory to the Modern Day* (New York: Monthly Review Press, 2020), 203-324.

30. John Bellamy Foster, *Marx's Ecology: Materialism and Nature* (New York: Monthly Review Press, 2000), 155-177.

spirit embedded in ecological justice, prioritizing social planning over market rules, monetary logic, and advertising culture.[31]

Within the framework of a digital socialist planned economy, Cockshott and his fellow researchers have defined carbon emission rights as an opportunity cost of social production, with government investment steering industrial structural adjustments towards an ecological civilization characterized by the harmonious coexistence of humanity and nature. In the late 1940s, Soviet mathematician Leonid Kantorovich pioneered optimal planning theory by transforming the challenge of scientifically utilizing productive resources into a system of mathematical equations.[32] He successfully developed a simple yet effective algorithm for solving these equations, demonstrating not only the feasibility of alternatives to the monetary system and profit motive but also the ability to account for the limitations of natural resources and the environment, thereby enabling rational choices between different technologies. Meanwhile, Russian-American economist Wassily Leontief digitally processed national statistical data to create the input-output matrix algorithm, providing a concise conceptual model for overall economic planning. Based on the Kantorovich-Leontief algorithm, Cockshott's team developed software systems for simulating digital planning, integrating carbon neutrality goals into equation matrices and assigning value to scarce resources and carbon emission rights. This framework was expanded an AI "harmony function," facilitating vector adjustments of final demand and potentially transforming consumption expectations by replacing advertising inducements with actual demand.

They assert that labor value inherently encompasses the labor time necessary for producing machinery, intermediate products, and for extracting resources. However, it is also crucial to account for the scarcity value of resources that cannot be produced by labor, particularly the constraints imposed by greenhouse gas emissions. These factors should be reflected in the product value as opportunity costs associated with ecological civilization. In other words, while ensuring the successful achievement of planned objectives, a dynamic scale should be established to measure lost opportunities. When a unit of labor devoted to consumer goods is sacrificed, the corresponding land, labor, and machinery must then be allocated to the production of non-consumer

31. Michael Löwy, *Ecosocialism: A Radical Alternative to Capitalist Catastrophe* (Chicago: Haymarket Books, 2015), 1-18.

32. L.V. Kantorovich, "Mathematical Methods of Organizing and Planning Production," *Management Science* 6(4) (1960).

goods, thereby increasing the value of the optimization objective function, such as developing new energy sources or restoring natural environments. The same algorithm can also be applied to optimize the production of low-carbon substitute products. For instance, if producing a unit of a traditional product requires three units of labor and results in high carbon emissions, while producing a unit of an environmentally friendly product requires four units of labor but emits little to no carbon, the optimization plan can assess the opportunity costs of inputs. This approach maximizes the production of environmentally friendly products and promotes carbon neutrality. By leveraging big data platforms, it is possible to aggregate opportunity costs and optimize production plans for thousands of products within the real economy. This can simulate market mechanisms to guide consumers toward choosing substitute products, ensuring that high-carbon products are only produced if consumers are willing to pay a premium for them.

C. Digital Democracy: The Decision-Making Mechanism of Social Planning

When Marx authored *Capital*, he anticipated the emergence of automated and intelligent machine systems, noting that when such systems exist as fixed capital, they inevitably become forces of objectified knowledge that leave the laboring masses behind. In contrast, the purpose of socialism in developing productive forces is not merely to amass vast quantities of commodities but to save labor time and liberate individuals. This means allowing workers more free time to engage in social management, scientific research, and cultural activities, thereby achieving their self-actualization. In this sense, the intelligent manufacturing systems built on digital technology are greatly liberating workers while rapidly creating a decentralized and non-representative democratic mechanism. This “unorganized organization” facilitates the direct participation of the laboring masses in the democratic decision-making of social planning, showcasing socialism's greater rational potential that transcends capitalism.[33]

---

33. Clay Shirky, *Here Comes Everybody: The Power of Organizing without Organizations* (London: Penguin Books, 2008); Sebastian Berg and Jeanette Hofmann, “Concepts of the Digital Society: Digital Democracy,” *Internet Policy Review* 10(4) (2021).

Just as big tech companies utilize big data platforms to monitor the daily production and living environments of the laboring masses through their personal devices, social organizations can similarly establish public digital platforms to manage the processes of social production and interaction using appropriate algorithms. Cockshott and his colleagues have envisioned a democratic decision-making mechanism whereby various functional social organizations, leveraging the digital feedback and predictive algorithms of public platforms, can propose multiple potential and feasible objective plans, such as improving transportation, expanding industry, managing the environment, and ensuring housing. Each plan's labor time and opportunity costs are made publicly transparent and accessible for inquiry. When necessary, public debates led by engineers can further enhance the rational understanding of the laboring masses, culminating in decisions made through secure, anonymous, and verifiable voting.

Under this system, the laboring masses are the ultimate representatives of social power. They can conveniently determine labor taxation and social planning through digital terminals, submit personalized orders for consumer goods, or delegate the management of public assets and projects to specific committees. This structure is essential to preventing engineers from becoming a new bureaucratic elite, which could lead to a new oligarchic regime. In summary, digital technology and labor value must be unified with the laborers themselves, shifting the principles of strategic decision-making from being oriented with private profit to public interest. This planned economy, governed by digital democracy, represents a decisive step toward ultimate freedom, where increased free time is a necessary condition for the laboring people's participation in economic decision-making and social governance.

The universal consensus among digital socialists is that digital information should inherently be social; it is only under capitalism that it becomes privatized, thereby restricting its free flow and universal accessibility. Consequently, the metadata of big tech companies must be transferred to social organizations. This movement is helping social culture transcend the bourgeoisie's narrow and abstract individualism. A new culture, fueled by the explosion of information in the metaverse, will ultimately be widely embraced by the global populace, particularly the younger generations. Multilateralism, pluralism, social justice, and ecological civilization are destined to become the common orientations of a shared human destiny.

4. The Path to Digital Socialism

The theoretical framework of digital socialism has largely taken shape, but the challenge lies in actualization. Soviet engineers once foresaw a model for socialist digitalization, and later, Chilean engineers were the first to explore this path in practice. However, both efforts were ultimately thwarted by neoliberal coups, which stemmed from insufficient democratic participation by the laboring masses. Amidst the rise of neoliberalism, tech companies paved the way towards digital capitalism, a process that, while resulting in the total alienation of human society, also created the historical conditions of material technology and social consciousness necessary for a new form of digital socialism. Since the dawn of this century, with the iterative advancement of digital infrastructure and the accelerated deterioration of the global ecological environment, progressive forces throughout the world have begun actively promoting digital socialism, particularly in areas that concern the shared fate of all humanity, such as economic planning, societal democracy, and environmental protection.

A. Historical Experience: The Experiments of the Former Soviet Union and Chile

In the post-Stalin era, the Soviet Union hoped to revitalize its socialist planned economy through the automation and digitalization of industrial production. This strategic decision was far ahead of its time and foreshadowed the trends of the 21st century.[34] Advocated and promoted by scientists like Viktor Glushkov and Anatoly Kitov, the use of computer technology expanded from the military sector to the social realm. They secretly formulated a comprehensive digitalization blueprint based on systems control theory, with the construction of a centralized unified information network seen as a strategic project that could lead or even surpass the United States. However, this was a flower that bore no fruit, as various departments established independent systems that were incompatible with one another, each guarding its own digital territory. Major enterprises instinctively opposed digital regulation, and the reforms of political

34. Kees van der PIjl, "Democracy, Planning, and Big Data: A Socialism for the Twenty-First Century?," *Monthly Review* 71(11) (2020).

liberalization and economic marketization ultimately led to the failure of socialist digitalization.

Meanwhile, Kosygin enthusiastically responded to the U.S. invitation to establish the International Institute for Applied Systems Analysis (IIASA) and worked together to address issues such as resource allocation, climate crises, and ocean pollution. This collaboration resulted in the construction of a digital global model capable of monitoring carbon emissions, which can be considered to be an early attempt at augmented reality, digital twins, and the metaverse. Engineers recognized that digitalization was not merely about the instrumental use of computers; it was especially about feedback and forecasting based on large-scale data analysis, encompassing various potential outcomes and the uncertainties that accompany them, much like weather forecasting.

In 1970, under the leadership of Salvador Allende, the Chilean Socialist Party briefly held power and implemented a comprehensive plan for socialist digitalization aimed at strengthening the management of state-owned enterprises and the social economy.[35] The project was led by British cybernetician Stafford Beer, whose team modeled the neural structures and functions of living organisms to create an advanced, large-scale, systematic digital twin model. This model mapped the recursive sequences of the entire country, various sectors, enterprises, factories, and even individual workers, while existing telecommunications equipment laid the foundation for a distributed "digital highway."

According to Beer, this represented a "liberated machine" capable of autonomously learning and self-regulating in response to changes in the external environment, thereby maintaining a dynamic balance between centralization (command) and decentralization (democracy)—a precursor to what we now refer to as artificial intelligence. Allende emphasized that ultimate control of this system must belong to the people. Beer further refined the digital model to enhance democratic participation, decision-making, and management, inspiring a sense of ownership among workers through public engagement, training, and experiential learning. With this system, the Chilean government could not only monitor the dynamics of social production and economic operations in real time but also predict future trends and optimize decision-making. Outputs were driven by information data rather than

35. Katharina Loeber, "Big Data, Algorithmic Regulation, and the History of the Cybersyn Project in Chile, 1971-1973," *Social Sciences* 7(4 (2018).

hierarchical authority, significantly alleviating the cumbersome forms of bureaucracy.

Both of these experiments ultimately ended due to coups orchestrated by the domestic bourgeoisie in collusion with foreign neoliberal forces, primarily because the political consciousness and democratic participation of the laboring masses were insufficient. Moreover, in terms of digital technology itself, the material infrastructure was not yet adequate to facilitate a comprehensive transformation of productive forces and production relations.

B. The Imperative of the Times: Platform Cooperation and Data Sharing

At the 2009 Davos Forum, neoliberals proposed a "Digital New Deal" that relied on corporations rather than governments. This plan aimed to privatize and liberalize individuals' production data to advance the digitalization of the market economy and monetary system. Left-wing scholars responded by asking, "If capitalism can have a digital plan, why can't socialism?"[36]

Contemporary digital political economist James Muldoon has reexamined Otto Neurath's socialist planned economy model and critiqued the shortcomings of top-down reform efforts that lack democratic backing. Muldoon proposes a 21st-century digital socialist alternative that is both relevant and feasible, embodying the fundamental principles of social justice and ecological sustainability. He argues that the main task is to build a pluralistic digital democratic mechanism and cooperative platforms.

Michael Hardt and Antonio Negri have already pointed out that all democratic mechanisms to date have ultimately resulted in oligarchic rule by a few individuals, fundamentally undermining and negating the ideals of democracy. However, digital technology creates the possibility for genuine democracy.[37] Big tech companies are already advocating for the digitalization of community life, and digital platforms, which began as virtual spaces for everyday

---

36. Morozov, "Digital Socialism?"

37. Michael Hardt and Antonio Negri, *Multitude: War and Democracy in the Age of Empire* (New York: The Penguin Press, 2004), 328-348.

communication, have evolved into virtual factories for cooperative production and political stages for democratic participation. The underlying logic of these platforms, however, is geared toward digital capital accumulation, online advertising expansion, and platform oligarchy.

In response, James Muldoon suggests that unionizing within large tech companies could strengthen democratic control over digital platforms, production processes, and corporate strategy.[38] Meanwhile, independent workers could establish cooperatives or social enterprises to jointly own and manage digital assets, creating value centered around universal needs and interests, gradually dismantling the power structures and barriers of digital capitalism. Additionally, the social ownership of digital platforms should be integrated with new democratic governance structures, fostering deliberative democracy among stakeholders such as producers, consumers, and public communities. This must be a bottom-up people's democratic movement.

The digital plans driven by this democratic mechanism should aim to serve members and the public, rather than pursue profit and generate advertisements. Thus, it is necessary to explore distributed models of social governance based on digital platforms, cultivate a participatory political culture, and raise citizens' democratic consciousness.

Muldoon emphasizes that, in addition to fostering mutual cooperation, digital socialism must also strive to address major systemic challenges related to resource allocation and product distribution. The key is to reshape the entire economic order based on comprehensive socialization, a continuation of Neurath's thinking. Eco-socialists have already pointed out that the only way to effectively tackle ecological crises such as climate change and environmental pollution is through worker-led social cooperation and democratic planning.[39] Morozov particularly highlights the feedback function of digital infrastructure, which can enable economic regulation through non-market mechanisms, proving more efficient than market discovery processes. Muldoon also adopts Hayek's reasonable suggestion, advocating for the use of existing social funds to guide private capital investment, forming a democratically-controlled mixed economy. This approach relies on digital algorithms to correct the blindness,

39. M. Graziano Ceddia and Jacopo Nicola Bergamo, "The Necessity of System Change: An Ecological and Marxian Synthesis," *Monthly Review* 75(11) (2024).

inequality, and instability inherent in free markets. In today's digital era, platforms offer unprecedented opportunities to achieve equitable resource allocation through democratic means.

C. Choosing a Path: Strategies and Tactics

Big tech companies have established digital platforms that transcend national borders, and the iterative development of data technology increasingly reinforces their commodification logic and exploitation methods. Plans for expanding the metaverse are accelerating their total penetration and surveillance of social production and interactions, posing serious threats to privacy, freedom, democracy, and sustainable development. Neoliberal digital policies advocate breaking digital monopolies to regulate the digital market; however, their emphasis on personal data ownership and fair exchange inevitably exacerbates the atomization and polarization of laborers, leading to class conflict, public mobilization, and radical actions. Digital socialism adopts a historically materialist and progressive stance, actively working to rebuild the collective organizations and power structures of laborers from the ground up. These organizations would formulate digital plans based on universal principles of social justice and ecological protection, gradually dismantling the private ownership of digital capitalism and achieving public or collective ownership of data, thereby guiding society toward the communist ideals outlined by Marx.

Cockshott and Cottrell reflect on the historical experiences of socialist revolutions in the last century and outline three strategic steps for the transition to a new form of socialism and its digitalization. The ultimate goal is to replace the market driven by capital profit with a socially planned economy supported by digital technology.[40] The first step involves guiding the transformation of private capitalism into state or collective capitalism through a peaceful buy-out process. This orderly transition of ownership typically does not disrupt the actual production process; rather, it can activate workers' sense of agency and innovative spirit. The second step is to improve economic planning and its democratic decision-making mechanisms while constructing a compatible digital platform. As the platform matures, indicative planning will be upgraded

40. W. Paul Cockshott and Allin Cottrell, *Towards a New Socialism: New Preface, 3rd Draft* (2004).

to directive planning. The third step is abolishing the monetary price system and fully transition to a labor value system. This involves transforming the remaining rentiers into workers and using political means to eliminate financial debt relations. Through an equitable system of labor time calculation, the welfare level of the majority can be significantly improved. They emphasize that during this entire transitional period, the monetary price market will still play a role to some extent, but it must be constrained by socialist macro-planning, and it is essential to firmly defend direct democracy's control over digital platforms.

Muldoon further proposes three specific strategies for resisting, regulating, and re-encoding the digital future. The first two are methods of struggle suited to current conditions, while the latter represents a long-term strategy. The first strategy involves grassroots resistance against the monopolistic power of tech companies, driven by collective action from internal workers and external users. The second strategy leverages state power and multinational organizational mechanisms to incorporate digital democracy and reform proposals into the agendas of pro-worker parties, thereby regulating the excesses of tech companies and monitoring their influence.

He also emphasizes that a crucial component of this transitional strategy is the construction of digital platforms under direct democratic control. Without control over digital infrastructure, it is impossible to implement a plan for digital democracy and embed it within alternative coding systems; thus, mere macro-regulation of existing private tech platforms is insufficient. He points out that the prerequisite for digitization is the development of direct democracy, and that egalitarianism can challenge the hegemonic status of capitalism, gradually evolving economic democracy into political democracy. However, for a certain period, capitalist elements will persist within the new mixed model, making it essential to remain vigilant against the surveillance of alternative proposals by digital capital and to resist opposition, sabotage, or even subversion from the bourgeoisie and their intellectual elites.

Message from the Chairman: Speech at the 1st National Convention of ACP

Haz Al-Din[1]

Comrades, if you had asked me three or four years ago about whether or not on this day this event would be happening, this process would be in motion, this party would have been formed, and we would have reconstituted the Communist Party of this country, I would have thought you were crazy. Yet here we are in defiance not only of our own expectations, but the expectations of all established political forces in the United States of America.

Established political forces, which for so long have taken advantage of the confusion, the lack of direction, the senselessness, which has inflicted the American people with an endless cycle of false divisions, false dialectics, and culture wars. Which have done what, in practice? Which have fulfilled a

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

strategic position of the ruling class. People may look upon us and think we're really radical, we're really extreme, and that we're ready for war… I know I am. But I can see you, my comrades, my soldiers, ready for that same war! (Applause)

It's important to remember, and it's important to bear in mind that we didn't fire the first shot. This war has been going on since the very founding of this country. It's just that one side of that war, one that is belligerent —the working class —the proletariat of this nation forgot that this war was being waged upon it.

So what have we seen since the so-called "end of Communism" after 1991? Even before then, the rise of so-called neoliberalism? We've seen the working class, the proletariat, on the back foot. We've seen decades and decades, not content with dismantling our Communist party, not content with dismantling the labor movement, the antiwar movement, the progressive and revolutionary forces. Not only of the United States, but the world, not content with having acquired victory over them.

As the decades rolled by, the working class continue to be victim of the sadism of neoliberalism. Continuing to be victims of their gains, with their achievements, constantly rolled back. Victim to debt. Victim to abandon. Victim to a government and a status quo, which not only wants to forget their existence, but destroy that existence. The ruling class that rules over us, the so-called neoliberal elites, they envision a future, as delusional as they are, without the proletariat of this country. They have gotten so out of touch, so removed from the realities that are necessary for their position to even be possible, that they have now acquired this delusion that they don't even need the working people of this country.

And so what do we see all across the working class communities of this country, all across the people of this nation in general? Their infrastructure is decaying. Their livelihoods are slowly but surely becoming a livelihood characterized by mere subsistence. In the face of natural disasters, such as Hurricane Helene and now Hurricane Milton, the federal government sees no reason to intervene on behalf of the people. Let them die. Let them be abandoned and consumed by these disasters. This is their view. This is their mentality. And it's a suicidal mentality because as we all know, the working class forms the bedrock, the foundation of our country, our nation's existence. Nothing would be possible without the working class of this country.

It's the working class of this country, and not the ruling capitalist class, that day by day, as an extension of its very existence, is maintaining the possibility that each and every one of us here have food to eat, that we can breathe, that we're secure, that we live in homes, that we have buildings that are constructed, that our electricity is maintained. They are the ones who keep the country going, and it's time this country remembered that. It's time they remember and give back to its own popular premises, in the working people. To that extent, we should think deeply about what it means for the Communist Party of this country to be reconstituted.

The Communist Party has as its foundation, not an idea, not a set of ideals, not a doctrine, but a purport to represent the will of the proletarian class to fight the war, the class struggle, which, as we know, will be weighed regardless of us on behalf of one side. One side which up until this point has had no representation. One side that has seen nothing but defeat over the past decades. One side which is wanting, which is lacking the proper representation to defend and fight for its interests.

The mission of a Communist party is not to implement a given ideal. It's not to implement a utopia. It's to fight the war on behalf of the working class. And so what does it mean to fight that war? Does it mean adventurism? Does it mean insanity? Well, comrades, I'm proud. I'm proud that you have provided a living example to this country and to history at large of what it means today to fight for the proletarian class, to fight for the working class. And I know our toughest battles are still yet ahead.

For example, in North Carolina, led by the chapter executive Bree, what they have done in the face of this disaster of Hurricane Helene, which has devastated so many communities that have simply been abandoned is simply astonishing. They've banded together and simply provided aid and relief to their neighbors, to their fellow American people. They've shown what it means to be an army for the working class, for the proletarian class.

And square one, the foundation of that army, lies in the ability to organize on a united basis with a united mission – to fight for the working people of this country. People, once again, who don't have any existence according to our ruling political elite, our economic elite. They have recognized the working people of this country by coming to their aid.

They have shown us what it means to be heroes of the working people, heroes of the American people at that. I would like to present the entire chapter of

North Carolina, and in particular the chapter executive, Bree, with our "Hero of the Party Award" to commemorate them for their outstanding efforts, and for their exceptional display of initiative. For leading by example in what it means to be a Communist. And in particular, what it means to be a chapter. (Applause)

Many people dismiss the efforts of chapters across the country at large, not just North Carolina. But almost all of the chapters here have in one way or another participated in leading by example and demonstrating what it means to be a Communist in a way that many so-called Communists in this country have overlooked. They've overlooked the most elementary and basic principles of Communist organization – square one of which is building a relationship with the working people of this country. Showing them in deed, and not just in word, what it means to be a Communist.

They dismiss this work, let's call them "political enemies", as mere mutual aid, but it's anything but that. What they neglect is the extent of organization that we've accomplished. The ability to mend individual differences of opinion, individual differences of personality and of character to unite on the basis of a common mission. That is no small feat! And I dare to say that this is 50 percent of the battle. If we can get that locked down and establish a unity of purpose… if we could somehow put aside our differences and understand the importance of our common mission above all else, then there is no obstacle. There is no mountain we cannot climb. There is nothing we can't surmount. We can do what the legends and the heroes that preceded us have done. We can go even beyond what they've done in the United States of America.

As we know, this is an individualistic country, and I think many people are confused about exactly what that means in practice. People assume that everyone is individualistic just because they don't like socializing, or they don't like being part of communities or with others. But as we can see, this is anything but the case. Individualism in the United States is really a form of a multiplicity of communities, a multiplicity of experiments and attempts for the people of this country to acquire some kind of collective and common existence which up until this point has always failed for them.

This failure is what we call individualism. This is what we call the rugged individualistic independence of Americans. It's not an arbitrary insistence upon lacking the very qualities of human nature that all of the people around the world exhibit and have. It's a mistrust. It's a distrust for collective existence,

which thus far has failed the American people, and which thus far has always been a pretext for scamming them, for robbing them, for misleading them.

We cannot assume right off the bat that the American people should trust us. After all, look at this. It's kind of scary to the average American, maybe a little bit, right? But why are we proudly Communist? Why do we raise that red banner regardless? Why do we do that despite the negative perceptions and attitudes toward Communism in this country? We do it because we understand, on the basis of the materialist principle rather than the idealistic one, that the meaning of words like "Communism" and the various associations people have in their head have warped, under such a meticulous and concentrated effort by the ruling class to brainwash them, to deceive them… Ultimately, it comes down to what results are the people associated with these labels yielding? What are they doing? What do they actually represent in material reality? And as long as we can get this locked down, as long as we can earn the trust of the American people and the working people of this country, as long as we can demonstrate to them what we are in terms of our practice, in terms of what we do, as long as we can humble ourselves to their sensibilities, to their norms, to their morals... I have no doubt that communism can easily conquer this nation. After all, it was the view of Communists since time immemorial, including Marx and Engels, that it was the United States of America in particular which is destined for Communism.

Engels said that when a revolution comes to this country, it's going to make what they've had in Europe look like nothing. And I think at a time today, when America doesn't just represent a single country, but an entire global system, we should be especially aware of the fact that an age where this global system is collapsing on the head of its own contradictions… When this global system is beginning to break apart… this country, the United States of America is going to be ground zero of the chaos, the instability, the confusion, and the misfortune. I hate to say that is to come. As such, we are not the radicals. We are not the extremists. We are those Americans who now, before anything has happened, have been willing to show the initiative, to respond, and to acknowledge that we are headed for radical and extreme times.

The illusion that the system can simply go on indefinitely, forever, is far more of a dangerous and extreme notion than anything that has come out of this party. And time will vindicate these words. It's not necessarily something we should look forward to or be happy about. We all must bear in mind, as we're continuing to work, step by step, and again, you have to begin with small steps.

Nothing great, nothing big comes out of nowhere. Keep in mind that the hardest times, the most difficult times, are ahead of us. And in order to endure these times we have to remain united. We have to keep in mind the united mission and purpose that has brought us all together today.

Now, I would be rather flattered at the notion that everyone here is in attendance just because they like me personally… but the truth is I have united you on the basis of a common purpose. It's not about me. It's not about any given individual. The collective force, the collective purpose that unites individuals is greater than any one individual. It's not necessarily personal. It's a matter of being responsive to changes in history.

Each and every one of us lives by the beneficence of a totality of production, of tens of hundreds of millions of working people who we will never meet in the entire duration of our living existence. This totality of production is what allows us to live. It's the ground we stand on. It's what we take for granted. It's what we need in order to be individuals.

What does it mean to be a Communist If not to acknowledge that fact, to work for the very premises that make your individual existence possible. It's well known that one of Marx's most famous sayings was that he wanted to work for humanity. That to work for humanity is the highest virtue and purpose for a given individual existence. And it's not just because a given individual is so compassionate. It's an individual recognizing and acknowledging the collective premises of their existence in the first place. That they don't exist in isolation. That the notion of an atomic individual is actually an abstraction and what is truly concrete is the unity of a people.

What's truly concrete is the collective existence, the unity of a society, of a country. We have a special responsibility as Communists in this country to represent the acknowledgement of that fact because this country is lost as far as what it means to have a real and organic collective existence. We must lead by example, because the American people are going to need leadership and guidance in order to face and surmount the difficulties that are to come.

The so-called "easy times", and it's really an illusion of easy times, because it hasn't been easy for the victims of the recent hurricane. It hasn't been easy for the working people of this country. Their struggles and their woes have merely been forgotten, but it's going to reach a certain threshold where it's going to be intolerable, where rents are simply going to go up higher than what people can

feasibly tolerate, if they haven't already. Where the debts are going to become so insurmountable that people will truly feel that they have nothing to lose. And this isn't something we should be optimistic about. Because the forces of nihilism, the forces of hate, the forces of misanthropy, the forces of confusion, these are the forces that are presently primed to dominate the landscape of this country when the going gets tough.

We need to keep in mind and understand who it is we're going to be fighting with and fighting against. It's not going to be pretty, which I hate to say, but it doesn't matter because the fact that we're already settled here, the fact that we've already accomplished this decisive step. And it's a step that I believe wholeheartedly will have an immortal significance for generations to come, call me delusional. Something I believe genuinely is that we are witnessing history. This step, which is, some may argue, one of the most difficult steps, we have already accomplished. We should be proud of that fact. We should hold fast to that fact. We shouldn't take it for granted what we've already accomplished.

Simultaneously, there needs to be an awareness that it's not going to get easier for us. I am so proud of what this party has done, of what it does almost on a weekly basis in service of their communities, in distinguishing themselves as upstanding Communists, upstanding allies and representatives of the working class.

We have already accomplished what the so-called Leftist organizations in this country haven't managed to do in decades. We have created a culture of virtue, of leading by example. One that, like a virus, spreads. Each of you learn from one another. You see the successes of other chapters and you emulate them. You emulate them in creative ways.

It's very important we keep in mind that as our party continues to grow, and it is growing, as our party continues to surmount new obstacles and reach new heights of success, that we are going to have to plant ourselves permanently in the communities we're working with. We cannot indefinitely engage in acts and services of charity.

As much as these acts and services must be accelerated, as much as they should be encouraged, as much as I, as your chairman, could not be prouder of you for having accomplished them, the next decisive step is to be efficient, to be entrepreneurial, to not only lead by example with regards to providing service, but to lead by example when it comes to providing a new paradigm of

economic existence, to be virtuous and ethical in your business dealings. After all, none of this is free. Let's plainly acknowledge that fact. It's a taboo topic for most so-called Leftist organizations, but they're purely hypocrites. These are people who receive grants from billionaires. They get it for free. We don't have that privilege. We have to work to build from the bottom and we have to frankly address the reality we're faced before us. We have to also be a business. And business is not a dirty word. Look at the language and vernacular used by Communists in the past, in particular the Bolsheviks. They were business minded. Business doesn't just mean trying to make money at all costs. It means professionalism. It means having a degree of formalism. And this is what we already have to a great extent in comparison to others.

We need to focus on and hone in on the need, especially now, to start proving ourselves. Proving that our organization is viable. Proving that it can exist in the long term and it's not just one to indefinitely be a type of charitable organization, because what we're doing is not simply charity. That should be held very close in mind. It's not just charity. What we are doing is organizing ourselves as an army for the people. We are going to be the ones that provide the necessary services, aid, relief, and help to our neighbors and our communities when no one else is.

That's not just charity. That is putting yourself in the service of your people, no different than a soldier does in a time of war when they're defending their communities and their people. This is an obligation and duty that we partake in, not simply out of compassion. It is building the very foundations of what Communism is, to the limited and humble extent that is attainable and possible for us.

But in order to accelerate these efforts beyond anything we can imagine, we also need to implant ourselves in this country and in its communities economically. And economics is not a dirty or scary word. To that end, I have no doubt, I have no doubt whatsoever in your ability to accomplish this. If anyone would have been presented with the idea that you had accomplished what you have in the months since the founding of our party this rapidly and this quickly before we had a constitution, before we had a program, before there was even a clear and precise idea of what the party is, you have risen to the task you've done it already. I see it on a bi-weekly basis and it's almost overwhelming.

You've accomplished what other organizations can't. They tell us that these organizations have thousands of people. These are people who are sitting

around, doing nothing. They just have the title that they're members of an organization. You see, there's something distinctly American, I'd like to believe at least, about our Communist Party: We believe in results. We believe in putting the work in. We prioritize that and put that over empty words and phrase mongering. It's about getting it done. Getting done what needs to be done. And after you do that, you could start having discourse about it and arguing about the names and the terms and all this other stuff that so-called leftist organizations spend almost the entirety of their time doing.

The fact that we have prioritized the need to fulfill practical accomplishments, practical aims and practical goals. The fact that we have established an organization that is conducive to that is such a profound accomplishment. And it almost makes you wonder, was it really always this easy? Was it really necessary that so-called "Communists" in America were so lousy, were so inefficient, were so hypocritical, were so defeatist after the period of the 1990s? What materially necessitated that? Nothing! And I guarantee to you. If we were not gathered here today, if the American Communist Party had not been reconstituted, things would have gone on as they are. Our society would continue to decay. The working class would still be on the back foot, and the misanthropic, the cannibalistic, the barbaric future that awaits us would pass over us in the same way that it is now.

So what have we accomplished? What have we created in contravention of that fate? We built hope. However small that hope is, however ineffectual it seems, and insignificant it seems now in the faces of evil and wickedness, we've built it. It's here. It's announced itself not only to this country, but to the world.

Don't be discouraged by the fact that we aren't a party of millions yet. Hold fast to your hearts this small grain of hope, and I promise you, it will grow into the greatest forest this world has ever seen! (Applause)

Ask yourself, which Communists in history, Communists that have seized power of entire states and civilizations and histories, began with millions? They began with dozens. How did that grow into what it did? An accident? A mere coincidence? You could go on with that mentality, sure. And hundreds of years would pass by you, and nothing would happen. And you would say it was meant to be all along. We resist this nihilism. We resist this defeatism. *We are engaging in an act of resistance against the future that doesn't necessarily need to pass*. This resistance can grow. It will grow. You must have faith. You must not be discouraged. Don't worry about others and what others think because

they have their eyes on us and every single person here knows that. They've seen the extent our enemies have gone to to try and undermine what we're doing here. And the goal is to demoralize you. The goal is to discourage you. The goal is to make you think that our obstacles are insurmountable.

If only they knew how wrong they were. I know how wrong they are. I believe in each and every one of you. I believe every single person in this room has the potential to surmount and conquer mountains. I don't see just cadre in this room. I see future leaders of a mass movement, which will have a formidable presence in this country. It's fated. It's destined. Call me crazy and delusional, but I believe it. I believe it with every fiber of my being because the dream of this party did not begin with me. It did not even begin with the legendary American Communists who preceded us. It began, you could argue, even since the beginning of time, where mankind within its heart strove for a world of justice, for a world of honor, for a world of a genuine and authentic collective existence.

The dream of this party is a dream that dwells in the subconscious of the proletariat of all America, of the working class, not just of America, but of the world. *Have the courage to insist on that dream. Have the courage to tread and walk the path of it. All it takes between that dream and reality is courage and belief.* This is the only wall that separates it. I have no doubt you can break that wall down because you are breaking it down.

Comrades, we need to bear in mind, not only the domestic situation, but the global situation we're facing. If you think someone up there has a plan, as far as the increased escalation of the prospect of a third world war, if you think there's people in power that somehow are capable of planning and preventing this, you are sorely mistaken. Every news headline that you're seeing about how close we are to a world war, to a regional war in the Middle East, to a war in Europe, in Eastern Europe, and in Ukraine – that's very real and they are just as much confused and baffled by it as we are. In the face of a world war, let us now take the vow, let us make the utmost commitment, that we will never, we will never aid and facilitate this criminal regime's plan for war with mankind, for war with humanity, for the destruction of civilizations and of peoples.

We will never repeat the footsteps of the social chauvinists on the eve of the first great imperialist war, who at the convenient moment decided to sell out the international proletariat, decided to betray the very own principles out of some

kind of convenience in the face of circumstances. Whatever difficulties lie ahead of us, including persecution, we must resist this war.

We must turn the global war that is to come into a civil war, into a war of the working class against our own regime, against the ruling class, against the capitalist class. And if we can set that example, we will be setting an example for all mankind, which is looking toward this country as far as its future is concerned. It's watching and looking at this country as it attempts to find its own way and find its own path in the multipolar world. Don't just think that some other big country is going to usher in a new age, independently of what we do here, because not everybody has a plan and has it all figured out. This global system, led by the United States, is bigger and more powerful than you think and it's going to take our participation, one way or another, to whatever extent to facilitate the transition into a new system. One that is devoid of America's hegemony. One that is devoid of the unipolar world system. This is ground zero, not just of our national class war, but of the global war, a new stage of the global war of the international proletariat.

This is what weighs over our shoulders. These are the stakes we're faced with. We are faced with the need to provide an example to Communists around the entire planet who've lost their morale, who've lost their purpose, who've lost their mission, who are confused in the face of a new technological and historical age.

We are here to insist upon a history that by and large has been forgotten by humanity. A history of struggle with so many countless immortal heroes and legends who devoted the entirety of their lives, sometimes at the expense of their lives. They've been forgotten. They're increasingly forgotten in Europe and in particular in Eastern Europe.

They attempt to liquefy the history of the Communist through the so-called decommunization laws. The so-called laws against totalitarianism. Make no mistake, they're planning to bring these laws here at home. They're going to attempt to criminalize remembering the past, which they would contend us to forget.

Our present, somehow, is not compatible with the feats of the historical past. The idea that something like Communism, something like Lenin and Mao, that this Communist alternative could even exist, this is something that our present

reality could not have even entertained if it were given total and free discretion as far as defining the past that has already happened.

They're already trying to rewrite the past and eliminate the heroic contribution of Communists. A new historical revisionism is taking hold. In the academic and institutional memory of the events of the Second World War, where the contribution and role of the heroic Soviet peoples is being undermined, is being effaced, is being denied and erased.

A new falsification of history is rapidly becoming institutionalized, according to which the Soviet peoples did not, in fact, have the decisive role in the defeat of Nazism and fascism in Europe, but rather it was the so-called liberal and free democratic world. Why are they preparing us with this false historical narrative? Because some kind of fascism is coming back, and they would rather have us believe that it is invincible and immortal, just like Hitler tried to have the world believe that his army, that his fascism, that his Nazism was so great and immortal and undefeatable.

But what did Stalin say in his speech to the soldiers of the Red Army and the Soviet people? There are no invincible armies. The so-called Hitlers will come and go, and it's only the people and their historical tradition that will remain. In the face of a new fascism, of a new emboldened so-called neoliberal elite who are thirsty and foaming at the mouth for a war of carnage and destruction against the peoples of the world, let us not be intimidated by them, despite their technological prowess and seemingly insurmountable technological capacities.

It's people that win wars. It's people that ultimately decide the outcome of history. Let's not be intimidated by the enemy we're going to be going up against in the near future because this enemy will fold in the face of an organization, a party, an army with a united mission and a united purpose that animates the commitment and devotion and belief of thousands of individuals.

This is more that can be said for any other political faction or organization in this country. Why do people join political organizations in America? Is it truly out of sincere devotion and belief? No, it's out of careerism. It's out of the interests of individual advancement. It's out of egotism. Sometimes it's even out of a need to have some kind of social life.

I know that for almost every single person here, if not everyone, it's much more than that. You are here because you believe. This is an army united by belief.

At the risk of sounding idealistic, belief is the foundation of this army, without which it would quickly collapse and scatter to the wind. And all of our chapters not only would be torn apart internally, but would be disunited from our national party. You're not all here just because you like me personally, or the party leadership for that matter, or even each other. You're here because of the common purpose that fastens the bonds of association that have been forged through common struggle, however humble, however small that struggle now appears to us today.

Comrades, domestically speaking, as far as the fate of our country is concerned, no one is providing a solution as far as what's going to be done with the hundreds of millions of people that live here, whose access to goods and services, whose ability to subsist and survive, is going to be severely disrupted because of breakdowns in the system – whether it's environmental disasters like the ones we've seen, economic turmoil as a consequence of the diminishing role of the so-called global reserve currency and petrodollar system as a consequence of the chaos and instability that will inevitably impact this country as a consequence of a global war.

No one has solutions and no one has a plan. Don't assume that our enemies are 10 steps ahead of us. I firmly believe that we're actually the ones ahead of them with what we've built here. We have something they don't. We have a weapon they don't have: the recognition of a collective existence and a collective form of being so difficult to establish in this country.

With that being said, I'd like to commemorate the outstanding display of discipline, of decisiveness and self-sacrifice, by Corey of the Chicago chapter, who in a time of decisive need in our party was able to act and was able to put aside any kind of egotism and self-interest. So, Corey, please come up. (Applause)

I'd also like to provide the same award to another hero of our party from the Chicago chapter. David, please come up. (Applause)

I've taken note of each and every one of your good deeds. I've been following what your chapters have been doing. I would have to give an award to every single person seated in this room to give proper acknowledgement and recognition of what you've accomplished, what you're already accomplishing. I'm well aware of the plans you have. I have no doubt you're going to be able

to fulfill these plans with the same ease, with the same degree of success as those you've already fulfilled and accomplished.

Comrades, for a long time, as someone who is one way or another isolated from society – partially because of lockdowns and other reasons, and I'm sure many of you here can relate to that – the future seemed very bleak. As much as it's one thing to have a profound philosophical and theoretical understanding of the world we live in, to discern the forces that represent consciousness of this fact, responsibility in the face of it, is nearly impossible.

I can tell you that on a personal level, I genuinely believe and am convinced that the future is bright. I believe ultimately the future is bright, not simply because so many of you share that belief with me now, but because we've already proven something possible that for so long the established forces within society were telling us wasn't.

And if we can do this, what else can we do? What else can we accomplish? Comrades, the truth is, we haven't seen anything yet.

I would like everyone to continue to enjoy the convention, and I thank all of you for coming out today. (Applause, chanting "ACP! ACP!") ▉

1

Civilize the Mind and Make Savage the Body: Speech at the 1st National Convention of ACP

Edward Liger Smith[1]

Today, I want to talk about character. On an individual level, that is what politics comes down to - what kind of character do you have? How do you live your life, day to day?

When my father completed the Ironman race in Madison Wisconsin, (which is a 2.4 mile swim, 112 mile bike, plus a marathon, a 26.2 mile run), we made shirts for him that had an Aristotle quote on the back.

“We are what we repeatedly do. Excellence, then, is not an act but a habit.”

---

1. Eddie Liger Smith is an Executive of the American Communist Party and a Director of the Midwestern Marx Institute.

Who we are as people, our character, can be distilled down to our daily actions. What do we spend our time and energy doing? How do we interact with the people around us? Do we allow ourselves to be surrounded by negative people who tear us down? These are the things that shape who you are and how you're perceived.

The very fact that you are in this room today says something about your character as an individual.

As an American, every media, religious, and cultural institution in your life has probably told you not to be a Communist. They have told you again and again that humanity has reached the "end of history" and that anyone who suggests radically changing the existing system is either an idiot or a psychopath.

This is a lie, and in reality, anyone with a heart and a brain should want to see a massive change in our system. But it's a lie that they're able to implant in a lot of people's minds through sheer repetition.

If you are in this room today it means you had the intelligence to realize you were being lied to. And more importantly, you had the courage to stand up and do something about it.

You had the backbone to stand up and say no. I'm not going to let you trap my family in debt and send my taxes to mass murder children, then expect me to sit on my butt and take it! I'm not going to believe what the media tells me about Syria, Libya, Ukraine, and Palestine just a decade after the entire American ruling class came together to lie us into the Iraq war based on false information that was gleaned through torture! I'm not okay with never getting to see my children grow up because I'm trapped working for a Wall Street shareholder 40+ hours a week for scraps!

And to the people who are selling us that system because it allows them to live in luxury off the backs of everyone else: *We aren't buying it anymore!* We see through you. We have studied your lies; we have studied your system; and we know exactly how it exploits us. You can read the upcoming party journal if you don't understand it yourselves. We will gladly take your money.

It takes a strong character to stand against ruling class lies, especially over the past thirty years since the fall of the USSR, which gave the propagandists an example to point to and show the "failures" of socialism. As if industrializing

your country, massively expanding healthcare access, providing universal daycare, and 56 days of maternity leave, giving more vacation time, increasing literacy rates from 35-100%, and defeating the Nazis can now be considered a failure because Gorbachev sold off the economy to Wall Street & established a Russian Pizza Hut.

This is one of the many reasons I have so much respect for Michael Parenti, who continued to defend socialism and provide Americans with real Marxist historical and political analysis even through the 1990s after the Soviet Union fell.

Parenti talked a lot about how capitalism tries to erode our character and get us to prioritize naked self-interest and callous cash payment above our fellow man, above our own communities. He talked about how it strips people of purpose and induces them with depression and social isolation.

Parenti, as well as heroic figures like Che Guevara, who I try my best to model my life after, believed in fighting capitalism not only through collective struggle, but also in how we go about personal our lives. They encouraged us to stimulate our minds with reading instead of spending every free hour playing mind numbing video games or watching television, to reject the highly processed food that is marketed at us every day, and to try to treat our own bodies with respect by feeding them nutritious fuel. With this in mind, the Party has a workout plan we have distributed to each chapter, and a nutrition guide that will be following shortly.

The ruling class does its best to make us feel depressed and hopeless. They want us to embrace doomerism and degeneracy. They want the people who are intelligent enough to realize the system is broken to feel that there's nothing they can do about it anyway, and therefore the only thing to do is chase short term sensory pleasures and material wealth until we die. The system relies upon eroding the character of intelligent individuals.

But Communists are those individuals of unshakeable character who have the heart to feel for their community that is being exploited by the system, the mind to deconstruct the system and come to understand how it works, the spirit to stand up against the ruling class bullies who own every media outlet, and the body that they can set to work in the struggle to revolutionize this system.

Although our bodies can vary greatly, obviously, and I'm not saying you have to have a "6 pack" to contribute. Okay, I'm saying you have to have an "8 pack." Step it up. This isn't PSL.

The truth is that it *is* possible to change this capitalist system, and this was proven for the first time by the Bolsheviks, and a man who truly embodied the ideal character of a Communist: Vladimir Lenin. A man with an iron will who refused to cower in front of the ruling class bullies who killed his brother, even before a successful Marxist revolution had proved the correctness of Marxist Revolutionary theory.

Lenin simply studied to the point where he couldn't be lied to, while continuing to gather high character, competent, and dedicated people around him. He openly lambasted those in Russian society who would claim that revolution was impossible, and in the end, it was proven that he had the most correct analysis of Russian society & the Russian working class, because his perspective was untainted by the ruling class propaganda of the era, which was able to turn so many previously great revolutionaries like Kautsky off the proper path.

Lenin wouldn't allow himself to be bullied out of fighting for what he knew was right, or thinking things that he knew to be correct. He dismantled the ruling class arguments one by one and continued to work diligently among the Russian workers until the revolution became a material reality that could no longer be denied.

And it's this kind of spirit we need to embody as Communists as we go forward in America and look to combat the years of McCarthyism and red scare propaganda that's been injected into our working class by the capitalist class. Which is really the only major disadvantage that we have compared to revolutionary leaders of the past. We also have tools that they didn't have, though. Such as more advanced means of communication, which is one of the gravediggers of capitalism that capitalism itself creates.

I mentioned earlier that I try to model my own life after Che Guevara, the famed leader (alongside Fidel Castro) of the Cuban Revolution, whose life I have studied deeply and reflected upon for years now. One might think that all the Marxists in Cuba at the time loved this Argentinian Communist named Che who came to Cuba to fight against the US-backed Batista dictatorship because he believed in a united Pan-American people. How could any Marxist dislike someone who spent all day organizing, studying theory, educating, and training

for the revolution by running around the Escambray mountains in East Cuba with a weighted backpack?

Well, there was an academic class of self-identified Marxists in the capital city of Havana who HATED Che Guevara at the time and viewed him as an adventurist for believing that the Cuban Peasants could be organized to the point where they constituted a political force powerful enough to overthrow the dictatorship and plantation economy. Many of these dogmatic, academic "Marxists" Believed that Cuba first had to pass through capitalism before it could achieve socialism, as if societal evolution and progress needs to follow the same exact linear path in each country. Additionally, they rejected the revolutionary potential of the peasant class, which they viewed as backwards and inherently reactionary.

Now, does this academic class of self-described Marxists sound familiar to anyone? It's important to acknowledge that these kinds of pseudo leftists have existed everywhere, and our heroes had to deal with them as well. Today, I understand why Lenin spent so much time arguing with other people on the left, which is something that perplexed me when I first started reading him.

Similar to Lenin, Che refused to be bullied by the Cuban academics, and the correctness of his revolutionary theory was proven in practice as the majority of peasants enthusiastically supported the overthrow of the Batista regime and the Plantation owners who worked them like slaves. If you spend too much time worrying about what the academics think you won't be able to reach the working people who actually are eager for revolution, because it's the only way to escape their material conditions, unlike many of the academics who already live in relative comfort.

Some people have attributed the FOCO theory of Revolution to Che Guevara, or Foquismo, which is one of those concepts he never explicitly named, but which was attributed to him later by students of his work. The theory draws on Che's theoretical works such as Guerrilla Warfare, published in 1960, and posits that a small group of high character individuals could inspire a much larger group of people to revolutionary struggle by demonstrating their competence and commitment.

The story of almost every communist party in existing socialist countries is the story of a small group of extremely high character people that are surrounded by wreckers, propagandists, and liars. However, through working diligently,

they are eventually able to win the support of the people and grow the movement into a massive revolutionary uprising.

In 1905 Russia, the Bolshevik party was incredibly small, and after the failed 1905 revolution the situation became even worse due to severe repression. It wasn't until 1912 that Lenin and company began to reconstitute and stabilize the party. And it wasn't until the 1917 Revolution that the party became a leading political force, backed by the majority of the working masses and a large number of Russian soldiers.

When the famous Granma Yacht set sail for the Sierra Maestra mountains to launch the Cuban Revolution it carried just 81 Revolutionaries. After they were ambushed by Batista's forces who had learned their location through an intelligence leak, all but 12 were captured or killed. These 12 Communists including Che Guevara, Camilo Cienfuegos, and Raul and Fidel Castro were the group that then mobilized the Cuban peasants to overthrow the US-backed puppet government and transform the economic structure of their society forever.

The Cuban Revolution literally started with 12 starving dudes in the mountains.

So, think about the situations that our revolutionary heroes of the past found themselves in and compare it to our conditions here in America today. We are not the largest group ever, but I truly believe that we are building the same kind of organizations that Che and Lenin were at the beginning. Organizations of high-character, dedicated individuals who can ignite the political struggle that this country so desperately needs.

In 1902, Lenin said, "We are marching in a compact group along a precipitous and difficult path, firmly holding each other by the hand. We are surrounded on all sides by enemies, and we have to advance almost constantly under their fire. We have combined, by a freely adopted decision, for the purpose of fighting the enemy, and not of retreating into the neighboring marsh, the inhabitants of which, from the very outset, have reproached us with having separated ourselves into an exclusive group and with having chosen the path of struggle instead of the path of conciliation."

I don't think any quote more accurately describes our situation since we made the decision to form the ACP and distinguish ourselves from the pseudo-Communist American political parties who have chosen the path of

conciliation and abandoned Marxism. From all angles we are attacked by wreckers, smear merchants, and those who wish we would shut up about the class struggle already and focus on the culture war distractions that the ruling class has stoked over the past few decades in order to divert our attention from the most pressing issues of our era.

But let us not become self-congratulatory, because so far, we have proved very little and all of the hardest work is still in front of us. Each and every one of you as an individual needs to understand that your choices, your actions, your words, and everything that you do reflects back upon the collective in the public's perception now.

This was something my dad and my high school wrestling coach tried to hammer into my head, and one of the lessons that I had the hardest time accepting. Because most of the time, under this economic system especially, it's much easier to ignore the well-being of the collective and your responsibilities to it so that you can just act however you want as an individual with little care for who your actions effect or how they're perceived. But to be frank with you, as Communists today, in the situation that we are in, we do not have a choice. We *must* accept this principle and train ourselves to take the collective into consideration before we take action. I don't get to go black-out drinking every weekend and try not to worry about who I pissed off the next day when I wake up. The stakes are too high. I'm now responsible to everyone in this room, to my own community, and to my future children who might inherit a literal hellscape if we don't start getting things done very soon.

When you have people who want to destroy your reputation, and the reputation of the group that you are a part of, you simply can't give them free ammo by being undisciplined and degenerate (although I know some people think that's a fascist word – it's not). To me, it just means treating yourself, others, and your environment with respect, rather than trashing them because it feels fun at the time.

When people are coming for your head, you must live beyond reproach.

And I'm not telling you guys that you can't have fun. I'm having fun right now at this convention and anyone who was at the Midwestern Marx Institute's *Airbnb* in Dearborn knows we had a blast there - until three AM drinking beers and building relations with the people who are going to be involved in this fight with us. Hopefully for the rest of our lives, God and Karl Marx willing.

My college wrestling teammates could also tell you a lot of "fun" stories about me, but that's why nobody is allowed to talk to them. That information is classified. I'm trying to get that put in the Constitution.

But to be honest with you all: *winning* is fun.

This is what I learned in wrestling. Once I started staying disciplined and denying myself some short-term pleasures that might prevent me and my team from achieving long term goals, I actually started to have more fun. Because it's much more fulfilling to achieve something that requires discipline and hard work, with a group of people you care about, than it is to enjoy every short-term pleasure that you can, while always seeming to come up short of your long-term goals, or never even beginning the process of chasing them.

Nobody is perfect, and our comrade Carlos has written a wonderful book about the failures of trying to achieve and maintain some kind of perfect purity. All we can do is our best, but now is the time to look inward as an individual and ask yourself, "am I doing everything I can? Are there obvious changes I can make to my daily habits that will lead to more positive outcomes for my party, or my country and community by extension? Am I spending at least a little time each week reading Marxist theory so I can stimulate my mind and sharpen my rhetorical skills for the next time I'm in a political discussion with a co-worker or community member?"

After all Lenin told us the three keys to revolution are: Read, Read, and Read.

Another almost unbelievably high-character Communist of history, Mao Tse-Tung, told us to "civilize the mind and make savage the body." There is a dialectical relationship that exists between discipline and freedom.

Discipline gives us the freedom to control our own minds and actions. Liberal freedom is freedom without discipline, freedom for the individual to consume goods and exploit others freely, but no freedom to actually live a fulfilling life in connection with your community, and that is no freedom at all. It is simply brightly-colored chains.

In Mao's study on physical education, where he says to civilize the mind and make savage the body, he posits that physical and mental discipline are inextricably connected. The healthier our bodies are, the more mental energy we will have. Something which is confirmed and explained in much more detail by Communist nutrition scientist Ray Peat.

I once had a coach who would tell me that if you are being a piece of crap in one area of your life, it will inevitably start to seep into other areas. Now that coach was an alcoholic who didn't follow his own advice, and eventually that character flaw prevented him from being a coach… But he was correct!

The party is only as strong as its weakest link, and we all have an obligation to each other to hold the chain strong. When the CIA & Mossad infiltrate organizations they target those who they feel to be of weak character and manipulate them to turn them against the party.

Over the decades before the ACP, they have torn high-character individuals out of the American left, leaving only self-righteous, virtue signaling leftists who look down on the working class. And these leftists are hated by the workers in turn. The onus is therefore on us not only to rebuild the American Communist movement, but also to restore our reputation in the eyes of the American working class. The ruling class would prefer that you live your entire life going to work and being exploited, then coming home to consume short term pleasures like booze, porn, and pot, until one day you keel over and die. But the ACP is a party of a new type, which draws from the legacy of past heroes like Henry Winston, who said, "No! I will not do what you say!"

"I will put the Collective above myself. I will sacrifice for the good of my community. I will live a disciplined lifestyle. And I will not become a passive and submissive peon who lives only to consume while you drown my community in debt and murder babies with my taxes!"

"I will *not!* I would rather die! A better world *is* possible. I *do* believe in humanity, and I will not be gaslit by genocidal psychopaths who accumulated their wealth through giving people loans to buy necessary goods like housing, then charging them interest. You're a scammer; you're a parasite; you're a liar; and I will stand with the workers no matter how much you cry about it or how many of us you try to hurt simply for speaking truth to power."

In the words of Che Guevara, "*It is not my fault if reality is Marxist.*"

And reality is Marxist my friends. Capitalism is not an eternal or universal economic system that can never be overthrown or improved. Just like slavery and feudalism before it was not, despite what ideologues of those eras tried to claim. The divine right of kings was once thought to be universal and eternal as well.

But it's going to take a high-character group of dedicated individuals to get that done. I believe that group is the ACP, which is why I'm very proud to be a part of it. Let us each do our best to live up to this monumental historical task that we have inherited. I am willing to fight for this country so long as you're willing to fight with me! ▉

2

Build Your Business, Build Your Party: Speech at the 1st National Convention of ACP

Noah Khrachvik[1]

Before I begin, I want to say a few things. First, I want to say that you don't have to worry; this isn't going to be a boring list of numbers. I'm not going to drag you through a PowerPoint or anything today. I also want to impart upon all of you what an honor it is to be up here right now. A few years ago, I would never have thought the ACP was possible, let alone that I could play such a role in helping to create it, or that its members would be precisely what that decaying old monster that called itself a left-wing in this nation lacked for so long. What all of you have accomplished in such a brief period of time is nothing short of amazing to me. With the work of this Party, and the fear it so

---

1. Noah Khrachvik is the Secretary of Treasury for the American Communist Party and a Director for the Midwestern Marx Institute. He is the author of the forthcoming *Reproletarianization: The Rise and Fall of the American Middle Class (2025)*.

obviously strikes into the hearts of its enemies in the ruling class, I am absolutely sure that the future is bright for this country we love so much.

That said, I want to mention before anything else that we are a new organization, and that in events of this nature going forward, this will be where our financial status is stated openly and transparently for the entire Party. I will drag you through PowerPoints at that time, so you're not entirely off the hook. There will be tedium and cell explanation. Obviously, though, we don't do that to bore you. We do it so that we can rectify all the failures of the old Party and move forward as one, with honesty, steadfastness, and solidarity - the ability to trust each other. This is your Party, after all. It is the Party we all create a small part of. This is just our first year *as* a Party, and the finances are only beginning to take shape into what they will become. But I'll get to that in a moment.

There are a few financial items that merit our attention before that. First, I would like to congratulate Bree and the North Carolina chapter again, along with everyone else involved in the hurricane relief project, for bringing more real aid to more regular, working-class Americans in the south than we could have anticipated. These efforts managed to raise almost 10,000 dollars before we were forced to close the donation link for fear of being overwhelmed, with every single penny going directly to help the families affected by this devastating event. When the government abandoned these families, the Communist Party did not!

Not only have these comrades gone above and beyond the call of duty, they have done so properly, keeping account of every penny, and I cannot stress enough how important this is. We are *the* Communist Party of this nation, comrades. And I don't think I need to remind you of our government's orientation to people such as us in the past, or the nature of the IRS. We *will* be audited, and we *will* defend ourselves from such attacks. Of course, the work of these comrades was acknowledged earlier. I simply want to reiterate that the way in which this work is carried out is just as important as the work itself. And not just in this, but in all our efforts. We must be above all reproach. We must live above all reproach. Our enemies are the scummiest of people, and do not hesitate to lie, to smear and distort, and to take our positive efforts and try to use them against us. And so we must not only bring help to the people of our class in their time of need, but we must do so with dignity, with compassion, and with good record-keeping.

That said, I can't even put into words how proud I am of all of you who've dedicated so much time and energy to this project. This is how bonds of

community are formed, how we distinguish ourselves as a Party. And I view it as a model that others should seek to emulate in different circumstances, as the crises of the 21st century deepen.

I would also like to mention that there are many of us who have donated their own money, adding up to thousands of dollars, to the creation of this Party, to organizing this very event, and to the success of our community service projects - the one tomorrow and the ones that have been so successful in each of our chapters. These comrades show what it means to dedicate themselves to the class struggle and the organization of the American working class. They literally put their money where their mouth is. Which is a bad joke, I know. I don't have any good ones, unfortunately. But it is a serious manner, and the Party acknowledges their contributions and holds them in high esteem. More importantly, it keeps meticulous records of these contributions.

And now, for the meat and potatoes.

Our Chinese comrades have a slogan I'm sure many of you know very well. "Follow your Party, start your business." We've all seen the memes, the famous statue. Well, I have a slogan for us. A slogan I want you to burn into your minds, like you're putting a brand right on your brain. Sear it in there. It is a watchword for the coming year. I want you to repeat it in your Party work, in your meetings, and as you have a free minute during your workday. I want you to think about it and what it means. Not simply on the surface, as words, but on a deeper level. That slogan is, *"Build your Party - Build your business."* This Party is not going to receive millions of dollars from the KGB the way the old one did. The Comintern is long-gone. We are going to make it of our own accord, on our own skills, and on our own resourcefulness, or we are simply not going to make it. Those are the facts, and that is where we are at. But I don't say this to discourage you or leave you dejected. I say this because the working class can rely on no one but itself, and this has always been the situation. We have only what we can claw back from our class enemy and no more. If what Marx teaches us is correct, and I think we can all agree here, at the very least, that it is, then this is the natural order of things, and the help the old Party got in starting out was a fluke. But, again, I don't say this to discourage you. Remember: only a few months in, we are surpassing expectations in every regard. We thought, well, if our launch event got in front of 200,000 people it would be a success. And now MILLIONS have seen it. We thought that if half our chapters were able to send representatives to our first convention that this event would be a success, and there are people from *every single chapter* here.

With proper planning, consideration, and, yes, record-keeping, we can accomplish every task we put our minds to. And so, I am nothing but optimistic in this accord. I have complete faith in our abilities. In your abilities.

On the topic of our slogan, and thinking about our slogan, I want you to consider this slogan both literally and figuratively. Of course, to non-Marxists, that would seem like a contradiction, and they would run screaming away from it faster than you could blink. But this slogan is not for them. It is for us. And for us, it is precisely literal because it is figurative, and figurative precisely because it is literal. As each of you discuss how to fund your chapters, how to create your business, and as you carry that out, whether you are developing a farm, or a cooperative grocery store, or you've got some cool thing you've invented, or you want to teach karate to kids - whatever it is you're doing, you are not just putting roots into the community you are already a part of, and becoming a leading figure in that community, you are also giving determinate form to what this Party is as it becomes what it is. You are not isolated in New York or Wyoming or North Carolina. You are part of *the* Communist Party. And you are participating in its actualization in the real world. Giving it concrete characteristics. Determining in part what it looks like and becomes. And in some years' time, when we are at a future convention, discussing the next steps for the American working class, or marching up to the steps of the White House, if you'll forgive me a bit of extra optimism for a moment, we will look back on each and every one of these meetings, these steps in the creation of each chapter's foundation, as abstract moments of development that are all embedded within the Party itself, part of what the Party became and what got us to where we need to go. As part of what made our Party *our* party - the concrete organization it will become. When we view it from this perspective, the Marxist Leninist perspective, then, we see that building your business is at the same time building your Party, both literally and figuratively - and not just giving character to it, forming and shaping it, but making it your Party, each chapter becoming an integral part of a whole that is greater than the sum of its components.

But this is only part of what creates your Party, comrades. If we are to look at it from that future moment again, they are abstract moments of concretization within the whole. They are the determinate form the Party has taken on. But the unity of diverse determinations that Marx calls 'the concrete' has that word diverse in there for a reason.

There is no way to build something real in a one-sided manner. This is why we have chapters in so many states, and I don't think I need to tell any of you that we are not in this simply to build successful businesses. This is about tearing down the edifice of our decaying oligarchy and rallying our entire class to become a class of and for ourselves. And so, in this effort, we must dedicate ourselves to that class. These businesses must be of a Communist character, and not simply businesses run by Communists. We must understand form *and* content. We are not just trying to make ourselves bourgeois, now, are we? Or petty bourgeois. Or whatever. (I'm going to avoid the temptation to make a pettiness joke here. You're welcome.) But even if it were possible for us to build up these businesses and become bourgeois - and let's be real, it's not - this would be an error. A betrayal. This Party must ground us in our task.

There is one more side of this that we must look at, in order to get a concrete idea of it.

At the same time, we are building this Party, this Party is building us - molding us into the Communists we will become. And as I look around this room, at each of you - not middle-class liberals with pink hair that are rebelling against their parents, whining that they want something handed to them and pretending they're "citizens of the world", but regular, hard-working Americans who have been forced into action by the decay of their homeland and the love of their people. People who know that it is the world around them, the world they are an active part of, that creates and determines who they are and who they will become. I don't think it's a coincidence that we are the only left-wing organization in this entire country that is formed from the blue-collar working class. This is the necessity of the Communist Party and the necessity of a New America.

This is what I see when I look around this room, and I see that we are more than equal to our task. Each of you has it within them to become something more, to add your part to the future of this Party, this nation, and the entire world Communist movement. Each of you has already proven that you have what it takes to dedicate your life and your labors to the working class. You are here, after all, and this is our task.

So, we are not setting out to take as much money from our fellow Americans as possible. We are, instead, dedicating ourselves to promoting class consciousness and waging the class struggle. And in this, we become part of the same process of concretization that I just described, but on another level.

We are becoming part of the entire world Communist movement and the building of an entirely new world. (So much for a minute ago being my indulgence of optimism, huh?) So, when you're in your meetings, and you're thinking of our slogan, when you are Building Your Party through Building Your Business, I want you to think about what type of business it is and how you will choose to run it. I want you to think about what it can do for your community. How it can concretely help the people that form that community. I want you to think about how you can help, in general. And I want you to think of that word help in multiple ways. Will your business be able to inspire your comrades to excel as you have? Will it perform a necessary service in your community? What form will filing that need take? How will it help our cause? What characteristics are you adding to this Party as you embody its development? All of these questions matter. All of these questions will determine what this Party looks like as it becomes itself. They're questions each of us must ask themselves and provide an answer for. And most importantly, we must do it together. That is the only way we succeed. Well, that and through good record-keeping. But you get my point.

I will leave you with this, our watchword for 2025:

Build your business. Build your Party.

3

Marxism–Leninism, the Communist Party, and Education: Speech at the 1st National Convention of ACP

Carlos L. Garrido[1]

There is an old Soviet joke I frequently repeat. I am sure some of you have heard me say it before. Marx, Engels, and Lenin are asked, if given the opportunity, would they rather have wives or mistresses. Marx responds first. As expected, he says he would rather spend his life with his wife. His devotion to Jenny Von Westphalen, his childhood love, is unwavering. Engels is the second to respond. As someone who was known to be a bit looser with love

---

He has authored many books, including *The Purity Fetish and the Crisis of Western Marxism (2023)*, *Why We Need American Marxism (2024)*, *Marxism and the Dialectical Materialist Worldview (2022)*, and the forthcoming *On Losurdo's Western Marxism (2025)* and *Hegel, Marxism, and Dialectics (2025)*. He has written for dozens of scholarly and popular publications around the world and runs various live-broadcast shows for the Midwestern Marx Institute YouTube. Subscribe to his Substack: *Philosophy in Crisis*.

affairs, he says he would rather spend his time with his mistress. Nothing unexpected here. Then Lenin is asked. Like Marx, in his everyday life he always seemed to be a bit more conservative. However, his reply shocks the crowd. He says he would rather have *both*, a wife and a mistress! Taken aback, they ask Lenin, why? His eloquent response is the following: so that I could tell my wife I am with my mistress, and tell my mistress I am with my wife, and meanwhile, I am in the library studying.

As was long ago acknowledged by Hegel, comedy presupposes a deeply philosophical conception of that which is being playfully mocked. Terry Pinkard, one of the great materialist readers of Hegel in our age, precisely captures this insight when he tells us that, for Hegel, "the fundamental core of comedy is thus the gap between people's *pretensions* about who they are and who they *really* are, between what people *say* they are doing and what they *really* are doing."[2]

However, the joke I just referenced works precisely for the opposite reasons. It is much more dialectical than the usual structure of Greek comedy which Hegel analyzed. It contains a third movement not found in Greek comedies. It goes beyond the dichotomy of pretensions and some deeper veiled reality, mocking both. The implicit pretension is, of course, Lenin's more conservative attitude in family matters. This attitude is then brought into conflict with his seemingly degenerate response to the question, that is, the choosing of both the wife and the mistress. If the joke ended there, it would have the qualifications of what Hegel analyzed in Greek comedy.

But clearly, the zinger is the following line. Beyond the equally apparent character of the pretension and reality dynamic of the previous two moments, there lies a more fundamental principle, based on Lenin's famous motto: study, study, study. The affirmative pretension of Lenin's conservatism, alongside its negations by some apparently deeper reality of his secret degeneracies, are both negated by a more concrete moment, where the pretension and the reality *actually* align. Lenin both *proclaimed and actualized* the proclamation of study, study, study. Here the joke works, then, precisely because the comedic (in the Hegelian sense), that which captures a gap between pretensions and reality, is overcome by the non-comedic, that is, by the alignment of Lenin's pretensions and his reality.

---

2. Terry Pinkard, *Hegel's Phenomenology: The Sociality of Reason* (New York: Cambridge University Press, 1996), 248.

As the joke makes clear, for Lenin, education was a non-negotiable reality for any successful revolutionary movement. As he famously writes, "without a revolutionary theory there can be no revolutionary movement."[3] Revolutionary theory will never simply develop spontaneously out of the immediate economic struggles of workers. "Class political consciousness," Lenin tells us, "can be brought to the workers *only from without*, that is, only from outside of the economic struggle, from outside of the sphere of relations between workers and employers."[4] You will be waiting in vain for a revolutionary theory to develop out of the Teamsters or the UAW. That is not their job. It is ours! As Lenin says, "we professional revolutionaries must and will make it our business to engage in this kind of 'pushing,' " that is, the raising of the working class's consciousness, either into active revolutionaries (as are all of you here), or the sympathetic mass which follows the party and has ultimate faith in it.[5]

A necessary, but albeit not sufficient condition for us to fulfil this historic role of communists, is education. As Lenin puts it, "the role of the vanguard fighter can be fulfilled only by a party that is guided by the most advanced theory."[6]

This does not mean, however, that we go down to the masses condescendingly to preach at them like the demagogues of the left that came before us in this country. On the contrary, we start precisely from an acknowledgment of their common-sense spontaneous philosophy, as the great Italian Marxist-Leninist, Antonio Gramsci, called it.[7] From this incoherent and heterogenous spontaneous philosophy, it is the task of the communist to find the rational kernels one could rearticulate towards socialist class consciousness. The critique of common-sense is immanent, it is a process of sustaining and elevating the rational kernels while deposing the mystical shells. We do not arbitrarily impose a new worldview on the masses. In other words, we raise the consciousness of the American working class on the basis of the worldviews they already have – worldviews which are colored by the regional differences in culture and material reality of our vast country.

The relationship between the party and the masses is, therefore, dialectical and referential. We are the educators that must ourselves be educated, as Marx

---

7. Antonio Gramsci, *Selections from the Prison Notebooks* (New York: International Publishers, 2014), 330, 421.

famously said. Or, to put it in Mao's words, "communists should set an example in study; they should be pupils of the masses as well as their teachers."[8] Our education should be twofold: 1- we should sharpen the theoretical education which Lenin emphasized as necessary for a party of a new type, and which Engels considered, alongside the political and practical-economic struggles, one of the essential "coordinated and interconnected sides" of the fight for socialism. And 2- we must educate ourselves on the regionalized spontaneous philosophies and sentiments of the American masses, so that our approach to winning them over is the most fitting.

We must avoid, under all circumstances, turning ourselves into the so-called communist version of the Greek myth of Procrustes, who would invite travelers to lie on his bed, but if they were too short, he would stretch them to fit, and if they were too tall, he would cut off their legs to make them fit. We must learn how to adapt to concrete differences.

As I am fond of saying, Marxism is to dogma as water is to oil, where one is present, the other cannot be. The ever-brilliant Soviet Marxist-Leninist philosopher, Evald Ilyenkov, expressed something similar when he wrote that: "the most reliable method for crippling the brain and intellect is the *formal memorialization of knowledge*… [which makes] the brain something like a track for a train or blinkers for a workhorse."[9] We are not medieval scholastics. We are Marxist-Leninists. Our outlook is dialectical materialism. It holds that everything is in constant change, propelled by its very own internal contradictions and interconnected and interdependent to all the other processes occurring within a specific, equally dynamic and open, totality. Marxism–Leninism is a worldview, a weltanschauung, that is creative, open, and – like its objects of study – ever evolving. As Lenin stressed, Marxism is "not a dogma, but a guide to action."[10] The essence of Marxism is this open, ever-evolving worldview, not necessarily the stale conclusions drawn from past Marxists. When we treat Marxism as a series of ready-made conclusions, Lenin says that

> *"We turn Marxism into something one-sided, disfigured and lifeless; we deprive it of its living soul; we undermine its basic theoretical foundation – dialectics, the doctrine of historical development, all-embracing and full*

8. Mao Tse-Tung, "The Role of the Chinese Communist Party in the National War," In *Selected Works Vol. II* (Peking: Foreign Language Publishers, 1965), 198.

9. Evald Ilyenkov, "Our Schools Must Teach how to Think!" *Journal of Russian and East European Psychology*, 45(4), July–August 2007, 12-13.

10. V. I. Lenin, *Marx, Engels, Marxism* (Peking: Foreign Language Publishers, 1978) 300.

> *of contradictions; we undermine its connection with the definite practical tasks of the epoch, which may change with every new turn of history."*[11]

This is perhaps one of the most important passages ever written by any of the figureheads in our tradition. It should constantly remind us that education, for the genuine Marxist-Leninist, isn't an exercise in recalling memorized quotes and applying ready-made formulas. Education, for us, includes within it Marx's call to not simply interpret, but also change, the world. For this to be accomplished, our analysis must be capable of being creative and adaptive to the changing of circumstances. "Dead truth," as Ilyenkov wrote, "becomes the enemy of living, developing truth."[12]

When we encounter a contradiction or a problem before us, our instinct should not be to try to recall what the classics have said in a completely different context to then foist such a ready-made conclusion onto our distinctive problem-at-hand. As Ilyenkov notes, when these issues present themselves, they should not "cause for hysteria but for an impulse to independent work, to independent examination of the [problem] itself – and *not only* of what other people have said about [similar problems]."[13]

As the Secretary of Education for our great party, I therefore must confess that I don't simply want you all to learn what is said in the reading lists I give you every four months. I want to encourage something which none of your previous bourgeois schooling has ever encouraged: I want you to learn, above all, how to think!

When we speak of Marxism–Leninism as a worldview, we must be cognizant of what this means. Marxism–Leninism isn't simply about adding more facts or "knowledge" to your already-existing worldview. It is about transforming the very outlook through which you engage with the world. The real test for this transformation is found in those moments when you are presented with a real problem you cannot simply go back to the books to answer. When you are forced to think *creatively* and *freely*, which is the essence of real thinking and intelligence, that is when you can say you have undergone this transformation in worldview.

---

11. Ibid.
12. Ilyenkov, "Our Schools Must Teach how to Think!," 21.
13. Ibid., 20.

This is not an appeal to an epistemological anarchy; to forgetting all past insights and knowledge and to diving into a problem like a tabula rasa. On the contrary, it is about not restricting the answers to new problems on the basis of the answers to old ones. In fact, those old answers, the most insightful and meaningful of them, arose precisely out of those moments where new answers where required for the problems-at-hand. As Bertolt Brecht said, "a person to whom it is self-evident that two times two makes four will never be a great mathematician."[14] "Textbooks and teachers," Ilyenkov notes, "start off immediately with quasi-scientific "definitions" … but the real people who created sciences never started with this."[15] They start with open and creative inquiry, and then finished with these "definitions" which are wrongly ossified by less capable minds later on.

Your education should free you up, on the basis of this new Marxist-Leninist worldview, to creatively solving the new problems you encounter. Education and transformation of outlook should be a liberating experience, an opening of a new toolset with which to solve the problems of the world. If it feels restrictive and fixed, it is not Marxism–Leninism towards which your thinking has evolved… or at least you might not yet be there.

All previous parties in our country have collapsed Marxism–Leninism, in some form or another, to dead knowledge. In other settings I have ventured to call this ossification of ideals a purity fetish, the positive form of categorizing the absence of dialectical materialist thought. If our party is to succeed in its historic mission, it cannot make the same fatal mistake. I vouch to commit my life, as Secretary of Education, to ensuring that this creative impulse abundant since the founding of our party, and central to true Marxism–Leninism, remains present. But it starts, not only with education, but with how the education is itself understood.

To conclude, therefore, I would like to reemphasize that the education we will commit ourselves to in the party will be comprehensive in character. We will not only develop our knowledge of the basics of Marxism, of the classical figures in our tradition, but additionally, being faithful to the spirit, and not just the letter of the text, we will also develop our ability to think freely, critically, and creatively. This is what is required to conquer the contradictions and problems of our time head-on. This is what is required for us to fulfill our historic duty as the American Communist Party. ▉

For a Free America: Speech at the 1st National Convention of ACP

Jackson Hinkle[1]

Welcome comrades to the first convention of the American Communist Party. I really wish I could be there with all of you tonight. There's no place I'd rather be, but I'm abroad in Moscow, Russia at the moment. I apologize I could not make it, but I'm 100 percent serious that there's no place I'd rather be than with you all in Chicago tonight.

I've gotten to know so many of you over the past few months, and it has been beautiful. Some of you, I knew before the party launch, some of you after. I've gotten to know some of you even better, and some of you I still haven't met yet, so I look forward to doing that.

But you have to understand something. For such a historic party that I think has already changed the game of politics and true partisanship in America, that has

---

1. Jackson Hinkle is an award-winning journalist and host of The Dive and Legitimate Targets. He is a member of the Executive of the American Communist Party.

done so many incredible things already and will do so many incredible things in the future, there's no place I'd really rather be than at this historic event tonight.

You should all be very proud of yourselves that you are here tonight. And you should consider yourselves lucky that you find yourself in the good company of so many not just intelligent people, but very, very good Americans. Patriotic Americans. Good people. People that care about their communities.

With everything I've seen form you already, I've just been so blown away by what you're doing, and I think this is something that we're just going to see more and more of. Because it's genuine to America. We are the real Americans. We come from all walks of life. We come from all backgrounds, all religions. We've got Christians, Muslims, Jews, all ethnic backgrounds, men, women. They claim that we're misogynists, but we have a lot of amazing women. Amazing women in North Carolina that are doing really incredible things right now serving the victims of Hurricane Helene, and I pray that you are all doing well down there.

This is what America is all about, and don't let anyone tell you otherwise. The people who are telling you otherwise are a bunch of fraudsters. These are the people that say, "America first," and then they say, "Ukraine second, Israel third." You get the idea.

No, we're "*America Only*."

This is what we're about. The answer to America's problems is,"America Only." Fighting for a *free* America. And that's why when we launched the party, it caused such a shit storm. It caused such a wave on social media that millions of Americans lost their minds. Millions of Americans were expressing genuine curiosity. I was most interested in those people, because as the party has continued on, and the chapters have continued to form, and you all have been doing this amazing work serving your communities… what have we seen?

Have we continued to see this level of negativity and hate? No. We're just seeing a great number of Americans that are very curious and very open minded, showing that they're not going to judge us just because of who we are and what we believe in. They actually are genuinely interested in what is happening. That qas the biggest takeaway I had from the social media launch of the party, why it was so inspiring to me and why I think it was so historic.

Many people have tried to start their own parties. We were the ones who did it. Because we did it right. Because we don't have a purity fetish. We recognize what the most important issues are: fighting for a free America, rebuilding this country, making it something that it's never been before. Something incredibly great. We understand that we should be seeking peace with all nations in the world rather than war. We're not going to let any of these silly issues that the Democratic party and the Republican party try to sic on the popular masses divide them. As Jimmy Dore says, "They try to make you hate your neighbor, whether you're a Republican or a Democrat." We are just fighting to unite this country, to focus on the meat and potato issues. And I can think of no one better who really embodies that principle of sticking to all of that than our chairman. Chairman Haz: salute to you. I wish I was there tonight. When I reflect on the launch of this party I go back to the days, the nights, when Haz and I were streaming together in Los Angeles, traveling across the country, and just watching how much our country is decaying. Not necessarily the people, because the people are good and that's why we are fighting for them. That's what we care about. That's why we're here.

I remember reflecting with Haz years ago, and the conversation always came back to, "We need our own party. We need our own Communist Party." And Haz has provided me with so much leadership and education over the years. Many people within the party have. I look to all of you as a useful opportunity for me to always be learning more. But Haz has just been such a beacon of light for me in my life. So, I couldn't thank him more, but that beacon of light has gotten so much bigger and so much stronger after we launched the party and I saw all of these amazing things happening. I even saw it trending in China. With millions of views!

People say, "We want this to succeed!"

People want this to succeed as much as they want to see the American government in its current context fail, and I think that means something. It really does mean something. It means something that you're all here tonight. It means something that all of your chapters are doing such incredible work all across the country right now, cleaning up your communities and serving your neighborhood. I've seen chapters providing food to the elderly, cleaning up the beaches, cleaning up parks, and much more. It shows people what we're actually about.

When we launched the party there was some negativity from the liberals and the conservatives. Okay, well, it's the same thing that happened in Germany, as

everyone knows, and in many countries throughout history. It's the same thing that always happens. The liberals and the conservatives, they unite to attack the Communists. To be honest, we kind of expected that.

But since the launch of the party, what have we seen? I've seen nothing but genuine curiosity and support for what you are all doing. I haven't seen rabid attacks against you all. I think at the start people may have been scared. "Okay, what is this, Communism? Ooh, icky, gross!" But since then you've shown what Communism is all about with regard to serving the community. I've seen no attacks.

This was exhibited in Chairman Haz's debate in New York this week. You all watched it, I'm sure. You had this smelly, slimy TikToker come up and try to debate the chairman of the American Communist Party. It went about as well as you can imagine, but the audience could clearly choose which side was correct.

They initially tried to lie and they said that the smelly Tiktoker won. You know what, I hope that kid comes around to the correct positions. I'm not going to hold my breath, but I hope he does. But you have a general audience coming around to the correct positions because they can see right from wrong. They understand who has a vision for the future and who's just trying to gain support by attacking their neighbor. So what Jimmy Dore always says rings true. "The Democrats and the Republicans, they want you to attack your neighbor." Well, Communists, we have a vision for actually building the future.

I also want to give a special shout out to the North Carolina chapter, because you all are doing such amazing work. I really mean that. Our government is sending billions of dollars, as you know, to Israel, to Ukraine, to Taiwan. They've sent 17 billion to Israel since October 7th, over 200 billion over the past two years. And for the hurricane victims: nothing.

It's the American Communist Party, specifically the North Carolina chapter, which has raised thousands of dollars for supplies and emergency goods for the people that are suffering right now - and I pray that you're all safe. The American Communist Party, for the Hurricane Helene victims, is the equivalent of Lindsey Graham for Israel and Ukraine.

You guys are going above and beyond and I watched it all. You, you won the award from your local community, The "Touched by an Angel" award, and congratulations to you guys for doing that. In the words of Chairman Haz,

“Follow the good example.” I think we should all be following the good example of the North Carolina chapter right now because it’s beautiful what you guys are doing.

Now look Haz recently came out to Russia and we met with some of the most influential Communists in the country. I don’t want to give away any secrets because he’s going to be publishing some stuff soon, but I just launched a new show, *Legitimate Targets*. I’m sure many of you saw that. I am trying to bring a voice to the multipolar world and what is happening as the U.S. imperialists and their allies try to stomp their boots on the necks of 99 percent of humanity. In doing this show, I am going to be talking with amazing people each and every day, five days a week, world leaders in politics.

This week I spoke to the spokesperson for Ansarullah in Yemen, Professor Marandi from Iran Zeinab Safar from Lebanon, and Scott Ritter, who is under attack from the federal government right now. This is what I’m primarily working on right now in my life, in addition to the work that is being tasked for me within the Party.

I hope to be as much help as I can for the Party in the near future. Right now, I’m absolutely losing my mind with how busy I am with the launch of this show, but in the coming weeks, I think things are going to settle down for me here, so I’m looking forward to seeing everything that happens in the near future for the Party.

I believe in this Party. It is the answer. It’s the only answer. Everyone else is a snake oil salesman. They’re trying to sell you on a bunch of lies. So, I thank you for being here tonight. I thank you for all your work. I’m so inspired by all of you. I wish I could be there with all of you. Thank you guys for being here tonight. I salute you all. We’re fighting for a free America.

Long live the American Communist Party!

5

Confronting Imperialism: Speech at the 1st National Convention of ACP

Christopher Helali[1]

Distinguished Delegates, Comrades, Ladies and Gentleman,

I warmly greet, and salute, the assembled delegates of this historic first convention of the American Communist Party. This convention is being held at an axial point in human history. The flames of war are spreading. The ongoing war drive of the US-EU-NATO imperialists has brought us to the brink of the abyss.

The imperialists have unleased wars in Ukraine, in Palestine, in Lebanon, and the risks are great for war in East Asia and the Pacific. In the Kursk region of Russia, German tanks burn today as they did over 80 years ago. In Gaza, Palestinians are being slaughtered in a genocide unleashed by the Zionists with the support of the US-EU-NATO imperialist axis.

---

1. Christopher Helali is the International Secretary of the American Communist Party.

It is at this precise moment that the past calls to us. A specter is haunting the world anti-imperialist movement - the specter of Stalin. Now more than ever the inspiring words of Stalin to the Soviet people commemorating the twenty-fourth anniversary of the Great October Socialist Revolution on November 7, 1941, echo through history.

> *Comrades, men of the Red Army and Red Navy, commanders and political instructors, men and women guerillas, the whole world is looking to you as the force capable of destroying the plundering hordes of German invaders. The enslaved peoples of Europe who have fallen under the yoke of the German invaders look to you as their liberators. A great liberating mission has fallen to your lot. Be worthy of this mission! The war you are waging is a war of liberation, a just war. Let the manly images of our great ancestors—Alexander Nevsky, Dimitry Donskoy, Kuzma Minin, Dimitry Pozharsky, Alexander Suvorov and Mikhail Kutuzov—inspire you in this war! May the victorious banner of the great Lenin be your lodestar!*[2]

Once more the grandchildren of the Nazi invaders are plunging Europe into a third world war. To meet this fascist threat, the grandchildren of Stalin, Zhukov, Konev, and Rokossovsky have answered the motherland's call.

Russia today defends itself against the full weight of the US-EU-NATO imperialist axis. The Axis of Resistance in West Asia resists the onslaught by the Zionists backed by the Western imperialists. The DPRK and China resist the aggression of the United States and its regional allies and puppets in East Asia and the Pacific. The peoples of Venezuela, Cuba, and Nicaragua continue to struggle for their people against brutal sanctions and blockades. African nations including Burkina Faso, Mali, and Niger are rising up against their neo-colonial rulers and pursuing a new path of development.

In my speech this summer at the World Anti-Imperialist Platform meeting in Washington, D.C. during the protests against NATO's 75th Anniversary, I identified and outlined seven major fronts in the ongoing and expanding US-EU-NATO imperialist war.

First, the Eastern European front centered in Ukraine is deepening and expanding. My fact-finding mission to the Lugansk People's Republic revealed

---

2. J. V. Stalin, "Speech at the Red Army Parade on the Red Square, Moscow," November 7, 1941, https://www.marxists.org/reference/archive/stalin/works/1941/11/07.htm.

the brutality and barbarity of the US led war on the people of the Donbass. Destroyed apartment buildings, schools, factories, roads, and other infrastructure shows how the Ukrainian fascist forces continue to commit egregious war crimes. As I stated at the United Nations this summer, this war did not begin with the special military operation in 2022 but in 2014, with the western backed fascist junta that unleashed a brutal war on the people of the Donbass.[3] This war is, as I have said, a struggle between the past, present, and future in the region. The Russian Federation's SMO has as its stated goal the denazification of Ukraine. That means, this is not merely a war like others around the world, but an anti-fascist war, a continuation of the Great Patriotic War.[4]

Second, the Pacific/East Asian front centered on South Korea and Taiwan, is heating up. The DPRK and Russia have grown closer in recent months, deepening their bilateral political, economic, and military relations. They have now elevated their relations to the level of "comprehensive strategic" partnership. This is the highest and deepest the bilateral relations have ever been. The US continues to pursue an aggressive policy towards China, especially towards territorial disputes in the South China Sea and the situation in Taiwan.

Third, the Southwest Asian and North African front, centered from Palestine, Syria, and Iran, to Western Sahara, reveal the ongoing genocidal policies of the Zionist entity, an outpost of US-EU-NATO imperialism and colonialism in the region, and its regional lackeys. The Palestinian people continue to wage a historic struggle against Zionism and their heroic resistance has been a beacon and a banner to unite all working and oppressed peoples. The axis of resistance from the AnsarAllah movement in Yemen to Hezbollah to various groups in Iraq and elsewhere continue to wage a historic struggle against the US-EU-NATO imperialists, Zionists, and their regional proxies. The Polisario Front in Western Sahara continues to struggle against the colonial state of

---

3. "Press Briefing: Dan Kovalik, Jackson Hinkle, and Christopher Helali following their recent visit to Donbass and Moscow," UN Web TV, July 3, 2024. https://webtv.un.org/en/asset/k16/k163tkr87w. For my written text see, https://popularresistance.org/united-nations-press-briefing-regarding-factfinding-mission-to-donbass-moscow/.

4. This is something that I have said when I was International Secretary of the Party of Communists USA since even before the beginning of Russia's SMO. Here is the statement I wrote following the SMO on February 25, 2022: https://partyofcommunistsusa.net/february-25th-2022-party-of-communists-usa-statement-on-russian-military-operation-in-ukraine/.

Morocco which is backed by the U.S. and Israel.[5] Struggles continue in Libya over the future of the country and Egypt is experiencing a deepening crisis as the genocide in Gaza continues unabated on its border.

Fourth, the Sub-Saharan African front, centered on anti-imperialist countries like Mali, Niger, and Burkina Faso, find themselves in the crosshairs of US-EU-NATO imperialism, notably AFRICOM, the U.S. military command that seeks to dominate the African continent. These three nations are prepared to cooperate at the highest levels in a rebuff to the imperialist instrument of ECOWAS. Wars and instability in the DR Congo, Sudan, and Kenya are critical to understand the situation in the region and its implications around the world.

Fifth, the Latin American front is centered on Cuba, Nicaragua, Venezuela, and other anti-imperialist countries like Bolivia. These countries find themselves directly confronting U.S. domination that justifies its ongoing destabilizing and interventionist role in Latin America via the Monroe Doctrine. The upcoming election at the end of July in Venezuela is critical and all eyes are watching as the U.S. and its proxies expand their hybrid war through misinformation and covert operations to overthrow the popular power of the PSUV and the Bolivarian Revolution.

Sixth, the caucuses front centered on Georgia as well as Armenia, Azerbaijan, and the Russian regions of Chechnya, Ingushetia, and Dagestan are in the crosshairs of the US-EU-NATO axis. Using religion and ethnicity, the imperialists seek to replicate their success in Yugoslavia to create instability by fomenting separatism in the Russian Federation. We witnessed very quickly how the “Republic of Artsakh” or Nagarno-Karabakh disappeared overnight with the Azeri military advance. Georgia’s EU and NATO membership have been a goal of the imperialists for many years and we recall the war in 2008 that led to Russian military intervention and the recognition of the Republics of Abkhazia and South Ossetia. Today, Georgia finds itself once more in the crosshairs and many believe that it is the next front in the region for the U.S.-EU-NATO imperialist axis.

Seven, the Arctic front has become a key battlefield between the U.S.-EU-NATO axis and the Russian Federation and by extension China. At present, eight countries, Denmark; Finland; Iceland; Norway; Russia; Sweden;

---

5. See my recent intervention on behalf of Western Sahara at the United Nations: https://www.spsrasd.info/en/2024/06/15/3902.html. Chris Helali speech at the United Nations: http://webtv.un.org/en/asset/k16/k161iaj5rb

and the United States, exercise sovereignty over lands within the Arctic Circle. In October 2023, the Chair of the NATO Military Committee, Admiral Bauer attended the 10th edition of the Arctic Circle Assembly in Iceland. There, Admiral Bauer shared NATO's view on the current security environment in the Arctic. He said "The increased competition and militarization in the Arctic region, especially by Russia and China, is concerning. The melting ice in the Arctic is creating new sea routes that would facilitate the movement of large vessels and shorten navigation times. We cannot be naïve and ignore the potentially nefarious intentions of some actors in the region. We must remain vigilant and prepare for the unexpected."[6] Admiral Bauer stated "When Sweden joins, following in the footsteps of Finland, seven of the eight members of the Arctic Council will be NATO Allies. We are grateful to our Nordic Allies for their enhanced cooperation, investment and vigilance in the region. The Arctic has always had a strategic importance to NATO, and we must ensure it remains free and navigable", he added.[7] It is clear from the words of Admiral Bauer that the Arctic region is a NATO prize worth fighting Russia for.

In all of these fronts the US-EU-NATO imperialist axis uses a wide variety of tools including war, covert operations, sanctions, color revolutions, funding pro-Western NGOs, dissident academics, pro-Western media, and funding and supporting anarchic, "anti-authoritarian", and nihilistic art and cultural programs to achieve its aims. The arsenal of the Euro-Atlantic imperialist axis uses liberalism, human rights, and democracy promotion as a guise for the ruthless and brutal domination and exploitation of periphery countries.

The gangsters of empire have brought the world once more to the brink. The bipartisan commitment to full spectrum dominance is paving the way to nuclear confrontation. The U.S.-EU-NATO axis must be stopped. NATO must be abolished if the world is to have peace in our times.

Comrades,

The mandate given to me this summer was to strengthen our international ties and establish the American Communist Party in the international communist movement. To the assembled delegates, I can proudly say that we have accomplished all of the short-term goals we had identified in July. In fact, we are ahead.

---

6. " 'Arctic remains essential to NATO's Deterrence and Defence Posture', says Chair of the NATO Military Committee," North Atlantic Treaty Organization, October 22, 2023, https://www.nato.int/cps/en/natohq/news_219529.htm.
7. *Ibid*.

The American Communist Party is now a member of the World Anti-Imperialist Platform, an initiative launched by the People's Democracy Party of South Korea. We signed on to the Paris Declaration joining over 50 communist and anti-imperialist parties and organizations. Additionally, we signed the Platform's Palestine declaration.

We held meetings with parties including the Communist Party of the Russian Federation (KPRF), the Communist Party of Tajikistan, the Unified Communist Party of Georgia, the New Communist Party of Yugoslavia, the Polisario Front, Vatan Partisi, and the Ambassadors of Nicaragua and Western Sahara.

After a struggle with those who defame and slander us internationally, we were victorious in joining the Stop World War 3 International Initiative for Peace, an effort led by Fronte del Dissenso in Italy and joined by over 80 parties and organizations.

Just this past week, I spoke in defense of Western Sahara at the Fourth Committee of the General Assembly of the United Nations in New York City. Seated next to Polisario Front's Ambassador Sidi Mohamed Omar, I addressed the assembled ambassadors and delegations of the world's nations, underscoring that "the American Communist Party remains steadfast and unwavering in its commitment to the struggle of the Sahrawi people. We reaffirm our commitment to the decolonization, self-determination, and national liberation of Western Sahara....The freedom of Africa is incomplete without the freedom of Western Sahara, the last colony on the continent." The American Communist Party's name is now on official documents of the United Nations, a first but not last for our party's international work.[8]

Our sights are now set on the upcoming meeting in Dakar, Senegal at the end of this month which will be the World Anti-Imperialist Platform's first meeting on the African continent. Over 100 delegations will take part in the event. In November, ACP will join the World Anti-Imperialist Platform leadership which is co-organizing the Anti-Fascist Conference in Belarus under the leadership of Union of Communist Parties – Communist Party of the Soviet Union (UCP-CPSU) led by KPRF and the Communist Party of Belarus.

---

8. United Nation's General Assembly, Seventy-ninth session, Special Political and Decolonization Committee (Fourth Committee), Agenda item 58, Implementation of the Declaration on the Granting of Independence to Colonial Countries and Peoples, Question of Western Sahara, Requests for hearing, (A/C.4/79/10), October 3, 2024, https://documents.un.org/doc/undoc/gen/n24/275/24/pdf/n2427524.pdf.

We are working towards membership in the International Meeting of Communist and Workers' Parties (Solidnet), joining the World Anti-Imperialist Youth Union, signing the Pyongyang Declaration, getting involved in the World Youth Festival in Russia, attaining observer status in the Sao Paolo Forum and COPPPAL, and cooperating with the OCLAE in the Caribbean and Latin America.

Comrades,

The American Communist Party, true to the historical legacy of Marxism-Leninism, understands the importance of uniting forces that are dedicated to anti-imperialism. Our historical duty is to unceasingly confront US-EU-NATO imperialism and all of its proxies around the world. This represents the greatest threat to humanity today. Given the various fronts and lines of demarcation facing the international communist and workers' movement today, we must sharpen our ideological positions and prepare for a prolonged ideological war with those who choose revisionism, opportunism, and factionalism. Our strategy is to be united in confronting imperialism under the immortal banner of Marxism-Leninism. We must heighten and deepen our struggle against the US-EU-NATO imperialist axis, the greatest threat to world peace. Only through the final confrontation with Euro-Atlantic imperialism can we open the possibility of constructing socialism-communism and building a lasting world peace for all.

We honor the millions of martyrs that were sacrificed to rid the world of the scourge of imperialism, colonialism, fascism, and Zionism. Millions have answered the call throughout history. It is time for all those assembled here to answer that very same call.

Death to Imperialism, Fascism, and Zionism!

Long Live the American Communist Party!

Long Live International Solidarity!

Victory to the Anti-Fascist and Anti-Imperialist Forces!

Victory to the Resistance!

Socialism or Death!

Patria o Muerte!

Venceremos!

FROM THE RIVER TO THE SEA, PALESTINE WILL BE FREE!

6

Redouble Our Efforts: Speech at the 1st National Convention of ACP

Kyle Pettis[1]

Comrades, I intend to be very brief because things have gotten a little long. (Though, I think that longevity was very much worth it.) In the last speech, Comrade Helali laid out the critical situation that we all face abroad. My duty is, of course, to look at what we are doing at the chapter level. What we are doing here, domestically.

And to that effect, I have spoken at length with all of you about our three-pronged strategy. I'm sure everybody remembers this, right? So, just to quickly go over this, the first prong was the community service initiatives that every single chapter I can gladly report has already partaken in and continues to deepen their struggle in reaching out their helping hand to the community at large. Amazing work by many chapters. I could go on for hours talking about

---

1. Kyle Pettis is the Chief Labor Analyst for the Midwestern Marx Institute and the Director of Personnel for the American Communist Party. He's a life-long blue collar worker and union man.

all of the different things that all of you have partaken in, but I don't need to. All of you know the vital work that you are doing in your communities and the help that you are rendering your neighbors and your communities at large.

The second prong of this, of course, was articulated stating the necessity for chapter enterprises. I think that this is something that presently we are all still in the developing and planning stages of, but it's clear to me that given the international situation and the heightening tensions here at home, state repression, crackdowns, and all the like, we must deepen our efforts in creating viable alternative solutions to the economic situations that our communities find ourselves in. That is the entire purpose of our financial enterprises at the chapter level. We have to create, in a sense, a form of dual economic power that we control and that the capitalists do not.

It's essential to our work, to continuing our endeavors, to be able to maintain the level of depth that we have in our communities, offering those helping hands that we all have. The third part was, of course, to be involved in social investigation. I have seen many reports from many chapters of comrades going out, talking to people in their community, finding out what makes them uncomfortable, what keeps them up at night, what worries them, and what gives them hope. This is essential information. Everybody should know everybody that they can in their communities. We are nothing but our communities at the end of the day. Strip back the federal government, strip back the state. What is there? There are communities of people across this wide, great land.

That is fundamentally what we are.

As communists, our goal is to be as embedded in our local communities as possible. With that being said, I want to congratulate all of you on the first prong of our three-prong strategy. And I want to commend all of you on your initiatives in beginning to address the second and third prongs of the strategy.

Once again, it is vital that we redouble these efforts, that we put all of our heart and soul into this, and we build the actual party. The party is not just the party in name alone. It is not just your memberships on the website. It's not just your fraternal relationships at the chapter levels, your building of the bonds of camaraderie. All of this is part of the party, but it is not the party in and of itself. The party is only the party when it is one with the masses, when it is involved in the civic activities of the community, when it is at the churches, it is at the union halls, when it is on every street corner, when every single American

knows what the ACP is - that's when we can say that we have the Communist Party in this country.

We are a party that is not interested in idle book clubs, though education is important. We are not a party that is interested in simple social interactions and buildings of friendships. We are a party that is designed to shake the very core of this nation and build a new, true American Republic. That is the goal of the American Communist Party.

Following my brief, although I feel concise words, we will be getting into the Constitution. The Constitution is the exact document that we have to live by. It is the Constitution that will bind you all as members in good standing or not to this party. It is essential that every comrade actually take the time to educate themselves on the Constitution.

Our party came out of the CPUSA. We have been reconstituted. We understand the errors of the general membership of the seat of the former Communist Party USA because it is former in this sense. They were not aware of what even their own constitution was saying. I hope that we do not make the same mistake in our great party.

We must be above delegating this insight to others. Every member of the party must understand the constitution. Every member of the party must understand the platform. These are the things that we fight for. These are the things we get up every day for, and we go into our communities and we advocate for.

How can there be a communist party where the membership is not even aware of its own rules and regulations? Please, do not fall into this. I hope every single one of you in the brief intermission that is to come reads the Constitution, prepares themselves to give a full discourse on what they approve, and I hope that us at the Executive Board and the national leadership at large have done a good job in articulating what we think is a viable Constitution for this party.

Thank you.

7

International Greetings to the 1st National Convention of ACP

What does it mean to be an internationalist? These days this word is used and abused by many on all sides of the political spectrum. Whether it is liberal humanitarianism that seeks to open national borders to Western funded NGOs or those in favor of globalization who seek to open borders for multinational corporations to plunder national resources and exploit workers, the idea of a "global community" is often little more than a rhetorical cover for imperialism. When we as communists use the term internationalism, we envision something radically new. We seek a world of peace, friendship, and cooperation. A world that builds bridges between all nations and peoples. Unlike the idealists, we understand that the term internationalist requires, at its root, a nation, a socialist nation.

Thus, each and every Communist or Workers' party in its respective country is simultaneously internationalist and patriotic. Each member holds in one hand the revolutionary flag of the nation and in the other hand, the red banner of the working class. Thus, the First National Convention of the American Communist Party was welcomed by over forty parties around the world. We are publishing a selection of the greetings we received from parties and organizations around the world who not only recognize the legitimacy and importance of the American Communist Party but place their hopes in the rebirth of an authentic and working-class communist movement in North America.

Workers of the world, unite!

Christopher Helali
International Secretary
American Communist Party

Party of the Committees to Support Resistance – for Communism
Via Tanaro, 7 - 20128 Milano
sito: www.carc.it

To the American Communist Party

Dear Comrades

we wish the most complete success to the work of your Convention of 12 October and the path from the Convention to the Congress. We would like to take this opportunity to thank you for the contribution you submitted for the Conference promoted by the CARC Party and other forces on the lessons of Stalin's work for the struggle of communists held today on 29 September as part of the CARC Party's Popular Rise Day.

We will surely respond to your request to speak on the key issues of this era, devoting the time they require, starting with direct meetings with representatives of your party, which we expect to have in the near future, perhaps as early as the Dakar Conference organised by the World Anti-Imperialist Platform later this month.

We would add that the issues you rightly draw attention to are on the agenda both in our work at the national level and in our interventions at the international level, the latest of which is that of Manuela Maj, head of the International Working Group, published in the October issue of Platform magazine (at https://waporgan.org/?p=4051).

We give utmost importance to the renaissance of the communist movement and the development of the popular mass movement in the USA and the relations between the communist movement in our country and yours.

The two centres of the world imperialist system are in this order 1. the US imperialist bourgeoisie with the industrial-military-financial complex that is its political organ, 2. the Roman Catholic Church with the Vatican (the Papal Court).

The USA is at the centre of the revolutionary situation developing all over the world. So every communist party must take this into account, all the more so in Italy where the USA since 1949 has been running the Armed Forces and foreign relations under a regime of limited sovereignty, has more than 116 military bases and installations, and keeps about 30,000 of its soldiers in NATO and US settlements. What kind of interference should we expect from the US imperialist bourgeoisie against the socialist revolution in our country? How can we help the US communist movement? What can we learn for our own purposes from the class struggle in the USA?

The main rising force against the US imperialist groups is the American proletariat. In the last century, the US imperialist groups have gained world leadership and succeeded in stifling the communist movement: just remember Edgar Hoover's FBI and McCarthyism. The decline of the role of the US imperialists in the world favors its resurgence. The mobilization of the popular masses and the US proletariat is favored by the political struggle within the US imperialist groups and the military-industrial-financial complex itself. In this mobilization, groups and aggregations have emerged that, in various ways and measures, some consciously reflect and others consciously make their own the real historical interests of the US proletariat. Their strength and role will grow and our struggle in Italy will also help them.

The support that we Italian communists give to the renaissance of the conscious and organised communist movement in the USA is divided into two tasks:

1. advancing the socialist revolution in Italy, breaking with NATO and expelling the US bases and troops that occupy our country and use it as a base for aggression and pressure on other countries, particularly against African countries, Middle Eastern countries and the Russian Federation. This is a task that also fully coincides

with the interests of the Italian popular masses and is inherent to advancing the struggle to establish socialism in our country;

2. affirm and develop Marxism-Leninism-Maoism: the communist worldview and the strategy of proletarian revolution in which it is articulated. To this end, the Caravan of the (n)PCI, of which the CARC Party is a part, promotes within the international communist movement discussion on four themes:
    1. the account of the communist movement (first wave of the proletarian revolution and the first socialist countries, crisis of the communist movement and modern revisionism, renaissance of the communist movement on the basis of the Marxism-Leninism-Maoism);
    2. the theory of the (first and second) general crisis of capitalism in the imperialist epoch and the associated revolutionary situation in development
    3. the regime of preventive counter-revolution established by the bourgeoisie in the imperialist countries;
    4. 4. the strategy of the protracted revolutionary people's war.

The US military-industrial-financial complex tries to preserve the domination that the US imperialist groups have imposed on the world since World War II, but in addition to the growing opposition in other countries, it has to deal with the war that is developing in the US itself. It is a war that has many promoters with antagonistic interests. They do not cooperate with each other, but they all contribute to undermining the US military-industrial-financial complex.

We Italian communists must take this into account in order to have confidence in the possibility of success in our struggle, against those who object to our line of creating the conditions for the establishment of the Popular Block Government that 'the US, Zionist and EU imperialist groups will not let you do it'. Of course we will have to face their intervention, but it is precisely the victorious struggle against it that will lead to the full renaissance of the communist movement in Italy and the establishment of socialism. And our struggle can be victorious.

The US imperialist groups are divided from one another and will become more and more divided: it is in their nature, they compete for the valorisation of their capital each. The clash between the followers of Biden and those of Trump is one expression of this basic contrast. The contrast will sharpen and the clashes will multiply. Not only will we and communists in other countries profit from this, but also the US communists will learn to take advantage of it for the renaissance of the conscious and organised communist movement in the US. The course of things that the US imperialists impose in the USA itself with repression (the USA is the country with the highest percentage of the population made up of prisoners and victims of other forms of state repression) and with the brutalisation of the minds and hearts of the popular masses (the USA is a country with a high percentage of drug addicts and a high number of massacres) promotes the development of growing resistance. The commodity production system has been disrupted by the capitalists themselves who have gone on to exploit workers in other countries (imported goods are much more than exported goods: the trade balance is chronically in deficit). Unemployment, precarious work in the USA is widespread and together with the greed of corporate masters, racial persecution, increasing violence against women (laws against the right to assisted abortion are just one example) and the increasing difficulties of students (school fees and housing) and youth in general foster the resistance of the popular masses. A vast field of action for revolutionaries in general and for those communists who will come to have a higher understanding of the conditions, forms and results of the class struggle. Revolutionary mobilization will grow. Reactionary mobilization will also grow, because the imperialist groups and their agents take advantage in a thousand ways of the impatience, discontent and rebellion of the popular masses. The last presidential election demonstrated this on a large scale. The spread of arms is a U.S. tradition and a source of large profits for manufacturers and traders. Added to all this is the devastation of the environment and pollution that the capitalist mode of production aggravates in the U.S. as in the rest of the world.

This is in a very short summary the field in which the U.S. civil war develops. It undermines the force with which the U.S. military-industrial-financial complex oppresses the rest of the world, and it is the field in which communists will learn to develop not only trade union and political demands, but also and above all to transform the general unrest and indignation of the popular masses into a war directed to a very specific end: to put an end to the domination of the imperialist bourgeoisie, its mode of production and the orders based on it, and to establish a socialist regime.

The renaissance of the communist movement will see the socialist revolution triumph in one or more imperialist countries.

We will be able to advance to victory.

Long live the Convention of the Communist Party of America!

Let us transform resistance into attack!

The future is bright!

США, ЧИКАГО 12 ОКТЯБРЯ 2024г
ПЕРВОМУ НАЦИОНАЛЬНОМУ СЬЕЗДУ
АМЕРИКАНСКОЙ КОММУНИСТИЧЕСКОЙ
ПАРТИИ!
МЕЖДУНАРОДНОМУ СЕКРЕТАРЮ
АМЕРИКАНСКОЙ КОММУНИСТИЧЕСКОЙ
ПАРТИИ ТОВ. КРИСТОФЕРУ ХЕЛАЛИ!

Глубокоуважаемые коммунисты Американской коммунистической партии!

Глубокоуважаемый Кристофер Хелали!

Центральный Комитет Коммунистической партии Кыргызстана от всей души приветствуют Вас всех с началом съезда, желают Вам плодотворной работы!

Съезд Ваш проходит в условиях накала неразрешимых противоречий внутри самих Соединенных штатов Америки! В силу международной финансовой роли доллара США давно уже стала мировым жандармом для остальных государств мира! США осуществляет криминальную диктатуру власти особенно в государствах, где есть природные богатства: газ, нефть! Также

неразрешимые противоречия возникли между двумя партиями, постоянно борющимися за власть: демократической и республиканской! Республиканская партия владеет списком Эпштейна, куда ходили на его остров немало высокопоставленных чиновников и чиновниц, где осуществлялись самые страшные преступления над детьми и подростками! Все это проявления тотальной деградации криминальной буржуазии во всем мире! США стоит на

самой вершине этой деградации! Фашизм, дискриминация людей, геноцид народов, государственные кровавые перевороты, инициирование войн!

Поэтому коммунистам США нелегко работать в таком клубке военных нравственных, экономических, социальных и политических противоречий! Жаль, что именно США является инициатором разрушения многих очень важных международных договоров! Подмял под себя ООН,НАТО, ОБСЕ,МВФ и другие организации!

США финансирует войну на Украине против России, Израиль против Палестины и государств Ближнего Востока!

Всем антиимпериалистическим силам и в первую очередь Вам коммунистам США приходится бороться с этим злом! Чем сильнее будете Вы внутри страны, тем легче всему коммунистическому движению в мире! Ведь ЦРУ действует во всех государствах мира! Нередко в своей стране приходится больше бороться с агентами штабов ЦРУ, чем с национальной буржуазией во власти! У штабов ЦРУ в республиках первая мишень- это коммунисты! Они их травят и физически и психологически, блокируют их деятельность, убивают близких родственников, не дают работать, вступая в сговор с руководителями заведений, где работают коммунисты, их дети и родные! Элементарно платят через Сороса!

Разрушается природа, наступает для человечества экологическая катастрофа и человечество с космической скоростью бежит к своему самоуничтожению!

Но несмотря ни на что наступил кризис и капитализма и империализма! В рамках этих общественных систем невозможна дальнейшая жизнь человечества! Есть ли выход из данного кризиса! Несомненно, это переход к социализму! Иного пути просто нет! Для этого необходима диктатура рабочего класса и всех трудящихся масс! Оно может быть осуществлена в основном снизу, но перед лицом гибели всего человечества возможно совместно и снизу и сверху совместно, если верхи поймут, что они тоже идут к гибели! Буквально на днях прошли природные катаклизмы по всему миру и они будут усиливаться год от года!

Желаем Вам принятия самых эффективных решений для реализации наших глобальных задач- установления социализма на всей планете- Земля! Замечательного Вам настроения, боевитости духа, оптимизма, удачи и успехов!

С глубоким уважением и искренней признательностью за все Ваши усилия в нашей борьбе!

Центральный Комитет Коммунистической партии Кыргызстана.

Central Committee
E-Mail

Bellinzona (Switzerland), 12.10.2024

Greetings for the congress of the ACP

Dear comrades,

On behalf of the Communist Party (Switzerland) we wish you good work and a successful congress.

In the actual geopolitical context of the increasing provocations and ongoing wars wanted by NATO, as much as the genocide fury of Zionism, it is very important to maintain unity over division in favor of peace and focus on the fight against Western imperialism.

Revolutionary greetings,

Communist Party (Switzerland)
CENTRAL COMMITTEE

Head of International Relations

ZIMBABWE COMMUNIST PARTY

Without revolutionary theory there can be no revolutionary movement. **V.I. Lenin**

==========

Revolutionary Greetings to the First Convention of the American Communist Party

Comrades! The Central Committee of the Zimbabwe Communist Party greets the formation of the American Communist Party with hope for the future of mankind.

That the USA has become the centre of world imperialist and monopoly capitalist terror has impacted on every corner of our small planet. And in this respect, it is impacting daily on the lives of ordinary US citizens.

There are no longer any 'trickle-down' benefits for the majority.

Extreme corruption, homelessness, lack of health-care, lack of dignified employment, drug abuse, poor food quality — are all having a disastrous effect on the majority of Americans.

It is our contention that there has been State Capture in the USA, that the US state machine no longer works for the interests of US capitalism as a whole, but only for the bankers, the military-industrial complex and the Zionists. Fundamentally, the difference between Democrats and Republicans is that they serve the interests of different strata of the US capitalist class.

The good news, is that the majority of young Americans, in opinion polls, are stating that they are in favour of some form of socialism or communism. This trend started to be apparent when Bernie Sanders competed for the presidency, and it is common cause that if he had been allowed to stand, he would have become President of the United States of America.

Now as Communists, we do not see Bernie Sanders as a real socialist leader, but the fact that the word 'socialist' is now there with the mainstream consciousness of the American people, especially the youth, is a major step forward.

Comrades! We see one of the most important tasks the ACP has to tackle, is to transform this vague and foggy consciousness around socialism into a firm and clear vision based on the realities of the economic and social conditions of your country — a vision acceptable to all but the most greedy and reactionary classes and strata of US society.

Africans have, in recent years, witnessed the destruction of two African countries through the orders of 'liberal' US Presidents.

Firstly: the destruction of the Democratic Republic of Congo (DRC) between 1998-2003 in the biggest war ever on the African Continent, was hardly recorded by Western media.

According to UN figures, it led to the deaths of 5.4 million people.

In the course of that war, President Laurent Kabila was murdered. His crime had been to renegotiate all mining contracts in DRC in order to obtain funds to develop the country. He was advised by the renowned Belgian Communist, Ludo Martens.

Bill Clinton armed Rwanda and Uganda to invade DRC in a proxy war. Our country, Zimbabwe, then chairing the Southern African Development Community (SADC), sent in troops to counter the invasion. The IMF and World Bank immediately suspended support for Zimbabwe while continuing to support Rwanda and Uganda.

Sanctions against Zimbabwe started then — not when our War Veterans occupied their own agricultural land as is normally claimed.

Secondly: The first 'African-American' President of the USA, Barack Obama, sanctioned the NATO bombing of Libya, then under the leadership of Brother Leader Muammar Gaddafi. Libya had the highest Human Development Index (HDI) in Africa at that time. Libya was destroyed and Gaddafi cruelly murdered (to the delight of Hilary Clinton). Western backed Salafist terrorists then began a campaign of genocide against black Libyans and re-introduced the slave trade.

Many of the Salafists then moved south to the Sahel — which gave the French and the US Africa Command, AFRICOM, an excuse to deploy troops. They had no intention of fighting the terrorists who were, in reality, their allies. It is only now that the revolutionary governments of the Sahel Alliance, with the assistance of Russia, have genuinely started to defeat the jihadists.

Currently, the ZCP is clear that the 'Ukraine War' is a US War against Russia — not even a NATO war, for NATO is nothing but a collection of US semi-colonies.

Similarly, we believe that the replacement of the State of Israel by a secular State of Palestine is the only way that there can be a lasting solution. The Two State Solution was tried in the 1990s and resulted in the murder of the two main signatories, Yitzhak Rabin and Yasser Arafat.

The ZCP believes that the ACP fully understands the relationship between US imperialism and the deteriorating living conditions of the US people and has the potential to be the leading force in US society.

Forward to Socialism, Forward !!

PO Box 78900, London, SW16 9PQ 07827 501 420 info@cpgb-ml.org

7 November 2024

Dear comrades of the American Communist Party

We salute you on the occasion of your first National Convention and the ratification of your constitution and party programme.

In the United States of America, as well as in Britain, an anti-imperialist revolutionary organisation of the proletariat is desperately needed. Objective conditions are rapidly developing towards a revolutionary crisis in countries all over the world, not only in the superexploited lands dominated by imperialism but also in the imperialist heartlands themselves.

As the global overproduction crisis deepens and the imperialist war drive accelerates, what is really missing is a Marxist-Leninist organisation capable of welding the workers into a real force and constructively directing their righteous anger. Not only towards overthrowing and destroying the old, but also towards building the new.

Overcoming the problems of our history and reforging the link between Marxism and the masses – this is the task that now faces us urgently, as our ruling classes try to maintain the present system through a combination of austerity, repression, racist scapegoating and war.

There are great struggles before us and many difficulties to overcome, but we have also entered a period of great opportunity – one in which the decisive defeat of the imperialist camp is not only necessary but possible.

We wish you success in progressing towards the vital goal of building a Marxist-Leninist party in the USA. A party that can enable the US working class to leave behind all the retreats and betrayals of recent decades and place its footsteps once again upon the revolutionary path, joining its efforts with the peoples of the world in facing and defeating our common enemy.

As we celebrate the anniversary of the Great October Socialist Revolution, we must follow the example and learn the lessons of that great feat and bend all our efforts towards bringing socialism to the workers' movement.

Red salute!

10/10/2024

Greeting message to the American Communist Party

Dear Comrades,

The Democratic Front for the Liberation of Palestine extends its greetings to you and congratulates you on the convening of your first national conference. We wish success for this conference, which is being held at a significant historical moment in the struggle between global imperialism and national liberation forces.

The Democratic Front for the Liberation of Palestine values your supportive stance on the Palestinian cause and the inalienable rights of the Palestinian people, particularly their right to self-determination on their land, the establishment of their independent Palestinian state with Jerusalem as its capital, and the return of refugees to their homes.

The Democratic Front for the Liberation of Palestine considers the unification of the struggle to confront global imperialism essential in these difficult times. We hope to continue our relationship with you to confront the Zionist plan, which seeks to displace the Palestinian people and establish a new Middle East dominated by global imperialism through its ally, Israel.

Our shared struggle and fight against Zionism must defeat imperialism, and the Palestinian resistance will overcome the colonial and racist Israeli projects, just as it has thwarted them in the past.

Every year, we achieve a new victory over Zionism and imperialism.

Congratulatory Letter to Participants of the 1st National Convention of the American Communist Party

October 12, Juche 113 (2024)

Dear Comrades!
Brothers and Sisters in the anti-imperialist struggle!

On behalf of the Coordination Committee of the DPRK ISG and myself personally, I cordially congratulate all members of the American Communist Party on holding the 1st National Convention.

We sincerely admire the thirst for justice of the communists of the USA and Canada, who are waging a struggle in the very heart of US imperialism, and we highly thank the American Communist Party for its special contribution to the demarginalization and development of the international solidarity movement with the DPRK.

Under modern conditions, to our deep regret, many "communist parties" are degrading and taking the path of revisionism, under one pretext or another speaking out against the DPRK, China, Russia and other countries waging an anti-imperialist struggle. Thus, hiding behind red flags and revolutionary slogans, they actually support the coalition forces of world imperialism with their actions. But the American Communist Party, despite the colossal pressure of hostile forces, found the courage to confront the enemies of our revolutionary movement and raised the red banner of international solidarity even higher!

We are deeply convinced that by joint efforts we can awaken the American working class, despite the machinations of sectarians and revisionists, to raise it to a just struggle for a bright future not only for their families, but for all of humanity.

Chairman of the Coordination Committee
of the DPRK International Solidarity Group

Alexander Mostov

Dear comrades!

We greet the American Communist Party (ACP) with great satisfaction on the occasion of your first national congress!

We sincerely wish you to earn the unconditional respect and support of the working people in the United States. We also see you as reliable comrades in the international anti-imperialist struggle, which is currently of particular relevance for communists worldwide.

We are confident in your ability to achieve significant influence in the internal politics of the United States and to become a notable participant in the international communist and anti-imperialist movement. May the glorious experience of your predecessors—communists—and the practices of contemporary political struggle assist you in achieving your goals.

Power to labor, not to capital!

Co-chairmans of the Socialist Party of Latvia

I. Burlaks, V. Frolov

ANC
Rassemblement de Communistes de France

Paris, the 10th of October 2024

To our comrades from the American Communist Party

We've been watching the rise of anti-capitalist and anti-imperialist protest movements in the United States for some time now, and the strengthening of socialist ideas among young people in your country, which fills us with joy. We are therefore delighted by the formation of your party, which responds to the needs of the moment in your country and throughout the world.

The French National Association of Communists is currently engaged in a merger process with our comrades from the Rassemblement Communiste, which should take effect on November 3, 2024 at our merger congress.

We are therefore particularly pleased to see that on the other side of the Atlantic, your organization is being born with which we intend to develop fraternal relations of internationalist cooperation against our common enemy, imperialism and NATO. We are convinced that imperialism and capitalism have reached a dead end of which the peoples are becoming aware, and in particular your people, who have a tradition of class struggle that your enemies have tried to bury and camouflage, but which is now being reborn in the light of the world.

Long live to the international people's solidarity !

Victory for the masses and people's democracy !

Bruno Drweski

International officer of the National Association of Communists

Dear Comrades

warmest greetings from the New Communist Party of Britain to all our American comrades. In difficult circumstances your are campaigning on the street to put socialism back on the agenda of the working class while defending the people of the Donbas fighting against the imperialist-backed puppet regime in Kiev and supporting the anti-war movement all over the world. There is an answer to the crisis -- and that is socialism. Let's make that demand echo across the streets, in the plants and the housing estates now!

A Brooks
General Secretary
New Communist Party of Britain

Dear comrades from the American Communist Party,

I salute you on behalf of the New Communist Party of Yugoslavia. We are sure that you will have a very successful national convention and we are sure that we will have a very close relationship between our organizations.

We need to fight against imperialism. We need to fight for freedom. We need to fight for the working class. We need to fight for the social justice. We know that we will do it together.

Once again, greetings from Belgrade, from the New Communist Party of Yugoslavia. Greetings from Serbia.

Long live the American Communist Party!
Long live the New Communist Party of Yugoslavia!
Long live the World Anti-imperialist Platform!

Aleksandar Đenić

MESSAGE DE FÉLICITATIONS DE PARTI COMMUNISTE CONGOLAIS AU PARTI COMMUNISTE AMÉRICAIN À L'OCCASION DE SON CONGRÈS.

Estimé Camarade Christopher HELALI,

Secrétaire International du Parti Communiste Américain
« ACP »

Camarade,

Le Parti Communiste Congolais voudrait vous adresser d'abord des félicitations les plus chaleureuses à l'occasion de votre premier congrès de l'unification des communistes américains et vous souhaite un grand succès.

Nous sommes convaincus que les résolutions que vous allez adopter lors de ce congrès contribueront à consolider d'avantages l'œuvre de l'édification de votre société américaine.

Nous apprécions l'unification des communistes aux USA pour la fondation d'un parti unique dans votre pays. C'est une première victoire car l'unité fait la force.

Notre Parti Communiste Congolais attache une grande importance aux relations entre nos deux partis politiques et est prêt à travailler avec la nouvelle direction de ce nouveau parti Communiste aux USA pour faire avancer nos relations de confiance mutuelle.

L'extrême droite aux USA au pouvoir viole les droits de plusieurs peuples dans le monde et sa gouvernance place aujourd'hui le monde dans une insécurité totale. L'escalade entre l'OTAN et la Russie va plonger le monde dans une troisième guerre aux conséquences irréparables d'où il y a vraiment urgence de mobiliser les communistes du monde entier de stopper la gestation de la troisième guerre mondiale.

Boulevard Lumumba n° 2Bis, Q. II, Commune de Masina-Kinshasa
E-mail : larevolutioncongolaise@yahoo.fr
Tél. : (+243) 818343190 / (+243) 852754539

En effet, il est inadmissible et inacceptable que les USA condamnent la guerre en Ukraine mais cautionnent la politique de la colonisation et d'apartheid en Palestine par Israël et durcissent en violation des droits humains, le blocus contre le Cuba, nous espérons que vous allez condamner cette politique de deux poids deux mesures de votre gouvernement actuel au pouvoir aux USA.

Notre combat pour la justice, la liberté et la paix n'est nullement l'objet d'aucune négociation. Œuvrant ensemble pour la paix au monde et contre l'impérialisme international.

Soutien total aux Communistes américains

Vive le congrès de l'ACP

La patrie ou la mort, nous vaincrons !

Fait à Kinshasa, le 11 octobre 2024

MESSAGE OF CONGRATULATIONS FROM THE CONGOLESE COMMUNIST PARTY TO THE AMERICAN COMMUNIST PARTY ON THE OCCASION OF ITS CONGRESS.

Esteemed Comrade Christopher HELALI,
International Secretary of the American Communist Party "ACP".

Comrade,

The Congolese Communist Party will first of all send you the warmest congratulations on the occasion of your first congress of the unification of American communists and wishes you great success.

We are convinced that the resolutions that you will adopt during this congress will contribute to further consolidating the work of building your American society.

We appreciate the unification of communists in the USA for the founding of a single party in your country. This is a first victory because unity is strength.

Our Congolese Communist Party attaches great importance to the relations between our two political parties and is ready to work with the new leadership of this new Communist Party in the USA to advance our relations of mutual trust.

The extreme right in power in the USA violates the rights of several peoples around the world and its governance today places the world in total insecurity. The escalation between NATO and Russia will plunge the world into a third war with irreparable consequences; hence there is a real urgency to mobilize communists around the world to stop the gestation of the third world war.

Boulevard Lumumba n° 2Bis, Q. II, Commune de Masina-Kinshasa
E-mail : larevolutioncongolaise@yahoo.fr
Tél. : (+243) 818343190 / (+243) 852754539

2

Indeed, it is inadmissible and unacceptable that the USA condemns the war in Ukraine but supports the policy of colonization and apartheid in Palestine by Israel and tightens in violation of human rights, the blockade against Cuba; we hope that you will condemn this double standard policy of your current government in power in the USA.

Our fight for justice, freedom and peace is in no way the subject of any negotiation. Working together for world peace and against international imperialism.

Full support for American Communists

Long live the ACP Congress

Fatherland or death, we will win!

PCO
PARTIDO DA CAUSA OPERÁRIA

To our comrades in the American Communist Party

São Paulo
October 28, 2024

It is with great enthusiasm that we, from the Worker's Cause Party, received the news of the formation of the American Communist Party (ACP) in the United States last July. This event is of utmost importance given the current international situation, as imperialism faces its worst crisis in history. In the face of decaying imperialism, the missing piece of the puzzle has always been the organization of the working class, its natural enemy, put in a defensive position after decades of neoliberal policy and, more recently, of vile opportunism amongst their supposed leaders in the form of identity politics. We strongly believe that the ACP has the means to play an important role in this movement, being at the heart of the most important imperialist power.

Backwards countries across the world are, in growing numbers, fighting for sovereignty, looking for the development of their economies. In 2021, the Taliban led a successful popular uprising against the imperialist occupation in Afghanistan; in 2022, Russia responded militarily to NATO's advances towards its border; in Africa, many nations seek to detach themselves from former colonizers to achieve full independence; and, finally, on October 7, 2023, the world changed forever with the dawn of the Palestinian Revolution, an event that marked the beginning of the end of the Zionist occupation and, consequently, of imperialist control over the Near East.

The birth of a party committed to the unwavering defense of the Palestinian people, one that distances itself from the Democratic Party's 'left' wing—which has demonstrated itself to be the most belligerent faction of imperialism— is an extraordinary event as it signals this party's alignment with the interests of the American working class and the oppressed peoples around the world. The first national convention of the ACP, which took place in Chicago this October, cements its already successful beginning. We could not be happier to receive ACP's commitment, laid out in its program, to the unconditional destruction of NATO and the elimination of the IMF, institutions that have militarily and economically devastated many countries around the world.

That said, The Workers' Cause Party salutes the formation and consolidation of the ACP and wishes our comrades the greatest success in their struggle to organize the American working class. We hope our unity in the anti-imperialist struggle is long and successful.

In solidarity,
International Secretariat of the Workers' Cause Party

+55 11 94143-0988 PCO.ORG.BR PCO29 @PCO.29
SEC.INTERNACIONAL@SORG.PCO.ORG.BR

Greetings Comrades,

The Palestinian Communist Party extends our warmest greetings and revolutionary solidarity to the American Communist Party as you hold your national convention. This gathering is an important milestone in advancing the struggle for socialism and justice in the United States and globally.

Your efforts and commitment to the working class inspire us all in these challenging times. We stand united with you in the fight against imperialism, capitalism, and all forms of oppression. Together, we will continue to build a world based on peace, equality, and true democracy for the people.

I wish you a successful and productive convention.

Red Salute!

Comradely,
Palestinian Communist Party

民 민중민주당(민중당)
People's Democracy Party

The American Communist Party will be at the forefront of the revolutionary advance of the US society.

The launch of the American Communist Party (ACP) is historic as World War 3 unfolds today. As long as imperialism exists, invasion, slaughter, domination, and exploitation are inevitable. US imperialism has been directly or indirectly involved in most wars since World War 2. Above all, the storm of World War 3, caused by the imperialist camp, is blowing from Eastern Europe through West Asia (Middle East) to East Asia and the Western Pacific. A series of facts show that it is the US imperialist aggressors that are blocking the realization of the independence of the world's peoples. Therefore, the birth of a revolutionary party of the working class that firmly raises the banner of anti-imperialism in the imperialist US, the ringleader of modern imperialism, is of particular significance.

The history of the world's peoples is a history of realizing independence. The activities of the people in the US, the head of imperialism, are no exception. Above all, the anti-war peace movement in the US has had an important impact on the independence and liberation of oppressed and exploited working people in colonies. In the 1970s, the anti-Vietnam War struggle accelerated the withdrawal of US invading forces from Vietnam, and today, the pro-Palestinian movement plays an important role in isolating and weakening the Israeli Zionists. The US people have stood firmly on the side of justice against aggression at every critical juncture. Throughout history, revolutionary parties of the working class have pioneered history by arming the workers and people with scientific and revolutionary strategies and tactics, calling them to struggle. The ACP has a historical duty to lead the working class and people of the US to revolution.

The "Republic of Korea (ROK) is a colony of US imperialism. Since 1945, the US invasion forces have occupied the southern part of the Korean Peninsula, manipulated the pro-US proxy regime, and dominated the "ROK "people militarily, politically, and economically. Also, they have been perpetuating the division of Korea and escalating the war crisis with the invasion exercises against the DPRK. Currently, the US imperialist forces are trying to form and realize the "Northeast Asian NATO, "manipulate the pro-US belligerent forces of Yoon Suk-yeol in the "ROK, "and launch the war in the "ROK, "which is the detonator of the war in East Asia and the Western Pacific. The fascist puppet of US imperialism, Yoon Suk-yeol, is busy preparing the rear by suppressing the only revolutionary party in the "ROK, "the People's Democracy Party (PDP), and the anti-imperialist and peace-loving forces. The anti-imperialist struggle in the US and the anti-US struggle in the "ROK "are intrinsically linked as the US-"ROK "relations are the imperialist and colony. The international solidarity between the PDP and the ACP can only develop strategically.

The World Anti-Imperialist Platform successfully conducted theoretical and practical activities in Washington during the NATO Summit in July in the face of the vicious interference of the imperialist US. In the process, the ACP has unwaveringly carried out consistent and active practice with a revolutionary perspective. We are convinced that the ACP will open the way for the US workers and people by establishing a revolutionary strategy based on scientific analysis of the situation, and will mark a historical turning point in the US communist movement. Global independence, true peace, and a new society where the workers and people become the masters of politics and economy must come. The ACP, which unites and struggles around the revolutionary ideas of the working class, will surely advance the victory of the social revolution and the construction of a new society in the US.

Down with US imperialism!

Long live the international solidarity!

PALESTINIAN PEOPLE'S PARTY حزب الشعب الفلسطيني

To the Leadership of the American Communist Party

Dear Comrades

On behalf of the leadership and all members of the Palestinian People's Party, we convey to you and to all members of your party our best wishes for every success to your national convention hoping that it will have a positive contribution for a better future for your people and the humanity for social justice and peace.

We would like also on this occasion to thank you for your firm position of solidarity with the just struggle of our people for ending the occupation and independent sovereign state within the borders of pre-June 5th 1967with east Jerusalem as its capital and the rights of refugees to return in accordance with UN resolutions and the release of prisoners from Israeli jails, and against the genocide going on in Palestine by Israeli occupying army and settlers, backed by the world imperialism leaded by USA and western countries.

Once again receive our best wishes.

Pôle de Renaissance Communiste en France – Commission Internationale

Comradely Greetings to the American Communist Party from the Pole of Communist Renaissance in France (PRCF)

On this historic occasion of the American Communist Party's first National Convention in Chicago, October 12th and 13th 2024, the Pole of Communist Renaissance in France (PRCF) extends its warmest congratulations and solidarity. The founding of a new communist party in the United States marks a critical moment for the working class and oppressed peoples in their struggle against capitalism and imperialism.

In a time of growing inequality and global instability, the necessity of Marxism-Leninism as a guiding analytic method has never been clearer. Only through the scientific approach of class struggle can we truly dismantle the capitalist system and build a society based on justice, equality, and solidarity. The principles of democratic centralism provide the organizational strength and unity needed to effectively lead this fight, combining disciplined leadership with collective decision-making.

Moreover, the ACP embodies the complementary principles of proletarian internationalism and revolutionary patriotism. While we struggle for socialism within our own borders, we stand in unwavering solidarity with workers across the globe, united by our shared interests and commitment to a common cause.

Pôle de Renaissance Communiste en France – Commission Internationale

May this convention mark the beginning of a new chapter in the revolutionary movement in the United States, one that brings us closer to the ultimate goal of a socialist future.

Long live the American Communist Party!

Long live proletarian internationalism!

In solidarity,

--

Pole of Communist Renaissance in France (PRCF)

Boris Differ

International Relationships Commission

Secretary

Greetings to the Congress
Dear comrades in the struggle!

On behalf of the Russian Communist Workers' Party, we welcome the delegates to the Congress and wish them fruitful work in finding ways to strengthen the party as an organizer of the struggle of the working class and the broad forces of all working people!

Dear comrades, we understand that you work in special conditions - in the very center of the imperialist world, in a country that is the support of the world capitalist system, the main source of reaction and suppression of the struggle for freedom of both other countries and workers in your own country. Today the main issue of our movement is the attitude towards the war in Ukraine and the Middle East.

We draw particular attention to the fact that the same group of the most predatory imperialist countries supports both the genocidal policies of the Israeli Zionists and the Ukrainian Nazis in their war with Russia. Our vision of the situation was expressed in the signing of the Izmir Statement of the Communist and Workers' Parties of the World Solidnet | 23rd IMCWP, The Struggle Against the Aggression of the USA and NATO which Seek World Hegemony and Foster Fascism Is the Task of All the Progressive Forces!

Today, the main danger to the World comes from the bloc of US and NATO imperialism, which gives rise to fascism and is pushing the world towards a third world war. We believe and hope that we will fight against fascism and imperialism together with you.
We are making every effort to unite the communist pole in the international communist movement, defend the socialism we know and promote the need to develop a revolutionary strategy for each communist party.

We in the Soviet Union suffered a temporary defeat, but we lived under socialism and we know what it is. Under socialism, many things are resolved better and in favor of the working people: issues of ensuring guaranteed work, free education and healthcare, caring for children and the elderly, providing housing, etc., but most importantly, we say that relations between people were better. They were much more honest, more pure, more just. They were more human. We did not bow to the masters and called each other comrades. We know that such human relationships are worth fighting for!

We are in a single class formation on the front of the battle against imperialism! Good luck to us in this noble struggle!
Let us not waver on our chosen path!
Workers of all countries, unite!

On behalf of the Central Committee of the RCWP
First Secretary of the Central Committee

Dear comrades,

We are up against a gigantic force. A system of imperialist bourgeois domination that is decaying, crumbling, but never wants to give up its sovereignty... A system of exploitation that does not hesitate to set the whole world on fire in order to maintain its sovereignty, a system that risks committing all kinds of crimes against humanity!..

Developments of years, even decades, now fit into days and hours. The fire of war is spreading. The imperialist thugs are carrying out terrible attacks in order to slow down the wheel of history, in order to keep their crumbling order alive a little longer.

The ongoing genocide in Palestine is now evolving into a war that is setting the whole region on fire. The Zionist entity is recklessly spreading the fire in line with imperialist plans. West Asia (the Middle East) is rapidly being dragged into a regional war.

Israeli-US-NATO attack on Iran is imminent. We do not know what kind of conflicts this attack will provoke. Lebanon, Iran, Yemen, and Syria have now become targets of Zionist army attacks. The Middle East (West Asia) is burning!

The imperialists lost their minds. They provoke a nuclear war!

However, nothing can stop the march of history! The upcoming dawn of brighter days is breaking out of great pain and tears.

The imperialist system under the hegemony of the USA, which imperialists call the so-called "rules-based order", is collapsing rapidly. They are is losing the war in Ukraine.

The anti-fascist and anti-imperialist war waged against the fascist Kiev regime and their big brother, the US-NATO-led imperialism, especially in Ukraine, provided a strong impetus for the struggle for freedom of the peoples of the world. The labouring peoples rising to support the heroic liberation war of the Palestinian people. The blows struck by the imperialist system have led the peoples, especially in Africa, to step forward more decisively in their anti-imperialist struggle.

Dear comrades,

Under these circumstances, the founder cadres of the American Communist Party fought against the collaborators who wanted to deviate the old Party line towards the Zionist camp. The collaborators changed the internationalist line of the Party on the Palestine issue. They gave up the one-state solution (democratic Palestine) paradigm. And the internationalist cadres separated their ways from those collaborators. Salute to the internationalist comrades!

Communists lead the fight of the revolutionary proletariat under the most difficult conditions. By risking the heaviest pressures and attacks!... The communists who shoulder the battle for the

emancipation of labour in the United States of America are waging their fight between the claws of the gigantic beast of global capitalism, in the mouth of the beast.

There, in the mouth of an ogre, you American comrades are fighting an uphill battle! The American communists raise the banner of socialism again and again. Glory to them!

Dear comrades,

A congress is the most important action of a communist party. American Communist Party is holding its first national convention. We believe our American comrades will emerge victorious from the congress.

At this critical juncture, the burden of the whole world rests on the shoulders of the international communist movement. The task of responding to the problems of the struggle for social liberation both in our own countries and in the international arena demands that we, as communists, maximize our joint efforts.

We know and believe that together we will succeed!

Hit the drums of the struggle for the proletarian revolution, for the freedom of labour more strongly!

Venceremos!

Long Live The Proletarian Internationalism!

Long Live the American Communist Party!

TKEP/Leninist

(Communist Labour Party of Turkiye/Leninist)

Central Committee International Bureau

11.10.2024

Unified Communist Party of Georgia
Central Committee
International Bureau

Dear comrades, the Central Committee of the United Communist Party of Georgia welcomes the first national convention of the American Communist Party, to whom we extend our warmest congratulations to all its participants, whom we consider comrades in our common struggle. Our two parties signed a historic bilateral agreement this summer in Gori, the birthplace of comrade Stalin. We look forward to many years of friendship and unity.

The communist struggle within a capitalist system is not an easy task. To mobilize the masses to communism, we must build colectives of workers and trade unions, we have to rise up farmers, students, intelectuals, soldiers and all sorts of oppressed people from whatever race they come from. We have to fight together side by side to advance the struggle and lead the community to communism. individualise, we are just broken branches, but if we unite collectively, we are an oak tree that wil not break. We must completely eradicate this system of destruction and fight for a communist society that puts an end to the exploitation of the working class, with its wage slavery and the climate crisis.

We realise that any movement, including the communist movement, is unthinkable without controversy. However, no differences, no displeasure at the behaviour of a particular Party, can justify methods of struggle detrimental to the interests of the international communist movement.The
deeper and broader our understanding of the aims and tasks of the international working class, the greater the vigour with which we should strive to analyse our differences, however serious they may seem today, quietly and relevantly, and prevent them from interfering with our positive work, from disorganising the revolutionary activities of the international working class.

Let us struggle and fight together for consistent adherence to the Marxist-
Leninist course in the international communist movement, against revisionism and dogmatism, for closer unity in the ranks of the international communist movement, for respect for collectively worked out policies, and against any violations or arbitrary interpretations of these.

On behalf of the United Communist Party of Georgia

Michael Niarchakos-Tzimis

International Secretary of the Central Committee of the United Communist Party of Georgia

GREETING FROM UNION PROLETARIA (SPAIN) TO THE FIRST NATIONAL CONVENTION OF THE AMERICAN COMMUNIST PARTY (ACP)

Dear Comrades,

On behalf of the communist organization Unión Proletaria from Spain, we extend our warmest greetings and congratulations on the celebration of your First National Convention.

The organization of communists into Marxist-Leninist parties is essential for the working class and oppressed strata. It requires a clear and firm strategy, along with a flexible political tactic to organize and educate the masses toward the socialist revolution. Therefore, we welcome the formation of the American Communist Party. Your initiative addresses the urgent need to organize, consolidate, and strengthen communist forces in all countries. Constituting the party of the proletariat is the most crucial task to confront the anti-imperialist struggle with maximum coherence, both nationally and internationally. In this context, the World Anti-Imperialist Platform aims to consolidate communist forces, and you, the American communists, are taking a vital step in the heart of international imperialism.

In recent years, the rebellion of nations and the resistance of peoples against imperialism have shaken its power. The response of imperialist countries has been to promote fascism to subjugate the proletariat and lead the world toward war. Although proletarian mobilizations may have diminished, opportunities for progress are emerging as our class enemy weakens. Under these conditions, it is essential to strengthen the global anti-imperialist struggle, coordinate actions, and support the resistance in Palestine, Lebanon, Syria, Yemen, Russia, the Sahel, Venezuela, North Korea, Cuba, and more, against the criminals of the US, NATO, the EU, and their fascist lackeys. To achieve this, it is vital to combat opportunism, revisionism, and leftism, and to coordinate the most conscious proletarian forces within the World Anti-Imperialist Platform.

We, the communists of Unión Proletaria, are confident that you will rise to the great responsibility of establishing a communist organization in the primary center of criminal imperialism. We believe you will succeed under the banner of Marxism-Leninism.

Proletarians and oppressed peoples of the world, unite!

Long live the World Anti-Imperialist Platform!

Long live the First National Convention of the American Communist Party!

In solidarity,

UNIÓN PROLETARIA

12 Ekim 2024,Ankara

Amerikan Komünist Partisi Liderliğine,

Saygıdeğer Yoldaşlar,

Amerikan Komünist Partisi'nin 12 Ekim Cumartesi günü düzenlediği Birinci Ulusal Kongresi'ni Türkiye'den devrimci duygularla kutluyoruz ve coşkunuzu paylaşıyoruz.

Yeni bir dünya kurulmaktadır. Atlantik merkezli Emperyalist-kapitalist sistemin son bulduğu, çok kutuplu bir dünyanın yükseldiği koşullardayız. ABD'nin silahla topladığı haraç sistemi çıkmazdadır. Dolar Saltanatı yıkılmaktadır.

ABD emperyalizmi ve İsrail Siyonizminin saldırganlığı Filistin'de, Ukrayna'da, Kore'de ve dünyanın dört bir tarafında kaybetmektedir. Asya'da, Latin Amerika'da ve Afrika'da Milli Devletler hegemonyacılığa karşı zaferler kazanmaktadır. Avrupa'da ve Amerika'da milyonlarca insan başta Filistinliler olmak üzere emperyalizme karşı mücadele eden halklara destek vermektedir. İnsanlık ABD emperyalizmi karşısında tek cephedir.

Bizler, Türkiye - Vatan Partisi olarak, Amerika Birleşik Devletleri'nin devrimci tarihine ve köklerine güveniyoruz. Amerikanın tarihindeki demokratik devrimler ve bağımsızlık savaşları bugün hem ABD halkının hem de insanlığın esin kaynağı olmaya devam etmektedir. O tarih sizlerle yeniden ayağa kalkmaktadır.

VATAN PARTİSİ GENEL MERKEZİ Aşağı Öveçler Mah. 1308. Sok. No:12 Çankaya - ANKARA Telefon: (0 312) 231 81 11 - Faks: (0 312) 229 29 95 - genel.sekreterlik@vatanpartisi.org.tr

Kongrenizin, millî devletlerin bağımsızlığı ekseninde, insancıl, halkçı, kamucu, paylaşmacı, aydınlanmacı, özgürlükçü, demokratik, barışçı ve çağdaş bir uygarlığın inşasına önemli katkılar sağlayacağına yürekten inanıyoruz.

Önümüzdeki süreçte Vatan Partisi – Amerikan Komünist Partisi arasındaki işbirliğini her alanda artırarak daha önemli sorumlulukları ve zaferleri paylaşacağımıza olan inancımızla, üstün başarılar diliyoruz.

Umutla, güvenle ve saygıyla.

Doğu Perinçek

Vatan Partisi Genel Başkanı

October 12, 2024, Ankara

To the leadership of the American Communist Party,

Esteemed Comrades,

From Türkiye, we celebrate the First National Congress of the American Communist Party on Saturday, October 12 with revolutionary feelings and share your enthusiasm.

A new world is being established. We are in conditions where the Atlantic-centered imperialist-capitalist system is coming to an end and a multipolar world is rising. The US system of extortion at gunpoint is in a dead end. The Dollar Reign is collapsing.

The aggression of US imperialism and Israeli Zionism is losing in Palestine, Ukraine, Korea and all over the world. In Asia, Latin America and Africa, National States are winning victories over hegemonism. Millions of people in Europe and America are supporting the peoples struggling against imperialism, especially the Palestinians. Humanity is a single front against US imperialism.

We, as the Patriotic Party - Türkiye, are confident in the revolutionary history and roots of the United States of America. The democratic revolutions and wars of independence in America's history continue to inspire both the American people and humanity today. That history is rising again with you.

We sincerely believe that your Congress will make significant contributions to the construction of a humane, populist, publicist, sharing, enlightenment, libertarian, democratic, peaceful and modern civilization on the axis of the independence of national states.

With our belief that we will increase the cooperation between the Patriotic Party and the American Communist Party in every field in the coming period and share more important responsibilities and victories, we wish them great success.

With hope, trust and respect.

Doğu Perinçek

Patriotic Party Chairman

Comrades,

The Workers' Party of Ireland extends its warmest fraternal greetings to the newly formed American Communist Party. We wish you every success in building your party and advancing the cause of socialism in the United States.

The past year has seen a further ratcheting up of global tensions. The US-NATO imperialists continue their policies of destabilisation and destruction, fomenting war around the world. In the Ukraine, the imperialists have consistently sabotaged peace efforts, sponsoring reactionary nationalist and fascistic groups in order to further the aim of NATO expansion. In the Lebanon, we have witnessed Israeli aggression, including attacks on Irish soldiers serving with UNIFIL, as part of a broader campaign of imperialist domination in the region. This is paralleled by the United States' arming and funding of Israel's genocidal campaign against the Palestinian people and their struggle for statehood and sovereignty. The vicious onslaught on Gaza is rapidly escalating into a wider regional conflict. Rooted in an imperative to control natural resources and vital trade routes, the actions of US-NATO imperialism and its proxies will no doubt cost many thousands of lives and add to the already critical refugee crisis.

These conflicts are three fronts in a broader campaign by US-NATO imperialism to undermine existing socialist states and other countries that refuse to be subordinate to US geopolitical interests, as well as to suppress the prospects for peace and socialism more generally. The continuing brutal blockade on Cuba, sanctions on Venezuela and Nicaragua, and increasing hostility towards China through the AUKUS pact exemplify this trend. The rise of China and the expansion of BRICS are seen as serious threats to US unipolarity, and the imperialist response has been to heighten existing tensions and conflicts.

Of course, the nature of imperialism means that the development of both the forces and relations of production is necessarily uneven geographically. Indeed, this unevenness of social development is indicative of the fact that existing social relations have become a fetter on the productive forces of society. If communism can only be built upon the foundations laid by advanced industrial development, it is equally true that the full benefits of this development can only be realised through socialist construction.

We are encouraged by the emergence of patriotic but anti-chauvinist parties like yours — parties that root themselves in their country's people, history, and traditions while advancing a clear anti-imperialist politics. Figures such as Marx, Engels, Abraham Lincoln, James Connolly, Lenin, and Stalin remind us that national liberation and international socialism are deeply intertwined. As Lenin and Stalin demonstrated, socialism must adapt to the specific conditions of each country while maintaining proletarian internationalism.

Comrades, our parties share a commitment to combating imperialism internationally. The primary means of defeating capitalist imperialism and fascism is through building our respective parties and

winning the working class for socialism and communism. In Ireland, The Workers' Party has been at the forefront of offering the working class practical proposals to undermine restrictive labour legislation and push for statutory trade union recognition. We recognise the importance of an expanded, militant trade union base for improved pay and conditions and, more importantly, as a mass organised base for socialism. Working-class strength lies above all in organisation and unity.

The struggle against capitalist imperialism and for socialist construction is an international one, and we look forward to building stronger links between our parties to further our common goal.

In solidarity,

Joshua Brady-Arnold

International Secretary
The Workers' Party of Ireland

Alexander Kojeve and the Russian Special Military Operation

Haz Al-Din[1]

Francis Fukuyama is famously regarded as the principal thinker of the American unipolar era, the period following the end of the USSR, characterized by the absence of any great political projects, ideologies, wars, revolutions, and causes for which men and women will risk their lives.

What many do not know is that Fukuyama's idea was not original, and itself drew from the work of Russian-French philosopher Alexander Kojeve, who articulates the idea of the End of History on the basis of the reconciliation that follows the Hegelian battle for recognition, or the master-slave dialectic.

For Kojeve, like Heidegger, human beings can be distinguished from animals in the radically temporal nature of their existence, defined by an openness toward the future which Kojeve does not regard as possible for animals or nature, whose development, in contrast to human history confines itself to fixed and eternal cycles.

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

For Kojeve, this temporal dimension can be located in the reality of desire, for desire is aimed toward that which does not yet exist. And for Kojeve, the ultimate desire for human beings is the desire for recognition - recognition of their being by and through other desiring beings.

Man, for Kojeve, does not acquire any reflection of their unique and exceptional existence in nature or animals, but only in other human beings.

Yet human beings can only acquire recognition of the temporal nature of their existence to other human beings through struggle, by resisting any attempt to be reduced to the object of another's desire, by asserting the supremacy of one's own desire over another's, and over their own physical, biological existence.

Desire for Kojeve is profoundly negative and destructive with respect to positive determinations in reality. This is what places it in proximity with death.

In this way, war for Kojeve can be understood as being based in this struggle for recognition. However the outcome of the struggle, in the master-slave relation, proves unsatisfactory with respect to desiring beings. The master still longs for recognition, and in short, this initiates a process in which the slave ultimately acquires supremacy.

Kojeve quite naively regards the emergence of modern universal law (following the French revolution), which does not afford recognition toward any distinctions, particularities, hierarchies, estates, etc. between human beings as the ultimate realization of human desire and self-consciousness.

This is not since he regards the ultimate aim of human desire to achieve recognition on the basis of human equality. Rather, according to Kojeve’s ontology, humanity itself can be defined, in contrast to nature, on the basis of a substanceless, self-relating negativity which cannot find satisfaction in any real concrete determination. Thus, Kojeve appropriates the most conventional Marxist criticism of bourgeois law - that it is abstract, devoid of substance, and exists only in ‘form’ - to serve as a source of proof that only *in it* is the fullest realization of human existence possible.

The French Revolution, through the Napoleonic wars and culminating in the World Wars, all in their destructive wake increasingly tended toward the same conclusion, the triumph of modernity, the rights of man, and formal equality on a universal and planetary scale, which for Kojeve finally assumed the form of the global American system.

Since the struggle for recognition has finally concluded in the Universal and Homogenous state, the basis of war and political conflict in general disappears. Risking one's life for a cause effectively becomes meaningless, since there could no longer possibly be anything to prove through it.

Here enters the Nietzschean ”last man,” the passive ”human animal” concerned only with hedonistic fulfillment, the end of any human discourse and, paradoxically, the end of humanity itself. All of the ‘subjective’ aims of the human are finally accomplished. All that remains, for Kojeve, is attending to banal, mundane and ultimately meaningless biological, sensory, and physiological drives. Discourse, or logos reaches its fullest conclusion in the universal form of the law.

In contrast to traditionalist critiques of Western modernity, Kojeve in my view successfully accomplishes an immanent critique. He phenomenologically draws out the logic of bourgeois modernity to its fullest possible conclusion and thereby reveals its internal contradictions more clearly and more precisely than conservative and reactionary thinkers could ever be capable of.

The principal error of traditionalist and conservative thought in its appraisal of modernity is that its criticism is always levied *from without*. Kojeve, by contrast, elevates modernity to the status of something with real ontological stakes with respect to the very nature of human existence itself. He does not regard it as something avoidable, lamentable, or capable of being resisted in any way. He phenomenologically draws out the logic of bourgeois modernity and demonstrates how it concludes in annihilating its own most fundamental premise - the self-sovereign individual subject.

Kojeve begins taking for granted the rigid subject-object distinction which serves as the foundation of bourgeois philosophy. All that is human is defined as what is intangible, negative, formal, substanceless - the self-relating Cartesian subject - in contrast to the non-human natural world of tangible, concrete, positive, sensuous, etc. determinations. Kojeve goes much farther than classical bourgeois philosophy in drawing out its most monstrous, abominable and inhuman possible conclusions - conclusions that were evidently realized in the very reality of industrial capitalism and its destructive wars of annihilation.

For classical bourgeois philosophy, the actual *reduction* of the human to the substanceless ‘Cartesian subject’ was never a *necessary* conclusion. Such a

conclusion was rather implied by the practical reality of colonial subjugation, racialism, and capitalist exploitation. The gruesome and alienating realities of modern capitalist savagery were disguised under the hypocritical and false veneer of religion, morality, civilization, etc. - Thus no authentic subjective confrontation with the reality of alienation was actually possible. Kojeve, by *insisting* upon this reduction, tears away the sentimental veil of bourgeois hypocrisy and imposes the fullest existential responsibility for and commitment to the real (rather than imagined for the sake of coping) consequences of modern capitalism.

Kojeve begins with nothing else but the subject of bourgeois modernity - the Cartesian self-same subject, the *sovereign individual* of contractual association, the *atom* of capitalist sociality. He demonstrates the logical development of this such subject - not through a comprehensive analysis of material existence (as in the case of Marx) - but by fully accepting its implicit ontological consequences for the very *meaning* of what constitutes the human. Kojeve draws out these consequences by partaking in a *formalistic reduction*, not unlike the *Black Square* of Kazimir Malevich, which reduces the essence of humanity to the very constitutive alienation which lies at the foundation of modern capitalism.

The fullest acquiescence to capitalist modernity is simultaneously what *exclusively* permits the possibility of moving beyond it. And why? Because capitalist modernity is characterized by internal contradictions, and full acquiescence to modernity enables the possibility of allowing these contradictions to develop nakedly and without any distractions. This is precisely what is missing in conservative and traditionalistic critiques of capitalism: They fail to recognize how their very fantastical longing for a pre-modern condition itself participates in the ultimate modern alienation. Kojeve here, by means of phenomenology, embraces the logic outlined in the Communist Manifesto:

> *Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses his real conditions of life, and his relations with his kind.*

Kojeve's ruthless modernism can teach us a lot about today's reality of global geopolitics. Russia and China - two states that bare the most important legacy of Marxist modernization - stand as the most powerful and effective opponents of the global hegemony. China and Russia were both *traditional* societies which adopted what is probably the most ruthless and unapologetic paradigm of modernization, Marxism, yet were simultaneously among the only civilizations that were actually able to successfully preserve traditional values in a modern age.

In the core of US imperial hegemony - North America, Europe, and parts of East Asia - modernization was accompanied by the most hypocritical veneer of religion, conservatism, human rights, etc. - yet simultaneously these societies today undergo the most intense cultural degeneration and alienation ever witnessed in the recorded history of mankind. That is since bourgeois ideology avoids confrontation with the real consequences of bourgeois civilization itself. It displaces the cold and ruthless subjective consequences of modern capitalism by indulging in fantasies of traditional, natural, wholesome existence. It thereby deepens, rather than resists, said inhuman alienation.

Thus, Kojeve is correct to *begin* by accepting the irreversibility of modern civilization, and refuse the reactionary temptation which Heidegger and other critics of phenomenological modernity, by contrast, could not bring themselves to abandon. He is correct to make due on the reductive presumption that *Cogito Ergo Sum* is a definitive ontological claim. The presumption that reduces all Being to an indeterminate negation may not be a necessary conclusion of *philosophy*, but it is indeed an actual fact of modern capitalist civilization.

It may appear at first that attributing to capitalism an *ontological* significance casts it as a timeless and unsurpassable reality. However, to comprehend the reality of humanity in a way that is *anything less* than the same reality of present conditions is what is certain to render impossible a comprehension of post-capitalist existence. As Lenin put it - Marxists must be as radical and revolutionary *as reality itself*. If one is unable to give the devil their proper due, and thereby *account* for the possibility of the emergence of modern capitalist civilization within their comprehension of reality, one regresses into an impotent, and, rather humiliating position of moralism. According to this position, the emergence of modern capitalist civilization was a mere 'misstep' of subjective judgement. Had only previous generations been more moral and more wise! This excises from history the dimension of *meaning* itself, reducing it to one great mistaken absurdity.

It excises from the ultimate ‘moral’ choice implied by the present ‘correct position’ (to ‘abolish’ capitalism and ‘abolish’ injustices, etc.) the dimension of *necessity*. In order to prove the historical necessity of socialism, it is simultaneously necessary to not only prove the historical necessity of capitalism, but to *include* this latter necessity in the former: To *account* for the past historical necessity of capitalism in the *current* necessity of socialism. To *assail*, rather than liquidate, in the very logic of the present movement all that is *essential* and *necessary* in the reality of the past.

Kojeve implies a notion of the human that, at minimum, rationally accounts for the reality of humanity in modern capitalism: A humanity defined entirely in opposition to nature, concreteness, and the world of positive determinations. A humanity defined by the supremacy of *pure form* over all particular content. By developing the contradictions which arise inevitably from such an ontological premise, Kojeve phenomenologically reflects the development of the contradictions at the heart of industrial capitalist modernity - in a manner devoid of all distractions and fancies of a subjectivity struggling in vain to resist them.

After the triumph of modernity, what desperate attempts to cling to ‘substantive determinations,’ fancies of consciousness, ideals, fantasies, notions of family, nationhood, religion, and cultural tradition neglect is the active and living reality of *negation*. By *mincing* in the face of the destructive reality of capitalism, one simultaneously suppresses any relation to the active and constitutive element of such concrete, human determinations. They become fossilized and empty forms, receptacles of the same formalistic nothingness characteristic of the ‘universal and homogenous state.’ In Heidegger’s terms, they become beings whose familiarity and ‘idolatry’ deepen the forgetting of *Being in general* - the phenomenological opening which casts into the realm of uncertainty and contingency the existence of all beings.

The rise of modern capitalism evidently corresponded to a new disclosure and forgetting of Being, a new decisive confrontation with the living essence of mankind and history in general. Nothing less than a full acceptance of *all* that is at stake in it - *not one step back* - could possibly constitute an authentic relationship with the movement of world history.

However, the principal error of Kojeve is that after having shown the internal contradictions of classical western modernity - in both the concept of desire (and the rigid subject-object distinction it implies from Descartes) and politics

(the principle of equality before the law), and how their development paradoxically culminates in the annihilation of their original terms - namely human beings, substantive, particular determinations, nature, etc. - he does not propose any re-examination of the metaphysical commitments of classical modernity originally taken for granted.

After having shown the fullest development of *one side* of the contradiction which partakes in the phenomenal essence of capitalism - absolute and complete triumph of the realm of pure subjectivity, spirit, form, difference, negation, etc. over the substantive, concrete, natural, etc.- he continues to treat the other, 'darker' side of the contradiction with dismissive frivolity. Kojeve speaks of meager 'animal' desires, cycles, and habits in opposition to the higher realm of pure forms. He does not draw out any qualitative consequences for the notion of the former amidst taking to its fullest logical conclusion the latter.

The problem is that Kojeve is unable to appreciate the *objectivity* of contradiction itself. One side of the contradiction - the radically temporal, intangible dimension of 'spirit' or negativity - acquires full supremacy over the other side, of nature, particularity, and the realm of determinations. Yet he does not then re-examine nature, particularity, concreteness, and determination as *nothing more* than the *negation of the negation,* so to speak. He accepts the premise of 'frivolous' and 'meager' positive determinations, but how they come to be through the dialectic itself in the first place does not seem to interest him.

Within bourgeois metaphysics, positive determinations are mere 'raw material' for the negative, liquefying movement of abstract, 'pure forms.' In other words, they exist *only to be distinguished from*, only to serve as standards of what is precisely not real, true, and essential. To whatever extent humanity acquires determination - in culture, habit, belief, convention, etc. - it establishes precisely what is *not truly* human, avant-garde, or ontological. Or as Goethe put it - all that exists deserves to perish, for reality is the mere movement of nothing to nothing.

Responding to this by attempting to conserve said determinations in the face of the destructive movement of modernity is ultimately vain. On the other hand, the *negation of the negation* (which truly does preserve the traditions and determinations of human history) is finally accomplished not when the 'destructive negation' of modernity is outright rejected, but when it is recognized to itself participate *as a moment within* the dialectical existence of concrete determinations.

As Hegel put it - *Being and Nothingness are the same*. Any one-sided comprehension of positive determinations which places them *in opposition* to the destructive negation represented by the 'pure form' of modernity can only, and in a roundabout, tragic way, reproduce - nay, even deepen - that same destructive negation. For example, nothing is more sacrilegious, and nothing acquiesces more to nihilistic, bourgeois atheism than contemporary online religious ideologies.

Kojeve rejects this roundabout philistinism, and decides to directly give expression to what he perceives to be the active, victorious, and triumphant tendency of world history since the French revolution. Only, by failing to appreciate the objectivity of *both terms* of the contradiction at the heart of this tendency - Kojeve enters a blind alley with respect to the emergence of a new category of the political around the postwar period: Namely, the *Partisan* so famously described by Carl Schmitt.

The Partisan precisely embodies the vicious return of heterogeneity with respect to precisely the 'Universal and Homogenous state. As a radically non-state actor with precisely no regard for the universal forms and conventions of law, the Partisan reintroduces particularity, contingency, temporality, and concrete *human* (rather than animal) existence back into the end of history. For the partisan imposes upon the form of the law the necessity of confronting *its own* real content.

On the one hand, that it is its *own content* appears to imply said form already possesses total supremacy over it. But if one accepts the *objectivity* of the contradiction itself, it is clear that the opposite is true. In the movement of *nothing to nothing*, the real content *is not* nothing - but the very movement itself as a positive determination. The real content of the Universal and Homogenous state is *partisanship*, just inasmuch as the real content of modern capitalism is the proletariat as a class.

Whereupon the Universal and Homogenous state comes to regard *itself* as an object, it itself acquires particular determination. Hence from the self-relating, recursive modern logic of Party politics within the Bolshevik movement, a more sacred, ancient, and profound sensibility with respect to the reality of all Russian history and civilization could be reawakened. How it is that *the steel is tempered*, how concrete, particular determinations actually arise was rediscovered. The whole of hitherto, premodern history could thus be

‘forgiven,’ since its essential and constitutive element was finally rediscovered through a simply *consistent* commitment to modernity itself.

The Partisan is nothing more than a partisan, an agent, *of a Universal and Homogenous state* (a universal and homogenous state *in particular*). In this sense, Curtis Yarvin was correct to state that communism is as American as apple pie. Communists really were just *consistently* applying the logic of American universalism - and, thanks to dialectical laws - this ended up allowing them to rediscover its precise opposite, namely, the reality of the particular and the concrete.

Whereas the citizen is a passive, static subject of the Universal modern state, whose rights and freedoms are passively guaranteed from without, the Partisan is the active subject of a (future or present) state-power suspended in temporality, which must constantly reproduce itself in the living realities of war and existence.

Partisan subjectivity reflects a fundamental schism within the ontology of classical modernity itself. A schism that can by no means by reduced to the development of its terms, but is rather something itself particular, definite and objective, and thus suspended in temporal existence.

Kojeve correctly understood in the Universal and Homogenous state the annihilation of the individual subject, taken as a human being that can somehow, in their individual existence, satisfy the object of their desires and the cause of being. But he took a step too far by confusing this for the annihilation of humanity.

He failed to grasp how this radically impersonal dimension of the Universal and Homogenous state then imposes upon the individual the dimension of Partisanship, subjective partiality - the splitting of the subject between individual experience and the reality they share with the 'object.' A partisan is not one who insists upon meager individual interests. They fully subordinate and dedicate their individual existence to the whole they form a part of.

How the 'universal and Homogenous state' itself interpellates Partisanship in the particular determination of its totality, in being 'this-way' rather than 'that-way,' is a notion especially important in our multi-polar age.

The 'this way' is neither the consequence of a voluntary choice, nor a mere passive repository of 'natural/biological' determination. It is really *the*

movement of nothing to nothing - not a timeless positive form - put a particular pattern and movement by which all forms are constituted and reconstituted out of their content.

This content can be understood as the reality of the very contradiction out of which arises the homogeneity of form.

The 'Universal and Homogenous state' acquires determination when it descends into the recesses of its own content. When the power of the state is reduced to the barrel of a gun - but also, when it finally demonstrates an extra-formal and extra-legal clemency toward its own material premises.

When the cruel, blind and merciless power of the state, indiscriminate as it is to particular and individual determinations, finally shows mercy toward its own real premises which it is powerless to itself formally determine.

In the exact same way that it cannot formally determine the necessary means toward its authority (the barrel of a gun).

This is what establishes the ultimate content of absolute recognition.

This relationship constitutes a definite totality of state power - Warrior-Dynasty, or Party-Dictatorship that opens the horizon of struggle for Partisans.

For Schmitt, the Partisan is not necessarily an anarchist or a criminal who simply has no regard for laws. Rather, the Partisan emerges under circumstances of conflict between radically incommensurate political powers, which Schmitt also defines as a state of ”absolute political enmity.”

This is not simply the master-slave dialectic between individual subjects, but a more fundamental conflict within the ”resolution” itself, between the form and the content - the fact that it does not resolve itself fully in the intangible and abstract dimension of law, but continues to reproduce itself in ways that produce forms that contradict such a conceit.

In the state of absolute political enmity, partisans have ALREADY acquired recognition. The enemy becomes a type of object, for whose destruction any and all means are permitted. No time is wasted in desires' longing for recognition. For, as Kojeve correctly observes, said recognition is already achieved in the emergence of the ‘universal and homogenous state.’ Only, the *real state* exists only in the dark shadow of the overt law.

The best example here is the introduction of political modernity in non-Western peripheral civilizations. What Russians, Chinese, Africans, people in Latin America were fighting for was exactly what the colonial core had already acquired- universal equality, modern rights, popular sovereignty, etc. And yet these were.and continue to be sources of radical antagonism for the West and its 'universal and Homogenous state' in the form of international law and ”human rights.” Why? Because non-Western peoples committed the crime, by making it itself an object, of giving the ‘universal and homogenous state’ the particularity of a specific determination.

Is this simply a consequence of greed, hypocrisy, and arrogance on part of the neocolonial West?

Or might it attest to a more fundamental metaphysical conflict, not necessarily between definite and distinct civilizations, but an antagonism at the heart of modern universalism itself - between distinct post-hoc responses to the all-consuming negativity of modernity (which Kojeve articulated in terms of temporality and desire).

One which concludes in the conceit of a pure form, and the other which continues to be suspended in fidelity toward the living nature of contradiction itself as object.

And this pure form is evidently not the pure form of law, which today's global hegemony has no problem transgressing - but the pure form of negation, nihil for its own sake, over and against all particular determinations as the ultimate expression of the supremacy of humanity over all existence.

For the longest time, Russia, China, and other ‘authoritarian’ states were regarded as less dynamic, more backward, and struggling to ‘catch up’ with the West. But over the past decade, a curious phenomena has revealed itself: As they ‘catch up’ to the West from behind, they end up surpassing it - since the ‘creative destruction’ of Western modernity increasingly liquefies its own premises at an exponential rate - while in the East, these premises are preserved within a rational and totalizing integrity of history. The very thing that had rendered the East more ‘backward’ and ‘behind’ is actually allowing it to now surpass the West.

What better characterizes today's destructive global capitalist hegemony than the maddening heights of contemporary Western nihilism? What better

characterizes such a pure form than the same commodity form described by Marx - and more specifically, the hegemony of the US dollar?

For Marxism, the antagonism at the heart of modern civilization is precisely known as the class struggle, which Marx regarded as the engine of all historical development itself.

Kojeve's contribution to Marxism is that he emancipated it from the methodological individualism of the Second International, according to which individuals constitute the subject of class struggle, that classes are merely the sum-total of individuals.

He correctly identified in the real object of human desire not the mere satisfaction of meager needs, but a type of recognition within which that quality within the individual that makes them more than a mere individual, more than a ‘meager determination’ is fulfilled, and true collective existence is possible.

Thus with the assistance of Kojeve's theory, it becomes possible to locate class struggle precisely in the dimension of the ”Universal and Homogenous State” rather than at the immediate level of individual experience.

But taken as an object within which not only human desire, but human existence itself finds satisfaction, it is possible to comprehend the 'Universal and Homogenous State' beyond the narrow limits of modern legal formalism that Kojeve wrongly took for granted. The next decisive step is to re-insert the new conception of humanity implied by the ‘universal and homogenous state’ back into its very ‘atomic’ premises - to acquire a new understanding of tangible, concrete individual existence. And the emergence of partisan subjectivity - from Che Guevara to Donbass and Palestine - precisely points the way with respect to this.

Following 1917, the class struggle and radical antagonism described by Marx began to acquire a geopolitical dimension global in scale - between liberal democracies committed (hypocritically) to the ”purely form” of law and ”authoritarian” states committed to Partisan determinations of statehood.

What the SMO has precisely returned into the spotlight, despite the end of the USSR and the overt ideology of Marxism, is precisely the same struggle which was initiated in 1917. And it is precisely since this struggle has acquired an *objective*, even *ontological* dimension that it is entirely beyond reduction to any specific ideology. ▉

Is Hegelian Dialectics Incompatible with Traditional Logic?

Carlos L. Garrido[1]

Introduction

Since dialectics emphasizes the positive role of contradictions as the engine of change, or in G.W. F. Hegel's words, as the 'root of all movement and vitality,' some have taken this to mean that dialectics is incompatible with the formal/abstract structure of traditional logic and with its laws of identity, non-contradiction, and the excluded middle – the three which are at the core of traditional logic as the 'laws of thought'.[2] As Allen Wood has noted, for many

---

1. Carlos L. Garrido is a Cuban American philosophy professor. He is the Director of the Midwestern Marx Institute and the Secretary of Education of the American Communist Party. He has authored many books, including *The Purity Fetish and the Crisis of Western Marxism (2023)*, *Why We Need American Marxism (2024)*, *Marxism and the Dialectical Materialist Worldview (2022)*, and the forthcoming *On Losurdo's Western Marxism (2025)* and *Hegel, Marxism, and Dialectics (2025)*. He has written for dozens of scholarly and popular publications around the world and runs various live-broadcast shows for the Midwestern Marx Institute YouTube. Subscribe to his Substack: *Philosophy in Crisis*.

2. G. W. F. Hegel, *Science of Logic*, Translated by A. V. Miller (Atlantic Highlands: Humanities Press International, 1993), 439. Bill Russell, *The Problems of Philosophy*, (New York: Henry Holt and Company, 1912), 112.

the 'baffling side of Hegel's philosophy is his repudiation of traditional logic, his avowed denial of the principles of identity, contradiction and excluded middle'.[3] Since 'Marx and Engels appear to agree with this point,' Wood argues, 'it is often a stumbling block to the understanding and acceptance of dialectical thinking'.[4] This observation, however, is one-sided and incorrect. Its error stems from the *either-or* form of engaging with the two logics, or, as Hegel would put it, its error stems from the limitations of the understanding. Contrary to the incompatible dichotomy the understanding imposes on the two logics, I will argue that dialectical and traditional logic are compatible, that each corresponds validly to different spheres of observing reality. Insofar as each does not overstep the bounds of its sphere, the two can serve to enrich the process of knowing the world in its utmost concreteness.

When the two logics are artificially antagonized, however, the fruitfulness each has in its own sphere is stifled and an artificial fetter is created in the process of knowing the world concretely. To prevent mistakes in our comprehension of the world, it is important to clarify the terrain; to show where traditional logic rightfully reigns and where, because of its immanent limitations, it must necessarily hand the baton to dialectical logic. This compatibilist strategy will unfold itself through a close reading of Hegel's treatment of the issue in his *Science of Logic* and *Encyclopaedia of the Philosophical Sciences*, where I will first focus on his critique of traditional logic's three 'laws of thought' and the abstract and formal character of its methodology, and then demonstrate how his critique – in opposition to how some have understood it in the past – is not a wholesale rejection of traditional logic, but a demonstration of the fields of thinking it should be limited to as a *science of thinking*.

Hegel on Logic's Need of a New Shape

Hegel's *Science of Logic* is one of the most arduous readings in the history of philosophy. There is, as Terry Pinkard has noted, a 'proclivity for testing out various hypothesis without telling us that this is what he is doing'.[5] This makes Hegel's text a pot of gold for misreadings, strawmen, and crude simplifications. The misunderstanding which artificially antagonizes dialectical and traditional logic can be traced to a misreading of how Hegel presents the task he is

3. Allen W. Wood, *Karl Marx* (London: Routledge & Kegan Paul, 1981), 199.

embarking on in the *Science of Logic*. Hegel contends that whereas other sciences have continued their development, 'logic shows no traces so far of the new spirit which has arisen in the sciences'.[6] The 'baldness of the merely formal categories' in traditional logic understands logical forms as 'fixed determinations… [separated] from each other and not as held together in an organic unity'.[7] When logical forms are grasped in this manner, Hegel argues, 'they are dead forms and the spirit which is their living, concrete unity does not dwell in them'.[8] Traditional logic, by focusing on abstract, separated, and fixed logical forms, is deficient in accounting for the constant immanent development of the 'living spirit,' i.e., the Idea. If logic is to serve its function as the 'science of thinking,' it must be able to keep up with the 'inner self-movement' of its content.[9] For this to take place, Hegel argues, logic must take a new shape.

> *The conceptions on which the Notion of logic has rested hitherto have in part already been discarded, and for the rest, it is time that they disappeared entirely and that this science were grasped from a higher standpoint and received a completely changed shape.*[10]

Upon a superficial first sight, it might seem that Hegel is presenting a clear case for the incompatibility of traditional logic and the 'new' dialectical logic. This reading, as I will show below, is abstract, insufficient, and wholly sustained on synecdochal readings of Hegel's engagement with the question. Nonetheless, it is true that for Hegel the new logic emerges in a 'completely changed shape' to overcome the old's 'childish game of fitting together the pieces of a coloured picture puzzle'.[11] A 'total reconstruction' in logic, Hegel argues, is required to appropriately regain its function as the science of thinking the idea in its interconnected immanent dynamism.[12] This reconstruction is at its core methodological; and the new method which corresponds to the reconstruction is for Hegel 'the only true method'.[13] What does this new method consist of? He says that

> *All that is necessary to achieve scientific progress … is the recognition of the logical principle that the negative is just as much positive, or that what is self-contradictory does not resolve itself into a nullity, into abstract nothingness, but essentially only into the negation of its particular content… and therefore the result essentially contains that from which it results… It is a fresh Notion but higher and richer than its predecessor; for it is richer by the negation or opposite of the latter, therefore contains it, but also something more, and is the unity of itself and its opposite.*[14]

For Hegel, the 'most important aspect of dialectics' is 'the grasping of opposites in their unity or of the positive in the negative'.[15] This would seem to put this new method at odds with what are known as the three laws of thought: the law of identity, the law of non-contradiction, and the law of the excluded middle. Hegel deals with these three laws directly in chapter two ('The Essentialities or Determinations of Reflection') of the *Science of Logic*'s book two on the Doctrine on Essence. Let us now examine closely what he has to say.

Hegel on the Three `Laws of Thought'

1. The Law of Identity

The law of identity – 'everything is identical with itself, A = A' – is for Hegel 'nothing more than the expression of an empty tautology'.[16] He uses the example of a plant: if one asks, 'what is a plant?' and the reply comes in – 'a plant is a plant,' everyone will unanimously acknowledge this is true; however, everyone will also admit that 'the statement says nothing'.[17] The unanimous truth recognized in the statement is merely a 'formal truth, a truth which is abstract, incomplete'.[18] The first flaw Hegel notes in the law of identity, then, is its emptiness.

Hegel asserts that this 'first law of thought,' when interrogated, also blurts out its internal contradictions.[19]

18. Hegel, *Science of Logic*, 414.
19. Hegel, *Science of Logic*, 413.

> *[The Law of Identity expresses an] empty identity that is rigidly adhered to by those who take it, as such, to be something true and are given to saying that identity is not difference, but that identity and difference are different. They do not see that in this very assertion they are themselves saying that identity is different; for they are saying that identity is different from difference; since this must at the same time be admitted to be the nature of identity, their assertion implies that identity, not externally, but in its own self, in its very nature, is this, to be different.*[20]

As Hegel had already shown in the various categories that appeared before this section, the interrogation of the categories the understanding (and old logic) held as steadfast opposites, when critically examined, show themselves to have their truth in their unity with their opposite. This is seen in the contradiction that arises when the category of identity is pressed, namely, identity itself presupposes, i.e., contains within it, its opposite – difference. When one thinks of identity, Hegel says, 'it is identity as difference that is identical with itself… truth is complete only in the unity of identity with difference'.[21]

On the one hand, the law of identity, Hegel shows, expresses merely a formal, empty truth. On the other hand, the law of identity contains internally, i.e., implicitly (*ansichseiende*), non-identity. Identity presupposes difference. What Hegel has shown is how the abstract, formal level in which old logic retained the law of identity stripped it of any content, of any meaning, and left it internally naked. Additionally, the separation traditional logic created between its categories – and here the categories of identity and difference in specific – is shown to be a farse. As Hegel asserts in his *Encyclopaedia of the Philosophic Sciences*,

> *Contradiction is the very moving principle of the world: and it is ridiculous to say that contradiction is unthinkable. The only thing correct in that statement is that contradiction is not the end of the matter, but cancels itself. But contradiction, when cancelled, does not leave abstract identity; for that is itself only one side of the contrariety. The proximate result of opposition is the Ground, which contains identity as well as difference superseded and deposited to elements in the completer notion.*[22]

22. G. W. F. Hegel, *Hegel's Logic: Being Part One of the Encyclopaedia of the Philosophical Sciences*, Translated by W. Wallace (Oxford: Clarendon Press, 1874), 192.

The contradiction and incompatibility of identity and difference, Hegel shows, is only a seeming (*Schein*) contradiction. Terry Pinkard calls this approach the 'compatibilist strategy,' it is an attempt to 'show that some apparent incompatible basic set of categories can actually be shown to be compatible' by 'using some new category or set of categories to show the conflict is only apparent'.[23] This is what Hegel has done with the law of identity, namely, show how the category of identity and the category of difference, far from being incompatible, are contained within each other in unity.

However, the contradiction that immanently emerged when the concept of identity was questioned in its immediacy has not been fully annihilated, but overcome, i.e., sublated (*aufhebung*). This is what the process of the 'negation of the negation' entails, namely, a 'preserving' of the old in the new.[24] The contradiction-as-resolved is contained in the new 'higher' term which resulted from the concluding movement. In the case of identity and difference – as a moment of the logic of essence – the new term which includes within it this previous process, the 'unity of the positive [identity] and negative [difference],' is ground (*grund*).[25]

2. The Law of Non-Contradiction[26]

The law of non-contradiction is for Hegel merely the 'negative form' of the law of identity; it holds that 'A cannot at the same time be A and not-A'.[27] As the negative form of the law of identity, when its positive form is overcome (as it was in the last section), its negative form is too. However, Hegel still dedicates a few pages to breaking down the law of non-contradiction.

Playing with the way the law of non-contradiction is often referred to as the law of contradiction, Hegel says that from its name what the law should express is the truth that 'everything is inherently contradictory'.[28] If it did, Hegel argues, 'this law in contrast to the others [would] express the truth and the essential

26. Hegel calls it the law of contradiction; it is known under both names. However, I will adjust it to the law of non-contradiction when it appears in a reference from Hegel. Considering what the law means, I think 'non-contradiction' is a much more appropriate way of referring to it.
27. Hegel, *Science of Logic*, 416.
28. Hegel, *Science of Logic*, 439.

nature of things'.[29] However, this is not what the law says, in fact, the opposite is true. The law of contradiction, instead of holding contradictions as the 'root of all movement and vitality,' says the opposite; namely, 'there is nothing that is contradictory'.[30] When this form of ordinary thinking (as it is seen in the understanding and traditional logic) is slapped in the face with contradiction, Hegel argues, 'it ranks [it] in general as a contingency, a kind of abnormality and a passing paroxysm or sickness'.[31] But this goes even against common experience, which doesn't simply see contradictions as an error external reflection ran into, but holds that

> *There is a host of contradictory things, contradictory arrangements, whose contradiction exists not merely in an external reflection but in themselves. [Contradictions are] not to be taken merely as an abnormality… [but as] the principle of all self-movement.*[32]

The emergence of the problem of change in ancient Greek philosophy supports this. Zeno of Elea was correct in pointing out the contradictions present in movement; however, Hegel argues, 'it does not follow that therefore there is no motion, but on the contrary, that motion is existent contradiction itself'.[33] As Adam Schaff would later go on to note, 'when investigating the possibility of movement Zeno *already* presumes that a body cannot 'be' or 'find itself' there otherwise than by *resting there*'.[34] Zeno's basic error, Schaff argues, is his 'attempt to 'reduce' motion to a succession of states of rest'.[35] This fails to see how 'movement cannot be explained by rest nor reduced to it'.[36] Hegel says that 'something moves, not because at one moment it is here and at another there, but because at one and the same moment it is here and not here, because in this 'here,' it at once is and is not'.[37] Schaff's reformulation of how copulas are understood helps to explain what Hegel means. Instead of the Eleatic

understanding of the copulas ‘is,’ ‘be,’ or ‘finds itself,’ as ‘*it rests*,’ they must be understood, instead, as ‘*it passes*’.[38]

For Hegel, something is ‘alive only in so far as it contains contradiction within it’.[39] Using some of the most trivial examples possible, Hegel shows how ‘each determination implies its opposite’.[40] The concept of father can only be understood in relation to its other, the son. Detached from its relationship, from its unity with the concept of ‘son,’ the concept of ‘father’ is null; all that is left is the man which, when related to a ‘son,’ can exist with the determination of ‘father.’ The same goes with the concepts of ‘up,’ ‘right,’ etc. All of these are concepts which must be understood in their relation, in their unity, with their opposite. In mathematics and computer science this would be called ‘mutual recursion,’ each concept is definable only in relationship to its other, to its opposite. In all of these cases, the truth of each antipodal point is in their unity with their other. As V.I. Lenin states, ordinary thinking is able to see these opposites, but in failing to go deep enough it misses what ‘is the most important,’ namely, the ‘transition from one to the other,’ i.e., how ‘father,’ ‘up,’ right,’ are known in their truth only when their opposites – ‘son,’ ‘down,’ ‘left,’ – are recognized as internal, necessary components for the unity of the concept.[41]

Because ordinary thinking, i.e., the thinking involved in the understanding and traditional logic’s ‘law of non-contradiction,’ ‘abhors contradictions as nature abhors a vacuum,’ it is unable to grasp anything more than dead being.[42] Contradiction is the basic principle of movement, and hence, of life. Where there is no contradiction, there is no life. Contradiction is not a ‘blemish, an imperfection or a defect,’ but the basic law of the living.[43] However, that which ‘is inherently self-contradictory’ (everything), ‘is no less contradiction resolved.[44] Contradictions arise but in so doing create the conditions to be overcome. In the developments of contradictions in nature, social life, and the human mind, there exists the capacity for an enriched reconciliation. Pinkard’s compatibilist strategy is not something which is formulated externally to where

the contradiction appears, but out of the contradiction itself the capacity for overcoming it arises. If philosophy appears on the scene when contradictions arise, philosophy's method must be – amongst other things – immanent. It must be able to show how all living things run up, in the course of their development, against seeming (*schein*) contradictions which, although presenting a momentary roadblock, create the conditions for the sort of redirection that overcomes the contradiction while containing it within itself as a necessary moment in its development.

3. The Law of the Excluded Middle

In the law of the excluded middle traditional logic's faulty understanding of opposites is 'made into a law' which holds that 'something is either A or not-A; there is no third'.[45] To this, Hegel says that,

> *Neither in heaven nor in Earth, neither in the world of mind nor of nature, is there anywhere such an abstract 'either-or' as the understanding maintains. Whatever exists is concrete, with difference and opposition in itself.*[46]

The proposition itself, Hegel argues, cannot but break its own 'either-or' fixation. For Hegel, the excluded middle, the universal something which the law claims cannot be indifferent to the opposition of A and not-A, is in the proposition itself – in the *something*. The same proposition which excludes a third term posits one, 'the third that is indifferent to the opposition is given in the law itself'.[47] It is a self-defeating law, no different than statements like 'there are no sentences longer than three words,' 'there is no truth,' etc. To say that something is either A or not-A is to express a proposition which has sublated both A and not-A.

Hegel's treatment, in the *Science of Logic*, of the fault in this 'law' is a bit more confusing than his treatment of the former two. In part, this is because he only takes one short paragraph to explain himself. Considering the law of the excluded middle is implied in the law of identity, and subsequently, in the law

---

45. Hegel, *Science of Logic*, 438.
46. Hegel, *Encyclopaedia of the Philosophical Sciences,* 192.
47. Hegel, *Science of Logic*, 438.

of non-contradiction (the negative of the law of identity) as well, the ground for this law has already been torn. This law presupposes the former two; it presupposes an identity *A* which is not its opposite, *not-A*. But in the section on identity Hegel already showed how all identity is mediated by and exists in a unity with non-identity (difference). Hence, there is no A which, when pressed, is not in unity with not-A. When the law of identity is sublated, the law of non-contradiction and the excluded middle are too. The law of non-contradiction is but the negative of the law of identity, to overcome the law of identity is to simultaneously overcome the law of non-contradiction. Further, the law of the excluded middle is implied, that is, is *grounded,* on the law of identity. Once its ground – the law of identity – is overcome, the law of the excluded middle hovers like a cartoon cat which has overran a roof, subsequently falling when made self-conscious of this.

Hegel's treatment of the law of the excluded middle is short. In his section dedicated to it, he 'wittily' shows how the law is self-defeating.[48] However, his critique of the law is supplemented by a backdrop of arguments which had already overcome the central principle the law of the excluded middle depended on – the law of identity.

Has Hegel Rejected the Three `Laws of Thought'?

Having examined Hegel's assessment of the so-called three fundamental laws of thought, it might *seem* obvious that the 'new' dialectical logic Hegel develops is incompatible with the three laws which stand at the core of traditional logic. However, this is only a seeming contradiction. What Hegel has done, when analysed concretely, is show how these three 'laws of thought,' 'instead of being true law[s] of thought, [are] nothing but the law[s] of abstract understanding'.[49] Therefore, when Hegel's comments on these laws are analysed more concretely, this seeming incompatibility falls apart, and both are shown to be efficient logics (sciences of thinking) for different forms of thinking corresponding to different spheres of analysis. Traditional logic and its three 'laws of thought' are indeed the laws for a specific type of thinking – the understanding. However, for more concrete, richer, and livelier forms of thinking, these 'laws' are insufficient, and hence, not 'laws' in these spheres. To provide a simple example, this is parallel to saying that the laws under which

48. Lenin, 'Conspectus of Hegel's Book *The Science of Logic*,' 138.
49. Hegel, *Encyclopaedia of the Philosophical Sciences,* 184.

primitive societies functioned are insufficient, as laws, for the forms of social life which exist today. These laws might be perfectly suitable for certain forms of social life, but, once qualitatively new forms of life, richer, livelier, and more complex in nature arise, these laws, like the form of life itself, is overcome.

However, the 'laws of thought,' whether in traditional or dialectical logic, are themselves grounded, and work alongside, different methods of exploring the world. Traditional logic's method of working is abstract, it is indifferent to content and purely formal. Dialectical logic's method of working is concrete, it seeks not only to know form in unity with content, but further, how this unity relates to all those things it presupposes in its existence within a given organic totality. It is of order here, then, to provide a cursory comparison of the two logics with an eye to their distinctive treatment of the methodological question of the abstract and concrete.

Traditional and Formal Logic: Abstract and Concrete

Traditional Aristotelian logic is formal and abstract. Its instruments are fixed categorical sets which are seen as separated by hard and fast lines. The formal nature of this logic makes it indifferent to the content it is dealing with. This logic, because of its formal nature, can access the 'validity' of propositions in a manner indifferent to their content. The forms in which propositions are structured in an argument is the source of its validity. The famous syllogism – 1- All men are mortal, 2- Socrates is a man, 3- Socrates is mortal – is valid regardless of whether a concrete study of 'Socrates,' 'Men,' or 'Mortality' confirms the statements in the propositions. The argument is valid because it necessarily follows. However, this 'necessity' is merely formal, it is an empty necessity insofar as the content of its propositions is not verified. This formal treatment of propositions allows for the examination of their validity to go beyond being merely indifferent to content, and to abstract wholly away from all content by treating propositions symbolically.

The argument above is no less valid if the terms 'Socrates,' 'Men,' and 'Mortal' are replaced with variables A, B, and C. One could then say – 1- All Bs are Cs, 2- A is a B, 3- A is a C – and it would be as equally logically necessary and valid as – 1- All men are mortal, 2- Socrates is a man, 3- Socrates is mortal. The aim of this cursory overview of traditional logic is to set the ground for my affirming of the following: namely, that the assessment traditional logic makes

is grounded on an abstraction away from the content and an examination of the purely formal structure of the ideas presented. The conditions, i.e., the determinations which lay in the backdrop of concepts like ‘Socrates,’ ‘Men,’ and ‘Mortal’ are to be ignored. The idea is reified, abstracted and conceived of as a separate and self-subsisting entity to examine its isolated form in relation to other isolated ideas.

Dialectical logic, on the other hand, does not bifurcate form from content, putting each in a time-out corner divided by an impenetrable gulf. Instead, it knows that form and content ‘spontaneously pass over into one another or, since they are reflections, posit themselves as sublated, [and] relate themselves to this their negation and reciprocally presuppose one another’.[50] For Hegel, it is philosophically erroneous to attempt to know form separated from content, and content separated from form. When any specific thing (unity of form-content) comes under philosophic examination, the aim of this examination is to know the thing concretely. Simply stated, the thing is not isolated in preparation for its investigation as a separate, severed fact; but it is analysed in the plethora and complexity of factors that allowed it to be a ‘fact.’ The thing is analysed in a way that accounts for the interconnections and relations that the thing presupposes. Dialectical logic is essentially relational, it seeks to know how things relate themselves to other things within an organic totality.

If the juxtaposition of the two logics regarding the question of identity and contradiction did not fully prove their incompatibility, the analysis of their divergence in the methodological question of the abstract and concrete should be the final nail in the coffin, right? The response here should be yes and no. On the one hand, the response should be ‘yes’ because a concrete analysis of the two showed undoubtedly that in ontological and methodological grounds, the two find themselves opposed. The dialectical method is concrete, it does not shy away from ‘tarrying’ with contradiction in a way which shows its illusory, although immanently necessary, nature. Once this is done, the dialectical method proposes a new concept which incorporates within it the developments of the previous one. This concept is considered ‘higher’ or ‘richer’ simply because it contains more determinations, that is, because it is a more concrete concept. In almost all of its central components, the dialectical method finds itself in opposition to traditional logic. Hence, it is true that dialectics and traditional logic are incompatible… to some extent.

---

50. Hegel, *Science of Logic*, 473.

On the other hand, the previous 'concrete' analysis does not exhaust all of the determinations possible for this comparative object of examination. Simply said, it is possible to go deeper, to be more concrete. When dug deeper, one finds that this blatant incompatibility is superseded by an acknowledgement that their incompatibility is but a regional skirmish; that on a larger frame, that is, when their relationship is analysed as it exists in a 'totality' of knowing, or better yet, of 'scientifically' knowing different forms of thinking, the two are perfectly compatible.

How Are Traditional and Dialectical Logic Compatible?

In 1808 Hegel writes a short article for popular consumption asking himself the question 'Who Thinks Abstractly,' his response – shocking to the crowd, but expected by those familiar with his work – 'the uneducated, not the educated[,] good society does not think abstractly because it is too easy, because it is too lowly'.[51] However, this 'lowly' form of abstract thinking, Hegel would argue, is appropriate in specific areas of examination.[52] In his 1830 *Encyclopaedia of the Philosophical Sciences* he says the following:

> *The study of formal logic undoubtedly has its uses. It sharpens the wits, as the phrase goes, and teaches us to collect our thoughts and to abstract — whereas in common consciousness we have to deal with sensuous conceptions which cross and perplex one another. Abstraction moreover implies the concentration of the mind on a single point, and thus induces the habit of attending to our inward selves. An acquaintance with the forms of finite thought may be made a means of training the mind for the empirical sciences, since their method is regulated by these forms: and in this sense logic has been designated Instrumental.*[53]

---

51. G. W. F. Hegel, 'Who Thinks Abstractly,' In *Hegel: Texts and Commentary*, Edited by W. Kauffman (New York: Anchor Books, 1966), 462.

52. It is important to note that the 'abstract' Hegel is referring to in the article 'Who Thinks Abstractly' is related to empirical (i.e., experience based) abstractions. It is the passing of judgement based on immediate appearance; quite literally, the judging of a book by its cover. This is a different form of the same 'abstract' thinking we see in logic, except the passing of judgement is not based on immediate appearance but on the immediate form of an argument. Recall, the form/content opposition is examined as a moment of the broader appearance/essence opposition. Similarly, the abstraction that focuses on the form of an argument and the one which focuses on the appearance of a phenomena are at their core grounded on the same type of thinking – abstract thinking.

53. Hegel, *Encyclopaedia of the Philosophical Sciences,* 33.

In his 1831 *Lectures on Logic*, Hegel would similarly say that

> *We must familiarize ourselves with such forms of the understanding as Aristotle brings forth – they are forms of thinking, abstract forms and one-sided laws. Yet if they are to be of service to true thinking, we must not interpret them so separately from one another, [as Aristotle does,] since they would then be only forms of untruth, finite forms. They would then be only so many different sides of concrete truths, and so would be one-sided. We must tear them out of their one-sidedness and bring them into their interconnection. It is because of such one-sidedness that logic has fallen into contempt, and with good reason… Though absolutely indispensable, they are in themselves defective. Still, one must be able to give an account of them, as to why they are false and absolutely indispensable… We shall come to know them only as moments of the true form. This true form can be fully rational logic only insofar as it is a logic in which thinking has won the dignity of being the basis of truth.*[54]

For Hegel, then, although formal logic might have been sublated by dialectical logic in the realm of philosophy, that is, the realm where 'thinking becomes knowledge… through notions,' this is not the only sphere were thinking takes place; and hence, where a corresponding 'science of thinking' is required.[55] In the elementary spheres of mathematics and science, which are infinitely useful and productive for human social life, the formality, abstractness, and conceptual reification present in traditional logic shows itself to be the more apt way of scientifically structuring and investigating these forms of thinking. To use a frequent expression from Hegel, in these spheres (elementary science and mathematics) traditional logic has already 'won its truth.' The Idea which philosophical cognition traces and which leads it into dialectical logic may have overcome those spheres into higher and richer ones, but those spheres are still there, and the logic which conceptualizes their laws and categories still works.

For instance, today face recognition technology is in most devices as one of the more advanced technological features of recent developments. Nonetheless, technologies like doorknobs, which won't magically open if you put your face in front of it, which require the gripping of it by the hand, and the subsequent

---

54. G. W. F. Hegel, *Lectures on Logic: Berlin 1831*, Trans by Clark Butler (Indianapolis: Indiana University Press, 2008), 4-5.

55. Hegel, *Encyclopaedia of the Philosophical Sciences,* 247.

turning of the hand in the right direction for it to function, are still around. The device with face recognition features is a higher form of technology – it contains more determinations; it is more concrete – but it still exists around technologies which its development presupposed (the phone presupposes the doorknob) and whose usage requires a different method. The method (the equivalent here of logic) employed in the higher technology would not function for the simpler technology. Similarly, the simpler method employed for the lower technology would not work with the more advanced technology. In the same way that my face will not open a doorknob, a tight squeeze and turn of my phone will not open access to my phone.

This might seem like a simplistic analogy, but the point is this: once something is overcome, not only does it stay contained as a 'moment' within that which it progressed into, but, often, it itself stays existing alongside the 'higher' forms that are implicit in it, and which, through historical development, have been actualized and made explicit. The mental and physical labour that led to the development of the phone (and facial recognition technology) presuppose the mental and physical labour which led to the development of the doorknob, that is, it contains it within itself as a necessary 'moment.' However, they both exist alongside each other. The objectification of labour which resulted in a doorknob contained implicitly the phone, that is, the 'real potential' for labour (combined with a host of other factors) to eventually actualize (objectify) itself into a phone. What was implicit in the labour embodied in the doorknob (the phone), was made explicit with human technological progress. But the doorknob, as a result of human labour, still contains implicitly something which has already been made explicit – the phone.

A similar dynamic is at play in the way Hegel thinks about the relationship of dialectical logic to traditional logic. The development of the content of logic (thinking), required a new logic apt to function as the 'science of thinking' for the new developments. It required a logic that could accept thinking in its dynamism and interconnections. However, simpler mathematical and scientific forms of thinking – for which the abstract and reified structures of traditional logic work – are still around. Not only are they still around, but, using the same methods of traditional logic, they have developed immensely. This development is undeniable. Neither Hegel nor anyone in the tradition of dialectical thought would reject this admission. Neither would any of them neglect the foundational role traditional logic played in their development. However, what would be stressed is that these developments and the

knowledge that they have resulted in are un-systematic in nature, that is, they lack a self-conscious awareness of their concrete existence within a totality.

Hence, science has made tremendous progress *in its field*, but this progress has always been detached from an awareness of the role it plays in the greater whole of human life. In this way, science has been able to 'pass' itself as 'non-ideological,' as disconnected from global economic and political structures. In the same way, it has also been able to detach itself from its own historical development. As Samir Okasha argues, school 'textbooks present the key ideas of a scientific discipline in as convenient a form as possible, with little mention of the lengthy and often tortuous historical process which led to their discovery'.[56] Sure, some historical hypothesis that have been overcome are still studied, but their study is as a dead entity. Their past is not considered to be alive and well in their present, but something that has been simply left behind. Science does not see their current developed form as the making explicit – the actualizing – of a collection of previously successful and failed hypothesis. Instead, the few links that are established to their past have an external and arbitrary character, that is, the 'development' is not considered as an immanent result necessarily stemming from previous scientific theories.

The traditional logic upon which these fields are grounded has been essential in achieving developments of a particular character in their specific fields of investigations. This is something the dialectician accepts and praises. For instance, computers, which are so central to our technological world today, operate on 'simple yes or no procedures' which are grounded on the binaries of traditional logic.[57] Insofar as the lens of analysis is in this field of discovery-production, dialectical logic plays no role, traditional logic is king, it holds truth. However, if one desires to know these developments in a lively manner, in their movement, relations, and positions with regard to the whole of human knowledge production and development, traditional logic falls short as a science *for this form of thinking*, dialectical logic here shows itself to be superior. As Sean Sayers notes with regards to analytic thinking (which is grounded on traditional logic),

> *Analysis—distinguishing and separating things in this way—plays a vital role in knowing and understanding things. Dialectic does not deny this. It*

56. Samir Okasha, *The Philosophy of Science* (New York: Oxford University Press, 2016), 2.
57. Alan Woods and Ted Grant, *Reason in Revolt: Marxist Philosophy and Modern Science* (New York: Algora Publishing, 2002), 96.

> *does not deny the reality of distinctions and the need for making them in thought. However, it insists that concrete and determinate things are also always and necessarily related and connected to other things within a larger whole.*[58]

Dialectical logic here takes the 'facts' discovered by science and removes them from the laboratory of abstraction, places them in the field of the concrete where it can analyse it relationally and historically.

The incompatibility of dialectical and traditional logic, then, only appears when one incorrectly bleeds into a form of thinking that it, as a science of thinking, is not functional for. It holds the same relationship as quantum and classical mechanics, each is efficient for different fields. It would be foolish to claim this fact implies they are incompatible. As Alan Woods and Ted Grant argue,

> *The relationship between dialectics and formal logic can be compared to the relationship between quantum mechanics and classical mechanics. They do not contradict but complement each other. The laws of classical mechanics still hold good for an immense number of operations. However, they cannot be adequately applied to the world of subatomic particles, involving infinitesimally small quantities and tremendous velocities…Formal logic equally holds good for a whole series of everyday experiences. However, the laws of formal logic, which set out from an essentially static view of things, inevitably break down when dealing with more complex, changing and contradictory phenomena.*[59]

Dialectical logic, if it was the ground on which certain elementary scientific investigations took place, would stifle development. Traditional logic, if it was the ground on which systemic and concrete investigation took place, would fail to contend with phenomena in their interconnection and movement. However, if each science of thinking could stick to the forms of thinking appropriate to it, there would be no real contradiction between the two. The contradiction would be shown to be only a seeming contradiction. They would show themselves to be as compatible, in the greater scheme of things, as doorknob turning and face recognition technology, or as classical and quantum mechanics.

59. Woods and Grant, *Reason in Revolt*, 90.

This realization, of course, is itself dependent on a dialectical assessment, for it is grounded on knowing the *relation* of each logic within the *totality* of knowing. Since the dialectical method has for its end the concrete reproduction of the concrete ("the unity of diverse determinations"), it understands this isn't something achieved at the beginning.[60] Instead, it realizes the necessity of process, of the ascension from the abstract to the concrete. As Marx would note, the "reproduction of the concrete by way of thought" is "not a point of departure" but the result of "a process of concentration."[61] In the abstract (embryonic) moments of a dialectical investigation of the concrete, this is where a role for traditional, abstract logic can be found. Once enough information about elementary facts has been gathered to begin to see these in their interconnection with other facts and with the totality it is a part of, then traditional logic has finished serving its role for the dialectical method's ascension towards the concrete reproduction in thought of the concrete.

The claims of their incompatibility, on the other hand, stem from the inability (grounded in traditional logic), of comprehensively analysing thinking with an eye towards relations and totalities, as opposed to detached, abstract, entities. Dialectics, because it is a superior form of logic with a more dynamic and concrete object of investigation, is the method through which one could understand how these two seemingly oppositional sciences of thinking are compatible and allies (conscious allies for dialectics, and unconscious allies for traditional logic) in the general scheme of human knowing.

When the relationship of traditional and dialectical logic is analysed dialectically, even the positing of the question of 'compatibility' seems strange. Dialectical logic does not stem out of a vacuum, it is itself a development of traditional logic, i.e., traditional logic contained implicitly the real potential for realizing itself in dialectical logic. Here the 1979 Soviet textbook, *The Fundamentals of Marxist-Leninist Philosophy*, gets it absolutely correct:

> *Dialectical logic arose as a continuation and development of previous logical theories [traditional logic]… it does not deny the importance of formal logic, but seeks to define its true place in the study of scientific knowledge… differing in quality from formal logic, dialectical logic does not consider the forms of thought only from the standpoint of their structure; it is also interested in their concrete content [and] considers*

60. Hegel, *Encyclopedia of the Philosophical Sciences*, 13.
61. Karl Marx, *Grundrisse* (New York: Penguin, 1973), 101.

> *them not in a rigid, isolated form, [like traditional logic does], but in their interconnection, in motion and development.*[62]

Hegel uses the example of science (which as previously seen, is grounded in traditional logic) to illustrate how dialectical 'philosophy owes its development to the empirical sciences'[63]:

> *The facts of science have the aspect of a vast conglomerate, one thing coming side by side with another, as if they were merely given and presented — as in short devoid of all essential or necessary connection. In consequence of this stimulus ['craving of thought'], thought is dragged out of its unrealised universality and its fancied or merely possible satisfaction, and impelled onwards to a development from itself.*[64]

Hence, like the example of face recognition technology and the doorknob, dialectical logic contains traditional logic as a necessary 'moment' in its development. Just like face recognition technology exists alongside doorknobs, dialectical logic exists alongside that out of which it grew, that is, it exists alongside that which contains it implicitly in it, and which relates to it as an external actualized form of something immanent in it. In a sense, to question the compatibility of these two would be like questioning the compatibility of phones and doorknobs. Or, to use a Hegelian favourite, it would be like questioning the compatibility of a bud with the fruit that it bore. Instead, one must think of them in their connection, in their 'organic unity,' how each exists within 'the life of the whole'.[65] Thus, Hegel acknowledges that 'Speculative Logic contains all previous Logic and Metaphysics: it preserves the same forms of thought, the same laws and objects — while at the same time remodelling and expanding them with wider categories'.[66]

However, even if one recognizes the sustained reign of traditional logic in fields like science and mathematics, the actuality of dialectical logic makes it so that the findings of science 'cease to be…mere data'.[67] Dialectical logic

assimilates scientific findings and exposes something scientific thinking was blind to about its own findings – their dialectical nature. As Hegel says,

> *Philosophy, then, owes its development to the empirical sciences. In return it gives their contents what is so vital to them, the freedom of thought… These contents are now warranted necessary, and no longer depend on the evidence of facts merely.*[68]

This is to say, dialectics gives scientific findings a systematic character, it contextualizes them within 'the larger picture.' Further, for Hegel, that traditional logic and dialectics are compatible is already contained in the more general observation that all 'the different systems which the history of philosophy presents are therefore not irreconcilable with unity'.[69] What a layperson observes as a historical progression of different and often antithetical philosophical systems, for Hegel is merely 'one philosophy at different degrees of maturity'.[70] 'In philosophy the latest birth of time is the result of all the systems that have preceded it,' hence, dialectical logic and speculative philosophy are the unified, most developed expression of all previous philosophy.[71]

Allen Wood states that Hegel's 'real complaint against formal logic (as it is meant by formal logicians) is not that its principles are false, but that it is philosophically sterile'.[72] While this is partially true, he misses the fact that Hegel recognizes that in science and mathematics traditional logic is far from being 'sterile.' In these areas it has been the ground for immense development. It has, however, been incapable of truly understanding the nature of its developments concretely and systematically. For this to occur, something which was implicit in it had to be actualized – dialectical logic. This actualization of dialectical logic does not, as Wood suggests, mean that the new method 'turn[s] out to be false'.[73] The truth acquired by the fields in which traditional logic reigned does not disappear when the new dialectical method arises. On the contrary, its truth is expanded beyond disconnected datums of information, it is enriched by its further concretization.

71. Hegel, *Encyclopaedia of the Philosophical Sciences,* 18.
72. Wood, *Karl Marx*, 205.
73. Wood, *Karl Marx*, 200.

Further, the discoveries that are grounded on traditional logic are only 'philosophically sterile' if they are retained within the understanding prevalent in the elementary sciences, mathematics, and the subsequent fields in which traditional logic predominates. The antidote to this philosophical sterility is their natural inclusion in the philosophically fertile dialectical outlook. Wood seems to equivocate philosophical with scientific sterility, and then, shames Hegel for not accepting the philosophical developments traditional logic has achieved through mathematics and science. However, the developments he points to are developments in the *sciences and in mathematics*, the 'non-philosophical' sphere in which Hegel thinks traditional logic is still very much fertile. In addition, for Hegel these developments are not bound to 'philosophical' sterility, insofar as they are incorporated into the systematic and concrete knowing present in dialectics, he believes they become philosophically important. This is, Hegel argued, what dialectical philosophy 'gives back' to the sciences.

Conclusion

The concrete analysis of traditional and dialectical logic resembles the movement of the negation of the negation seen all throughout Hegel's logical writings. The immediacy of traditional logic is forced to confront an external enemy – dialectical logic. Their contradiction, when further investigated, shows itself to be only 'seeming.' Dialectical logic is shown to be an inner development of traditional logic, a result of the contradictions which develop in traditional logic's incapacity to keep up with the thinking for which it is a 'science' for. This process of immanent mediation gives way to the reunited form of mediated immediacy which is present in the awareness that dialectical logic contains traditional logic as a necessary moment and that it exists compatibly alongside it, enriching its truth by giving it philosophical significance. Far from being incompatible, traditional and dialectical logic are necessary allies for the comprehensive and concrete investigation of the world.

Will Cuba Be the Next Syria?

Danny Shaw[1]

An Ethnographic Portrait of Youth, the Blockade and Survival in Havana Today, the 66th Anniversary of the Revolution

After 14 years of a Western economic blockade and dirty war, the Syrian Arab Army (SAA), the state of the Arab Socialist Ba'ath Party and the deposed president Bashar al-Assad collapsed on December 8th.[2] While there were many factors at play in this long internationalized proxy war on Syria, quite simply the Syrian people were worn down by well-armed Al-Qaeda offshoots backed by Turkey, Israel and the U.S.[3] After losing over 128,000 SAA troops since 2011 and hundreds of thousands of civilians, the country of some 30,000,000 people with some 14,000,000 refugees fell to the forces of colonialism,

Zionism and barbarism[4]. Syrian SAA soldiers were only making $40 a month and often could not even be paid. The rebranded Hayat Tahrir al-Sham (HTS), ISIS fighters were making thousands of dollars per month thanks to their imperialist backers. 90 percent of Syrians endured poverty and hunger due to the U.S.-led hybrid war. [5]

Minus the bombs and ISIS cutouts, Cuba is up against a similar reality. Argentinian sociologist Atilio Borón, analyzing the impact of Western sanctions on South American and Caribbean countries, explained that hunger was more dangerous than any bomb imperialism could drop on the Bolivarian nations. Keenly aware of an air-tight blockade inflicting acute hunger and despair on the 11,000,000 people of Cuba, Cuba supporters and internationalists have a responsibility to ask: Before the most powerful empire in history, how much longer can the revolution hold on?

Cuban Flames, Imperialist Tundra

There are two January showdowns shaping up in the Caribbean. On January 1st 2025, the 66th anniversary of the revolution, Cuba will officially become a member of BRICS. On January 20th, Donald Trump and his cabinet of billionaires will take state power in the United States.[6] Trump enacted a further 243 coercive measures against Cuba when he assumed office in 2016.[7] The Biden administration continued to tighten the noose around Cuba. The U.S. has not recognized Nicolas Maduro, Cuba's closest ally, as the president of Venezuela. They are recognizing opposition candidate Edmundo Gonzalez. This sets up a clash for inauguration day on January 10th, 2025 which the U.S. is looking to exploit. The Department of Defense just signed an agreement with Trinidad and Tobago which allows them "to deploy forces to Trinidad and Tobago in the event of a "conflict" in Venezuela."[8] Credible international

sources from the multipolar world are expecting another U.S.-supported July 11th 2021, San Isidro-style coup attempt against Cuba in the opening weeks or months of Trump's second term. All signs are that Cuba and Venezuela could go the way of Syria

As a boxer, internationalist and scholar, I have been traveling to Cuba since 1995 seeking to objectively measure the enthusiasm of everyday people who survive despite the U.S.'s War on Cuba.[9] For almost three decades, I have followed up with the families with whom I have met and built friendships, bolstering my own understanding of this resilient island nation.[10] This study is a snapshot of the nuanced, blockaded Cuba that I have experienced.[11] It is vital to present an honest evaluation of what we were clearly unaware of in Syria, where Cuban hearts and minds are at currently, amidst the profound social contradictions created by the U.S. economic war. I originally wrote a draft of this study in 2014 as a warning to the U.S. left that it was dangerous to underestimate the objective factors in Cuba and the subjective factors, people's consciousness and a tidal wave of Cubans forced to flee the country. Some "movement leaders" dismissed my observations as "overly focused on the lumpen elements in Havana."

A decade later, I am sounding a more desperate warning. If the U.S. left does not get off the beaten path of the solidarity delegations, they will again be in the dark when Havana explodes because of hopelessness and hunger. None of us who defend Cuban self-determination should be surprised if another foreign-sponsored and coordinated revolt occurs.[12] Every U.S. regime, Republican and Democrat, since 1959 has applied a full court press against

10. I have been to Cuba five times. I first went to Cuba in 1995 as a representative of the July 26th Coalition, a delegation from the United States that stood against the U.S. blockade of Cuba and participated in the International Festival of Youth. I returned for a month in 2001 again focused on learning from and listening to Cuban leadership and the Cuban people. In the summer of 2014, I returned through Cuban boxing contacts related to Sumy. I attended Fidel Castro's funeral in November of 2016 screaming "Yo Soy Fidel" ("I am Fidel") shoulder to shoulder with generations of Cubans. I returned to Cuba at the close of 2022 to continue collecting ethnographic data to finish this study.

11. While I have traveled to Santiago, Matanzas and across Cuba, I spent most of my time in the capital, Havana.

12. "Foreign Agents #1: Exposing the San Isidro Movement & US culture war on Cuba" The GRAYZONE, posted July 29, 2021,https://thegrayzone.com/2021/07/29/foreign-agents-san-isidro-movement-cuba/.

Cuba, attacking economically, diplomatically, politically and militarily.[13] The U.S. hybrid war, like the 14-year war on Syria, has for decades laid the fertile soil of despair in order to set in motion another San Isidro-style, color revolution movement to try to topple the Cuban government.

"Ataca Sabroso" (Attack with the Sweetness)

Sumy is a slender 6'2" retired fighter. At 60 years old, he could pass for 39. Known for a long, stiff jab that snapped heads back, the retired fighter turned long-time high school principal assures me he's still got it. For two decades, Jesús Miguel Rodríguez Muro, known by his nickname "Sumy," glided through cruiserweight boxing competitions across Cuba. Internationally, he made a name for himself as well, fighting in the Soviet Union and the Warsaw Pact countries. His cousin Lazarro Almanza was my trainer in the Bronx as I prepared for Tri-State area fights. Almanza left Cuba in 1980 as part of the Marielitos.[14]

Boxing emerged as an organic way to *convivir* (live together), that is learn more about Cubans, their lives and challenges.[15] When Sumy held the pads for me and heard the snap of my double jab, he shouted "*sabroso, sabroso*" (sweet, sweet) and announced the next combo he wanted.

After our workouts, he took me around different neighborhoods where I heard a plethora of views on politics, the economy and the blockade. A dedicated member of the Cuban Communist Party, Sumy lived in Arroyo Naranjo, an outer municipality of Havana, their version of the Bronx. The dark-skinned retired athlete lives as all Cubans do: modestly. His feet swung off his ramshackle tiny bed. He had a collection of books and notebooks stacked on a bookshelf that was on its last leg. A tiny TV straight out of the 1980s and a transistor radio that we Americans might see in the Hollywood movies about the Vietnam war furnished his bedroom, which moonlighted as a living room. He invited me in and gave me two volumes of Cuban history textbooks by

---

13. This was the term used by the Reagan administration for its war on the Soviet Union's existence. Trump called the war on Cuba "a maximum pressure" campaign.

14. The Marielitos were Cuban immigrants to Southern Florida in 1980 when the Cuban leadership decided it was more strategic to allow anyone who wanted to leave the country to leave in 1980 from the port Marielito. Roughly 135,000 Cubans left that summer.

15. Danny Shaw, "Las Antillas Mayores de cara al 2023," posted January 17, 2023, by Arturo Lopez Levy, YouTube, 3:05:12, https://www.youtube.com/watch?v=nRDVClP7-Gw.

University of Havana professor Eduardo Torres Cuevas. As I began to read some José Martí quotes outloud, Sumy responded with his signature phrase, "*sabroso, sabroso*."

We set out on the town to visit some of Sumy's friends. When hunger struck around dinner time, after taking the first packed *camello* bus, Sumy led me into a bakery. I looked at all of the bread and some pieces of cake and I pleaded for us to get "some real food." He laughed at me, telling me I wouldn't survive long in today's Havana. He grabbed two pieces of cake and tossed them into an empty loaf of bread. He handed me the make-shift stuffed gyro and sank his teeth into the other, winking at me: "*Sabroso, sabroso*!"

Rompiendo una Talla en La Habana (Listening and Building in Havana)

Did everyone share Sumy's anti-imperialist fervor and willingness to make personal sacrifices?

I engaged in hundreds of conversations to address this question, in boxing gyms, on street corners, in bars, in hospitals, in work spaces, in living rooms, in parks, on public transportation and walking the streets of Havana. I talked with students, veterans of the anticolonial war in Angola, teachers, stevedores, former prisoners, re*parteros*, emos, hustlers, the Omni Zonafranca artists who went on to build the San Isidro movement,[16] alcoholics, retired carpenters, grandmothers, repatriated Cubans and rockeros.[17] Some conversations took place in private. Other interactions burst out into debates, with friends and family members passionately competing for control of the airwaves.

Havana's population currently stands at 2.4 million, roughly the population of the borough of Queens in New York City. To continue with this comparison, Havana is much larger than Queens geographically. Havana is 281 square miles while Queens is 178 square miles. There are 15 municipalities in Havana. The *municipios* (municipalities) roughly correspond to what we would consider neighborhoods or sections of Queens, such as Astoria, Long Island City, Jackson Heights, Bayside, etc. Armed with curiosity and a thousand questions,

16. While I had no way to prove it in 2001 or 2014, I suspected that these anti-government art collectives were building relationships with regime change actors in the U.S. and Europe. They unsuccessfully tried to recruit me to their pro-U.S. cause.

17. *Reparteros* are the youth of the *repartos* or peripheral neighborhoods of Havana.

my goal was to dedicate time to visiting each of the 15 *municipios* of Havana. Where were people at in terms of their consciousness and enthusiasm about the revolutionary government? What were their chief complaints? What were allegiances? What was the temperature of the revolution among everyday families, political and apolitical, 64 years after the overthrow of the old ruling class? Why are over 200,000 Cubans risking everything to flee the besieged country every year?[18]

"Democracy Promotion" aka Using Hunger as a Weapon to Provoke a Coup

The Trump and Biden administrations and those that preceded them, including that of Barack Obama who only slightly tweaked some stipulations of the blockade, have remained faithful to the original objective of the 1960 blockade.[19] A year after the revolution's triumph, Eisenhower calculated: "If the Cuban people are hungry, they will throw Castro out."[20] Four months later, Deputy Assistant Secretary of State for Inter-American Affairs Lester D. Mallory agreed: "Every possible means should be undertaken promptly to weaken the economic life of Cuba...to bring about hunger, desperation and overthrow of the government."

The U.S. government's "Program of Covert Action" drafted in 1960 continues to inform U.S. policy towards Cuba.[21] For six decades, the U.S. has sought to suffocate and destroy Cuba's self-determination. *The Economic War Against Cuba: A Historical and Legal Perspective on the U.S. Blockade* by Salim Lamrani and Fabian Escalante's *Operation Extermination: 50 Years of Aggression against Cuba* are two solid resources about the diverse terrorist tactics employed by the US government.[22]

More than 3,400 Cubans have been killed by U.S. state terrorism since the revolution.[23] U.S. intelligence plotted and organized 638 known attempts on Fidel Castro's life[24]. Biological warfare has been used such as the intentional infection of the island's pig population with the swine virus.[25]

Every policy of today's most powerful empire has been calculated and designed to inflict regime change in Cuba which is an intellectualized euphemism for the complete overhaul of class relations. Ignoring these external pressures, the legacy media hyper focuses on repression in Cuba. Political scientist Michael Parenti explained why socialist countries were forced to employ certain authoritarian measures.[26] Subjected to constant threats, harassment and U.S. intelligence-backed terrorist campaigns, how could the Cuban leadership focus on anything but national security? This defensive posture plays right into the hands of Cuba's would-be colonizers in Washington and Miami. Constantly looking over its shoulder, distrustful and paranoid, brother is pitted against brother.

Amidst the crumbling buildings of Centro Havana, some future leaders of the San Isidro movement exclaimed to me: "los dioses están muertos" (the Gods are dead), meaning that Che, Fidel, Celia Sanchez, Camilo Cienfuegos and the other icons of the revolution meant nothing to young people today. The counterrevolution had its voice and foreign governments and NGO's[27] were

willing to pump big money into this “civil society” movement.[28] Tracy Eaton’s The Cuba Money Project meticulously documents the U.S. government’s financing of such groups.[29] The National Endowment for Democracy funded over 40 such counter-revolutionary groups to the tune of hundreds of millions of dollars. These “dissidents" assured me they were “non-ideological,” as they organized meetings with the parliament of the European Union alongside U.S.-sponsored pawns, such as Juan Guaido and Luis Almagro. While I always kept them at arm’s length, they were an accurate measure of how many Cubans feel today about the ripped posters and faded murals of the heroes of the revolution. Che’s ideals and Fidel’s bravery were not putting food on the table or ensuring that there was access to electricity or the internet.

Some Cuban journalists and cadres of the party argue that the higher levels of leadership in the party need a wake up call. Some Afro Cuban youth yelled at me: “*Aquí no hay bloqueo*” (there is no blockade here). For too many youth, blaming an economic blockade they could not concretely see had worn thin and no longer seemed like the root cause of their collective woes.

An Ethnography of Terrorism and Resistance

On July 9th, Cuba revealed to the world the latest U.S.-sponsored terrorist plot aimed at fomenting counterrevolution on the island.[30] An armed group calling itself *La Nueva Nación Cubana en Armas* (the New Armed Cuban Nation) stockpiled weapons in Miami and sought to smuggle them into Cuba in order to recruit and activate clandestine cells that would rebel against the government.[31] Though the U.S. media barely mentioned the story, 32 individuals were arrested for conspiring to attack military barracks, schools and hospitals. This was the most recent in six and a half decades of U.S. plots against Cuba. The goal of the New Armed Cuban Nation’s actions were to incite chaos and violence so

that Elon Musk, CNN and Fox could then spotlight Cuba as a "failed dictatorial state" and justify more aggression against it. Was this a test run for what is to come?

Everyday terrorism that Cuba confronts from the U.S. power structure rarely make the front pages. Denied by apologists for empire and conveniently ignored by Cuba's critics, an unilateral U.S. blockade continues to stifle and starve the people of Cuba. The Special Period, which began in 1991 with the collapse of the Socialist Camp countries led by the Soviet Union, has only intensified over the past three decades, taking its toll, as it is intended to, on the morale of generations of Cubans. On the 66th anniversary of the 1959 Cuban Revolution, has David grown tired of always having to be on the defensive against Goliath, the omnipresent bully? What breathing space[32] do the 11,174,587 people of Cuba have, particularly the 2.3 million youth under the age of 18 years?[33]

88 percent of international currency transactions are[34] still in dollars. There are routine blackout crises[35]. There is no gas. A trip across Havana on public transportation often takes three hours. The U.S. government continues to accuse[36] Cuba of being a hub for Chinese spies and a source of auditory terrorism, or "Havana Syndrome."[37] Protestors fatigued by six and a half decades of a Cold War are demanding "electricity and food."[38] The imperialist Center for Strategic and International Studies (CSIS) forecasts that there will be

more protests because of an economy that is worse than during the Special Period.[39] Rations are down to a bare minimum and even that sometimes is not even available.[40] According to one doctor and Cuban Communist Party leader Oldanier: "We live like Palestinians minus the bombing. Malnutrition is everywhere. Inflation has skyrocketed. The state cannot pay our salaries. Child mortality is way up. More and more people are fleeing."

Beyond the Propaganda

Every semester since 2006, until I was fired last semester for denouncing the genocide in Palestine, I asked my City University of New York students in my South American and Caribbean Studies courses: "What do you think of when you hear the word…..Cuba? Write down whatever comes to mind."[41]

It doesn't take a crystal ball to know that many of them wrote: "Cigars, sugarcane, dictator, communism, poor, tourism, baseball, beaches and Fidel." I continued to challenge them: "Have you ever heard one positive word about Cuba? In the media and on social media, have you ever heard anything positive about Cuba and the Cuban system?"

Across the liberal-right divide of American politics, no love is lost for Cuba's leadership. Corporate media outlets show nothing but hostility toward the Cuban system. Social media helps ensure Americans' knee-jerk reactions to Cuba's political system are full of pity and negativity. Anti-communism continues to be the unofficial religion of the United States.

On the opposite end of the political spectrum, anti-imperialist groups organize delegations to Havana to learn about the Cuban system.[42] I was and continue to

be a part of them. Often, for understandable reasons, as *brigadistas* we don't have the opportunity to go off the beaten path. Early on during my travels across Cuba, participating in volunteer labor with Cubans and an international brigade on orange plantations in the province of Mayabeque, I became anxious to learn as much as possible about this socialist country. I never once questioned Cuba's right to self-determination free of U.S. government interference. As the Palestinians say, "existence is resistance." Still, I wondered: what are the experiences and critiques of those who live this reality and bear its consequences? Ignoring the rough edges of life in Cuba does not make them go away. Ignorance of them only disarms us as we seek to engage the diaspora, end the economic war and clearly scrutinize the next foreign attempt at a color revolution.

Visa para Un Sueño (A Visa for a Dream)[43]

On January 4, 2023 the U.S. embassy reopened its visa operations in Havana.[44] This was the first time the U.S. embassy had begun providing consular services since the wild, unproven[45] accusations that the Cubans were using sonic terrorism against embassy officials in 2017.[46] Those allegations came at a strategic time and were designed to interrupt the first potential thawing of relations between the two countries since 1958. Over 200,000 Cubans have been forced to leave their homeland in the past year and a half, a figure even larger than previous migrations such as the Marielitos and the 1994 "rafters."[47] While the mainstream media repeated the announcement of the reopening embassy and the alarming migration statistics, no outlet thought to examine

why hundreds of thousands of Cubans from the last two generations have been forced to leave their homeland.

A Track Record of Revolution, Solidarity and Internationalism

Sumy's parents' generation made the revolution. Sumy's generation benefited from the social transformation and fortified it.

The Cuban revolution represented a great unleashing of human energies and potential, much like the Chinese Revolution which was set in motion during the Long March of the 1930s. As Dr. Ana Ferrer's Pulitzer Prize-winning book *Cuba: An American History* demonstrates, this was a society in ferment: Cubans of all ages questioned orthodoxy, overthrew the old and reorganized. The conscious workers and peasants smashed the old repressive state apparatus. The new ruling class, with its roots in the humble sections of Cuba, combatted colonial-era dependency on the sugar mono-crop.[48] Massive literacy campaigns swept the countryside and the new Cuban leadership eliminated hunger. Health indicators began to resemble not those of downtrodden colonies but those of their well-heeled colonizer states. Radical agrarian reforms freed up land for hundreds of thousands of toiling families. Housing, transportation and health care became rights protected by the state. Cuba stood up and declared before the world — as the 1804 Haitian revolution had before it — "Never again shall a foreigner step foot on this soil as a master of our destiny."[49]

Cuba inspired billions of workers and peasants across Latin American and the world to rise up and overthrow the legacy of colonial underdevelopment. Half a million Cuban volunteers fought in Africa, the Middle East and South America shoulder to shoulder with the 'Wretched of the Earth,' in pursuit of Fanon's baptism.[50] Regardless of future events, the Cuban Revolution has forever proven that 'Yes, it can be done!' The despised, the silenced, the spat upon and

humiliated can rise up, reclaim and rewrite history. Never again can we be told that the reorganization of society is idealism and a pie in the sky at best. Despite all of the misinformation and demonization of Cuba, this can never be taken away. Cuba and the fact that it still stands on its own two dignified feet, is an ideological weapon of freedom in the closet of ammunition of those who fight for humanity.

My time in Haiti provided concrete proof of Cuban internationalism at work.

In the countryside of Haiti, besides Mormons completing their proselytizing requirements, what foreigners walk the unpenetrated mountains and overflowing shantytowns?

Deeper in the mountains, Cuban doctors treat and heal the Haitian people.[51] As readily as you can see Mormons and other colonial-style missionaries strutting in twos throughout the ghettos and villages of oppressed countries, Cuban doctors spread across the globe offering their humble services to humanity. Cuba offered doctors to New Orleans in the wake of Hurricane Katrina before the U.S. government did.[52] No other country has had such a consistent commitment to internationalism, earning Cuba a Nobel Peace Prize nomination for their efforts to help countries confront the COVID-19 epidemic. According to one estimate, Cuban doctors have treated close to 2 billion human beings since the revolution.[53]

Youth: The #1 Casualty of the Blockade

While Sumy and many from his generation are firm supporters of the revolution, the two generations that followed are less committed and ideologically stealed. A similar dynamic took place in the Soviet Union. The generation of 1917 fought the revolution and hundreds of thousands died in the 1917-1922 Civil War. The generation of WWII defeated the Nazis. 27,000,000 Soviets gave

their lives to defeat Hitler's extermination campaign. But by the 1970's, as Carlos Martinez writes in *The End of the Beginning: Lessons of the Soviet Collapse*, a sense of demoralization had set in among certain sectors of the Soviet population that was ultimately a factor in the restoration of capitalism.[54]

How many Cuban youth feel de-futurized today? How many teenagers and young adults pledge that they will not die in Cuba? It was as if they were taking an oath before the moon to cross the seas by any means necessary. At a Metallica-blaring nightclub, four Cuban rock-a-billies screamed to explain to me that their government "*son unos sing**s* (pieces of sh^t)."

The exasperation and determination is visceral.

A pack of hungry young men descended upon another group of teens in street clashes that were previously foreign to the backstreets of Centro Habana and La Habana Vieja. President Diaz Canel's administration feels the urgency. Earlier this year, for the first time they asked the United Nations for food support.[55]

When I defended the system with all of my reading and ideological training, I was the one who was sometimes laughed at and mocked. A young Rasta woman kicked me out of her apartment in front of her spliff-smoking crew, accusing me of working with the Cuban government to infiltrate her "non-ideological" Rasta subculture. Two doctors cracked up laughing, remarking sarcastically, "*Oh, este es un comunistón.*"[56] Family members would stop mid sentence completely perplexed by my accent and about my motives, wondering if I was some type of informant. Time and time again, I heard, "Oh you like socialism? Let's trade places."[57] Many youth of all skin tones asked me why I got to travel where I wanted to but they could not. Others cited the

56. "Oh look at the big bad real communist."

57. My individual experience in Havana is clearly colored and shaped by the fact that I am a white American male. My money is worth much more than the devalued Cuban currency and my blue passport ensures that I come and go at any time. I wonder how my experience might have been different if I were Black or from another South American country. One friend Rafaelito declared: "Coño I don't care if you're *chino* or *ecuatoriano*, I just need to get the hell out of here." Acquaintances and strangers asked me to marry a cousin or an aunt to help the family out. My identity as a white American opened up some doors and kept others shut. My command of Spanish and Cuban slang was an ice-breaker when Cubans first thought I was a European tourist. In some areas frequented by Europeans, no matter how well I articulate myself in Spanish, some Cubans continue to relate to me as though I could not understand a word of the language, playing charades with me. For them I was a *punto* (a tourist who can easily be

national poet Nicolás Guillen: ”Cuba es dulce por fuera, pero muy amarga por adentro,” (“Cuba is sweet on the outside, but very bitter on the inside”), insinuating that it was easy to love Cuba from afar but much more difficult to endure her inner reality on a daily basis.

There was no tale of the everyday struggles from the Bronx, New York or Opa Locka, Miami that could discourage them from wanting to migrate. Before a portrait of the exploitation and the accompanying human misery that exists in neo-colonies like El Salvador, Guatemala, or Colombia, Chano — a Yoruba *padrino* (godfather) — responded: “I can only hope the *yumas* (gringos) come and recolonize us.[58] Then I can be exploited all day in their sweatshops and at least earn 10 bucks that are worth something.” This is the material reality of scarcity imposed from without that has been the chief catalyst of Cuban’s frustrations and hopelessness.

It is useful to remember: “People make their own history, but they do not make it just as they please…but under circumstances directly encountered, given and transmitted from the past.”[59] The Cuban leadership continually points to the international economic pressure to explain the despair. The harsh reality, however, is that there is no explaining away “war communism.”[60] Until there are revolutionary breakthroughs elsewhere and a truly multipolar world, Cubans will be confined[61] to an existence of scarcity or what the

---

hustled). Others — deep into a conversation — stopped mid-sentence during their responses, asking me if I was *un periodista infiltrado* (an undercover journalist), collecting information for the government. Several Cubans accused the state of employing foreign spies and told others to be careful with their responses. Confidants made me promise not to divulge their responses to sensitive questions. Other families lost in both the revelry and polemic shouted out every last insult against their government. Some people shared family member’s sea-odysseys to Miami openly on the bus. This contrasted sharply with one friend Juan who became offended by my privately prodding into the opportunities to take *balsas* (rafts or boats) to Florida. He yelled at me, “Mira gringo while you continue to enjoy yourself prancing around Cuba, I will be locked up in El Combinado del Este (Havana’s largest jail) just for talking to you about this.” He didn’t want to field a question that could raise the suspicions of those around him. Hundreds of pages of notes dating back to 1995 capture these illuminating anecdotes.

58. Gringos or Americans. The word *Yuma* comes from the Clint Walker 1971 Western movie by this title.

59. Karl Marx. The Eighteenth Brumaire of Louis Bonapart, 1852.

60. The Bolsheviks describe the extreme rationing methods and centralization of production during the 1917-1922 Russian Civil War as “war communism.” Vladimir Lenin described the desperate struggle for survival of the fledgling Soviet worker’s state when it was surrounded and under attack by the tsarist white army and 14 different imperialist armies. Hundreds of thousands of Bolsheviks and Red Army soldiers died in defense of their revolution.

61. Gabriel Rockhill, “Understanding Siege Socialism with Gabriel Rockhill,” December 21, 2024, posted July 9, 2024, by Critical Theory Workshop, YouTube, 1:02:35, https://www.youtube.com/watch?v=9NlaRTu9wdk.

highly-censored Parenti called “Siege Socialism.”[62] In the words of one mother and communist militant in Marianao: “The new generation has only lived in a period of sacrifice and more sacrifice. They don't remember the struggle against Batista nor the first decade of the revolution, with those marvelous debates and experiments we had at that time. They only know austerity.”

The Cuban Communist Party (PCC): Doing the Impossible

The Cuban leadership, seasoned by six decades of successful resistance and growth, is searching for a response to the hybrid war and its impact on morale. They respond as any fighter who is fighting above their weight does, aggressively and desperately. Multipolarity is their strategy to break the blockade.

President Diaz-Canel visited Iran to discuss mutually-beneficial ways to break the embargoes.[63] The Deputy President Salvador Valdés Mesa recently returned from a visit to South Africa to strengthen diplomatic and economic ties.[64] On May 9th, which was the 79th anniversary of the Soviet Day of Victory over Fascism, arguably the most important holiday the world has, the Cuban president celebrated with Vladimir Putin in the Grand Kremlin Palace. Cuba hosted a fleet of Russian warships in its harbors, just 500 miles from nuclear-powered U.S. attack submarines which continue to occupy Guantanamo Bay.[65]

Visits back and forth between Xi Jinping and his Cuban counterpart shows Cuba’s resolve to build up their own Chinese style competitive state companies that operate internationally and seek to find a cure for the food shortages. Cuba

hosted the Group of 77 last year, the largest international organization after the United Nations itself.[66] 134 countries, or 80 percent of the world population, are currently represented in the now misnamed "Group of 77." From Havana, chairman of the Group of 77, Diaz-Canel, insisted: "After all this time that the North has organized the world according to its interests, it is now up to the South to change the rules of the game."[67] Cuba, along with 34 other countries, has applied for membership in BRICS. The addition of Saudi Arabia, Egypt, Ethiopia, the United Arab Emirates, Iran and Argentina (contested by the new president Milei) at the beginning of 2024, means the BRICS bloc nations now constitute 42% of the world's population and account for 23% of gross domestic product and 18% of global trade.[68] Cuba's future does not run through Wall Street or the Beltway, it runs through Moscow, Beijing, Caracas, Tehran, Johannesburg and the other burgeoning centers of multipolarity.

Cuba is no longer an isolated moral compass standing on its own like it was in 1991. It is now a small but barrelling wave in the rising tide of multipolarity.

Since January 1st, 1959, Cuba has stood up to "economic terrorism" from the United States and Western European countries, "which affects a third of humanity with more than 8,000 specific sanctions in 39 countries."[69] There is a reason Fidel Castro and Hugo Chavez were not just the most popular leaders in their homelands, they were the most popular leaders throughout the Global South. Last month, on June 20th, South Africa commemorated the 2,000 Cuban soldiers who gave their lives to Africa's liberation wars in the 1960's, '70's and '80's.[70] Wherever there is a Goliath, Cuba recognizes David.

Washington lives in panic. Last year, 12 South American heads of state gathered in Brasilia to reignite La Unión de Naciones Suramericanas (UNASUR).[71] This is the second iteration of the Pink Tide, on the 201st

anniversary of the Monroe Doctrine, building greater economic, political, diplomatic and military integration and unity among the nations of the Caribbean and South America. These multipolar regional and global developments could not occur soon enough for Cuba and Venezuela, the two nations most impacted by Washington's unilateral economic wars. Despite the red-baiting and Cold War 2.0 rhetoric against Caracas and Havana, the peoples of the continent are finally interrupting Washington's domination of a hemisphere they have long treated as their backyard.

One of Cuba's biggest enemies, incoming Secretary of State Marco Rubio, has warned of the multipolar world on the horizon.[72] Alarmed by Brazilian President Lula's multipolar instincts and his visits to Beijing and beyond, the right-wing Florida senator appeared anxious on Fox News: "We won't have to talk about sanctions in five years because there'll be so many countries transacting in currencies other than the dollar that we won't have the ability to sanction them." Could the "sanction inability" theory, as the Chinese *Global Times* calls it, spell relief for the Cuban people or is it too late?

The economist, theorist and writer Ernesto "Che" Guevara wrote "Be realistic, demand the impossible!" This slogan captures the mentality of the Minister of Foreign Affairs Bruno Rodríguez Parrilla and other *dirigentes* (leaders). Cuban local and national leadership has found a way to endure the mightiest of hurricanes, U.S. imperialism. The scorn they inspire in the stenographers of the Miami Herald as well as the lies from the Trumps and Bidens is the surest proof that Cuba continues to inspire the underdogs of the world.

The Special Period Never Ended

Unfortunately for Cubans, you cannot yet feed your children nor fuel your cars with multipolarity. Capitalism demands instant gratification. And capitalism knows how to prey upon the alienation and impetuosity of youth.

The verb *luchar* captures a shift in this generation's mindset. It has multiple meanings mostly associated with struggle and its historic use contrasts with

where the national liberation struggle is at today. *Luchar* today in street slang means "to hustle, to get by, to survive." *Luchar* embodies the everyday struggle in Havana to push ahead as one can, inventing whatever hustle to gain access to dollars or euros. This is in sharp contrast to the parents of the hustlers and survivors who learned to have a revolutionary outlook of self-sacrifice and to maintain a fighting optimism. Early in the revolution, a strong economic base produced an inspiring infrastructure – cinema, billboards, art, murals, national demonstrations, olympic gold medalists, etc.[73] The long lines, unmotivated workers and dilapidated state of the world famous ice cream parlor Coppelia, whose construction was overseen by the guerrilla Celia Sanchez, mocked the booming success of the Castro establishment from decades past.[74] Too many mothers commiserate with one another that they long for the years when Cubans could do more than survive, they could live.

The special period began at the end of 1990 when Cuba's economy was brought to a virtual standstill with the fall of the Socialist camp. Only 12 to 15 percent of industrial capacity still functioned. Foreign trade fell by 70 percent.[75] This staggering loss of productive capacity was Cuba's very own Great Depression. While there were partial recoveries and adjustments of the economy, the hard times continued. The National Library of Medicine characterized the period as a famine, documenting how Cubans on average lost an average of 5 to 20 percent of their body weight.[76] Sumy and his contemporaries saw all of this as the next wave of attempts to overthrow the revolution. The indomitable generation kept their hands up, heads down, bobbing and weaving through every U.S. attempt at sabotage, punching forward with an enormous spirit of self-sacrifice. All of humanity is indebted to them for holding the banner of socialism and resistance high in the most difficult moments. Due to the drastically different material and geopolitical reality, how can this generation shoulder such a historic responsibility with equal enthusiasm? Many want out.

They say that they never signed up for this. They provide the fertile soil for the next San Isidro-like color revolution attempt.

Any contact with a foreigner from a rich country meant potential access to consumer goods and foreign money worth 20 to 150 times the local currency. Plato must have been writing about the Cuban people when he said "necessity is the mother of invention." Havana is home to every hustle imaginable to survive the realities of an enclosed world. At the same time, these dynamics of inequality encompass a neo-dependency on foreigners.

Cubans call sex work or prostitution, *jineterismo*. A *jinete* is a jockey. *Jineterismo*, literally translated, is the art of riding the horse. The horse is the foreigner. The *jineteras* are concentrated in the tourist districts of Centro Habana, Vieja Habana, El Vedado and Playa. There was none of this activity, in what would be called the outer boroughs in New York City, because there were no tourists visiting those areas. In the periphery of Havana, there are few non-Cubans. A *jinetera* may live in Guanabacoa or La Lisa, which is a half hour bus ride from Central Havana, but they made the daily trek from their neighborhood to *jinetiar* downtown where the money is. One grandmother whose 25-year-old grandson working informally as a *jinete* shrugged her shoulders and said: "We have to live somehow." A neighborhood colleague chimed in: "This is a job like any job. Here we respect the *jineteros*. It is normal. We do what we have to." A Cuban philosopher took a deep breath and remarked: "*El jineterismo* is a stark reality that we don't like talking about. But it's true and rooted in the blockade."

Alexis is a poet and teacher from Alamar who lived with his wife and children. He met an American woman who came with an international delegation and dated her. He periodically left his home for a week or two at a time to "work" with this American woman. His wife was aware of his actions and seemingly understood that it was necessary. The blockade challenges everything from the traditional Cuban family structure to notions of sexuality. Alexis' wife Maria understood that he was going out with and sleeping with another woman in hopes that he could travel and perhaps one day send for her and the children to join him. Maria responded with a certain sense of dejection and resignation. As the *cristales* (popular Cuban beer) poured themselves, I asked curiously between laughs and sighs what these types of sacrifices meant for her. She responded: *"Hacer que, mi hijo?"* (What else can we do, my son?) Within these one-on-one conversations or exchanges with a group of a dozen people just hanging out on a porch, there were other Cuban women who declared,

"F*ck that. There are other ways to struggle forward without opening your legs to a foreigner." As anyone who has spent a significant amount of time in Havana knows, these debates often spilled over into community discussions and polemics where no one was too shy to offer their two cents.

For some Habaneros who are *luchando*, any tourist is a "*punto*." This is slang for "a target" or a point of attraction because of the access they represent. Several Cubans married representatives from solidarity groups While one participant in the marriage naively embraced it as a bond never to be broken, the Cuban participant often "hustled" to find their way out to achieve economic opportunities elsewhere that would enable them to send money back to their family. Clearly, not every marriage between a Cuban and a foreigner was built upon an economic necessity, but there were enough to make note of this practice. Other Cubans hustle in the tourist economy in order to consume the latest fashions and cellular telephones. Some youth sought hard cash to survive, others to look good and consume like their first-world counterparts. Youth leaders in the *Unión de Jóvenes Comunistas* (UJC, Union of Young Communists) expressed concern over the explosion of materialism among their youth counterparts. They swore up and down, shadowboxing in the "Memories of Underdevelopment," that Fidel would have confronted this humiliation head on and somehow magically whisked it away.[77]

One artist shared this quip to make his point about the disconnect between the PCC (the Cuban Communist Party) and this generation of youth: "They asked a young girl in my neighborhood, Habana del Este, what she wants to be when she grows up. She responded: "a *yuma*, meaning a foreigner."

Some of the artists and cultural activists I went to poetry and hip hop shows with in 2001 went on to form the leadership of the San Isidro movement. Like the *damas blancas* "movement" (the women dressed in white) and MSNBC's perennial "Cuban political prisoners," the 2021 San Isidro protests became the darlings of both the Republican and Democratic wings of the U.S. media establishment. These talented poets and hip hop artists had contacts with think tanks and NGO's who were able to provide them with money, prominent social media attention and a prized possession in Cuba, visas. I visited the Omni Zonafranca artists in D.C. and New Orleans in 2012 when they were on tour, hosted by different U.S. academics and NGOs.[78] Charming, intelligent and

captivating, it was tough not to fall in love with these artists, who always claimed to be "non-ideological." One couple exclaimed that they had started "Occupy Cuba" in order to take buildings back from the government. This was an interesting idea in a country where 85 percent of people own their own homes.[79] Afro-Cuban youth and cultural workers are the perfect weapon for intersectional imperialism and its aim of regime change.[80]

A City without Ghettos

As any Cuban will tell you, "*esto está complicado*" (This is complicated). The economic situation is dire. Long lines and packed public buses characterize the public transportation experience. Havana's roofs and ceilings are caving in. Infrastructure is crumbling.

Poverty is different in Havana because it does not stand in stark contrast to great wealth. Locals often warned me: *"Oh no. Don't head that way!" "Stay away from there! That is a rough area. You'd have to be crazy to go there."* One elderly woman told me *"No, don't go to Alamar. There are some real elementos over there."*[81] Other contacts laughed *"No te metes alli en Lumumba (Arroyo Naranjo) que estos negros te van a volar encima."*[82] As I kept walking, never was there anything dramatically different from the fear-mongers' own neighborhoods. In fact, I often stumbled upon new friends who offered equally dire warnings about the neighborhoods I had just come from.

There is some social differentiation but it is fantastically less than in a capitalist country. Inequality has risen since the initiation of market reforms in 2010. The blockade and opening up to tourism introduced economic contradictions that are now part and parcel of the Cuban reality. Some small businesses have had great success, resulting in new class contradictions that did not exist prior to 1991. Families with loved ones in Miami had a better chance at capitalizing on these economic opportunities; millions of others were left to fend for themselves.

81. Elementos could be translated here as shady or suspicious people and veiled language implying there were dark-skinned Cubans who lived there.

82. "Don't go to the neighborhood of Lumumba. Those Black people there will jump you."

There is no homelessness as we know it in the West and housing is a human right guaranteed by the constitution. One might find a mentally ill person or an alcoholic wandering the streets in a very bad place. These are isolated cases and there is support for them. La Fundación Fernando Ortiz published an ethnographic study that explains their findings on this topic.[83] There is no such thing as a child begging or roaming the city barefoot and hungry. I contrasted this with my experiences living in Rio de Janeiro, Port-au-Prince, Praia and Santo Domingo, among other cities in the formerly colonized world, where I saw extreme misery and humiliation. Havana is something quite different and even shocking to those who have never visited.

There are substandard housing structures called "*los llega y pon*" (the "arrive and puts"), in reference to the makeshift shacks that internal migrants build when they arrive in the capital. They are in the outskirts of Marianao, San Miguel de Padrón and other municipalities. Built from cardboard, wood, palm leaves and zinc, these structures are temporary living quarters for families from the interior of Cuba where the material scarcity is more intense than in Havana. Over the course of decades, hundreds of thousands of families saved up money to try to move to the big city. According to one resident of Marianao, "trying to build a sustainable house has been an odyssey for us."

Every street is a paved street. It is only here in the back alleys where the *Palestinos* live that you find the famed *callejones* (alleyways) so feared in the Global South. *Palestinos* is everyday slang for people who migrate to Havana from the Oriental provinces. Like the Palestinian people, they search for survival in a land that is no longer their own. But the reality of the internal migrants is clearly not as intense as that of the indigenous people of the Middle East who continue to fight for their right to exist in their own land.

As Western newspapers love to showcase, the deterioration of homes is a major problem in Havana Vieja and Centro Havana. Ceilings and walls often collapse. Communities don't have access to concrete and the building materials needed to upgrade their homes. Children innocently play in the streets, seemingly unaware of a certain grayness or demoralization that has taken root in those old enough to understand the tedious matters of infrastructure. Pickpocketing and other petty crimes in Centro Habana and on the buses has become more of an issue. Talking or texting on your cellphone at the wrong moment in the wrong place can result in petty theft.

83. Fundación Fernando Ortiz. *Cuba Etnográfica*. Havana. 2012.

A Tale of Two Cities

While Havana has no slums as we would define them in the U.S., the hotels and private neighborhoods clearly represent a different world. The tourist economy is a central part of Havana's reality. Habana Libre hotel, Hotel Nacional and a host of other hotels that dot the *malecon* (the ocean front) are the tallest and newest buildings in Havana.[84] A night at one of these hotels costs anywhere from $300 to $1,000 dollars for the fanciest VIP suite.[85] The official government exchange rate is 25.75 pesos per dollar.[86] If a Cuban worker earns tips or any income in dollars, they often post in a WhatsApp chat group to see if anyone can exchange it for them for pesos.

The Soviet Union and Cuba exchanged oil for sugar. The number one oil-producing country in the world at the time did something unthinkable under capitalist trade relations – they engaged in the barter system. Today there are gas shortages. Nostalgic but still pushing forward, the Cubans tried turning to a new source of income.[87]

With the fall of king sugar, the PCC saw tourism as the new cash crop. The tourist industry was on the march in the 1990s and into the new millennium, peaking in 2018 with 4,712,000 visitors. Then the pandemic happened. The bottom fell out of Cuba's largest industry, precipitously dropping to 1,086,000 visitors in 2020.[88] This was the perfect recipe for economic disaster and hunger. Fewer tourists meant fewer dollars and euros. In a world of dollar and euro

---

84. I could tap into my national and skin privilege in the small tourist enclaves. I breached hotel security if I pretended not to speak Spanish. Who dared question whether or not I belonged there? When I was accompanied by Cuban friends, we did not even make it past the elevator without a suited security guard asking for our hotel keys as proof that we were staying there. No Cuban liked this reality. All of society was bearing the sacrifice together.

85. Up until the pandemic, there were two currencies in Cuba. The CUC was the Cuban equivalent of the dollar. $100 US dollars fetched $85 C.U.C., the convertible Cuban peso. Cubans "illegally" exchanged money on the black market, where one hundred U.S. dollars was exchanged for $90 C.U.C. The everyday people's money, the Cuban peso, had very little value. $1 dollar was worth 175 pesos. This mean only access to foreign currency allowed one to buy most consumer products at special CUC stores. Cuba eliminated the two currency system during the pandemic.

supremacy, Cuba cannot use its peso to buy food, medicine, machinery, spare parts or imports on the international market. Can the Cuban government be blamed for this monetary war? Similar to the lively debates around the sugar mono-crop economy in the 1970's, there was a discourse that putting all the eggs within the basket of the tourist economy was unsustainable.

A cashier or waitress earns roughly 3,000 pesos monthly, or $15 U.S. dollars. The Cuban people earn in a currency that has very little value when compared to the dollar. This is the fiscal reality that forces a doctor or an Angolan Liberation War veteran to moonlight as a taxi driver. A doctor can potentially earn her monthly salary driving one night for tourists.

The manipulation of a people's currency is as much a psychological as an economic weapon of war.

Yoselin is a 53-year-old nurse whose children are grown. Her husband passed away from a stroke and she cares for her mother. She earns 6,000 pesos ($17.14) per month working Monday through Friday from 8 A.M. until 6 P.M. Beyond the subsidized food she receives, she has a series of economic decisions to make. A pair of shoes costs more than a month's salary, somewhere between 5000 and 20,000 pesos. A pocketbook costs 3000 to 5000 pesos. Yoselin clarified that these are not brand name products. I asked her about name brands. "No. We can't. Those are beyond our reach." She continued outlining the cost of everyday items. Jeans, 3000. A dress, 4000. Hair dye, 800. Shampoo, 800. Hair conditioner, 800. Perfume or cologne costs 4000 pesos, or 10 times more expensive if it is a fancy brand. Deodorant is 500 pesos or roughly two or three days of work. Fish is 500 to 600 pesos per pound. These items have long been luxuries in Cuba.

As Yoselín explained and re-explained all of this to me I got dizzy. She chuckled: "You think you're dizzy? Imagine us, living this situation day after day, year after year. What about my patients? We medical workers have to be artists to get them enough food to heal. There is no medicine or syringes. We get two pens per month. They [the U.S. government] are asphyxiating us!" She showed me her refrigerator and an old computer she had been saving up for years to fix. She then asked me rhetorically: "Why do you think we love Russia? We can eat bread and pizza thanks to Putin. We'd be starving if it wasn't for Russia. Russia has sent 6 million rubles worth of wheat to Cuba."

The Russian government sent 20,000 tons of wheat to Cuba in April of 2023. Russia postponed all Cuban debts until 2027.[89]

While Cuba attracts a unique brand of leftist tourists several times a year, who arrive in solidarity with the revolution, a high percentage of tourists are of the traditional sort. Most Europeans and Canadians have no interest in how Cuban people live. To them, Havana may as well be Cancún or Aruba. They come for the everyday clichés described in the tourist's brochures: rum, beaches, tobacco, entertainment and exotic Cubans.

While recognizing the social benefits the revolution had established, many workers — alluding to the tourist scene — see no difference from the struggles of their family members before the revolution. The inequality is in their face. They express that the humiliation and dependency is the same. The foreigner enjoys the Cuba that Cubans cannot. The nightlife around these hotels and at the famous resorts of the Varadero Beach — an hour and a half outside of Havana — reflect the old colonial dynamic. Cubans — half-clad and "exoticized" — put together elaborate shows and dance for the enjoyment of the *yumas* who sipp their cocktails. This form of tourism reflects a neo-colony relationship. Many Habanaeros feel trapped and resentful as they navigate dependency, love and hate before tourists and their coveted dollars and euros.

The elected leadership understands the duality of the tourist industry in that it brings in much-needed dollars and euros but also brings with it a host of social ills. The profits derived from the hotels are poured back into the economy in the form of medicine, hospitals, transportation and whatever else the population needs. Cubans see tourism as a retreat, but a necessary one to adapt and survive in a hostile capitalist-dominated world.

Cuban state companies work with European capital to fetch foreign currency, especially through tourism. The Cuban leadership, unlike the post-Mao Chinese leadership, has not fully embraced "market socialism." Reforms under Presidents Raul Castro and Miguel Diaz-Canel are concessions, a necessary retreat to gather more strength. It was a 'bend but don't break' strategy.

---

89. Successful Farming. 2023. "Russia Donates 25,000 Tonnes of Wheat to Ally Cuba as Ties Deepen."
Successful Farming. 2023. https://www.agriculture.com/markets/newswire/russia-donates-25000-tonnes-of-wheat-to-ally-cuba-as-ties-deepen.

The population is divided. Some everyday people ask out loud: "what is the difference between the Havana of today and that of 1958?" Others understand this is the War on Cuba in motion.[90]

The End of Rations?

Critics rush to judge and accuse Cuba of being trapped in a time warp. But why are they silent about the reality of 500 plus years of savage theft and pillaging and 65 years of crippling sanctions meant to bring Cuba to its knees?[91]

Before the aggravated crisis that began last year, every month, each member of a household in Cuba received the following centralized subsidies guaranteed from the government.

- 7 pounds of rice (it often arrives late)
- 10 ounces chickpeas and sometimes 10 ounces of black beans
- 1 pound of cooking oil every 2 months
- 1 kg of salt every 4 months
- 1 lb. of white sugar
- 2 lb. brown sugar
- 115 grams of coffee
- 1 bar of soap
- 1 bar of soap for every child, senior citizen, or sick person
- 80 grams of bread
- 7 eggs

90. Belly of the Beast Cuba. 2020. "The War on Cuba — Episode 2 - YouTube." Www.youtube.com. 2020. https://www.youtube.com/watch?v=61hYxh9x61Y.

91. Swelling up with emotion, Cuban Americans in Miami cried to me about "how miserable and hungry children were in Cuba." They rattled off the usual clichés from *The Wall Street Journal* and the *New York Times*. Considering Cuba is a country that has dedicated itself to overcoming historical underdevelopment and there are no children with distended bellies full of parasites like so many countries in the Caribbean, I wondered if they really believed what they propagated.

- 1 lb. of chicken but there has been none since May
- 2 lbs of bologna or mixed, blended meat (*picadillo o mortadela*) to replace the lack of chicken
- Tobacco as needed
- 1 toothpaste for 1 to 3 people every four months

The capitalist press refers to these subsidies as "rations," conveniently ignoring what creates the need to ration in the first place. This "*canasta básica*" (basic basket) is what every Cuban receives every month. If a family wants fruit, vegetables, or anything beyond *la libreta* (the ration book), it is up to your own individual spending ability. Families told me about the creative artform it was to stretch such a meager amount of food for the entire month. For example, families saved up extra eggs for New Years Eve in order to be able to give their children some type of treat that night. "We cannot provide what is required for those with diabetes and other sick people," one nurse informed.

Children under seven also receive:

- 1/2 kg of milk/ children between 7 and 14, one bottle of yogurt
- 10 containers of baby food
- 1 pound of beef

The war on the Cuban state is synonymous with the squeezing and harsh punishment of the Cuban people. What was once proof of how the Cuban model of equality worked, has now for the most part been cut. Many Cubans my age and older say this is worse than the 1990's.

In the historical sense of underdevelopment, Cuba is no different than other Caribbean islands. If visas were suddenly granted to all, a high percentage of youth and citizens from the Dominican Republic, Jamaica, or Trinidad would leave in order to roll the dice in Miami, New York, Montreal, Barcelona and the other metropolises. This has little to do with the Cuban mode of production and everything to do with five hundred years of unequal development and Cuba's daring to resist imperialism.

Dwarfing Cuba's Potential and Cultivating the Counterrevolution

Ernesto “Che” Guevara studied the concept of underdevelopment as he grew to understand the realities of the Third World. In his article, “Cuba: Historical Exception or Vanguard in the Anticolonial Struggle?” (1961), Che asked: “What is 'underdevelopment'? A dwarf with an enormous head and swollen chest is 'underdeveloped,' insofar as his fragile legs and short arms do not match the rest of his anatomy. He is the product of an abnormal and distorted development. That is what we are in reality — we, who are politely referred to as 'underdeveloped.' In truth, we are colonial, semicolonial or dependent countries, whose economies have been deformed by imperialism, which has peculiarly developed only those branches of industry or agriculture needed to complement its own complex economy.”[92]

Guevara was studying the effects of neocolonial exploitation. Today, Cuba is the very dwarf Guevara described, but for a different reason, the impermeable U.S. economic and military blockade. A thorough understanding of the horrific effects of this undeclared U.S. war is necessary. These conditions result in precisely what the writers of these policies intended: hunger, hopelessness and chaos. Walking, conversing and staying in Arrollo Naranjo, La Lisa, Guanabo or any other neighborhood of Havana is to witness the blockade in action.

Recalcitrant cold warriors in Miami and New Jersey from both sides of the aisle work overtime to tighten the economic war and asphyxiate Cuba’s people.[93] Informed by their intelligence services, chief policy makers target the most marginalized populations to carry out their regime-change agenda. This was what we saw play out on July 11, 2021. As Cuban-American scholar Carlos Garrido analyzed for *Covert Action Magazine*, their objective is to fund and provoke an island-wide anti-government uprising and then highlight the heavy hand of the Cuban state to justify the next step of their regime-change operations.

The foreign policy establishment in Washington is divided over its approaches to Cuba: further isolation or a renewed commitment to penetration?

---

92. Ernesto Guevara. *Socialism and Man in Cuba*. 1965: Ocean Press.

93. Garrido, Carlos L. “Anti-Government Protests in Cuba Provoked by U.S. Embargo Has Right-Wingers Salivating at the Prospect of Regime Change - CovertAction Magazine.” CovertAction Magazine - Exposing Covert Action Since 1978, August 12, 2021. https://covertactionmagazine.com/2021/08/12/anti-government-protests-in-cuba-provoked-by-u-s-embargo-has-right-wingers-salivating-at-the-prospect-of-regime-change/.

The *Helms-Burton Act* is, "a United States federal law that contains provisions that prevent foreign countries from engaging in international trade with Cuba by subjecting foreign nationals to travel restrictions and financial liabilities in the United States by punishing the banks and companies of other countries that do business with Cuba."[94] Freights or cargo bound for Cuba cannot stay in U.S. ports or pass through the Panama canal or those counties will be targeted by U.S. sanctions. The magazine *Science for the People* rigorously analyzes what these unilateral laws mean for the Cuban masses and their inability to access medicine.

Let's look at one example of how this all plays out. The U.S. Office of Foreign Assets Control fined the German bank Commerzbank millions of dollars for doing business with Cuba between 2005 and 2007.[95] The U.S. Treasury and Justice Departments, the U.S. Federal Reserve and the New York City Department of Financial Services collected millions of dollars from the bank as punishment. Where did this money go?

In contrast to D.C. and Miami's hard-liners, the forces behind Obama sought a backdoor approach to recolonization.[96] Obama was respected in Cuba. Families were surprised a Black man could become the CEO of such a racist, class-stratified society. Cuban leadership, while open to a detente, warned that Obama was no friend. The 44th president represented the liberal wing of the ruling class who saw capital penetration as one of the many weapons, while still occupying Guantanamo, still imposing a crippling blockade and continuing to engage in covert regime change actions. Western Union, American Airlines, the Cruise ship industry, AT&T among a slew of investors drooled over this market of 11,000,000 off Florida's shore. In times of Woke Imperialism, this was the Trojan Horse strategy and Obama had the perfect complexion and smile for it. On January 12th, speaking for some of these interests, the *New York Times* even listed Cuba as one of their 52 places to travel in 2023.[97] While short-lived, the thaw gave Cuba some much needed breathing room and

conditions on the island improved. Some friends even told me that with the potential thaw in Obama's last year in power, the leadership did not maintain the revolutionary billboards that had formed the background of everyone's pictures in Cuba for decades.

In the wake of the collapse of the socialist camp from 1989-1991, U.S. imperialism successfully isolated Cuba. On the other hand, capital from Spain, Italy, Mexico, Canada and beyond inserted itself into Cuba to make profits off tourism, construction and other industries.

The U.S.'s isolation of Cuba interrupted the ideological and economic dynamism of decades past.

As of 1989, Cuba was the most advanced society in Latin America in many respects. Today, everyone over 40 years of age longs for the decades prior to 1990 when there was a preponderance of food, consumer goods, a strong Cuban peso and an optimistic energy. Youth in Havana today largely feel disconnected from the process. For many, it seems the headlines of *Granma* and *Juventud Rebelde,* the official organs of the PCC and the Union of Youth Communists mean little. The director of Havana del Este's Cultural Center and participant in the San Isidro movement exclaimed that less than 25% of young people today identify with any of the leaders of the Cuban revolution. Others hold the view that Fidel, Raul and Miguel Diaz-Canel stand by their convictions and are not to blame. One metaphor often cited was from the NED-funded rap group Los Aldeanos: "our problem is not with the captain but with the ship's staff."[98] There is a perception that a mid-level bureaucracy has developed under the aging veteran leadership which intentionally deceived the people about the actual state of affairs in the streets of Havana.[99] While groups like Los Aldeanos became State Department assets, their lyrics speak to some of the real talk that is occurring in certain sectors of the population.

Are there really high rates of corruption in Cuba? I do not see proof of bureaucrats with mansions, fancy cars and Swiss bank accounts. Surely if a lower-level employee at a bakery or butchery siphons off some merchandise to get by, those with more economic access will have their petty hustles as well. This maneuvering has little to do with the "inevitability of absolute power

98. Fernando Ravsberg. *Havana Times*. "Are USAID's Dirty Tricks Over in Cuba?" Dec 26, 2014.

corrupting people" and more to do with the human quest to make everyday living easier. The capitalist cliché of greedy human nature is a convenient way of explaining away inequality before the downtrodden even dare to rebel.

"The second economy," commonly known as "the black market," is a necessity for families to get by, but there is still a high degree of discipline and selflessness among everyday people. However, from the perspective of a fellow Cuban who sees what they perceive to be functionaries living across town in Playa or El Vedado with slightly more access to consumer goods and travel, this can be irritating and provokes resentment.

A Step Back in order to Advance

In 2010, Raul Castro introduced market reforms that Cuba's detractors hoped were a harbinger for Cuba's transformation back to a capitalist economy. Out of necessity, the state had to lay off 500,000 workers and made some cuts to the *libreta de abesticimiento* (the family ration book that every family has in their home). Due to shortages deliberately caused by the intensification of the trade embargo, Cuba's inflation rate is an astronomical 39.1%. Financial blockades are designed to generate perilous inflation rates.[100] Other blockaded countries fare even worse: Venezuela's inflation rate is currently 250% and Zimbabwe's rate last year peaked at 667%.[101] In Cuba, one dollar is worth 315 pesos and a euro is worth 320 pesos. Access to dollars is the only way many people can eat. They can access the private Micro and Small Enterprises stores (MYPIMES) which sell food and other products at prices pegged to the dollar and euro. This means that to buy a pound of chicken in "the free market," a Cuban will spend up to 20 percent of their monthly salary. For two weeks of milk, they may spend two weeks of their salary. Many PCC vets say this is their worst economic moment yet. One community leader told me: "We don't have medication. I am a diabetic. We just keep losing weight. Look at these 25 pounds I have lost. Carlos Lazo's Bridges of Love (Puentes de Amor) program helps us but it is not enough."[102]

102. Carlos Lazo. "Puentes de Amor llama a caravana internacional contra el bloqueo este domingo". *Cubadebate.* 31 marzo 2024. http://www.cubadebate.cu/etiqueta/carlos-lazo/

How did everyday families experience this at the time of the reforms? The rations of coffee, eggs, rice, beans and other staples were cut back. Only pregnant women or the very sick received any beef. Rumors swirled that this was the end of *la libreta,* that is food subsidies, a lifeline for so many. At the PCC Congress in 2011, the elected leadership took one step back in order to take two steps forward. They were forced to open the island to foreign economic profiteering. Raul was depicted as a pragmatist, willing to work with foreign capital, whereas Fidel was understood to be a patriot who would not budge an inch. Cubans argued about which model was better.[103]

The Secretary of the Communist Party of Cuba Miguel Diaz-Canel represents a continuation of these policies. Diaz-Canel, who rose up through the ranks of the PCC became president in 2021, inheriting a Cuba up against the twin challenges of the blockade and the pandemic. Many Cubans see him as the continuation of principled leadership; others are indifferent.

Communism is based on the idea of providing enough for everyone and moving towards creating abundance for all. Of little comfort are these ideas when Hans, a 21 year-old aspiring body-builder, is trying to gain muscle mass on a nutritionally-empty diet of bread, rice, plantains and a scant amount of meat. As we have seen, the U.S. war of aggression is both subtle and at times an all-encompassing psychological and economic war.

The tried and true tactic of creating exhaustion within a restive population has been employed against the Sandinistas, the FMLN, the Southern African liberation movements, Iran and many other nations who have dared to stand up to the U.S.'s unipolar designs. Syria just fell because of a long, dirty, imperialist war. There is no free communism, developing with the solidarity and blessing of the world powers. Again, this is "war communism." Economic asphyxiation serves the U.S.'s objectives. But if they are not eating well in the neighborhoods of Arroyo Naranjo and Marianao, this is the reality in Regla and Playa as well. These are four municipalities on opposite sides of Havana which before 1959 represented the class and racial extremes in Havana. Some segments of the population, war-wary, battered and beaten down like a boxer in the 12th round who has had enough, are ready to submit. Cuba, a veteran of so many grueling heavy-weight fights, continues to adapt and push through the most challenging of times wondering out loud as so many families have expressed, "How much more of this can we take? Something has to give."

---

103. Carlos Martinez. *The End of the Beginning: Lessons of the Soviet Collapse* LeftWord Books: 2019.

Activist and musician Carlos Martinez's *The End of the Beginning: Lessons of the Soviet Collapse* is necessary reading for all defenders of Cuba and other workers' states. Martinez plots the historical timeline behind the 1991 coup that culminated in the end of the 1917 Russian Revolution.[104] His research speaks to the challenges the Soviet leadership were up against in the final years of the USSR, much of which is all too relevant to Cuba today.

The Battle of Ideas

Fidel Castro highlighted the centrality of the ideological struggle, the showdown for the heart and soul of a people.[105]

On the 66th anniversary of the earth-shaking, watershed Cuban Revolution, it is important to critically assess who is winning the war of ideas in Cuba.[106] Many *Habaneros* urged me to tell their stories because they sense there is an over-glorification of Cuba's reality by Western leftist tourists and solidarity activists. Many told me something has to give. Either the expanded BRICS nations will incorporate Cuba into their multipolar economic, political and diplomatic expansion or the vultures will finish Cuba off. There is no in between.

Cuba's fight resembles the boxing career of Mohammed Ali. For the first three decades, the revolution was youthful, sharp, bold and invincible. Sumy's generation fought for Angola, sent 4,000 internationalists soldiers to Syria in 1973 to fight Zionism and stood with Grenada and the Sandinistas.[107] They admired and emulated the heroes of the revolution. This generation faces hunger, despair and isolation. With the collapse of the anti-capitalist rival pole of the Cold War era, Cuba has been left to fight on its own. Multipolarity is on the rise but as the Israeli-U.S.-Western genocide in Gaza and the temporary defeat of the Axis of Resistance shows, humanity is still years or perhaps

Philosophical Collaboration of Social Christians and Communists during the Cold War

Toby Terrar[1]

This article is about the philosophical collaboration of the social Christians who took the side of the communists during the cold war.[2] By collaboration they meant learning from and helping the communists, and vice versa. They argued their philosophy conformed both to the church's teachings and to Marxism. Their philosophy was dialectical materialism.

---

1. Toby Terrar is a member of the National Lawyers Guild and practices in Washington DC. His non-paying job is writing about legal and religious history. He received his J.D. at Georgetown University and his M.A. and Ph.D. at the University of California at Los Angeles.

2. The term "social Christian" was used by a number of political parties and by their members in recognition of their solidarity with the social encyclicals which began in 1891 with Pope Leo XIII's *Rerum novarum* and include Pope Pius XI's 1931 encyclical *Quadragesimo anno.*

The social Christians were political activists. None wrote a systematic treatise on Thomistic dialectical materialism, but they referred to it and relied on it in their work.

The source for the discussion will be largely but not entirely the philosophical writings of the Parisian priest, Father Jean Boulier (1895-1980). In the immediate post-World War II era he served as the professor of Christian Legal Principles at the Catholic University of Paris, until the position was abolished because of his politics. Before becoming a diocesan priest in 1933, he had been a Jesuit and his philosophy was Thomism.

Called the "Red Priest" because of his friendship with the communists, Fr. Boulier never joined the French Communist Party (PCF), but he published in their press, spoke at their events, advised them on church matters, was active in their auxiliary organizations and ministered to them in his working class parish.[3]

Fr. Boulier's mission extended to Eastern Europe, where Christians in significant numbers sided with the communists in the post-war period. This included priests, nuns and some bishops. He worked with their clerical organizations, including PAX in Poland, the Association of Priests for Peace in Hungary, and the Movement of Patriotic Priests and Catholic Action in Czechoslovakia.[4] They published his writings and sponsored his speaking tours to their countries with audiences as large as 100,000 people.[5] Their members held political offices and contributed positively to their socialist societies.

1. Materialism

In teaching philosophy, Fr. Boulier emphasized the similarity of Marxist and Christian philosophy. For example, Engels had written about how thinkers

---

3. Fr. Boulier documented his ministry in the autobiography *I was a Red Priest: Memories and Testimonials* (New York: Red Star-CWPublisher, 2022). ISBN 0976416832. It was first published as *J'étais un prêtre rouge: souvenirs et témoignages* (Paris: Éditions de l'Athanor, 1977). By way of further background, during World War II, Fr. Boulier worked in the resistance movement on the side of the Jews against the Nazi and Vichy governments. As a result Israel (Y*ad Vashem*) is currently considering conferring upon on him the title, "Righteous among the Nations."

4. See Boulier, *I was a Red Priest*, pp. 220 and 479 (Czechoslovakia), 313 (Bishop Jan Dechet), 486 (Hungary), 192-193 (Poland).

5. *Ibid*., p. 220.

were historically divided on how they answered the question about the relation between thinking and being. He commented, "Those who asserted the primacy of spirit to nature … comprised the camp of idealism. The others, who regarded nature as primary, belong to the various schools of materialism."[6]

Fr. Boulier held that like the Marxists, the Christians were materialists. On this he cited Thomas Aquinas (1225-1274), who was the church's leading philosopher.[7] Aquinas wrote in his treatise, *De veritate*, as quoted by Fr. Boulier, "Nothing is in the intellect that was not first in the senses."[8] In this he maintained that Aquinas summarized his rejection of innate ideas and along with them the Platonic minimization of the material world.

As mentioned, in addition to Fr. Boulier, there were other Thomistic philosophers, including anti-communists, who understood the philosophical compatibility of Thomism and Marxism. Among these the Dominicans or Order of Preachers (OP) were prominent. Illustrative was Fr. Joseph Bochenski, OP (1902-1995), a Polish noble who spoke Russian. He was a philosophy professor at Rome's Pontifical University of Saint Thomas Aquinas. He wrote of his experience:

> *Marxist-Leninists and Thomists would realize they are standing together, and practically alone, in the contemporary world of skeptics, irrationalists, and subjectivists. A few years ago I attended an international meeting of logicians and methodologists at Stanford. The most pathetic figures at that meeting were [the Soviet] professor B. M. Kedrov and a Dominican priest, Father William Humbert Kane, OP [1901-1970]. Both were desperately trying to explain to the mass of logicians present that there is something*

8. Boulier, *I was a Red Priest*, p. 321, citing Aquinas, *Truth (Quaestiones disputatae, de veritate)* (Chicago: H. Regnery Co., 1952-1954, 1994, LCCN 94029598), vol. 1, pp. 69, 76; the citation form is Q. 2, Art. 3, ad 19; Latin edition: *Opera omnia. T. 9, Quaestiones disputatae cum quodlibetis: volumen secundum* (vol. 2) (Parma: Fiaccadori Publishers, 1859, OCLC 310765548), v. 9, pp. 28 and 31. According to the Rockefeller University historian of science Paul F. Cranefield (1925-2003), the *Quaestiones* date to 1256-1259 AD. See Cranefield,"Notes and Events," *Journal of the History of Medicine and Allied Sciences* (January 1970), vol. 25, no. 1, pp. 77-89. The Latin for the cited passage is "Nihil est in intellectu quod non sit prius in sensu."

> *which can be called an essence, and that science is, after all, in search of such essences. . . Most of their listeners were hardened positivists, who consider all talk about essences as pure mythology.*[9]

Just as there were non-communist Christians who appreciated Marxist-Leninist philosophy, there were non-Christian communists who appreciated Thomistic philosophy. Illustrative was the Soviet philosopher Sergei S. Averintsev (1937-2004), who eventually became a member of the Pontifical Academy of Social Sciences. In the following he discussed Aquinas's anti-idealist methodology:

> *The task that Thomas set for himself was to create a systematic order of the many within the one, rather than to contemplate the one in isolation from the many; he sought, as it were, to deduce the existence of god from the existence of things. In this respect, Thomas' thinking is in contrast to the abstract speculation of early Scholasticism (as exemplified by Anselm of Canterbury)—a school of thought that was in line with Plato, Neoplatonism, and Augustine. Under the rubrics of the* Summa theologiae*, the same schemes of thought are imposed on an infinite variety of specific questions, ranging from the five proofs of the existence of god to a definition of the limits of what is or is not permissible in the conduct of financial affairs.*[10]

Finally, on the issue of materialism, Fr. Boulier had the support of church councils and popes. About this, the scholar Rev. Sebastian A. Matczak, a former professor of theology and philosophy at St. John's University, wrote in the *New Catholic Encyclopedia* concerning fideism, which also goes by the name *sola fides* or priority of faith over reason (as opposed to common sense):

In addition to the pontifical appointment, he was also awarded the Lenin Komsomol Prize in 1968.

> *Pius X in the encyclical* Lamentabili *(1907) rejected the opinion that the assent of faith is based on a series of probable opinions (Denzinger, 2121); and in* Pascendi *(1910) he called attention to the decree of Vatican Council I, that humans are capable of knowing with certainty, by natural reason, God's existence and the credibility of divine revelation through external signs, and not only through a subjective experience or inspiration (Denzinger, 3026, 3034).*[11]

2. Neo-Thomism

In teaching Aquinas's materialism, the social Christians had allies among the clergy and laity. At the same time, their doctrine was not the church's official version. The official version was called neo-Thomism.[12] Its opponents maintained that the official school had abandoned the historical Aquinas because, among other reasons, he was too materialistic.

The critics saw the origins of neo-Thomism as dating back not to Aquinas but to Pope Leo XIII's encyclical *Aeterni Patris* (Eternal Father), issued in 1879.[13] That encyclical set out what were seen as the principles of neo-Thomism. It stated that the Aristotelian scientific method of Aquinas was the philosophy which the Church needed. At the same time it emphasized the metaphysical features of scholasticism, not the empirical sciences and the history of philosophy.

Among the neo-Thomist leaders was Fr. Joseph Maréchal, SJ (1878-1944), a Belgian Jesuit who taught at the University of Leuven. Prompted by the call of Pope Leo XIII to revitalize Thomist philosophy, he started studying in depth the works of Aquinas along with the works of other scholastic thinkers and modern philosophers. From this, and in particular from Kant's transcendental idealism,

Matczak, "Fideism," *New Catholic Encyclopedia* (New York, McGraw-Hill [1967], 1989), vol. 5, p. 712, citing Heinrich Denzinger, *Enchiridion Symbolorum: Definitionum et Declarationum de Rebus fidei et Morum* (ed. A Adolf Schönmetzer (Freiburg 1963). See also, Fergus Kerr, OP, "Knowing God by Reason Alone: What Vatican I Never Said," *New Blackfriars* (May 2010), vol. 91, no. 1033, pp. 215-228 (natural reason has possibility of knowing God's existence , but cannot prove it).

12. Neo-Thomism also went by the name Roman school, "neo-scholasticism" and "modern scholastic theology."

13. Pope Leo XIII, *Aeterni Patris: Encyclical of Pope Leo XIII on the Restoration of Christian Philosophy* (Rome: Libreria Editrice Vaticana, 1879), online at https://www.vatican.va/content/leo-xiii/en/encyclicals/documents/hf_l-xiii_enc_04081879_aeterni-patris.html

emerged what its proponents called a new and more dynamic Thomism, recapturing the union of "act and power" in Aquinas.[14]

Fr. Maréchal's neo-Thomism paralleled the abandonment of materialism throughout European bourgeois philosophy that started in the aftermath of the French Revolution. This was commented upon in 1900 by Paul Lafargue (1842-1911), who led the French Workers Party and collaborated with the Catholic workers as a deputy to the French Parliament from 1891 to 1893.[15]

Lafargue wrote the following about the history of the retreat from materialism to Kantian idealism:

> *At the beginning of the nineteenth century our bourgeoisie, having completed its task of revolutionary destruction, began to repudiate its Voltairean and free-thinking philosophy. Catholicism, which the master decorator Chateaubriand painted in romantic colours (*peinturlurait*), was restored to fashion, and Sebastian Mercier imported the idealism of Kant in order to give the* coup de grâce *to the materialism of the Encyclopaedists, whose protagonists had been guillotined by Robespierre.*
>
> *At the end of the nineteenth century, which will go down in history as the "bourgeois century," the intellectuals attempted to crush the materialism of Marx and Engels beneath the philosophy of Kant. The reactionary movement started in Germany.*[16]

As the leader of the Workers Party, Lafargue offered in common sense terms the following explanation of Kantian agnosticism to "the comrades who have to acquaint themselves with bourgeois philosophy":

> *The workingman who eats sausage and receives a hundred sous a day knows very well that he is robbed by the employer and is nourished by*

16. Paul Lafargue, *Socialism and the intellectuals* (Brooklyn, NY: Labor News, 1967). 22 p. LCCN 68001877, quoted in Vladimir Lenin, *Materialism and empirio-criticism; critical comments on a reactionary philosophy* (New York: Red Star Publishers, [1909], 2014), LCCN 53025513, p. 170.

> *pork meat, that the employer is a robber and that the sausage is pleasant to the taste and nourishing to the body.*
>
> *Not at all, say the bourgeois sophists, whether they are called Pyrrho, Hume or Kant. His opinion is personal, an entirely subjective opinion; he might with equal reason maintain that the employer is his benefactor and that the sausage consists of chopped leather, for he cannot know* things-in-themselves.[17]

The proponents of neo-Thomism maintained their interpretation was the ultimate expression of philosophy to which all Catholic thought must remain faithful. Materialism and other philosophies were labeled ”modernism” and as being inimical to Christian philosophy. Of particular concern were:

> *(1) the use of the historical-critical method in biblical exegesis;*
>
> *(2) the belief that dogmas were not immutable and that ecclesial dogmatic formulas could change both in interpretation and in content; and*
>
> *(3) the belief that revelation continued up to and including the present day and, therefore, did not stop with the death of the last apostle.*

Starting in 1910 the neo-Thomists required the clergy to take an oath against modernism.[18] But as Fr. Boulier pointed out the popes were ineffective at stopping moderism among the critical-thinking clergy and laity at the local level.[19] Fr. Boulier spoke of his own critical thinking and “metaphysics” as a student about 1919 in dealing with neo-Thomism:

> *Literary criticism had led me to the history of dogmas, then with St. John of the Cross, to criticism of religious knowledge, which Henri Bremond was to analyze as the metaphysics of the saints.*[20]

---

17. *Ibid*.

18. The text of the oath is in Pope Pius X’s decree (*motu proprio*), titled *Sacrorum antistitum* (The antithesis of the sacred), online at https://www.papalencyclicals.net/pius10/p10moath.htm.

19. Boulier, *I was a Red Priest*, p. 198.

20. *Ibid*., p. 57. Henri Brémond (1865–1933) was a French literary scholar, sometime Jesuit, and Catholic philosopher, one of the theological modernists. He worked on the Jesuit publication *Études*. He left the Society of Jesus in 1904, but remained a priest. In 1909 he was temporarily suspended *a divinis* for his presence at and an address he gave and for making a sign of the cross over George Tyrrell‘s grave at his funeral. Tyrrell was a modernist and Brémond’s friend. Among his publications were *Prayer & poetry: a contribution to poetical theory* (Norwood, Pa.: Norwood Editions, 1976); and *Thundering abbot, Armand de Rancé, reformer of La Trappe* (London: Sheed & Ward, 1930).

By the post-World War II era, there was significant resistance against the church's position on modernism. Those who were critical of the neo-Thomists went by several names: *ressourcement* (return to the sources), *nouvelle théologie* (new theology), or reformers. Among them, only a few of whom were materialists, much less social Christians, were the Jesuits Jean Daniélou (1905-1974), Henri de Lubac (1896-1991), Henri Bouillard (1908-1981), Joseph Maréchal (1878-1944), Hans Urs von Balthasar (1905-1988), the Dominicans Marie-Dominique Chenu (1895-1990), Yves Congar (1904-1995), Dominique Dubarle (1907-1987), Henri-Marie Féret (1904-1992), and the laity Étienne Gilson (1884-1978) and Jacques Maritain, (1882-1973).

Professor Gabriel Flynn of Dublin City University summarized the dispute in the post-war period:

> *The fierce intellectual clash of arms between the reformists and those of the classical French Thomist School, epitomized in the neo-Thomism of the* Revue Thomiste *in the period 1946-1948, that included such [neo-Thomist] luminaries as Marie-Michel Labourdette, OP and Réginald Garrigou-Lagrange, OP, ultimately resulted in the promulgation by Pope Pius XII of the controversial encyclical* Humani generis *[human race] in 1950, with devastating consequences for the leaders of the [critical thinking] ressourcement.*[21]

The modernists were beaten in 1950, but a decade later in the 1960s at Vatican II the neo-Thomists were in the minority and the object of criticism, so that in 1967 the official church (Congregation for the Doctrine of the Faith, with the approval of Paul VI) abandoned the anti-modernism oath. The Jesuit philosopher Gerald A. McCool, commented on the shifting fortunes of the neo-Thomists:

> *Unfortunately, the old alliance between integralism and right-wing politics had been restored at Rome [in 1950]. The [critical] theology appeared to be a dangerous flirtation with modern thought and Marxist politics. The encyclical,* Humani Generis*, and the disciplinary measure taken by their general superiors against liberal Jesuits and Dominicans, brought the movement to a sudden end. For the moment Rome's*

21. Gabriel Flynn, "A Renaissance in Twentieth-Century French "Catholic Philosophy," *Revista Portuguesa de Filosofia* (2020), vol. 76 (4), pp. 1559-1592, at p. 1560.

> *intervention gave the impression that the traditional [neo-] Thomists had won the day. Actually they had lost.*[22]

According to Fr. Boulier, the neo-Thomism issue was part of the reason Pope John XXIII convoked the Second Vatican Council. He wanted to liberate what he called the "real" church from the "official" church. Fr. Boulier learned of this when Monsignor Angelo Roncalli, later Pope John XXIII, was the papal nuncio to France. During this period, he and the nuncio became friends. In one of their meetings at the nuncio's residence on Avenue du President Wilson in Paris, the nuncio remarked to Fr. Boulier, "You are, in one field (*un'campo*), and the Church is in another. You know, popes change their politics."[23] That was, as Fr. Boulier later commented, "to make me understand that I had to be patient, to wait for a change to come."

But for Fr. Boulier the nuncio's answer was not good enough and at a later meeting he followed up, "I am very touched, Excellency, by the kindness you always welcome me. But I must tell you that last time you scandalized me greatly. Yes, you told me that I was in one camp and the church in another. But the Church cannot be in a camp: it is everywhere where there are friends of God." The nuncio responded, "I meant the official Church." From which Fr. Boulier concluded:

> *So it was not the Church? And that is why a few years later, in order to free himself from the "official Church" he convened the Council, which for him, represented the Church.*[24]

From the social Christian view, the Vatican Council may have helped the "real" church against the "official church," but it did little for the teaching of philosophical materialism. Fr. Bochenski, who, as mentioned, was a dialectical materialist, if not a social Christian, commented in 1967:

> *The Church has reversed its old policy, and it seems that in most of its schools Thomism is no longer being taught. Mystical ideologists, like*

22. Gerald A. McCool, "Twentieth-Century Scholasticism," *The Journal of Religion* (University of Chicago Press: 1978), vol. 58, supplement, pp. S198-S221, at S216.

23. Boulier, *I was a Red Priest*, pp. 213-214.

24. *Ibid*., p. 214.

> *Teilhard de Chardin and existentialisms of every possible shade seem to be far more popular among Catholics than Thomism. A leading representative of one of the most important philosophical institutes, and supposedly a Thomist, said in public that no philosophy of being is possible without reference to the self. Thomism is undergoing one of its greatest defeats in history.*[25]

Besides mysticism and existentialism, Professor Benedict M. Ashley, OP (1915-2013), in discussing the materialism of Fr. William Humbert Kane, OP (1901-1970), enumerated several other prominent but, in his view, deviant Thomistic idealists, for whom philosophizing was a "mere word game":

> *According to Fr. Kane, to attempt to build a Thomistic metaphysics on the Cartesian* Cogito ego sum*, or on the "concept of Being" as did many traditional Thomists, or on some "metaphysical intuition" as Jacques Maritain claimed to do, or even on the "judgment of the act of* esse*" as did Étienne Gilson, simply will not work. All these ways of grounding metaphysics, Kane argued, left it open to the modern charge that it is a mere word game.*[26]

Yet another criticism of the Thomistic "system builders," utopians and transcendentalists, came from the Fribourg University academic, Fr. Louis Bertrand Geiger, OP (1906-1983). Their idealistic philosophy taught "the illusions and mirages with which imagination and language continually cover it." He summarized:

> *Under various influences, a goodly number of philosophers have come to believe that the point of departure proposed by Descartes for philosophy, which has been taken up again and again by "system builders," is too utopian. When philosophers reflect sufficiently on the real conditions of philosophy, they find that it cannot begin with a pure subject (e.g., the* Cogito*, or a transcendental subject, of whatever nature this might be) or with a pure given, as does mathematics. Man's thought begins, and can*

> *only begin, with an initial situation that implies the presence and openness of his being, at all its levels, to a world that makes sense from the beginning, a sense that he never ceases to interrogate in order to discover its deepest meaning.*[27]

As seen, Thomists were critical of what they viewed as the idealist distortions of the material world. It should not be surprising, therefore, that idealists such as Professor Thomas Blakeley (1931-1989) at Boston College, the editor of *Studies in Soviet Thought*, was in turn critical of dialectical materialism. He believed that only idealism qualified as philosophy. He commented, "The first thing that strikes one about this doctrine [dialectical materialism] is its naïveté: almost all its affirmations are prephilosophical and commonsensical."[28]

For social Christians common sense was also philosophy and working people were philosophers. The Soviet philosopher Averintsev complemented Aquinas for having, as he put it, clothed the doctrines of faith in the vestments of common sense.[29] Along the same lines, Fr. Chenu praised Aquinas for having entered "into the distress of the world, the suffering of souls and bodies."[30]

3. Dialectic, Potency and Revolution

In their philosophical collaboration with the communists, the Christians found support in Thomism for the dialectical aspect of Marxism, just as they did for the material aspect. The Soviet philosophers Aleksei Losev **(**1893-1988**)** and Alexander Spirkin writing in the *Great Soviet Encyclopedia*, began their definition of the dialectic in an abstract manner as "the doctrine of the most general principles of emergence and development, whose internal source is viewed as the unity of and conflict between opposites."[31] They contrasted the

31. Aleksei Losev **(**1893-1988**)** and Alexander G. Spirkin, "Dialectic," *Great Soviet Encyclopedia*, vol. 8, p. 185, online at https://encyclopedia2.thefreedictionary.com/dialectical+materialism. See also, Alexander Spirkin, *Dialectical materialism* (Moscow: Progress

dialectic's "movement" view of reality with the view of things and phenomena as unchanging and independent of each other.

In the Soviet analysis the role of Hegel in understanding the dialectic was emphasized. Professors Losev and Spirkin commented:

> *According to Hegel, the dialectic encompassed the entire area of reality, beginning with purely logical categories, passing further on into the areas of nature and the spirit, and ending up with the categorical dialectic of the entire historical process. The Hegelian dialectic is a systematically developed science; Hegel was the first to present the general working of dialectics in a comprehensive and conscious manner.*[32]

Hegel's three laws of logic were summarized:

> *1) the law of the transformation of quantity to quality;*
>
> *2) the law of the unity and progress resulting from the struggle of opposites or contradiction; and*
>
> *3) the law of the negation of the negation.*[33]

In discussing the concept of dialectics, Fr. Bochenski suggested that Thomism had the same concept, but used the word "potency" for it, as had Aristotle, from whom it was borrowed. The Dominican wrote:

Publishers, 1983), 342 pp.; and Spirkin, *Fundamentals of Philosophy* (Moscow: Progress Publishers, I990). Losev was a university professor and Russian Orthodox monk. Ordained in 1929, he was active in a splinter group called Onomatodoxy, which was based on the idea that the Name of God is God Himself. Among his writings were eight monograph volumes, which he began in 1923. In the last of them, *The Dialectics of Myth*, he took the side of the bourgeoisie. As a result he spent several years in the early 1930s in Lubyanka and Butyrskaia Prisons, and in a labor camp engaged in building the White Sea-Baltic Canal. Maxim Gorky regretted that he was not executed. At the same time, Gorky's first wife, Ekaterina Peshkova, as head of the Political Red Cross, won his release from a ten-year term and he returned to Moscow in 1933, where he went back to philosophy teaching. See Sergei Khoruzhii, *"*A Rearguard Action,*"* *Russian Studies in Philosophy* (M. E. Sharpe: 2002), vol. 40, no. 3, pp. 30–68, at p. 48-49, online at https://synergia-isa.ru/wp-content/uploads/2009/06/hor_losev.pdf.

32. Losev and Spirkin, "Dialectic,"), vol. 8, p. 185. See also, K. Marx, *Kapital*, vol. 1, 1955, p. 19

33. Marx and Engels did not use the term "dialectical materialism." Marx talked about the "materialist conception of history," as in *The German Ideology* (1845), online at https://www.marxists.org/archive/marx/works/1845/german-ideology/. Engels referred to it as "historical materialism" and "materialist dialectic" in 1883 in his *Dialectics of Nature*. It was Georgi Plekhanov who was among the first to use the term "dialectical materialism," when he wrote in 1891 on Hegel and Marx.

> *There seems to be a striking similarity between the Thomistic concept of potency and that of dialectics in Marxism-Leninism. Both are used wherever we meet with serious ontological difficulties, as in the problem of movement.*[34]

The correlate of potency was "act," which expressed its completion. The Fordham University professor Fr. William Norris Clarke, SJ (1915-2008) in the *New Catholic Encyclopedia* defined potency:

> *Potency, a technical term used principally in philosophy and theology, is the capacity or aptitude in a being to receive some perfection or perform some action. Always a relative term, it means capacity "for" something , e.g., potency to receive energy, to grow, to learn mathematics, to become wise, virtuous. The correlate of potency is act, which expresses the fully present realization or completion of potency.*[35]

As discussed, the general theory of act and potency, with its terminology, originated with Aristotle and became the central doctrine of his philosophy.[36] For him, potency was necessary to explain change, that is, the transition from one mode of being to another, or the coming-to-be of some new being or mode of being.

Like Fr. Bochenski, the Soviets found the same resemblance of potency to dialectic in their analysis of Aristotle. Professors Losev and Spirkin commented:

> *Aristotle, who transformed Platonic ideas into the forms of things and, moreover, introduced the doctrine of potentiality and energy (as well as a number of other, analogous doctrines), developed dialectic further. In his doctrine of the four causes—material, formal, final and efficient—Aristotle asserted that all of them exist in everything, and each is completely indivisible and identical with the thing it exists in. Aristotle's doctrine of a*

34. Bochenski, "Thomism and Marxism-Leninism," p. 155. Aquinas used the term "dialectic," which he borrowed from Aristotle but used it in the classical Greek sense, which was tied to rhetoric and persuasion.

35. William Norris Clarke, "Potency," *New Catholic Encyclopedia* (New York, McGraw-Hill [1967], 1989), vol. 11, pp. 554-557, at p. 554.

36. Aristotle, *Physics,* 187a 12-192b 3; *Metaphysics.* 1045b 27-1052a 12.

> *prime mover who thinks himself—in other words, is himself both subject and object—is a fragment of the very same dialectic. By designating the doctrine of probable judgments and conclusions or the doctrine of appearances as dialectic, Aristotle provides a dialectic of becoming, since potentiality itself is only possible in the sphere of becoming.*[37]

Lenin praised Aristotle as being dialectical in all but name. He wrote, "Aristotle's logic is an inquiry, a searching, an approach to Hegel's logic—and it, the logic of Aristotle… *everywhere*, at every step, raises *precisely* the question of *dialectics*."[38] The Christians made the same claim for Aquinas. Illustrative was Fr. Bochenski when he was discussing the general laws of nature, which, as he put it, could only be understood as dialectical:

> *For the Soviets humans are certainly the highest entity in nature, but they still are a part of it, even if a very peculiar part. One cannot understand anything in anthropology without starting with the general laws of nature, with the study of dialectics, i.e. with dialectical materialism. In that respect also, Thomism is one of the very few trends which assumes a similar attitude. Practically all other present-day philosophic trends, linguistic analysis, existentialism, the recent forms of phenomenology, neo-Kantianism (which appears to be still alive) and the Western variety of 'Marxism' are anthropocentric.*[39]

Echoing Fr. Bochenski, the Jesuit, Fr. Clarke noted that the "clear and distinct ideas" of Cartesian rationalism, the radical empiricism of the English tradition culminating in Hume, the conception of nature found in mechanism – "all had no place for the authentic conception of potency."[40] Rather, these idealistic philosophies sought to impose their own image on the world of things.[41] They needed as Fr. Clarke put it, the "ontological grounding of dynamic substance or

nature as a unified center for its many relations and its self-identity through time."[42]

From the Soviet view, science and the dialectic were closely related. They took a positive view of Aristotle for his scientific writings. The Christians had a similar view of Aquinas, who adopted Aristotle's science and expanded on it. The Dominican Fr. William A. Wallace, OP (1918-2015), commented about Thomistic science, arguing it uncovered the secrets of nature:

> *Whereas scholars in the Early Middle Ages [476-1000 AD] were content with dialectics and its [Abelard's]* sic et non *[yes or no] procedures, later to be refined into the scholastic disputation, those of the High Middle Ages [1000-1250 AD] were strongly attracted to the ideal of science found in [Aristotle's]* Posterior Analytics*, newly introduced into the Latin West at the end of the twelfth century. Recent studies of William of Auvergne, Robert Grosseteste, Roger Bacon, Albertus Magnus, and Thomas Aquinas reveal how these investigators rediscovered the* Analytics *and applied it methodically to uncovering the secrets of nature. All had confidence that truth and certitude could be attained using the Aristotelian canons, that they could arrive not merely at "knowledge of the fact" but also at "knowledge of the reasoned fact" once its causes were properly ascertained.*[43]

Revolutionary Thirteenth Century. Joining in on the Dominican argument, Fr. Bouiler in his teaching about the positive role of the dialectic in the history of Christian philosophy maitained that Aquinas's encounter with Aristotle was itself dialectical. There was conflict and progressive systhesis to the benefit of Christian philosophy. Furthermore, he argued that such dialectical confrontations with adversaries and positive results were a Christian tradition and that Marxism was another of them. He wrote:

Is it not possible that unity of action [between Christians and communists] does generate unity of thought? Take holy water said Pascal, naturally it will make you believe and you will be stupid. Working together, we end up thinking

together. Over the course of their two thousand years of existence, Christians have found themselves confronted with systems of thought from which faith has finally emerged, not without struggle but not without exchanges and fruitful borrowing: Gnosis, Platonism, Neo-Platonism, Stoicism, the Aristotelianism of Averroes, turned into Thomism, Cartesianism insinuating itself masked, *larvatus prodes* [I go around masked], of Descartes and then deserting Aristotle, clearly claiming to be Epicurean, Saint Thomas More, Erasmus, Gassendi, the liberalism of the nineteenth century proscribed by Archbishop Lefebvre, denounced as satanic by Joseph de Maistre and all the fundamentalists but magnificently rectified by Leo XIII and his great Encyclicals. And so why not Marxism? *Exhibit Karolum Christo militantem* [Karl (Marx) Christian militant]. Will Christians of the twenty-first century face Marxism other than to curse it?[44]

In his ministry Fr. Boulier publicized the dialectical synthesis of Marxist and Thomistic philosophy as being part of Christian tradition. One of his allies, Fr. Chenu, played a similar role in his ministry. Like Fr. Boulier he was a university professor who lost his job because of politics. He then was part of the priest-worker movement in the diocese of Paris until Rome shut that ministry down because of politics.[45]

In his teaching about the dialectic, Fr. Chenu argued that it was not only Thomistic philosophy that came out of the thirteenth-century revolution but the Dominicans themselves. The order was established in 1215, as Fr. Chenu put it, because of the activism of "Gospel-spirited Mendicants, … the discoverers of Aristotle."[46] They challenged the lack of science and respect for the material world in Christian philosophy and educational institutions. To the Dominicans, science involved a return to the Gospel.[47] They had a hand in the schools and

universities that flourished at that time at Paris, Bologna, Oxford and Colone. Aquinas himself was a professor at the University of Paris.[48]

In bringing science into the education of the clergy, among the main works used by the Dominicans were Aquinas's *Summa theologiae* (1265-1274 AD, consisting of close to 3,000 articles and left uncompleted) and his *Summa contra gentiles* (1270-1273 AD). As noted above, Professor Averintsev taught that these works clothed the doctrines of faith in the vestments of common sense. Following in the footsteps of Albertus Magnus, they went back to Aristotle as a source for his concepts—namely, Aristotle's "common sensibles" and the idea of a system of "natural" reason as the underpinning of "supernatural" dogma.[49]

For Fr. Chenu the *Summas* clothed the doctrines not only in common sense but in a revolutionary sense. He commented:

Since the 16th century, when Luther harnessed all the evangelical forces, we [Dominicans] have been afraid of this strong wine, and we leave the world to its misery and ignorance. It is now others who have stepped in (e.g. Marx)… We must enter into the distress of the world, the suffering of souls and bodies.[50]

The Soviet medievalist Boris Ramm (1902-1989) in studying the 13th-century Dominican revolution emphasized that they were the main defenders of Thomistic integralism against the imperial authority, local church hierarchies, cities, and universities. This doctrine maintained that secular and spiritual power had to be united, with the spiritual power (papacy) supreme. There was no separation of church and state. Ramm summarized:

In 1227 the Dominicans received the right of universal preaching and confession, and in 1232 the papacy entrusted them with conducting the Inquisition. They became the papacy's chief support against heresies and in its clashes with imperial authority, with local church hierarchies, with cities, and with universities. The Dominicans attributed particular importance to control by the Catholic Church in the sphere of upbringing and education; they founded their own educational institutions (in Bologna, Cologne, Oxford, etc.) and were

in charge of departments of theology in the universities of Paris, Padua, Prague, and elsewhere. Outstanding among the Dominicans were such prominent figures in medieval Catholicism as Albertus Magnus and Thomas Aquinas. In the 13th century the Dominicans began to develop extensive missionary activities and founded many monasteries (for example, near Kiev, in Iran, and in China.[51]

As will be discussed below, Fr. Chenu found the integralist doctrine, where the church was liberated from enslavement to Constantine and monastic contemplation, similar to the proletarian dictatorship, where communism was the spiritual power. There was no separation of church and state.[52]

4. God

As has been discussed, Fr. Boulier, in collaborating with the communists taught the philosophical compatibility of Thomism and dialectical materialistism. He and his friends also took up collateral questions in the same collaborative manner. One of these was "God."

While some communists and anti-communists debated the question, Fr. Boulier maintained that dialectical materialist philosophy was a science. As such it could not prove or disprove the existence of God and he experienced little opposition from the Marxists concering this argument. He commented:

> *But Marxists, apart from a few rather narrow-minded sectarians, know that it cannot scientifically prove that God does not exist. In their explanation of the history of universal evolution they stick to the position of Laplace in his* System of the world*. To Napoleon, who had read the book and asked him why he had not mentioned God, Laplace replied: "Sire, I have done without this hypothesis." By this, Laplace no more than the Marxists professed atheism.*[53]

Jerome Taylor and Lester Little (Chicago: University of Chicago Press, 1968), pp. 267-269.

53. Boulier, *I was a Red Priest*, p. 313; see also, 265.

Where Fr. Boulier found atheism was not among the communists but among the bourgeoise. He stated, "For Christians, the only truly authentic Godless person is the worshipper of money. A heart in which God reigns, how could money reign in it?"[54]

It is also of interest that while the Marxists could not prove that God did not exist, Thomistic philosophy had little to say about God. That is, Aquinas maintained that humans did not know what God was.[55] Professor Brian Davies emphasized this in reviewing a biography about Aquinas:

I was also impressed by the way in which he brings out the seriously negative approach to God that Aquinas develops in the wake of his claim that we do not know what God is. Some readers of Aquinas do not seem to realize that he meant what he said when stating that we do not know what God is. Porro explains to such people why Aquinas meant exactly what he said.[56]

Paradoxically, as Fr. Boulier pointed out, some prominent Bolsheviks, including Anatoly Lunacharsky, Maxim Gorky and Alexander Bogdanov argued that dialectical materialism did not exclude an openness to God. He wrote:

> *Does materialism when it is dialectical, like that of Karl Marx and not mechanical, like that of Holbach, exclude all openness to God? As a left-wing Hegelian, Marx by his materialism put Hegel back on his feet. But Lunacharsky and Gorky, to Lenin's great anger, thought of using the dialectic for what they called a reconstruction of God.*[57]

57. Boulier, *I was a Red Priest*, pp. 313-314.

One of the reasons the communists gave for seeking God was that atheism was not good enough. For example, a Moscow medical doctor, Vikenty Veresaev (1867-1945), stated that atheism was pessimistic and made life become meaningless. Atheism did not give the meaning that religion did – such as the promise of eternal life or that the devil had been defeated on Calvary or an answer to the Primordial Existential Question (PEQ), "Why was there something rather than nothing." For some this latter problem was more than a semantic paradox, it was an ontological problem - the contradictory nature of objective reality.[58]

Dr. Veresaev maintained that the state possessed many rituals (parades, demonstrations), but they were "depressingly untalented and miserable."[59] He noted further that communists were going to church due to disappointment in the bureaucratic indifference and poor quality of Soviet state marriages and birth-registrations. Along the same lines, a Komsomol (young communist) activist spoke up for a fellow worker whose wife had died and was buried through means of an emotionally cold and indifferent secular-communist ceremony. The worker, greatly depressed by it, consumed a full bottle of vodka while crying in tears. Lenin had claimed that religion was a kind of spiritual booze in that it acted like a drug for the working class, while this man had turned to booze in place of religion. Dr. Veresaev warned that with atheism "life would become a bore and man would turn into an empty container."[60]

For some Bolsheviks, their atheism was a problem. But for class-conscious workers in the Orthodox Renovationists and the Living Church Movements, it was the traditional church that was the problem. The Orthodox leadership had been on the side of the landlords since Peter the First (1672-1725), if not of

60. Pospielovsky, *A History of Soviet Atheism*, vol. 1, p. 92. In 1965, suggestions began to appear in the Soviet press that pseudo-religious rites should be instituted that would create a mystical link between people and the promised communist society of the future, glorified in the labor of the present. The rites and services would be oriented to an utopian future promised by the Communist society. Events and days for glorifying Communism would be celebrated. Special temples with symbolic artistic ornaments would be built to glorify Communism as man's greatest achievement, with oratorios composed and performed in the temples.

Constantine (272-337 AD). Some of the Renovationists were collaborating with the Bolsheviks even before the Revolution.

One of their leaders was Archpriest Alexandr Ivanovich Vvedensky (1889-1946), who was part Suprene Church Administration (VtsU), which had been established at the All-Russian Sobor that met for the first time since the 17th century from August 1917 to September 1918. The priest-scholar, Georgy Orekhanov summarized Vvedensky's pro-communist political theology:

> *The main "sin... of the old Church," according to Vvedensky, was that it did not condemn capitalism, while "the Church must sanctify the truth of the communist revolution," for in the state sphere the Bolsheviks, as Vvedensky, wrote, "embodied the principle of social truth" and came closer than previous rulers "to the fulfillment of the covenants of Christ." Vvedensky, translating his reasoning into the political plane, called the Patriarchal Church "the fighting organ of the counterrevolution," "the church of counterrevolutionaries."*[61]

During the first years of the Soviet Revolution, some 70 percent of the Russian Federation (RSFSR) parishes took the Renovationists side.[62] Their "Red Church" adopted reforms, including the adoption of a worker-friendly liturgy that Bishop Antonin Granovsky (1865-1927) helped design. He was a monk and leader in the Petrograd Group of Progressive Clergy. The new liturgy was in the Russian vernacular and replaced Church Slavonic. It also updated the church calendar, placed the altar in the middle of the church and developed a theology to explain the changes.[63] In Moscow another progressive leader was Fr. Sergei Kalinovskii (Kalinsky) (b. 1886), pastor of Grebnevskii Lubianka Square. He sought to organize a Christian socialist party of workers and peasants.[64]

The Living Church followed the Alliance of Church Renewal (ACR) program, which came out of the 1905 Russian Revolution.[65] It set up a constitutent assembly in May 1922 and establishing a journal *Zhivaia tserkov'* (Living Church). The latter reported on the church activities around the country. Professor Roslof summarized the journal's thelogical support for the government, as set forth in a declaration that the church made "To the Believing Sons of the Orthodox church"

> *The Soviet government was established by the will of God to fight war, famine and disease in Russia. The church had stood on the sidelines during these disasters, and church leaders had actually supoted enemies of the people.*[66]

Some of the Living Church members, as Professor Young observes, belonged to the Communist Party and Komsomol, which they felt was a product and extension of their religion.[67] A 1922 list published by the Renovationists listed their goals:

> *The principle of equality, fraternity and freedom.*
>
> *The desire to generalize property.*
>
> *Equalization of the rights of clerics and laity in the management of the affairs of the community and their associations.*
>
> *Purification of Christianity from all paganism, the fight against "darkness and ignorance", identification of the causes of those phenomena by believers which which give rise to many superstitions and rituals.*
>
> *Revision of dogmatics and ethics in order to clarify the true evangelical and apostolic principles of faith and morality, obscured by medieval scholasticism and school theology.*

Purification and simplification of worship and bringing it closer to the understanding of the people.

Revision of liturgical books and menologia, the introduction of ancient Apostolic simplicity in worship, in particular, in the furnishings of churches and in the vestments of the priest, the use of the native language instead of the obligatory Slavonic.

The electability of the clergy.

The abolition of church awards.

The abolition of compulsory fees for the needs of the cult.

The elimination of "religious professionalism, that is, the separation of labor from earnings".

The revision of all church canons and the abolition of those that have lost their relevance.

Solely married ("white") episcopate.

The closure of monasteries, except of those that are based on the principle of labor and are ascetic in nature.

Special emphasis on socially useful work: "the labor principle is obligatory for all believers".

Increasing the importance of women in the Church and the introduction of the rank of deaconesses.

Broad public charity.

Ecumenical reference: "the religious-class division of hummankind into Catholics, Orthodox, Lutherans, etc. is the work of human hands."[68]

The Renovationists held periodical national church councils. At the October 1925 council, the Patriarchates of Constantinople and Alexandria concelebrated the eucharist with members of the Renovationist Synod.[69] To help in clerical education and ordination of peasants and workers, two institutions of higher

learning were opened. One was the Moscow Theological Academy and the other the Theological Institute in Leningrad.[70]

In the first years of the Soviet Revolution, the Moscow Patriarch Tikhon (1865-1925) took the anti-communist side. But the Renovationist achievement persuaded him that an open struggle against the new social order, which enjoyed the support of the entire people, would destroy the influence of the traditional church among the poulation. In a letter of June 16, 1923, to the Supreme Court of the Russian Soviet Federative Socialist Republic (RSFSR), he acknowledged his guilt, disassociated himself from counterrevolution, and requested a pardon.

Tikon's case was dismissed by a decree of the Central Executive Committee of the USSR on March 21, 1924. He then took up the traditionalist line and worked with some success to turnback the clock on the Revovationist reforms. In such situations Fr. Boulier liked to repeat Mauriac, "If humanity still has twenty thousand more years to go, we are the first Christians."[71]

It is of interest that besides the Orthodox, there were Polish and other communists in the USSR that were believers. The priest-worker Fr. Walter Ciszek, SJ, described the benefit of his Siberian ministry in connection with a fellow Polish worker, who was a Komsomol member in the laboratory where they worked the night shift during the 1950s:

> *Working with Ninja, night after night, I could actually sense the grace of God at work—in her sincerity, in her enthusiasm, and in the change which had come over her. Now she not only wanted to be baptized herself, but she wanted her three children baptized as well. Her husband, however, would be against it, she knew; he was a sincere Party man. But she begged me to do it anyway, and promised that she would bring up the children in the Faith.*[72]

Similarly, Fr. Boulier appreciated the proletariat's participation in the vernacular Mass. This was the purpose of his writing in 1975 *The New Mass:*

Explained in Dialogues: Communist Liturgy.[73] More specifically, the intended audience was Catholic youth who were about to leave secondary school. It sought to give them a foundation for their life based on their Catholic faith, the Mass being the greatest act of their religion. As he put it, Jesus and the early Christians were communists and it was time to return the Mass to its revolutionary purpose. Leo XIII and Pius X took steps to reconnect with the proletariat. Vatican II and collaboration with the communist movement was another step.

About the revolutionary role of the liturgy, it had been part of the Soviet Renovationist program and Fr. Boulier pointed out its positive role in post-World War II China. The courageous bishops there were faithful supporters of Mao and the Communist Party and at the same time held Catholic beliefs that were irreproachable. This caused a schism for which, as Fr. Boulier put it, the Court of Rome bore full responsibility. For the believer, as Fr. Boulier taught, each Mass was a continuation and participation with Christ in the very same Death, Resurrection and Redemption of humanity in Heaven and on earth that was accomplished on Cavalry. Through the eyes of faith, the Devil was defeated on Cavalry. The early Church identified the Devil with Roman imperialism. Fr. Boulier identified NATO and anti-communism with the Devil. Participating at the Mass was a world-redeeming mystery.

In addition to religion being a source of emotional and spiritual courage, Lenin himself was concerned about another problem raised by Dr. Veresaev. Lenin complained that the Revolution had brought a curse of sexual promiscuity and Philistinism upon the Soviet Youth. He stated:

> *I don't mean to preach asceticism by my criticism. . . The changed attitude of the young people to questions of sexual life is of course based on a "principle" and a theory. Many of them call their attitude "revolutionary" and "communist". And they honestly believe that it is so. That does not impress us old people.*[74]

Then Lenin went on to invoke the wisdom of his Orthodox ancestors, "Self-control, self-discipline is not slavery. . . In love two lives are concerned, and a third, a new life, arises, it is that which gives it its social interest, which gives rise to a duty towards the community."[75]

5. Ontology: Being is Good

In addition to God, a second philosophical question concerning the compatibility of Thomism and Marxism that Fr. Boulier addressed was ontology. He argued that the official church's doctrine on communism was contrary to Thomistic ontology. By way of background, in Marxist philosophy, as Soviet professor Aleksandr Ogurtsov put it, "being is regarded as matter, as an object of science."[76] In early Greek the term "ontology" meant "the study of being." The concepts the Greeks developed concerning it were later adoped by the Thomists and Marxists. The concepts included (1) actual being (act) and possible being (potency), (2) essence and existence; and (3) the form and matter principle of being.[77]

The Marxist ontologists, in discussing these concepts, argued that there was a tie and unity between ontology, epistemology and logic. The Soviet philosopher Erik Iudin (1930-1976), summarized ontology's historical and relative nature:

> *Ontology expresses a picture of the world that corresponds to a particular level in the knowledge of reality and that is recorded in a system of philosophical categories characteristic of a particular period and*

---

75. *Ibid.*

76. See Aleksandr Ogurtsov, "Being," *Great Soviet Encyclopedia*, vol. 4, pp. 22-24, online at https://encyclopedia2.thefreedictionary.com/being.

77. When the term ontology was first used in the philosophical lexicon by the German scholastic philosopher, Rudolph Goclenius in *Lexicon philosophicum quo tanquam clave philosophiae fores aperiuntur* [1613], reprint: Hildesheim: Georg Olms, 1980), it was as a synonym for metaphysics and was primarily concerned with definitions of being. Professor Ogurtsov in discussing Aristotle's *Metaphysics* (III, 3, 998, 22), remarked in his *Great Soviet Encyclopedia* article, about the third concept mentioned above, the form and matter principle of being:

> *Being was understood by Aristotle as a universal predicate, which applies to all the categories… He based his thought on the principle (developed by him) of the mutual interrelationship of form and matter… Form was an inalienable characteristic of being.*

> *philosophical tradition (for example, materialism and idealism). In this sense, every philosophical and, in general, every theoretical system rests on certain ontological concepts that constitute its stable content foundation but that change as cognition develops.*[78]

One of the characteristics of Thomistic ontology, if not Marxist ontology, was, as Soviet scholar Averintsev pointed out, that "being" was good. He wrote:

> *Thomas' ontology, reflecting a characteristic of medieval philosophy in general, is value-laden; in his view, "the real and the good are interchangeable concepts." (*Summa theologiae*, 11:18.3).*[79]

Professor Ogurtsov, commented further, "Christianity developed the ancient conception of the identity of being with perfection (goodness, truth, and beauty)."[80]

Fr. Boulier, in defending both the principle that "being" was good and his communist politics, criticized Pope Pius XI, who taught in the encyclical *Divini Redemptoris* (March 1937) that communism was "intrinsically perverse." Later Pius XII in July 1949, using this teaching, excommunicated all adherents to the party.[81] The excommunication prohibited any collaboration with the communists on any ground.

In response, Fr. Boulier argued that Thomism, following Augustine, taught that nothing was intrinsically evil. Fr. Boulier wrote:

> *But Satan himself is not "intrinsically perverse"! All being as being is good. "One cannot think of nothingness," says Bergson. One can think evil only as a deprivation of being. The evil of the gazelle is the good of*

81. Supreme Sacred Congregation of the Holy Office (approved by Pope Pius XII), The *Decree Against Communism* (1949)

> *the lion that feeds on it, the evil of cancer that destroys a human is the good of the virus that infects the person. According to this metaphysics, authentically Thomist, nothing can be "intrinsically perverse". The moralists, it is true, seek to catalog among human actions that which would be "inherently perverse." They find only blasphemy.*[82]

Fr. Boulier personally experienced the official doctrine on intrinsic evil when dealing with ecclesiastical authorities. He commented about one such encounter, "Cardinal Ottaviani said to me, 'How can you join the enemies of God?' For His Eminence, they were indeed 'intrinsically perverse.'"[83] Because of his politics, Fr. Boulier was briefly suspended from practicing as a priest in 1949 and then reinstated by his bishop. In 1950 he was sanctioned by Rome. In 1952 he was briefly reduced by Rome to the lay state. After participating in a conference in Hungary in 1962 he was again reduced to the lay state. In 1971 he was reinstated in the Parisian clergy.

Rome had an intrinsic evil doctrine, but over the years, Fr. Boulier had bishops, cardinals and laity that took his side and were sometimes able to protect him. These included Cardinal Emmanuel Suhard (1879-1949) of Paris, who, for as long as he lived, also looked out for the priest-workers and their "mission to the working class." As noted above, another friend was Msg. Roncalli in the post-war period, who told him, "You know, popes change their politics."[84]

During the 1960s the church corrected its ontological understanding of communism. Remarking on John XXIII's encyclical *Pacem in terris*, Fr. Boulier wrote:

> Pacem in terris *distinguishes in Marxism, without mentioning them, a certain number of affirmations which are radically opposed to the Christian faith. But the Encyclical explains that the Marxist movement is evolving and changing. Finally, the Christian cannot but adhere to the affirmations in conformity with the demands of the human and universal conscience taken up by communism.*[85]

85. *Ibid*., p. 314.

6. Cosmology - Creation

In addition to God and ontology, Fr. Boulier collaborated with the communists in discussing the topic of cosmology and creation. Cosmology is a division of philosophy and in Greek means the study of the world. One of the issues it takes up is the origin of the universe. Dialectical materialism holds that since matter is primary, there is an implication that it is not created but always existed.[86] More generally, dialectical materialism follows the monist doctrine that matter is (1) infinite in space, (2) eternal in time, (3) uncreated and (4) atomistic.

Fr. Boulier agreed with the dialectical-materialist position and argued that his position was not contrary to Aquinas or scripture. After explaining in his biography how he had come by his philosophy as a young Jesuit student, he summarized about his cosmological views:

> *Thus I composed myself, without any other guide than my readings, a philosophy whose main lines have remained unchangeable for me, rather unorthodox, to tell the truth.*
>
> *The world is eternal and the matter infinite. Against the "grumblers," St. Thomas demonstrates that it is not irrational to think of an eternity of matter and that only faith teaches us that the world was drawn from nothingness and that it was its beginning. Now that we read the Bible in Hebrew - which St. Thomas did not do - we see that Chaos pre-existed the creative action.*
>
> *In the beginning that God created heaven and earth, the earth was vague and empty, the darkness covered the abyss, the spirit of God hovered over the waters. God says ... The dogma of creation from the first moment of a cosmos emerging from nothingness is only formulated with precision in the Bible at a late time and in popular language [that is reflected] in the legend of the seven brothers martyrs with their mother during the persecution of Antiochus Epiphane. Origen, with more than one Greek father, admitted an action of God exercising eternally on an eternal matter.*[87]

87. Boulier, *I was a Red Priest*, pp. 72-73. The reference to Aquinas is *De aeternitate mundi, contra murmurantes* (*On the Eternity of the World, against Grumblers*), which is available in

Fr. Boulier's position was not the traditionally Christian position on creation. The Soviet philosopher Averintsev, as mentioned earlier, was more accommodating to that position and wrote positively about Aquinas because in contrast to the idealism of Plato and his Christian followers, Aquinas, in a materialist manner, created, as he put it, a systematic order of the many within the one. From this he deduced the existence of God from the existence of things, as seen in the five proofs of the existence of God.[88]

7. Ethics

In their philosophizing with the Marxists about ethics, the social Christians used both the authority of the early Christians and Aquinas's theories such as integralism, just war and natural law. For example, Fr. Boulier maintained that the church's economic ethic from the start was communism. This was exemplified in the *Acts of the Apostles* (80-90 AD), 2:44-45 and 4:32-35 (everything in common, distribution according to need), 2 *Thessalonians* 3:10 (no work, no eat), the *Didache* (100 AD) and the Desert Fathers and Mothers (200s-400s AD), who followed Jesus' command to "be perfect, therefore, as your heavenly Father is perfect" (*Matthew* 5:48).[89] They summarized this in the three evangelical counsels: poverty, chastity and obedience.[90] American communist Milt Felsen gave the Jewish version: the Ten Commandments are communism, breaking them is capitalism.[91]

In discussing Thomas More's *Utopia* (1516), Fr. Boulier described the Marxists as already having risen to the faith without knowing it. He wrote:

Mary T. Clark, *An Aquinas Reader* (Garden City, N.Y.: Image Books, 1972), pp. 178–185. The work is online, at www.logicmuseum.com/time/aquinaseternitate.htm. The woman with seven sons was a Jewish martyr described in 2 *Maccabees* 7 and other sources. The belief about everlasting life cited by the last brother is the reason Fr. Boulier cites the passage. Concerning Origen of Alexandria (184-253 AD), See John McGuckin, *The Westminster Handbook to Origen*, (Louisville, Kentucky: Westminster John Knox Press, 2004).

91. Milt Felsen, *The Anti-Warrior: A Memoir* (Iowa City: University of Iowa Press, 1989), p. 137.

> *But with your Utopian communists, did not you go back to the first Christians? We read in the* Doctrine of the Apostles*, the* Didache*, the oldest Christian writing, perhaps prior to the Gospels: "If you partake among yourselves as communists (*koinônôi*) the God who does not die, all the more reason to be communist with the goods that perish". Your non-Christian Utopians were thus rising, without knowing it, to the level of the faith. And why not our Marxists?*[92]

The Marxists were already Christians, according to Fr. Boulier and the monks, nuns, priest-workers and the resistors to bourgeois rule of all ages were already communists. In 1949 he summed this up:

> *Christians will therefore be good citizens of the modern city. And here it is well understood that if this city is communist, they will work with all their heart for the socialist order, such as it is proposed to them, such as it is possible for them to collaborate in the factory, in the agricultural enterprise, in the higher councils where the order is regulated.*
>
> *But if this society is bourgeois, how can Christians accept its fundamental law, the one to which all others finally give in:* make money *[in English] or, as Guizot said: get rich? "You cannot serve two masters: you cannot serve God and money" [*Mt. *6:24]... But since this bourgeois society where money is king calls itself democratic, Christian will use all the freedoms, as long as they are offered, to fight against the yoke of money and its threat.*[93]

Arguing for the same economic ethic, priest-workers in the post-war era used for authority, in addition to the early Church, the Thomistic doctrine on integralism. Aquinas set forth this principle in the treatise, *De regno*. Integralism taught that secular and spiritual power had to be united. In the

92. Boulier, *I was a Red Priest*, p. 326, see also pp. 567-569. The Soviet historians Iakov Lentsman and Abram Ranovich discussed both the egalitarian philosophy of the Christian community and the transition away from this, as reflected in the *Didache*. The traveling Christian prophets, rabbis and apostles of early Christianity are shown as being replaced by professional priests and bishops. See Iakov Lentsman, *Proiskhozhdenie khristianstva* [Origins of Christianity] (Moscow: Izd-vo Akademii nauk SSSR, 1958), pp. 164-167, 222-223; Iakov Lentsman, *Sravnivaia Evangeliia* [Comparative Gospels] (Moscow: Isd-vo Polit. Lit-ry, 1967), p. 177; and Abram Ranovich, *O rannem khristianstve* [Concerning early Christianity] (Moscow: Izd-vo Akademii nauk SSSR, 1959), p. 60.

93. Boulier, *A Priest Took a Stand*, p. 77.

official church version, as represented by medieval popes such as Gelasius I, Gregory VII and Boniface VIII, this meant the pope was supreme. They were the government of the Italian Papal States for a thousand years up until 1870, when King Victor Emmanuel II overthrew it.

However, the social Christians, such as Fr. Chenu, turned the doctrine on its head. They used it as a tool of political-economic integration with the communists in order to make the proletariat supreme -- the reincarnation of the real Christianity of the early church.[94]

The progressive Catholic journal *La Quinzaine*, discussed the integral engagement in France on the socialist holiday, "May Day" 1953.[95] It stated that the priest-workers were justified in their complete commitment to temporal action because the workers' world should be considered as "a complete human reality," like a nation. This meant having its own Church, which differed from the existing bourgeois church and which carried over none of the traditions which were foreign to the workers' world. The priest-workers had to create new communities round them which would be as authentically proletarian as the Church in Ireland was Irish and in France was French.[96]

The priest-worker Fr. Maurice Combe, writing about the economic ethics in his socialist factory school, argued that it was practicing the gospel in a religious spirit.[97] Similarly, the focus of Fr. Chenu's ministry in the 1940s and 1950s as a Parisian Friar-worker was to help proletarian congregations that were independent of the bourgeoisie and which had their own clergy and liturgy.

94. Chenu, *The Theology of Work*, pp. 57-61. See also, Chenu, "Le Sacerdoce des prêtres-ouvriers," *La Vie intellectuelle* (February 1954), pp. 175-181; and Sarah Elizabeth Shortall, "Soldiers of God in a Secular World: The Politics of Catholic Theology, 1905-1962" (unpublished Ph.D. dissertation, Harvard University, Cambridge, Mass., 2015), p. 305, online at https://dash.harvard.edu/bitstream/handle/1/23845484/SHORTALL-DISSERTATION-2015.pdf?sequence=4&isAllowed=n.

95. *La Quinzaine* was a Catholic bimonthly newspaper published by Editions du Temps présent from 1950 to 1955. Its directors were Ella Sauvageot and Jacques Chatagner. It was intended for Christian activists involved in working-class circles. It and the priest-worker movement were condemned by Pius XII because of their communist collaboration.

96. Yvon Tranvouez, "Guerre froide et progressisme chrétien: *La Quinzaine* (1950-1953)," *Vingtième Siècle. Revue d'histoire* (January-March, 1987), no. 13, pp. 83-93; see also, Tranvouez, *Catholiques et communistes. La crise du progressisme chrétien, 1950-1955* (Paris: Cerf, 2000), chs. 3, 4, 9.

97. Maurice Combe, quoted in Oscar Arnal, "A Missionary 'Main Tendue' [extended hand] toward French Communists: The 'Témoignages' of the Worker-Priests, 1943-1954," *French Historical Studies*, (Autumn 1984), vol. 13, no. 4, pp. 529-556, at p. 543.

Their apostolate was the economic ethic of the worker program.[98] The benefits of their program, as they viewed it in the socialist countries, were:

> *People were equal.*
> *Every citizen could keep a job.*
> *There was an internally stable economic system.*
> *Strong social communities were established.*
> *Competition did not exist.*
> *Efficient distribution of resources.*[99]

As set forth by Aquinas, the integralist and spiritual supremacy doctrine flowed from "natural law." The Soviet philosopher Averintsev in discussing the natural law, commented on its authority for popular revolution:

> *In his ethical teachings, Thomas Aquinas represents "natural law," which is implanted by god in the human heart, in the spirit of Aristotle's ethics; "divine law" stands above and surpasses natural law but cannot contradict it. In his treatise on kingship,* De regno*, Thomas combines the dogmas of Christianity and the doctrine of the pope's supreme authority with such Aristotelian concepts as the idea of man as a social being, the common good as a goal of the state, and morality as the middle point between the fallacy of the extremes. With some reservations, Thomas acknowledges the people's right to rise up against a tyrant who practices the perversion of justice.*[100]

Seemingly, "natural law," implanted by God in the human heart is a Platonic, not a materlialist doctrine. Whatever the case, the Soviet jurist Vladimir Tumanov (1926-2011) noted that Marxism views "a priori" natural law systems as expressions of existing economic systems. At the same time he defended the elements of truth which they contained. He wrote:

> *The Marxist materialist approach to law as a reflection of the economic order and political structure of class society makes superfluous the*

> *concept of natural law as a precondition for the existence and validity of existing law… At the same time Marxism does not consider false everything that stands behind the concept of natural law. Marxism attaches great significance to the inalienable rights of humans and citizens and, in evaluating existing law, assigns an important role to ideals and values (and justice as well), considering them, however, socially conditioned, class-bound, and historically changing, not* a priori *categories.*[101]

Revolutionary Poland was an example of where Marxists made use of natural law. The Thomistic activist Danuta Gostynska, who worked with the PAX movement, discussed the legacy of Aristotle's *Nichomachean Ethics*. Coming from a slave-dominated society, Aristotle denigrated work. Because of this labor had become associated with punishment for original sin. But the Poles revised Aristotle's natural law on this point: labor in their view was intended by God to be a continuation of the creation.[102]

In their interpretation of integralism, the social Christians were joined by Jacques Maritain.[103] He was not on the left, but he argued that secular forms of humanism were inevitably anti-human in that they refused to recognize the whole person. Accordingly, in his book, *Integral Humanism*, he explored the prospects for a new Christendom, rooted in philosophical pluralism, in order to find ways to inform political discourse and policy in a pluralistic age. He developed a theory of cooperation, to show how people of different intellectual positions could nevertheless cooperate to achieve common practical aims. This influenced the Christian Democratic movement.

Another ethical area of Christian-communist collaboration that paralleled the economic, was the international peace movement. This was a full-time apostolate for Fr. Boulier during and after the period he was chair of the department of Christian Principles of the Law of Nations at the Catholic University of Paris. His work involved writing, petitioning, teaching,

demonstrating and preaching at conferences throughout Europe. In 1949 he summarized that his activism was based on the thirteenth-century principles of the law of nations, which Aquinas had adopted from the Roman law concept of *ius gentium*. His mission was to apply the principles to America's atomic war policy. He wrote:

And so things are perfectly clear: Warsaw, Rome, Wroclaw, three places in the world where I had to take a stand in the conflict of forces that are fighting for the future. Faced with the threatening presence and policy of the United States, I applied to this policy the Christian principles of the law of nations which I was charged to teach. For it is not a question of stating in the abstract the law of nations of the thirteenth century, but that which our time recognizes and that to which it aspires. I do not think that an atomic policy can claim Christian principles of war and peace. So I take a stand.[104]

In 1950 Fr. Boulier helped write and promote the Stockholm Appeal to prevent nuclear war in Korea.[105] The petition gained 273 million signers, most of whom, as he pointed out, were Christians, not communists. Still later, in 1958 he was convicted of a felony for defaming the French military concerning its conduct in the Algerian War.[106]

In the early 1960s from within the peace movement during the Second Vatican Council, Fr. Boulier worked with Fr. Chenu and Cardinal Suenens to help it support peace.[107] The language in the Pastoral Constitution on the Church in the Modern World, *Gaudium et Spes* ("Joy and Hope") of December 7, 1965, contained the essence of Fr. Boulier's proposed text, "Every act of war which tends indiscriminately to the destruction of entire cities or vast regions with their inhabitants is a crime against God and against man himself and it must be condemned firmly and without hesitation."[108]

There is a final aspect of the social Christian collaboration with the Marxists that will be mentioned. This is epistemology, which studies the theory of knowledge and how humans can know the world. Materialists make direct experience of the world the basis of all knowledge. On the other hand, idealists (rationalists), such as Kant, argue that knowledge of the world is governed by fixed and *a priori* concepts or categories, including conceptions of' substance or causality, which structure thought or perception of reality.

Fr. Bochenski used anthropomorphic versus cosmocentric (nature) terminology to define the issue when he was defending Marxist-Leninist and Thomistic epistemology against East-European revisionism. He summarized:

> *The "revisionists" are anthropocentrist in the same category with the Kantians and the existentialists, and in sharing opposition to the clearly cosmocentric approach of the Soviets.*[109]

As mentioned above in the neo-Thomism discussion, Fr. Bochenski argued that like Aquinas, the Soviets held that humans were the highest entity in nature, but they were still a part of it.[110]

Lenin as a materialist, argued that consciousness reflected reality.[111] Similarly. Aquinas taught that in perception, the mind, or, in his words, "the soul," received the form of the world.[112] In his presentation on cognition, Fr. Brian Chrzastek, OP, who is an Assistant Professor of Philosophy at the Dominican House of Studies in Washington, DC, elaborated on Aquinas's explanation of

112. Medieval historian Robert Pasnau noted that Aquinas's "theory of cognition was the sort that a modern materialist could love." See Pasnau, *Theories of Cognition in the Later Middle Ages* (New York, NY: Cambridge University Press, 1997), 330 p., at p. 36, pp. 42-46; online at https://spot.colorado.edu/pasnau/inprint/pasnau.theories.pdf. Aquinas," *New Scholasticism* (1968), vol. 42, pp. 578-91; and Martin Tweedale, "Origins of the Medieval Theory That Sensation is an Immaterial Reception of a Form," *Philosophical Topics* (1992), vol. 20, pp. 215-31.

how the mind receives the form of the world and how his explanation differed from Kant.[113]

As described by Fr. Chrzastek, Aquinas's explanation involved four-steps, which did not operate in a straight-line, but had switch-backs and "miraculous" complexity. In the first step of cognition, the person experienced through their sense organs the sensation of an entity which possessed an inherent essence or nature, such as a dog. Secondly, the person's brain apprehended a phantasm or mental image of the object. Thirdly was intellection. The person took the concept from the image and presented it to the passive intellect. Lastly was judgment, such as "that is a dog."

Kant's explanation paralleled that of Aquinas, but with greater complexity, which however, did not eliminate its multiple contradictions and agnosticism about the material world.

For Fr. Boulier, knowing the world included having a spiritual relationship with God. This started at a young age.[114] As a Thomist, the relationship involved the senses of both God and Fr. Boulier. Concerning senses, the Soviet philosopher and vice-president of the USSR Philosophical Society Alexander Spirkin (1918–2004) maintained that Marx took a broad view:

> *Marx pointed out that in addition to the five senses, the spiritual and practical senses (love and willpower, for example) – in a word, human emotions in general and the human nature of the sense organs – arise only because of the existence of an object for them and because nature has been humanized.*[115]

For Fr. Boulier, God the Father, not only the Son, was humanized. Prayer meant humans and God communicating with "miraculous" complexity through the senses. There was no agnosticism about the material world.

Marx, *Marx and Engels Collected Works* (London: Lawrence & Wishart, 2010), LCCN 75328381, vol. 1, p. 85].

Communists and social Christians shared the same epistemology and also the militant political ramifications that accompanied the theory. For example, professor Averintsev in elaborating on Aquinas's materialist epistemology, alludes to the role his doctrine had in the 13th-century evangelical movement:

> *Thomas' anthropology, which had a particularly close relation to the acute ideological conflicts of his time, is based on the notion of the human individual as a personal union of soul and body. While the soul is both immaterial and real, it is only through the body that it achieves ultimate actualization.*
>
> *Thomas defended this idea against the spiritualism of Plato and Augustine as well as against the Averroism of Siger of Brabant, with its doctrine of a single impersonal intellectual soul in all thinking creatures of the universe.*
>
> *In Thomas' view, Origen's doctrine of the essential identity of angelical and human nature was fallacious. The human soul must not simply be considered the body's "mover," but rather its essential form. This concept was resisted by Thomas' Augustinian and Franciscan opponents, until it was accepted as orthodox doctrine by the Catholic Church at a council held in Vienne in 1314.*[116]

Concerning epistemology's role in politics, Averintsev pointed out that Averroism was regarded by Aquinas as a subversion of Christian eschatology, insofar as the latter was concerned with the destiny of the human soul. The individual, in Thomas' view, was "the noblest thing in all reasoning nature" (*Summa theologiae*, 1:20.1). Averintsev explained:

> *The intellect, inasmuch as it is always an individual human intellect, is not the prime moving principle; rather, it is a part of the whole. God alone is endowed with intellect as essence, while intellect in humans is the potential of essence; thus it is not intellect which thinks—it is humans who think through the medium of the intellect. Proceeding from the premises of Christian dogma, Thomas denies the absoluteness of the intellect and views it as a part of the individual's spiritual and bodily entity; at the same time, he asserts the primacy of intellect over will. According to Thomas, reason is in its nature higher than the will—but with the reservation that,*

116. Averintsev, "Thomas Aquinas," *Great Soviet Encyclopedia*, vol. 15, pp. 559-563.

> *on the plane of human life, love of god is more important than knowledge of god.*[117]

9. Conclusion

This article has been about philosophical collaboration of social Christians and communists during the cold war. The Christians argued their dialectical materialist philosophy and related doctrines on God, cosmology, ontology, ethics and epistemology conformed both to the church's teachings and to Marxism.

Beyond Adventurism: Luigi Mangione and the Revolt Against Capitalist Healthcare

Jonathan Brown[1]

Introduction

On the morning of December 5th, Brian Thompson, the wealthy CEO of UnitedHealthcare, was walking to an investor conference in New York City — reportedly to collect his substantial Christmas bonus — when he was shot and killed by a lone gunman. At the scene, police discovered three spent shell casings, each marked with the words "deny," "defend," and "depose" — a clear nod to *Delay, Deny, Defend: Why Insurance Companies Don't Pay Claims and*

---

1. Jonathan Brown teaches high school social studies in Athens, Georgia, where he inspires students with his deep passion for exploring society and history. He also teaches sociology as an adjunct professor at Athens Technical College. Jonathan holds a bachelor's degree from the University of Georgia and a master's degree from California State University, Northridge, where he studied culture and politics from a Marxist perspective. Outside the classroom, Jonathan plays guitar in a punk rock band and is an active member of the Jewish anti-Zionist community. He is a committed member of the American Communist Party.

What You Can Do About It, a 2010 book that revealed how the health insurance industry systematically refuses to pay claims to maximize profits. The alleged shooter, 26-year-old Luigi Mangione, was later apprehended, and authorities recovered a manifesto in which he condemned corporate America and declared that "these parasites had it coming."[2]

Mangione's actions have since sparked a firestorm of debate, exposing the festering rage within the American working class toward an unjust healthcare system that prioritizes profit over human life. To many workers, Luigi Mangione has emerged as a folk hero — a modern-day Robin Hood who struck a symbolic blow against a system built on exploitation and suffering. While most Americans do not condone acts of vigilante violence, there is precious little sympathy for corporate executives who have enriched themselves at the expense of human lives.

How should Marxist-Leninists interpret this extraordinary moment? This essay will argue three key points. First, the American healthcare system exemplifies Friedrich Engels' concept of *social murder*, where systemic, profit-driven policies result in preventable deaths. This system is experiencing a deep crisis of legitimacy – which is why Mangione's alleged actions have resonated so strongly with the public. Second, liberal moralistic critiques of Mangione's background and beliefs reflect a *purity fetish* that attempts to stifle the growing revolutionary consciousness of the masses. Finally, while Mangione's actions express legitimate working-class frustration, Marxism-Leninism teaches that true revolution demands collective organization, not isolated acts of adventurism.

The Healthcare Industry as Social Murder

The public reaction to Brian Thompson's death laid bare the profound discontent with America's for-profit healthcare system. Social media platforms overflowed with *schadenfreude*. A Facebook post by UnitedHealthcare mourning Thompson's death, for instance, received over 90,000 laughing emojis.[3] One commenter's caustic remark — "thoughts and prayers are out of

network" — perfectly captured the working-class's deep cynicism and anger toward a system that denies care to those who need it most. The corporate media, unable to comprehend this response, clutched its pearls. "A man was murdered in cold blood, and you're laughing?" Jia Tolentino asked in *The New Yorker*. "Are we really so divided, so used to dehumanizing one another, that people are out here openly celebrating the death of a hardworking family man?"[4]

To the American working class, Brian Thompson was not a "hardworking family man" but a bloodthirsty parasite who profited from human misery. As CEO of UnitedHealthcare — one of the nation's largest health insurance conglomerates — Thompson oversaw a business model rooted in the systemic denial of care. In 2023 alone, UnitedHealthcare reported $281 billion in revenue, while Thompson personally received a $10 million salary. [5] Under his leadership, the company introduced policies that denied coverage for "non-critical" emergency room visits, forcing patients to gamble on whether their symptoms warranted treatment. Thompson also oversaw the use of artificial intelligence systems to automate claims denials, accelerating rejections while boosting corporate profits. His tenure epitomized the free-market logic of healthcare as a commodity: profits for a few, suffering for the many.

These failures extend far beyond Thompson or UnitedHealthcare; they reflect the inherent contradictions in the capitalist approach to healthcare as a whole. Despite spending more per capita on healthcare than any other nation, nearly 26 million Americans remain uninsured, and 45,000 die annually from preventable illnesses.[6] For those "fortunate" enough to have insurance, crushing medical debt is commonplace: Americans owe $220 billion in medical debt, with over three million burdened by debts exceeding $10,000.[7] Despite decades of debate by US politicians about various healthcare reform measures, America's

privatized system remains an unfortunate outlier among advanced industrialized nations.

The grim statistics of suffering and death brought about by the American healthcare system evoke Friedrich Engels' concept of *social murder*, introduced in his 1845 exposé of industrial capitalism, *The Condition of the Working Class in England*. Engels used the term to describe systemic, preventable deaths that arise not from individual acts of violence, but from the deliberate policies of the capitalist class. These deaths, Engels argued, are not accidental but are an inevitable consequence of a system that places profit above human life. He wrote:

> "When society places hundreds of proletarians in such a position that they inevitably meet a too early and an unnatural death... it commits a crime as surely as does the single individual who puts a knife to another's throat."[8]

This concept remains as relevant today as it was in Engels' time. CEOs like Brian Thompson preside over a healthcare system that knowingly denies care, leaving millions to suffer preventable illness, injury, and premature death. Their policies are no less violent than an individual act of murder, yet these CEOs are celebrated as "innovators" and "leaders" while their victims are treated as collateral damage. The capitalist system's defenders would have us believe that Mangione is the criminal, but the American people are beginning to recognize that the greater crime lies in the systemic violence of *social murder* perpetuated by the ruling class.

The Problem of the Purity Fetish

While Luigi Mangione has been celebrated as a populist hero, liberal media outlets have predictably sought to discredit him by scrutinizing his personal background and beliefs, holding him to an impossible standard of perfection. The *New York Times* fixated on Mangione's "privileged background," emphasizing his upper-class upbringing, status as a high school valedictorian, and Ivy League education – as though these factors invalidate his grievances

8. Friedrich Engels, *The Condition of the Working-Class in England* (London: Penguin Classics, 2009), 106.

against the healthcare industry.[9] Similarly, feminist commentator Jill Filipovic trivialized Mangione's popularity, claiming it stems from his "six-pack abs, gloriously thick eyebrows, and million-dollar smile," reducing legitimate working-class solidarity to sexual objectification.[10] Several commentators combed through Mangione's social media presence for evidence of "wrongthink," leading prominent democratic-socialist Nathan J. Robinson to lament Mangione's "lack of traditional left-wing views" and ignorance of socialist and communist literature — as if familiarity with Marxist texts were a prerequisite for expressing justified rage against capitalism.[11] Yet perhaps the most asinine critique came from MSNBC's Ja'han Jones, who equated public support for Mangione with the "hero worship of white killers," and bizarrely compared Mangione to serial killer Ted Bundy.[12]

These criticisms exemplify what philosopher Carlos L. Garrido terms the "purity fetish" — an obsession with ideological perfection that undermines revolutionary consciousness and stifles potential for meaningful action.[13] The widespread support for Luigi Mangione is not simply about one man; it signals a growing crisis of legitimacy, not just for the healthcare industry, but for capitalism as a whole. Large segments of the American public have lost faith in the institutions of bourgeois society, and the ruling class is increasingly unable to maintain its grip on the status quo. In such moments, liberals serve as gatekeepers of capitalist hegemony, wielding ideological purity tests to disarm and paralyze revolutionary momentum. Rather than acknowledging Mangione's actions as a reflection of profound systemic anger, these critiques deflect attention from the healthcare industry's inherent brutality and work to protect capitalist interests. Only through the leadership of a disciplined Communist Party can the discontent of the masses be transformed into a coherent revolutionary force capable of overthrowing the system. To achieve

this, we must reject the ideological puritanism that divides and disempowers the working class, and instead unite behind the shared goal of revolutionary change.

The Limits of Adventurism

While Marxist-Leninists reject liberal attempts to discredit Mangione, we also recognize the limitations of individual acts of violence. Individual actions, however heroic, risk falling into *substitutionism* — where the deeds of a lone individual are mistakenly seen as a replacement for the necessary work of building a revolutionary movement. As V.I. Lenin argued in his 1902 essay *Revolutionary Adventurism*, collective action and disciplined organization is a more powerful force than the isolated acts of lone individuals.[14] In a society saturated with myths of the lone hero — perpetuated by Hollywood's endless parade of superhero narratives — this caution is more urgent than ever. While acts like Mangione's can bring attention to systemic injustice, they cannot replace the hard, patient work of constructing a revolutionary party. Surrendering to petty-bourgeois impulses that elevate individual violence over organized struggle runs the risk of undermining the goal of building a truly collective, class-conscious movement capable of overthrowing capitalism.

Conclusion

Luigi Mangione's alleged killing of Brian Thompson reflects a profound crisis of legitimacy within capitalism. His actions, born from a justified rage against systemic social murder, resonated deeply with the working class. As committed Marxist-Leninists, we must reject the liberal critics that seek to discredit Mangione — whether by fixating on his "imperfect" ideology or his "privileged" background. These critiques, rooted in puritanical moralism, serve only to paralyze the masses and shield the capitalist class from accountability for its crimes. At the same time, we understand the limits of individual acts of violence. While such actions may expose systemic injustices and galvanize public discontent, they cannot substitute for the organized, collective struggle necessary to overthrow capitalism. The task before us is clear: to build a legitimate Communist Party capable of uniting the working class, channeling mass discontent, and leading the fight to overthrow the capitalist system. Only

14. Vladimir I. Lenin, "Revolutionary Adventurism," *Marxists Internet Archive* (September 1, 1902): https://www.marxists.org/archive/lenin/works/1902/sep/01.htm

through organized, disciplined struggle can we dismantle this regime and replace it with a system that prioritizes human life over corporate profit.

6

On the Bigfoot Question: The Nature of Humanity as Proof of Dialectical Logic

Noah Khrachvik[1]

Introduction: Objective Truth and the Question of Humanity

What makes us human? What separates us from the animal kingdom? Or the plant kingdom, for that matter. Or any other kingdom you could think of? What about humanity gives us that humanity? Is it some characteristic we have? Thought, maybe? If it's thought, where does that thought come from? If it's a characteristic, which one? Why do we even think about ourselves as humans separately from nature, anyway? Can we even be sure that we're not just another animal, mechanistically doing what any animal does, but in some unique form? These are questions philosophers have been asking themselves and trying to answer since before the word "philosophy" even came around.

---

1. Noah Khrachvik is the Secretary of Treasury for the American Communist Party and a Director for the Midwestern Marx Institute. He is the author of the forthcoming *Reproletarianization: The Rise and Fall of the American Middle Class (2025)*.

Even in ancient times, before we had bodies of knowledge that we categorized into different disciplines, human beings looked at the natural world around them, at the stars above them, and thought about these things, developing entire religions and customs around them. And it's moved forward from there. Pre-Marxist logic, for example, often looked at the question as one of common sense. Man is man. A = A, and can't be anything but A. All you really need to do to figure out what "humanity" or "man" is would be to look at those characteristics that are present within every single individual within the classification without exception and add them up, or to look at those characteristics that are present within these individuals and no others, and then compare them. It's only when we start going a little deeper than elementary observations that problems begin to come up. What living beings are we going to include here in the first place? Believe it or not, this was not always something that seemed readily apparent to us. Some of the greatest philosophers in the history of society believed that some human beings were more… human than others. Aristotle didn't take slaves into account when he called man a political being, for instance. For Aristotle, only the actions of a free citizen could truly be considered human.

Way back in the oldy timey times, before even the enlightenment, Descartes' famous reduction, "I think, therefore I am," made sense. The notion that all I can know without doubt, when we strip everything away and begin at the beginning, is that I am a thinking being. That I am having this thought. Outside of that? It's anyone's guess. We may all live in a giant potato. Who knows. We have to go onwards from there and check and see what else we can't doubt. (Okay, so I added the potato bit myself - that is not part of what Richard Levins and Richard Lewontin called 'the Cartesian Reduction.' But you get the point, right?)[2] The postmodernists don't believe we can ever answer such a question, as they don't believe we can even find objective truth. For them, all of the various "truths" we see are only subjective illusions, an infinitely expanding world of competing narratives - what is real for me is not necessarily real for you. So your conception of 'humanity' may be far different from mine, and who's right? Well, both of us. Neither of us. It's all the same, really. Maybe your potato and mine are different potatoes, and those potatoes are real for both of us.

Potato worlds aside, though, the weirder sounding modern-day philosophical schools are not the only ones who think this. From Bishop Berkley to the

---

2. Richard Levins, Richard Lewontin. *The Dialectical Biologist.* (Harvard University Press, 1985).

Machists of the early 20th century, many forms of idealist philosophy throughout history have dealt with the nature of truth in such a way. And if we do not have objective truth that is outside ourselves, then we cannot ever know if our understanding of humanity is correct or not. So let's get that squared away real quick.

JV Stalin, who was a far deeper thinker than the Western bourgeois academic "Marxists"[3] and postmodernists will ever tell you, says in his short primer, *Dialectical and Historical Materialism:*

> *Contrary to idealism, which denies the possibility of knowing the world and its laws, which does not believe in the authenticity of our knowledge, does not recognize objective truth, and holds that the world is full of "things-in-themselves" that can never be known to science, Marxist philosophical materialism holds that the world and its laws are fully knowable, that our knowledge of the laws of nature, tested by experiment and practice, is authentic knowledge having the validity of objective truth, and that there are no things in the world which are unknowable, but only things which are as yet not known, but which will be disclosed and made known by the efforts of science and practice.*[4]

He goes on to tell us in brief why that is, but the explanation really comes from Frederick Engels, who criticized Kant's attempt to state that objective truths were unknowable to us, expanding on Hegel's insight that there is a connection between the world of thoughts within our minds and the material reality existing outside of that sphere. He said:

> *The most telling refutation of this as of all other philosophical crotchets is practice, namely, experiment and industry. If we are able to prove the correctness of our conception of a natural process by making it ourselves, bringing it into being out of its conditions and making it serve our own purposes into the bargain, then there is an end to the Kantian ungraspable 'thing-in-itself.' The chemical substances produced in the bodies of plants and animals remained such 'things-in-themselves' until organic chemistry*

3. I refuse to call these people Marxists. They are, to their core, anti-Marxist, and their worldview is anti-Marxist through and through. But that's a story for another time and place. Or, what I call "a whole nother bag of bananas."

4. Joseph Stalin. *Dialectical and Historical Materialism.* (International Publishers, 1972), 8-9.

> *began to produce them one after another, whereupon the 'thing-in-itself' became a thing for us, as, for instance, alizarin, the coloring matter of the madder, which we no longer trouble to grow ill the madder roots in the field, but produce much more cheaply and simply from coal tar. For 300 years the Copernican solar system was a hypothesis with a hundred, a thousand or ten thousand chances to one in its favor, but still always a hypothesis. But when Leverrier, by means of the data provided by this system, not only deduced the necessity of the existence of an unknown planet, but also calculated the position in the heavens which this planet must necessarily occupy, and when Galle really found this planet, the Copernican system was proved.*[5]

Or, to put it a little more simply: the practice of theory within the real world is proof of objective truth within that theory. Engels tells us that, as we develop the scientific knowledge to understand the coloring within the "madder" root, we make it a thing for ourselves at that point. We interact with that real world, change it, and make it work for us. From then on, we can make the same thing much more cheaply and easily by theoretically understanding other aspects of the world around us. Without the theoretical and practical experience of, say, medical technology, and the ability to perform heart transplant procedures, my mother would have died a very long time ago. Because these physical laws are not things-in-themselves, unknowable to the doctors who operated on her, however, her life was saved and she has been kicking asses and taking names since then, and that was more than thirty years ago.

And so Marxism says that of course we can have objective truth, and that the truths we discover are objective truths. And this is precisely what we need in order to answer any question, really, not just the one about ourselves as human beings. Without objective truths, all of our philosophical pondering is nothing more than navel gazing and mental masturbation, guesses about what is that can never be verified. This essay is an attempt to cut through all that nonsense and to state a fact we often take as a dogma through the posing of one question alone.

What is a human?

Asking this question and attempting to answer it can only lead to one solution: in order to even begin trying to answer it without ending up hopelessly trapped

---

5. Frederick Engels. *Ludwig Feuerbach and the End of Classical German Philosophy.* (Progress Publishers, 1946), 16.

in circular logic, or already having a preconceived abstract notion of 'human being' as separate from the rest of the living world, reducing us to the counting of fully formed characteristics without understanding how they relate or became what they are, or vulgar idealism, we must apply the dialectical form of logic.

Or, a little more simply: in order to genuinely ask the question, "what is humanity," with the intent of arriving at an answer and not just circling endlessly around conclusions that are also our premises (which sounds exhausting, frankly), we must:

- understand that truths are objective, and outside of ourselves.
- think developmentally, and understand how things get from A to B.
- have a scientific method of investigation whereby we can understand development and processes, and properly denote elementary sensual observations from the rational stage of cognition that begins after this observation, going step by step from the end to the beginning and beginning to end at once.[6]
- In doing this, we must understand that ends are only beginnings and beginnings are always ends. Cause and effect are constantly changing places through the course of a thing's development, and that the premise of all things is development. Discovering how that development happens is the key to objective and scientific knowledge of that thing.

Or: we must have dialectical logic. More, we must have dialectical logic that is based on a firm, materialist foundation, with any mystical trappings of idealism stripped from it and revealing both its correct internal formation and its correct reflection of the material world.

Or, a little more simply: we must have Marxism.

In order to do this, we're going to talk about Bigfoot.

---

6. We begin with observing a thing in reality - say, a bag of bananas. This is where its development has gotten to, the end. In order to understand how it got to that end, we must begin our abstract theorizing by looking at how it became this particular bag of bananas. We must understand how the paper the bag is made of became that paper, and how the bananas inside it were put inside it. By starting at the end and abstracting to the beginning, we recreate a concrete representation of the processes that begat this bag of bananas in our minds.

That's right. Fucking Bigfoot.

Bigfoot, the American Northwest, and the Reign of the Sasquatch

If you're not from the USA, or you're unfamiliar with American pop culture from the 20th century, you may be asking yourself at the moment what a Bigfoot is. They're called different things in different times and places. Yetis, for instance. Or 'the abominable snowman' when they're in the snow. Sasquatches. The Missing Link. Basically, they are mythical creatures (or are they real creatures?[7]) who lie somewhere between the world of apes from which we are descended and the modern human being. There are, in fact, ancient histories with tales of such beings - part ape, part man. Some of them are peaceful, and some of them are vicious monsters, depending on the story. Regardless of the type, though, they are always particularly interesting for us humans. Such fantastical tales have been a staple of the zeitgeist for ages. And once mass media had been established, whooo boy. The imaginations of millions were captivated seemingly overnight by stories of "*Bigfoot*", hiding somewhere in the dense forests of the American northwest, or high in the Andes or Himalayas. "Sightings" popped up by the hundred, and the corporations began to cash in. Even the rednecks got into the spirit of things, with monster truck rallies featuring a car-crushing, gas guzzling, drunk-redneck-cheer-creation-machine named after the ape-monster of legend. I cannot tell you how many "Bigfoot" toys I had as a kid, but it was a lot.

For our purposes here, though, we are going to take things a little more seriously, and focus on the missing link version, rather than the big truck that crushes cars for our entertainment. And we are going to ask ourselves a question.

What if Bigfoot was actually discovered?

What if our technology, advanced as it is, was able to use thermal imaging to discover a whole bunch of Bigfoots? (Or is it Bigfeet? I'm not sure how to pluralize this one. I like Bigfoots. We're gonna go with Bigfoots.) What if some logging company was blowing their way through our pristine forests,

7. Cue trombone slide noise or rim shot here, whichever you'd prefer.

destroying the natural landscape and ecosystem to make a few bucks, and they discovered this previously mysterious and reclusive “missing link”?

What would this do to our society?

What debates would it bring up?

How would we view such a creature? And what would various sections of our society say about it?

I’ll tell you the first thing that would happen. Libertarians the world over would tell us that they can’t possibly have any connection to humans, because they live communally and don’t have Bigfoot mega-corporations or conglomerates, which is apparently considered ‘human nature’ in such circles, a priori. (Such is the degeneration/vulgarization of liberal thought in the 21st century. Don’t yell at me about it. I’m not the one who did that. And I’ve got enough on my plate trying to help undo the damage done to Marxism, anyway. The libertarians can try to combat that one if they want.) As we try to discover less humorous ways of categorizing our Bigfoots, though, let’s lay out a few things we’ll discover about them as the question materializes in the minds of humanity and becomes front page news, as most of us won’t come to such silly conclusions immediately.

Let’s just stay as close as we can to all the myths and legends. Our Bigfoots live very similar lives to apes, in large family or clan-like groups, and that they have a very primitive ability to engage in what might be considered language if we stretch the concept of language a little bit - guttural growls, yips with some precision, and gestures; that sort of thing. Apes, already, are taught sign language all the time, so I think this is a fair one to give them. Let’s say they’re not so advanced as to wear clothes, but they obviously mate and then bond with their immediate families; they are distinct individuals. Let’s say they have leisure time of a sort, have something between an ape paw and a human hand, and a pretty ape-like hierarchy within their large family units. This seems a fair in-between, if we’re going to try to be true to the general notion of what these guys are within pop culture. They’re a missing link, right? Somewhere on the evolutionary scale between us and our forebears. They’re much larger than us humans, with more natural lean muscle mass, fur all over, and (I apologize in advance for the dad joke) big feet.

These are our Bigfoots. And they’re scared to utter bejesus of the drones we initially keep flying towards their little hidey-hole communities in the forest in

order to try to study them without interfering with their natural ecological state while we make up our minds about what to do now that we know they're real. They throw rocks at the drones with amazing strength, and use the pieces in primitive not-quite-tools sometimes, and other times, they just leave the mess where it was, provided it was outside of the area they consider their territory.

I think this is a good starting place.

Let's see where it takes us.

The Debates: Is Bigfoot Man or Animal?

One would think we could simply view Bigfoots for what they are when they're discovered, and study them in order to try to figure out a deeper view of what we are as humanity, and where we come from. But their existence would immediately bring up certain problems. Vercors, a progressive French novelist known for his wit and ability to put such big questions into fictional situations with grace, wrote about just such things in his 1953 novel *You Shall Know Them* (which is actually part of the inspiration for this paper). He told the story of a similar creature being discovered on an expedition into previously undiscovered wilderness. This sparks all sorts of debates which increase in depth and philosophical perspective as the story goes on. The protagonist ends up forcing the issue when he kills one of them, prompting the need for immediate answers to the questions their existence brought up. Is he a murderer, who must be sentenced based on this crime he committed? Or has he only killed an animal, in which case such a charge would be ridiculous?

We will not go so far as to kill any imaginary Bigfoots in order to get to the root of this question, but we are going to delve into the questions it must lead us to when trying to decide whether or not these Bigfoots are sentient (or similar to humans) or if they are mere animals. In this way, we will arrive at the conclusion that the only proper way to even ask the question is to approach it through dialectical and not metaphysical logic.

Remember our logging company that initially discovered our Bigfoots? Well, in order to be logging there, they would have to own the land on which the Bigfoots were residing, wouldn't they? And if we are to apply the laws of whatever country this may be (let's use the USA, since that's where we are),

then what they do with their land is their business. If the Bigfoots are considered animals, they could be the perfect beast of burden for this company, as they could then be considered the private property of the logging company. After all, Bigfoots do not have class consciousness or even antagonistic relations of production. They do not form labor unions, and they do not form Communist Parties. They do not ask for wage increases, or even understand what a wage is. One Bigfoot could get the work of many humans done in a fraction of the time, especially as it relates to carrying heavy loads, clearing forests, etc. If these missing links were to be captured and used as a labor force, this would be a giant boon not just for our particular, individual logging company, but for those capitalists in need of such labor all over the world, and our logging company would be able to sell these "animals" to others and profit from the sales. This has happened even with human beings in the real world, during the era of chattel slavery. In fact, this was what Vercors was mainly dealing with in his novel, the effects of this chattel slavery on the human psyche, and the way it affected our social consciousness. In fact, the analogy is far more apt than one might think, if one is not aware of the deeper history of this institution being the central driving factor in the creation of a concept of "race" among humans, and entire schools of objectively wrong "scientific" inquiry that they used to call *race science.*

In the modern day, socialist musician/screen-writer Boots Riley explored the notion of a mega-corporation creating creatures to use in such a manner in his 2018 film, *Sorry to Bother You,* where the hero was tricked into taking a drug that mutated him into a horse-person, so that he could be a liaison between these things considered slaves/animals and the mega-corporation. (It doesn't exactly end up well for the Jeff Bezos-like character in charge of the mega-corporation, however, as the hero instead begins to organize the other horse-people who had been victims of the drug and starts a revolution.)

What Vercors and Riley are both doing here is commenting on the dehumanization that is inherent within subjective decisions made a priori based on how ruling classes must perceive subjects, and how they must reduce people to less than human status in order to justify their inhuman treatment. This is the entire pseudo-science they used to call "race science." The effect of this institution creates the social reality of race and race relations, which then becomes the cause of the system going forward from there.

Another character from Vercors's novel is an old clergyman, who wrestles with the question based on the need to either baptize them and save their souls if

they are to be considered human, or to do this in error and commit blasphemy if they are considered animals. He has a more open-ended incentive, of course, but finds himself compelled to notice that it is the distinction made at the outset of asking the question that determines whether they are human or animal. If they are human, then he must attempt to save their souls. If they are animals, he is breaking a very serious law of his religion, but since one must be trying to prove a conclusion as one even asks the question, he's left in a pickle. How does he decide? If he takes them as human, and baptizes them, then it is their immortal souls he is worried about. It is, after all, this immortal soul that makes one truly human for the faithful of his religion. But if he bases his view of what is human on the presence of said immortal soul, then he's already decided before he asks the question.

According to biologists who apply the Darwinian theory of evolution, humanity is the result of that same mechanical function, evolution. Humans are those who have evolved into what we see as human today, regardless of the consideration of the soul. We are the product of a mechanism that has led us to be precisely what we are, having adapted ourselves from a previous form according to the environment around us. Interestingly, it is held back only by its mechanistic form of thought. They observe, just as the religious do, that humanity at present can think and speak, and they can engage in labor, changing the natural world around them to suit the form of thought they have within their minds and serve their purposes. But they do not add the reciprocal relation that the Marxist point of view does, that humans are necessarily changing our environments as our environments change us. They do not add the effect becoming cause. They are, unfortunately, stuck in metaphysics.

On the surface, all metaphysical logic seems like common sense. A=A, right? And these are certainly not A. They're B. But when we dig down under that surface level, sensual observation, well… what do we call *thought*? What is *speech*, or a *soul*? If we are to seriously consider whether or not this Bigfoot should be a beast of burden for our logging company, or considered a sentient creature in its own right, then these are questions that *need* answers.

For the Marxist view, labor is the beginning of what makes us thinking beings, and our essential nature as humanity. Stripped down to a simple definition, and the core of what develops everything else about humans, we can say that humans are beings that produce instruments of labor and means of production. It was the need, after all, to perform labor that began the development of our thumbs, and coordination of such our speech. But what is labor? What is

production? Is it defined as working in a factory to produce a commodity and surplus value like so many people who call themselves Marxists will tell us today? Or can we say that banging a rock against a tree with the strength of a Bigfoot in order to knock it over on behalf of a logging company is labor? Is pouring a cup of coffee labor if we're selling that coffee for a company, rather than drinking it ourselves? Is it still labor if we drink it ourselves? When we think of these things, are we thinking of them as static states of being, devoid of development and how they came to be what they are? Are we working backwards from an already pre-defined view of what *labor* or *production* is and holding what happens in the real world up to that view? If so, are we even engaged in the Marxist view of labor?

Again - we must have concrete answers to these questions.

But it seems that posing the questions themselves ends up giving us the same problems that Vercors's priest had. Depending on which category or quality we determine makes them human or animal, there is already the determination of whether they qualify or not. If we begin adding up qualities our previously existing humans already have that the Bigfoot does not, then we are specifically leaving our Bigfoots out of the category, and we again have already made up our minds before we ask the question. Likewise, if we begin with categories they both have, then we have already made up our minds in the opposite direction.

Or, a little more simply: We always end up choosing those categories to define "human" that already include or exclude Bigfoots. This is the philosophical flaw in all metaphysical thinking. The counting of characteristics, in one way or another, to "define" a given thing must therefore reduce it to a static state of being at the very least.

So let's say our logging company is asking these questions. In order to define the Bigfoots as animals and use them as beasts of burden, they must already have a specific form of speech in mind that will qualify as 'speech' before even posing the question. And so, for our logging company, 'speech' becomes only the equivalent of modern language. The guttural sounds our Bigfoots make when "speaking" to each other obviously cannot count. The premise is baked into the conclusion. We can't get an answer that way.

What if our logging company has some people who've read Marx in it, and they decide that it is labor that makes something human. What can we say about

“labor”? Is a draft horse pulling a plow on an oldy timey farm engaged in labor? Only human beings have the ability to observe nature, then hold up an image of changed nature in our minds, and then interact with the material world outside of that image in order to change it and make it more closely resemble the image. So, maybe it is purposeful labor that we are dealing with. Can we say our Bigfoots are doing this when we are training them to use rocks to knock over trees? Again, here, the logging company must already have a qualifier of what constitutes labor and is therefore human in their minds in order to arrive at a solution. As must any detractors. From both sides of this question, we see only circular logic. If we consider ‘labor’ to only be that which we described above, then we already know whether the Bigfoots are human or not before we even ask the question. We’re operating backwards from a conclusion and trying to prove it.

In fact, this was Vercors’s final view, that it is always a foregone conclusion. Therefore, what is considered ‘human’ is whatever the powerful within society, those with the ability to disseminate their view as they wish, want to call it. As we see above, asking these questions results only in already having the notion of what qualifies as ‘human’ within our minds, and our reduction to vulgar materialism. And the notion that the ruling class defines objective reality is only more of the same. Their view is is not, in fact, reflective of objective reality outside their minds. This is not an objective truth. It is, instead, a subjective narrative that must ignore its own premises in order to arrive at its conclusions. Just as it was with so-called “race science.”

The Answer to the Bigfoot Question

The Marxist view of concrete humanity, of man, takes development as its premise, rather than focusing on some set in stone characteristics that end up in circular logic and working backwards from a conclusion. Humanity is its own development. It is an on-going process. What is Marxism, after all, other than a science through which we seek to understand how things develop the way they do? For Marxism, $A \neq A$. Instead, A is B. Or, rather, A is becoming B, which is the determinate form A took on, and where B can give us a clue to genuinely concretely understanding A, shaping our concrete concept of the whole as a moment of rational cognition. Every part of the whole must come together to form our concept. For Marxism, therefore, the essence of man cannot be found as some abstract characteristic inherent in each single individual, or by

comparing abstractions from individuals. We must, instead, understand all of the characteristics not according to what they are, or their being, but instead according to how they came to be that way and how they interact with each other, or their becoming. It is, as Marx tells us rather plainly in his theses on Feuerbach, the "ensemble of the social relations," which we cannot arrive at without this form of developmental logic, without ascending through our abstractions and into the concrete totality, the ensemble.

And so, for Marxism, we must take a look at the beginning of that development.

Engels's Answer to The Bigfoot Question

Engels teaches us this lesson in *Anti-Duhring*, where he describes the metaphysical mode of thought and contrasts it to the dialectical view in the most succinct manner I've ever seen, which can begin to really concretize our view of the Bigfoot. He says:

> *To the metaphysician, things and their mental reflexes, ideas, are isolated, are to be considered one after the other and apart from each other, are objects of investigation fixed, rigid, given once for all. He thinks in absolutely irreconcilable antitheses. "His communication is 'yea, yea; nay, nay'; for whatsoever is more than these cometh of evil.*[8] *For him a thing either exists or does not exist; a thing cannot at the same time be itself and something else. Positive and negative absolutely exclude one another, cause and effect stand in a rigid antithesis one to the other.*
>
> *At first sight this mode of thinking seems to us very luminous, because it is that of so-called sound common sense.*[9] *Only sound common sense, respectable fellow that he is, in the homely realm of his own four walls, has very wonderful adventures directly he ventures out into the wide world of research. And the metaphysical mode of thought, justifiable and even necessary as it is in a number of domains whose extent varies according to the nature of the particular object of investigation, sooner or later reaches a limit, beyond which it becomes one-sided, restricted, abstract, lost in*

8. Engels is here quoting a Bible verse, Matthew 5: 37, which is noted in the original text. Figured I'd let you guys know too, as it's a pretty interesting verse in its own right and Engels did nothing without reason. Here, he is saying their thinking is dogmatic to the point of being religious, while using the Bible itself and the context this is within to prove the point.

9. Sound familiar? What did we say at the beginning?

> *insoluble contradictions. In the contemplation of individual things it forgets the connection between them; in the contemplation of their existence, it forgets the beginning and end of that existence; of their repose, it forgets their motion. It cannot see the wood for the trees.*
>
> *For everyday purposes we know and can say, e.g., whether an animal is alive or not. But, upon closer inquiry, we find that this is, in many cases, a very complex question, as the jurists know very well. They have cudgeled their brains in vain to discover a rational limit beyond which the killing of the child in its mother's womb is murder. It is just as impossible to determine absolutely the moment of death, for physiology proves that death is not an instantaneous momentary phenomenon, but a very protracted process.*
>
> *In like manner, every organic being is every moment the same and not the same, every moment it assimilates matter supplied from without, and gets rid of other matter; every moment some cells of its body die and others build themselves anew; in a longer or shorter time the matter of its body is completely renewed, and is replaced by other atoms of matter, so that every organic being is always itself, and yet something other than itself.*[10]

Or, a little more simply, everything is always in an unending process of development and developing. There is no such thing as pure being, after all. All being is becoming. And more, that becoming is a determinate becoming, based on what is already in place.

Or, even a little more simply: $A \neq A$.

Marx's Answer to The Bigfoot Question

Marx can give us some insight into The Bigfoot Question as well, and help us further concretize our conception. In his *The Grundrisse*, a collection of his notebooks and notes that were mostly to himself, he says very plainly that, "Human anatomy contains a key to the anatomy of the ape." Now, on its own, and immediately apparent to us, this sentence means very little. It's just a statement. We can believe or disbelieve it. Agree or disagree. When we begin to think a little more deeply, and apply the lesson from Engels above, we can

---

10. Frederick Engels. Anti-Duhring - Herr Eugen Duhring's Revolution in Science. (Progress Publishers, 1947), 13-14.

see that it is more profound than we first thought. Obviously, though, Marx was not relying on a book by Engels to make sure people understood what he was saying. Let's back out a little bit, and see the context in which he develops this statement, applying dialectical logic to another phenomenon. That should really help.

> *Bourgeois society is the most developed and the most complex historic organization of production. The categories which express its relations, the comprehension of its structure, thereby also allows insights into the structure and the relations of production of all the vanished social formations out of whose ruins and elements it built itself up, whose partly still unconquered remnants are carried along within it, whose mere nuances have developed explicit significance within it, etc.* ***Human anatomy contains a key to the anatomy of the ape.*** *The intimations of higher development among the subordinate animal species, however, can be understood only after the higher development is already known. The bourgeois economy thus supplies the key to the ancient, etc. But not at all in the manner of those economists who smudge over all historical differences and see bourgeois relations in all forms of society. One can understand tribute, tithe, etc., if one is acquainted with ground rent. But one must not identify them. Further, since bourgeois society is itself only a contradictory form of development, relations derived from earlier forms will often be found within it only in an entirely stunted form, or even travestied.*[11]

So, as Marx is explaining in brief here, it is the development of a thing that leads to the future ability to determine things about that thing. It also grows more complex as it develops, requiring us to think about it far more in-depth. For example: In the USA today, we can now understand finance capital, globalization, and the rise and fall of the middle classes (or re-proletarianization). This was not possible in earlier epochs, as the process was not advanced enough to do so. It is the *human* anatomy, after all, that gives us a key to understanding the anatomy of the ape and not the other way around. For Marxism, it is this development, or concretization, that is key to understanding what is. And we must apply this same process of an "ascension to the concrete" regarding the concepts we develop within our minds, making sure they properly reflect the actual, concrete reality outside of them.

---

11. Karl Marx. *Grundrisse*. (Penguin Books/New Left Review, 1973), 38-39.

In viewing humanity as it is, we can get a key for understanding the Bigfoot too. We can begin to understand which characteristics have changed and in what ways they've changed in our evolution. We can even see which characteristics have stuck around in some form, or their stunted form. What is our hair but the stunted form of the Bigfoot's fur, after all? What are our… uh, relatively small feet compared to their big feet?

So is Bigfoot human or not?

Our Answer to The Bigfoot Question

The name for this section may be a little misleading, now that I think about it. We didn't really even set out to get an answer, after all. Rather, we set out to prove that the only way to ask the question in any seriousness requires us to apply Marxism and dialectical logic - unless, of course, we find it fun to get hopelessly lost in circular logic that works backwards from a foregone conclusion.

Or: We can only even *ask* the Bigfoot Question from the Marxist perspective. It is only dialectical logic that shows us a key to understanding precisely what the Bigfoot is, and why we can understand humanity as the further actualization of the self-same thing. Is Bigfoot human? At an abstract level, yes. When we think about it now, yes. It is a moment in the concretization of what humanity is, from the Marxist perspective. Therefore, concretely, it is not human. This is why there are no Bigfoots actually in existence now, of course.[12] Our reflections of these moments of development, and how the effect of one cause becomes the cause going forward, are necessarily abstractions that we must make in the cognizing of a concrete whole concept. *What is humanity? What is a Bigfoot? Is it human? Is it animal?* We cannot simply stop at those reflections that are directly given to us in sensual observation in order to find out. We must think through the abstraction, develop notions of these moments, and continue on, ascending to a concrete concept of what existed in concrete reality in order to find out.

That is how we ask the question. If we are to answer it, we must begin with sensual observation - at the beginning. So, if you want my advice: go to the

12. Or are there? (Insert dramatic sound effect.)

forests of the Pacific Northwest, or up into the Himalayas, take a look around, and let me know.

Echoes of the Hearth: Tradition and Transformation in the Family[1]

John Molera[2]

Family structures are the most intimate and directly influential set of social relations for the human being. These structures shape our sense of morality, they often define our expectations for ourselves, and they are the bonds which together shape the forms of sociality that define our communities, our nations, and our very sense of common humanity internationally.

The human family has experienced adaptations throughout history, reflecting and participating in changes to the ways in which things are produced and the set of social relations which accompany new forms of production. The diverse

1. This presentation was given at the Future of the Family panel in Moscow, Russia in November of 2024.

2. John Molera is a member of the Political Bureau of the American Communist Party, Executive Director of DD Geopolitics and Co-Host of the DD Geopolitics Show, and Co-Director of the ACP Legal Team. John has recently appeared as a plenary speaker at the "Inventing the Future Symposium" in Moscow, Russia where he presented on the future of diplomacy and the future of the family.

customs and traditions which have accompanied family structures at any stage of historical development reveal the innate human capacity for social experimentation to address new realities, to initiate transformations to existing sets of social relations, and to reintegrate these relationships into standards that unite and stabilize human communities.

The traditions of mankind are reflected in the traditions of the family. Activities, routines, and behaviors passed down from generation to generation are expressed through the family. Traditions are not merely memories to be held fondly, traditions are the accumulation of mankind's tried and tested practices, ways of life, and wisdoms — adapted over the course of generations — which provide a path for the success and synchronicity for human communities into the future.

The future of mankind, the future of traditions, and the future of the family all share the same fate — to either be brought forward into conformance with existing realities or to be totally extinguished like some of the tragically fated prehistoric species which came before us.

Modernity has brought the family precisely to this crossroads, where the nuclear age, the emergence of artificial intelligence, and advances in biological science simultaneously render the dissolution of the family into superfluousness, and the elevation of the family to Olympian heights, a possibility. This crossroads is expressed through the divide between the Imperialist world order of the dominant Western political institutions, and the opposing traditional, communist, and communist-adjacent societies of the global majority.[3]

Psychosis of the Western Family

In the West, we are consumed by a notion that human society is moving inexorably forward under the power of technological progress. Accompanying this notion is the myth that the institutions of the United States, Europe, and its partners are at the forefront of the evolution of progressive social relations and

3. Michael Hudson: Debt, Economic Collapse, and the End of Civilization. Robinson's Podcast. In this interview, Hudson distinguishes the fundamental question dividing nations. This is the question of what comes first, protecting the debts of creditors or making tangible capital investments? Hudson reveals that this is the central problem of today's polarized global society, and it is the common denominator of the divide between BRICS and the global majority away from the Western jungle. He cites Rosa Luxemburg to reveal that this is the divide between civilization and barbarism.

that in every field of academic endeavor we are moving forward. ”At the end of history,” he wrote, ”it is not necessary that all societies become successful liberal societies, merely that they end their ideological pretensions of representing different and higher forms of human society.”[4]

But, as is true in the economic realm and the significance of debt peonage,[5] the leading “thinkers” in the West neglect the fundamental understandings of familial human relationships from thousands of years of human history. It is this neglect, whether out of a fetishization of the past or a delusion of a future completely disconnected from the past, which is hindering forward progress in the development of social relationships, and is driving society back toward reactionary, unworkable, and unsustainable ideals for human interactions.

Far from representing the cutting edge of social relationships, the developments in Western society demonstrate a general psychosis among popular “thinkers”[6] on the topic of social relationships — a disconnect from what is possible and totally unrealistic expectations for the future. The elites directing and inhabiting prominent academic and media institutions often one-sidedly direct the blame on worsening social disunity toward American conservatives’ penchant for a kitsch nostalgia for the way things were in the past. These “enlightened ones” who cast judgements instead imagine a future completely liberated from the past and any previously held standards for families. They present a blank canvas for every individual to draw their own interpretation of human nature itself, sometimes issuing vague directives toward “compassion” and “freedom.” The mirror of this ideology, presented in the “manosphere” and outrage politics of the right, elevates complete male dominance over women in a caricature of past familial relations as the only antidote from total disconnection to our humanity.

After the cementation of liberal capitalism in the mid-21st century came the articulation and popularization of the concept of the “nuclear family.” As commonly understood in the West, the role of the nuclear family, traditionally comprised of a husband, wife, and children living in one home, has been the

primary arrangement for European countries dating back to 13th century England. But in the historical communal family arrangements the predated the "nuclear family," including matrilineal relationships, many of the characteristics that later came to define nuclear families had long been established. The man was expected to go defend the community, to go and obtain the means for the community to subsist and be at the forefront of political struggles and wars. Women played a prominent role in raising and nurturing children, caring for the elderly and sick, bonding the community socially, and teaching new generations basic skills and social expectations. Under the pressures of feudalism and capitalist relations, Women were generally ushered into a social position of deference to the authority of the male father or husband.

Today, the nuclear family is undercut by the dominant cultural trends, economic challenges, and social alienation brought about by Western capitalism and the social, economic, and political domination of the Western financial elites. The radical liberal intelligentsia responds to this development by throwing the baby out with the bathwater. No longer do women "hold up half the sky,"[7] but there is no half of the sky to be held up according to many radical liberals. Some go as far to evaluate that the traditions and norms that continued to develop within families in general simply precede the revolutionary moment and will be swept away entirely with the fall of capitalism but say nothing of how the dominant characteristics general to men and women respectively will be addressed.

The family itself, according in M.E. O'Brien, a purported theorist on gender and "communist" theory, becomes an "obstacle to human freedom." The family must be abolished according to this view, which means a "breaking open of the family to free and unleash what's good in it and to generalize that into the social body as a whole. To make the necessary forms of care available to everyone unconditionally."[8]

The problem the radical liberal sees is not alienation from our communities and innate abilities, but that alienation creates situation where people "are haunted by an idealized working-class life of the past: of marriage, gendered norms (male breadwinner, female homemaker), home ownership, and having children," and that this unreasonable psychological need simply needs to be overcome. Their attack is fixated on elevating the superstructure of capitalism above the base of economic relations.

---

7. A quote attributed to Mao Tse Tung, likely sometime between 1950-1960 during the cultural revolution.

8. M.E. O'Brien, *Family Abolition, Capitalism, and the Communizing of Care*, (Las Vegas; Pluto Press, 2023), 11.

In condemning capitalism, they say, "the conditions of a capitalist society make the nuclear family our main source of support." Yet they don't grapple with the fact it's the same forces desperately attempting to preserve capitalism via hyper-financialization and debt servitude that are destroying traditional relationships in favor of a hyper individualized free-for-all where everyone is encouraged to live their "personal truth."[9]

For instance, the radical western liberal analysis calls into question the very institution of marriage and the norm of monogamous human relationships, not just the legal constructs of capitalism that have existed to commodify women in this type of relationship. This fixation on eliminating marriage altogether elevates the significance of marriage by emphasizing its negation as a path to a freer more harmonious society. Do these Western self-described "communists" go to the working masses themselves to reach the conclusion that the dissolution of the hetero-normative marriage is desirable? Of course not. They do not recognize that its precisely the harmonious and stabilizing elements of traditional relationships which most working people wish to preserve, and that it is the loneliness and isolation, and fragmentation of unified communities and culture standards which the working class seeks to destroy.

The radical liberals speak of the family in a similar way that American "conservatives" talk about the government. That the concept of the institution itself—and those who defend it—continues to limit our freedom. However, as the generally recognized parameters of the state set conditions where individual right and freedoms can be recognized and protected, the institution of the family also promotes freedom within a certain set of social relations and provides a buffer for weak and atomized individuals that predatory forces, whether corporate powers or rapacious individuals, would otherwise exploit.

The Stability of the Family and the State

"Marriage is a conservative institution, a way for class to reproduce itself."

But how is the ruling class being preserved today? The destruction of the social bond of marriage has *helped* the new globalist ruling class preserve itself and exploit the masses, commodify women's bodies for the benefit of corporate

9. They also ignore the canonical communist views of degeneracy and social degradation, which precisely explain the breakdown of certain traditions, the proliferation of prostitution, and alternative and individualistic lifestyles as a product of capitalist decay.

monopolies, alienate and disempower men, and produce other anti-social and maladaptive behaviors among the population which demoralize the working class.

The decline of marriage rates, and the increase of incidents of divorce are not necessarily a reflection of a more mature and progressive culture, but of a culture in disarray and turmoil. [10] Financial instability is the number one reason young people cite for waiting longer to get married or not getting married at all.[11] More marriage-aged young men are depressed and drug addicted, and more marriage-aged young women are falling into a vicious pipeline of technologized prostitution to pay off debts and make ends meet.

When it comes to divorce, the context of the rise of no-fault divorce has also accelerated social disunity. However, no-fault divorce on its own is common and quite understandable in modern societies. When people commonly live to eighty or older, have their basic needs met, and there is no longer a rigid set of property relations necessitating perpetual unity of one family unit, people may have different phases in their lives to explore different love interests or even have new families. But the opening up of divorce coupled with the neglect to provide incentives and living standards that make durable families possible has irresponsibly fragmented our society, where the future prospect of a family is unimaginable to many young working-class Americans.

In strong and ascendant states, no-fault divorce can be implemented in such a way that simultaneously allows individuals to make choices while defending the values of the society, and when appropriate preventing unnecessary and alienating outcomes. In China, official marriage registries have recently begun offering free premarital and divorce counseling to address the increase in divorces, with the recognition that divorces overall negatively impact social stability and harmony.[12] It is this synthesis of economic and social supports coupled with legal choice in countries like China which has created durable marriages that can thrive under modern conditions.

---

10. "Marriage rates in the United States from 1990-2022," *Statista*, (September 23, 2024): https://www.statista.com/statistics/195951/marriage-rate-in-the-united-states-since-1990/.

11. Interestingly, more people in the "Z" generation want marriage than the previous "Millennial" generation. This could inform how the challenges of the marriage in modern times produce an underlying psychological or physiological desire for marriage that can only be unveiled by the lack of suitable conditions for it.

12. Jason Tian, "Family Laws and Regulations China 2025," *iclg*, (February 9, 2024): https://iclg.com/practice-areas/family-laws-and-regulations/china

Conversely, throughout the late 20th century and early 21st century, as America opened to socially acceptable "alternative" lifestyles, the power of capitalism financial monopolies accelerated a dissolution of social programs which provided basic economic security to many working people. Wages fell dramatically, hidden behind rising prices and falling quality, and more Americans were compelled to become concerned with feeding and housing themselves tomorrow rather than planning for the future within the context of their communities.

Today's "feminism" champions staffing women in corporate leadership positions for public relations and protecting stock valuations, reaching powerful celebrity and political status, while working women fall into debt and anxiety about the crime, drugs, and general social decay consuming their neighborhoods.

In the 1976 Republican Party convention, the Republican Party expressed "fear the government may be powerful enough to destroy our families; we know that it is not powerful enough to replace them."[13] Their concern proved valid though their actions continued to create the conditions which attacked the values they ostensibly sought to protect.

> *Families make sure our children are properly nurtured, our elderly are cared for, our cultural and spiritual heritages are perpetuated, our laws are observed, and our values are preserved.*[14]

In response to their failures to materially alter the all-consuming capitalist path, these Republicans came to demagogue cultural decay by glorifying an expired and irretrievable past. In response, the radical liberals champion and sometimes sought to accelerate the superstructural dissolution of the family, and promoted ambiguous forms of relations like "caring communities." They celebrated these scarcely affiliated communities that popped up in protest movements such as Occupy Wall Street in 2011 or Standing Rock, the Indigenous-led protest movement against the Dakota Access Pipeline, or DAPL, north of the Standing Rock Indian Reservation, in 2016. But far from a panacea, these movements were failures which were soundly defeated, and the mission to create a more egalitarian and just society fell further behind.

---

13. "1976 Republican Platform," *National Archives,* (1976): https://www.fordlibrarymuseum.gov/1976-republican-platform
14. *Id.*

These failures were evidence that completely “free forms of association” are not sustainable. One of the reasons for the failure of these movements was an inability to establish concrete responsibilities within the communities, and as such were steamrolled by the forces of imperialism. For today’s radical liberal, there is a tendency to idealize these movements without being brave enough to explore the reason for their failures. These failures, we can confirm from observation, were the product of the failure to concretize and particularize the forms of these “caring communities.”

Marxism as the Vanguard of Tradition and Transformation

The future family image must draw from some of the original elements of harmonious relationships. In doing so, it will look not only at traditional nuclear families that arose from industrialization, but also the more communal family models of agricultural societies and even ancient societies which predate the Industrial Revolution. Over the past centuries in Western society, we’ve seen the withering away of the family, bringing us to the varied and increasingly isolated familial structures we see today. But the individualization in the West sets up the possibility of a reconstitution of the essential family structure and intimate bonds of association in a higher form. Imagining the family in the future should reaffirm the value of traditional parenting roles that worked and respective strengths and existing inclinations of the sexes rooted historically, with the added recognition that multiple family units will likely have to work together aided by technology, to navigate economic conditions, and the failures of the Western governments to enforce the social contract. We might again see family norms and practices increasingly take on regional characteristics between or even within states in this centralized and community-based family model.

The role of the State should *not* be to craft out of whole cloth expectations for the sexes or make up new gender roles. Rather, it should be to utilize and encourage the existing general strengths of men, women, children, and the elderly, and minimize their existing weaknesses and vulnerabilities. This is the true Marxist proposition, as Marxism is not a mere ideological abstraction, but an index of historical experience. It is through an elevation of the family, not a negation of it, by which we acquire the material basis in the national, historical, and civilizational realities of America. This is same theoretical realization Lenin had as to the significance of the peasantry, or in Stalin’s promotion of national traditions and the rehabilitation of the Orthodox Church.

Friedrich Engels revealed that, "all economic circumstances (either its own personal circumstances or the general conditions of society) do not reach that which they seek but are fused in one general media in a common resultant, by this fact one cannot conclude that they are equal to zero. On the contrary, each contributes to produce the resultant, and is contained in it."[15] From this insight we glean that the way of the family will neither be reversed to the prior state nor will it be completely wiped away (the choices the current stage capitalism tries to necessitate), but the future family will instead be fused with the past in a new synthesis.

Therein lies the conservatism of Marxist-Leninist states: forced to reconcile itself with the basis of its existence, the political state of the Soviet Union reflected a "Red Tsardom," China a Confuco-Marxist state.[16]

New political innovations that bring forward the lessons of Lenin, Stalin and Mao are emerging again in America, along with a genuine left. The American Communist Party has recently recognized the need to defend the family in their new 2024 Party Program. The program states, "The Communist Party stands for the swift and merciless prosecution of criminals who terrorize American communities and families."[17] In dealing with new technologies, it states "the Communist Party stands for the promotion of healthy, positive, and family-oriented trends online."

The American Communist Party also recognizes what history of the Soviet Union and modern-day China proves but remains scandalous in the Western "left" due to ideological confusion: That Communism's legacy, far from being synonymous with the historical nihilism of contemporary Western Marxism, is the defender of the perennial traditions of mankind.

This defense has been seen not only in China and Russia, but also in Islamic civilization. It is in the sands of Gaza and the hills of Lebanon where traditional family-oriented communities fight against the imperialist Zionist entity which remains far more open to Western liberal values, recreational drug use, prostitution, and socially acceptable "alternative" lifestyles than its victims.

Central to the Western leftist critique is the fact that the family is an institution that has been critical to the functioning of capitalism— but this doesn't square with capitalism and imperialism being at its most heightened levels precisely as traditional family relationships are dissolving. Meanwhile, the nations which have preserved and brought forward traditional values of family fall decisively in the camp opposing Western imperialism.

We must understand and come to grips with the fact the proposals of a basic socialist society would create new demands for the family, and a need to bring forth the predominant characteristics of men, women , children, and the elderly in a way which complement the new state of productive relationships and broad social goals of the community in order to maintain its vitality, inter-connection, and strength.

The Dialectic of Love

The essence of Communism turned out to be the revival of the very traditions it originally endeavored to overthrow. We are seeing a similar pattern around the tenuous links between Western "left" groups and its desire to overthrow traditional notions of gender, sexuality, and family. But flame of revolution not a destructive flame, but a purifying one, which, far from consuming the historical traditions of mankind, liberated them from the modern and bourgeois rubbish which corrupted them to the core.[18]

This insight is not a novel revelation. Engels himself wrote, "if men needed only to be concerned with sex-love and no longer with property and inheritance, then monogamy would come naturally."[19] In the destruction of capitalism, Engels did not see the destruction of monogamy, man and women, or the family, but a true monogamy and a basis on which women were free to hold up half the sky free from the oppressions of capitalism. It would be free to chart forward a path on this basis, not to chart a path forward when human social distinctions had been destroyed through ideological will.

We are told in the West that "Important and radical changes in our social structure are necessary if love is to become a social and not a highly

individualistic, marginal phenomena."[20] But new forms of love and commitment must be given expression through particular relationships which are suited to harmonize historical experiences to have real meaning. Without this understanding, we will find ourselves only in common disarray.

The freedom and comprehensive development of humanity are the central themes of Marx's lifelong critique of modernity and the core propositions of his communist thought system. Many people trace the external influences of individual others through the symbolic language evident in Marx's texts, concluding that Marx's communist ideas began during his time in Paris. However, from the perspective of its intrinsic generative logic, Marx had already developed considerable conscious awareness during his student years. Due to the obscuration of this common perspective, academia has insufficiently emphasized the process of Marx's consciousness development during his student days. Primarily, there is a lack of a comprehensive understanding of the logical structure of the original living context that gave rise to Marx's consciousness, making it impossible to analyze the theoretical connections between his internal development and transcendental systems of ideas from the perspective of Marx's subjective evolution. Instead, both direct and indirect external influences are often imaginatively attributed to the young Marx, with his doctoral dissertation frequently viewed merely as a product of external influence from Hegel or the Young Hegelians. Particularly, Marx has been depicted as an inherently omniscient atheist, due to the denial of the inevitable impact of religious faith on his consciousness. This approach precludes an understanding of Marx's dialectical sublation of the Christian worldview and, furthermore, prevents an appreciation of the intrinsic motivation that drove Marx to engage with Epicurean philosophy and the true enlightenment it provided for his worldview. To borrow from Marx's own interrogative style: Was it purely coincidental that Christianity, which inherited the Greco-Roman spirit, ruled the Western spiritual world for a thousand years? Was it accidental that all of German classical philosophy remained entangled with religious concepts? Was it by chance that utopian socialists affirmed early Christian organizations? Was it merely incidental that the members of the League of the Just predominantly came from Christian churches?

Marx's student years were the *a priori* phase of his intellectual development, during which his thought manifested itself through everyday life. The “divinity” originating from God was transformed into human freedom and comprehensive development. It was not until his encounter with Epicurean philosophy that Marx began to achieve his theoretical goal of deconstructing the divinity of nature and humanity. Building upon the realities of human society, he systematically reflected on the conflicts between theological and philosophical ideas. This marked the beginning of a thorough philosophical revolution that transcended the Hegelian system in a way distinct from the

Young Hegelians. By focusing on the context of Marx's daily life and analyzing the early emergence of his self-consciousness, it becomes evident that, even at the outset of his philosophical revolution, the freedom and comprehensive development of humans as concrete individuals in real life had already become the logical foundation for the independent evolution of his thought. This process reveals the inherent necessity of his later "inversion" of Hegel's system and the reconstruction of Feuerbach's humanist materialism. Ultimately, Marx organically integrated the conceptual achievements of his philosophical revolution with the practical experiences of European social movements, endowing the proletariat's creation of the term "communism" with meaning. This marked the inception of the construction of scientific communist theory.

I. Three Living Contexts of Marx's Emerging Consciousness During His Student Years

"Life is not determined by consciousness, but consciousness by life."[3] Marx, as a real and living individual, saw the initial emergence of his consciousness deeply rooted in specific contexts of daily life. These contexts included the dominant discourse of Protestant ethics, the modern rational discourse stemming from the French Enlightenment, and the Romantic discourse from Germany's critical reflection on the Enlightenment. These three discursive systems, along with the social consciousness they embodied, played an external and objective determinative role in the generation and development of Marx's consciousness during his student years. They simultaneously internalized into Marx's initial conceptual framework, shaping his lifelong ideal and belief in the freedom and comprehensive development of humanity.

The first context is the religious tradition of the Gospel, which inspired Marx's ultimate concern for humanity. Trier, as Germany's oldest Christian diocese, had a profound religious cultural heritage. The archbishop was one of the seven Prince-Electors, and belief in God not only served as the foundation for people's spiritual lives but also underpinned state authority and was a mandatory component of moral education in schools. During high school, Marx studied religious knowledge and gained a basic understanding of Christian history. He demonstrated a clear grasp of Christian doctrines and

3. 《马克思恩格斯文集》 (*Collected Works of Marx and Engels*), Vol. 1, Beijing: People's Publishing House, 2009, p. 525.

teachings,[4] as reflected in his exam essays, where he explored the connection between Christ and believers. Marx saw this union as opening the human heart to “love … to all that is noble, to all that is great,”[5] a perspective evidently shaped by Luther's doctrine of ”justification by faith.” Luther's initial aim in reforming religion was to dismantle the spiritual authority of the Pope and the feudal hierarchy of the Catholic Church. He transformed religious devotion into the intrinsic essence of secular individuals,[6] emphasizing that Christians, through faith in God, become “perfectly free lord[s] of all” while willingly serving as “perfectly dutiful servant[s] of all,”[7] thus affirming both personal freedom and the conscious service of humanity. However, the objective result of the Reformation was the establishment and consolidation of the German state churches. Marx’s father was compelled to convert to Protestantism but maintained a faith more deeply rooted in Jewish tradition. Influenced by Kant’s rational perspective, he critically reflected on the rigid doctrines of Judaism, placing greater emphasis on the moral practice of faith. Historically, Christianity originated from the Jewish tradition of monotheistic faith, interpreting the soul's freedom after death as true freedom and placing humanity's hope for universal freedom in the otherworldly kingdom ruled by God. Despite its messianic worldview, Christianity transcended differences of gender, age, birth, and tribe, embodying a universal concern for the salvation of all humanity. It particularly offered “a way out” for the suffering to pursue spiritual freedom.[8] Jesus Christ preached the Gospel of God among the lower classes, exposing the suffering and chaos inflicted on Jewish commoners by the expansion of the Greco-Roman Empire. This reflected people’s longing for peace, justice, and light. As Jews dispersed worldwide, impoverished freemen, fugitive serfs, and slaves living in Roman cities became the early Christians. Saint-Simon therefore believed that Christianity was originally intended to organize human society in ways most beneficial to improving the lives of the poor.[9] From the Reformation to the Enlightenment, European humanism

shifted its focus on human concerns from the afterlife to the present world. This practical grasp of the freedom and development of the common people became the theoretical foundation and goal of Marx's later construction of communist doctrine.

The second context is the modern rationality of the Enlightenment, which inspired Marx's independent consciousness of individual freedom. The 18th century was the era of bourgeois intellectual enlightenment, during which French Enlightenment thinkers established individual reason as the sole standard of judgment. They opposed the divine authority of Christianity and its theological systems in the realm of social consciousness, and feudal production relations and hierarchies in the realm of social existence. With“elegant words” and “seductive promises,”[10] they constructed a rationally governed kingdom of freedom, reflecting the modern citizen's aspiration to determine their actions through reason in daily life. The Rhineland region, where Marx was born, was a frontier of the German Enlightenment. Shortly before his birth, it had been temporarily annexed and ruled by France, exposing its citizens to long-term influences of rationalism and liberalism. Marx’s father fully embraced the power of reason and was deeply immersed in the liberal atmosphere of French politics, religion, life, and art.[11] He adopted Kantian rational logic and saw himself not as a “fanatical religious believer” but as someone who regarded faith in God as “a great moral force” and “a genuine human necessity.”[12] At the Trier Gymnasium where Marx studied, liberal Enlightenment ideas were also prevalent. The headmaster and history teacher, Wyttenbach, was a follower of Kantian philosophy and attempted to reform education according to rationalist principles.[13] Many teachers, including those in religious subjects, shared similar intellectual leanings. Meanwhile, ”Hegelianism”[14] was gaining an unrivaled dominance in German academia and permeating various disciplines. At the University of Berlin, where Marx pursued further studies, the Hegelian system of speculative philosophy was at its peak. Marx’s favorite professor, Gans, worked on reconstructing the rational logic and freedom perspectives of

Hegel's spiritual kingdom in jurisprudence and history. His closest friend, Bruno Bauer, following Strauss, engaged in relentless criticism of Christianity. Marx's interactions with the Young Hegelians increasingly drew him toward the radical goal of abolishing traditional religion and the existing state, steering German philosophy toward the emancipation of humanity. It is evident that Marx's awareness of freedom was formed within the Enlightenment contexts of his family and school. His initial understanding of the issue of freedom was directly influenced by his father and teachers. His intellectual trajectory also reflected the developmental logic of German philosophy after Kant. The Hegelian system, as the culmination of German philosophy, provided Marx with a rational dialectical method and historical perspective. The contradiction between reason and reality became the logical starting point for Marx's efforts to address universal human freedom and consistently drove the scientific construction of his communist theory.

The third context is the Romantic emphasis on perfect individuality, which inspired the comprehensive development of Marx's transcendental consciousness. Romanticism served as a critique of the Enlightenment, with early German Romantics ironically challenging modern rationality's tendency to homogenize everything. They advocated for the expression of each person's perfect individuality through poetic language, reflecting the demands for comprehensive development arising after the Industrial Revolution. Marx's father was described as a "Protestant with a Lessing-style faith."[15] His neighbor and close friend, Baron von Westphalen, was also a "paternal-like friend"[16] to Marx. Both frequently guided young Marx in studying the works of Voltaire, Racine, Homer, and Shakespeare, fostering an early love for Romanticism.[17] At the University of Bonn, Marx deliberately chose to take courses from August Schlegel, a key Romantic figure. Schlegel criticized the Enlightenment for reducing human existence and the world to economic principles, materialism, and mathematical forms, subordinating human goodness and virtue to utilitarian and practical purposes. Instead, he advocated for a historical perspective to understand the vitality of human life and the natural laws of civilization, emphasizing that the poet's work lies in "perfectly

creating individual in the true sense."[18] His brother Friedrich Schlegel further asserted that each person should "walk their own path in the most individual way."[19] Influenced by Romanticism, Marx immersed himself in literary works, including extensive histories, and even aspired to be a poet. He became deeply involved in poetry creation for a time, prompting his father to hope he would fulfill the noble duties of a poet, using his extraordinary "talents to achieve personal perfection."[20] In Marx's early poems, symbolic metaphors such as darkness and light, oceans of suffering and distant horizons, beauty, and the sublime pervade, reflecting his satire of real-life constraints and his pursuit of perfect individuality. They reveal an idealistic view of love, life, and the world, especially through the imagery of poets Schiller and Goethe. These figures symbolized the entanglement of reality and ideals in his inner world. Heine believed that Schiller's works embodied freedom, historical progress, and cosmopolitanism, while Goethe meticulously endowed each character with "independent value" and "unique perfection."[21] Marx later pointed out that the Romantics nostalgically clung to the "primitive richness"[22] of humanity's early developmental stages. In contrast, he grounded his views in the inevitable processes of historical movement. He redefined concepts such as reason, self, and spirit in terms of the social practice of individuals transforming the real world. He identified true richness as the realization of human freedom and comprehensive development, confirming it as the ideal of the communist society.

II. The Questioning Nature of Marx's Rational Awareness and His Thinking Pathway

The processes of real-life provide objective conditions and materials for human consciousness and thought activities. However, consciousness itself can "really

represents something without representing something real"[23]—in other words, thought can transcend the constraints and limitations of the real world to independently create a conceptual world. Marx's awareness of human freedom and comprehensive development initially manifested as pure idealistic imagination, divorced from reality. However, the tension between ideals and reality in his consciousness gave rise to a series of logical problems. These issues guided his thinking from Kant's dualism toward Hegel's dialectics. For the first time, the logical relationship between the kingdom of freedom and the kingdom of necessity emerged as a foundational proposition in his conceptual framework.

Firstly, in the realm of Romantic literary creation, Marx became aware of the opposition between what ought to be and what currently exists. Through his family and high school education, Marx was inevitably influenced by the dominant discourses of his time. The interaction between the religiously transcendental ethical concepts and the rational experiences of secular life prompted him to consciously reflect on the unfortunate conflict between human principles in spirit and in flesh, as well as the challenges of overcoming this conflict. He aligned with the general norms of social consciousness, viewing work for the happiness of humanity as a guiding principle for achieving personal perfection.[24] However, at this stage, he had not yet formed a comprehensive understanding of the entirety of human social reality. Amid the Romantic atmosphere at the University of Bonn, Marx began to consciously observe his entire personal life world as "an expression of fully revealed spiritual activity."[25] At this time, an unattainable and hopeless world of love ignited his imagination. To him, nothing in the real world was as "beautiful" as Jenny. Marx developed a profound interest in poetry, the art form most celebrated by the Romantics. Friedrich Schlegel believed that a part of the poet resides within everyone, radiating the creative vitality of poetry, while in the depths of the human spirit lies "the source of imagination and the ideal of beauty."[26] The subject of imagination was undoubtedly the "self," and Fichte's philosophical interpretation of the "self" as the absolute subject became an authoritative perspective in the Romantic movement. The creative activity of

the "self" dominated Romantic imagination.[27] In his poetry collection dedicated to Jenny, Marx crafted stories of tragic love and spiritual struggles of individual characters, satirizing the constraints imposed by temporal and spatial distance, mortal destiny, religious ethics, worldly matters, and societal scrutiny on the freedom of love. He integrated symbols of divine blessings, sunlight, the flame of freedom, and the yearning of the soul into the divine ideal of perfect love. In the poetry collection dedicated to his father, Marx broadened his intellectual horizon to imagine the spirit of the world. He passionately sang of the natural divinity of all things, celebrated the boundless creativity of the human spirit in its pursuit of happiness, the sublime, and perfection, while mercilessly mocking the Gospel of God, secular morality, traditional prejudices, and scientific rationality for neglecting human spiritual freedom and comprehensive development. Marx explicitly stated that, in his purely poetic imagination, he sharply opposed what ought to be with what currently exists. This inherent contradiction of idealism became the epistemological foundation for his division of the world.[28] It later served as the logical premise for his philosophical reflection on Romanticism, a journey of conscious philosophical thought that began with Fichte.

Secondly, in the metaphysical study of law, Marx became aware of the relationship between the conceptual form and reality itself. The Jewish faith practice, rooted in divinely revealed legal principles and covenantal relationships, along with the legal professions pursued by his predecessors, undoubtedly shaped Marx's initial consciousness regarding law. After choosing to study law, Marx began consciously reflecting on what he referred to as the "metaphysics known as law."[29] Initially, his dominant intellectual framework was rooted in Romanticism, which subjectively opposed the ideal form of law to existing law, stripping law of all practical content and form. He attempted to construct the perfect spirit of law and present its complete system purely in imagination. Fichte's conceptual formalism in legal theory became Marx's preferred intellectual model. Starting from the self, Fichte deduced the legal relationships and principles between rational beings, illustrating that legal norms are laws of freedom rather than natural laws.[30] In philosophical

imagination, this approach speculatively establishes the absolute concept and conceptual system of law, encompassing the objective reality represented by various substantive laws. Marx, however, based his exploration on the contractual relationships between freely determined subjects, constructing his own legal framework. His initial system structure was similar to Kant's *Metaphysical Elements of Justice*, but his overall approach and specific explanations were entirely aligned with Fichte. It is evident that Marx sought to reconstruct Kantian legal theory through Fichte's philosophy. At the same time, Marx was inspired by Savigny, a prominent figure in the historical school of jurisprudence. Savigny viewed Roman law as a coherent whole, embodying the comprehensive development of self-realization. He argued that jurists must possess two scientific qualities: a historical understanding grounded in reality and a systematic vision, enabling them to discard deceptive illusions in philosophical thought.[31] In contrast, Gans—another influential figure—focused on Hegel's philosophy, advocating for the freedom of spirit, historical perspectives, and the philosophy of law. The debates between Savigny and Gans attracted Marx's attention to Roman legal codes. However, Marx insisted that the formal definitions of concepts and their substantive provisions could be separated and must develop "independently of each other."[32] He believed this approach would allow him to integrate Roman legal concepts, devoid of substantive provisions, into his own conceptual framework. Nevertheless, when Marx began categorizing and organizing substantive law, he found that "the spirit and truth of the law disappeared." By the end of substantive private law, he observed "the falsehood of the whole system."[33] His attempts to reconstruct a new metaphysical legal system ended in failure once again. Marx was compelled to recognize the fundamental flaws in his thinking process. He realized that objects possess an inherent unity, richness, and completeness. He also became aware that only historical dialectics could resolve such contradictions. Consequently, he decided to move away from idealism and "turn to reality itself to seek concepts."[34] This shift brought him into engagement with the philosophical frameworks of Schelling and Hegel.

Finally, through the integration of art and science, Marx became aware of the dialectical unity between freedom and necessity. The conceptual conflict between modern European humanistic art and natural science, combined with the historical contradiction between Germany's traditional religious faith and secular order, deepened the dualistic opposition in people's consciousness between spiritual freedom and natural necessity. The theoretical aim of German philosophical speculation was to resolve this contradiction. While studying jurisprudence, Marx realized that without philosophy, deeper understanding was impossible. He attempted to incorporate a philosophy of law across the entire field of law, inevitably revisiting and delving into Kant's antinomies. In reflecting on the causality and purposiveness of the world's origin, Kant proposed *a priori* freedom and derived absolute necessity through the causality and purposiveness of the natural sequence.[35] He viewed these as the basis of judgment for genius artistic imagination and natural scientific knowledge, respectively, synthesizing them into the beautiful ideal of a universal kingdom for rational beings.[36] This ideal, however, became something "beyond" the grasp of human understanding.[37] Fichte attempted to overcome Kant's dualism and agnosticism through intellectual intuition. Based on the absolute form of "A = A," he established the subject-object unity of the self and its consciousness, arguing that humanity's ultimate purpose is to universally recognize and return to its "true (absolute) freedom."[38] He concluded that rational beings, through genius imagination and scientific knowledge, would actively create a singular union that harmoniously governs nature—a kingdom of freedom. Marx regarded Fichte's philosophical starting point as an "unscientific form of mathematical dogmatism." He believed that it dissolved the vivid content of real phenomena and thus became "an obstacle to understanding truth."[39] Schelling complemented and extended Fichte's subjective idealism with his objective idealism, drawing Marx's attention. Schelling's philosophy sought to spiritualize natural necessity, dialectically unifying subjective imagination with objective reality through the creative activity of the rational self in the progressive development of human history. He attributed the highest unity of

freedom and necessity—the pinnacle of absolute objectivity—to the genius of artistic works.[40] Marx likely grasped Schelling's concept of aesthetic intuition and its relationship with intellectual intuition. He recognized that his previous artistic creations relied on rhetorical technique rather than poetic conception.[41] As a result, he sought to reengage in genuine artistic creation, exploring various forms such as music, novels, and drama. Subsequently, Marx partially integrated science and art, producing a groundbreaking long-form dialogue that explored the origin of philosophy (freedom) and the development of necessity. He aimed to dialectically reveal "the divinity expressed in concepts, religion, nature, and history." He concluded that his "final proposition was the beginning of the Hegelian system," and thus referred to it as "what should have been a new logic."[42] This indicates that Marx had already become aware of the foundational problems of worldview and methodology.

III. The Theoretical Orientation and Practical Focus of Marx's Doctoral Thesis

Engels observed that Hegel's greatest achievement was the restoration of dialectics as the highest form of thought, thereby for the first time portraying the entire world of nature, history, and spirit as a process. However, Hegel failed to uncover the inherent regularity underlying apparent contingencies.[43] In the post-Hegelian era, Hegel's system showed signs of disintegration similar to those seen in the post-Aristotelian period. Marx initially mocked Hegel for merely seeking to comprehend the "ordinary, everyday things encountered on the streets."[44] Marx, through a circuitous path starting with Fichte, moving through Kant, and then Schelling, was ultimately "lured into the enemy's camp," starting with a self-conscious engagement in what he called his "new logic." Building upon the foundation of the Hegelian system, Marx traced the entire historical progression of ancient Greek philosophy, gaining insight into the significance of Stoicism, Skepticism, and particularly Epicurean philosophy

for the theoretical and practical challenges of the post-Hegelian era. This journey enabled Marx to initiate an independent reflection that culminated in a philosophical revolution transcending Hegel.

Firstly, through a comprehensive examination of ancient Greek philosophy, Marx affirmed the Enlightenment significance of Epicurus's thorough atheism. Kant described Enlightenment as humanity's emancipation from self-imposed immaturity and its courage to independently use reason.[45] Hegel, building on the notion of rational freedom, regarded ancient Greece as the origin of true philosophy,[46] integrating the entire history of philosophy into his system and attempting to reconcile religion and philosophy within the framework of absolute spirit. The Young Hegelians increasingly adopted a radical critical stance aligned with the Enlightenment movement. Strauss eliminated supernatural miracles from the stories of Jesus, while Bauer relentlessly criticized the Gospels and epistles, arguing that Christianity was the "own product"[47] of the Greco-Roman world. Marx, already deeply familiar with ancient Greek art, further deepened his understanding of ancient Greek philosophy through his interactions with the Young Hegelians. Unlike Hegel, who placed great emphasis on the flourishing period of Greek philosophy from the perspective of absolute spirit, Marx viewed the three major philosophical schools following Aristotle—Stoicism, Skepticism, and Epicureanism—as the "key to understanding the true history of Greek philosophy."[48] Marx especially admired Epicurean philosophy. Drawing on Prometheus's declaration, Marx highlighted Epicurus's assertion that "self-consciousness is higher than all heavenly and earthly gods." He mocked Gassendi for cloaking Epicurus in "the black robes of a Christian nun" and criticized Plutarch for dragging Epicurean philosophy "into the religious courtroom." Epicurus proclaimed that popular opinions about the gods were nothing but "empty assumptions" and emphasized that inner pleasure and tranquility are "the first innate good" and "the ultimate goal of a happy life."[49] He opposed the notion of imagining or perceiving some fearsome natural power controlling celestial phenomena. To

Marx, Epicurus's self-consciousness represented a thorough atheism because it rejected the unity and eternity of the celestial bodies themselves.[50] This stance stood in direct opposition to the prevalent beliefs of the Greek people, not only surpassing the Pythagoreans, Plato, and Aristotle in their religious views of the heavens but also exceeding the contemporary Stoics and Skeptics in their interpretations of divinity. Moreover, Marx believed that even the modern proofs of God's existence—whether transcendental or a priori—offered by Descartes, Kant, and other modern philosophers represented a degeneration of reason. Such arguments merely reaffirmed human self-consciousness as proof or illustration of human essence.[51] Hegel had pointed out that the ancient world originated in nature, while the modern era began with spirit. Marx further emphasized that Epicurus's irreverence toward nature symbolized "a rupture with substantial, pure life," signifying "a liberation from the shackles of blind faith."[52] Hence, Marx declared Epicurus to be "the greatest Enlightenment thinker of ancient Greece."[53] In Marx's view, only by fully implementing atheism in both theoretical speculation and practical activity could one truly transcend the Hegelian system.

Secondly, Marx reinterpreted the theory of atomic deviation to establish the concept of human freedom as the creator of world history. Marx's study of Hegelian philosophy was fundamentally aimed at proving the solid foundation of human spiritual essence.[54] Hegel emphasized that the essence of spirit is freedom but conceived absolute spirit as an eternal, singular, and universal entity, uniting subject and object.[55] He presented this concept in the form of thinking self-consciousness and manifested it in the actuality of self-determined free will. World history, in this view, was reduced to the rationalization of absolute spirit realizing itself. Bauer, returning to Fichte's notion of the absolute self-identity of the ego, elevated self-consciousness into an entity, unifying externalized free will with internal self-consciousness. He positioned

self-consciousness itself as the ”omnipotent creator” of the world,[56] theoretically revealing the human subjectivity and creativity obscured in Hegel's metaphysical framework. However, practically, this interpretation did not go beyond Hegel’s speculative boundaries. Hegel pointed out that the common principle of post-Aristotelian philosophies was “the pure relationship of self-consciousness to itself.”[57] The Young Hegelians resonated strongly with these philosophical systems, and Marx acknowledged that these schools of thought still “fully enjoy their spiritual citizenship in the modern world,” as they comprehensively expressed “all the moments” and “the complete structure” of self-consciousness.[58] Marx paid particular attention to Epicurean philosophy, where the deviation of the atom from its straight path symbolized “free will,” the “soul of the atom,” the “specific entity,” and the “true essence of the atom,”[59] which represented the genuine starting point of world creation. According to Marx, only Lucretius correctly articulated the formal definition of Epicurus's atomic concept. He explained that atoms, as the material origin, move eternally in infinite void. However, as the foundation of spirit, they occasionally and spontaneously deviate from their straight paths during motion, thereby breaking free from the constraints and domination of deterministic fate. Only through such deviations could atoms collide and generate the diversity of the world. Marx further noted that Epicurus’s philosophy was centered on the principle of “self-determined existence,” which was both unique and direct. Atoms and the void represented the concretization of existence and thought. Deviation was the intrinsic antagonism and struggle of atoms, and the mutual repulsion among numerous atoms was the inevitable realization of the law of atomic deviation. This repulsion, Marx argued, was the primordial form of self-consciousness.[60] At this stage, Marx was no longer content with developing self-consciousness merely within the speculative realm. He began to regard self-consciousness as the free spirit of humanity, actively creating the world. This perspective foreshadowed a dialectical negation of the Hegelian system on the theoretical level and implied practical opposition to the existing world, which represented the fixed form of absolute spirit.

Thirdly, by reflecting on the figures of ancient Greek philosophers, Marx affirmed the self-realization and comprehensive development of individual freedom. Epicurus's concept of the atom held dual significance, encompassing both spiritual essence and material elements. The motion of countless atoms deviating from straight paths negated all predetermined relations, objectified their intrinsic contradictions, and restructured the entire "kingdom of atoms." In this process, time, as the contingency of contingencies, became the "absolute form of the phenomenal world."[61] In Marx's view, the spirit of freedom that runs through Epicurean philosophy is abstract and individual self-consciousness,[62] which represents the general form of many individual consciousnesses as self-determined existence. Humans, as individuals, are both natural material entities constituting the real world and manifestations of the free spirit of the essential world. It is through self-consciousness that humans break away from the relative determinations of desire and nature, becoming the sole real object of their own existence. Moreover, humans transform their mutual relationships of repulsion into ones of contracts and friendship, continuously realizing the spirit of freedom and creating world history as self-determined subjects. For Epicurus, sensory perception was the ultimate standard, and the world was a real, objective phenomenon. Thus, he consistently departed from deterministic premises to find satisfaction in the contingent joys and happiness of life. In contrast, Democritus viewed the sensory world as a subjective illusion, reducing everything to necessity beyond existence, even to the extent of blinding himself to maintain the purity of rational judgment. Their philosophical consciousness was vividly embodied in their respective figures as philosophers. A philosopher, akin to a creator, represents an entity imbued with the world's ideal purpose and supreme good. Freedom as an entity, in turn, was the soul of Greek life and Greek spirit.[63] Marx clarified that early Greek philosophers merely expressed the substantive spirit of the world of human life in conceptual terms. These conceptualized substantive spirits ascended in Socrates to become subjective spirit, standing in opposition to the multitude and the realities of life. Plato sought to incorporate existence and its realms into the ideal world, hoping to materialize them in the philosopher-king's utopia. From Aristotle onward, the rational concept and its definitions began to infiltrate individual consciousness through empirical

experience. Epicurus, however, completely eliminated all preconditions and external premises, internalizing all conceptuality and necessity into undifferentiated self-consciousness. In his own substantive life, he embodied the passive movement of every free individual toward fully developing their nature. From this, Marx derived a positive philosophical revolutionary stance: philosophers should be committed to changing the world. Individuals must unite as subjects in practice to abolish private property and class distinctions, enabling every person to achieve true freedom and comprehensive development. This vision later became the theoretical foundation and practical goal of what Marx termed “communism.”

IV. Conclusion and Further Reflections

Marx’s student years marked the initial stage of his conscious awareness, a process intrinsically centered on the themes of human freedom and comprehensive development. Objectively, this development was inseparable from the context of his daily life within his family and school environment. At that time, the dominant social consciousness in Germany was undergoing the ongoing influence of French intellectual Enlightenment and political revolutionary movements. The prevailing Protestant ethics were being critically examined by modern rationality, while Romanticism opposed the deconstruction and materialization of spiritual entities by modern rationality. These social currents were reflected in the words and actions of Marx's father, teachers, and friends. From the beginning, Marx held a vague rational attitude toward the religious faith of Messianism. However, he maintained a particularly strong and lasting interest in Romantic artistic creation, as the seeds of individual freedom and the perfection of personality were already planted in his consciousness in the form of idealism. In his legal studies, Marx sought to reconstruct Kant's metaphysics of law through Fichte's model of the self, a natural outcome of the germination of his idealistic inclinations. Yet, at this stage, he could no longer rely on Romantic imagination. He was compelled to address a series of contradictions—between what ought to be and what is, between concepts and reality, and between freedom and necessity—through scientific methods. Marx realized that philosophy was indispensable for understanding the essence of things. Consequently, he delved deeply into the philosophical ideas of Kant, Fichte, and Schelling, which eventually led him, along the logical path of German philosophy, toward Hegel’s philosophical system, albeit with lingering doubts about the “divine.” Initially, Marx was not

particularly fond of what he considered the strange and convoluted style of Hegel.[64] During this intellectual journey, Marx experienced two major detours and two significant leaps. The first was from law to art, followed by a leap to philosophy. The second was a detour through Fichte and Kant, culminating in a leap from Schelling to Hegel. The logical pivot of this progression was the transformation of the subject, represented by Epicurus's atomic theory, which symbolized the real, specific, and concrete human being in everyday life.

Hegel firmly believed that this creative transitional era was nurturing a new world. He argued that the world spirit had already passed through the stages of subjective creation in art and comprehensive representation in religion and was now progressing toward the stage of absolute truth in philosophy. Philosophy, crowned as the science of sciences, served as true theodicy, with its "ultimate goal and interest lying in reconciling thought, concept, and reality."[65] For Hegel, this philosophical reconciliation was internal and earthly. Only by scientifically eliminating all alienated essences and breaking with historical traditions could the world spirit, as absolute spirit, fully realize its essence of freedom in reality, enabling absolute self-consciousness to unify with finite self-consciousness. The Young Hegelians inherited Hegel's "revolutionary" legacy, committing themselves to the historical transition from religion to philosophy and from Christ to humanity. They increasingly adopted radical critiques of religious tradition in pursuit of the full realization of spiritual freedom. Among them, Bauer absolutized human self-consciousness as the foundation for creating the world. However, this "human" remained an abstract being detached from the world, and Bauer's "self-consciousness" was merely a reflection of his critical principles and conceptual activity.[66] Consequently, he logically despised the "ignorant" masses, viewing popular rule as the end of philosophy and the negation of freedom. Through his study of ancient Greek philosophy, particularly Epicurus's atomic theory, Marx affirmed that "man" is a sensual being living in the real world. He argued that each individual possesses self-consciousness and free will. Building on this, Marx transformed Hegel's retrospective notion of reconciliation into a practical goal for future action, revealing the inevitable development of the materialist conception of history. This marked the beginning of Marx's thorough philosophical

revolution, independent of the Young Hegelians. In subsequent political struggles, Marx quickly demonstrated a more progressive stance than figures like Strauss, Bauer, and Feuerbach. He consistently represented the people, actively advocating for all spiritual, political, and economic rights of freedom. Admittedly, Marx's philosophical discourse was inevitably influenced by German classical philosophy. However, this does not mean that his philosophical thought was entirely derived from it. In essence, Marx's thinking was independent, systematic, and coherent. His reflections on the post-Christian era's themes of human freedom and comprehensive development were deeply rooted in ancient Greek philosophy. These reflections were later concretized into the scientific theory of the communist historical movement through his resolute revolutionary practice to transform reality.

Class Struggle: Dialectics versus Metaphysics

Haz Al-Din[1]

Below is an excerpt of a text written back in 2020 which was never published. It provides some insight into some of the theoretical trajectories and lines of inquiry which have come to preponderate the development of my thinking.

The materialist dialectic affords precedence to content over form, matter over spirit, particular over universal, etc. - but the *contradiction* (that is dialectic) *itself,* in contrast to the contradiction between classes, can never find permanent resolution but is only repeated in new ways (which is why Marx endows essential significance to the *proletariat,* not peasantry). Almost all hitherto Marxists have committed the error of failing to distinguish the absolute, from relative form of this contradiction. Thus the contradiction between the bourgeoisie and the late aristocracy had been relativized as a contradiction between two mere classes. After the triumph of the bourgeoisie in England, its democratic universality was erroneously assumed to have laid to rest the *living essence* of the class struggle, with the decisive confrontation between the proletariat and bourgeoisie alone remaining.

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

And yet, after the triumph of the liberal bourgeoisie, what was dismissed as vestiges of the past (small proprietorship, aristocracy (oligarchy), etc.) simply reasserted itself in new ways (and which were being investigated already in the last segments of *Capital*), democratic universality was not only particularized in the industrial factories of England, but in the persistence of so-called pre-capitalist and pre-modern relations of production. These form(s) have only *transformed* in the centuries since the rise of modern industrial capitalism, but the more fundamental contradiction posed by them to the universality of statehood has persisted. According to the textualistic *dogmatists*, the ground of *class struggle* is given only in the democratic universality of the citizen and statehood, and yet the *latter itself* remains in a state of permanent antagonism with its own conditions of existence in *the people*. The experience of history demonstrates the *living essence* of the class struggle, as co-temporal throughout ever repeating democratic and peoples' revolutions which *deepen* the dialectic of humanity's universality through its particular realities.

The fundamental class antagonism between the proletariat and the bourgeoisie demonstrates an antagonism internal to *one* state universality, and thus *one* (legally instanced) form of the people, *one* nation, *one* historically decisive moment. Class difference is revealed only in the *formal equality* of the people. Yet it does not *bring to a halt* the *development* of the people, the historical development of state and national realities. However according to Substantialists, the development of mankind ceased after culminating in 19th century England (all following history being unreal, accidental, decadent, impossible, etc.). In their high priestly idealism, the reality of what is a single moment of the class struggle is recognized only in a theoretical consciousness particular to them alone, which preserves the memory of that Zion at the expense of the *actual history* which has unfolded and which *continues* to unfold *at their expense*.

But the science of class struggle did not *end* history, it only *clarified* it. Consciousness of the proletariat's world-historical mission does not make for a *substitute* to the realities inherited by history, and thus the relation it establishes toward them cannot be preemptively decided. The cretinization, stagnation, idiocy and cluelessness cultivated by metaphysical pseudo-Marxism, and its *actual retarding* of popular movements in the West, is its only real and lasting historical consequence. In taking for granted the form of universality (of both *statehood* and *reason*) that grounds *consciousness* of the *essence*, the academic-textualists have, across the history of Western Marxism, consistently aligned themselves with decrepit Western imperialism, and the institutional

establishments of their respective nations as prostitutes of the financial oligarchy. Taking refuge in this fortress against the hordes, Moishe Postone went as far as to condemn the very naming of the latter (and the chain of institutional corruption flowing from it) 'structural anti-semitism.'

The class struggle, as traditionally expounded between the proletariat and the bourgeoisie, only demonstrates a contradiction *internal* to the form of the state's universality. The chief significance of proletarian consciousness consists not in *arbitrating* the terms of social revolution, whose development proceeds independently of that consciousness, but in *clarifying* the course of its *development.* This is why what chiefly distinguished the experience of Marxists in the 20th century was not the *first* revolutions for the seizure of state power (a precedent accomplished in the French revolution), but the *second* revolutions (the Stalin and Mao revolutions) which allowed for the original to survive whereupon its *limit* (the same one recognized by the early Marx, and which was responsible for his very recognition of the proletariat's significance) was reached. *Social revolution* is an ever recurring inevitability, the *decisiveness* of proletarian consciousness enters only after having submitting to the laws revealed by it, and *surviving* its inevitable contradictions.

The inevitability of social revolution can be proven not in proving any everlasting criterion(s) of conflicting self-interest between differing groups, moral wrongs to be rectified, or contradictions between ideas - it is proven *in the very formal universality* of *any given community* and the *very real conditions* of that social existence. The academic-textualists take for granted the formal universality of 19th century statehood (inherited by American imperialism) as a condition of recognizing class struggle's *true essentiality*. In doing so they deny the essential site of the class struggles' real development. In contrast to their prejudices, no formal (urban, institutional, rational, conscious, heavenly, et. al) universality is ever *permanently* reconciled, it continues to enter into contradiction with its demotic conditions of its existence. The inability for (the) universal form to fully conquer the conditions of its very origination (i.e. to be transmuted among the whole people) inevitably gives rise to a special segment that stands against and apart the whole of society.

This is not out of any immutable law of self-interest, nor does the formal universality necessarily encounter its limit in being unable to exhaust the *wealth* of particularity inhering in the people. Rather, such a limit is inevitably reached whereupon the negation posed by the universal form to the particular is made *superfluous*. At the outset, universality is only an *apparent* universality.

It would be wrong to collapse the distinction between a universal ideology, principle of state, or even religion with the *concrete whole* of social existence. On the other hand, the *novel appearance* of a universal principle does in fact *reflect* revolutionary changes in the concrete totality of social existence and history. Ones which have *already occurred*.

Yet throughout the history of private property, the form of the universal, at the outset the *newborn product* of social processes, inevitably forecloses any relationship toward its real origins, and demands the imposition of special criterion (i.e. the cultural phenomena of *aristocracy*, which ironically reaches its zenith in modern political correctness) to safeguard the *formal purity* of the original negation - like an inbred aristocracy. The universal is unable to conquer its particular conditions, i.e. the *conclusion* is unable to fashion its *premise* in a way that is formally consistent with it, on account of an *immanent* limitation, not one posed by the premise itself (on account of *formally discernible* contrary qualities): It is unable to discover the *concrete essence* of its form *on terms familiar to the form itself*. Put in solely abstract (intellectual) terms, the sole significance of *materialist dialectic* consists in avoiding this error, and *imperiling* form in content (i.e. *socialist realism, Socialism in One Country, etc.*).

In other words, *the exact opposite* of the academic-textualists, vulgarizers, dogmatists, and almost all contemporary Western 'Marxists.' The sole significance of the proletariat (in contrast to the peasantry), for Marx, consisted in proving the *immanent* limitation of universal form (of the state, thought, rationality, philosophy, etc.), not in any *essential* privileging of 'modern' over 'archaic' or 'urban' over 'rural' (as evidenced by the peculiar positions of the *late Marx* and the very experience of history). The peasantry are defined *positively*, thus their privileging *in thought* would inevitably come under the terms of the then prevailing (universal, state, etc.) consciousness.

For example, Narodism, for all its pretenses, could only end up reflecting the limited petty bourgeois consciousness of its leading intelligentsia. By one-sidedly regarding the peasantry as the sole revolutionary subject, the bourgeois, metaphysical presumptions about the then social, demographic and historical realities could not be subject to the process of dialectical overcoming. But on the other hand, to dismiss the peasant element (the *democratic* - more accurately for the Leninist meaning the *demotic*, i.e. not liberal civil society - petty bourgeois) as mere vestiges of the past takes for granted the establishment of the *present*. In reality, a given form of the universal always has *unfinished*

business with its inceptual conditions. *Establishments* come into being through the tautology of form, or economically, the recycling of value and in the aggregation of private property (i.e. in the present day, big capital appears in scale as 20th c. socialistic states).

Such 'establishments' consist not in any *one* particular class, but an entire stratum defined by informal networks, institutional corruption, economic rigging, bureaucracy, insulation, mediocrity, metonymy, cultural degeneracy, incest, etc. - characteristics that had hitherto defined the *aristocracies* of any given society in history. These are precisely what characterize the decadent phase of the rule of the bourgeoisie - a phase which Marxists regarded to have already started by the late 19th century.

The idealist prejudice of academic-textualistic 'Marxists' has thus far consisted in assuming that the essentiality of class struggle is waged primarily at the *site* of these *establishments* (hence the rise of 'graduate student unions', etc.), whereas the experience of history, consistent with the materialist dialectic, demonstrates that the site of the essence lies not in heaven but in Earth (i.e. Lenin identifies the *development of the peasantry* as the truly revolutionary site of class struggle, not the urban centres, and identifies *a revolutionary petty bourgeoisie* in the small proprietor as opposed to the *big bourgeoisie* of the *establishment* etc.). Every *establishment* would prefer to have its last word as regards the messy conditions of its origination (the production of value, private property, etc.), like Freud's primal horde.

By the time the conclusion - the revolution in the forces of production, a new form of the universal (which consolidates in *establishment*) - comes to *alter* the *premise* (as it most certainly does) - it is *already too late* for the 'forward-thinking' cretins and ideologists of *establishments*. Revolutionary partisans (which inevitably *originate* in the metropole) do not inoculate revolutionary feelings among the people, they discern, cultivate, and give form to them where they already exist. It launches its 'base of operations' not from the (metropolitan, et. al) liberal bourgeoisie, but from the hinterlands, which comprises the site for the *repetition* of the essential class struggle *on a new, fresh basis*. The intellectual *shit of the nation,* having contended themselves with acquiring knowledge of the true essence and the true content (of class struggle), do not recognize any antagonism of forms, and thus do not see any difference between class struggle within the hinterlands (peasantry) and the 'class struggle' within the metropole. Yet the idealist error of dismissing forms

as 'all the same' *by a purely formal criterion* is *precisely* what is alien to Marxism.

The proletarian revolution can be waged only at the site where *the conditions* of the essence of class struggle*'s disclosure*, are *repeated* anew and afresh. The academic-textualists do not distinguish between the conditions of the *revelation* of the essence and the *actual site* of essence. Such is their foolishness that they would insist that shark's fin is the same as the shark itself, such is their foolishness so as to insist that what is proven by the proletariat's existence for a nation, is the same as the *positive development* of the nation itself. The decisive confrontation between the proletariat and the bourgeoisie only proves the deeper social revolution at hand between *established states* and *volcanic popular forces* within a given historical determination (nation, region, civilization, etc.). Such revolutions (whether it is *politically* revolutionary or otherwise) are inevitable and even cyclical, and yet the *decisiveness* of proletarian consciousness reveals itself only through the course of *these such* revolutions. The social revolution posed by the Russian peasantry against the Russian establishment was *inevitable*, the decisiveness of proletarian consciousness enters only in discerning *its true essence*.

Western 'Marxists,' in all their idealist weakness, could not have possibly accepted the humiliating reality that social revolution proceeds independently of the *consciousness* and *knowledge* of it. They have failed to grasp the *material essence* of social revolution, preemptively attempting to arbitrate its conditions *in* thought, consciousness, or ideology. Yet all the experience of history demonstrates the fact of the *discontinuity* between the material force of social revolution and the *consciousness of it*. *The fact* of a social revolution of the 1930s that had occurred in all the then modern nations of the world can be easily demonstrated (in the compromises of bourgeois reforms, in the reaction of Fascism, and in the phenomena of 'Stalinism'), both as the objective *consequence* of transformations in the forces of production (including the means of communication) as well as the objective *cause* defining the epoch as a whole. The material force of social revolution does not imply (as the vulgarizers had once contended) the automatic victory of the revolutionary proletariat, but the *antecedence* of the *ground* set before its *partisans* (in contrast to the *voluntarists*).

The academic-textualists might protest, that in recognizing the *living* essence of social revolution, one must nihilistically deny the *eschatological* striving of world history, the *decisiveness* of the proletarian class for it and Communism as

the *riddle of history solved*. *What movement of the heavenly bodies is possible without the sun?* They might ask. In doing so, they would have committed the error of not only preemptively assuming the *conditions* of the end of history, *but the actual site* at which it is waged. That according to the most basic dialectic thinking the universal exists only through the particular, should make it self evident that the *true absolute* can only take *relative* form. It is not that the material force of social revolution is indifferent to proletarian consciousness, only that *their site* is *discontinuous;* they are not one and the same *Substance,* be as they may be of the same *material objectivity.* The decisive site of proletarian consciousness for world history can only be taken as a whole, albeit for the same reason it is only able, at the *outset*, to assume abstract form.

Other kinds of consciousness are able to preponderate the terms of social revolution, and proletarian consciousness, at the outset, allows for insight into their ultimate *vanity*. Yet here, it could not possibly be *decisive*. It is only *decisive* where, at any given point or place in history, it delivers the partisan to what is concrete; where what is historically relative is at the same time *absolute*. To discern the true essence of social revolution is not to preemptively *arbitrate* it, but to receive the true calling and striving of the era, however relative and particular, struggling to be born. The contention of Marxism as a whole is thus that: Be it as it may that other kinds of consciousness can preponderate the terms of social revolution, they will never successfully establish a *scientific* relation to their *own object*; they are condemned to vanity not because of any immutable historical laws, but because they obscure, distort, pervert, etc. *their very own* object. The implication is clear; the decisive significance of Marxism is not negative (Adorno), but positive, it lies in establishing a *concrete relation* to *concrete reality*.

The chief discovery of the third volume of *Capital* and principal striving of the project *as a whole* (a project that *remained incomplete*) has been neglected entirely by the academic-textualist vulgarizers, for all their pretenses to textual stringency. That is not only in establishing a formulaic distinction between profit (capital) and rent (landed property) as categories of political economy, but in demonstrating how the latter, a vestige of the past for bourgeois civilization, *re-emerges by way* of the *former*. Taken to its conclusion, such a discovery also demonstrates how the proletariat, the *negation* of the national, peasant element, so far as it assumes particular form, is but a *moment* in the dialectic of its real being (the *negation of the negation*). The experience of the October revolution shows that the peasant element cannot be dismissed as a vestige of the past to the proletariat, the latter is but the moment of its *negation;*

the two, like capital and landed property, are co-temporal, occupying different sites of the same being.

How it happens that 'petty bourgeois' tendencies continue to persist among the overwhelming majority of any given population (even after the complete triumph of modern industry, as in England), has proven among the greatest scandals of Western 'Marxism.' Yet they need only return to their original mistake of having made absolute what was relative. The destruction of the 'peasant' element was assumed on account of the socialization, inter-connectedness, etc. corresponding to modern industrial civilization rendering impossible its atomic independence. The error lies in having assumed that the peasantry, while *in fact itself* occupying a particular reality, emerged fresh from the primordial, Hobbesian jungle. But every peasantry in history had taken as its premise, in one way or another, the infrastructure of common civilization. The assumption had been falsely made, in a manner alien to the chief discovery of Marx and Engels, that the increasing economic interdependence (which is relative) proves *an end* to the dialectic of humanity, of peoples and nations, and of the inexorably living relation between future and past.

In the midst of this, being powerless before the distortion and slander by the enemies of Marxism, the academic textualists foolishly deny the facts of historical experience, and that the final eschatological moment (i.e. of final capitalist socialization or 'proletarianization') is still underway. Foolishly, they take as an article of proof for this, the socialization that is, in any given period of the past one hundred years, underway. Yet they do not see that this socialization is always *relative*, it does not culminate in any *full and permanent* negation but *is a moment* in the dialectic of *positive being*. The significance of proletarian consciousness does not consist in the Trotskyist error of belief in *permanent* negation, but in discovering in *moment* of the negation a concrete truth, whose actual *positive consequences* cannot be preemptively chosen or decided, and which guarantees only the avoidance of that vanity which trembles amidst the inevitability of change. The proletariat is *concrete-universal*, its significance (for or, at the expense of philosophy) consists in the unity of the universal and particular, abstract and concrete, negative and positive.

The assumption of the total permanent *ontological* negation of peasant by proletarian, country by town, rural by urban, passion by reason, matter by spirit, atomic by collective, past by future, national by global, etc. - evinces the vain psychosis of the bourgeois-consciousness that is but the opposite end of the

coin to its hypocritical philistinism. One-sidedness is impossible for the proletarian *aesthetic* (i.e. the higher sense) *precisely because* it affords precedence to content over form (in contrast to Zizek's 'critique' of 'Stalinist' dialectical materialism). Every one-sidedness is but *a different path* to the same position (for instance the degeneracy held in common between liberalism, anarchism, fascism, etc.) which seeks to preserve the purity of form *against* content. Form for the proletarian *aesthetic*, by contrast, *arises from* humility toward content rather than being *set against*. The *form* of the *universal* is *not set against* the *content* out of which it had arisen (certainly, however, it is set against false forms), it is embraced as the miracle, the trace, and the beauty of a deeper content.

What is decisive for proletarian consciousness lies not at the site of the negation (the *resistance toward* and *veneration of which* being two forms of the *same vanity*), but the *negation of the negation*. Thus the object of the proletarian aesthetic, and likewise materialist dialectic thinking does not resist the inevitable negation of its form, but renders all negation *as but a moment* in *its* reconciliation. Taken in a more practical sense, recognizing the significance of the peasant element does not amount to reactionism against the inevitability of socialization (et. al), only that the latter (at the outset purely negative) by no means can be taken as a final social form. For every proletarian there is also the dispossessed and landless peasant; the striving towards positive being and reparcelization is an existential fact of its condition. Only reparcelization (i.e. taken in the broadest sense of the redistribution of *landed property*) takes as its premise the prior form of aggregation (i.e. the postwar American *automobile* or home took as its premise the modernization of agriculture).

Even the very qualifier of the *petty bourgeoisie*, which had always been wrought with ambiguity historically, would not suffice to name the site of the *peasant element* in question. One the one hand, the petite-bourgeoisie can refer to what is today called professional-managerials. On the other hand, it can refer to the independent small proprietor. Furthermore, even the small proprietor can be further broken down, the small artisan (*sans cullote, urban serf, bazaar merchant*), small landowner (i.e. traditional peasant proprietor) metropolitan (i.e. the small businesses of gentrification), etc. With only the latter sharing the same class (and thus social, cultural, historical, etc.) characteristics as professional-managerials (i.e. the decisive element being the *virtual* orientation). To speak of the peasant element means to name what is antecedent in the first place; what flows *infinitely toward the past*, to characterize it as *petty-bourgeois* is to deny the material conditions which ground such a

conceptual apparatus in the first place (*as in fact* material). It is to commit the error of assuming no discontinuity between essence and appearance, past and future, material and ideal, et. al

The bourgeoisie as a class can be characterized by the pure *positing* of positive form (of ideas, aesthetics, law, religion, economic value, etc. - the bourgeoisie is *neoclassical*, it, like the Roman citizen, attempts to posit on the basis of the positing-of-itself, it is the *true* class of Lukacsian 'self-consciousness'). It does not belong to the same categorization as does aristocracy, since aristocracy is itself the *social realization* of positive form (chiefly that of law; as *legally* recognized ruling class, and before then, a growing scandal to bourgeois democracy). Thus bourgeoisie does not *actually* refer to a social form cognizant of itself in some way: the *idea* of bourgeoisie, unlike aristocracy (or the transient *citizen*), does not *reproduce* itself in the *reality* of the bourgeoisie, but through active analysis. As bourgeoisie inevitably merges into aristocracy (the limit to the positing, the limit to the production of value and consequent recycling), it inevitably gives rise to *democratic petty-bourgeois* tendency originating from peasant hinterland. But as the 'reflexive determination' (Hegel) of positive law delves deeper and deeper into its own *real* (and not imagined) conditions of existence, class categorization becomes increasingly negative. In contrast to both bourgeoisie and aristocracy, peasant refers to a stratum that relates to its positive intelligibility only negatively.

It should be remembered that in Russia, the 'peasant's referred not to a distinct class, but a vague designation given to subsistence 'farmers,' who themselves oscillated between different class tendencies. Yet of these tendencies oscillated around *a single social subject*, the subsistence farmer embedded within a traditional, communal existence grappling and struggling with the introduction of capitalism. In this sense, the 'peasant' can be understood as the *concrete determination* of the modern subject - the 'abstract' determination being the subject of modern law. While modern subjects are all formally free individuals at liberty to do whatever they want, and whose rights are defined negatively - in their *concrete determination*, the great majority of the people remain embedded in a specific communal context and way of life. This is why it is possible to compare modern 'middle classes' to 'peasants.'

The essence of peasant-ness is defined not by the *idea* of itself, but (the relation it possesses) to *material being* which is at best ambivalent to the form of its categorization by institutions or thinking subjects. The main thing for the peasant is not *the idea* of how it is defined, but how it comes to be defined *as a*

real determination materially, (by which the idea can be *reproduced*), the manner by which it enters into intercourse with the real conditions of life in the first place, which do not obey the terms of its *reflexivity* (it is on account of this insolence that peasant culture, for aristocracy is impure, forbidden, *deplorable*, etc.). The bourgeoisie as a whole take as their premise *established order.* Peasant being, by contrast, *already* takes as its premise order that is *real*, but which has yet to be *established*. Typically, the *real order* upon which the peasantry bases its existence is assumed to be that of the *vestiges of the past*, whereupon a new state is established. Yet the experience of history demonstrates the revenge of the past over that arrogance which pretends to its conquest.

During the period of the Iranian Shah's *white revolution*, the Iranian peasantry were assumed to have comprised the vestiges of the previous established (feudal) order. Yet the exact opposite showed itself to be true, just as it did in Russia and China. They *in fact* inhered the very *raw material* of the future. Only the *established order* which contends itself with *final knowledge* of the pasts' *essence* can be said to be *vestigial*. Being no less *real*, the *order* upon which the peasantry base themselves always *has yet* to come into *existence*. It has yet to be *named* and given determination as a principle of state. The essence of this order, whereupon it *reveals* itself, always comes at the expense of the one established (as well as the very arrogant *assumptions* about its essence), and herein lies the peasantry's *revolutionary* nature. That reality precedes its *recognition,* that every order is condemned on its own *real basis* appears an absurdity for the bourgeois consciousness, for which form is final before content, appearance final before essence. But for materialist dialectic thinking, content means only that which is afresh with the annihilation, and rebirth of form anew.

Marxism-Leninism must critically re-examine ‘Western Marxist’ dogmas about the meaning and nature of the ‘peasantry.’ The ‘peasantry’ appear completely outmoded and irrelevant in the 21st century. Yet the struggle between concrete social subjects in the form of *freehold laborers*, and abstract subjects in the sense of liberalism (and thus, *debtors*) remains essential to understanding class struggle in the 21st century. The question must be posed: What is the true subject of class struggle?

Is the object of proletarian class struggle solely the fulfillment of negative bourgeois liberty, or the fulfillment of a concrete social existence - and one, moreover, which includes the entire accumulated history? ▉

Sign-Value and Bourgeois Degeneracy in Moribund Superimperialism: A Case Study of Golden Goose Shoes

Carlos L. Garrido[1]

A student writing for Baylor University's paper, the Baylorlariat, expresses his inability to understand how so many students on campus enjoyed having Golden Goose shoes.[2] For those that are not in the fashion world, imagine the

1. Carlos L. Garrido is a Cuban American philosophy professor. He is the Director of the Midwestern Marx Institute and the Secretary of Education of the American Communist Party. He has authored many books, including *The Purity Fetish and the Crisis of Western Marxism (2023)*, *Why We Need American Marxism (2024)*, *Marxism and the Dialectical Materialist Worldview (2022)*, and the forthcoming *On Losurdo's Western Marxism (2025)* and *Hegel, Marxism, and Dialectics (2025)*. He has written for dozens of scholarly and popular publications around the world and runs various live-broadcast shows for the Midwestern Marx Institute YouTube. Subscribe to his Substack: *Philosophy in Crisis*.

2. Syndey Matthews, "Golden Gooses are a Waste of Money," *BarlorLariat* (February 21, 2023): https://baylorlariat.com/2023/02/21/golden-gooses-are-a-waste-of-money/

shoes you would see on the feet of a homeless man by a New York subway. Have you captured the image? Well, this is what Golden Goose sells —'new' shoes that look like they have been worn down for decades.

But wait, there's more! If selling hand distressed shoes off the shelves as 'new' isn't ridiculous enough, the fact that they range anywhere from 600 to 2000 dollars should warrant its acceptance as one of the seven wonders of world stupidity.

The young student's puzzlement is understandable. In terms of the use-value of the shoes, they are no different than any other pair one can buy off the rack. In fact, their wear might reduce its utility to that equivalent of a beat down thrift store shoe, price difference aside.

The exchange value of the shoe is interesting. The process of making a Golden Goose shoe is anywhere from two to three times as time consuming than most regular shoes. Perhaps it is the case that the increase in abstract labor time, and hence, in exchange value, is here proportional to the price the luxury commodity gets realized through. Although, without a doubt, spending two to three times as long on a shoe to meticulously make it look like it belongs in the garbage can hardly be said to fully explain why they costs anywhere from 4-5 times more than regular sneakers, on conservative estimates.

Even if we accept that exchange value, that is, quantitative differences in socially necessary labor time, can account for differences in pricing, we must still ask — is meticulous craftsmanship the reason young, wealthy, students have made Golden Goose shoes fashionable? Is the fact that they are handmade really the reason why people are willing to drop the equivalent of a week's pay for an average American worker on these distressed shoes? There are plenty of brands that provide an equivalent amount of labor time for their handmade shoes which charge two to three times less than Golden Goose.

A much more explanatory reason for the Golden Goose phenomenon, in my view, lays in the status that the commodity has achieved thanks to the relations it is embedded in. While we don't have to go as heretical as Jean Baudrillard did, can we not say that the *sign-value* of the commodity is doing the heavy lifting?[3] Is it not the case that, fundamentally, the whole purpose of buying the shoes is the prestige and status it bestows to the owner? Are the students of

3. Jean Baudrillard, *For a Critique of the Political Economy of the Sign* (St. Louis: Telos Press, 1981).

Baylor really interested in the utility of Golden Goose shoes? Are they really craftsmanship aficionados? Or, are they simply trying to look cool and hip, to give out the transgressive image of not caring about how they look while simultaneously caring enough to drop half a stack on the silhouette on their feet?

The misguided student writing for the school paper, unable to understand this phenomenon, is fundamentally working through the wrong lens. Approaching it from the standpoint of utility, or even aesthetics, will give you no real explanation for the trend. It is the wrong paradigm through which to approach the question itself. It is as unfitting as someone rating *The Boy in the Striped Pajamas* poorly simply because it wasn't funny. Well, it wasn't meant to be — the framework through which this melodrama must be judged is completely different. Likewise with the Golden Goose shoes. It is a commodity whose price and popularity is primarily determined by the exclusivity, prestige, and status attached to it. In other words, to truly understand the Golden Goose phenomenon, one must attempt to grasp the significance of the sign-form that is imposed upon the commodity-form in the system of carefully manipulated signs.

It is a mistake, however, to reduce this whole sphere of economic interaction to simply a system of signs. This is where even the young Baudrillard goes astray. It is only in some instances, with certain 'luxury' commodities, that sign-value rises up to an indispensable explanatory category to understand the rift between exchange value and price marked by the inflated price. Even here, the relations of the systems of signs are themselves underpinned by relations of production which must never be undermined.

At a more basic level, it is important to point out how 'distressed' shoes are the culmination of a decades-long trend in the West, from ripped jeans to bleach stained shirts, which tends to fetishize the disintegrating, the decaying, that which in its very material form is visibly withered away. It has been a spiral into more profound forms of cultural degeneracy, which consists of a basic lack of decency and self-propriety — as Edward Smith has put it, degeneracy consists in the absence of respect for "yourself, others, and your environment."[4]

This term, degeneracy, should not be given all that easily to the right. Is it not the case that the bourgeoisie, especially in the stage of imperialism, can

4. Edward Liger Smith, "Civilize the Mind, Make Savage the Body," *Red America* 002 (December 2024), 7.

produce nothing more than a decadent culture? As Che Guevara put it, “in culture, capitalism has given all that it had to give, and nothing remains but the stench of a corpse, today's decadence in art.”[5]

Both decadent and degenerate imply societal decay, deterioration, and moral corruption. Decadent, which comes from the Latin *decadere*, meant originally to fall or decay. Degenerate, from the Latin *degenerare*, also refers to a ‘fall,’ to a process of decline — but here’s the caveat, a process of *decline from one’s class*. Degenerate signifies a more specific form of decay than decadence. Decadent here stands as an abstract universal, a decay in general, while degenerate is a concrete universal, a particular form of decadence, a decay from one’s class.

The bourgeoisie was once the class that revolutionized world history, that brought into being some of the great marvels of the world. It was a class that gave us Shakespeare, Schiller, Goethe, Beethoven, and many more geniuses whose cultural productions have been cemented in the treasure troves of universal history. It was the class that revolutionized the forces of production like never before. As Marx and Engels proclaimed, the bourgeois form of life “accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals.”[6]

But that class, its revolutionary and creative edge, has dissipated. Corresponding to the new, highly financialized, usurious, and parasitic stage of imperialism in the post-war period, what Michael Hudson calls super imperialism, capitalism shows itself unable to provide real economic development.[7] Growth has been reduced to accumulation through rents, interest, and stock manipulation. This economic stagnation and degrowth of the real material forces of production corresponds and is reflected into a real stagnation and degrowth of cultural productions. From Shakespeare to porn novels, from Goethe to college student’s slam poetry, from Beethoven to Sexxy Red. This is bourgeois cultural degeneration, *the decaying from their class*, from the progressive, humanistic, and rational ideas of the early bourgeoisie.

The decline into irrationalism, which Georg Lukács located in the post-1848 world (intensified especially by the development of the imperialist stage of

7. Michael Hudson, *Super Imperialism: The Economic Strategy of American Empire* (New York: Holt, Rinehart and Winston, 1972).

capitalism), is a form, in the philosophical domain, of the degeneration of the bourgeoisie and its form of life.[8] The transition from Hegel to Schopenhauer, and then Nietzsche, is a process through which the capitalist class undergoes a "decline from one's class," that is, from the enlightenment values of universal reason, progress, and humanism to the postmodern doctrine of the irrational, the historically static and reactionary, the anti and "post" human. In art, Frederic Jameson correctly diagnoses the "flatness or depthlessness, [the] new kind of superficiality in the most literal sense, [which is] perhaps the supreme formal feature of all the postmodernisms."[9] "Postmodern culture," Jameson argues, "is the internal and superstructural expression of a whole new wave of American military and economic domination throughout the world: in this sense, as throughout class history, the underside of culture is blood, torture, death, and terror."[10]

To return to Golden Goose, is this not a clear depiction of irrationalism, or at least, of instrumental rationality (since, after all, the goal is still profit, a goal in which a form of 'reason' is definitely used) being employed in deeply irrational ways? Reason put at the service of unreason, of the irrational. A 'new' shoe that already comes destroyed and costs five times as much as a regular new shoe? How is this not the epitome of irrationalism in fashion, of calculated stupidity taking concrete form? As Marx wrote in a youthful letter to Arnold Ruge, "reason has always existed, but not always in a rational form."[11]

The hyper-inflated sign-value of this irrational commodity is a manifestation of bourgeois degeneracy, of the decay of the bourgeoisie from what its class once was, from the principles and values it comes into the historical scene affirming. The sign-value of this degeneracy is a reflection of the moribund and decaying character of the social order itself.

The fetish of the decaying experienced in fashion merely reflects the degenerate stage of a form of life with fetishism in its "cell form."[12] Here Lukács was absolutely correct, writing in *The Historical Novel* that "behind the decadence

or the banal degeneracy one can always glimpse the general decline of the epoch."[13]

What the Baylor student was unable to see was that the phenomenon he was unable to understand was not necessarily a lack of reason on his part. The 'gap' wasn't between him and the world of fashion. The gap, the incompleteness, as Slavoj Žižek would say, is *in the world itself*.[14] *It is irrational*. *It is incomplete*. What the student felt she was missing to make sense of the trend was something that was missing *in the trend itself*.

The response to this cultural degeneracy cannot end simply in the reintegration of a communist sense of decency and respectability for oneself, others, and one's environment. While this is necessary *for communists*, the general phenomenon of cultural degeneracy cannot be surmounted unless the decaying form of life that produced it is itself overcome. Only socialism can return us to a higher form of decency, self-respect, and honor. To attack degeneracy without being ready to affirm the only alternative, the only way out of it, is as silly and infantile as thinking you'll be safe putting the fire out in one room while the rest of the house burns. No matter how much you put out the fire in that room, the whole house is burning, and sooner or later that room will be once again. The only escape from the wrath of the fire is to flee the house. The only escape from the bourgeois degeneracy so prevalent in our period of moribund imperialism is through overcoming the capitalist mode of life which engendered it.

Communists show the way forward!

Work, Marx, and Spinoza: Interview with Jason Read

Jason Read[1]

What motivated you to bring Spinoza and Marx into dialogue on the politics of work, and what do you see as the central insight this pairing provides?

The question of Spinoza's relationship to Marx can be stretched back at least to the beginning of the twentieth century. For a large part this writing takes up either the question of the influence of Spinoza on Marx or the intersection of their thought around shared philosophical positions. Marx it is known, kept pages of notes on Spinoza, and Spinoza was influential to his philosophical milieu. With respect to the second, Spinoza and Marx both see human beings as part of nature, and understand our actions and our thoughts to be shaped by the natural and historical world we live in; in other words, they are both materialists.

---

1. Jason Read is a professor of philosophy at the University of Southern Maine and the author of The Production of Subjectivity: Marx and Philosophy (2023), The Double Shift: Spinoza and Marx on the Politics of Work (2024), Unemployed Negativity: Fragments on Philosophy, Politics, and Culture (2024), and other texts. He blogs at unemployednegativity.com

I wanted to take up the question of Marx and Spinoza more concretely, with respect to a specific problem. Work struck me as the right problem for three reasons. Work, the selling of labor power, is the cornerstone of Marx's critique of capitalism. While Spinoza does not have much to say, at least directly, about work, his central concern is first and foremost how we strive to maintain our existence, and the way that striving can be captured by the dominant forces of society, so that we "fight for servitude as if it was salvation." This connects to Marx because the way in which we "make a living" in capitalism, reproduce our existence, also reproduces the conditions of our domination. Finally, I wanted to write about work because we are living in a moment in which the material rewards of work are diminishing, lower wages, less security, for jobs, but largely this has not led to a criticism of work, or even collective movements to confront working conditions, but a doubling down on the work ethic. Hustle and grind mindset cultures are our "fighting for servitude as if it was salvation."

How does the concept of the "double shift" operate as a theoretical lens in your analysis, and how does it connect to the lived experience of labor in contemporary society?

I use the concept of a double shift broadly to theorize the way in which something from one category or aspect of life carries over into another aspect or category, pulling a double. The first such double is economics and politics; that work which is part of economic life, integral to how we produce and reproduce our existence, is also central to political life. This can be seen not just in the calls for politicians to create jobs, but the way in which the hierarchy and discipline of labor relations becomes part of political life. The second double, which follows from this, is the way in which material existence becomes part of how we think about and understand the world. As Marx said, "life determines consciousness." The wage relation, selling our labor power in order to make a living, is not just part of our material lives, but it is part of our consciousness, shaping how we think and how we feel. At the same time, our actions are shaped by what we think and believe to be possible. This can be seen in the third double shift, the way our strategies, our ways for acting in the world, are shaped by the way that the world acts on us. In contemporary capitalism, it is work, working harder, faster, smarter, as an individual that is the only strategy that many imagine for improving their life. Collective action, solidarity, and political action are outside what many see, and thus outside of what many do.

In what ways do you think Spinoza's understanding of the imagination and ideology informs contemporary labor struggles and workers' consciousness?

Spinoza understands the imagination to be a confused amalgamation of the way something affects us, and what something is; when we imagine or when we contemplate an image, we unknowingly combine qualities of the thing with the way it affects us, or has affected us in the past. Then Spinoza goes onto write "The mind insofar as it can, strives to imagine those things that increase or aid the body's power of acting." This is a fundamentally ambivalent assertion, sometimes our imagination is in part correct, the things that we imagine actually help or aid us, we imagine that exercise will make us stronger, but sometimes we can be mistaken, we imagine that alcohol makes us funnier and more charming when we are actually obnoxious. To put this back in the context of work, and the point about the double shift above, the dominant imagination sees work, individual work and effort, as the only way to improve one's position in life. People believe that if they work hard, become a model employee, then their hard work will be recognized and rewarded. This "imaginary" of work has a powerful hold on people's desires and actions. It is reinforced by everything from the wage relation to the narratives and stories of success that permeate popular culture.

You reference popular culture in your book, such as Office Space and Better Call Saul. How do these examples illustrate your arguments about work and exploitation? In addition, how do motivational meetings at places like Apple Stores contribute to the illusion of liberation through work?

As is well known Breaking Bad is in some sense a show about the failures of work. A high school chemistry teacher realizes that his diagnosis of lung cancer will leave his family destitute when he dies. In that sense it is about the failures of work to provide the basic conditions of existence. However, it is not a show critical of work. What does Walter White, the Chemistry teacher do when he realizes that his work will not provide for his family, he works harder only now as "cook" of crystal meth. As much as this "breaks bad," breaking the law, he conforms to a higher law, the idea that if one works hard, is good at their job, they will find success and even revenge. This explains why White's alter ego, Heisenberg, has become a folk hero. Many popular films and movies that

purport to critique work ultimately reveal a deeper attachment to work. This is also true of Office Space in which the criticism of the world of office work is shown in the end to be a celebration of the honesty and integrity of manual labor.

The unique thing about Apple, a company which has an incredibly low rate of pay for the amount of money that goes through its stores, is that it uses brand identification, the loyalty of its customers, as a motivator. Apple consumers are often very loyal and identify with the brand even putting their stickers on cars and backpacks. In a way Apple treats its employees like consumers. In this way it is not that unique, our society, and especially the media, generally treats all issues in the economy in terms of how they will affect investors and consumers, in that order, rather than workers. We are told how a strike will affect the stock market and the price of consumer goods, rather than what it is trying to do for workers.

Can you explain the concept of “negative solidarity” and how it manifests in modern workplaces?

Alex Williams defined negative solidarity as “an aggressively enraged sense of injustice, committed to the idea that, because I must endure increasingly austere working conditions (wage freezes, loss of benefits, declining pension funds, erasure of job security and increasing precarity) then everyone else must too.” This often manifests itself in hostility towards workers who have any protections or benefits, often won through collective action. One prevalent example is the hostility shown towards teachers, who have protections of seniority and time off. There is a strategy since at least Reagan as dividing workers between public workers, who have higher union involvement, and workers in the private sector. The latter are seen as real workers precisely because of their disorganization and isolation. There is a strange sort of solidarity in this, but one that takes work as necessarily onerous and difficult, something that one endures as an individual. Anyone who is seen as not working, or not working hard enough is seen as suspect. It is a solidarity that can only be negative, can only dismantle actual solidarity, and one that strives to make working conditions worse not better.

The Great Patriotic War and the Struggle Against Historical Revisionism

Christopher Helali[1]

Speech given on January 31, 2025 at the Volgograd Region Celebration of the 82nd Anniversary of the Soviet Victory over the Nazi Invaders in the Battle of Stalingrad.

Dearest Comrades and Friends,

Early in the morning on January 31st, 1943, the newly appointed *Generalfeldmarschall* Friedrich Paulus awakened from his slumber to find the Red Army at his door. Preparations were made for a surrender, which Paulus would later deny ever giving. However, on February 2nd, 1943, the last of the Nazi invaders in Stalingrad surrendered to the heroic Red Army. The guns fell silent. After over six months of the largest, fiercest, and bloodiest battles the world has ever seen, the Soviet Union was victorious.

1. Christopher Helali is the International Secretary of the American Communist Party and Chair of the USA branch of the International Movement of Russophiles (MIR).

News of this tremendous victory traveled far and wide. Across the Atlantic, President of the United States of America, Franklin Delano Roosevelt, sent a telegram to Stalin which stated,

> *As Commander-in-Chief of the Armed Forces of the United States of America, I congratulate you on the brilliant victory at Stalingrad of the armies under your Supreme Command. The one hundred and sixty-two days of epic battle for the city which has forever honored your name and the decisive result which all Americans are celebrating today will remain one of the proudest chapters in this war of the peoples united against Nazism and its emulators. The commanders and fighters of your armies at the front and the men and women, who have supported them in factory and field, have combined not only to cover with glory their country's arms, but to inspire by their example fresh determination among all the United Nations to bend every energy to bring about the final defeat and unconditional surrender of the common enemy.*[2]

A few weeks later on February 23, 1943, the 25th anniversary of the Red Army, President Roosevelt sent a telegram congratulating the Red Army for its "magnificent achievements unsurpassed in all history."[3] After the "immortal battle of Stalingrad," Roosevelt goes on to state that the "Red Army and the Russian people have surely started the Hitler forces on the road to ultimate defeat and have earned the lasting admiration of the people of the United States."[4]

The Soviet victory at Stalingrad completely changed the course of the Great Patriotic War. Historians on both sides of the Atlantic agree that the Battle of Stalingrad was the most important and decisive battle in the entire Second World War. Stalingrad was the axial point of the entire war.[5] So decisive was

3. J. V. Stalin, "F. Roosevelt to J. V. Stalin [No. 77]," Correspondence between the Chairman of the Council of Ministers of the USSR and the Presidents of the USA and the Prime Ministers of Great Britain during the Great Patriotic War of 1941-1945. Volume 2: Correspondence with Franklin D. Roosevelt and Harry S. Truman (August 1941-December 1945), February 23, 1943, https://www.marxists.org/reference/archive/stalin/works/correspondence/02/43.htm.

4. *Ibid.*

5. Franklin D. Roosevelt, "Scroll from US President Franklin D. Roosevelt to the city of Stalingrad," Stalin – Churchill – Roosevelt: The Common Struggle Against Fascism [Federal Archival Agency of the Russian Federation], January 31, 2025, https://alliance.rusarchives.ru/scroll-us-president-franklin-d-roosevelt-city-stalingrad-17-may-1944.

the victory that King George the VI of the United Kingdom commanded that a sword be forged to honor the Soviet defenders of Stalingrad. British Prime Minister Winston Churchill presented this sword to Stalin during the Tehran Conference on November 29, 1943. Likewise, on May 25, 1944, President Roosevelt had two scrolls sent to Stalin for the cities of Leningrad and Stalingrad which had "the wholehearted admiration of the American people."[6] Roosevelt goes on to say that the "heroism of the citizens of these two cities and the soldiers who so ably defended them has not only been an inspiration to the people of the United States, but has served to bind even more closely the friendship of our two nations."[7] Lastly, he states that both "Stalingrad and Leningrad have become synonyms for the fortitude and endurance which has enabled us to resist and will finally enable us to overcome the aggression of our enemies."[8] This goodwill between the United States and the Soviet Union, born out of an alliance against fascism and the horrors of war, would quickly give way to suspicion, fear, and confrontation after the war's conclusion.

This year we not only celebrate the 82nd Anniversary of the Soviet Victory over the Nazi Invaders in the Battle of Stalingrad but the 80th Anniversary of the Victory of the Soviet People during the Great Patriotic War. What should be a moment to deepen the shared commitment to immortalizing the heroic peoples who defeated fascism, and to building a world of peace and friendship, is unachievable given the hostile attitudes of Western governments. This is notable in the recent commemorations for the 80th Anniversary of D-Day in Normandy in 2024 and the 80th Anniversary of the Liberation of Auschwitz in 2025 where the Russian Federation was not invited to participate.

Adding insult to injury, the ongoing campaign of historical revisionism in the West has reached new heights.[9] The ongoing effort to distort, misrepresent, and outright lie about the historical record shows the depths some will go who harbor anti-communist, anti-Soviet, and/or Russophobic beliefs. It is clear that not only the rehabilitation, but the outright heroization of Nazi collaborators in

countries like Ukraine, Lithuania, Latvia, and Estonia is extremely inflammatory and provocative.[10] The ongoing destruction of monuments that commemorate the Great Patriotic War and the heroism of the Soviet Red Army in the Baltic states, Ukraine, and even Bulgaria are shameful and unforgiveable acts. These assaults on the collective memory of the war dead are aimed at erasing the heroic achievements of the Soviet people. The lines of demarcation are also clear from the recent United Nations General Assembly vote on the resolution on combatting the glorification of Nazism.[11] The European Union continues to pass resolutions that equate fascism with communism and blames the Soviet Union for starting the Second World War. President of the Russian Federation Vladimir Vladimirovich Putin has made it clear that "placing the Nazis and the Communists before WWII on the same level and dividing responsibility between them equally is absolutely unacceptable. It is a lie."[12]

Given that I am a history teacher, let me provide a personal example of this historical revisionism in the United States. When I was teaching a unit on World War II, I showed a short approximately 15-minute video on what happened on the Eastern Front in World War II. This video clip, from Oliver Stone and Peter Kuznick's *The Untold History of the United States* provides a good overview of the Great Patriotic War, the immense sacrifice of the Soviet people, and their heroism in defeating Nazism. When I shared this clip with my colleagues, I was told that this was "Russian propaganda." I respectfully responded that this was historically accurate. However, some colleagues claimed that the numbers and role of the Soviet Union were greatly inflated due to ongoing Russian disinformation. Shocked by this ignorance, I advised my colleagues to read the history once again and to learn about the fact that the Soviet Union had already turned the tide at Stalingrad, over a year before the allies would land in Normandy on D-Day. However, the Hollywood propaganda machine continues to emphasize that it was the United States and the United Kingdom that were the real victors. Films like *Saving Private Ryan*

are part of an ongoing mythology that portrays the United States as the liberator of Europe and the "free world." President Vladimir Vladimirovich recounted the history perfectly well at the Valdai conference in 2021 when he responded to a journalist's question saying,

> *Firstly, it was Germany that attacked the Soviet Union on June 22, 1941, and not vice versa, and secondly, let us not forget who stormed Berlin. Was it the Americans, the British or the French? No, it was the Red Army. Have you forgotten this? It is easy to recall, for it is an obvious fact. As many as 1.1 million of our people died in the Battle of Stalingrad alone. How many casualties can Britain claim? 400,000. And the United States, less that 500,000. A total of 75 percent, and probably even 80 percent of the German military potential was destroyed by the Soviet army. Are you a little rusty on this? No, you are not rusty at all. These events are being used to deal with the current internal political matters in an opportunistic manner. This is wrong, because nothing good will come of manipulating history. At the very least, this does not promote mutual understanding, which we need so badly now.*[13]

President Vladimir Vladimirovich has proclaimed 2025 the "Year of the Defender of the Fatherland."[14] Let us continue to honor and pay tribute to the tens of millions of Soviets who perished during the Great Patriotic War and the millions more who heroically fought and returned to rebuild their country. Let us continue to teach the truth about the Great Patriotic War. Only by teaching the truth, and by honoring the sacrifice of tens of millions of people, will future generations know the price paid for peace and the need to safeguard it.

13. *Ibid.*

The Dialectical Function of The Communist Manifesto in the Historical Process

Giannetto Edoardo (Nanni) Marcenaro[1]

"The struggle against the fragmentation of the working class is at the same time the struggle against national or racial prejudices"[2]

---

1. Giannetto Edoardo Marcenaro, a.k.a Nanni is an Italian philosopher, independent researcher in philosophy and political economy, who finances his research by his own wage labor. He holds a degree in Philosophy of Science and is a member of the Centro Studio Nazionale "Domenico Losurdo", annexed to the Movimento per la Rinascita Comunista in Italy. He collaborates with several organizations and is author of some fifteen books (self-published), among which six (out of seven) volumes of a *General Description of Thought*, and a whole *General Commentary to □ριστοτέλης* in seven more volumes recently completed, besides a two-volume *Premise to the Critical Analysis of Political Economy,* title *Value and Knowledge*.

2. Domenico Losurdo, *Introduzione,* to Karl Marx, Friedrich Engels, *Manifesto del Partito Comunista* (Roma-Bari: Gius. Laterza & figli, 1999) xxiv. Translations from Italian by the author.

1. Introduction

The 175th anniversary of the publication of the Communist Manifesto falls in an era in which the development of the historical process, on the one hand, has demonstrated how –despite the triumphant proclamations of the liberals following the dissolution of the Soviet Union– socialism and the Marxist-Leninist ideology are alive and well, and have acquired more strength and wealth than they ever created before, especially in the People's Republic of China, and on the other hand, marked in the West the beginning of a profound crisis of credibility, diffusion, and rooting in the populations of the various European states, for those same movements and thoughts.

The last thirty years have seen a downsizing, not far from a complete erasure from the political landscape in the capitalist West, of communist or socialist formations whose influence on society and national cultures, despite the continuous deterioration of living and working conditions, has been increasingly reduced, under the constant and systematic attack of historical revisionism and the incessant counter-waves of mass cultural products.

The capitalist class was able to take the initiative in the absence of any constraint and transform the whole of society in its own image and likeness, separating the political aspects of social relations from those of identity, so as to isolate “individual” and “society”, defusing therefore any revolutionary scope of the so-called “civil” rights movements, and transporting the economic issues as a whole on the terrain of the “celestial” mechanics of the “free market”, with the subtle means of the Keynesian rhetoric of “companies” and “families”, in which any notion of social or class conflict vanishes and the only perspective on the horizon of events is that of the Thatcherite “there is no alternative”: it is only permitted to vainly appeal to a glimmer of hope that “another capitalism” is possible.

In such a context, as in Marx and Engels’ epoch the working population is increasingly “a simple set of single individuals” devoid of any cohesion or awareness of their social function, due to of the incessant, even violent, laceration of the social fabric, in which “the triumph of employers' “despotism” is consecrated” –with new categories of employment contract, in increasingly precarious conditions, left to the will of the “entrepreneur”– and “the reforms carried out through the movement from below [...] can be undone”,[3] as we have

3. Ibid.

witnessed, and still we're seeing today, particularly in Italy, with the neoliberal assault on the few surviving remnants of the mixed economy that characterized many Western countries after World War II.

Today the government of the capitalist class appears to reign unchallenged in the West, and no political force seems capable of opposing the imperialist and neocolonial dynamics that are raging over these countries, enslaved to the will of US capital, while no significant jolt of political awareness, aspiring to question the powers-that-be, can be glimpsed in the population.

It is therefore possible that a brief analysis of what Karl Marx and Friedrich Engels say in the Manifesto –a document which in its deepest essence is precisely a heartfelt appeal to overthrow the capitalist system– simultaneously reflecting, just as briefly, on what the development of history has shown us since then, would offer our intellect useful elements for a more integral and dialectical understanding of today's situation and its roots.

2. Fragmentation and union of the revolutionary subject

First of all, it should be noted that Marx and Engels in the *Manifesto* are primarily concerned with *identifying* and *clearly defining* the revolutionary subject: the sector of society which, as a class, can and must form itself into a unitary block aware of its function and magnitude, actively assuming a political *but also* a social role, decisive in influencing the social trends in progress which establish the direction taken by a country.

In this sense, the analysis they brought ahead leads them to conclude that, at that time, "of all the classes that [...] confront the bourgeoisie, only the proletariat is a truly revolutionary class", since it is "the [...] more authentic product" of the "big industry" from whose development the bourgeoisie draws its profit, while "the other classes decay and set"[4] with it: this is because the "proletariat" is the class that puts for sale one's "labor power" as a commodity, as a means of production at the disposal of the capitalist, which he uses as "wage labour". The latter on its own turn is the "condition [of the existence] of capital"[5].

The bourgeoisie, in order to obtain the maximum profit from its entrepreneurial activity, is willing to create the best conditions so that in the production and

4. Karl Marx, Friedrich Engels, *Manifesto del Partito Comunista* (Roma-Bari: Gius. Laterza & figli, 1999), 20.
5. Ibid., 23.

trade of the products in its availability it finds itself in the most advantageous position with respect to the buyer, or its competitor: for this it needs to beat as low as possible a price for the means of production which enable the goods to be realized.

Furthermore, since the capitalist production system is based on “modern bourgeois private property”, i.e. the private ownership of the means of production, for which a separation is created between producers and products, between workers and the result of the work performed by them, and the only “property” of the latter is none other than their “labour-power”, to the extent that “wage labour, the work of the proletarian [does not] provide […] to the latter a property”[6], all of these “are forced to sell themselves to the minute” and therefore be exposed “to all the vicissitudes of competition”[7] among the workers, on which the same “wage labor is based exclusively”[8].

Competition is a principle that creates isolation among workers: since the *only* way for them to survive is to work, the unemployed worker –if he does not have a sufficient reserve of exchange-value with which he can meet his needs in the period in which he does not receive a wage– will always be ready, in order to earn anything, to accept a *lower* compensation than another worker to do the same job, thus creating the ideal conditions for the realization of the maximum profit by the capitalist and of the *fragmentation* of the working class.

In fact, in a system of competition between workers, everyone thinks for himself, without realizing that he is thus strengthening the position of the one who exploits him, and indeed often without even realizing that *he is being exploited*: in fact, wage labor, as such, is by definition performed by a “free” individual, not a slave. It's not at all forced labor.

This fits spontaneously into the so-called ”liberal” tradition of Western thought, whereby “the level of wages and working conditions refer to a contract freely agreed between the parties”, so that “modern worker slavery” can “immediately vanish into a sphere considered devoid of any political relevance”. The gloomy and ferocious reality of the ruthless exploitation suffered, according to a character of the caliber of Edmund Burke, in fact is nothing but “a semblance, which does not substantially affect the reality of freedom as a 'common

6. Ibid., 27
7. Ibid., 15.
8. Ibid., 23.

blessing'" of which in his opinion "not even the most miserable"[9] can be said to be stripped of.

A position that expresses in its essence the liberal tradition as a whole, based on the selective reading of events and their hagiographic and sweetened narration, so structured as to build a *completely* falsified history, through which it's accomplished a systematic mystification of the real scale of the monstrosity of colonialism; of the magnitude and conscious mechanism of the systematic looting of the peoples of the South of the world; of the corrupt and degenerate ideology which pervades the liberal mind and which it has justified without any scruple, on the basis of the perverse conviction of the superiority of Western culture and European, i.e. white, populations over all the others, the massacre, the reduction into slavery, up to the real and proper extermination, of entire peoples, such as the First Nations of the American continent, whose erasure from the face of the Earth was nothing more than the first phenomenal form in which liberalism showed its purest essence, nourishment of the ground in which Nazism would later be cradled in the twentieth century.

In the first pages of the *Manifesto*, the two authors observe, correctly, that where the bourgeoisie had obtained power, "it placed the *only* freedom in unscrupulous trade", introducing in this way, "in place of exploitation veiled by religious and political illusions […] open, shameless, direct and dry exploitation"[10], imposed by the categorical imperative of maximum profit.

However, this requires a progressive increase in the scale of production, and therefore an ever greater number of workers employed in industry, whereby the proletariat "is concentrated in increasingly more imposing masses" with the result that "its strength grows and *it feels it more and more*"[11]: in this way the workers begin to associate in "coalitions against the bourgeoisie and unite to defend their wages", but "the real result of their struggles is not immediate success but *their union*, which spreads more and more"[12], and that is the progressive formation of a consciousness and a class movement that leads to political and social struggle against the class of the owners of the means of production.

Obviously, we are dealing with a *dialectical* movement here, since the progress of this union is "facilitated by the ever-expanding means of communication", as

9. Losurdo, *Introduzione,* xii-xiii
10. Marx, Engels, *Manifesto del Partito Comunista*., 9.
11. Ibid., 17, emphasis mine.
12. Ibid., 18.

well as by modern means of transport, which make it possible to accomplish "in a few years" what for the "citizens of the Middle Ages […] took centuries" to realize, but both of these means, as well as the proletariat itself, "are produced by big industry"[13] in its impetuous development, "of which the bourgeoisie is the involuntary and passive vehicle"[14]: from the development of the productive forces, according to the modalities of the progress of technical and scientific knowledge, two *opposite* elements are produced, as main aspects of the main contradiction in the capitalist system –bourgeoisie and proletariat– which emerge simultaneously, although each responds to its own internal dynamics.

3. The apparent avoidability of revolution

For Marx and Engels therefore "it clearly appears that the bourgeoisie is no longer able to remain the *dominant* class of society", since by reducing those whose work it must profit from, to the most abject misery, it is not even "able to guarantee the *life* of its own slave", so that "the existence of the bourgeoisie is no longer compatible with society". Therefore, from their point of view, "its decline and the victory of the proletariat are equally inevitable". According to Marx and Engels, *already* in their time, "society can no longer live under its *domination*"[15], that of the bourgeoisie.

The two clearly explain the reasons why this must be the situation at the time they wrote, in the first part emphasizing in particular the dehumanization and assimilation to a "simple accessory to the machine" suffered by the wage laborer, causing his salary to steadily descend with each innovation, each of which makes his tasks more and more mechanical and *less skilled*, so that he finds himself "without property" except for his own labor-power and progeny, and he's not even granted "those conditions which allow [him] to lead his miserable servile life"[16], in a society that does not care in the least about him or his peers, standing "on the denial of earthly happiness and of the very meaning of life for the majority of the planetary population"[17].

But it is in the second part that their rhetorical technique takes on a completely peculiar character that deserves to be briefly analyzed, since after having

13. Ibid.

16. Ibid., 15, 20, and 22.
17. Losurdo, *Introduzione*, xliii.

outlined in broad terms "the theoretical positions of the communists"[18] and having examined "the two terms […] of the antagonism between capital and wage labour"[19], there begins a long section in which the two authors address *directly* the capitalists, the bourgeois class, discussing "the objections of the bourgeoisie against communism" both with respect to "appropriation and production of material goods", and with respect to that of "spiritual goods"[20] following the revolution, which in those passages is no longer simply *proletarian*, but becomes specifically "communist" and which is "the most radical rupture with traditional property relations", so that "in its development the most radical break with traditional ideas takes place"[21].

At the moment in which "the class struggle approaches the decisive moment", in fact, the "dominant" class is dissolving due to its own internal contradictions and "thus now a part of the bourgeoisie passes over to the proletariat", that is, that part, the "ideologists", which has come "to theoretically understand the historical movement as a whole"[22]: this would imply that "in the heart of the old society the elements of a new one have been formed", for which "the dissolution of the old conditions of life goes hand in hand with the dissolution of old ideas"[23].

But it is clear that in the terms in which the issue is outlined, those "bourgeois ideologues" who understood "theoretically the historical movement as a whole", can only be *Marx and Engels themselves* –both of whom were part of the "bourgeoisie", one way or another, or had been such– and those who intended to follow in their wake.

Furthermore, the two authors present, in the *Manifesto*, the question of the revolution of the proletariat which "cannot rise up, cannot stand on its feet, without blowing up the whole [...] official society" (ibid.) as a fact which is about to take place since "Germany is on the eve of a bourgeois revolution" and this revolution "can only be the *immediate* prelude to a proletarian revolution"[24] which however is configured only as first step of the "communist" revolution.

The *Communist Manifesto* was published in February 1848: and in fact, only a few weeks went by before riots and revolutionary uprisings erupted throughout the European subcontinent, assuming, in particular in Germany, precisely the character evoked by Marx and Engels, retraced in the series of articles from 1851-52 for the *New York Tribune* later published under the title of "Revolution and Counter-Revolution in Germany".

The uprisings of 1848, however, fail in the medium term, and the concrete reality of a "bourgeois" revolution in Germany will still have to wait for almost seventy years, when in 1919, at the end of the First World War, on the last worn out vestiges of the "ancient régime", the Weimar Republic will be founded. It will finally unite large portions of the territory of the defunct Second Reich in a nation-state governed by institutions founded on the sovereignty of the people (whose fate and notorious successor we know all-too-well).

But all this will not be sufficient to produce in Germany, nor in any other Western European country which already from the first part of the 19th century onwards had had statutes and constitutions while remaining "monarchies"[25], nor in the multiple-Republics' France, that proletarian revolution which the two authors of the Manifesto hoped for and which they believed would have *necessarily* imposed itself in the conditions realized by the development of industry which the "domination" of the bourgeoisie would bring about.

This means that when Marx and Engels say that "laws, morals, religion are for [the proletarian] so many bourgeois prejudices, behind which so many bourgeois interests are hidden"[26], this cannot in fact be a statement based on an *objective* assessment of the material conditions given in the concrete situation, experienced, in those countries at the time, but, at best, an optimistic overstatement that turns out to be unfounded, and in the worst case, instead, it's only the projection of the awareness of the two authors regarding these elements of the superstructure, on that of the mass of workers, who instead, of course, had been raised, educated, and taught, by the institutions and in the beliefs of what *Marx and Engels* in effect saw as nothing more than "bourgeois prejudices".

The fact that the event envisaged by them in the *Manifesto* as "inevitable" under the conditions *already* given has never occurred was simultaneously one

25. e.g. Sweden, Norway, and Belgium, as well as the Netherlands, the Kingdom of Sardinia in 1848, and Denmark in 1849.

26. Ibid., 21.

of the main factors, in the erosion of the *credibility* of the thought that such a prediction presupposes, and in the emergence and of so-called Western "Marxism" –dialectical development of the consequent affirmation of Marxism-Leninism and of the success of communist strategies and revolutions in the East– which, as a secondary aspect of the contradiction between colonialism and anti-colonialism, intended to deny the socialist and Marxist character of the entire Eastern revolutionary experience.

4. The transition of the capitalist class in Europe from dominant to ruling

It is therefore perfectly clear and evident that the factor not considered by Marx and Engels in the elaboration of the arguments exposed in the *Manifesto* is the one that will instead be distinguished and defined by Antonio Gramsci in the following century, namely the *cultural hegemony* of the class which in a country holds the ownership of the means of production and with the latter it also holds political power: and it is precisely because of this predominant position that it is able to exercise an almost *absolute* control over the entire population, where the organization of the State is such as to capillary intercept the intellectual formation of every citizen.

Marx and Engels in fact repeat several times, as highlighted above, that the class that controls political power is "dominant", and that the "working class" must conquer its "domination" over society, before abolishing "the conditions of existence of class antagonism […] and therefore also its own class domination"[27]: from what they then consider to be the attitude of the "proletarian" towards bourgeois cultural institutions, it is clear that they do not take into account that factor. But can a class conquer and maintain the "domination" of society, where it does not also place itself as a *ruling* class, that is, hegemonic? The problem, it is clear, had to arise essentially also for the *bourgeoisie* at that time.

After all, until the contemporary era this function of *direction* of society, whose work provided the necessary material to establish hegemony, was mainly carried out by religious institutions, for example with the teaching of catechism to the popular masses, which made it possible to control the intellectual formation of the workers without it being necessary to teach them to read and

27. Ibid., 37.

write: and that is, by imposing on them a very precise *vision-of-the-world* transmitted through symbolic figures and exemplary episodes –that is, a transcendental image determined by empirical contents whose internal and external relationships provide the mind with a value and a sense of its own being in its existential understanding– depriving them of the intellectual tools necessary for its critical analysis and discussion of its epistemological foundations.

In the beginning this situation was also perfectly suited to the purposes of the bourgeois class in exercising its functions of "dominion": for the production system that had developed during the First Industrial Revolution, the psychic subjection of the working class imposed by the "traditions" of European "civilization" produced an individual disposition perfectly inclined to tolerate the "petty, odious, exasperating despotism"[28] exercised with "the regimentation of the employed"[29], whom, on the other hand, is required to perform "only an extremely simple, monotonous, very easy to learn manual operation"[30]. Just like the serf in the feudal production system, neither the worker in the capitalist system needs to know how to read and write to carry out his job, nor does he need to develop or exercise his spontaneous faculties of reasoning, reflection, and critical thinking.

However, the introduction of that "open, shameless exploitation" rather than "veiled by religious and political illusions" produced a contradiction in the dynamics of social hegemony, and by promoting the *union* of the working class, showed to the latter the intrinsic conflict, not so much *between itself and the bourgeoisie,* as between the explicit character of the capitalist production system and the feudal world-view that had been sold to it.

The manufacturing industrial production system, which in any case had been the means for the overthrow of the social order based on the feudal relationships of production, could certainly be blamed and criticized, and by the working class, also starting from the teachings and notions provided by the "traditional" forms of thought, i.e. those that the communist revolution should have erased.

For this reason, during the course of the 19th century many forms of association and thought –which Marx and Engels enumerate in the third part of the *Manifesto*– within the working class or about it, emerged in an ever more

28. Ibid., 16.
29. Losurdo, *Introduzione*, xxiii.
30. Marx, Engels, *Manifesto del Partito Comunista*, 15.

overwhelming way among which, without any of them ever questioning the established order, some tried to dogmatically reconcile the destructive conflict of the terms of contradiction, while others were openly reactionary, opposed to the development of industry, obliquely primitivist, often in an attempt to "give Christian asceticism a hand of socialist veneer"[31], positions that later on prospered greatly, and still nowadays, mainly in Italy.

These currents of thought are not revolutionary in any case, and their dialectical function is to defuse the social tensions that the affirmation of the capitalist system brings with itself, and which set the conditions, those set forth by Marx and Engels, for which the overthrow of the "domination" of the bourgeoisie becomes "inevitable", but at the same time with the ambition to limit this "domination" and maintain unchanged the prerogatives and the political-social strength of the ousted dominant classes, *and yet still ruling*.

The explicit appearance of the reality of that contradiction therefore *calls into question* the domination of the bourgeoisie, of course, since this hegemony was the one which *previously* guaranteed the domination of the feudal classes, although in the context of a limited development of the capitalist system the bourgeoisie too could make use of them. Whereas *in fact* the "dominant" class is not able to ensure to the oppressed class "at least those conditions that allow it to lead its miserable servile life"[32] it is certainly legitimate to ask whether that "dominant" class is in fact adequate for this function in society: failing to ensure these conditions indeed means setting those of the overthrow of the entire social order, which precisely Marx and Engels in the *Manifesto* prospect the impending occurrence.

Therefore, it couldn't suffice the mere domination of society, the imposition of a social order by means of the monopoly of the use of force and the violent repression of popular and workers' movements, with the hypocritical and false justification of exploitation with the argument of freedom, in Burke's way, in which "the [...] law is only the will of the [...] [capitalist] class raised to law"[33], but it was also required to renew the character, the magnitude, and the breath of the hegemonic narrative, so that the bourgeois class could constitute itself properly as the "ruling class" of society, and therefore produce in turn, not only a novel production system, but also a "new" *society* in which to assert its *hegemony* in a distinct way, completely different from the previous one, which

31. Ibid., 41.
32. Ibid., 22.
33. Ibid., 31.

was essentially based on *the ideal of deprivation from pleasure and abundance*: the strictly *dialectical* nature of these dynamics cannot be hidden in the slightest from the eye of the attentive reader.

On the other hand, is it possible to overlook the fact that when Charles Darwin published his "The Origins of Species" in 1859, almost all Europeans and their overseas descendants firmly believed in one or another version of the myth contained in the "sacred" texts of Christian religion? And that for centuries the "domination" and hegemony of the feudal classes had been based on these texts, through *both* of which they had effectively exercised *political* power, decisively orienting the opinions of the vast majority of individuals, all the while keeping unchanged the established order and its own class social privileges?

However, neither is it possible to pass over in silence that in that same year 1859, in England, according to the surveys carried out by David Cressy, the percentage of males and females able to affix a signature to the declarations of the ecclesiastical courts exceeded 70% and the 60% respectively.[34] The first edition of Darwin's text, 1,250 copies, sold out on its first day of sales, and a second edition of 3,000 was printed the following year. The book by the English scholar, unlike that of Marx and Engels, saw as much as *six editions* in just thirteen years, as well as being published in the United States as early as 1860, and being translated into the main European languages by the end of the 1870s. According to the author himself, as he declares in his autobiography, "up to now (1876) sixteen thousand copies have been sold in England"[35].

Moreover, as many as 500 copies of the first edition were purchased by Mudie's Library, a private library, which lent books one volume at a time, against payment of an annual subscription, which Darwin himself had used for the studies necessary to write his book, and which allowed a wide circulation of the works. This type of library existed widely in the United Kingdom at the time, but due to their cost they remained a service dedicated above all to the wealthier classes.

In the same period of time, however, during the second half of the 19th century, following the approval of a specific law in 1850, a public library system was

---

34. David Cressy, *Literacy and the Social Order* (Cambridge: Cambridge University Press, 1980).

progressively established which did not include any fees for consulting or borrowing books. It was open to everybody, and in turn Marx also made use of it when, exiled in England, he was able to take advantage of the vast collection of the British Museum Library for his research on political economy: also in this case to the attentive reader cannot escape the deep dialectical materialist essence of such events.

This process of progressive extension of the diffusion and circulation of literature and knowledge, albeit limited by the relatively low literacy, is evidently a completely *antithetical* movement to that in which, for centuries, knowledge had been jealously guarded by the ruling classes, and a similar argument can be made for the gradual establishment of large-scale education systems, controlled by the state, or private, but removed from the direct influence of religious institutions.

In fact, on the one hand, the bourgeois class itself increased in number, and intended to educate its offspring according to an ideology which *certainly* was not that of the feudal classes, or which, in any case, was imparted by exponents of those classes, and on the other hand, with the growing sophistication of production techniques, as well as of bureaucratic, administrative and managerial systems, a gradual general increase in the valorization of the workforce (i.e. in the education and training of workers) was very slowly seen as necessary.

These measures, observed under the lens of dialectical materialism, openly reveal themselves as the strategy of the bourgeois class to wrest the *leadership* of society from the feudal classes, promoting a clear detachment from previous habits, necessary to spread one's vision-of-the-world, making it take root in the population, and gain hegemony, in the same way as the ending of restrictions on apprenticeships in medieval guilds had helped to overthrow the feudal economic system.

But at the same time, in the context of the historical period in which they fit, they are in turn the origin of a movement that is contradictory to this same strategy to conquer hegemony by the capitalist class, which causes a sector of “ideologues” to detach themselves from the bourgeoisie, still largely tied to traditional ideas, and pass to the proletariat, fueling the resonance of workers' struggles and the merciless and shameless brutality of exploitation under the “domination” of the bourgeoisie.

Along this path, within the “bourgeois ideologues”, the former “young Hegelians” of the left, a vision ripens that is diametrically, *radically* opposite to that which they had been taught and under whose lens they had been educated, trained, and induced to observe any phenomenon and which called itself with the names of “religion”, “metaphysics”, “idealism”, even “absolute”, and of course “creation” of the whole universe by the “unique deity” by means of its own free voluntary act: *they therefore spontaneously accepted those positions that they perceived as contrary to such a world-view.*

However, the latter were those that emerged *within* the bourgeois class, in the first phenomenal appearance of its tortuous path of *apparent* intellectual emancipation from the hegemony of the feudal classes, namely those of individuals such as Darwin, precisely, or Herbert Spencer and Lewis H. Morgan, all of whom were far from affirming any “socialist” idea, and who, in one way or another, accepted a form of belief in the ”traditional” thought of European civilization, branding peoples of color and of the South of the world at most as “good savages”, who can be educated in the ways of civilization while remaining essentially inferior to the whites, even if one cannot escape the fact, according to Morgan, that “there are only two means of saving the Indian from his impending doom” (i.e. annihilation) that is “education and Christianity”[36]. This shouldn't surprise us in the least, since after all the bourgeois class cannot deny that mental structure, i.e. dogmatic thought and the determinations of the relations existing between the vision-of-the-world’s elements underlying that thought, necessarily established once its fundamental premises are placed, without renouncing its “dominion” over society, since it is based on such “hegemonic thought”.

Therefore, that same *formal* structure, as a *unity*, assumes opposite but equivalent terms, whose transcendental identity is revealed in the course of the development of that certain peculiar thought in the historical process, so that at the beginning it appears as a contradictory aspect of the *thesis* in opposition to which it arises –and that is the *feudal, metaphysical, idealistic* vision-of-the-world– but following the elaboration of those terms, it becomes evident that the principle on which it is based, as an *antithesis* of the previous thought, is the same, and manifests itself as a vision-of-the-world, yes *bourgeois*, and *materialistic*, and yet equally as before, as Lenin pointed out with great acumen, *metaphysical*, that is, in more precise terms, ”hyperphysical”.

---

36. Lewis Henry Morgan, *League of the Ho-dé-no-sau-nee, or Iroquois* (Rochester: Sage & Brother, 1851), 447.

It is logically excluded, therefore, that the "dominant ideas" for which "the most radical break with traditional ideas takes place", during the development of the "communist revolution", can be these latter, since this "break" will need to be formulated as a *synthesis* of the two previous stages, which productively summarizes those two positions in a new one *that denies them both*: yes, because the synthesis is certainly not the movement equivalent to the antithesis, otherwise *we would go back to the starting point*. It is the *accomplished dialectical overcoming* of the essential contradiction which has produced those two stages as its main aspects, the interaction of which has generated the principle of their own obsolescence.

5. Dialectical dynamics between bourgeois hegemony and labor aristocracy

Just as, therefore, the *Manifesto*, in its very genesis and characteristics, was a result of the productive interaction of the set of determining factors in society at the time, as opposing class tendencies, not limited to proletarians and bourgeois, but involving also, at least in England, the aristocracy and the clergy –in which a bitter clash was looming, which in effect has not yet seen a conclusion, and later took the form of the gap between "progressives" and "conservatives"– and its two authors derived from the works of bourgeois intellectuals tools and notions, the value of which, extracted by them for the benefit of *their own* theories, provided support for the embryonic form of that synthesis, it is just as much quite evident that the bourgeois class, the bourgeois intellectuals, have without doubt studied the *Manifesto* carefully, after 1872 –when the two authors took the opportunity of its presentation as *prosecution evidence* in the trial against Karl Liebknecht and August Bebel, to republish it in Germany, and the text began to have wider circulation– in order to *prevent* from happening what Marx and Engels predicted with absolute certainty.

The social and political situation in Europe, moreover, in the second half of the 19th century, continued to be explosive, and in the period in which the *Manifesto* began to be widely spread and studied, international geopolitical tensions were accumulating which, just barely kept at bay by the "Partition of Africa" after the 1883 Berlin Conference, would finally result in the First World War, at whose closing, the worst nightmare of the capitalists of the entire planet had materialized in the first State, and unique at that time in the world, *truly free and democratic,* the Soviet Union, founded precisely on the basis of the work and thought of the acute German man.

Nor would it make sense that the capitalist class had not taken an interest in *at least* this text, once the movements and political parties that invoked Marxism began to gain visibility, and with them also the *Manifesto*, precisely in the decades preceding the "imperialist massacre" of 1914-1918: on the one hand, for the brevity, incisiveness, and clarity with which it sets out the essential theoretical principles and the political-economic program that the communists intended to use as tools to fight the bourgeoisie –and thanks to which they said they *were sure* they would defeat it– and on the other hand precisely because, as noted above, it is addressing them *directly*. It is equally evident, however, that until the foundation of the first Workers 'and Peasants' State, on the ashes of the tsarist empire, this text was regarded more with ridicule than with fear, as instead its two authors hoped, and that only after the defeat of the colonialist armies in the Civil War of 1919-1922 its words were actually taken seriously.

The *Manifesto of the Communist Party* on the other hand –especially in its final part, where the two authors "openly declare" that the objectives of the Communists "can only be achieved with the *violent* overthrow of the whole social order", and suggest that the dominant classes, "let them tremble before a communist revolution"[37]– can only appear as a *challenge* that Karl Marx and Friedrich Engels issued to the capitalist class as a whole, regarding all aspects of the organization of society, both from the point of view of material production, and from that of "spiritual production", because the latter "is transformed together with the material one"[38].

This passage shows the logical problem in Marx and Engels' argumentation highlighted in the previous section: since, if the "spiritual production", i.e. "the dominant ideas of an era", is modified contextually "to the material one", and the latter is modified following "[the] elevation of the proletariat to dominant class"[39], as a "first step" in that revolution, it is evident that, at the moment in which that first step is taken, that "spiritual production" cannot have *already* been transformed, and therefore, the "proletariat" could hardly have considered those beliefs and institutions, widespread and consolidated in the society of the time, as simple "bourgeois prejudices".

If we then read what Marx and Engels write at the end of the second part, in the list of "measures" that "for the most advanced countries can [...] be applied",[40]

37. Marx, Engels, *Manifesto del Partito Comunista,* 57, emphasis mine.
38. Ibid., 34.
39. Ibid., 34-35.
40. Ibid., 36.

following the revolution in which the proletariat becomes the "dominant class", it becomes very clear the dynamic, apparently convoluted and paradoxical, for which the so-called "left" of the liberal parties, imbued with Western "Marxism", has often and willingly been accused of being "communist", in a completely absurd way, not ever having historically under any circumstances supported any of the *fundamental* premises and principles of socialist or Marxist-Leninist thought.

It is therefore perfectly consequent, in the light of what has been said, that in the immediate post-war period Western European countries involved in the conflict adopted a series of measures, once again, dialectically, completely antithetical to the methods of government that had been in force until then in those States, and that in the following three decades –pompously called the "Glorious Thirty Years"– a significant abundance of material goods spread in them, on the one hand, in the course of a deep infrastructural and productive modernization of the countries, and on the other hand in a radical transformation of customs and habits, in the unbridled development of an ever more extensive *consumer society*, and therefore of pleasures: *exactly what the previous hegemony kept segregated and banned.*

Just as it is consequent how of these measures the most significant ones –whose adoption and support by that "progressive" political faction were the origin of that dynamic– are also listed by Marx and Engels, each of which, although by no means integral to the proposal made by the latter once isolated from the others that define its scope precisely as *revolutionary*, rather than counter-revolutionary, it is, again and always dialectically, *also* functional to the purposes of the bourgeois class, to maintain both hegemony and domination, which amounts to say, to provide "at least those conditions" under which the wage worker can lead his own "servile life", and ensure that it does not *appear* at all as "miserable", that is, it is made tolerable.

A "highly progressive tax"[41], in fact, is undoubtedly an indispensable element in the superstructure of a socialist state, and yet even the bourgeois state can greatly benefit from it, where, for example, it wants to affect large concentrations of capital, or patrimonies, of the feudal classes, which can be mobilized, but which nevertheless are not invested, or to prevent, in a regime of semi-competition, a monopolistic centralization of production.

---

41. Ibid.

In exactly the same way, the "centralization of credit in the hands of the State through a national bank with State capital and with an exclusive monopoly" on the issue of money, together with the "centralization of the means of transport in the hands of the State" and the "increase in the number of nationalized factories and instruments of production"[42] are naturally measures that are proper to the *essence* of socialist thought and the socialist State.

Yet at the same time it is clear that, especially when the *modernization* of a country begins –i.e., the construction of transport and communication infrastructures that cover the entire territory, the development of the supply and distribution of energy sources, the diffusion of uniform standards of measurement and currency to the entire population– the bourgeoisie will certainly want to favor such a centralization movement, to ensure that the State, drawing from the resources obtained through "strongly progressive taxes" –which in fact to a large extent are contributed by the working class, since the latter always represents the absolute majority (i.e. >90%) of the population– takes on its shoulders the task of carrying out such works, which are after all necessary for the capitalists to be able to carry out their business without hindrance or slowing down.

Finally, of course, if it is obvious that, to break the segregation of knowledge that guarantees the "domination" of the capitalists by imposing their "hegemony", the organization of a capillary system of "public and free education for all children" is indispensable –and consequently also the "abolition of child labor in factories"–[43] as already observed, the bourgeoisie also, with the development of the productive forces and a progressive transformation of the economy of a country towards the sector of services, above all in the increase of productive, administrative and social assistance activities by the State with that centralization, will intend to adopt such a strategy, which, moreover, will allow it to exercise a very strict control on the diffusion of the vision-of-the-world on whose grip its hegemony rests.

But then the fact that "it does not appear at all as "miserable" in the context of capitalist society under the hegemony of the bourgeois class does not at all mean "universalizing and making concrete the same negative freedom" that the bossy class has always claimed *exclusively* for itself, but is meant only to denote that life in which there are the means for the *consumption* of an increasing quantity of an ever-increasing number of categories of commodities,

42. Ibid.

43. Ibid., 37.

which give the impression of *abundance.* The production, distribution, and consumption of said commodities, though, will result in the long term in concentration of more and more wealth and power into the hands of the class owning the means of production of those goods, constantly subtracting resources from the administration of those services which are provided by the State following that centralization, by means of which the foundations had been laid for the creation of a large sector of *labor aristocracy*.

The turning point in this story is the speech given by Harry S. Truman, president of the United States of America, on March 12th, 1947.[44]

Precisely at the end of his delirious invective against communism and the Soviet Union, in which in a questionable masterpiece of rhetorical mystification he is able to operate a complete reversal of the reality of the facts, attributing to the socialist system the "way of life" in which "the will of a minority [is] forcibly imposed on the majority", and which relies on "terror and oppression, a controlled press and radio, rigged elections, and the suppression of personal liberties"[45], i.e. to a large extent, what Marx and Engels denounced of capitalist society, and which Michael Parenti, in his "Inventing Reality: the politics of mass media", will demonstrate still existed in 1986 precisely and above all in the USA; well, at the end of this impressive series of inversions of reality, the US politician makes some extremely indicative statements, in which, however, he immediately reveals the reality of that mystification, and the poor rhetorical skills of the author.

In fact, he says that "the seeds of totalitarian regimes", that is, of course, those that do not intend to allow the US ruling class to take advantage of the riches of those states (i.e. the Soviet Union) as if they were their own, "are nourished by misery and out of need" –precisely that condition in which Marx and Engels observe that the working class was thrown from bourgeois rule into capitalist society– and "spread into the evil terrain of poverty and conflict" –i.e. of open class struggle provoked by shameless and open emergence of exploitation, which juxtaposes immense riches and abysmal miseries– to then "reach their maximum growth when the hope of a people for a better life is dead",[46] i.e. the

---

44. Harry S. Truman, *Address of the President to Congress, Recommending Assistance to Greece and Turkey,* (March 12, 1947): https://www.trumanlibrary.gov/library/research-files/address-president-congress-recommending-assistance-greece-and-turkey?documentid=NA&pagenumber=1

45. Ibid., 4.

46. Ibid., 5.

condition in which the oppressed “have no nothing to lose but their chains [and] they have a world to gain”[47].

Mr. Truman concludes: “We must keep that hope alive.”[48] But here certainly he can only be speaking of those states in which those “seeds” were germinating, and seemed to be more vigorous than ever, and that is, those countries which were still at that time *subject to the capitalist system of production*, certainly not to the socialist one, and the reckless US politician is therefore perfectly aware that that “evil soil” and nourishment were precisely the poisoned fruit that such system and the ruling class of the United States of America, and of the entire liberal West, had reserved for the working classes in the *imperial metropolises*.

In doing so, however, he unmasks in one fell swoop the crude hypocrisy of the inversion accomplished, because certainly only such a “way of life”, in which a few impose their will on the vast majority by force, terror, and oppression, physical and psychic, by preventing them from any kind of concrete “personal freedom”, so that they find themselves deprived of any property other than their own ability to work, can produce that “soil” and “nourishment”, and will unfailingly achieve such result.

Truman therefore, in that famous speech –which officially marked the beginning of the Cold War, and established the ideological presuppositions of the Marshall Plan and NATO, whose very existence must presuppose such an hegemonic image– is giving a *warning* to the ruling class, not only of the United States of America, but of the entire front of the colonialist states, i.e. the European ones, to which he addresses himself as the *representative* of the declared leading country of this coalition, and therefore the official, bureaucratic *spokesman* of that same ruling class, who proclaims the general strategy to follow for the block of the imperial metropolis: a warning that requires all these countries to immediately adapt to *bourgeois hegemony*, understood as the *liberal* one, and therefore a sudden change of course with respect to habits, customs, and culture spread in capitalist societies at the time.

In the light of what has been said so far, therefore, the deepest essence of the movement of the historical process in the late 20th century should just have spontaneously revealed itself to the mind of the reader who has accomplished the understanding of the analysis presented here from the perspective of the dialectical development of events: as a relationship of interdependent elements which together constitute a structured process, whose characteristic dynamic proceeds by substitution of contrary factors, whose development in its simplest form (i.e. "normal", as in the case of an equation) determines its overcoming.

The effort made by the bourgeois ruling class in the West and by its lackey-servants, by the "comprador" bourgeoisie of the semi-colonial regimes of central and southern Europe, and by the system of cultural production, all of which have embraced that hegemony without reservation, at the same time ensuring *not to introduce* any radical "break" with the "traditional ideas", has been impressive, and it has involved social and productive forces of considerable magnitude, applied constantly and with an ever-growing diffusion for decades: it is essentially the issue of an immense *mass psychological operation* which, at least in Italy, can be demonstrated to have officially begun on August 18th, 1943, when Sicily fell into the hands of Anglo-American and British troops, and shortly thereafter the broadcasts of Radio Palermo, "sector of the Pwb, the 'Psychological Warfare Branch' [...] which makes propaganda and controls information on the Italian territory" already conquered by the "Allies", would begin, from whose microphones "Mikhail Kamenetzki, Misha for friends", a man who later "will be known by the name of Ugo Stille, one of the greatest Italian journalists"[49] operates with impeccable zeal.

The control exercised over the entire colonialist front by US cultural institutions (i.e. the overwhelming pressure of the bourgeois class's hegemony and of liberal ideology) was supposed to ensure the hagiographic narrative of liberalism an absolute advantage position in public education; on the means of information and mass entertainment; for academic authorities and for intellectuals, once the open military occupation of the invading troops (i.e. the uncovered appearance of the domination of the US ruling class), that the assumptions of that same narrative could admit only as a "state of exception", was suspended.

The intention not to carry out any real "break" with the "traditional ideas", then, is still a dialectical aspect of the question: on the one hand, in fact, it does not at

49. Vincenzo Vasile, *Salvatore Giuliano: bandito a stelle e strisce* (Milano: Baldini Castoldi Dalai editore, 2004), 42.

all imply the attempt of immediate elimination from each country of the competing ideology in the hegemonic field, and on the other hand it is that same cultural background in which “liberalism” took shape and which has provided it with its determining characteristics.

Those “ideas” in fact represent the dialectical result of the previous hegemony, and they are complementary to the present one, but they’re also a tool by which it is possible to represent the hegemony of the bourgeoisie as the “progressive” one, that is, *opposed* to the “conservative” one, presented as a “backward”, “discriminatory”, “authoritarian” legacy of feudal society, of which it is instead complementary: it is only matter of the dogmatic split of the appearance of that contradiction’s two complementary aspects, in which one of the two has taken the upper hand, and the survival of the other is functional only to provide a fictitious term of comparison of that “progress”, from the time when the “personal freedom” of which Truman speaks –which is what the liberal John Locke invoked to justify the institution of slavery– was stifled by “absolutism”.

It is therefore obvious that the bourgeois capitalist class in taking possession of cultural institutions, and beginning to establish its hegemony, has taken decisive steps to carry out a complete and thorough *revision* of the narrative of history and of liberal ideology, to be sure in particular about the United States of America, presented as an “indispensable nation” whose “manifest destiny” has placed at the helm of the “civilizing mission” of the West, today in the declination of the “export of democracy”, otherwise known as the “Aryan struggle for world domination”.

The very character of this narrative has not changed *at all* from before, and it assigns to the capitalist West, and by extension to white Anglo-Americans and white Europeans, exactly the same social and political position that was previously assigned to the feudal aristocracy and yet, on the basis of that inversion of meaning operated by the writers of Truman's speech, presented as the maximum expression of “negative freedom”, of “political democracy” and “human rights”, as the only alleged bulwark against “totalitarianism” and “absolutism”, and therefore held by the standard-bearers of the “independence” of peoples, which like the US people shrugged off their shoulders the British monarchy’s yoke.

This is once again a dialectical movement –which in the 1960s was obscurely guessed about by Guy Debord, who recognized the falsifying essence of public discourse in the West, though expressing it confusedly in the typical mystifying

language of metaphysical materialism– intended to hide the brutal reality of US history; the primary role of the US in the colonialist system, declassified to a trivial bauble; and the transformation of the system of international exploitation by the imperialist states from colonialism to *neocolonialism*, namely: from the practice of military occupation of the territories subjected to the authority of the metropolis and of their direct political subjection to the head of state of the invading country, to that of the formal independence of all those states, whose political *personalities* are so selected and formed as to respond in a clear and consistent way to the will and interests of the imperial master, and whose political *authorities* are structured in such a way as to fully favor those same wills and interests and to be able to easily undergo effective economic, financial, or social coercion, should they prove recalcitrant to grant the best possible investment conditions to Western corporations, so that the latter extract all the possible surplus value from the country, without making it go bankrupt, since in this case they would risk losing their investment: everything is then presented with an admirable show of hypocrisy as a promotion of "freedom", of "democracy", of "rights", without ever specifying that it is a question of freedom, democracy, and rights, yes, *but only* those that belong to the "people of the lords".

What changes here, with respect to feudal hegemony, is the hope Mr. Truman speaks of, "hope" of a "better life", *represented by the conditions of existence in the imperial metropolis*, then sold to all neocolonial and western peoples as "American dream": and that is the underlying idea that in *earthly existence* it is possible to elevate one's social condition, which, in capitalist society, exclusively means *passing from the working class to that of the exploiters.*

The ideal sold by the capitalist hegemony is that of earning *more than necessary* by working *less* than necessary, and indeed, ideally, *by not working at all,* and therefore to obtain a living from the fruits of the work of others, making all this appear as a profit resulting from the "initiative" of a "free individual", while any constraint about it must be denounced as illiberal, authoritarian, undemocratic.

Our dialectical materialist analysis has shown how this inversion –which for the French writer would depend on indefinite impersonal forces that assume apparent wills in autonomous social dynamics– is a *perfectly logical consequence* of a vast range of material factors, given as current and proven in the historical process's condition, the interaction of which has determined such peculiar development of events, and not another, in a modality that can only be

defined as *dialectical*, that is according to the alternation of apparent phases of the distribution of these factors whose relationships define each of those stages as thesis, antithesis, and synthesis.

Considering then this same dynamic according to the criterion we followed in this paper, dialectically, it becomes clear how the reciprocal relationships of the factors we considered have unleashed a process of *pulverization* of the revolutionary subject in the West, causing the situation described in the first section.

In fact, in the balanced evaluation of the events witnessed in the course of historical events, it is completely clear that the words written in the *Manifesto* played a decisive role in this process too, and the influence they have had goes far beyond that exerted on those who were inspired by it, as an example of political practice to promote the "communist revolution", also extending to those who instead intended to avoid this revolution at all costs.

The transformations that took place in the capitalist West in the decades following the declarations of March 12th, 1947, on the other hand, speak very clearly, and highlight a precise convergence of the evidence at our disposal, so that the material conditions of the power relations in society at the end of the Second World War would have required the bourgeois ruling class to adopt a strategy taking into account the more or less rooted *and growing* presence of its hegemonic competitor, as noted at the beginning of this section, and therefore to use this situation to its advantage.

Thus, whereas in fact, in the *Manifesto* Marx and Engels exclude that the communists can adopt any other means except the "violent overthrow" of the established order, here in the West on the one hand during the 1960s the ideology of "non-violence" emerges –and the mainstream means of information and entertainment create its icons and promote them as figures to be taken as a model, invoked by the "left"– as the main road of social demands, and on the other side instead, the special operations of NATO secret services succeed in infiltrating the political formations of the socialist area to feed, and promote, terrorism under the banner of the revolutionary "left", which shrewdly refers to the words of the *Manifesto*, and to that explicit declaration of intent, in this way justifying their elimination, often violent, without meeting mass opposition.

Whereas in the *Manifesto* Marx and Engels declare that the communists intend to abolish the "private property" of the bourgeois because "it exists precisely

because for the nine-tenths it does not exist", a "property whose necessary condition is the lack of property for the vast majority of society"[50], then in Western countries an ever greater percentage of workers, by means of the benefits resulting from the creation of labor aristocracy, can afford a small "private property", and the capitalist system of production, thanks to neocolonial exploitation, can create an economy of scale, material and cultural, which provides both an *abundance* of goods, however shoddy, and *liberality* of customs; modeled on the need to consume the goods produced by the capitalists, and on the imitation of the lifestyle of the *real* owners' class, those who own the means of production (i.e. the ruling class) who are horrified by the idea "of the alleged official community of women in communism", and yet "not to mention official prostitution, find one of their principal delights in seducing each other's wives"[51].

Again: whereas in the *Manifesto* Marx and Engels denounce the "petty, hateful, exasperating […] despotism" existing within the "large factory of the industrial capitalist" in which the workers, in addition to being "servants of the bourgeois class, of the bourgeois state", are "enslaved also by the machine"[52], losing any "personal dignity in the exchange value" and therefore any real, concrete "negative freedom"; thus the civil rights movements overwhelmingly emerge as a tension "to universalize and make negative freedom itself concrete"[53] just as "the workers' struggle invoked by the Manifesto" was supposed to do.

And yet, according to the "Truman doctrine", only as *hope*, i.e. as a future perspective, the satisfaction of which will have to resolve any social tension, whereby the ruling class makes tactical concessions in this direction for strategic reasons, and to consolidate its hegemony without putting at risk its own dominion, preventing such movements, even by exercising the latter, from deviating by the direction in which, once they have arisen and been trained, they have been channeled.

Such hope, as noted above, is not, as in the "absolutist" society of the past, projected into an unattainable time except after death, but into earthly existence, in which "happiness", i.e. "negative freedom", is guaranteed for everybody, which however, in the present, due to a *political* party, or a country, which does

50. Marx, Engels, *Manifesto del Partito Comunista,* 29.
51. Ibid., 32.
52. Ibid., 15-16.
53. Losurdo, *Introduzione,* xix.

not respect the principles of “democracy” and “freedom”, can never be achieved (i.e. it does not diverge in anything from the “Second Coming” of “Christ”).

Thus, the so-called “mainstream” press is always willing to present itself as “progressive”, and that means to a large extent “liberal”, for “rights”, in favor of “minorities”, of “science”, of the “theory of evolution”, and a newspaper like “The Washington Post”, which to define as wildly reactionary is not inaccurate, can title, on p. F6 of the May 11th, 2023 edition: “The Right's new culture-war target: 'Woke-AI'”. In fact, the mainstream press is *the voice of the hegemonic master,* and the latter is the capitalist, bourgeois class, whose ideology, however reactionary, continues to oppose that presented as feudal, aristocratic, associated with “creation”, “superstition”, and “faith”.

Finally, whereas in the *Manifesto* Marx and Engels declare that “a part of the bourgeoisie, in particular a part of the bourgeois ideologues, is now passing over to the proletariat”[54], then the conditions are set for a part of the proletariat to pass over to the side of the bourgeoisie, i.e. the working aristocracy of which Lenin acutely saw the perniciousness, and a part of the ideologues, or rather, of the intellectuals of the socialist area in the West, is absorbed into the superstructures of the hegemonic power and produces the *revisionist* reading of the history and of the reality of socialism and socialist states, allowing the rooting of the aforementioned “Western Marxism”.

Intellectuals whose names are well known –from Hannah Arendt to Michel Foucault, from Toni Negri to Theodore Adorno, from Perry Anderson to Max Horkheimer– although the palm of the greatest exponent of this movement, exemplary representative of the function of these individuals, undoubtedly must be acknowledged to Herbert Marcuse: hired by the Office for Strategic Services during the Second World War, with the task of drafting reports on the political and social situation in Germany,[55] remained a part of it until its dissolution in 1947, and then joined the CIA, in which, from the United States, he was head of the Office for Central European Affairs. He retired from this post in 1951, to then become a teacher in the main universities of the United States, rise to the status intellectual and writer of international renown, and establish himself as a pivotal figure in the “left” circles of the 60s and 70s, founding and animating the so-called “Frankfurt School”.

---

54. Marx, Engels, *Manifesto del Partito Comunista,* 19.

55. Franz Neumann, Herbert Marcuse, et al. *Secret reports on Nazi Germany: the Frankfurt School contribution to the war effort* (Princeton: Princeton University Press, 2013).

The latter, together with that whole movement, played a fundamental role in the eclipse of *the colonial and national question* from the horizon of the political and social debate in the West, thus allowing itself to express unjustified, completely *arbitrary* condemnations of all the socialist revolutions and the states founded by it, going so far as to reach the absurd and outrageous comparison between the Soviet Union and Nazi Germany.

Western Marxism is an obvious consequence of the "Truman doctrine", since in order to build a cohesive and stable sector of labor aristocracy it is necessary to gloss over the colonial question. Such sector can exist –as an exponent of the "we" among whom according to "liberals" there must be no slavery– only if the ruling class manages, through the exploitation of the neocolonial countries, to obtain sufficient surplus profits (i.e. surplus-surplus value), to maintain or increase its own income while conceding to the working classes in the imperial metropolises the benefits of that privileged condition, that is by making the working class participate in the proceeds of their business activities in the periphery, and thus making it accomplice in the looting and their crimes. In this way the working class senselessly, albeit in an ever more unconscious way, links its destinies to those of the bourgeoisie, which however will not hesitate even for a moment to abandon it to abject misery (i.e. the "third-worldization" of that country, in the words of prof. Parenti) if the conditions cease to be favorable to its profit.

Nonetheless, the more bourgeois hegemony consolidates, the more the entire population is led to see the world through the eyes of the capitalist, and to be falsely convinced that the only means of improving one's condition is, as observed first, *to become a capitalist*, i.e. an "entrepreneur": this is in fact the most obsequiously revered social figure in bourgeois capitalist society, to whom, when he is "successful", everything, or almost everything, is allowed, depending on the mass of capital which he is able to control.

There is no alternative to bourgeois society in bourgeois hegemony –it is presented as a fact of nature from which one cannot deviate without suffering ruin and destruction– and the whole society is composed of single isolated individuals who are all potential "entrepreneurs", that is, would-be exploiters of the work of others.

The operation carried out by the capitalist ruling classes in the West had a fundamental executor in "Western Marxism", which fulfilled the task of providing support to that inversion of meaning *from within* the political field of

the “left”, aggregating Western communist and socialist parties in the context of liberal “representative democracy”, by offering arguments, however specious, to such parties to break away from the political lines of socialist countries –be it the Soviet Union, from 1956 onwards, or later of the People's Republic of China, or the Republic of Cuba– and justifying this detachment on the basis of the *Manifesto* itself: that is, on the very intention to renounce *Marxism-Leninism*, and therefore with it anti-colonialism and anti-imperialism too, in this way placing the basis for a mass transition of the socialist-leaning working classes under the grip of bourgeois hegemony, into the camp of “progressives”.

The point that “Western Marxism” has in fact exploited –which is the same point to which the insane ideas of Lev Davidovich Bronstein, known as “Trotsky” appealed– to denounce the socialist states as non-Marxist and authoritarian, traitors to the true thought of the “master”, is the formulation, which Marx and Engels give at the end of the second part of the Manifesto, of the process by which “when the proletariat [...] becomes the dominant class”, it follows that “it forcibly suppresses the old relations of production”, and with them “also […] classes in general, and therefore its own class domination”, whereby “in place of the old bourgeois society […] takes over an association in which the free development of each [i.e. “negative freedom”] is the condition for the free development of all”[56].

This passage has been interpreted by Western Marxism in a wholly *tendentious* way, as if it wanted to imply that, once the “revolution” has been accomplished and the position of “dominant class” has been conquered, *at the same time* this must lead, without a perceptible latency, to the dissolution of class society and to the same class domination of the proletarians, and therefore to a stateless society, since “political power [...] is the organized power of one class to oppress the other”[57]: in this way allowing the slandering of socialist states as “totalitarian”, “authoritarian”, even “imperialist”, *by the mere fact of being such*, “States”, i.e. political organizations, completely overlooking the material conditions in which those organizations had been formed, and couldn’t but be formed by the Communists, in the development of the contradiction between (neo)colonialism and anti-colonialism, embodied above all by the great October Revolution.

---

56. Marx, Engels, *Manifesto del Partito Comunista,* 37.
57. Ibid.

But *nowhere* in fact Marx and Engels affirm anything of the kind, since, at the beginning of that same paragraph, they write that it is "in the course of evolution" that "class differences will have disappeared", since "the rise of the proletariat to dominant class", as they explicitly clarified just two pages earlier, is only "the first step" of the "communist revolution"[58]. During the latter the path for the construction of socialism can only be long and tortuous, on the one hand due to the opposition and aggression of the imperialist and colonialist powers, and on the other hand due to the need for reform and modernization of the country, and the education of the population according to the hegemony of the proletarian class –although it is nevertheless necessary for communists today to recognize the philosophical and logical limits, which we have highlighted in this writing, of this formulation and of the *Manifesto* in general, in careful consideration of the concrete situation of its drafting, at the time of which the two authors were not yet in their thirties, although it is surprising that they did not dwell on reviewing it when repeatedly republished, limits which precisely allowed that text to be exploited.

The extension and rooting of bourgeois hegemony in Western societies thus resulted in the complete destruction of the revolutionary subject in these countries, its reduction to a social dust, which comes alive in the volatile tendencies raised on purpose by the media, in which the mass of individuals divides itself between *flatterers* of the established order –whose maximum aspiration is to become part of the sector that he perceives as privileged in society, i.e. the richest, most wealthy classes, and thus aspires to become "rich"– and *denigrators* of this order –namely the anarchists, whose maximum aspiration is the extinction of the State and of *their own* "work", but towards whom they will never do anything, since they will never soil themselves with the "power" of the State, their bitterest enemy.

All of this found indeed important contributions in the description that Marx and Engels make of "work" in the factory, portrayed as "repugnant"[59], and of the conditions of "brutalization" to which it reduces the "proletarian", which has been exploited to produce a *reactionary* idea on the figure of the worker, as a "noble savage", a man of "good will", but unable, due to the exploitation imposed upon him, to obtain by himself the means of his own emancipation, both intellectual and material. Could he in that case obtain positive results when he is entrusted with the management, not only of his own existence, but, as a class, of the whole of society?

---

58. Ibid., 35 and 37.
59. Ibid., 15.

On the other hand, the notion, “by himself”, is essentially *inaccurate*: any means or instrument, fruit of the intellectual elaboration of the empirical material by the human mind, results as a product, which is, by definition, a combination of distinct organic components, one constant, and the other variable, where the first is the knowledge and assets accumulated and handed down from previous generations, which, of course, far exceeds what any individual, or class, can produce “by itself”, in the performance of one's living labour, both in the production of knowledge, relative or absolute, and in that of the means of subsistence.

Once again, dialectically, therefore the “State” is also the most bitter declared enemy of the presumed antagonists of the ”anarchists”, i.e. of the “liberals” and of the “capitalists”, who however are well aware of the importance of its function for supporting its own dominion and hegemony. However, since the latter do not intend to leave that “power” in the hands of anyone else, but those others after all do not want to hold it *at all*, it cannot come as a surprise that the two coexist harmoniously, and anarchism reveals itself for what it is: the perfect counterpoint to the narrative of liberal hegemony, used to neutralize leftist social forces, dismember solidarity and class consciousness of workers, by raking them into masses of do-nothing idealists, as to make them harmless “rebels” who can be put to bed with small “libertarian” concessions, in the sphere of social customs and identity politics, with this making sure to erase even the mere *conceivability* of questioning the established order, without having to resort to explicit censorship measures.

It is therefore perfectly evident that the main social scourge that must be fought today, in order to promote a rebirth of the revolutionary subject in the West, is *political indifferentism*, of which Marx himself made a penetrating analysis.

This attitude is a perfectly obvious result of the hegemony of liberal thought, bourgeois ideology, and essentially reduces itself to *conformism*: it is precisely the ideology of the small owner, or of the libertarian anarchist –perhaps dedicated to the cultivation of some esoteric orientalist conception– who, as long as he is not disturbed in the privacy of his own (zen) garden in his own (“eco-friendly”) home, where he can indeed feel himself “the master”, finds nothing to object to the fact that in the meantime his neighbor (i.e. the populations of neocolonial countries) is robbed of any of their property, and indeed, probably he’s not even aware of such theft.

7. The superiority of the dialectical method is the advantage of communists

In conclusion, the basic problem that Marxism-Leninism, at least in the West, has to face is that of clarifying in detail and significantly popularizing by all available means the reasons why capital has found the resources to fight the tendency of the crisis and the dialectical development of its overcoming, not only from the strictly technical point of view of the economy's workings, but also from that of the effectiveness and persistence of liberal ideology in its diffusion and rooting in the working classes (i.e. who do not participate in the ownership of the means of production).

The exponential growth of capitalist economies, their financialization, has made possible the logarithmic extension of the credit leverage, creating a persistent and constant inflationary dynamic, called "growth", in which the mass magnitude of production has simultaneously counterbalanced the falling trend of the rate of profit, and the loss of currencies' purchasing power, all obtained thanks to the neocolonial exploitation by the United States of America of the territories subject to partition by the European colonialist powers until 1945, with the help of those same countries which were allowed, on condition that they would inextricably link themselves to the economic destinies of the imperial master, to become part of the semi-colonial cohort within the perimeter of the metropolis.

These resources are first of all those of *knowledge*, the *cultural* ones, in all their distinct declinations and aspects: and that is, on the one hand, the application of machines in the search for an ever greater labor productivity –an operator of a modern industrial machinery in fact, can, with adequate technical training, be instructed to perform such-and-such a relatively simple overseeing procedure that supervises the machine *in the simultaneous execution of much more than one procedure*, which he or she alone would never be able to carry out, even if he had the knowledge to do it– on the other hand, the complete realization of a *totalitarian social hegemony*, based on the widespread and incessant diffusion of a very precise vision-of-the-world, meant to include in its own ideological framework the whole field of human knowledge as demonstrative corollaries of the indisputable, natural, and ahistorical character of the social and economic relationships on which those same superstructures are based.

In turn, this hegemony finds its roots in the *segregation* of that same knowledge, i.e. in its exclusive administration by superstructural institutions

whose management is entrusted to individuals belonging to the ruling class, and who share in all respects its vision-of-the-world: it is precisely on this principle, moreover –that of the *segregation of knowledge*– the one on which the affirmation of private property, and the development of the social superstructures consequent to it, is based, during the historical process in its complex.

But it is obvious then: in the first place, the weapons supplied by the process of development of industry and the accumulation of capital, which the working class must turn dialectically against the capitalists themselves are precisely these latter, and this means not simply to "elevate […] to *dominant* class"[60], but to establish the conditions for which it has the means that allow it to reach the dimension of a *ruling* class, as a necessary condition of the "first step in the workers' revolution", i.e. communist.

This means that the working class must be able to establish its own hegemony, and therefore have at its disposal, at hand, a vision-of-the-world *superior* in all respects to that offered by bourgeois liberal, i.e. dogmatic and idealist, thought: a vision-of-the-world therefore founded directly and unequivocally on the essential principles of *dialectical materialism*, to the concept of which it is necessary to lead back in a consequent way the entire field of phenomena, summarizing in an organic, integral, complete, logical, and empirical synthesis, i.e. scientific, the value of knowledge handed down from previous generations, and refining it in a new form determined by a superior genre that makes it a coherent whole from whose analysis *no remainder* is left over.

The fulcrum and superiority of the dialectical method over the dogmatic one lies in considering one's object from multiple points of view simultaneously.

The very idea of such an understanding can be difficult even to imagine in its concrete realization, yet it is simply the observation in the mind (i.e. the act of contemplating) of a notion, a concept, whose constituent elements make up an *organic* unity endowed with a transcendental value that results from the factors of the composition of that knowledge, as productive combination of the interaction between the factors distinguishable by the mind in the concrete situation of material existence and whatever phenomenon's measure of understanding as a primary function of the mind itself (i.e. the intellect).

Obtaining this understanding means possessing in the mind a transcendental object –a concept– which as a whole offers to that mind which possesses it a

60. Ibid., 35, emphasis mine.

complete representation of a phenomenon in general, that is, of any phenomenon: this concept is the one expounded by Lenin, the unity in the conjunction of the two opposites, which however are *not in the strict sense opposites*, but must be considered as *complementary*, that is, yes *contraries*, but not exclusive of each other (otherwise their synthesis could not exist).

This object in the mind, this knowledge, is the understanding of a *procedure* in its entirety, which can therefore be contemplated in its unfolding, when one pauses to reflect on it, whatever its phenomenal content: for this reason ριστοτέλης believed, erroneously, that in the "receiving" of "knowledge" starting from the "senses", the intellect grasps the "form", the "quality" itself *which was "actual" as "soul" to a certain "living being",* in its own "transcendental way-of-being" and therefore admitted the "intellectual intuition" which instead Immanuel Kant demonstrated not to be possible.

The crucial question to keep in mind is the following: it is necessary to acquire an understanding of dialectical dynamics as a formal representation of the development of any phenomenon, whose phenomenal appearance corresponds to a motion whose trend develops according to the figure of the *double spiral*. To acquire this understanding it is in turn necessary to adopt the dialectical materialist perspective of that dynamic, and that is to be able to observe with the mind this dynamic in the form of a wave that develops in *three dimensions.*

It is therefore necessary to obtain the general representation of that figure whose characters define the dialectical dynamics in its entirety, thus enucleating three magnitudes: (1) the angular momentum calculated with respect to the semi-symmetrical center of the translation; (2) the differential value between the angular moments of the two apparently opposite tendencies, which actually proceed along the same *axis of development*; (3) the axial moment of the harmonic development of the two tendencies calculated with respect to the zero point (i.e., $y = 0$) of that process, i.e. the minimum phenomenal magnitude of that material contradiction, and therefore the measure of the movement made from the origin of that certain dialectical dynamics (i.e. "time", but if you reflect carefully, you will discover that "time" does not exist as a "substance", and it is nothing other than the notion of the measure of movement, namely, that of the Earth on its own axis).

It is perfectly clear how this structural representation fully expresses the concept of dialectical materialism, to the extent that it can offer the mind with a clear perception of the concrete trend of the dynamics of phenomena,

representing the figure of the opposition between thesis and antithesis (i.e. the two angular moments in the vector with respect to the center) which produces a synthesis (i.e. the progress of the axial moment) whereby the movement *returns* to the previous geometric coordinates, but at a *higher* level, in which a new thesis and a new antithesis appear: these sum up the previous values in themselves and go beyond those by expressing a more complete form of the potential contained in that contradiction.

Dogmatic thought, on the other hand, is not able to understand the real dynamics of phenomena in the magnitude of the three dimensions, and is always limited to a *two-dimensional* understanding of this development, imprisoned by the separation between its two opposing aspects, which it carries out by its own constitution (i.e. for it the relation "$+x \neq -x$" is valid, the two cannot coincide in any case), and therefore it can only comprehend that structure either as a series of concentric circles, which it represents as a conical pyramid (i.e. to which it refers the social superstructure's organization), or as a sinusoidal wave, which represents variations in magnitude of one or the other factor in the course of a rectilinear movement (i.e. to which it refers the development of history and events).

The intrinsic superiority of dialectical thought therefore cannot but *necessarily* lead to the triumph of the practice of socialism and of the ideology founded on Marxism-Leninism, but only to the extent that it frees itself from the dogmatic chains that imprison its potential, and constitutes itself as an autonomous vision-of-the-world proposing itself in a consequent and credible way as the only true *demonstrative science* of economy, politics, and society, as well as of life and the entire Universe.

From Fields to Forums: A Reflective Commentary on Agricultural Resistance Amidst Neo-Liberal Policies in Jammu and Kashmir

Waseem Ahmad Bhat[1]

---

1. Waseem Ahmad Bhat has a Ph. D in Political Science and currently teaches at Cluster University, Bemina Srinagar (Jammu and Kashmir). His primary research focus lies in the “Communist Movement in Kashmir and Left in Electoral Politics.” Waseem Ahmad Bhat's scholarly contributions include the publication of articles in journals such asSouth Asia Research (Sage), 'The Social Science Journal (Routledge, Taylor and Francis Group), 'Critique: Journal of Socialist Theory' (Routledge, Taylor and Francis Group), 'Economic and Political Weekly,' 'Social Scientist, India Quarterly (Sage), Asian Affairs (Routledge, Taylor and Francis Group) and International Critical Thought (Routledge, Taylor and Francis Group) waseembhat94@gmail.com

Introduction

Apple orchards are integral to the socio-economic fabric of Kashmir, serving as a crucial source of economy and sustenance for the region.[2] Situated in the scenic Himalayan landscapes, these orchards significantly enhance the agricultural productivity of the region and embody the cultural heritage of Kashmir.[3] The production of apples is vital, contributing to the livelihoods of approximately five million people, or nine hundred thousand families throughout India, with Kashmir alone accounting for seventy-seven percent of the nation's total apple output, equating to more than 2.4 million metric tons.[4] This sector not only supports the economic and social welfare of millions but also contributes eight percent to the Gross Domestic Product (GDP) of Jammu and Kashmir.[5]

Despite its significance, the apple industry faces challenges, including issues with pest control, fertilizer quality, and corporate exploitation.[6] In response, the Apple Farmers Federation of India, and the Jammu and Kashmir Kisan Tehreek convened the first National Conference in Shopian district (Kashmir), from July 15th to 16th, 2023, aimed at addressing the complex challenges confronting apple orchard farmers and elucidating the negative impacts of existing government policies. This paper focuses on the critical concerns discussed during the inaugural National Conference in Jammu and Kashmir, an event that marked a significant platform for both experts and the general

populace to voice their challenges. The conference, organized by groups aligned with leftist ideologies,[7] aimed to spotlight the struggles faced by the common masses, particularly in the agricultural sector. Drawing from the firsthand experiences of the author, who attended as a delegate, this study provides an in-depth analysis of the socio-economic hurdles confronting apple farmers in the region, underscored by the complex interplay of neo-liberal policies and corporate practices. It further examines the collective call for action and the strategies proposed to counteract these challenges, emphasizing the need for policy reforms and the empowerment of local farming communities to ensure sustainable development and equitable growth. Through this paper, the author seeks to contribute to the ongoing dialogue on agricultural sustainability and social justice, reflecting on the conference's role as a catalyst for change and advocacy in Jammu and Kashmir's apple farming landscape.

Corporate Exploitation in Agriculture

In the opening session of the conference, Ashok Dhawale,[8] President of the All-India Kisan Sabha, highlighted the significant challenges faced by farmers in the apple sector of Kashmir, including prohibitive input costs and difficulties in obtaining fair prices for their produce. Dhawale also recounted a distressing incident from the 2022 apple season where governmental actions led to considerable losses for farmers, and he touched upon the severe issue of farmer suicides within the region.[9] These insights underscore the critical challenges within India's apple economy, particularly in Jammu and Kashmir, Himachal Pradesh, and Uttarakhand, prompting an examination of the efforts by organizations like the Apple Federation of India and Jammu and Kashmir Kisan Tehreek to address these issues.

8. Ashok Dhawale, President of the All India Kisan Sabha (AIKS), is a distinguished figure in India's agrarian movement, advocating for farmers' rights and reforms. Leading AIKS, affiliated with the Communist Party of India (Marxist), Dhawale has been at the forefront of significant protests addressing issues like land rights, debt relief, and fair agricultural pricing. His efforts include organizing the notable 2018 Maharashtra farmers' Long March, highlighting agrarian distress nationally. Dhawale's activism merges academic insight with grassroots mobilization, making substantial contributions to discourse on equitable agricultural policies and rural development.

9. Author’s observation as a delegate at the conference, 2023.

In the wake Comrade Dhawale's enlightening presentation, P. Krishna Prasad[10] offered a comprehensive analysis of the adversities confronting the agricultural sector in Kashmir, enriched by historical and contemporary perspectives. Drawing from the establishment of the Kisan Sabha[11] during the British colonial era, Prasad underscored pivotal movements in Telangana, West Bengal, and Kashmir that have shaped the agrarian landscape, attributing significant socio-economic advancements in Kashmir to its unique governance structure as a quasi-independent entity.[12] He addressed the disparities in land distribution across India, highlighting the exploitation of smallholder farmers due to escalating costs and indebtedness, exacerbated by capitalist market dynamics.[13]

Prasad discussed the pricing disparity for apples between local markets in Kashmir and major urban centres like Delhi and Mumbai, which results in significant corporate profits at the farmers' expense, a situation extending to crops such as rubber, apricot, almond, rice, and tomatoes, thus exacerbating the plight of farmers nationwide.[14] He also identified the fragmentation within the farming community, rooted in caste and religious divisions, as a vulnerability to neoliberal exploitation,[15] advocating for unity among farmers and suggesting the formation of crop-specific federations to strengthen their bargaining power. The conference highlighted the issue of suboptimal apple production per hectare in Kashmir compared to global benchmarks, with India's productivity notably lower than that of Belgium, Denmark, and the Netherlands.[16] Prasad's recommendations included reducing production costs, establishing a pension scheme for farmers, and the necessity for governmental action to establish cold storage facilities and counter corporate exploitation. Prasad's advocacy culminated in a call to action for establishing local farmers' associations, inspired by historical land rights struggles in Kashmir, aiming to focus on the

rights and welfare of apple growers and advocate for systemic changes to ensure sustainable and equitable agricultural practices.[17]

Challenges in Agricultural Policy

The state of agriculture in Jammu and Kashmir, as detailed by Zahoor Ahmad Rather, an influential left-wing activist within the Kashmiri agricultural community, was thoroughly examined in a comprehensive report. This report, presented at the conference, shed light on the significant challenges faced by apple producers in the region. Rather's insights, based on observations made during the conference, highlighted the array of adversities currently impacting the apple farming sector, offering a critical perspective on the issues at hand.[18] He detailed the sector's resilience amid challenges post-revocation of Article 370,[19] significantly affecting apple production dynamics. The disruption of transportation facilities during the harvest season, a critical period marked by national highway blockages, was highlighted as a significant impediment, contrasting with its operational status throughout the rest of the year. Rather suggested these obstacles could be the result of neoliberal corporate strategies manipulating market conditions to their advantage.[20]

Furthermore, he critiqued the unconventional selling practices of apples in Kashmir, where transactions are made per pack (nug) rather than by weight, causing confusion and potentially disadvantaging farmers in pricing. To address these challenges, Rather proposed the implementation of Minimum Support Prices and crop insurance specific to the apple sector. He also voiced his opposition to the Goods and Services Tax (GST), humorously labelling it the 'Gabbar Singh Tax,' for imposing an undue financial burden on all commodities, disregarding the common populace's financial capacity. His recommendations for mitigating these issues included regulating transportation charges, standardizing apple box sizes, and curbing corporate exploitation. The slogan 'Saib Ko Bachao, Kashmir ko Bachao' (Save Apple, Save Kashmir) was presented as a rallying cry for urgent intervention."[21]

Multiple Perspectives

In an impassioned discourse witnessed at the conference, Mohammad Yousuf Tarigami[22] critically analysed the impact of the current political and economic landscape on the agricultural sector, with a specific focus on the challenges faced by apple farmers and marginalized labourers. He articulated concerns over the government's neglect of the agricultural community, a neglect that has marginalized small-scale farmers and exacerbated their challenges, pointing to a significant failure in governmental protection of its most vulnerable citizens.[23] Furthermore, Tarigami addressed the detrimental influence of corporate interests on agriculture, highlighting the severe disparities in pricing as evidence of corporate greed, which has resulted in the undervaluation of farmers' labour.[24] He also brought attention to an alarming incident in Shopian, where labourers from Bihar were attacked, as reported by the ”Indian Express” in 2023,[25] illustrating the increasing tensions and the government's failure to safeguard marginalized communities.

Amid these challenges, Tarigami advocated for collective action and principled advocacy to uphold the rights and interests of the farming community, underscoring the importance of government intervention to address farmers' grievances and enhance their welfare. His speech called for a comprehensive strategy that places the stability of the agricultural sector and the well-being of its workers above corporate profits, highlighting the critical need for a shift in policy focus.[26]

Delegates from diverse regions significantly contributed to the discourse at the conference, addressing a broad spectrum of agricultural issues relevant to their localities. Discussions encompassed the promotion of organic farming

22. Mohammad Yousuf Tarigami is a prominent political figure from Jammu and Kashmir, India, known for his longstanding involvement in regional politics. As a member of the Communist Party of India (Marxist), Tarigami has been vocal about social justice, workers' rights, and the need for peace and democratic processes in the region. He has represented the Kulgam constituency in the Jammu and Kashmir Legislative Assembly for multiple terms, advocating for the rights and welfare of the marginalized sections of society. Tarigami's political career is marked by his efforts to bridge communal divides and his opposition to policies detrimental to the socio-economic fabric of Jammu and Kashmir. The author has conducted many interviews with Mohammad Yousuf Tarigami, during his Ph. D programme.

26. Author’s observation as a delegate at the conference, 2023.

practices, the need for increased production of high-quality apples, strategies for reducing production costs, the importance of price regulation, and the advocacy for the elimination of substandard pesticides, insecticides, and fertilizers. A notable proposal was the establishment of an independent agricultural institute aimed at standardizing agricultural products to ensure their quality and safety.[27]

Somlal Ji, the Secretary of Kisan Tehreek from Jammu, in a compelling speech, praised the conference for its role in converging the voices of the agricultural sector to deliberate on pressing issues. He highlighted the importance of such platforms in cultivating collective dialogue and action towards addressing agricultural challenges. Emphasizing the critical role of government intervention, Somlal Ji argued that significant advancements could only be achieved through unified efforts.[28]

Subsequently, Om Prakash, President of the Centre of Indian Trade Unions (CITU), voiced robust support for the Apple Federations and other groups advocating on behalf of marginalized farmers. He underscored the necessity of farmers vocalizing their grievances, asserting that their active participation is crucial for the recognition and resolution of their challenges. Om Prakash's statements further solidified the conference's theme of solidarity and the essential need for platforms that elevate the voices of the agricultural community, especially those facing marginalization.[29]

These delegate contributions highlighted a unified call for agricultural reforms, emphasizing organic farming, quality control, cost management, and regulatory measures, indicating a holistic approach to overcoming the sector's systemic challenges. Furthermore, the push for establishing an independent agricultural institute marks a stride towards institutionalizing standards that could enhance the quality and sustainability of India's agricultural output.

Democratic Rights and Agricultural Advocacy

Ghulam Mohi-u-din, a distinguished member of the CPI M and the District Development Council, presented a critical resolution at the assembly,

27. Ibid.
28. Ibid.
29. Ibid.

emphasizing the vital need to uphold democratic values. He highlighted the detrimental impact of the suppression of fundamental rights, specifically pointing to the revocation of articles 370 and 35A and argued that this legislative change has profoundly affected the lives of residents in Kashmir. The loss of honour and dignity, compounded by the ongoing military presence and distressing events spanning decades, was attributed to the current government's policies, underscoring an urgent need for the restoration of democratic rights in the region. Mohi-u-din elaborated on the significant negative consequences for numerous families facing restrictions and denials by authorities, which have aggravated the challenges of rising inflation and unemployment. His advocacy for reinstating democratic rights in Kashmir served as a rallying cry, urging action to counteract governmental neglect and the erosion of democratic foundations.[30]

Rallying for the Apple Sector

The conference reached its zenith on July 16th in Shirmal Shopian, culminating in a rally that attracted a substantial audience and featured speeches from notable industry experts, including Ghulam Nabi Malik, Krishna Prasad, Ashok Dhawale, and particularly Mohammad Yousuf Tarigami. As a senior leader of CPI M and PAGD Convenor, Tarigami elucidated the pivotal role of apple cultivation in sustaining the livelihoods of countless farmers, highlighting the deep connection between the agricultural community and the apple economy. He critiqued the unequal distribution of resources like cold storage facilities and criticized governmental inertia concerning the Swaminathan Commission's recommendations on minimum support prices. Tarigami's calls for nationwide farmer solidarity and governmental interventions, such as the waiver of Kisan Credit Card loans, underscored a collective effort to mitigate the financial challenges faced by the farming community.[31]

The rally was marked by an energetic atmosphere, reflecting the resilience and optimism of the youth and participants despite challenging conditions. The chant 'Save Apple, Save Kashmir' evolved beyond a mere slogan, embodying a profound plea for the protection of Kashmir's cultural and economic heritage. This rallying cry signified not only the closure of the conference but also the dawn of a revitalized advocacy for the apple sector and the overall welfare of

30. Ibid.
31. Ibid.

Kashmir. This assembly and subsequent rally highlighted the crucial link between democratic rights and agricultural prosperity, advocating for an integrated approach that honours and enhances the welfare of Kashmir's inhabitants and their economic foundations. This movement represents a step towards securing recognition and support for the agricultural sector, especially the apple industry, aiming to cultivate a future where democracy and economic stability are intrinsically linked.[32]

The National Conference on Apple Farming in Kashmir (India) not only highlighted the complex challenges faced by apple growers but also underscored the urgent need to address the neo-liberal economic policies that exacerbate these challenges. The unchecked neoliberal agenda, often characterized by deregulation, privatization, and a free-market economy, has significantly contributed to the vulnerabilities within the apple industry in Kashmir. This conference illuminated the stark realities of how such policies facilitate corporate dominance, leading to exploitative practices that undermine the livelihoods of local apple farmers. A critical examination of these discussions suggests that for the apple industry in Jammu and Kashmir to thrive and be sustainable, there must be a concerted effort to curtail neo-liberal exploitation. Implementing protective measures, regulatory frameworks, and support systems that prioritize the welfare of the farming community over corporate profits is paramount. This approach not only aims to safeguard the apple industry from the adverse impacts of neo-liberal policies but also ensures its long-term sustainability and resilience. Thus, the conference's deliberations call for a re-evaluation of current economic policies, advocating for a shift towards more equitable, farmer-centric approaches that can foster a more sustainable and prosperous future for apple growers in the region and beyond.

Conclusion

The outcomes of the conference, while positive, bring to light several important issues that need further attention. The conference aimed to address the challenges faced by apple growers but may not have fully covered the wide range of difficulties experienced by farmers from varied backgrounds. There is a need for greater emphasis on giving voice to the struggles of marginalized or small-scale farmers, which would make the discussions more inclusive and ensure that a wider array of concerns is considered. However, the occurrence of

32. Ibid.

floods in different parts of India, as reported by the ”Economic Times” in 2023,[33] posed significant challenges that may have affected the ability to fully achieve this goal. Furthermore, to turn the conference's recommendations into tangible outcomes, it is essential to develop and implement detailed plans of action along with mechanisms for ongoing monitoring. Without a clear framework for implementation, there's a risk that the conference's decisions will remain theoretical and not lead to meaningful improvements for the apple farming community. Although the focus on sustainable practices and fair pricing is commendable, the increasing threat posed by climate change to apple farming requires additional focus. Developing strategies for climate adaptation and resilience is vital to mitigate the negative impacts of environmental changes on apple cultivation.

To sum up, the National Conference on Apple Farming has shed light on ways to improve the health and economic stability of India's apple agriculture sector. It highlighted the importance of collective action, strategic planning, and the adoption of adaptive measures to address the current challenges in agriculture, aiming to protect the livelihoods of numerous farmers and enhance the sector's sustainability and economic success.

In Memory of Harpal Brar: In praise of Stalin

Harpal Brar

In commemoration of the recent passing of comrade Harpal Brar, founder and long-time chairman of our fraternal Communist Party of Great Britain (Marxist–Leninist), we reprint this erudite speech in defense of Stalin which he gave to a hostile group of Trotskyists in 1998. Brar committed his life to the struggle of the working and oppressed peoples of the world. He produced a great wealth of insights for subsequent generations to continue studying and learning from. While comrade Brar, in the physical form, may have passed to meet Marx, his ideas stay with us and are as pertinent as ever.

Comrades, when I was invited to speak, I was slightly taken aback, and I spoke with your national organiser, comrade Fischer, and said: "Look, I regard Stalin as a great continuer of the Leninist tradition, and your views are just the opposite. It's unlikely I'll change your mind, and you won't change mine, and where conviction is so deep, what's the point of having a debate?" He assured me there were comrades floating between the line of the Weekly Worker and our line. So I hope there will be some floating comrades able to listen to what I say, make up your own minds, and of course come over to the viewpoint I uphold.

I have been asked to speak on the legacy of Stalin. It's a very large topic - one cannot to do justice to it in an hour. 'Stalinism' is not a term which either Stalin

or any of his supporters invented. It's a term invented by Trotskyism, and it's a term invented by the bourgeoisie, and as a result of a great deal of collaboration between the two sides, Trotskyism and the ordinary bourgeois. I regard Stalin as a great Leninist. I do not regard him as having done something very original, except that he had a genius for putting into effect the precepts of Marxism-Leninism. I think that's where his great achievement lies. He never pretended, like a lot of Bolsheviks who shall remain unnamed, to have something new to say. He constantly referred to Lenin, and said, 'This is what comrade Lenin said: that's what we are going to do. It makes sense to me, and I don't wish to disagree with other people just for the sake of disagreeing. We've got a job to do and that's what we are going to get on with.'

I want to summarise in the beginning, and then substantiate, exactly what Stalin's contribution was. I think the most significant contribution was first of all to hold the Party together by routing all the fractious elements. No doubt you'll call it Bonapartist purges and all the rest of it. But actually to have maintained the dictatorship of the proletariat in the Soviet Union in those times could not be done except on the basis of the strictest iron discipline, for which not Stalin, but Lenin was responsible through the resolution that he personally wrote for the 10th Congress of the Communist Party of the Soviet Union.

The second thing Stalin did was lead the Party not only to defeat the opposition - he had to do this before anything positive could be done - but also convince the Party in the fashion of Lenin that it was perfectly possible that socialism could be built in the Soviet Union. Although it would have been lovely if revolution had come in Germany, Britain, France, the United States of America and the leading capitalist countries, it hadn't come - that was the fact. And there's no point in saying that Stalin betrayed the revolution. People who say so have a soft spot for social democracy. If anybody betrayed the revolution in Western Europe, it was social democracy, and not Stalin. Social democracy had betrayed the revolution during the time of Lenin, and it was to do so again in the period leading to World War II and subsequently. Stalin led the fight for the building of socialism, and constructed socialism. Should someone question whether socialism was constructed, I shall give them quotations from none other than Leon Davidovich Trotsky.

Building socialism wasn't something minor. It meant pulling the Soviet Union out of its feudal and medieval integument into the modern world, and building modern socialist industry and collectivised agriculture. I come from a peasant country, where the peasantry live in miserable conditions. I believe in

collectivisation - socialist collectivisation. Stalin's was a tremendous achievement.

And the third achievement was to have built the Red Army, which was to have the glorious role of almost single-handedly smashing the fascists from Germany and their allies. And at the end of his life to have waged a struggle against people in the Party who were trying to bring in the ideas of market socialism, and to have rehabilitated Soviet production within three years of the end of the war to pre-war levels, and within three years after that to have doubled it.

These are Stalin's significant achievements, and these are his legacy to the communist movement. I don't care that as I speak people snigger and say, 'These are the typical sayings of Stalinists.' To me they are axioms. They are achievements of working class power, of which working people everywhere can be proud. If you go around the world, working people are indeed proud of the Soviet achievement, and so, notwithstanding the reversals that have taken place since the days of Krushchevite revisionism, notwithstanding what has happened in Eastern Europe, it doesn't prove anything wrong about the pursuits of Stalin, and what he was trying to achieve. On the contrary, it shows how important it is to have revolutionary leadership, how important it is to fight revisionism and Trotskyism. The 21st century will never be what the 19th century was, such has been the effect of the October Revolution, and I must say Stalin had some part to play, no matter how modest that part may be. It was certainly far greater than we collectively have ever played or are likely to play.

On the question of holding the Party together. Time and again, it has been asserted that what Stalin was trying to do was cleverly manoeuvre to eliminate every opposition - all those brilliant Bolshevik leaders - so that he could become the sole man in charge. There is absolutely no truth in this. Stalin always believed that after the death of Lenin there was not a single leader in the Party able to step into Lenin's shoes. It was therefore very important to have a collective leadership. Stalin worked as hard as possible with all the leaders - with Kamenev, Zinoviev, and he wanted to work with Trotsky. This was at a time when Kamenev and Zinoviev refused to speak to Trotsky. They wanted Trotsky's expulsion from the Party. Stalin said to them: 'You can't do that. If you start doing that you lop off one arm today, the other tomorrow, and a leg the day after that, and what would be left of the Party?'

It wasn't until much later on, over the question of whether socialism could be built in the Soviet Union or not by the year 1925, that they united together in

hostility to the Party. Although they were known as brilliant Marxists and great theoreticians, they hadn't a clue how to function. Stalin wanted to work with them. And when they forced the debate in the Party on whether socialism should or should not be constructed, or could or could not be constructed, there was a full debate - and let no one tell me the 'Stalinist bureaucracy' stopped the debate taking place. Debate raged in the Party, in the factory units, on the farms, all over the country. And when the vote took place, the Trotskyists and the new opposition, as it was called, along with Kamenev and Zinoviev, got 4,000 votes, as opposed to something like 700,000 that the Party got. That was their strength. There was nothing bureaucratic about this straightforward defeat.

I ask you, comrades: a revolution has taken place in Britain. Your theory says socialism cannot be built in a single country, unless revolution comes in a number of other countries. For reasons that are beyond your control - you haven't betrayed the revolution: you obviously want it everywhere - it doesn't come. What exactly do you do? It's a practical question. There are two things. Our theory says socialism cannot be built. So that's it. Lets shut up shop and go home. It was a one-day wonder. The proletariat simply lived to go to the barricades, win, and then be slaughtered. The other thing is - no, it hasn't come, but we're going to make a go of it. I can provide textual evidence - Lenin, all over the place - on the question of whether revolution is possible in several countries, let alone all over the world. And he said it's a rarity. It is not a Stalinist invention that this is so: it is what Lenin said, as early as 1916, in the United States of Europe article - this question has caused some controversy in the SLP.

Read Lenin's article on the military programme of the proletarian dictatorship. Read his article on cooperatives. And what does he say? Socialism can be built. It can be built, because things have changed since Marx's day. Things have changed because old free-competition capitalism has become monopoly capitalism. When monopoly capitalism comes on the stage, the question of revolution can no longer be looked at in the old way. It's not a question of whether in a given country the proletariat is in the majority or not. The question is that under conditions of imperialism the whole world is ripe for revolution. Where will the chain of imperialism break? Nobody can say for certain, but it is likely to break down at its weakest link, and in February, and in October/November 1917, Russia proved to be the weakest link.

The Trotskyists and the opposition suffered defeat, and a lot of people called it Stalin's manoeuvring. The reason the Trotskyist opposition failed was because

it was trying to depart from Marxism-Leninism on the question of building socialism. Stalin raised this question: he said, 'How are we to explain the fact that, notwithstanding his oratorical skills, his will to lead and his abilities, Trotsky was thrown out of the leadership of the CPSU(B)?' And Stalin goes on to answer, 'The reason is that the opposition intended to replace, to "improve" Leninism with Trotskyism.' But the Party wanted to remain true to Leninism. That's the root cause why the Party which made three revolutions found it necessary to turn its back on Trotsky and on the opposition as a whole.

Stalin raised the same question at the 15th Congress, when he said, 'How could it happen that the Party as a whole, and after it the working class as a whole, so thoroughly isolated the opposition?' After all the opposition was headed by well known people, with well known names, people who know how to advertise themselves - people who were not afflicted with modesty, and were able to blow their own trumpet. It happened because the leading group of the opposition turned out to be a group of petty bourgeois intellectuals, divorced from life, divorced from the revolution and divorced from the working class. And that's why it was defeated.

Stalin goes on to say that the opposition thinks its defeat can be explained by the personal factor, by Stalin's rudeness. That is too cheap - an incantation, not an explanation. Trotsky had been fighting Leninism since 1904. From 1904 until the February Revolution of 1917, he hung around the Mensheviks, desperately fighting Lenin's Party all the time. During that period Trotsky suffered a number of defeats at the hands of Lenin's Party. Why? Perhaps Stalin's rudeness was to blame. But Stalin was not yet general secretary of the central committee of the time. He was not abroad, but in Russia, fighting tsarism underground. Whereas the struggle between Trotsky and Lenin raged abroad. So what has Stalin's rudeness got to do with it?

During the period from the October Revolution to 1923, Trotsky, already a member of the Bolshevik Party, made two grand sorties against Lenin and his Party. In 1918 on the question of the Brest peace, and in 1921 on the trade union question. But these sorties ended in Trotsky being defeated. Why? At that time Stalin was not yet general secretary of the central committee. The secretariat was then occupied by notorious Trotskyists. So what has Stalin's rudeness got to do with that? Later, Trotsky made a number of fresh sorties against the Party, in 1923, 24, 26 and 27. And each sortie ended in Trotsky's defeat. Is it not obvious that Trotsky's fight against the Party had deep historical roots? Is it not obvious that the struggle that the Party was waging

against Trotskyism was a continuation of the struggle that the Party headed by Lenin waged from 1904 onwards? Is it not obvious that the attempts of Trotskyists to replace Leninism by Trotskyism were the chief cause of the failure of the entire line of the opposition?

So, the whole idea that as soon as Lenin died, the struggle took place because Trotsky was fighting against Stalinist bureaucracy is nonsensical. As Stalin rightly described, Trotsky was the chief patriarch of bureaucrats. You could not find a more bureaucratic person than Trotsky, whose solution to every problem was militarisation. Militarisation of the trade unions, militarisation of everybody. This could not be done. Working class power could not be held in place if everybody was simply ordered. So you come to a position where you have socialist construction taking place. And Trotsky himself had to admit what exactly the achievements of socialism were.

Revolution Betrayed is a Trotsktist bible. If anyone is a Trotskyist, that's one book that they are likely to have read. I'd actually like them to have read all of Trotsky. The best way to refute Trotskyism is to read Trotsky. He trips himself up each paragraph and contradicts the previous paragraph. Each book contradicts the previous book, and so on. I can see what the attraction of Trotsky is for the average petty bourgeois, and especially the intelligentsia. He has a terrific turn of phrase, but it doesn't enlighten anybody. I also read Trotsky and find at times that he's quite good. For example here, in Revolution Betrayed, he says: "Gigantic achievements in industry, enormously promising beginnings in agriculture, an extraordinary growth of old industrial cities, and the building of new ones. A rapid increase in the number of workers, a rise in cultural level and cultural demands. Such are the indubitable results of the October Revolution." People are 'betraying' it, but the October Revolution is somehow working these wonderful achievements.

"Socialism has demonstrated its right to victory". And that's written by the gentleman who says that it's not possible, it's not capable of being built in a single country, and there's got to be a world revolution. "Socialism has demonstrated its right to victory, not in the pages of Capital, but in an industrial arena comprising one sixth of the world's land surface. Not in the language of dialectics, but in the language of steel, cement and electricity. A backward country has achieved in less than 10 years successes unexampled in history. That is so. This also ends the quarrel with the reformists in the workers' movement. Can we compare for one moment their mouse-like fussing with the

titanic work accomplished by this people aroused to a new life by this revolution." Now that's Trotsky. I hope you like it.

Then, Stalinism is supposed to be herding everybody, like cattle. Stalin raises his finger, and everyone from Khrushchev down to the factory operator dances to his tune. Not so, if we believe Trotsky. I wasn't there, but Trotsky should know something about Russia. "To be sure," he says, "the youth are very active in the sphere of economics. In the Soviet Union there are now 1.2 million communist youth in the collective farms. Hundreds of thousands of members of the communist youth have been mobilised in recent years for construction work, timber work, coal mining, gold production, for work in the Arctic, Sakhalin or in a mood where the new town of Komsomolsk is in the process of production. The new generation is putting out shock brigands, champion works, Stakhanov-ites, foremen, under-administrators. The youth has studied, and is studying assiduously ..." Of course Stalin said 'study' and they studied.

"They are as active, if not more so, in the sphere of athletics, including its most warlike forms, such as parachute jumping and marksmanship. The enterprising and audacious are going on all kinds of dangerous expeditions. The better part of our youth, said recently the well known polar explorer Schmidt, are eager to work where difficulties await them. This is undoubtedly true. It would be crude slander against the youth to portray them as controlled exclusively or even predominantly by personal interests. No, in the general mass, they're magnanimous, responsive, enterprising. In their ranks are various unformulated tendencies grounded in heroism, and still only awaiting application. It is upon these moves in particular that the newest kind of Soviet patriotism is nurturing itself. It is undoubtedly sincere and dynamic."

That was Trotsky, who thought that socialism could not be built, and that the leadership had betrayed the revolution. These achievements are the finest examples of the kind of 'betrayal' that I would like to see everywhere. I wish that we could have a leadership who would actually 'betray' the proletariat so much.

So you have Soviet industry being built, and there is really not a single country in the world where there was such labour heroism, where there was such an unleashing of the initiative of the masses. There was nothing that the Soviet people didn't think that they could do, and they were right. The breathtaking audacity, and the all-encompassing, awe-inspiring achievements really are fantastic as far as the Soviet people are concerned. And it is really only because

of that, that is was possible for the Soviet people to go along and defeat Nazi Germany.

But the Soviet Union could not have achieved this, had it not got rid of the fifth column. No doubt, most people sitting here consider that the Moscow trials were staged by Stalin, that Stalin acted as the judge, jury and prosecutor. Far from it. Time will not allow me to present the evidence of the Moscow trials. Any of you who are genuinely interested, rather than raising Aunt Sallies, should read the transcripts of the Moscow trials. They run into about 2,000 pages. The Moscow trials were held in front of over 1,000 foreign journalists. Foreign diplomats attended. Among them was Joseph Davy, no great communist, from the United States of America - he was the ambassador. He sent reports to his government saying, 'These trials are correct and these people are guilty'. There is plenty of evidence. His masters wrote back to him saying, 'This is so, but it's not something we want the people of the world to know. We have to say these trials are rigged.'

Here are these 51 or 52 people who have been in the Bolshevik Party for a long time. They come and admit to all kinds of heinous crimes, from sabotage to wrecking, to treasonable associations with foreign powers, including Germany and Japan. If a common criminal is arrested, the moment he comes to court he says, 'I was beaten and the police extracted this confession out of me.' I invite you, even if you have to force yourselves, to actually read the testimony of the accused in these trials. I invite you to read Bukharin's evidence at his trial - the same Bukharin who was denounced all the time as a rightwing revisionist. But the moment he turned against the building of socialism, he becomes a great communist and a leading member of the opposition, with whom Trotskyists have no difficulty working. Bukharin actually engages the prosecutor in philosophical discussions, and tries to actually answer the question, why was it possible, how did it come about that, from being Bolshevik revolutionaries, they became traitors to the socialist motherland? He explains the process.

No one, unless they are very crude, would say all these people entered the Bolshevik Party because they were agents of the bourgeoisie. Although that is not impossible in some cases. Was it unknown for infiltrators to get into revolutionary parties? Is any single group free from it? Is your group free from it? Of course not. Lenin was so strict about who should join the Bolshevik Party - but who did he put on the central committee? Comrade Malinovsky. Comes the revolution, and where is Malinovsky? The one time you want to be with your comrades, when you've won, he's missing. The Bolsheviks seize the

records of the tsarist police, the okhrana. And what do they find? He was a tsarist agent. It was on his information that so many people were sent to Siberia. So they caught him somewhere in the streets of Moscow.

Was Malinosky given a trial? No. Lenin quite rightly said that the dictatorship of the proletariat is unrestricted by law. It doesn't first say, this is the article in the criminal code that you violated, and therefore we shall try you. No. Malinovsky said, 'I'm sorry. I tried to be a fake Bolshevik I shall be a real one if you give me a chance.' Lenin said, 'Take this scoundrel out and shoot him', and they did. Stalin did no such thing. He said, 'Our intelligence agencies have this, that and the other evidence against these people: present it in court.'

The fact that these people were eliminated has been put out as the decapitation of the Party, and the decapitation of the Red Army. Funny 'decapitation'. Funny that this 'decapitated' army, which was expected to last no more than six weeks in the face of the German onslaught, is actually the army that raised the red flag over the Reichstag.

You see, before the war started, Trotsky's prediction was that the Soviet Union would lose. The Stalinist bureaucracy was "frightened" of the workers, the workers at home were disgruntled and the war simply could not be waged. And Trotsky said, "Can we however expect that the Soviet Union will come out of the coming great war without defeat?" To this question, frankly posed by Trotsky, we will answer as frankly:

"If the war should only remain a war, the defeat of the Soviet Union will be inevitable. In a technical, economic and military sense, imperialism is incomparably more strong, and if it is not paralysed by revolution in the west, then of course imperialism would win."

In 1940, just before another Trotskyist did him to death, Trotsky said: "We always started from the fact that the international policy of the Kremlin was determined by the 'new aristocracy's' incapacity to conduct war. The ruling caste is no longer capable of thinking about tomorrow. Its formula is the same as that of all doomed regimes - after us, the deluge. The war will topple many things, and many individuals. Artifice, trickery, frame-ups, and treasons will prove of no avail in escaping its severe judgements." This is what Trotsky said in his article, 'Stalin, feckless quartermaster'. Lovely, isn't it?

He then goes on to say, Stalin cannot make a war, with discontented workers and peasants, and with a "decapitated" Red Army. The level of the USSR's

productive forces forbids a major war. Involvement of the USSR in a major war before the end of this period will signify a struggle with unequal weapons. The subjective factor, not less important than the material, has changed in the last few years very sharply for the worse. Stalin cannot wage an offensive war with any hope of victory. Should the USSR enter the war with its "innumerable victims" (mainly Trotskyists), the "whole fraud of the official regime, its outrages and violence, will inevitably provoke a profound reaction on the part of the people, who have already carried out three revolutions in this century. The present war can crush the Kremlin bureaucracy, long before revolutionary war breaks out in some capitalist country." That's what Trotsky says.

And how did the average Soviet soldier fight? You see, if a regime is unpopular, decrepit and rotten, the best time to overthrow it is during a war. This is what happened to tsarist autocracy. A rotten regime can last in ordinary, peaceful times. But it cannot survive the kind of feverish changes that took place in the Soviet Union in peaceful times as well as in warlike times. It could only last because it was closely connected with the people. Because the leadership had become a representative spokesperson for the ordinary people. And the average soldier went to his death with one slogan on his lips - 'For the motherland, and for comrade Stalin'. To them, as even a renegade like Gorbachev admits, the major part in the victory of the Soviet Union was Stalin's leadership, and his ability to organise things and wage war in a disciplined manner. And Gorbachev hated Stalin every bit as much as did Trotsky.

I quote from a bourgeois author called Ian Grey, who has written a biography of Stalin. He said the massive setbacks and the immediate threat to Moscow - the initial 12 weeks of the war - would have unnerved most men. "But the impact on Stalin was to strengthen his determination to fight. No single factor was more important than holding the nation from disintegration at this time." He carries on: "It was in a real sense his [that is, Stalin's] victory." Grey cites Isaac Deutscher - "Collectivised farming had been the peasant's preparatory school for mechanised warfare" - and comments:

"It was his victory too because he had directed and controlled every branch of Russian operations throughout the war. The range and burden of his responsibilities were extraordinary. But day after day, without a break throughout the war, he exercised direct command of the Russian forces and control of supplies, of war industry and government policy, including foreign policy."

Isaac Deutscher says, how “dreary”, “dull”, “bureaucratic”, etc Stalin was. The very same Stalin as he describes in these wonderful terms: “Many allied visitors who called at the Kremlin during the war were astonished to see how many issues, great and small, military, political or diplomatic, Stalin personally took the final decision in. He was in effect commander in chief, his own minister of defence, his own quartermaster, his own minister of supply, his own foreign minister, and even his own chef de protocol. The Stavka, the Red Army’s general headquarters, was in his office in the Kremlin.

“From his office desk, in constant and direct touch with the commands at the fronts, he watched and directed the campaigns in the fields. From his office desk too, he managed another stupendous operation, the evacuation of 1,360 plants and factories from western Russia and the Ukraine to the Volga, the Urals and Siberia, an evacuation that involved not only machines and installations, but millions of workmen and their families. He bargained with Beaverbrook and Harriman over the quantities of aluminium or the calibre of rifles and anti-aircraft guns to be delivered to Russia by the western allies. Or he received leaders of the guerrillas from German-occupied territories, and discussed with them raids to be carried out hundreds of miles behind the enemy’s lines. Thus he went on, day after day, throughout the four years of hostilities, a prodigy of patience, tenacity and vigilance, almost omnipresent, almost omniscient.” For a dull, dreary, bureaucratic person, I think that’s pretty good.

He continues:

“There’s no doubt that he was their [that is, the Soviet troops’] real commander in chief. His leadership was by no means confined to taking abstract strategic decisions, at which civilian politicians may excel. The avid interest with which he studied the technical aspects of modern warfare, down to the minutest details, show him to have been anything but a dilettante. He viewed the war primarily from the angle of logistics, to secure reserves of manpower and supplies of weapons, in the right quantities and proportions, to allocate them and transport them to the right points at the right time, to amass a decisive strategic reserve, and to have it ready for intervention at decisive moments. These operations made up nine tenths of his task.”

And, believe it or not, Deutscher says: “It should not be imagined that the majority of the nation was hostile to the government. If that had been the case, no patriotic appeals, no prodding or coercion would have prevented Russia’s political collapse, for which Hitler was confidently hoping. The great

transformation that the country had gone through before the war had strengthened the moral fibre of the nation. The majority was imbued with a strong sense of its economic and social advance, which it was grimly determined to defend against dangers from without." Which means it was as much a victory for socialism that had been built in the Soviet Union, as it was for mere Russian patriotism.

In a speech to business managers in 1931, Stalin said: 'We're 50 or 100 years behind advanced countries. We must make good this lag in 10 years. Either we do it, or they crush us.' So Stalin had spoken exactly 10 years before Hitler set out to conquer Russia. His words, recalled now, could not but impress people as a prophecy, brilliantly fulfilled, as a most timely call to action. Indeed a few years' delay in the modernisation of Russia might have made all the difference between victory and defeat.

As Jehovah's Witnesses would say, 'My time is up'. I'm going to end with this quotation, comrades, After the victory of the Soviet Army against the fascists, there was a victory parade in Red Square, Moscow. And Deutscher captures the scene as follows: "On June 24 1945, Stalin stood on the top of the Lenin Mausoleum, and reviewed a great military parade of the Red Army, which marked the fourth anniversary of Hitler's attack. By Stalin's side stood Marshal Zhukov, his deputy, the victor of Moscow, Stalingrad and Berlin. The troops that marched past him were led by Marshal Rokassowski. As they marched, rode and galloped across Red Square, regiments of infantry, cavalry and tanks swept the mud off its pavements with innumerable banners and standards of Hitler's army. At the Mausoleum, they threw the banners at Stalin's feet. The allegorical scene was strangely imaginative. The next day Stalin received the tribute of Moscow, for the defence of the city in 1941. The day after, he was acclaimed as hero of the Soviet Union, and given the title of Generalissimo.

"In these days of undreamed of glory," continued Deutscher,

"Stalin stood in the full gaze of popular recognition and gratitude. These feelings were spontaneous, genuine - not engineered by official propagandists. Overworked slogans about the achievements of the Stalinist era now conveyed fresh meaning, not only to young people, but to sceptics and malcontents in the older generation."

But not for sceptics in this country.

Message from the Chairman

Haz Al-Din[1]

Dear comrades,

With the ramping up of our recruitment drive, increasing international recognition, increased efforts toward participation in the labor movement, and acceleration of political contradictions domestically, our Party is now facing more intensity and pressure than at any point since its declaration. We now enter the storm that will define the integrity of our organization and prove to be among the most formidable tests for our American Communist Party. It is necessary to briefly reflect upon the factors that have come to shape our current circumstances of unprecedented intensification and success.

As we all know, the overwhelming bulk of our Party activity is mundane in nature. Not once have the enemies of our Party emphasized the fact that in isolation, a given form of Party and chapter activity is on average rather unexciting and mundane. However, it is precisely the consistent, slow, and steady inertia of our Party work that has brought it on the cusp of the current watershed moment. This reflects the basic dialectical law of the transformation of quantity into quality. The slow, meticulous, steady and patient activity of our

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

Party chapters - as long as it remains consistent, unyielding, disciplined, and steadfast - is bound to culminate in great, intense, and exciting successes.

Whereas left-liberal organizations meander between hurried, excited, near-apocalyptic shouting and protesting - and on the other hand, complete despair - it is the steady, patient and consistent work of organization and practice that makes a Party strong. It is just the same as in exercise: the blow-hard and braggart who enters the gym once every blue moon to 'show off' their abilities - will never surmount in strength and capacity the one who exercises consistently, even if they begin with modest weights. Such is the case when it comes to Party organization: Slow and steady wins the race. Slow and steady is precisely how our Party will outlast, outmode, and surpass all other organizations.

And the basic premise of consistent, patient and steady work is adherence to the principle of collective discipline. It is upon this solid foundation - the combination of collective discipline with practical patience - that our Party will begin to take shape as a material factor in American domestic politics.

It is necessary to keep all this mind in light of our current recruitment drive. It is hardly necessary to make great noise with trumpets and bullhorns, promising excitement and immediate, apocalyptic salvation - in order to attract prospective recruits to our Party. What is necessary is the ability to demonstrate to others the fact that our Party activity reflects a viable form of everyday, social existence. What will draw in great quantities of recruits into our Party is the ability to demonstrate how it reflects a specific, viable, and consistent way of living in relation to the rapidly changing circumstances within our country.

I offer these words of advice not in order to stem the great energies and passions driving the movement of our Party - but on the contrary, so as to remind comrades not to hurriedly expend their energies overnight: That great strength derives from consistency, that treading long distances requires steady movement, and that great success stems from repeated and patient trial-and-error.

The Dialectic of Trump: An Interview with La Tizza

Carlos L. Garrido[1] & La Tizza[2]

1. The Los Angeles Times says: "Trump and Musk are dismantling and shaking the foundations of U.S. democracy." In your opinion, to what extent is this new government "breaking the rules" and to what extent do the elements of continuity prevail?

Western discourse is kind of interesting. Over here we don't say torture, we say "enhanced interrogation." When it's done by those who serve U.S. imperial interests, they're not called terrorists, they're "moderate rebels." I think this is one of those examples where "democracy" is the replacement for

2. La Tizza is a digital magazine that aspires to become a thought platform to debate the future of the Cuban revolution project, its relationship with the political practices of the day, and its possible futures.

“imperialism,” or at least, the institutions through which imperialism has been carried out in the last four to five decades.

The reality is this, Trump has shocked a lot of people. Not because he is doing things he did not promise, but precisely the contrary, because he is doing – certain things at least – that seem to fulfill promises he made in the campaign trail. This is, of course, unheard of for a U.S. politician. Lying is a consistent part of the job for the American political class. In some spaces I hear that they pad their CVs with mentions of theatre classes they took in high school. They must show the oligarchs they’re up for the task!

But seriously, what has Trump done to shake things up? I’ll mention a few things: move towards banning USAID and NED, the two central institutions (along with the CIA) which have carried out regime change operations for decades (as Cubans, we know very well how these institutions operate). In less than two months, Trump has taken serious steps towards ending the proxy war against Russia, a war that has taken the lives of hundreds of thousands of people thrown in the meatgrinder to serve the interests of NATO and US imperialists. In addition, Trump has taken in serious consideration removing the U.S. from NATO, which would, of course, lead to its likely collapse. Let us recall that NATO is the farthest thing from a “defensive” institution. It is the organ that viciously bombed and dismembered the former Yugoslavia. Who can forget about the role it played in overthrowing the Gaddafi government in Libya, transforming what was the most prosperous African country into a hellhole with literal slave trades. Just these steps warrant Trump being labeled the most progressive president since Franklin Delano Roosevelt. I wish I was simply being hyperbolic, but these are serious assaults on some of the most indispensable institutions of U.S. imperialism.

In addition to this, Trump has proposed creating a national fund and potentially buying TikTok with it. This would be a monumental return to a Hamiltonian style American economics, which is a lot closer to a socialistic style of banking than the current federal reserve. If TikTok gets bought with this national fund, that means that the first amendment (freedom of speech, press, etc.) is protected under it. As someone who belongs to a communist Institute that, after amassing almost half a million followers on TikTok, has had seven accounts banned, this would be superb for disseminating revolutionary, anti-imperialist information.

In terms of Gaza, the aggressive rhetoric has certainly been there. First, he said he would buy it. After realizing how silly an idea this is (buy it from whom?),

then he said he is just going to "take it." This is certainly troublesome rhetoric. But do we remember what he was saying he'd do to the Democratic People's Republic of Korea just a year before the establishment of a historical diplomatic deal? Trump quite literally said that he would make the DPRK disappear, and moments after, he is the first U.S. president to step foot in the country. From threatening to obliterate the DPRK to laughing with Kim Jong Un about hoping to look "nice and slim" in the picture, what we see here is the same old Trump from his old show, *The Apprentice*, where he would play hard ball, feigning a position of strength and power, before landing deals. Could we expect the same fate in Palestine? Could this time next year, as occurred in the DPRK, we see a Trump visit to Rafah, where he meets with Hamas leadership and shares some laughs? While I don't think it is likely, I also didn't think he becoming buddies with Kim was either.

For the neoconservative imperialist establishment, both its "liberal" and "conservative" wings, this is heretical. It is, as far as we can see, an actual assault on the Deep State that governs U.S. policy. That is why the legacy liberal media, like the Los Angeles Times, is taking it as an assault on "democracy." For them, democracy is nothing more than the institutions of the U.S. empire, used to formally "spread democracy and human rights," but in reality, just debt-trap and loot countries of the global South. It is ludicrous, for them, to cut funding to the fascist state of Ukraine. After all, they have spent the last decade telling us that Ukraine is a beacon of democracy fighting against the authoritarian Putin regime. Let's not be fooled, this is why they hate Trump. This is why they consider him a threat to "democracy."

I must mention this also, since it is something the media brings up to pull the heart strings of us Hispanics: the discourse on immigration is purely made to inspire fear. Statistically, Trump is deporting almost half of as many people as Biden. Biden, just like Obama before him, was the true "Deporter-in-Chief." I'll cite a recent study on the subject, for those who find this to ring untrue: "U.S. President Donald Trump deported 37,660 people during his first month in office, previously unpublished U.S. Department of Homeland Security data show, far less than the monthly average of 57,000 removals and returns in the last full year of Joe Biden's administration."[3] Why is it, then, that all we hear about from the media is immigration hysteria? Why should undocumented

3. Ted Hesson, "Trump deporting people at a slower rate than Biden's last year in office," *MSN* (February 22, 2025): https://www.msn.com/en-ph/news/world/trump-deporting-people-at-a-slower-rate-than-biden-s-last-year-in-office/ar-AA1zAeFR?ocid=BingNewsSerp

immigrants be more afraid of a Trump administration than a Biden one, when, statistically, they were twice as likely to be deported under Biden?

None of this is to say that Trump is an anti-imperialist hero and champion of the working class. It is likely that on labor politics, he will be more aggressive against unions, and the National Labor Relations Board, than Biden was. But in terms of foreign policy, the steps taken so far are monumental. And it is these steps, and the crude, vulgar form that he carries himself with, that has won him the hatred of the liberal pundits of empire.

However, I do think a lot of this is too good to be true. If I can, I will cite from a recent article I wrote for The China Academy on the subject:

> *As the consciousness of the people outmodes the woke model of imperialism, the ruling class needs a clean slate. Trump and his cohorts of fake dissident rightists, carrying out an anti-woke crusade, was the perfect alternative. At a time when the American people want to be dissident and anti-establishment, give them the same status quo but in the form of dissidence. Give them people who fight against the form imperialist ideology has taken in the last few years, but not against imperialism itself – not against the system that produced it in the first place…*
>
> *I've argued previously that this is an age, in the U.S., marked by the necessity of hegemony presenting itself as counterhegemonic. The rulers must, at all times, manipulate the public into seeing them as subaltern, as powerless and waging a crusade against the elites themselves. From conservatives, to liberals, to the various Trotskyite "leftists" and "democratic socialists," all American politics is coming more and more to take the form of dissidence. It is an aristocracy of capital that survives through the conceit of continuously struggling against itself for power. Like in Kafka's* The Trial*, where the court bureaucracy is reproduced precisely by presenting itself as powerless subjects subjugated by the system, the dialectic of American political authority today also takes the form of this feigning of impotence to sustain their systemic omnipotence. Power sustains itself through the pretense of powerlessness.*
>
> *And now we are here. In a Trump presidency that is dismantling USAID – one of the wretched henchmen of "humanitarian imperialism" – and that is moving towards possibly doing the same with the National Endowment for Democracy and many other institutions tied to the modern form of legitimizing, and carrying out, imperialist assaults.*

I would like to think this is a revolution against a parasitical Deep State sucking the host republic dry, as Scott Ritter has suggested. I really hope it could be that, and that the debt jubilee that Ritter claims is possible with this "revolution" pans out.

But my Marxist common sense, my understanding of the ever-evolving forms of ideologically justifying U.S. imperialism tells me that, perhaps, something else is going on: A switch back to a previous form of legitimation.

Perhaps a turnback to the dominance of the offense-as-defense model that we saw in the Cold War and in the first decades of this century. This one certainly seems to be dominant in the discourse around China, which is presented as an "existential threat" to the U.S.'s security and geopolitical standing. Trump's National Security Advisor, Michael Waltz, has said that "we are in a Cold War with the Chinese Communist Party" and that China is an "existential threat to the US with the most rapid military build-up since the 1930s." This discourse on China as an existential threat, which is very common in the foreign policy establishment, is foundational for the offense-as-defense model of legitimizing imperialism.

Some analysts have suggested a return to a Monroe Doctrine style imperialism, where one is more open about the aims of conquest for conquest's sake, veiled thinly with an appeal to a divine mandate. This is another form we have seen in the history of empires. It is clear that this model of discourse is employed in the rhetoric used for U.S. foreign policy in the Western Hemisphere.

The truth, however, is that we don't know. We'll have to wait and see what actually happens.

This indeterminacy isn't simply in our knowledge of the existing state of affairs. I do not think that the problem, at the moment, is one that is located in our knowledge of the world, of how U.S. imperialism will develop in the coming years. The indeterminacy is in the world itself. The U.S. regime is itself scrapping to figure out its next moves, to see what it can do to sustain at least a semblance of hegemony in a world where the Weltgeist *is moving eastward.*

What I think we could be the surest of is the following: this isn't an anti-imperialist revolution occurring within the belly of the beast via the hand of the billionaires themselves. When some of the leading billionaires, NGO's, think tanks, and financial investment firms are perfectly fine, or even supportive, of the Trump administration, that does not inspire

> *confidence in the thesis that he is carrying out a great assault against the system. After all, if anyone personifies the system best, it is those profiteers who have continued making money hand-over-fist irrespective of who's been in the White House. They compose the unelected body of rulers that stays the same with every change in administration. Together with the intelligence agency who serve their interests, they make up the famous "Deep State." When BlackRock CEO Larry Fink tells us, as he did during the presidential campaigns, that he is "tired of hearing that this is the biggest election in your lifetime," and that "the reality is over time, it doesn't matter," perhaps we should listen.*[4]

2. Between 2016, Trump's first "election" – he did not win the popular vote, nor in 2020 – and 2024, how has the domestic political landscape in the US and international conditions changed from his first term until now, how has that change affected the strength with which Trump arrives this time?

Since I have extended myself with the first question, I will aim for brevity with this one. The truth is the American people are sick and tired of the political establishment. Only 19 percent of them think their representatives actually represent them, and only 11 percent trust the mainstream media. This is a deep crisis of legitimacy that we have in our hands. The American people are struggling to make ends meet, they are drowning in debt, and all they see is the Biden regime sending hundreds of billions of their tax dollars to fund Nazis in Ukraine and Nazis in Israel.

Trump, for better or for worse, is seen as a political outsider. His profile is tied to being a dissident. He didn't have to get into politics. He was already a billionaire. He came in to exert the will of the people, to dismantle the Deep State that has destroyed America. That is how the narrative goes. And even if people realize a good amount of it might be a load of crap, it is at least, in rhetoric, the dissidence they have been looking forward to.

The MAGA base, for those that don't know, is primarily the disenfranchised American working class. As the philosopher and political theorist Haz Al-Din has previously put it, this is the only force in American politics that has reintroduced, after decades, a sense of true, dissident partisanship in the

---

4. Carlos L. Garrido, "Trump Is Merely Using Change to Maintain U.S. Hegemony Unchanged," *The China Academy* (February 19, 2025): https://thechinaacademy.org/trump-is-merely-using-change-to-maintain-u-s-hegemony-unchanged/

American political horizon. Yes, it remains in an embryonic form. Yes, it has attached itself to this goofy billionaire. But nonetheless it is there. They are to us what *el campesinado* was for Fidel and the Cuban revolutionaries. And if they have attached themselves to Trump, that reflect more negatively on the entity that called itself the "left" from the previous period, than it does positively on Trump.

Depending on how this Trump administration goes, that working class base, if dissatisfied, may be up for grabs. This is where my party, the American Communist Party, could step in and show working people that only they can save themselves, and that the rational kernel they thought they saw in Trump (e.g., dismantling the war machine, the parasitic Deep State, etc.) can only be realized through socialism. And to get there, we need a party that upholds the interest of our working masses. That is what our party, as the reconstitution of the old and dignified Communist Party, aims to be.

3. A federal court has blocked Musk's department's access to data from the Treasury Department's payment system. This can serve in the narrative carried out by Musk and Trump that there is a great conspiracy in the state to commit corruption, against which they fight. Can the future stability of the US state be affected by the marked rightward polarization of Trump voters in favour of a growing scepticism about the legitimacy of that state?

Historically, the "left" are those who stood on the side of progress, on the side of overthrowing the ruling institutions of power. This is what the Jacobins were, and the term "left" itself comes from the fact that they stood to the left on the national assembly. Can we really describe this attack on the institutions of imperialist bureaucracy a "rightward polarization"? I am not so sure. Let us recall what Marx and Engels wrote in *The German Ideology*: "we do not set out from what men say, imagine, conceive, nor from men as narrated, thought of, imagined, conceived, in order to arrive at men in the flesh. We set out from real, active men, and on the basis of their real life-process we demonstrate the development of the ideological reflexes and echoes of this life-process."[5] We must look beyond the superficial proclamations people make. We must judge them by their actions. Let us recall the words of Comandante Fidel Castro in his unforgettable 1979 speech at the UN: "¡Basta ya de palabras! ¡Hacen falta

5. Karl Marx and Friedrich Engels, *The German Ideology* (Peking: Foreign Language Press, 2022), 13-14.

hechos!"[6] From the actions, from the facts, of Trump's administration (and not simply from his mean words), it is evident that his administration is far more "left" than any of the previous ones we have seen.

However, as I explained in the first question, if the U.S. elite was smart (and I don't think they're dumb), this is what they would do. They would satisfy the thirst for dissidence in the populace by using the crisis of legitimacy as a big spectacle to tear down all the old imperialist institutions, only to erect new ones in their place. In the short run, of course, this will have a stabilizing effect. In the long run, however, this will show itself to be nothing more than a bandage on a gushing wound.

4. Trump is a millionaire, but a "marginal" millionaire in the sense that he does not command branches of capital central to contemporary capitalism. He is not the first oligarch to do what he is doing, examples are in the US, Italy, Chile, etc. However, Elon Musk, for example, is a Big Tech capitalist, a leading area of the current mode of production. How novel is it, for North American capitalism, and perhaps for world capitalism, that capital expressly renounces its command in the shadows in order to access the visibility of public policy to govern society?

I think the Musk phenomenon has intensified the contradictions in Trump. Trump, in many ways, nicely captures the class fracture in America. On one side, his support comes from angry working class people who want real, radical change (the base historically Marxists have pulled from). This is the heart and soul of MAGA. On the other side, there are sectors of big capital that have thrown their whole lot in behind Trump. Certainly, in this 2024 campaign, it became evident that the Silicon Valley oligarchs had to jump on the Trump train. This intensifies the contradictions, because the interests of these oligarchs and those of the MAGA base couldn't be more at odds with each other. While it is certainly true that Musk has been influential and public in this 2024 campaign, this isn't necessarily a coming-into-the-light of the capitalists that have previously, in shadowy manners, controlled the U.S. government (as with all capitalist states). We have to recall, as Lenin already saw, that finance capital is ultimately, in the era of imperialism (and superimperialism) the one that calls the shots. The role of big banks and investment firms has remained in the shadows. These are the real string pullers, not necessarily Musk and Silicon Valley – problematic though they might be in their own right.

http://www.cuba.cu/gobierno/discursos/1979/esp/f121079e.html

5. During Donald Trump's previous term, the position of Secretary of State did not remain unchanged. And it was not the only position that changed in that cabinet. Some people on social networks are hoping that Trump's temperament may compromise the permanence of someone like Marco Rubio at the helm of US foreign policy or, conversely, Marco Rubio will not be able to reconcile with the more pragmatic wing of the Trumpist sectors. How much can Cuba place hope in this possibility? What could be the main tensions between Trump and Rubio (and more than themselves, the wings of power they represent) regarding the foreign projection of the US government?

I don't think that Trump, this time around, is going to wait as long as he did to kick people out of his government who do not follow his lead. I think he learned from the experience with John Bolton and Mike Pompeo. If Rubio stays it is on Trump's terms. The Cuban American Mafia in Miami is powerful, but now they can't dangle removing endorsement, as they did in 2016, in exchange for supporting the asphyxiating and genocidal blockade on Cuba. Remember that Trump initially wanted to continue Obama's thaw policy with Cuba, and it was the far-right, fanatically anti-communists in the Cuban American community that forced him to take the position he did in his first administration. I know Trump has added Cuba back on the State Sponsor of Terrorism list, shortly after Biden's purely symbolic removal. However, I think this is a place where we must be strategic. Trump has announced that the slogan of his campaign is "common sense." It isn't commonsensical to sustain a 60+ yearlong blockade on Cuba. It makes the U.S. look horrible internationally, as year after year the whole world votes in the U.N. in favor of lifting it.

The American people, and even certain business sectors, want this blockade lifted. I think that, if approached intelligently, relations between Cuba and the U.S. could even surpass those that were established in the Obama era. But strategic thinking must predominate. The U.S. blockade doesn't just affect Cubans, it affects tens of thousands of Americans that die a year because they don't have access to Heberprot-P and other Cuban treatments for diabetes and cancer.[7] It is contrary to common sense to sustain a fruitless blockade that not only doesn't achieve the desired outcome of regime change, but prevents tens of thousands of Americans from receiving life saving treatments. I think this commonsense approach should predominate in whatever discourse the two

7. Carlos L. Garrido, "The US Blockade and Its Effects on Cuban Medicine," *Science for the People* (March 06, 2023): https://magazine.scienceforthepeople.org/online/the-us-blockade-and-its-effects-on-cuban-medicine/

administrations could have. There is no reason why the U.S. can have relations with Vietnam, China, and as of recently, Russia, but continue exerting such a strangling blockade on Cuba. It is contrary to common sense. With this new "commonsense administration," this is the approach that I think must be upheld.

6. What is serious and what about overacted stridency in Trump's announcements about the Middle East? What can be expected in that direction?

As I mentioned in the first question, it is hard to tell. Trump often plays hard ball, not to do what he says, but so that a diplomatic negotiation could be had. I do not think he wants to continue this genocidal war on Palestinians. As far as the explicit aims of the Zionist operation, that is, the destruction of Hamas, has completely failed. All the Zionists seem to be good at is bombing innocent children and women. What makes us this that U.S. involvement would be much different? What makes us think that, in the first place, the Zionist offensive hasn't already contained U.S. involvement? We must remember that the Zionist entity is merely the colonial outpost for U.S. imperialism in West Asia. Like a dog tail, it doesn't wag unless the dog does something.

7. If we look for the closest precedent to Trump of conservative government, we have as an immediate reference the government of George Bush. A government to which the reactionary neoconservative sector of American politics and the most extreme wing of the Republican right were almost directly associated. However, Trump arrives in his first term as a supposed "outsider". How much of that was modified? Was it really like that or was it the strategy of the Republican right to present something already known as novel? After a first black president, wasn't the right forced to its own simulacrum of singularity?

I don't think so. I don't think the political establishment, neither the conservatives nor the liberals, had any idea what was going on when Trump entered the political scene in 2015. They all mocked him. The Democrats laughed at how buffoonish he made the Republicans look, and the Republicans hated how informal he was, how much he lacked bourgeois propriety. He was way too vulgar and uncontrollable for them. But yet, he awoke a mass of working class people that had turned away from politics completely, especially after Obama showed himself to be nothing more than Bush 2.0, except with "Hope" as the motto. I think up until the end, the political establishment, conservative and liberal, has hated Trump. I can't say I trust the story behind

the assassination attempts. I think they tried their best to not have him win in 2024, by all means available. There is too much that doesn't add up. Trump has been a big curveball the ruling elite has had to deal with. This could not be any further, in terms of substance and not just cheap rhetoric, from Bush. This isn't because Trump is a great anti-imperialist fighter, but because he is quite unpredictable. No one really knows what the hell he is going to do next. He is also so crude that sometimes he accidentally lifts the mask empire needs to put on in order to operate. Let us recall when he bragged about being very close to taking Venezuela's sweet oil. That is breaking bourgeois propriety, "don't you know we meddle in Venezuela, not for oil, but for human rights and democracy promotion?"

8. Trump has managed to install a certain relationship with the myth of being a defender of the working class, and at the same time he is the demiurge of a broad reactionary anti-rights agenda. Are two dimensions disconnected, or do they have a tight articulation? Is Trump a practical and discursive synthesis of the emergence of the contemporary right?

I think that Trump has been able to tap into a sense of working class partisanship that hasn't existed in the U.S. since at least the 1960s with the Civil Rights revolution. At the same time, of course, like all politicians in the U.S. he has the backing (especially recently) of the class of capitalist oligarchs. This tension, this basic contradiction, is what is shaping the trajectory of the Trump administration. I wouldn't, however, simply see it as a contemporary right wing phenomenon, for a few reasons. First, as I mentioned above, we really have to reinterrogate what it means to be on the left. Being "left" is not about being the most socially liberal. China is, in terms of their culture and social morals, a conservative country. As is Nicaragua, Venezuela, and the Democratic Peoples Republic of Korea. As was Cuba under Fidel. However, all of these countries are as Left-Wing as you can possibly get. Historically, the Soviet Union, of course, was also socially conservative but very left-wing. What determines left or right, in our era, is where you stand on the question of U.S. imperialism. As Marxist-Leninists, we know that the struggle against imperialism is itself a determinate form of class struggle in the age of imperialism. This has nothing to do with how one feels, for instance, about transgender surgeries for kids. One can be "left wing" while being, on these secondary and tertiary issues, socially conservative or liberal.

We must also understand the role that the United States has played, through institutions such as USAID and the NED, in promoting the LGBTQ lobby,

which is used to foster color revolutions and denigrate the social fabric of socialist and anti-imperialist countries. Frequently, this is carried out through the supposed solidarity of organizations that claim to be socialist, but that are bankrolled with tens of millions of dollars by the imperialist state through institutions such as Goldman Sachs' "Philanthropic Fund." The case of the Party for Socialism and Liberation in the U.S. is not the only one.

Now let's look at Trump, in comparison with both Obama and Biden. Obama took us from being in three wars to seven. He overthrew progressive governments, from Honduras to Libya. Biden was the administration that saw the commencement of the intensification of the Zionist genocide in Palestine. Under his administration tension were escalated with Russia to such extremes that the Doomsday Watch nearly hit midnight a few times. Hundreds of thousands were killed in these needless imperial pursuits. Now, Trump in his first mandate certainly pursued, under the guidance of Warhawks like Mike Pompeo, John Bolton, and others, aggressive imperialist policies against Venezuela, Iran, Cuba, and other countries. However, the scale of his imperial pursuits, even under the guidance of such Warhawks, pales in comparison to the administration of the Democrats. It was under the Biden regime that the Syrian government of Bashar Al-Assad was overthrown, installing those "moderate rebels" I previously mentioned into power. This government was central to getting weapons for the Axis of Resistance, especially in Palestine, against Israel. Trump, as I mentioned above, has so far slashed some of the most important institutions of U.S. imperialism. While he might not be "left," and while he is still an agent of the imperialist, if we have to judge it by the facts, its hard not to see how, in this central issue of imperialism (which is the nexus that defines left and right in our era), Trump is far more "left" than both the Democratic Party and the establishment, non-MAGA, Republicans. He is even to the left of the Democratic "Socialists" like Bernie Sanders and Alexandria Ocasio Cortez, who might have socially liberal view on LGBTQ matters, but who have supported the imperialist proxy war against Russia that is backing literal Banderite Nazis in Ukraine.

9. The U.S. "democratic system" accepted the arrival in government of a character with accusations of dozens of crimes and with four criminal cases, some of which have copious evidence. Did U.S. imperialism interpret that it can only respond adequately to this epoch if it anti-democratically "intervenes" in the system itself? Why should we expect anything good from Trump if the system has suspended and intervened in the "democratic guarantees" for the sake of someone like Trump coming along?

I am not sure what this is referring to, mainly because democratic guarantees were stripped during the Biden regime. Black socialists from the Uhuru movement, for instance, were incarcerated and had their houses raided simply because they attended a conference in Russia, whom they thought the U.S. shouldn't be belligerent towards. Our comrades in the Party, all throughout the Biden regime, have been getting harassed and interrogated at airports for traveling on internationalist missions to Russia, China, Venezuela, Cuba, and other countries outside the sphere of influence of U.S. imperialism. These are all violations of rights and democratic procedures, and as far as we can tell from this first month of the new Trump administration, these areas have seen significant improvement.

The reality is this, as Noam Chomsky once said, "If the Nuremberg laws were applied, then every post-war American president would have been hanged."[8] The crimes they accuse Trump of pale in comparison to the crimes against humanity carried forth by previous Presidents. They pale in comparison to the thumbs up the fascist Biden regime gave to the Zionist genocide in Palestine. If they want to accuse Trump, accuse him of murdering the great Qasem Soleimani, the Iranian slayer of U.S.-funded and backed terrorist. But they won't accuse him of that because that's just policy-as-usual for the U.S. empire. They won't accuse Trump of trying to overthrow the government of Venezuela simply because that is what the other administration would've been doing as well. Trump isn't being accused of any of the serious things he could be tried for simply because every other U.S. president has done the same, and perhaps worse. The trials against Trump are political in character, they are "lawfare" against a candidate that, while not some principled anti-imperialist, is an uncomfortable thorn for U.S. imperialism, even if it is only because of how unpredictable he is.

10. In recent days there have been demonstrations of rejection by citizens and also by important voices of culture. Can we sense a potential for resistance in the streets sufficient not only to contain and defeat Trump, but to unleash a process of real social and political transformations?

No. Some of the only protests I've seen have been around the issue of immigration. But this, as I mentioned above, is based purely on lies and media manipulation. I can't imagine it will take too long for the people protesting Trump on immigration to realize that he's actually far better on that issue than

8. Noam Chomsky, "The Crimes of U.S. Presidents," *Chomsky's Philosophy* (2003): https://www.youtube.com/watch?v=5BXtgq0Nhsc&t=114s

Biden and Obama were. There are many things to protest Trump for, but in the shock of the significant improvement he has made in U.S. policy, contrasted with the Biden regime, I highly doubt these will appear for quite a while.

If, as I argue above, Trump is really just pulling out of some of these conflicts so that he can focus on the 'big fish' to fry, that is, China, then I think we will get some strong resistance from the American people, especially the youth. With the temporary banning of TikTok a month ago, tens of millions of Americans flooded – purely to spite the U.S. political class – over to "Red Note," a Chinese lifestyle app.[9] There they were exposed to the truth about China, and had the lingering propaganda of the U.S. Deep State cleansed from their minds (at least for a lot of them). I don't think, after this "great migration" to Red Note, that the American people, especially the youth, will stand in favor of a belligerent attitude against China. If that is the course the Trump administration takes (and there are many in his government that want it to be so), then we will start to see people in the streets for something that actually deserves protests.

9. Carlos L. Garrido, "From TikTok to Rednote: The Dialectical Transition into Opposites," The China Academy (January 16, 2025): https://thechinaacademy.org/from-tiktok-to-rednote-the-dialectical-transition-into-opposites/

3

Crisis of Worldview: An Interview with Helena Sheehan

Helena Sheehan[1]

February 2025

RA: This year will mark the 40th anniversary of *Marxism and the Philosophy of Science*, a seminal encyclopedia of the history of the Marxist tradition's various interactions with the field. In the last four decades, what do you think have been the major developments in this relationship? How has the last decade's Engels revival, and the renewed interest in his *Dialectics of Nature*, affected this?

HS: 40 years! I hadn't quite realised. I felt somewhat isolated in the years when I was writing it, although I did manage to build a network of others within this tradition, mostly in Eastern Europe, but also elsewhere. I travelled to the USSR and other Eastern European countries and attended international

---

1. Helena Sheehan is an American philosopher, historian of science, philosophy, culture and politics. Sheehan is professor emeritus at Dublin City University, where she taught media studies and history of ideas in the School of Communications. She is the author of Marxism and the Philosophy of Science (1985), and most recently, Until We Fall (2023).

conferences in US and Europe, but for long periods I was alone with it in Ireland. Once it appeared, there was a steady stream of people making contact with me about it, which accelerated quite a lot once the internet came into our lives. I have had quite a lot of email about it over the years, although the volume of it tends to rise and fall in line with the spikes of engagement with this tradition over the years.

Because this tradition was strongest in the socialist countries of Eastern Europe, there was a decline in work in this area after 1989. Many of the intellectuals who carried forward this tradition were cast aside and their institutions were abolished or subjected to hostile take-over. This was the lowest point for this tradition in those years.

In the past decade, there has definitely been a revival. I think the primary force driving it has been the ecological crisis and a rise of consciousness about the necessity of a philosophy of nature. For those who have pushed further, they have found an extremely rich intellectual tradition that put forward an integral philosophy that provided the philosophical foundations for the systemic thinking necessary for serious thinking about ecology. John Bellamy Foster and other authors in *Monthly Review* have played a major role in making this case. Foster has also gone back through the history set out in my book and stressed the ecological dimensions of it

At the moment, I am preparing for a keynote I am to give at a big conference on Marxism and ecology in Venice in March, where I am tackling these questions: Science and synthesis: Does late capitalism constrain the systemic thinking required by ecology? Does ecology demand a comprehensive world view? Is ecological crisis exacerbated by lack of systemic thinking? How does the prevailing social division of labour shape the production of knowledge? Is unity of science a meaningful goal? Can it be achieved without a grounding in an integral philosophy? What is the role of political economy in this scenario? Is Marxism the answer to these questions?

Back to the book, I see it as more than an encyclopaedic history of this tradition. It was an engaged and extended philosophical (and sometimes historiographical) argument defending this tradition and taking positions on various controversies within it.

One big controversy, of course, was that about the Marx-Engels relationship and the vast and vituperative anti-Engels literature that held sway in Western

Marxism. I am proud to have stood against this and I am happy to see the tide turn on this finally and to see Engels appreciated for the great thinker that he was. I am disappointed, however, that Kohei Saito has revived the Marx versus Engels position with his argument about a degrowth Marx versus a productivist Engels.

RA: In the text you argue that between the bourgeois extremes of subjectivism and fatalism, "the way out of the blind alley was dialectical materialism." How does Marxism, as a philosophical framework, provide insights into the nature and development of scientific knowledge? Why does it capture that which other philosophical worldviews miss? What value does Marxism bring to the philosophy of science?

HS: So many blind alleys, so many dualisms, so many contradictory positions are resolved within Marxism. The big one with respect to scientific knowledge is science as reliable knowledge of nature versus science as social construction of reality, which still divides science studies. Marxism has made the strongest claims of any intellectual tradition before or since about the socio-historical character of science, yet always affirmed its cognitive capacity, its revelatory power in explaining the natural world. Science was seen as inextricably enmeshed with economic systems, technological developments, political movements, philosophical theories, cultural trends, ethical norms, ideological positions. It was also a path of access to the natural world. There have been many studies, texts, theories, tensions, debates exploring the complexities of this stance. The objectivist/constructivist dichotomy could never capture its epistemological dynamic. Nor could the internalist/externalist dualism ever do justice to the interacting field of forces harnessed in its historiographical process.

What Marxism brings to philosophy of science is an integral philosophy. The mainstream western tradition, from positivism through neo-positivism to post-positivism is narrowly methodological. Marxism takes these methodological issues seriously and takes a position of critical realism. I am not referencing Roy Bhaskar here and I resent the way this concept has been branded to him. It has been the mainstream Marxist position from Marx and Engels until now. It sees knowledge as an interaction between mind and world which is capable of revealing the world. However, Marxism goes beyond this and aims to analyse the actual results of science in terms of weltanschauung. Many of those involved in this tradition were scientists, such as Bernal, Haldane, Needham, Levins, Lewontin, who reflected philosophically on

science and drew philosophical conclusions from science. Also thinkers, such as Marx, Engels, Lenin and Bukharin, who were not scientists, were constantly studying actual science and drawing philosophical conclusions from it.

RA: What was the importance of the 1931 International Congress of the History of Science and Technology in London? How did it influence the intellectual scene in the British communist movement? What role does it play for brilliant British progressive/communist scientists such as J.D. Bernal, J.B.S. Haldane, Joseph Needham, et. al.?

HS: In 2006, there were a number of international events organised by mainstream universities (such as Princeton) and professional bodies (such as the British Society for the History of Science) commemorating 75 years since that conference. How many conferences have been so memorialised? Who knows what happened at the first or third International Congress of the History of Science and Technology? It is only the second one that is remembered and not only among Marxists.

It is because it was the first time that a Soviet delegation appeared an international conference and that created quite a stir. However, it was much more than that. These were among the most renowned and creative intellectuals in the world at that time: Bukharin, Hessen, Vavilov and others too. They came full on, brimming with energy and confidence, making the strongest possible claims about the superiority of Marxism vis a vis all other modes of thought. It stunned the British audience, most accustomed to a much more low key and low claims mode of discourse. However, for others, who were already moving in this direction, it set them on fire. Already internationally renowned scientists, Bernal, Haldane, Needham and others focused on how a Marxist analysis of science was the key to a unifying vision connecting the disparate sciences. They also saw it as connecting science to other disciplines, such as political economy, putting forward a strong analysis of the role of science in capitalism, arguing that capitalism constrained science and it could only reach its full potential under socialism. Moreover, they built a movement for social responsibility in science. Today's Science for the People would be their successors.

RA: In your forward to Lenin's *Materialism and Empirio-Criticism*, you reference a thread on the text that you read online, which described "the text as the equivalent of garlic to ward off vampires, such as postmodernism or queer theory, which generated a series of varied responses, with some insisting that Lenin demolished the essential premises of postmodernist solipsism before its

proponents were even born, with others questioning this from different angles." Do you think this is correct? What tools did Lenin give us in this text to help us fight against the development of postmodernism, which has dominated Western academies for more than three decades?

HS: I cited it as an amusing, if hyperbolic, formulation. I think we need to look at Lenin's philosophy as a whole and not just this text, where there were some one-sided formulations, which were re-balanced in his later texts. The important thing about Lenin in this regard was his philosophical and scientific seriousness, his insistence on seeing the integral connections between science, philosophy and politics, his assertion of materialism and realism as the only sound grounding, both for the advance of knowledge and a movement toward socialism. We need, however, to make our own arguments for our own times and not to wave garlic or texts at those unbalanced by postmodernism and id-politics.

RA: Western Marxism has developed a profound, postmodernized, distaste of anything that appears as a 'grand narrative.' Some of the most prominent Marxists in the West today lament how, somewhere along the way, Marxism became a "worldview," a *weltanschauung*. Meanwhile, leading Chinese Marxist scholars, and even Xi Jinping himself, are constantly referring to Marxism as a worldview, and suggesting ways in which Marxist philosophy could fruitfully interact with various fields. Why do you think such an aversion to thinking about Marxism as a comprehensive worldview has developed in the West? What is at stake in sustaining Marxist philosophy as an all-encompassing worldview?

HS: There is finally a real push-back against Western Marxism now, although it is far from gone. Postmodernism is still there in the universities and wider culture. Although the debate about it, which raged in the 1980s and 1990s, has died down, its presence persists, often unnamed, in contemporary mentalities. It is rooted in the fragmentation of contemporary experience. This has also infected Marxism. Yet I think the tide has turned on it, at least within Marxism. History is moving so fast, with such big world-historical events to conceptualise, people are seeing the necessity of a grand narrative to frame it all and to live and think coherently within it.

In China, there is whole different atmosphere. There is a sense of a society moving forward and not plunging downward. There has been a revival of interest in Marxism under Xi Jinping. I was teaching at Peking University last

autumn and I am going back to do so again. I spent a lot of time talking to young people about their lives, their hopes, their views on China and Marxism. They do see it as a comprehensive world view and are sometimes a bit puzzled by assertions to the contrary in the west.

There is a massive crisis in meaning in the capitalist world. There is a crisis of vision, of values, of purpose. It is a crisis of world view. This is what Marxism has to offer: meaning, purpose, values, world view. Moreover, we offer a movement to transform the world that is plunging downward to destruction into one that is moving forward with vision, meaning, purpose, values, all grounded in a comprehensive world view.

4

Capitalism In Terminal Decline and the Economic Necessity of 'State Monopoly Socialism'

Ted Reese[1]

Headline points

• The aggregate ‘world’ rate of profit trends historically towards zero, having fallen from an estimated average of 43% in the 1870s to 11% in the 2010s.

• Rates of interest (a form of profit) over the past seven centuries have also trended towards zero, where short-term central bank rates were stuck for most of the period between 2009 and 2021 – record lows in both the US and UK, the

---

1. Ted Reese is a British Marxist in the tradition of Henryk Grossman. He is the author of End of Capitalism: The Thought of Henryk Grossman (2022) and Socialism or Extinction: Climate, Automation and War in the Final Capitalist Breakdown (2019).

traditional capitalist superpowers – but ending recessions requires an average 6% baseline cut in order to cheapen capital and reincentivize investment.

• Prices have also closed in on zero – at exponential pace as, amid accelerating innovation, productive output tends to double absolutely every 25 years.

• The US dollar and UK pound sterling have lost nearly 100% of their purchasing power over the past century, mostly since 1970 when absolute productivity gains accelerated with automation and digitalization.

• The number of publicly listed US companies has more than halved since the mid-1990s and, since 1960, the average lifespan of the richest 500 has fallen from above 60 years to below 20.

• Whereas the capitalist class is a relatively dwindling minority, the global working class since the 1950s has been growing exponentially, making 'bourgeois democracy' increasingly obsolete and 'proletarian democracy' increasingly necessary.

• Fossil fuels are becoming too expensive to produce profitably due to dwindling ground reserves and ever-deeper drilling.

• To offset falling profitability, by economizing and rationalizing production, capital accumulation is increasingly dependent on central planning *within* and mergers *between* private enterprise. A 'final merger' – a necessarily public monopoly since no exchange of ownership would exist – with central planning of the economy *as a whole* and *social* accumulation is consequently becoming an economic necessity *for the first time*.

Karl Marx regarded socialism's supersession of capitalism as an inexorable natural process. Nuclear war, global warming or pollution-induced infertility could of course intervene; but the point is that capitalism tends to drive us closer and closer towards the necessity of implementing a socialist (publicly owned) mode of production. That's because, in the simplest terms, expanding and speeding up the production of commodified use-values (exchangeable useful products produced for profit) inevitably results in the ever-greater withering away of the exchange value (essentially labor time realized as profit at the point of sale/exchange) that commodities contain – eventually making exchange of ownership and the dual character of the commodity obsolete and necessitating a system of production based solely on (de-commodified) use-values. As

man-supervised automation tends to replace man-operated mechanization, not only as a result of the human inclination to innovate but to meet the ever-rising demands of capital accumulation by enhancing the productivity of labor – accelerated by competition between capitalists – the labor time needed to produce a commodity is disappearing and the capitalist productive and social system is quite clearly becoming ever more unmaintainable and crisis-prone.

Only purposeful human activity can ultimately bring this movement of history to fruition, but it is compelled by unavoidable economic developments. If we are conscious of this objective historical momentum, we can implement the necessary 'solution' and at least minimize the political and social conflict and turmoil that is bound up with such a transition. If we remain blinded by alternative proposals to 'reform' capitalism or attempt to skip ahead of what is practically possible, the transition to socialism will be all the more painful and the risks of the worst-case-scenarios prevailing will increase.

By analyzing short- and long-term empirical economic trends, a set of compelling evidence comes together to indicate that capitalist production is both approaching a *final, insurmountable* breakdown; and *evolving towards*, *birthing*, socialism. Capitalism, after centuries of evolution, is an increasingly *centrally planned state monopoly capitalism,* since capital accumulation is increasingly dependent on: the efficiency of central planning *within* each private enterprise (eliminated internal departmental competition; centralized real-time data; etc.); industrial monopolization through mergers and acquisitions; *and* state (public) subsidies, facilities and contracts.

Capitalism's evolution is therefore culminating in laying the basis of a *centrally planned 'state monopoly socialism'*, whereby a 'final merger' of evermore concentrated private enterprise *into a public/state monopoly* – since no exchange of ownership is necessary in a total monopoly – is the next necessary shift in the evolution of the productive forces (man and technology).

Long-term indicators

The 'world' rate of profit (the over and above return on investment) fell in an estimated secular trend from 43% in the 1870s to 17% in the 2000s, in one study;[2] and around 10-11% in the decade following the 'Great Recession' or

2. Maito, E., *The Historical Transience of Capital: The Downward Trend in The Rate of Profit Since XIX Century*, Universidad de Buenos Aires, 2014.

'Great Financial Crash' (GFC) of 2007-09, in another.[3] While the exact numbers differ across many other national rate of profit studies, the consistency of the trends confirm "the law of a *progressive* fall in the rate of profit"[4] (our emphasis) that Marx calls "in every respect the most important law of modern political economy".[5] Short- and long-term rates of interest (a form of profit) have fallen in a secular/historical trend towards zero *over more than seven centuries – regardless of the forms of political and banking regimes*.[6] Inversely, the trajectory of absolute 'global Gross Domestic Product' (in monetary value) veers *ever steeper, indicating an approaching peak*.[7] That is, as capital accumulates, rates of profit tend to fall.

The post-recession recovery from the GFC has been the weakest, relatively, since WWII. Whereas US GDP grew by 43% over the first 39 quarters of the 1991-2001 expansion, in the first 39 quarters of the expansion up to March 2019, it grew by only 22%. At that rate, the latter would have had to continue for another six years to equal the aggregate growth of 1991-2001, and nine more to match the the 54% recorded in 1961-69.[8]

Average GDP growth rates in 'high income countries' fell from 5.59% in the 1960s; to 4.15% in the 1970s; 2.93% in the 1980s; 2.35% in the 1990s; and 1.78% in the 2000s (World Bank). A rise to 2.1% in the 2010s – based on 'austerity' (the transfer of public funds into private subsidies), a temporary boom in shale gas discoveries, and record levels of debt – gave way to a 4.5% slump in 2020, even worse than the decline of 3.2% in 2009.

The *rate* of labor productivity growth (the monetary value each employed person creates per unit of input) in advanced countries has trended downwards. Growth in output per hour slowed in the US in 2015 to 0.3%, well below the average pace of 2.4% in 1999-2006.[9] Investment growth and the *rate* of innovation have also continually slowed down. Returns on US research and

development (R&D) fell during 1985–2015 by 65%, despite a 250% rise in the number of scientists and engineers engaged in R&D.[10]

These productivity trends have 'coincided' with the 'deindustrialization' of the global workforce, now largely based in services, as automation – which does not require breaks or expenses on wages, lighting, heating, or holiday or sickness pay – takes over manufacturing. Even sub-Saharan Africa and Latin America spent the 2010s deindustrializing.[11] Just as the number of slaves in the US declined as a percentage of the population (from approx. 25% in 1790 to 16% in 1860) *before* slavery was abolished; manufacturing workers declined as a percentage of the US workforce from 26% in 1970 to 8.5% in 2016.[12] Through closures and mergers, a*lmost half*, 43%, of around 9,000 banks in the US 'disappeared' in 2000-17 – already down from 14,000 in 1986 and 30,000 in 1921. US savings institutions are also dying out, declining from around 4,000 in 1985 to 627 in 2020.[13]

Despite decades of privatization and absolute productive expansion, the number of publicly-listed US companies fell from about 8,000 in 1996 to 4,500 in 2016 and 3,700 in 2022. Some 52% of S&P 500 companies – the richest 500 on the US stock exchange – also 'disappeared' during 2000-15.[14] Since 2008, mergers and acquisitions in China – now challenging the US for the highest share of global GDP – have risen exponentially.[15] Of seven major merger and

Tumerkan, A., "Corporate cannibalism: How monopoly powers are widening inequality", SpeculatorsAnonymous.com, 2 September 2021; K Garelli, S., "Why you will probably live longer than most big companies", IMD.org, December 2016. The number of companies listed on the UK stock exchange fell from 2,415 in 2008 to 1,646 in 2021. In Argentina the number fell from 321 in 1975 to 85 in 2021.

15. Mergers in China rose from 16 in 2008 to 469 in 2020. Xiao-Ru Wang, "A reflection on China's merger reviews – key messages from the latest five-year report and insights from

acquisition waves in the US since the 1890s, four (60%) have taken place since 1980.[16] Between 1964 and 2014, the average lifespan of the 500 richest US companies shrank from 61 to 18 years.[17]

Although each 'succeeding' generation has tended to have a higher proportion of investors (and thus 'semi-proletarians' – workers supplementing wages with investment returns), UK investors in 2023 were holding onto their shares for 0.8 years on average – down from 9.7 years in 1980, a decline of 91.75%. In the US the figure fell from five years in 1975 to 10 months in 2022.[18] From 1977 to 2013, startups as a share of all US firms fell from 16.5% to 8%, a decline pervasive across states and sectors.[19]

Despite higher educational attainment, fewer than 4% of US 30-year-olds in 2013 ('millennials') were 'entrepreneurs' (business founders) compared with 5.4% of those born in 1965-80 and 6.7% in 1944-62.[20] The same downward trend in entrepreneurship has taken place among older citizens of prime working age.[21] The capitalist is, evidently, a dying breed.
Of the roughly 750 currencies that have existed since 1700, less than 20% remain, all of which have been largely devalued.[22] British pound sterling has lost more than 99.5% of its purchasing power since its adoption as official currency in 1694. The US dollar has lost 97% of its purchasing power since

1913. The vast amount of that figure, 91%, ensued after 1949, when the US supplanted Britain as the world's dominant imperialist superpower (i.e., the world's dominant exporter of capital/owner of overseas investments). The figure since 1970 is 85% (93.5% for Britain), around the time of the first major post-WWII recession that catalysed the digital/computing/automation revolution.[23]

Costs of production have secularly trended towards zero.[24] Whereas the fastest supercomputer in 1975 was worth $5m ($32m in 2013 money); an iPhone 4 released in 2010 with the equivalent performance was $400. One gigabyte of data storage fell from $200,000 in 1980 to $0.03 in 2014.[25]

The production of 1kg of one type of protein molecule through 'precision microbial fermentation' – promising to exponentially augment the production of (chemically identical) animal and plant proteins for next to no cost, making 'conventional' intensive/industrial farming uncompetitive and obsolete (or at least unprofitable) – fell to around $100 in 2020 from $1 million (m) in 2000.[26] The energy return on energy invested (EROI) for oil trended downwards from 100:1 in 1930 to 25:1 in 1970, 10:1 in 1990 and 3-6:1 in 2019.[27]

With oil companies having to dig ever-deeper to extract oil and gas, the process is becoming more complex, expensive and capital- and fuel intensive. In 2019 the world burned 7.7 times more oil than was discovered. Explorers in 2015 discovered only about a tenth as much oil as they have annually on average since 1960.[28]

According to the International Energy Agency, oil production is declining at an average rate of 6.7% annually. Peak oil production struck in 2019, according to

A study led by French scientists published in 2021 claimed that by 2050 half of the energy extracted from global oil reserves will need to be put back into new extraction to keep producing oil, making the whole enterprise pointless. Dalannoy et al., "Peak oil and the low-carbon energy transition: A net-energy perspective," *Applied Energy*, vol. 34, 15 December 2015.

28. "Peak everything, overshoot, & collapse", Energyskeptic.com, 24 June 2020.

Shell. The shale gas/tight oil/fracking 'revolution' that (along with the debt boom) enabled (weak) US growth in the 2010s, also peaked in 2019.[29]

Between 2016 and 2020, the price of a barrel of crude averaged $51, but the cost of production in Saudi Arabia averaged $86. The value of Saudi Arabia's state assets, mainly in oil, is expected to fall from $900bn to (minus)-$2trn by around 2030.[30] Oil producers, highly dependent on public subsidies – no bottomless reservoir – have responded to waning profitability by imposing greater levels artificial scarcity (cutting production and/or distribution) than ever before, a strategy that already lifted prices by 70-80%.[31]

Fossil fuel has been vital for capitalism since the intensity and non-renewability of their production – it disappears into thin air once burnt – maximizes and renews the demand for labor exploitation and capital investment.

Near-term indicators

Restrictions on trade ('trade wars') have been hitting record levels since 2015 (*before* the election of Donald Trump or Britain's vote to leave the European Union).[32] In 2023, the first major US bank failures since 2009 included the *second, third and fourth biggest bank failures in US history*.

Whereas the number of bank failures during the GFC peaked at 297 in 2009-10, *722* US banks reported unrealized losses exceeding 50% of their capital at the end of the third quarter of 2022 and "face significant safety and soundness risks" (Federal Reserve). Losses on the US banking industry's investment

---

29. US conventional oil production has been in absolute decline since the 1980s – even during the Great Depression of the 1930s it grew by 3.6% – when it started ramping up oil imports. In the 2000s the US imported around 75% of its oil, about 12-14 million barrels a day. Watch "Energy cliff: The coming depression that will never end", SRSrocco Report [YouTube], 24 November 2020. See also Brower, D., and McCormick, M., "What the end of the US shale revolution would mean for the world", FT.com, 15 January 2023; and Berman, A., "US oil dominance is coming to an end", 18 June 2020. The average annual shale production decline rate is 27%.

30. See "Saudi Arabia's oil problem", Wendover Productions, 23 September 2021 [online video].

31. "Revealed: oil sector's 'staggering' $3bn-a-day profits for last 50 years", TheGuardian.com, 21 July 2022.) In 2009, the G20 nations, which accounted for 79% of global carbon emissions, committed to phasing out fossil fuel subsidies in the medium term, but tripled subsidies for coal-powered plants during the next decade – making up for a 75% plunge in private investment. ("G20 nations triple coal power subsidies despite climate crisis", TheGuardian.com, 25 June 2019.) Globally, fossil fuel subsidies were $7trn or 7.1% of world GDP in 2022, according to the IMF – up by $2 trillion from 2020.

32. "WTO warns on rise of protectionist measures by G20 economies", FT.com, 21 June 2016.

securities totaled $690bn in the third quarter (Q3) of 2022 – around a quarter of all banking equity capital – compared to less than $100bn in 2008, at the height of the GFC.[33]

Global debt, substituting for the underproduction of value in commodity production, has continually hit record highs (driven by private debt) which trebled between 1950 and 2019.[34] The 'private sector' entered 2020 – before the COVID-19 lockdowns – with record debts, according to the International Monetary Fund, despite a decade of near-0% interest rates and record-high government bailouts that heaped much of its debt onto the backs of the public.

Official US national debt relative to GDP hit 126% in 2020, eclipsing the previous record of 119% *at the end of WWII*.[35] Having climbed *increasingly steeply,* the US's national debt (i.e., held by the public) exceeded $35 trillion (trn) for the first time in the second half of 2024; up from $23trn at the start of 2020; $9trn at the start of 2007; $17trn in 2013, $9trn in 2007; and $470bn in 1973.

In November 2022, the Bank of International Settlements (BIS, the 'Bank of Central Banks') warned that "mostly very short-term" geographically-hidden off-balance-sheet dollar debt held by financial firms had passed $80trn – exceeding the stocks of dollar Treasury bills, repurchase agreements and short-term corporate debt combined.
An unprecedented 'everything bubble' – whereby stock market capitalization (the total value of publicly-traded stocks) is overvalued relative to GDP – hit record highs after 2009, engulfing *every* asset/debt class *for the first time*, including (especially since 2020), long-term governments bonds.

It amounts to the third 'once-in-a-century' financial 'bubble' in three decades – the third to exceed the bubble that collapsed with the 1929 Wall Street Crash – following the 2000-01 'dot com bubble' crash and the 2007-09 'housing bubble' crash. What kind of bubble comes after an 'everything bubble' crash?

---

33. Watch "Why is the Federal Reserve provoking a financial crisis?", BestEvidence (John Titus), 15 February 2023.

34. Mbaye, S., Badia, M., "New data on global debt", IMF.org, 2 January 2019.

35. TradingEconomics.com/Office of Management and Budget, The White House. When 'off-balance-sheet' debt is included – such as Social Security and Medicare; respectively estimated as on course to go bankrupt in 2026 and 2034 – US debt in 2019 was actually $103trn, 490% of GDP. That would put global debt at 560% of GDP; $215,000 per person (on average) instead of $86,000. (Surz, R., "Per capita world debt has surged to over $200,000", Nasdaq.com, 24 July 2019.)

The value of the Wilshire 5000, the total value of all publicly-traded US stocks, stood in January 2025 at a record high of 205.7% to GDP, beating the previous high of 193.4% in November 2021; the 160% in January 2020 that preceded the two-month 'covid/lockdown recession'; and the notorious peaks of 138.3% in March 2000 and 105% in October 2007.[36]

Whereas the bubble for the top 10 US technology stocks hit 30% of GDP in March 2000 before crashing to 6% by October 2002, the figure topped 56% in December 2021. In May 2023, the top seven tech stocks accounted for 86% of the S&P 500's year-to-date returns, having trebled their share of S&P 500 valuation from 8.4% in 2013 to 29.2%.[37]

The gigantic size of the bubble demonstrates that, for lack of profitable opportunities in commodity production, investment has been pouring into stock market speculation – where wealth centralizes into fewer hands via glorified betting, aiding the restoration of accumulation for the winners – *on by far the largest ever scale*.

The balance sheet of the Federal Reserve (the Fed), the US central bank, rocketed from $100bn in 2000, mainly then made up of investments in *short-term* government bonds (debt); to $900bn in September 2008, when, by digitally spending money 'into existence', the Fed bailed out banks by buying government debt lent to banks (mortgage-backed securities) and (*long-term* government bonds; to *$9trn* in 2020.

If that pace had continued, the Fed would "own the entire Treasury [government debt] market in about 22 months".[38] The US's M1 money supply (liquid monies such as cash) rose from $1.6trn in May 2009, to $4trn in February 2020, to $16.5trn in June 2020; and $20.7trn in March 2022.

The broader M2 supply (including deposits and money market funds) went from $8.4trn in June 2009 to $15.3trn in February 2020 and $22trn in April 2022. That meant *80.7%* of all M1 ever put into circulation was 'printed'

36. See "The Buffett Indicator: Market Cap to GDP", LongTermTrends.net.

37. "7 or 493 stocks: What matters for the S&P 500?", Blog.Rangvid.com, 27 August 2023; "Just 7 companies are carrying the S&P 500 in 2023", SPGlobal.com, 18 May 2023.

38. "The Federal Reserve now owns 15 Percent of the US Treasury market; at its current rate, it could own the whole market in less than two years", WallStreetOnParade.com, 28 March 2020. In April 2020, the balance sheet of the G4 central banks (the US, Britain, Japan and the EU) collectively represented 40% of their GDP, up from 18% in 2010 and 30% in 2016.

(electronically spent into existence) in just 23 months; or 69.5% for M2 in 26 months.

For comparison, the total the US has spent on its wars on Afghanistan, Iraq, Syria and Pakistan since 2001 have cost $6.4trn.[39] The Fed started to operate at a loss in October 2022 – with its long-term assets fixed at lower rates but its short-term liabilities (money owed) burdened by rising interest rates (a result of falling private investment) – putting it on course to have negative tangible equity (liabilities exceeding assets) *for the first time*. That meant the Treasury stopped receiving the Fed's surpluses, a $100bn+ annual revenue source – four times the annual budget of NASA.[40]

The US government's interest payments on borrowing rose from 8% of government spending in 2019 to 13% in 2023; making it the fastest growing component of the federal budget. As investment falls and fixed rates of interest expire, this figure will continue to rise. The tax base, which private enterprise is increasingly dependent on for subsidies, is therefore tending towards collapse. A 1% rate of interest on £30trn of national debt is $300bn, but 10% is $3trn – not much less than total US tax revenues of $4.9trn in 2022, already short of the $6.27trn in government spending.

By September 2023, the 'gold standard' inverted yield curve – when the interest rate on the 10-year Treasury Bill (government debt) carries lower interest rates than the usually less risky 3-month or 2-year – had been signaling a recession for a *record* 212 days straight. Historically, the longer a recession takes to start after an inversion, the more severe the recession is. As the US yield curve started to un-invert, it did so *in a unique way*. The yield curve has always un-inverted via short-term rates falling faster than long-term rates. *For the first time*, the yield curve flattened because long-term yields climbed faster than short-term rates.

The Fed's baseline interest rate hikes took *eight years*, peaking at 19% in 1980-81, to combat the inflation of the 1970s. Because of lower wages relative

---

39. Crawford, N., "1 United States Budgetary Costs and Obligations of Post-9/11 Wars through FY2020: $6.4 Trillion", 13 November 2019.

40. The Australian, Dutch and Swiss central banks also reported large operating losses. N.B. Cancelling a government's debt to its central bank is not much of an option. Firstly, as then BoE governor Andrew Bailey pointed out, government borrowing from the central bank cannot be cost-free, since the latter is still paying interest on reserves ("BoE is financing UK's coronavirus measures, Bailey acknowledges", *The Financial Times* [online], 14 May 2020.) The factoring-in of future debt repayments in spending plans, moreover, helps to hold back inflation. As of September 2023, the Federal Reserve was paying interest of 5.5% on reserves of $3.2trn.

to household debt levels, interest rates of 3% in Britain in 2022 were the equivalent of 14% in 1980.[41]
Overall real wages (adjusted for inflation) fell globally in 2022 for the first time since comparable records began (International Labor Organization). The US in early 2022 saw the fastest ever decline in job openings (excluding the lockdown shock).[45]

The medium real revenue growth of 'FAANG' stocks – Facebook, Amazon, Apple, Netflix and Google, the five best-performing US tech companies of the 2010s, comprising about 20% of the value of the S&P 500 – turned negative in 2022 *for the first time*.[42] 2022 was the worst year for stocks and bonds combined since 1871. Long-term US government bonds saw the biggest drop since 1788. The classic investor blend of bonds and equities put in the worst performance since 1932. In 2023, the Bank of America said losses on bond sales over the previous three years had been the worst over an extended period *in US history*.

In October 2022 the US started the largest-ever emergency release of oil from the Strategic Petroleum Reserve (SPR), which fell to a 38-year low of 21 days, then 17 a year later, down from 40 in 2020; and 350 million barrels, below half of the 2011 peak. The 283 million barrels sold took 25 years to accumulate. The rising costs of reproducing US military power has seen its naval and airforce capacity consistently diminish. The number of its heavy bombers has fallen to 140, from 400 in 1989; and navy ships from 600 to 292; while many of those that remain are operating well past their sell-by date.

The central bank baseline interest rate in the US and Britain hit 0% for the first time ever in the wake of the GFC as the demand for capital rose as a result of recessionary devaluations, making capital cheaper to purchase. The average Federal Reserve interest rate cut during recessions between 1958 and 2009 has been 6%. Since the 1980s, each US recession has started at a lower baseline rate – 19% in 1981, 8% in 1989, 5% in 2000, 4% in 2008; 1.5% in 2020. How negative could central bank rates go before lending is dis-incentivized? Rates are therefore likely to trend back upwards as capital investment plummets, making accumulation increasingly dependent on dispossession, accelerating the centralization of value and capital into the hands of an ever-slimmer minority.

The Revolutionary necessity of 'state monopoly socialism'

Empirical long-term economic data indicates that *world* socialism is becoming an absolute economic necessity *for the first time*. Socialism has grown within the womb of capitalism itself; just as capitalism emerged within feudalism through the evolution of material production and society's economic-technical basis. Accumulation, which can be defined as the quantitative and qualitative improvement of production itself, historically now demands that *social* accumulation usurp capital accumulation.

The *evolution* of society's economic-technical basis, from mechanized commodity to automated use-value, increasingly demands a *revolution* in the political-legal superstructure. Stimulated by the attacks of the capitalist class, increasingly desperate attempts to offset falling profitability (on wages, living standards and peace) the exponentially growing working class will be increasingly *compelled* to take up a revolutionary struggle to take over the ownership and control of production and establish a new all-socialist state that usurps the old all-capitalist state. Through ongoing struggle (including, to minimize conflict as much as possible, the expropriation of the last capitalists via compensation and long-term debt payments),[43] the socialist state will increasingly take production and services under public ownership until a total public monopoly of the economy is completed.

The establishment of the new *relations* of production from private to public/social/human *ownership* of production will represent a *social revolution;* and a culmination of an ultimately inseparable series of evolutionary phases and epochs not only during centuries of specifically capitalist production but thousands of years of privately-owned production comprising slavery, feudalism and capitalism.

---

43. Arguably this is already happening, given China's overseas investments by *state-owned* enterprises.
All modes of production end partly via compensation for the 'old masters' – who, in trying to cling on to their property and power, tend to be the most rebellious and reactionary, *initiating the class struggle* – to limit social conflict as much as possible and to conquer a peace. The British capitalist state only finished paying off long-term debt to families of former slave owners in 2015. When feudal lords returned from the Crusades – wars driven by the economic need to expand land ownership – they would often be so broke that they would accept offers from peasants buying lands.
With contemporary weaponry being what it is and in the context of the climate/environmental crisis, expropriation via compensation is a more important policy than ever. Given the massive productivity gains to be made, paying long-term debt should prove to be relatively easy, although 'taxes' will of course be impacted, particularly initially.

Given that evolutionary phases are regulated by productive development and are therefore relatively gradual and cannot be 'leapt' over. The economy cannot be taken under public ownership in one fell swoop – the evolution of the productive forces (man and technology) now demands that 'state monopoly capitalism' is transcended by 'state monopoly socialism':

Because capital accumulation is increasingly dependent on *i)* mergers/monopolization; *ii)* central planning (eliminated internal markets, centralized data, etc.) and *iii)* state (public) subsidies, contracts and facilities;[44] a 'final merger' (a therefore public monopoly since no exchange of ownership is required) and central planning of the economy *as a whole*, is becoming, *for the first time,* an economic *necessity*.[45]

The private sector is losing its ability to employ value-creating (commodity-producing) labor, it does so only if profitable, (public) society, via the state and state/social enterprise, must take over responsibility for employment; enabling actual full, formal employment (thereby revitalizing earn-as-you-learn apprenticeships and retraining for workers displaced by innovation).

Money is dying a natural death, with physical cash also becoming obsolete through digitalization, it must be phased out and replaced by an *inherently* centralized non-transferable digital voucher credit system; with the 'currency' pegged to labor time, weighted against productivity rates and supply and demand. Work of 5.5 hours earns, on average, for example, 5.5 credits that can be used to draw down entitlements ('purchase' goods and services) that take, on average, 5.5 labor hours to produce; with prices adjusting upwards with higher demand relative to supply and vice-versa to ensure break-even production and price stability.[46]

Because vouchers are non-transferable, cancelled like train tickets once 'spent', the centralization of wealth into fewer and fewer hands is impossible. The most

---

44. Private spending on research and development (R&D) has consistently declined to the point that in the US private R&D labs have "mostly disappeared", making corporations dependent on state-military R&D (Mazzucato, M, *The Entrepreneurial State*, Penguin, 2018, pp. 31, 193).

45. We use the term 'necessity' not in a deterministic but *relational* way. Marx's understanding of the *immanent* (inherent) movement of matter – confirmed by contemporary quantum physics – is that it is *part random* and *part relational;* so each movement relates to the one that came before, and so although the motion of matter is *indeterminate*, it is to some extent limited by that previous movement.

46. See Reese, T., "Fiat currency is dying a natural death – its logical replacement is a digital voucher system fixed to labour time", grossmanite.medium.com, 21 February 2020.

productive workers and those whose services are in highest demand relative to supply will still receive the highest pay, but as time goes on a larger proportion of workers will join the ranks of the most productive; and falling prices and accelerating innovation and productivity will progressively lift living standards for all.

The workforce is now almost entirely services-based and services workers produce relatively little new value per commodity, since they tend to handle, if any, finished or near-finished commodities.

Stable economic growth can only be established by an applicable system, whereby 'value' (measured in labor time as an accounting measure) is created not by anarchic (recessionary, competitive), for-profit commodity-production; but by planned (joined-up, coordinated), break-even utility-production.

Because the process of 'globalization', the global integration of production and distribution, is increasingly interrupted by capitalism's worsening breakdowns, its completion necessitates world socialism, making 'trade' *actually free* (again, since no exchange of ownership takes place between social enterprises) – necessitating a new Communist International, made up of democratic socialist republics to co-ordinate global co-operation.

Higher/stateless communism

Once the transitional socialist state has taken the whole economy under public ownership, the state will have been abolished, since the state is by definition the rule of one class over another – in the case of a transitional socialist state, the rule of the working class over the remainder of the capitalist class. This process is unlikely to be a linear one. As experienced in the past, there may be spells where isolated socialist countries or blocs need to allow partial re-privatization in order to evade sanctions, import resources, and build up foreign reserves. Once, however, the whole economy is publicly owned (ultimately globally) class has technically been abolished. A governmental structure remains, of course, but it no longer represents a state. Once the attitudes and actions of diehard counter-revolutionaries die out, the nature of the government structure should evolve in a way that requires less and less dependence on military and intelligence services.

Furthermore; as the productivity of social enterprise becomes increasingly prolific and prices fall back towards zero; new technologies like 3D printing

will diffuse (as has already largely happened with smartphones and laptops, for example) leading to increasingly abundant (extremely plentiful) material wealth *for all*, revitalizing independent craftsmanship along with creative, aesthetic and spiritual endeavors.

The relatively centralized, hierarchical authority of the communist governing structure – although it will be more hierarchical, even during the transitional period, will therefore tend to dissipate as dependence on social enterprise eases and previously economically weak peripheral nations, zones and regions become increasingly prosperous. So, *whereas capitalism has a long-term tendency to centralize wealth and power, socialism has a long-term tendency to decentralize wealth and power*.

Lower communism' evolves into 'higher communism', just as 'lower' 'mercantile/free market/competitive' capitalism evolved into a higher form, monopoly capitalism, which today has evolved into a *pre-socialist*, advanced state monopoly capitalism.

5

Principles of Biopolitical Economics

Pengpeng Liu[1]

0. Introduction

Every morning, as we wake up, our consciousness assures us that the self we are today is the same as the self that existed yesterday. Our life experiences solidify into memories, which then help shape and guide our future actions. Yet, there are times when we feel as though parts of our body don't "function as we wish." Could this be explained by the idea that parts of our body possess their own autonomous consciousness—one that might conflict with our collective consciousness (the overarching consciousness that defines us as human beings)?

Every human being lives and operates within various social organizations—families, companies, governments, nations, and more. As members of these groups, individuals often encounter situations where their personal ideas clash with the collective ideas of the group. Typically, what we call "collective awareness" or "team awareness" is articulated by team leaders.

---

1. Pengpeng Liu is a member of the Communist Party of China. She got her PhD in organic chemistry from Balliol College, Oxford, in 2012-2016. In 2017, she returned to China to work in the pharmaceutical industry.

However, the individual awareness of these leaders cannot fully represent the collective consciousness of the group or team as a whole.

This raises an intriguing question: Could social groups—such as families, companies, communities, nations, and even humanity as a whole—be seen as unique types of organisms, each with its own autonomous consciousness? If we imagine a social group as "a person," there might be times when this "person" feels frustrated that some of its components (individual members) are not functioning as intended. Similarly, this "person" might occasionally act without clear purpose, leading to a life that lacks direction or significance.

Like all organisms and non-living matter, human beings are composed of elemental atoms found in the periodic table. Humans, other living beings, and inanimate objects all participate dynamically in the endless cycles of mass and energy in nature, adhering to the physical laws discovered by scientists. As humans, we possess our own consciousness. But what if we extend this idea further? What if the organs, tissues, and cells that make up our bodies each have their own consciousness? And what if all social groups, as well as the entirety of human society, also possess their own distinct consciousness?

0.1 Be illustrative, but not repetitive

> *To see a world in a grain of sand / And a heaven in a wild flower Hold infinity in the palm of your hand / And eternity in an hour*
>
> —William Blake, *Auguries of Innocence* (1803)

As modern natural science develops, humanity has formed systematic knowledge about how our body parts function inside us. Is it possible that the biochemistry laws concerning the function of our body parts, are illustrative to the research of the laws concerning the function of the human society? Is it possible that the laws concerning the function of the human society, are also illustrative to the research of the biochemistry laws concerning the function of our body parts?

From the perspective of philosophy, human being is consisted of body parts; human beings consist of human society. The natural laws existing in individual components (human being) would be illustrative to the probation of overall

system (human society) that the components construct; on the other hand, the natural laws existing in the overall system (human society) would also be illustrative to the probation of individual components (human being) that the system consists. However, it should be noted that the individual components and the overall system belong to different levels of sophistication in natural world: The discoveries of natural laws in one object could only be illustrative, but not repetitive, to the observations of another object.

Based on the arguments above, we propose the concept of "biopolitical economics".

0.2 Biopolitical economics

In biopolitical economics, human societies at all grades of hierarchy or sophistication are perceived as special organisms with their autonomous consciousness. Life science knowledge is attempted to explain the phenomena in the functioning of human societies. Meanwhile, the constituents of human beings and other organisms in nature are perceived as special societies with their autonomous consciousness. Political/economical science knowledge is also illustrative to the new findings in life science.

The main difference between "biopolitical economics" and "biopolitics"[2] (representative sociologist: Michel Foucault) is: Biopolitical economics performs comparison between the biochemical properties of human (and other species found in nature) and socio-political properties of human society; whereas biopolitics treats the biochemical properties as an important part of the socio-political properties of human.

0.3 Logical comparison

Our understanding of life has proceeded through to molecular levels. Back in early 20th century, our understanding of life had mostly stayed at the cellular levels. In metaphors, human beings are usually perceived as "cells in a country": But since the number of job types worldwide is at the level of tens of thousands; yet the number of cell types in a human being is about 200.[3] The metaphor "comparing human beings in the society to the cells in a human body" might be logically improper from the perspective of molecular biology.

---

2. *Science* **2008**, *322*, 912-914
3. *PLoS Biol.* **2016**, *14*, e1002533

Human genomics predicts that the number of protein-encoding genes is around 20,000.[4] Proteins/polypeptides are the fundamental molecular machines fulfilling regulatory biochemical processes (In certain cases, RNAs take the roles instead of proteins/polypeptides in biochemical process). Thus, it might be more logically appropriate to perceive the relationship between a type of protein/polypeptide and an individual human being, as the counterpart of the relationship between a type of job holder and the whole human society.

According to the "one gene-one polypeptide concept",[5] the number of types of polypeptide that constitute human body is around 20,000: We could approximately perceive each type of polypeptide in human body as the counterpart of each type of job in human society.[6] Many proteins/enzymes consist of a single polypeptide chain and could function alone: We could perceive these types of proteins/enzymes in human body as the counterpart of self-employed jobs or simple jobs in human society. Some sophisticated biochemical processes involve many types of polypeptides (protein subunits) to cooperatively function according to the biochemical environment/signals (e.g. transcription in eukaryotes[7]): We could perceive these types of polypeptides/ protein subunits in human body as the counterpart of types of jobs fulfilling sophisticated projects in human society. Human immune system could generate huge amount of types of antibodies based on somatic VDJ recombination processes:[8] We could perceive the types of polypeptides generated from VDJ gene segments in human body, as the counterpart of the types of military jobs in human society; the types of antibodies in human body could be perceived as the counterpart of types of military deployment in human society.

After the long history of evolution, the species existing in nature are versatile. The species have their specific genome, which determines their specific proteomes that distinguish from other species. For different species, the constituting protein types, protein numbers, as well as the overall functioning complexity of the species, are all different. With regard to human society, after the long history of development, the economic entities in the world (most of which have the form of sovereign countries) are versatile. Different economic entities consist of different job types and different amount of population taking the jobs; also, the functioning complexity of the economic entities are different.

---

4. *Hum. Mol. Genet.* **2014**, *23*, 5866-5878
5. *Genetics* **2004**, *166*, 1-10
6. List of over 12,000 jobs: https://www.careerplanner.com/DOTindex.cfm
7. *Nat. Rev. Mol. Cell Biol.* **2015**, *16*, 129-143
8. *Nature* **1983**, *302*, 575-581

For global economy or US/China, which covers (virtually) all the types of jobs existing in human society, the functioning complexity of these economic entities are very high. The functioning mechanisms of the species at higher sophistication level (e.g. eukaryotes) could be used to illustrate the functioning mechanisms of advanced economic entities. For other economic entities with lower levels of functioning complexity, species at lower sophistication level (e.g. prokaryotes) could be used as their illustrate.

0.4 Political standpoint of biopolitical economics

Biopolitical economics is a subject explaining the functioning phenomena of human society from the perspective of life sciences. Apart from biopolitical economics, there are many other types of perspectives to explain the functioning mechanisms of human society. Whichever type of perspective it is, its fundamental political standpoint would be either Marxism/communism, which is in the interest of working class; or, capitalism/imperialism, which is in the interest of exploitation class.

The political standpoint of biopolitical economics firmly locates in the area of Marxism. As an academic subject, biopolitical economics attempts to solidify the idea that communism functions as a vital component in human society development.

1. Basic Components and Function

1.1 Basic units of study

Molecular biology is essentially a subsidiary of chemistry; and chemistry is a subject on the study of molecules. The basic molecules that constitute life include proteins, nucleic acids, saccharides, lipids, etc. The major elements that constitute the molecules mentioned before include carbon, hydrogen, oxygen, nitrogen, phosphorous, etc. Proteins implement virtually all the critical activities of life. Nucleic acids carry genetic information of life and regulate levels of life activities. Saccharides are the direct energy source for life activities. Lipids could be categorized into two forms: a) The free form of lipids (e.g. fatty acids) is one of the important energy storage media in life. b) Biomembranes (fixed forms of lipid in coalition with proteins) build separate chemical environments in life, provide communication pathways in between, and offer critical conditions for biochemical processes. Apart from the molecules mentioned before, nutrients (e.g. water, molecular oxygen, dietary

minerals, vitamins, etc.) are the essential tools to guarantee the efficiency and accuracy of life activities.

Political economics studies the mechanisms of economic activities at any level of organization in human society. The people are the most important constituting factor in economic society, since they implement virtually all the critical activities in economic society. **We compare the role of people in economic society to the role of proteins in life.** Social relation in economic society is presented in the forms of labour division, social class, civilization, etc. The information carrier could either be tangible matters or non-material. In life, genetic or regulatory information is the "social relation" of the molecules related to life activities: **We compare the role of social relation (presented by labour division, social class, civilization, etc.) in economic society to the role of genetic information (carried by nucleic acids) in life.** Currency is the carrier of social resource that could be directly traded during economic activities. **We compare the role of currency in economic society to the role of saccharides in life.** After sophisticated economic activities, currency transforms into financial capitals, which have similar liquidity compared to currency, but function as the media for social resource storage. In the same time, financial capitals has connections with fixed forms of capitals via trading. **We compare the role of financial capitals (liquid forms of capital) in economic society to the role of lipids (free form) in life.** Means of production is the coalition between fixed forms of capital and the people (labourers). Similar to financial capitals, means of production are also generated by sophisticated economic activities. Means of production provide housing and shelter, allocate working place for people, implement production, and transport people/goods at high efficiency. **We compare the role of means of production in economic society to the role of biomembranes in life.** Natural resources such as water and minerals are the necessary tools for economic society to function. **We compare the role of natural resources in economic society to the role of nutrients in life.**

The comparison of the concepts in molecular biology and the concepts in political economics are summarized in Table 1-1.

Concept in molecular biology	Concept in political economics	Function
Proteins	The people	Implementation of critical activities
Nucleic acids	Labour division, social class, civilization, etc.	Information carrier of social relation
Saccharides	Currency	Carrier of direct resource flow
Lipids (free form)	Financial capitals (liquid forms of capital)	Resource convergence that can be stored or traded
Biomembranes (Fixed forms of lipid in coalition with proteins)	Means of production (Fixed forms of capital in coalition with the people)	Shelter, formation of specific environments, transportation, production
Nutrients	Natural resources	Necessary tool for function

Table 1-1 Comparison of concepts in molecular biology and in political economics

1.2 Proteins (concept in molecular biology) and the people (concept in political economics)

As the most sophisticated molecule in molecular biology, proteins bear the most versatile functions in life, which determines the fact that proteins are the pivotal constituent of life. The core activities of life consist of metabolism, transportation, signaling, gene expression regulation, recognizing and coping with other life-related molecules (aka. autoimmunity and immunity). Virtually all of the critical life activities are implemented by proteins. Although the definition of proteins has some kind of ambiguity, the number of types of proteins in human is around 20,000.

Economic society cannot exist without the activities of people, which makes the people the pivotal constituent in economic society. In economic society, the people bear versatile types of jobs. Farmers and industry workers produce products via farming or operating tools/instruments: **We compare the role of farmers and industrial workers in economic society to the role of enzymes**

in life. Merchants distribute resources inside and in between economic societies: **We compare the role of merchants in economic society to the role of transport proteins in life.** Public figures (e.g. writers and artists) and other messengers send out information or signals, which subsequently triggers downstream activities in economic society: **We compare the role of messenger people in economic society to the role of signaling proteins in life.** Administration people formulate policies and regulate economic activities in economic society: **We compare the role of administration people to the role of regulatory proteins in life.** Defence and security people recognize/confront hostile enemies and regulate public security by violence: **We compare the role of defence and security people in economic society to the role of (auto)immune-related proteins in life.** The definition of job types also has some extent of ambiguity. As said in Chapter 0, the overall number of job types in the world is in the range of 10,000~20,000.

1.3 Genetic information (concept in molecular biology) and social relation (concept in political economics)

In molecular biology, genetic information is carried by nucleic acids. Genetic information is sustained via the replication of nucleic acids. The accumulation of gene mutation leads to the formation or distinction of life species during the evolution in history. Transcription and translation of nucleic acids regulate the synthesis of proteins. For different life species, transcription and translation are influenced by more factors in more sophisticated species of life. In eukaryotes, the delicate relationship between transcription factors could effectively guide the specific living organism adjust gene expression levels according to the changes from exterior environment. Also in eukaryotes, introns in messenger RNA are deleted before translation, which lowers the probability of protein malfunction caused by gene mutation. These seemingly more complicated (or even surplus) procedures in life makes the species at higher sophistication more durable to errors/changes in nature.

In economic society, social relation is presented by labour division, social class, civilization, etc. Social relation is sustained by heritage and is mutated by revolution, which leads to the formation or distinction of versatile forms of economic societies during the evolution of human society. Social relation is the template that guides the development of people. Under the education and training from social groups (e.g. family, school, institutions, companies, etc.), and under the influences from civilization, people could effectively be involved in economic activities. For economic societies at higher levels of sophistication,

social relation (e.g. labour division, delicacy of the relationship between all types of economic activities in the society, etc.) would be more complicated compared to the ones at lower levels of sophistication. Meanwhile, economic societies at higher levels of sophistication would have more constituents that are functionally complementary (or even surplus) to each other, which would make the whole society more endurable to the changes or challenges from exterior environment.

1.4 Saccharides (concept in molecular biology) and currency (concept in political economics)

In molecular biology, one of the major functions of saccharides is to provide energy for life activities. With the chemical structure based on carbon chains, saccharides release energy via the break of C-C/C-H bonds and the formation of CO_2/H_2O during citric acid cycle. Saccharides are intensively involved in energy-related metabolism; yet in most cases, the masses of energy-providing saccharides only flow through life, but do not linger in life. Ribose and deoxyribose are the core structures of ATP, NADH, nucleic acids, etc., which are the pivotal molecules related to metabolism and gene regulation. The saccharides that exceed the energy demands of life activities would go through complicated pathways to form oligo-/poly-saccharides (short-term energy saving media) or free forms of lipids (long-term energy saving media).

In economic society, currency renders direct energy to economic activities such as commodity circulation and production. Currency is intensively involved in production, distribution, consumption in economic society; yet for a healthy economic society, the masses of currency only flow through it, but not linger in it. Currency is also an information carrier of social relation (e.g. labour division, classes, civilization, etc.): An economic society could convey part of its regulatory information through its currency policy.[9] The currency that exceed the demands of economic activities would go through complicated procedures to form short-term savings or financial capitals.

1.5 Lipids (concept in molecular biology) and capitals (concept in political economics)

1.5.1 Lipid in free forms and in biomembranes (fixed forms)

---

9. For example, the words and pictures depicted in currency convey part of the mainstream ideology of the economic society.

In molecular biology, lipids in free forms often exist in the structures of fatty acids and glycerides. Similar to saccharides, lipids have the chemical structure based on carbon chains; yet lipids have higher energy density compared to saccharides because the oxygen proportion in lipid molecules is lower. Lipids (free form) could be obtained from exterior environment by digestion; they could also be obtained by synthetic pathways in life.

Fixed forms of lipids in biomembranes have very similar C-H chain structure compared to free forms of lipids; and both forms of lipids are media of energy convergence/storage. Yet lipids in free forms are short of phosphate groups, which render amphiphilicity to phospholipids (fixed forms of lipids). Amphiphilicity is the vital property of biomembranes: Being compatible with both water and oil makes biomembranes available to be effectively interact with proteins in many critical life activities. Meanwhile, biomembranes function as the frame of life: Biomembrane systems at dynamic functioning stage cannot easily participate in the catabolic procedures that lipids (free form) do. Only the biomembrane systems at apoptosis stage are susceptible to the aforementioned catabolic procedures, since the system is breaking down.

In summary to the discussions above, lipids have higher energy density compared to saccharides. Lipids (free form) are one step short compared to biomembranes (fixed forms of lipid in coalition with proteins), which function as the frame of life. Free forms of lipid are not freely interchangeable with fixed forms of lipid in biomembranes.

1.5.2 Capital in liquid forms (financial capitals) and in fixed forms (in means of production)

In economic society, financial capitals (liquid forms of capital) are media for social resource storage and have similar liquidity compared to currencies. Typical forms of financial capitals include but are not limited to payments, investments, financial derivatives, etc. Similar to currency, financial capitals are eligible to be traded in the market; yet their resource density is higher compared to currency. Financial capitals could be directly obtained from nature (usually through mining) or from other economic societies (usually through looting). Financial capitals could also be generated from currency through complicated economic activities.

Fixed forms of capitals in means of production have similar properties compared to financial capitals (free forms of capitals), as both forms are the

media of social resource convergence. However, the fundamental difference between financial capitals and fixed forms of capitals lies in that the latter forms are intensively in coalition with the people (labourers); whereas financial capitals only signify an assemble of resources in the market. For means of production that are at dynamic functioning stage, they form the frame of the economic society and cannot be freely traded in the market as financial capitals do. Only for the means of production that are at exit stage of market competition, their constituting fixed forms of capitals could be traded in the style similar to financial capitals.

In summary to the discussions above, capitals have higher resource density compared to currency. Financial capitals (liquid forms of capital) are one step short compared to means of production (fixed forms of capital in coalition with the people), the latter of which functions as the frame of economic society. Fixed forms of capitals in means of production are not freely interchangeable with liquid forms of capitals.

1.6 Biomembranes (concept in molecular biology) and means of production (concept in political economics)

1.6.1 Biomembranes (fixed forms of lipid in coalition with proteins)

In molecular biology, biomembranes exist in all life species that are constituted by cells. Biomembranes are formed through complicated biological pathways. They provide locations and channels for versatile life-related proteins, metabolites, and signals to guarantee life activities are properly, accurately and efficiently implemented. Biomembranes provide locations for functioning proteins either in/on the membranes themselves or in the regions that the membrane encloses. In the same time, biomembranes build barriers from the perspective of information (e.g. cellular antibody recognition), material (e.g. osmosis pressure) and energy.

For life species at higher levels of sophistication, biomembrane systems that constitute cells and tissues would have higher levels of complexity; the membrane proteins (with the function of recognition, transportation, etc) would also have more complicated relation networks and signal pathways.

For different organelles in a cell, different cells in an organ, different organs in a life, their respective distributions of protein, metabolites, energy flows and signal pathways would have significant discrepancies. Yet despite the

versatility, all the constituents (of the life species) share the same genetic information and conform to the same regulatory procedures that the species implements. Also, the different constituents have stable and reliable communication pathways with regard to information, material and energy.

1.6.2 Means of production (fixed forms of capital in coalition with the people)

In economic society, all economic entities are equipped with means of production. Means of production are formed through complicated social work which usually requires intensive labour division and cooperation between people. Means of production provides necessary shelters and locations of work for people; they also provide storage and transportation for social resources associated with economic activities. Means of production include tangible matters such as land territories and tools/instruments for production; they also include intangible matters such as intellectual properties. Both the aforementioned tangible matters and intangible matters function as the basis of barriers (aka. division of labour) in social activities.

For economic societies/entities at higher levels of sophistication, the constituting system of means of production would have higher levels of complexity; the social network of the people involved, as well as the network of social resource flow, would also be more complicated.

For an economic society with complex hierarchies, labour division makes the types of work and social resources strongly versatile in all levels of administrative divisions. For different types of economic entities in the same economic society and different departments in the same economic entity, the difference of the nature of means of production makes the communication mechanism between people much different. Yet despite the versatility, provided the entities constitute the same economic society, stable communication pathways between the constituents are critical in the fields of information, goods, human resources and financial resources. Also, economic entities at all levels of hierarchy conforms to the same system of disciplines in terms of law and morality; and they conform to the regulations implemented by their communal government.

1.7 Nutrients (concept in molecular biology) natural resources (concept in political economics

In molecular biology, all life forms require support from exterior resources to maintain their normal life activities. Water is the necessary solvent for

biochemical conversions; microminerals are catalytic centers for enzymes; vitamins are intensively involved in the critical steps in biochemical cascades. No life form could live without the communication with exterior environments: all species require exterior resources from other species and non-life. In the same time, the metabolites generated from one species could become the exterior resources of other species.

For economic societies, sufficient supply from natural resources is a necessity for ideal development of economy. Major cities usually locate near rivers or in the regions rich in natural resources: The water and minerals nearby are necessary resources for economic activities. No countries could function normally without the communication with exterior environment. The natural resources as well as industrial products from foreign countries are necessary for the economy to develop at normal conditions.

2. Implementation of Critical Activities

In this chapter, proteins (concept in molecular biology) and the people (concept in political economics) will be discussed in detail. The similarity of the two concepts had been described in Chapter 1: Proteins are the major role to implement critical activities in life; The people are the major role to implement critical activities in economic society.

2.1 Formation and function

2.1.1 Proteins (concept in molecular biology)

In molecular biology, proteins are formed from amino acids with the information from messenger RNA as template. The primary structure of proteins are the sequence of amino acids. Based on the primary sequence, folding and formation of disulfide bonds occur under ideal chemical environments: Secondary and tertiary structures are then formed. Some types of proteins consists of multiple subunits with either identical or complementary structures. For some types of proteins, post-translation modifications (e.g. glycosylation, methylation, phosphorylation, etc.) are required to guarantee the normal activity of proteins. The modification procedures are necessary in that the complex biochemical environments adjust the activity of proteins to ensure the overall system functions at optimal conditions as much as possible.

The mechanism of protein to function could be summarized into one word: Fit. Only the proteins with primary, secondary, tertiary structures that are best fit to

the biochemical environments, could function at optimum efficiency. The spatial conformation of proteins determines whether they could accurately recognize target molecules[10] or whether they could accurately fit metabolite molecules into catalytic centres. A medium-sized protein consists of several hundreds of amino acids: The change of any amino acid inside could dramatically alter the spatial conformation of the protein, thereby influencing the function of the protein.

After the long history of natural evolution, the proteins that constitute life would have high exclusivity in terms of structure and function. This guarantees the specificity of the species and the differentiation inside a specific living organism. Also, specificity and exclusivity guarantee the high efficiency in biochemical processes.

2.1.2 The people (concept in political economics)

In economic society, the people are defined by the attributes that the society renders. This means that in political economics, the study of the people should be backed by their social relation system. The people in economic society are created by versatile social relations such as family ties, education and employment. Some types of occupation require the intensive collaboration from multiple labourers (with either identical or complementary functions) to be successfully implemented. Some types of occupation require the support from monetary resources (to ensure that the job holder is sufficiently able to pay) to be successfully implemented. Some types of occupation require delicate adjustment of the efficiency of the job holders:[11] The working environment would adjust the output of each position to optimize the condition of the whole economic society/entity.

In economic society, the mechanism of the people to function could be summarized into one word: Fit. The creation procedure from social relation system determines the ability at all dimensions and fitness to the work positions of the people. For a specific work position, only at the right time, in the right place, with the right people, the designated tasks could be perfectly implemented. The education and training experiences of the labourers determine whether they could perfectly fit into the work position and fulfill the designated tasks. The seemingly trivial discrepancies between the social

10. Target molecules could be proteins, nucleic acids, lipids or any other signal molecules.

11. That is to say, job holders are not necessarily required to work at full efficiency all the time.

relation network of two people could lead to the fact that their work positions could not be interchanged.

After the long history of development, labour division in economic societies has reached to a rather sophisticated state. For a well-developed economic society or entity, the constituting work positions are highly versatile and have high exclusivity: This also guarantees the high efficiency during the work implementation procedures.

2.2 Energy sources

2.2.1 Adenosine triphosphate (ATP) is the energy source for eukaryotes

For most of the eukaryotes, the basic organelle to supply energy for life activities is mitochondrion. Mitochondrion provides biochemical environments for proteins related to aerobic respiration, generating the ATP used for life activities. Virtually all critical life activities[12] require phosphorylation or dephosphorylation processes related to ATP.

The upstream metabolites of ATP are saccharides and related nutrients. Saccharides undergo typical oxidation processes (e.g. citric acid cycle) to yield ATPs. Sufficient amount of saccharides and nutrients is only one of the necessities to guarantee full energy supply of life; the other deciding factor is the activity of proteins involved in the saccharide metabolism. According to the activity level of saccharide metabolism-related proteins, there should be a decent concentration range of sugar in a living organism. Sugar concentrations higher or lower than the range could both give negative effects. The detailed discussion on the role of saccharides in life will be presented in Chapter 4.

2.2.2 Food and clothing is the energy source of economic societies

For economic societies, we can never overestimate the importance of agricultural security. The role of agriculture in economic society is the counterpart of the role of mitochondrion in eukaryotes. The food and clothing produced from agricultural activities could keep people warm and free from hunger. This is the prerequisite factor before any critical economic activity[13] could be implemented.

---

12. The critical life activities include but are not limited to: Gene replication, gene transcription and translation, protein conformation change in molecular recognition, metabolism-related enzyme activities, etc.

13. The critical economic activities include but are not limited to: Inheritance of social relation, creation of the people by education and training, division of labour & collaboration between labourers, usage of tools to implement production, etc.

In economic society, the upstream object of food and clothing supply is currency and natural resources. Under the decent supply of natural resources and currency circulation, food and clothing could be efficiently harvested and circulated in the economic society. Sufficient amount of natural resources and currency supply is only one of the necessities to guarantee full energy supply of economic activities; the other deciding factor is the productivity of the labourers harvesting and producing agricultural products. According to the productivity of the labourers in the economic society, there should be a decent amount of currency circulation in the economic society. Currency supply either in surplus or in deficiency could give negative effects. The detailed discussion on the role of currency in economic society will be presented in Chapter 4.

2.3 Regulation and defence

2.3.1 Immune system, immune cells and antibodies

Advanced forms of life need immunity to regulate the functions of constituting parts (auto-immunity) as well as to protect the living organism from the attacks outside (immunity).

Take human as an example for discussion. Human immune system is constituted by immune organs (thymus, bone marrow, lymph, spleen, etc.). Immune organs is constituted by tissue cells and in the same time generates specific immune cells (T cells, B cells, NK cells, macrophages, etc.).

At healthy state, life does not need to spare significant amount of resource to generate antibodies. All the immune cells function in a balanced style to keep the living organism organized. For killer T cells, NK cells and macrophages, they function in the unit of cells: These immune cells patrol and check functioning cells, and attack infected or cancerous cells. Helper T cells alarms the immune system that some cells are attacked by external microorganisms or some cells have become cancerous.

At the state of being infected by antigens, B cells are activated by the signals from immune system and generate large amount of antibodies, which consumes significant amount of resources from the living organism. Antibodies are essentially a team of proteins generated by the immune system to fight against invasions from external microorganisms. The major difference between antibodies and ordinary protein subunits lies in that the type of antibodies is highly versatile. Only by forming antibodies with sufficient amount of types

and by screening under actual combat conditions, life could keep the teams of antibodies that efficiently fight against antigens. Although the gene number related to antibody formation is as low as <100, VDJ recombination renders the antibody system with high versatility.

2.3.2 Institutions of violence, national defence and armed forces

Economic society needs internal regulations (aka. public security) to keep the society organized. Meanwhile, economic society needs national defence to protect itself from enemies.

Take Chinese institutions of violence as an example for discussion. Chinese institutions of violence include but are not limited to: Commission for Discipline Inspection System of Chinese Communist Party, People's Court System, People's Procuratorate System, People's Public Security System, National Security System, People's Liberation Army, People's Armed Police, etc. Of these institutions of violence, some are institutions of intelligence and can be referred for decision-making; some are institutions of execution; and some undertake both two duties.

In times of peace, armed forces are not involved in wars and thereby do not consume too much social resources. All the institutions of violence function in a balanced style to keep the economic society organized. As an example, Chinese domestic news often reports the anti-corruption activities by the team of Commission for Discipline Inspection System, People's Court System, People's Procuratorate System and People's Public Security System. Public security officers fight against outlaws to keep our daily life secure; National security officers fight against spies to keep the country safe and sound.

In times of war, armed forces will be summoned under war mobilization, which consumes significant amount of resources from the economic society. Armed forces are a team of soldiers to fight against enemies. Since the battlefield is constantly changing, whereas the ordinary workplace usually stays still, soldiers need to cope with the environmental change much more than the ordinary labourers do. As a result, the organization styles of armed forces are much more versatile compared to the ordinary economic entities.

2.4 Create, repair, decompose and dispose

2.4.1 Enzymes

The core activities of life is to create, repair, decompose and dispose of metabolites. These processes could be summarized as the metabolism of life. Metabolism is essentially a series of biochemical reactions and enzymes are the critical catalyst of the processes. Saccharide metabolism, as described in Section 2.2, requires relevant enzymes for the oxidation of carbohydrates and the release of energy. Apart from saccharides, for all of the critical molecules (lipids, nucleic acids, proteins) related to life, each life form has its specific metabolism pathways for the molecules. Molecules under anabolism pathways will be created and repaired; molecules under catabolism pathways will be decomposed and disposed of.

2.4.2 Occupations related to social production

The core activities of economic society is to create, repair, decompose and dispose of objects related to economic society. The objects not only include means of production and consumables; they also include the people in the economic society. As a result, the occupations related to social production are critical to economic activities. The production of food and raw materials of clothing (described in Section 2.2) is implemented by agricultural labourers. **The role of agricultural labourers in economic society could be approximately compared to the role of enzymes in saccharide metabolism.** Labourers in manufacturing and construction industry are involved in the social production of means of production and consumables. **The role of manufacturing and construction labourers in economic society could be approximately compared to the role of enzymes in lipid metabolism.** Administrative people embody social relation into detailed policies and rules. **The role of administrative people in economic society could be approximately compared to the role of enzymes in nucleic acid metabolism.** Teachers educate and train labourers; doctors heal labourers; lawyers defend the rights of labourers. **The role of teachers, doctors and laywers in economic society could be approximately compared to the role of enzymes in protein metabolism.**

2.5 Transportation

2.5.1 Transportation in life

The transportation in life could be studied at macroscopic scale and at microscopic scale. At macroscopic scale, the materials related to life activities are transported by blood, an organ with the function of transportation, among

the organs that constitute life. For different organs, the difference of their functions makes the differences of their inputs and outputs. At microscopic scale, the functioning procedure of a single cell involves versatile material transportation: Trans-cell membrane transportation fulfills the communication between cell and exterior environment; intracellular transportation fulfills the routine functions of the specific cell.

For small molecules such as water, salts and amino acids, their transportation could be completed by simple diffusion or by the active transport from transmembrane proteins. For large molecules such as saccharides, lipids and proteins, their transportation could be completed by vesicles specifically designed/formed for the "cargo": The vesicle is manipulated by its constituting protein and the targeted transportation is completed.

2.5.2 Transportation in economic society

The transportation in economic society could be studied at macroscopic scale and at microscopic scale. At macroscopic scale, the economic society usually has clear labour division at industry level. The materials related to economic activities would be transported between industries under the regulations from administrations and the market activities between industries. At microscopic scale, versatile transportation is involved in the specific economic entity: Transportation between the economic entity and exterior market fulfills trade deals; transportation inside the economic entity fulfills the routine functions of the economic entity.

For small items such as portable tools or portable goods, their transportation could be completed by individual labourer. For more important or larger items (such as currency, physical capitals, means of production, labourers themselves), their transportation could be completed by vehicles specifically designed/manufactured for the "cargo": The vehicle is manipulated by its driver and the targeted transportation is completed.

2.6 Signal management

2.6.1 Signal management in life

For a specific living organism, signals come from both external and internal environments. Signals from external environment include light, heat, odours, etc. Signals from internal environment include electricity from nervous system, hormones released by specific cells, etc.

The carriers of signals could be versatile: They could be a string of electromagnetic wave, a single metal ion, a short-chained polypeptide, or a protein molecule. Yet whichever the carrier form is, the critical role for signal reception and signal processing is undertaken by proteins. Typical examples include ion channel receptors, a series of proteins that undertake the role of neurotransmitters; and G protein-coupled receptors, a series of proteins that detect signals outside of the cell and activate cellular responses.

Signal reception triggers/activates the membrane protein and lead to a cascade of biochemical reactions that involves several other types of proteins. For the reception, transmission and processing of a specific signal, the type number of the proteins involved in the cascade reactions could range from 3 to more than a dozen. Meanwhile, the cascade biochemical reactions could split like branches, that is to say, a single signal triggers multiple biochemical pathways.

After signals are properly processed by the cell, the results could be versatile: Growth hormones could facilitate the proliferation of cells; signals from helper T cells could trigger the generation of antibodies by B cells; apoptosis signals could lead to the planned death of target cells.

If the signal management system of life functions normally, the chances of life encountering illnesses would be low. But since the environment that life lives in is dynamically changing and the evolution of life itself is far from perfection, any living organism would encounter the challenges of illnesses virtually at all stages of development. Take human as example, even after the long history of natural selection, its signal management system has many imperfections or shortcomings towards challenges. Pressures from work or daily life could lead to sleeping disorders; antigens from pandemic could lead to malfunctions of the immune system. As a result, the tissues/organs do not develop to the extent as properly planned; immune system mistakenly recognize normal cells as enemies, or cannot clear cancerous cells that are supposed to be eliminated, or cannot clear pathogens that would lead to infection; cells that are supposed to undergo apoptosis still dwell and consume resources of the body. Under these circumstances, illnesses at different levels of severity could occur. Treatment or precautions could be the solutions to the challenges from illnesses. Typical solutions include relieving pressures of life by lowering expectations, improving sleeping quality, taking the proper medicines: All of these solutions could effectively reallocate resources in the body and send the signal

management system back to normal state,[14] thereby reaching to the goal of being healthy.

2.6.2 Signal management in economic society

For a specific economic society, signals come from both external and internal environments. Signals from external environment include climate change, natural incidents, discovery of natural resources, etc. Signals from internal environment include policies issued from authorities, enquiries or demands or feedbacks from cooperating economic entities, etc.

The carriers of signals could be versatile: Natural environment send signals to the economic society by climate change such as temperature, precipitation and sunlight; news are released via radios, televisions and internet; a specific law or policy is issued and comes into effect; superiority sends a person to work in a specific department, leading to the change of functioning state in the department. Yet whichever the carrier form is, the critical role for signal reception and signal processing is undertaken by people working in the economic entity, the messenger people. In Greek mythology, Hermes is known as the messenger god, and has extensive and effective connections with people from all backgrounds.

Under normal conditions, signal reception would trigger a cascade of economic activities that involves several other types of occupations. For the reception, transmission and processing of a specific signal, the type number of the occupations involved in the cascade activities could range from 3 to more than a dozen. Meanwhile, the cascade economic activities could split like branches, that is to say, a single signal triggers multiple economic activity pathways.

After signals are properly processed by the economic entity, the results could be versatile: Policies that support the development of one specific industry could increase the number of the economic entities in the industry; information from intelligence departments could lead to the responses of national defence to counter the invasion or penetration from hostile enemies; policies that restrict or terminate the development of one specific industry could reduce the number of the economic entities in the industry.

If the signal management system of economic society functions normally, the chances of the economic society encountering problems would be low. But

14. That is to say, every body part is on the same page, and is all in the interest of the whole body.

since the environment that the economic society locates in is dynamically changing and the refinement procedure inside the economic society is far from perfection, any economic society would encounter challenges or obstacles from misinterpretation virtually at all stages of development. For human economic society, the signal management systems still have much discordance at all levels of constituting hierarchy. For example, an economic society faces social contradictions because of the incompatibility between productive forces and relations of production; chronic labour shortage could lead to the productivity failing to meet the demands of social needs; global pandemic could exacerbate social polarization and increase the rates of strategic misinterpretation. As a result, the constituting economic entities do not develop to the extent as properly planned; institutions of violence mistakenly judge normal constituting entities as adversaries, or cannot clear adversary constituents that are supposed to be removed, or cannot effectively counter the invasion or penetration from hostile enemies; economic entities that are supposed to cease to exist still dwell and consume resources of the economic society. Under these circumstances, social problems or conflicts at different levels of severity could occur. Typical solutions include adjusting social development expectations in accordance with current productivity, defending the rights of labourers, carrying out social revolutions at proper forms and intensities: All of these solutions could effectively reallocate social resources and send the signal management system back to normal state,[15] thereby reaching to the goal of healthy social development.

3. **Information Carriage and Embodiment of Social Relation**

Any object functions under rules: This also suits for either a living organism or an economic society. Apart from conforming to the same fundamental physical laws, various types life species (or economic societies) conform to the rules that are either in common with or distinctive from each other. Genetic information is the critical factor that distinguishes one life species from others: Genetic information regulates the function of life via transcription and translation to form protein systems. Social relation is the critical factor that distinguishes one economic society from others: Social relation is presented by civilization, culture, ideology, religion, political system, laws, moralities, etc., and regulates the function of economic society via embodying into people undertaking versatile types of occupations.

---

15. That is to say, every constituting part of the society is on the same page, and is all in the interest of the whole society.

In this chapter, we compare the roles of genetic information in life, to the roles of social relation in economic society.

3.1 General genetic information and general social relation

3.1.1 General genetic information

For most life forms in the world, the genetic information carrier is DNA. DNA structure has advantages such as high accuracy in replication, high information density, and easy-to-obtain raw materials: After the long history of natural selection, DNA structure is selected as the genetic information carrier for most life forms.[16] All of the genetic information in life would undergo extensive natural selection, mutation, evolution in the long history of time, and develops under the influences of both internal and external environment. We could judge the kinship between two species by analyzing the similarities of the genetic information of the two species. We could also explore the evolution status (both spatially and historically) of the environment that life dwells in, by studying the genetic evolution status of the specific life. In a word, the general genetic information of life carries the historic and current information of its development. We could also predict the development status of one species by exploring the characteristics of its general genetic information and the characteristics of its external environment.

The general genetic information of life includes the information of all base pairs from all of the DNA molecules in nucleus, mitochondrion, etc. For many sophisticated life forms, part of the genetic information is retained in the life form but is not expressed any more. We define this part of the genetic information as non-coding DNA. Non-coding DNA has possible relations to historical evolution, and constitutes the general genetic information along with coding DNA (genes).

Despite that non-coding DNA does not directly regulate the synthesis of proteins, as the information of life from history, non-coding DNA has significant effect on the development and evolution of life. In 2005, Elgar *et al.* reported a study by used a whole-genome comparison between human and the pufferfish to identify nearly 1,400 highly conserved non-coding sequences. The study proved that the accuracy for the replication of non-coding DNA is of significant importance for vertebrate development.[17]

---

16. The genetic information carrier of some types of viruses is RNA. RNA has relatively higher mutation probability compared to DNA. In technical sense, viruses still have ambiguities to be defined as life: Some people argue that viruses are only objects that hijack the imperfections of life to self-replicate.

17. *PLoS Biol.* **2005**, *3*, e7

3.1.2 General social relation

For economic society, social relation is presented by objects that span different ranges of space and time. The objects include but are not limited to: civilization, culture, ideology, religion, political system, laws, moralities, etc. The social relations at all levels of hierarchy in the economic society have undergone extensive selection and refinement in the long history of time, and develops under the influences of both internal and external environment. We could judge the kinship between two economic societies by analyzing the similarities of the social relations of the two economic societies. We could also explore the development status (both spatially and historically) of the environment that the economic society dwells in, by studying the social relation development status of the specific economic society. In a word, the general social relation of economic society carries the historic and current information of its development. We could also predict the development status of one economic society by exploring the characteristics of its general social relation and the characteristics of its external environment.

The general social relation of economic society includes two parts: a) Overall historical memories of the economic society during its development; b) Current social relation system that regulate the functioning procedures of the economic society at now. General social relation could be approximately presented by civilization and culture, which cover as comprehensive as possible in terms of time and space.

Historical memory is of significant importance to the development of economic society even if it does not directly regulate the functioning of the economic society at now. The judicious and accurate recording/dissemination of historic information is of vital importance to the economic society. Martyrs who sacrificed their lives for the freedom and independence of their motherland should be forever remembered and honoured; Invaders who committed genocide and offended the interests of other nations should be condemned and cautioned. Recently, the film *Oppenheimer* uncovered many crimes of the Japanese invaders committed during WWII to the US audiences, which is a good example of the judicious and accurate recording and dissemination of historic information.

3.2 Genes and current social relation

To continue with the discussions in Section 3.1, genes are part of general genetic information and are expressed into proteins. From the perspective of evolution, information carried by genes comes from inheritance. For a life

species at a specific time in history, the information carried by genes regulates the functioning procedures of the species at the specific time.

Current social relation is the part of general social relation and regulates the economic activities at now. If general social relation is approximately presented by civilization and culture, current social relation could be approximately presented by current ideology, religion, political system, laws, moralities, etc.

3.2.1 Gene expression

Transcription and translation are the expression processes of genetic information for all life forms. Even for the gene expression of viruses, the majority of the processes is completed by the hijack of transcription- and translation-related proteins of host cells. For a single cell, the information carried by genes is the start point for all life activities; transcription[18] is thus the very first step of life activities. The primary enzyme involved in transcription is called RNA polymerase; the critical factor that influences the gene expression level (aka. transcription level) is a group of proteins called transcription factors. Transcription factors bind with the DNA strands to facilitate the transcription procedures. Meanwhile, transcription factors bind with internal signals (metabolites) and external signals to undergo conformation changes. Since conformation changes affect the gene transcription level, the binding procedure between transcription factors and internal/external signals could be seen as the feedback of life towards the signals from the environment. Life gives effective feedback towards the signals from external environment via a series of biochemical reaction: This procedure is the basis of life to accommodate and reshape environments, and is thus the meaning of life to exist in nature.

For prokaryotes which do not have sophisticated organelles (such as nucleus, where transcription happens in eukaryotes), their transcription is still influenced by internal/external signals via the binding with the transcriptions factors. Since prokaryotes carry relatively simple genetic information, the types of external signals that prokaryotes could give effective feedback would be relatively fewer: The function of prokaryotes is thus less sophisticated compared to eukaryotes. The signaling pathways in prokaryotes are less complicated compared to the situation in eukaryotes; also, the gene expression modes that are in backup with each other or in the purpose of system balancing are fewer compared to the situation in eukaryotes. As a result, prokaryotes are unicellular and the concept of cell differentiation virtually does not exist in prokaryotes.

For eukaryotes, the cells have sophisticated organelles such as nucleus. In the nucleus, genetic information is properly stored; transcription occurs in the

18. Or the reverse transcription process that viruses hijack the host cells to perform

nucleus and is separated from the translation that occurs outside of the nucleus. Eukaryotes bear relatively more sophisticated genetic information, the types of external signals that eukaryotes could give effective feedback would be relatively more: The function of eukaryotes is thus more sophisticated compared to prokaryotes. The signaling pathways in eukaryotes is more complicated compared to the situation in prokaryotes; also, the gene expression modes that are in backup with each other or in the purpose of system balancing is readily available in eukaryotes. Up to now, human transcription factors are still in the process of discovery and function analysis.[19] As a result, many eukaryotes are multicellular and the concept of cell differentiation is as important as the division of work of proteins inside a single cell.

3.2.2 Embodiment of current social relation

In economic society, policy making and policy implementation is the embodiment process of current social relation. Even for the mafias in the economic society, their social relation is embodied by the hijack of policy makers under the conditions that current administration has imperfections in the policy system. For an economic society, the information carried by current social relation is the start point for all economic activities; policy making is thus the very first step of economic activities. Policy makers carry out administrations according to the current social relation system (including political system, laws, ideology, etc.); meanwhile, policy makers and policy influencers adjust the administrations as the feedback to internal/external signals of the economic society. Economic society gives effective feedback towards the signals from external environment via a series of economic activities: This procedure is the basis of economic society to accommodate and reshape environments, and is thus the meaning of economic society to exist in the world.

The size of economic society/entity in our study is variable: For a family, a city, a country, the whole human society, they could all be considered as an economic society/entity to be studied. For less sophisticated economic entities, the policy making procedures might not occur in a fixed area. Take a family as an example, the husband and wife could decide on some issues either on a trip, or at home, or anywhere else. Despite the informality, the policy making procedures are still influenced by internal or external signals. For these less complicated economic entities, their social relation is relatively simple; the external signals that they could provide effective feedback is relatively fewer.

---

19. *Cell* **2018**, *172*, 650-665

Thus the functions of these economic entities are relatively simple and the study of these economic entities is easier.

Still take a family as the example. A family is relatively simple from the perspective of functions as economic entity. As an economic entity, a family could be involved in the activities in larger family groups, or in the activities of social communities. Apart from these activities, a family could not have more sophisticated economic functions on its own: Thus people could not form social relation networks that are in backup with each other or in the purpose of system balancing, solely based on a family. Also, a more sophisticated economic society cannot be formed based on the simple replication of families. For each of the family members, he/she could be involved in more sophisticated economic activities in other occasions: A family member could in the same time function as a member of a community, a company, an institution, or even a country.

Sophisticated economic societies typically consist of subordinate economic entities; the hierarchies of the constitution could be varying according to the complexity of the economic society. The inheritance and embodiment of social relation in sophisticated economic societies are implemented in relatively fixed areas such as schools, libraries, museums, chapels (for social relation inheritance), and governmental residences (for policy making). Also, the places for policy making are usually different from the places for policy implementation. Sophisticated economic societies have more comprehensive system of social labour division, which makes the external signals that they could give effective feedback more versatile. Thus the functions of sophisticated economic societies are more comprehensive.

For sophisticated economic societies, the signaling pathways of internal and external information is longer to reach to the policy-making people compared to the situation in simple economic societies/entities. This means the management of sophisticated economic societies is more difficult; the study of these types of economic societies is more difficult; and the team of policy-making people in these types of economic societies is more complicated. In sophisticated economic societies, the social relation networks that are in backup with each other or in the purpose of system balancing are readily available: As a result, sophisticated economic societies consist of many subordinate economic entities with clear labour division, and with proper backup or balancing between each other. During the activities of sophisticated economic societies, the labour division and cooperation between subordinate

economic entities are as important as the labour division and cooperation between the constituents inside the subordinate economic entities themselves.

3.3 Cell differentiation and social labour division

3.3.1 Cell differentiation and gene regulations: Entropy decrease in life

As previously discussed in Section 3.2, cell differentiation is a gene expression mode at higher sophistication level. After the long history of evolution and natural selection, sophisticated forms of life are equipped with sufficient genetic information to realize cell differentiation. The protein system (generated by gene expression) could realize more than the implementation of versatile biochemical processes: The protein system could equip life with differentiated cells since the genetic information in these life forms are in backup with each other or in the purpose of system balancing. Starting from cell differentiation, tissues and organs are formed to realize more sophisticated and more versatile functions; advanced forms of life are available to exist in nature. In the mean time, life forms at different levels of sophistication and with different specialties together form the ecosystem in nature, with the life forms in backup or in balance with each other.

For a life form with sufficient genetic information to realize cell differentiation, at first thought, if every gene is fully expressed in every cell, the functions of the life form could be expressed at maximum extent. However, since the expression of genetic information consumes significant amount of resources from life, the living organism needs to delicately allocate resources to every organ, tissue and cell. The regulatory work performed by life could maximize the utilization efficiency of limited resources in the purpose of survival in natural selection. Life forms evolving towards higher levels of sophistication is thus based on cell differentiation and the associating regulatory work performed by life.

Life is a system that consists of both entropy increase and entropy decrease processes. In life, any free expression of genetic information is spontaneous: This correlates to the entropy increase processes in physical chemistry. The planning and regulations that life imposes on gene expression (for the interests of life as a whole) is non-spontaneous: This correlates to the entropy decrease processes in physical chemistry.

In the world of physical chemistry, systems generated by entropy decrease are always cherished by people since ordered/organized systems represent high quality and competency. In the mean time, under the disturbances from internal and external environment, highly-ordered systems are inclined to decompose into chaos.

For sophisticated life forms, the planning and regulations of gene expression is of vital importance for the survival of life species: Under the disturbances from internal and external environment, highly ordered system (aka. sophisticated life form) would suffer from the consequences of dysfunction of gene regulation. Take human as an example, leaving aside the diseases caused by the infections or attacks from other species,[20] the imperfections in gene regulation itself could make people suffer from diseases at different levels of severity, in any stage of life. From insignificant illnesses such as mild allergies and slight inflammations, to life-threatening diseases such as autoimmune diseases and cancers: They are all consequences of the imperfections of life to plan and regulate gene expression procedures.

3.3.2 Social labour division and regulations: Entropy decrease in economic society

Compared to the simple labour division during the implementation of a specific task, social labour division is an advanced form of social relation embodiment procedure. Typically, social labour division occurs in sophisticated economic societies, and more specifically, between the subordinate economic entities of the economic society. After the long history of development, sophisticated economic society has sufficient social relation to realize social labour division. The people with versatile occupations (generated by social relation embodiment) could realize more than a specific task that requires labour division and cooperation: Via social labour division, the occupation system could equip the society with subordinate economic entities that are in backup with each other or in the purpose of system balancing. Starting from social labour division, economic societies/entities with multiple hierarchies are formed to realize more sophisticated and more versatile functions; advanced forms of economic societies are available to exist in human society. In the mean time, economic societies at different levels of sophistication, with different climate and geographical conditions, bearing different cultural images, and with different specialties, together form the economic society of the whole humanity. In the economic society of the whole humanity (aka. global economy), the constituting economic societies (mostly in the forms of sovereign countries) are also in backup or in balance with each other.

For an economic society with sufficient social relation to realize social labour division, at first thought, if social resources are fully allocated into every occupation, the functions of the economic society could be expressed at

20. It should be noted that under many circumstances, the infections or attacks from other species are one of the reasons leading to the dysfunction of gene regulation in human.

maximum extent. However, since the activity of any occupation consumes significant amount of social resources, the economic society needs to delicately allocate resources to every subordinate economic entity, every occupation and every people. The regulatory work performed by economic society could maximize the utilization efficiency of limited resources in the purpose of survival in contest. Economic societies evolving towards higher levels of sophistication is thus based on social labour division and the associating regulatory work performed by the economic society.

Similar to life, economic society is a system that consists of both entropy increase and entropy decrease processes. In economic societies, any free market activity is spontaneous: This correlates to the entropy increase processes in physical chemistry. The planning and regulations that economic society imposes on free market activities (for the interests of the society as a whole) is non-spontaneous: This correlates to the entropy decrease processes in physical chemistry.

In the world of physical chemistry, systems generated by entropy decrease are always cherished by people since ordered/organized systems represent high quality and competency. In the mean time, under the disturbances from internal and external environment, highly-ordered systems are inclined to decompose into chaos.

For sophisticated economic society, the planning and regulations of free market activity is of vital importance for the survival and development of the society: Under the disturbances from internal and external environment, highly ordered system (aka. sophisticated economic society) would suffer from the consequences of regulation dysfunction. Take a sovereign country as an example, leaving aside the challenges caused by the penetrations or attacks from other countries,[21] the imperfections in social relation system itself could make the country encounter challenges at different levels of severity, in any stage of development. From insignificant problems such as public security flaws, to country-threatening challenges such as coup d'état and civil wars: They are all consequences of the economic society failing to properly plan and regulate free market activities.

3.3.3 Planned economy and free market economy

For both life and economic societies, their existence is accompanied by the spontaneous entropy increase processes and the non-spontaneous entropy decrease processes all the time. As described in Section 3.3.1, the entropy

21. It should be noted that under many circumstances, the penetrations or attacks from other countries are one of the reasons leading to the regulation dysfunction of the economic society.

increase processes in life correlates to the free expression of genetic information; the entropy increase processes in life correlates to the planning and regulations that life imposes on gene expression. As described in Section 3.3.2, the entropy increase processes in economic society correlates to free market economy; the entropy decrease processes in economic society correlates to the planning and regulations that economic society imposes on free market activities (aka. planned economy). For any system (not limited to life and economic society in our study), the entropy increase and decrease processes are always accompanied by each other: The fundamental reason for this argument lies in that orderliness could only exist in the pretext of unordered choices.

For all economic societies (in any historical background, with any size), planned economy is the foundation of their existence. One of the typical elements of planned economy is taxing: Refusing to pay taxes to the country is refusing to pledge allegiance to the economic society, which is an important reason for the decomposition of the society. For superpowers such as USSR, United States and China, just put aside the reigning ideology (whether it is a communist state or a capitalist state), their formidable national powers are all based on the balance between planned economy and free market economy.

The United States is a capitalist country with the general image to the world as freedom defender. Thus the free market economy (entropy increase) seems to be the foundation of the road to greatness of the US. Yet this argument is only half of the overall right answer. We cannot ignore the contributions of the administration of Franklin Roosevelt and the economic theories of John Keynes, which both lead to the allocation of vital social resources to the government. With the resources in hand, the US government could implement planned economy (entropy decrease) that constructed critical infrastructures and started the third industrial revolution. Renowned public research institutions such as NASA, NIH and national laboratories made great contributions to the development of humanity: This is the typical activities of planned economy at the level of sovereign country. Currently, the superpower of the US is in retreat; this is directly related to the retreat of planned economy in the US, leading to the imbalance between planned economy and free market economy. Typical social phenomena of the imbalance include but are not limited to: NASA subcontracts core projects to private companies; pharmaceutical companies, insurance companies and medical institutions have monopoly on the pricing of American medical system; gigantic corporations evade taxes by controlling the government.

The USSR was a communist country with public ownership as the foundation of economy. Planned economy was thus the determining sector of the national economy of the USSR. The birth and early stages of USSR was accompanied by wars to defend the nation from invaders. Being in a war naturally forces the nation to plan nearly everything to win the war at all costs. Thus at war, the balanced state (between planned economy and free market economy) would be very special and there might be very little space for free market economy. From the historic point of view, totally implementing planned economy helped the country with a big win and lead USSR into power and glory after WWII. Yet after WWII, too little space of free market economy would lead to the imbalance between planned economy and free market economy: Looking at the history from current point of view, it seems that free market economy needed more space to rebuild the balance. Ignoring the daily life needs of people, spending too much social resources in the cold war with the US, exporting socialism ideology recklessly to other nations without respecting the choices of the object country, top USSR officials committed revisionism after WWII: These are all factors leading to the breakdown of USSR.

The breakdown of the USSR, however, does not necessarily mean that communism is not the future of humanity. Also, the breakdown of USSR does not mean that communism would cease to exist in the places that the USSR had governed. It might just be an obstacle that tackled humanity in 1991, which people could learn lessons from and could recover from. Logically, economic societies with higher levels of sophistication naturally correlates to the sheer amount of free market economy (entropy increase), and this needs a proper balance from planned economy (entropy decrease). Since the planned economy under socialism/communism ideology correlates to the entropy decrease processes in human society, provided that human society develops towards higher level of sophistication, socialism and communism could always provide proper solutions to the world.

China is not the first country to implement socialism in the world; yet until now, China is the most successful country to implement socialism in the world. One of the reasons for the success is that China learned lessons from the experiences of USSR; but this is not the fundamental reason. Over the long history of development, China had accumulated sufficient social relation to realize a very sophisticated economic society; and this economic society naturally requires significant amount entropy decrease processes to function properly. In different times of history, the ideology that correlated to the entropy decrease processes in economic society would vary in forms. In the recent 100~200 years, communism/socialism is probably the most matching ideology with Chinese

culture to realize the entropy decrease processes in economic society, thereby reaching the goal of balance between free market economy and planned economy. As a result, the balance has generated a huge success for the development of Chinese economic society.

Similar to the USSR, the establishment of new China went through a series of wars ranging from 1839 (First opium war) to 1953 (Korean war). Chinese people had a surprisingly long time to find a proper solution before communism became the final choice. Planned economy based on the dominance of public ownership roughly started in 1953 featuring five-year plans (a heritage from the USSR), which continues until now. Thanks to the planned economy, China now owns the most comprehensive industrial system in the world. But this does not mean that Chinese people did not encounter setbacks during the development: Social campaigns such as Great Leap Forward and Cultural Revolution are examples of the society ignoring the importance of free market economy. Also, the breakdown of the USSR gave Chinese people lessons from outside. Chinese people generally realized that to make a gigantic economic society function properly, apart from the dominance of planned economy, free market economy is not only important, but also necessary.

Some historical events illustrate the gradual recognition of the necessity of free market economy by Chinese people. In 1978,[22] Reform and Opening-Up started to include various elements of free market economy into Chinese economic society. In 2004, “Citizens’ lawful private property is inviolable” (Article 13) was written into the Constitution of the People's Republic of China. In 2013,[23] CPC Central Committee decided that “The market is allowed to play a decisive role in allocating resources”. These events all reflect the mentality of Chinese people focusing on the balance between free market economy and planned economy: Both elements are of vital importance and each element has its proper role. In fact, if we do not have the choices of development directions offered by free market economy, we cannot even select from the choices to implement planned economy.

Nevertheless, free market economy is based on private ownership; and private ownership leads to exploitation and injustice.[24] The size, weights and operating ranges of free market economy need strict regulation to reach the balance. The uncontrolled development of free market economy would lead a gigantic economic society into dissociation or breakdown, just like the consequences

22. 3rd Plenary Session of the 11th Central Committee of the Chinese Communist Party

23. 3rd Plenary Session of the 18th Central Committee of the Chinese Communist Party

24. Jean-Jacques Rousseau - *Discours sur l'origine et les fondements de l'inégalité parmi les hommes*

from totally implementing planned economy (lessons from the USSR). The example goes into the current United States. The post-WWII prosperity of the US could be attributed to the balance between planned economy and free market economy.[25] But now, the US is encountering challenges from the national superpower retreat and the increasingly fragmented society: These challenges could be attributed to the fact that the elements of planned economy are in retreat and the elements of free market economy are developing in an increasingly uncontrolled manner.

From the discussions in this Section, we could compare the proper function of an economic society to the healthy lifestyle of a human being. Keeping a lifestyle that consists with natural rules, having self-discipline: These examples of planned lifestyle should be the mainstream of a human being. This could be compared to the planned economy as the mainstream of the economic society. Relaxing, resting and having recreations under proper conditions: These examples of free lifestyle is the necessary complement of one's life.[26] This could be compared to the free market economy implemented at proper extents/ranges in the economic society. For the topic of which social resources should be allocated to planned economy and which social resources should be allocated to free market economy, the discussions will be described in detail in Chapter 4.

3.4 Self consciousness and collective consciousness

As a human being, each individual of us is a member of a group or collective such as a family, an institution, or a country. The group or collective has its collective consciousness, which might be consistent, or inconsistent with our self consciousnesses. The ideal development status of a collective is based on the consistency between the collective consciousness and the self consciousnesses of the constituting members. As Warren Buffett put "never bet against America",[27] an individual's long-lasting success is always based on the success of the collective he/she belongs to. Whichever ideology we hold, proactively communicating with the collectives that we are in, and trying to reach consensus with the collectives would be a reliable pathway to succeed.

As a human being, each individual of us is in the same time a gigantic collective of the constituents of our bodies. If the constituting proteins of our

25. Also, US economic policies by then were free from the rivalries between capitalism and communism

26. Also, the free lifestyle could make people able to distinguish (via trial and errors) which activities are in consistent with natural rules and should be conformed as a plan.

27. https://www.cnbc.com/2021/02/27/warren-buffett-says-never-bet-against-america-in-letter-trumpeting-berkshires-us-based-assets.html

bodies have self consciousnesses of their own, the self consciousness of each individual of us will be the collective consciousness of the constituting proteins. "Γν□θι σαυτόν" (know thyself) is probably the perpetual topic of our lives, since we could never get a clear view of what our constituents are thinking about (Of course, we do not have to do this thoroughly). Since the ideal development status of a collective (each of us as an individual) is based on the consistency between the collective consciousness and the self consciousnesses of the constituting members (the constituting proteins of our bodies), it is of great importance to effectively communicate with the constituting parts of our bodies (such as routine health check and self-reflection) and reach consensus with ourselves. Through this, we could lead a proper lifestyle in food, sport, work, recreation and rest: The success of each of us could then be realized.

From the discussions above, we could assume that for atoms, molecules, organelles, cells, tissues, organs, humans, economic entities/societies at hierarchies low to high (all the way through to human society), each of the objects has self consciousness on its own. The self consciousness of an object is the collective consciousness of the objects at lower hierarchy; the sum of the self consciousnesses of this type of object (aka. their collective consciousness) is the self consciousness of an object at higher hierarchy. For objects at any level of hierarchy, they would have their specific operating principles; in the same time, the objects at different hierarchies would share many operating principles, which we call "natural rules". Biopolitical economics is thus a subject trying to find the shared principles between life sciences (the study of life) and political economics (the study of human economic society). Based on biopolitical economics, some natural rules could be revealed for both life sciences and political economics.

4. **Allocation of Resources**

In a living organism, apart from proteins and nucleic acids, the most important constituent is the resources in the species. Life activities are essentially the process of constituting proteins to function under the regulations of genetic information: Transformation and utilization of resources in life is thus the core activity. In life activities, saccharides, lipids (free form) and biomembranes (fixed forms of lipid) are all embodiment forms of resources; and they could undergo versatile transformation processes into each other. The liquidity, resource density and intimacy with proteins for saccharides, lipids (free form) and biomembranes (fixed forms of lipid) significantly vary; yet in the same time, all of the embodiment forms are of vital importance to life.

In an economic society, apart from the people and social relations, the most important constituent is resources in the economic society. Economic activities are essentially the process of the people to function under the regulations of social relations: Transformation and utilization of resources in economic society is thus the core activity. In economic activities, currencies, financial capitals (liquid forms of capital) and means of production (fixed forms of capital) are all embodiment forms of resources; and they could undergo versatile transformation processes into each other. The liquidity, resource density and intimacy with the people for currencies, financial capitals (liquid forms of capital) and means of production (fixed forms of capital) significantly vary; yet in the same time, all of the embodiment forms are of vital importance to the economic society.

4.1 Saccharides and currencies

4.1.1 Basic functions

In nature, chemical conversions are accompanied by the input or output of energy: The chemical bonds are thus the carriers of energy. The resource-related breaking/rebuilding processes of bonds requires a shared energy carrier for life to standardize life processes and to differentiate from disorganized non-life processes. Saccharides were selected by nature as the energy carrier of life, majorly due to the chemical bond energy consistency with proteins/nucleic acids, and the availability of C, H, O elements on planet Earth. The circulation of saccharides in life needs the background of metabolism system of the specific life form. Thus for different life forms, the circulating saccharides might vary in structure. However, different forms of saccharides could undergo biochemical conversions to be properly utilized between different life species. Apart from being circulated in life and carrying energy, saccharides could undergo other biochemical process to form nucleic acids and lipids. Saccharides could also functionalize some types of proteins to form glycoproteins: Glycosylation of proteins enable proteins properly function in various biochemical processes.

In economic society, economic activities are accompanied by the creation and utilization of social values. The creation and utilization of social values are accompanied by the exchange of social products. Under the regulations of social relations, the primitive goods-for-goods exchange mode standardized into the circulation of currencies; and currency is thus a reflection of values. The circulation of currencies needs the background of social credits based on social labour division. Thus for different economic societies, the circulating currencies might vary in forms. However, different currencies could be

exchanged during international trading activities. Apart from being circulated in economic society, currencies could be involved in special economic activities that influences social relations or generates financial capitals. Some types of occupations need intensive cooperation between the people and currency: Only with the ammunition of currency to prove the sufficient affordability, the task of the specific people could be properly realized.

4.1.2 Quantity in decent level

For a living organism, especially for advanced forms of life, the sugar levels need to be maintained at a decent level to enable normal life activities. For human beings, maintaining blood sugar to decent level is of vital importance as hypoglycemia, hyperglycemia and diabetes could all cause life-threatening risks. The decent quantity of sugar intake for a living organism is determined by the metabolic ability (aka. physical function) of the species for the time being. That is to say, the constituting proteins system's ability (along with other constituents) to perform normal biochemical conversions of sugar, determines the decent amount of sugar intake of the living organism.

For a human being, when his/her physical function is at lower status compared to normal situations, the decent amount of sugar intake should be reduced accordingly. After the physical function recovery, the decent amount of sugar intake could return (increase) to normal status. If a person is in a state of mentally stressed and cannot have proper rests, the signaling system of the body might have dysfunctions. As a result, his/her sugar intake might increase rather than decrease when the physical function drops. The main reason for this abnormality is that the process of sugar intake naturally pleases human's nervous system (directly related to human's control system), which is a seemingly relief of the stress. Excess intake of sugar could lead to "stress weight gain" and the risk of inflammation increases.[28] When sugars cannot be consumed by normal biochemical processes, they will intervene with many biochemical processes that do not need the participation of saccharide molecules; and thus inflammation occurs. When feeling low, just relax and have better plan of life. There is no need to let mental stresses mislead people's judgment of the decent amount of sugar intake, which is of much help for one's health.

For an economic society, especially for advanced forms economic society, the levels of currency circulation need to be maintained at a decent level to enable normal economic activities. Both excess or insufficient amount of currency supply could lead to social problems at different levels of severity. The decent

28. *Front. Immunol.* **2022**, *13*, 988481

quantity of currency supply for an economic is determined by the economic vitality of the economic society for the time being. That is to say, the vitality of the social members from all occupations (along with other constituents) to produce social values with the help of currencies, determines the quantity of currency supply of the economic society.

For an economic society, when its economic vitality is at lower status compared to normal situations, the decent amount of currency supply should be reduced accordingly. After the economic vitality recovery, the decent amount of currency supply could return (increase) to normal status. If an economic society is in a state of social tension or social conflict due to various reasons (such as ideology fragmentation, improper distribution of social resources, etc.), the constituents of the economic society could not perform sensible communication inside the society and the information system in the society might have dysfunctions. As a result, the currency supply might increase rather than decrease when the economic vitality drops. The main reason for this abnormality is that the process of currency supply naturally pleases economic entities that are directly related to the society's policy-making parts, which is a seemingly relief of social tension. Currency oversupply could reduce operating efficiency in most of the businesses in the society; in the same time, risks of social tension and social conflicts increase dramatically. When money cannot be consumed by normal economic activities, they will intervene with many economic activities that do not need the participation of money, or at least not that much amount of money; and thus barriers, tensions, conflicts occur. A proper plan to regulate the economic activities is important to economic societies. Especially when economic vitality is low, reallocation of social resources to genuinely reduce social tensions should be considered: This would correct the society's judgement of currency supply, which is of much help for the health of the economic society.

4.2 Lipids (free form) and financial capitals (liquid forms of capital)

4.2.1 Lipids (free form)

When the energy intake of life exceeds the required energy for basic life activities, the energy carrier (saccharides) could be transformed into free form of lipids. Lipids (free form) could also be digested and absorbed from exterior environment, which is also an important source of lipids for life. Compared to saccharides, lipids contain more C-H bonds (higher bond energy) and fewer C-O bonds (lower bond energy), which means that lipids have higher energy density as energy storage medium compared to saccharides. Meanwhile, to

release the energy stored by lipids, more resources are required to implement the related catabolism processes.

The most important function of lipids (free form) is not energy storage. The most important function of lipids (free form) is to be the precursor to form biomembrane systems (i.e. settling down from free forms to fixed forms), by the coalition with proteins. Critical biochemical processes are all related to biomembranes and membrane proteins.

The typical structure of lipids is a long C-H chain consisting of more than 10 carbon atoms. A special group of lipids called steroids, has typical basic structure of four hydrocarbon rings fused together (gonane). Steroids exist in most types of cells in life and are involved in many important biochemical processes. Along with proteins, polypeptides and other signaling molecules, this special type of lipid undertake an important role in the regulatory activities of life.

4.2.2 Financial capitals (liquid forms of capital)

When the social values created by economic society exceeds the basic living needs of the people in the society, currency in circulation would converge to transform into financial capitals. Directly looting financial capitals from other economic societies, or mining from nature, is also an important source of financial capitals. As had been mentioned in Section 1.5, financial capitals have attributes of being available to be traded in market; and their resource (social value) density is higher compared to currencies. Yet in order to be converted into social values, more social resources are also required (compared to currencies) to realize the corresponding economic activities.

The most important function of financial capitals is not resource storage. The most important function of financial capitals is to be the precursor to form means of production (i.e. settling down from liquid forms to fixed forms), by the coalition with the people (labourers). Critical social activities are related to means of production and the corresponding labourers.

Financial capitals could do more than undertaking the role of social resource storage media and the component of means of production. A special type of financial capitals could function as the tool for policy implementation, along with other forms of policy tools, to accurately regulate target economic activities.

4.2.3 Financial capitals - tool for good, tool for bad

Lipids are after all lipids. Even if lipids are the convergence of energy, without the coalition with proteins, lipids are no more than other carbohydrates or fossil

fuels to be finally combusted or decomposed. Getting fat is much easier compared to getting fit: Getting fat only need the intake of sugar and fat; getting fit need a good cooperation between proteins and the resources inside the body.

Capitals are after all capitals. Even if capitals are the convergence of social resources, without the coalition with the people (labourers), capitals are no more than other social resources to be finally consumed or decomposed. For an economic society, getting rich is much easier compared to getting strong: Getting rich only needs the control of social resources; getting strong needs the good synergy between the people and social resources.

After WWII, the United States established dollar credit system worldwide and the US dollar circulated as the most reliable currency in international trading. For some countries, US dollar might be even more reliable compared to the domestic currency. This phenomenon greatly facilitated the development of many economic societies, since the credit of US dollar has a strong background of productivity from the US. Globalization of US dollar currency offered a stable medium of social resources for many economic societies to utilize, which makes the US a reliable leader for many countries.

But when the economic society of United States faces the challenges of erosion from imperialist capitalism (aka. imperialism), situations began to change. Imperialist capitalism homogenize capitals with labourers by labeling both capitals and labourers with prices, the intention of which is to seize/control social resources as much as possible. But the attributes of labourers to constitute economic society are totally different from the case of capitals: This could be compared to the fact that proteins and lipids are totally different in chemical structure and in biological function as the constituents of life. Denying the distinctiveness of the people's role in economic society and homogenizing labourers with capitals are the original sins of imperialism. Imperialism is also the ideological basis of the deeds done by capitalists to loot social resources from everywhere in the world simply by printing money, generating financial capitals out from nowhere, and trading with the world backed by the US dollar credit system. Gradually, many economic societies in the world find that using US dollars are increasingly costly and there might be other candidate currencies as complement or even as substitute.

As previously discussed in Section 1.5, financial capitals cannot be freely traded with means of production (fixed forms of capital) in economic societies, which is similar to the fact that lipids (free form) cannot be freely interchanged with biomembranes (fixed forms of lipid) in life. If there is any uncontrolled interchanges between lipids (free form) and biomembranes (fixed form) in life,

this indicates abnormality or decomposition is happening in life. Trying to freely trade financial capitals with means of production everywhere in the world, is to loot or exploit from everywhere in the world. Using financial capitals as a tool to loot or to exploit does not only happen outside of the US; it happens in the same intensity in the US. The US, previously full of creativity and productivity, is becoming more and more "fat" (lots of financial capitals in the economic society) and "fragile" (labourers cannot have ideal coalition with capitals to form productivity), just like the obese patients (which exist in huge amount) in the US.

From the discussion above, we could argue that in economic activities, acknowledging the distinctiveness of both labourers and capitals are of vital importance. Only by doing this, labourers and capitals could have ideal coalition to form productivity at maximum efficiency. To realize the ideal coalition, public ownership of social resources is the basis: And this also supports the argument that communism ideology is the future of humanity.

In the above-mentioned paragraph, one important argument has not been discussed in detail: Why public ownership of social resources is the basis of the ideal coalition between labourers and capitals to form productivity at maximum efficiency? This argument will be discussed in detail in Section 4.3.

4.3 Biomembrane system and means of production

4.3.1 Basic functions (some rephrases of previous contents)

Biomembranes basically consist of phosphorylated lipid, an amphiphilic form of the lipid to build the bilayer structure (i.e. the fixed forms of lipid) in life. Biomembrane system functions with the proteins that are inserted into the bilayer structure. Biomembrane system is the most important location for life activities, since virtually all biochemical reactions (or reaction pathways) are related to biomembrane system. As had been described in Chapter 2, representative biochemical processes include but are not limited to molecular recognition, molecular transformation, signaling management, etc.

Means of production basically consist of fixed forms of capital, which are in coalition with the people (labourers) in the economic society. Means of production give out productivity by the manipulation of the people (labourers). Means of production is the most important location for economic activities, since virtually all economic activities proceed with the background of means of production. As had been described in Chapter 2, representative economic activities include but are not limited to the judgement of alignment or conflict of interests, production of goods, signaling management, etc.

4.3.2 Control of biomembranes by proteins, regulation of life activities

Proteins, metabolites and all other life-related molecules are compatible in the chemical environment offered by biomembranes, majorly due to the amphiphilicity of biomembranes. The distribution of proteins in biomembrane system (i.e. the control of biomembranes by proteins), is the basis of interests for all life components during life activities.

Life is an object with immense complexity. For a living organism at high level of sophistication, life activities are accompanied by homeostasis states[29] and non-homeostasis states of cell groups (such as cell differentiation, apoptosis, etc.). No matter which state the cell groups are in, the distribution of proteins in biomembrane system has a decent pattern to fulfill the normal functions of the cells. For cell groups at non-homeostasis states, typical functions of the cell groups undergo processes from non-existence to existence, or from existence to non-existence. Accordingly, the corresponding biomembrane systems also undergo processes from non-existence to existence, or from existence to non-existence.

Take example of a cell group that is newly generated from stem cell differentiation: This type of cell group previously did not exist, but exist now. To fulfill this transformation, the executing proteins (of the functions coming into existence) are sufficiently expressed now, but were much less expressed before the differentiation. From the perspective of the whole living organism (macroscopic perspective), the living organism needs to allocate resources with high priority to the newly-formed cell group to guarantee its development. From the perspective of the newly-formed cell group (microscopic perspective), proteins that were not sufficiently expressed in stem cells are now increasingly expressed: This phenomenon indicates that during cell differentiation, some types of proteins gradually manipulate/control part of biomembrane systems from scratch.

As for a cell group that is in the state of apoptosis, the corresponding biomembrane system along with the specific types of proteins would gradually fade out in the living organism. The whole process of apoptosis should also be delicately regulated by the living organism.

Cell groups are partially autonomous constituents of life, and are naturally available to expand in sizes when sufficient resources are offered. However, the resource that a specific living organism could offer to life activities is limited. All cell groups generated from cell differentiation could only obtain limited amount of resources after a certain period of time, which means that the cell

29. Homeostasis state of cell groups also include normal updates of cells in the specific cell group

groups would undergo the transition from non-homeostasis state to homeostasis state. From the perspective of the whole living organism (macroscopic perspective), resources allocated to the specific cell group would gradually stabilize into a decent range. From the perspective of the newly-formed cell group (microscopic perspective), the share of biomembrane system controlled by newly-expressed proteins would gradually stabilize into a decent range.

To properly enable the transition process in the paragraph above, the delicate regulation of life activities is of vital importance. Since cell groups are partially autonomous and could expand in an uncontrolled manner, the living organism should accurately allocate resources to each type of cell group with the purpose to make everything controlled. Illnesses or diseases at different levels of severity are related to the imbalance or dysfunction states during the regulation of life activities. Life activities could be categorized into different levels of essentiality. For an advanced form of life, the most essential life activities include but are not limited to respiration, immunity, metabolism of energy-related molecules, etc. If these activities are impaired, life-threatening risks would at once appear. Thus for life, the more essential life activities are, the more delicate and accurate regulations of these activities are required for the life.

For a living organism, when imbalance or dysfunction states occur during the regulation of life activities, some types of cell groups would develop in an uncontrolled (or poorly controlled) manner. From the perspective of the whole living organism (macroscopic perspective), the uncontrolled (or poorly controlled) state of the specific cell groups would consume more resources than the decent amount, thereby giving extra burdens to the living organism. From the perspective of the specific cell groups (microscopic perspective), the over-expression of certain types of proteins are directly related to the imbalance or dysfunction states of the regulation of life activities.[30] When the amount of overall biomembrane resource stays still, the over-expression of certain types of proteins would force part of other proteins out of the biomembrane system (when at normal state, these proteins should have good manipulation to the biomembrane system). Membrane proteins being forced out of biomembranes, would lead to dysfunction status of signal management during life activities.

For example, a certain type of protein would be recognized as “ally” by T cells if it is on the right place of biomembrane system. If this type of protein is

30. We cannot confirm whether the over-expression of certain types of proteins leads to the imbalanced (or dysfunction) status, or the imbalanced (or dysfunction) status leads to the over-expression of certain types of proteins. Yet in practice, the imbalanced (or dysfunction) status is virtually another presentation mode for the over-expression of certain types of proteins.

outside of biomembrane systems, its conformation would dramatically change: There is a possibility for T cells to recognize the protein as “enemy”. This situation would lead to autoimmunity dysfunction and illnesses such as inflammation or cancer might occur.[31]

4.3.3 Control of means of production by the people, regulation of economic activities

The people and all other economy-related objects are compatible in the environment offered by means of production, majorly because means of production could be manipulated by the people, and in the same time, could transform raw materials into products. The distribution of the people in means of production (i.e. the control of means of production by the people), is the basis of interests for all components of economic society during economic activities.

Economic society is an object with immense complexity. For an economic society at high level of sophistication, economic activities are accompanied by homeostasis states[32] and non-homeostasis states of industries (such as formation of new industries, exit of old industries, etc.). No matter which state the industries are in, the distribution of occupations in the means of production system (i.e. the people’s control of means of production system) has a decent pattern to fulfill the normal functions of the industries. For industries at non-homeostasis states, typical functions of the industries undergo processes from non-existence to existence, or from existence to non-existence. Accordingly, the corresponding means of production also undergo processes from non-existence to existence, or from existence to non-existence.

Take example of an industry that is newly generated from social labour division[33]: This type of industry previously did not exist, but exists now. To fulfill this transformation, the executing occupations (of the industry coming into existence) are sufficiently in demand now, but were much less in demand before the social labour division. From the perspective of the whole economic society (macroscopic perspective), the economic society needs to allocate resources with high priority to the newly-formed industry to guarantee its development. From the perspective of the newly-formed industry (microscopic perspective), occupations that were previously not sufficiently in demand are now increasingly in demand: This phenomenon indicates that during social

31. *Nature* **2008**, *454*, 436–444

32. Homeostasis state of industries also include normal productivity updates in the industry, on condition that the overall productivity of the industry remains still.

33. Forms of social labour division include but are not limited to: Technological progress, scientific revolution, etc.

labour division, some types of occupations gradually manipulate/control part of the system of means of production from scratch. Thus this is the blue ocean era of the industry.

As for an industry that is in the state of exit, the corresponding system of means of production along with the specific types of occupation would gradually fade out in the economic society. The whole exiting process should also be delicately regulated by the economic society.

Industries are partially autonomous constituents of economic society, and are naturally available to expand in sizes when sufficient resources are offered. However, the resource that a specific economic society could offer to economic activities is limited. All industries generated from social labour division could only obtain limited amount of resources after a certain period of time, which means that the industries would undergo the transition from non-homeostasis state (blue ocean era) to homeostasis state (red ocean era). From the perspective of the whole economic society (macroscopic perspective), resources allocated to the specific industry would gradually stabilize into a decent range. From the perspective of the newly-formed industry (microscopic perspective), the share of means of production system controlled by newly-formed occupations would gradually stabilize into a decent range.

To properly enable the transition process in the paragraph above, the delicate regulation of economic activities is of vital importance. Under the premises of free market economy, private ownership and capitalist ideology urge the control/manipulation of resources should expand in an uncontrolled manner, no matter whether the industry is at homeostasis or non-homeostasis state. Thus the economic society should accurately allocate resources to each type of industry with the purpose to make everything controlled. Social problems at different levels of severity are related to the imbalance or dysfunction states during the regulation of economic activities. For an economic society, economic activities could be categorized into different levels of essentiality. The more essential the economic activities are, the more delicate and accurate regulations of these activities are required for the economic society; and it is more important to have dominance of public ownership (aka. elements of planned economy) in the corresponding industries. If the essential activities function in an uncontrolled manner, risks that threaten the basis of the economic society would appear.

For an economic society, when imbalance or dysfunction states occur during the regulation of economic activities, some types of industries would develop in an uncontrolled (or poorly controlled) manner. From the perspective of the

whole economic society (macroscopic perspective), the uncontrolled (or poorly controlled) state of the specific industries would consume more resources than the decent amount, thereby giving extra burdens to the economic society. From the perspective of the specific industries (microscopic perspective), the excess manipulation of means of production by certain types of occupations (i.e. the existence of capitalists) are directly related to the imbalance or dysfunction states of the regulation of economic activities. When the amount of overall resource of means of production stays still, the excess manipulation of means of production by capitalists would force part of other labourers out of the means of production system (when at normal state, these labourers should have proper manipulation to the means of production system). Labourers being forced out of the means of production system, would lead to dysfunction status of signal management during economic activities.

For example, a person would be regarded as “comrade” if he/she is in an economic entity with public ownership as the basis. If he/she no longer has proper manipulation to (or being forced out of) the means of production system, he/she would be regarded as the “employee” reporting to his/her “employer”. If he/she is jobless, he/she might be regarded as “outlaw” to make a living. The absolute difference on the control or manipulation of means of production system, leads to class conflict between proletarians and capitalists. Class conflict would prevent people from looking at things from the same standpoint, thereby leading to the dysfunction status of signal management during the entire process of economic activities. As a result, the economic society would encounter challenges from social conflict or confrontation when distribution of social resources is poorly regulated.

4.3.4 Communism and socialism must prevail

From the discussions in Section 4.3.2, we could conclude that an advanced form of life would require delicate regulations of all life activities by life as a whole. Meanwhile, the more advanced the life form is, the higher level of regulative ability is required for the life form. From the discussions in Section 4.3.3, we could conclude that an advanced form of economic society would require delicate regulations of all economic activities by the society as a whole. The regulative activities, along with free market activities (backed by human nature), are both prerequisites for the economic society. Meanwhile, the more advanced the economic society is, the higher level of regulative ability is required for the economic society.

For a human being, self-discipline leads to freedom. Via self-discipline, an individual could level up personal ability to fulfill versatile tasks. Being able to

fulfill versatile tasks makes a person available to more choices in work and life, thereby reaching the goal of freedom. For an economic society, the general background of public ownership ensures its ability to regulate all constituting industries. The regulative activities implemented by the economic society as a whole, are the sine qua non for the economic society to develop towards a more advanced, more comprehensive status. We know that perfection is never easy to be realized: Even if regulative activities are properly implemented inside the society, disturbances from exterior environments such as natural disaster and wars/conflicts would be a great challenge to the road to prosperity. Yet despite the challenges, staying in the right pathway is always sensible.

History tells us that totally implementing public ownership in economic activities would be detrimental to the economy, since this violates the human nature chasing for interests. Meanwhile, totally implementing private ownership would be even worse, since this damages the basis of a society to develop towards a more advanced, more comprehensive state. Advanced forms of economic societies should have their essential economic activities based upon public ownership to enable vital regulative activities; private ownership should also be fully acknowledged in specific areas of economy to fulfill the human nature chasing for interests.

Provided that the development of human society targets at a more advanced, more comprehensive state, many economic activities that were previously newly-formed gradually become essential economic activities to human society. Under such circumstances, regulative activities in economic societies are thus increasingly in demand, especially for advanced forms of economic societies. The discussions above could be an argument against Janet Yellen's remarks in December 2023 that "Too strong a role for state-owned enterprises can choke growth".[34] From the perspective of biopolitical economics, state-owned enterprises are increasingly in need for the essential activities of a giant economic society. Thus communism and socialism are the future of humanity and must prevail.

4.3.5 Role of private ownership in socialist economy

It should be note that private ownership is backed by human nature to chase for interests. Thus despite that essential economic activities are regulated by public ownership, private ownership should undertake a necessary and significant role in socialist economy. The balance between public ownership and private ownership signifies the balance between planned economy and free market

34. https://china.usembassy-china.org.cn/remarks-by-secretary-of-the-treasury-janet-l-yellen-on-the-u-s-china-economic-relationship-2/

economy (also the balance between entropy decrease and entropy increase) inside the economic society.

For an economic society, natural environments and international contexts are constantly changing. To succeed in the competition with other economies (and also with the nature), essential economic activities of an economic society are constantly in need of adjustment to ensure maximum productivity of the society: Planned economy could properly implement the task of adjustment.

Private ownership could maximize people's productivity in chase for their own interests. For industries that are not in the areas of essential activities of the economic society, private ownership (along with free market economy) would offer significant amount of work positions to the labourers. More importantly, many new elements of productivity are generated by free market economy: These elements of productivity would become the candidate pool for planned economy to select; and some of the new elements of productivity would later become essential activities of the economy society. Thus private ownership (along with free market economy) offers important candidate elements for planned economy to implement the task of adjustment mentioned in the previous paragraph.

It should be noted that although chasing for personal interests is human nature, chasing for collective interests is also the nature for the economic society that we are in. Only when the interests of individuals are in harmony with the interests of the collective, that sensible solutions could be reached. As a result, to make private ownership legitimate in socialist economy, private ownership must conform to the regulative activities implemented by planned economy. Chasing for unconditional private ownership is refusing to accept the socialist economic system: Such deeds should be cautioned, restricted and punished.

4.3.6 Essentiality levels of economic activities, Maslow's hierarchy of needs

As discussed in Section 4.3.3, economic activities could be categorized into different levels of essentiality. The more essential the economic activities are, the more delicate and accurate regulation of these activities are required for the economic society. For current human society, highly essential economic activities include but are not limited to: Food supply, energy supply, communication, infrastructure, national defense, public security, education, healthcare, accommodation, social welfare & pension, banking & financing, internet (including artificial intelligence), etc.

We again use Chinese economy as an example to discuss the essentiality levels of economic activities. From 1953 to 1978, China followed the mode of USSR economy to totally implement public ownership in economic activities. Great

achievements had been made, especially in the fields of basic manufacturing industry; yet many obstacles were encountered without the vitality of free market economy. Starting from 1978, elements of free market economy (private ownership) gradually came into Chinese economy. The incorporation of free market elements had been performed in a highly prudent style. During the last 45 years, Chinese people has benefited a lot from free market economy, since many industries were filled with vitality when people could chase for interests of their own. In the same time, Chinese people found that some essential economic activities (industries) incorporated elements of private ownership beyond the appropriate limit: Social problems were then incurred in the corresponding areas of economy.

Food supply, energy supply and security are always vital to either a person, or a country. According to Maslow's hierarchy of needs, these topics falls into the bottom two hierarchies: Physiological and safety. In socialist China, economic activities involving food supply, energy supply, national defense and public security, have always been dominated by public ownership. This situation guarantees every citizen in China has equal basic rights to survival.

Communication, infrastructure and social welfare & pension are economic activities approximately related to the “belonging and love” hierarchy. On these topics of economic activities, socialist China has been keeping public ownership as the dominating element. Thanks to planned economy, China currently owns the most advanced system of high-speed railway, 5G communication and electricity supply infrastructures. Powerful electricity supply enables the ongoing clean energy revolution in China, featuring the whole supply chain of photovoltaics and electric vehicles.

Education, healthcare, and accommodation are economic activities that encounter more complicated situations. Education serving for personal interests, premium healthcare, as well as upgraded housing, are not quite essential for economic societies. Elements of private ownership had been incorporated into the non-essential part of these activities, and had greatly improved the quality of living in China. Meanwhile, basic education, basic medical care and basic accommodation are economic activities with high essentiality. Incorporation of private ownership into such areas, as we have observed in current Chinese economy, would lead to social inequality that hampers the productivity of labourers. Chinese people have observed social problems such as inequality in basic education, expensive essential medicines/medical treatments, expensive basic housings, etc. The government

is now working hard to reestablish the dominance of public ownership in the corresponding highly essential economic activities.

Banking & financing are tools for social resource distribution. This tool could both serve activities based on public ownership and serve activities based on private ownership. Chinese banking & financing system had been efficiently involved in highly essential economic activities to serve public ownership, and great success had been achieved. Yet in some highly essential economic activities (such as examples mentioned in the previous paragraph), the banking & financing system had provided services to private ownership, which is detrimental to socialist economy. China has now realized this problem, and is redirecting the specific divisions of banking & financing system to the right target.

The list of essential economic activities might change over time. Take internet as an example: Before the Information Age, internet was not available in human society and the related economic activities were thus not included in the list of essential economic activities. But now, internet has an irreplaceable position in the economy since it is related to national security, people's everyday communication, public information dissemination[35], etc. Also, artificial intelligence (AI) previously had insignificant productivity. Yet now, the productivity of AI is increasingly important and could remodel the situation of social labour division in the future. Thus internet, along with AI inside, should be considered as highly essential economic activities.

The rise of internet economy in China is very similar to the situation elsewhere in the world: Elements of private ownership dominated the economic activity in the start. Chinese government gave sufficient policy support to internet industry from 2010 to 2020, which made Chinese internet economy gigantic in volume. However, private ownership still dominated internet economy when internet had become a highly essential economic activity in China, giving rise to several private monopoly enterprises, and also leading to a sharp inequality of social resource distribution in internet economy. Chinese government realized the problem from 2020, and is now making efforts to gradually establish the dominance of public ownership in internet economy.

4.3.7 We need a world with sufficient inclusiveness, openness and versatility

In nature, versatile life forms/species are distributed in different territories and different time ranges. The deciding factors for the distribution include genetic information of life forms, as well as environmental conditions such as

35. Dissemination of public information may influence mainstream ideology in a subtle manner.

temperature, lighting, water, natural resources, etc. In all, life should fit to its natural surroundings.

If we assume the economic societies of humanity as special life forms with their respective characteristics, then in different territories and different time ranges, the inhabiting economic societies should have their decent political/economic rules fitting to their respective natural surroundings. Trying to use a series of preset political/economic rules to apply to economic societies with different cultural backgrounds, different climate conditions, different natural resource densities, and different levels of development, is futile and in the same time harmful to the development of the local economy.

Imperialism attempts to apply capitalist social relation system to every economic society in the world, which would only lead to the state of constant conflict and turmoil, and local resources being looted. Thus imperialism could not give sustainable progress for humanity. Respecting the choices of the local people and cooperating with each other on the basis of equality and mutual benefit, is the solution with inclusiveness and long-lasting goodness.

As has been described in Section 3.3, sophisticated economic societies should be equipped with more complicated organizations. Thus a highly advanced economic society should be sufficient inclusiveness to versatile constituents of the society. Racism and separatism are thus enemies to economic societies. Racists hold the mentality that their belonging group is “superior” to other groups. The mentality leads to the fact that racists’ group has a less inclusive organization compared to other groups. Thus logically, economic societies run by racists are less advanced (or in the wording style of racists: “inferior”) compared to other economic societies, which makes the whole case quite ironic.

In fact, all life forms and all economic societies have their own good reason to exist in the world: We cannot simply say which life form/economic society is superior or which is inferior. Do unto others as you would have them do unto you, seek common ground while reserving differences, are the solutions to the whole humanity for a bright future.

4.3.8 How do we promote communism in the world?

As has been discussed in Section 3.3.3, communist ideology and planned economy are entropy decrease factors in an economic society. Entropy decrease processes are non-spontaneous, which makes the worldwide promotion of communism really challenging. Yet being non-spontaneous does not necessarily mean being not realizable. Life itself, as a result of significant entropy decrease, prevails in the world.

According to Gibbs free energy equation,[36] if we would like to have spontaneous entropy decrease in a system, filling enthalpy into the system seems to be the only solution when temperature stays still. For human society, filling enthalpy into economic society signifies the activity of filling productivity into the economy. Only when people enjoys the fruits of economic development, that could make people realize rules are important. It should also be noted that the fruits of economic development should be accessible to all people in communist society, whereas in capitalist society, the fruits of economic development are only accessible to “elites”.

Communists have the historic role to promote communism in the world. For countries being exploited and looted by capitalism, unite of proletarians, fight against exploitation, trying to reallocate social resources (especially with regard to means of production) and liberating productivity are always the right solutions. Different countries always have different styles of culture and ideology, which means telling local people to do this or to do that only makes one a clown. Do something, rather than say something.

Infrastructure and technology is the real solution to realize productivity level-up: Thus helping other nations to build infrastructure and upgrade technology is a sensible way to promote communism in the world. Historically, the support from USSR of infrastructure construction and technology transfer to the newly established New China (156 Проектов) is a great example of promoting communism in the world. Prague Spring is a historical event of telling someone to do this or to do that, and is thus a negative example of promoting communism in the world.

Currently, China’s Belt and Road Initiative looks for trading opportunities with countries interested in the initiative. Since nothing could be obtained really for free, China would like to do business with the world with something in return. But the pricing policies set by Chinese suppliers are fundamentally different from capitalists.

Backed by technology superiority or monopoly or hegemony, capitalists seeks to earn supernormal profit as much as possible through any trading. As a comparison, China would like everyone in the world have access to products from the state-of-art technology at a reasonable price, especially in the realms of manufactured goods. Meanwhile, China also seeks to provide help to less-developed countries in need of infrastructure upgrade and technology improvement. In all, when people find that trading or cooperating with China

36. $\Delta G = \Delta H - T\Delta S$

really improves life quality, they might be interested in the ideology system that helps China to achieve.

Marxism and World Revolution

Haz Al-Din[1]

In an era of increased theoretical discourse surrounding the rise of multi-polarity, it is important to re-examine the historically Marxist view on the topic of politics and struggle at the world scale.

The history of Marxism is indexed and marked by the formation of international associations – the first, second, and third internationals. The Marxist tradition had always been committed to the principle of proletarian internationalism. Though unpublished, in *Principles of Communism* Engels aptly surmised the Marxist view of the anticipated proletarian revolution to come:

> *"It is a universal revolution and will, accordingly, have a universal range."*

Further, the rallying cry of world revolution featured prominently among the slogans of the October revolution. It also characterized, to a great extent, the propaganda of anti-Communist, reactionary and fascist forces throughout the

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

1920's and 30's. Additionally, during the Great Proletarian Cultural Revolution in China, a strong emphasis was placed on the international nature of proletarian, socialist, and anti-imperialist revolution.

However, the slogan and notion of world revolution is most often incorrectly associated with the Trotskyist notion of 'permanent revolution' – which contrasts with the Marxist-Leninist view of building Socialism in One Country. But in fact, there is no need to concede to Trotskyism the indispensable and essential principle of proletarian internationalism and world revolution. There is no need to regard as incompatible the principles of Socialism in One Country and World Revolution.

In order to better comprehend the Marxist-Leninist view of world revolution, it suffices to draw attention to one of the most commonly cited 'paradoxes' within Marxism itself, as repeated by criticism like Leszek Kołakowski in the third volume of *Main Currents of Marxism*: That Marxism regards the anticipated proletarian revolution as objective and inevitable, while simultaneously regarding subjective class-consciousness, political willpower and leadership as an indispensable factor in the realization of said revolution. The adoption of class-consciousness is itself justified on the basis that it is scientific, and correctly reflects objective historical laws. Yet on the other hand, said class-consciousness is itself an indispensable factor in the realization of said laws. How then, can the Marxist view of proletarian revolution and socialism be *scientific*?

The major theoreticians of Social-Democracy in Europe – such as Karl Kautsky – set about to 'resolve' this paradox by regarding the victory of the proletarian revolution as inevitable insofar as the alternative would guarantee the ruin of civilization itself. Rosa Luxemburg cited Fredrich Engels as having stated that: "Bourgeois society stands at the crossroads, either transition to socialism or regression into barbarism."

In this vein, Social-Democratic thinkers gave rise to a tradition within Western Marxism which justified the necessity of socialism on the basis that the alternative would be the complete destruction of civilization – or in today's 'green' framing, the extinction of mankind itself. Regardless of the merits of such a view, in no way does this restore objective inevitability to the notion of the victory of the revolutionary proletariat. Rather, it affirms choice as the foundation for socialist politics – the choice between civilization, survival, and the choice of extinction. This is not any less methodologically voluntarist,

idealist, and antithetical to the Marxist view than the notion that socialism arises from purely moral, arbitrary, whimsical, etc. foundations.

What is misleading about the notion of socialism or barbarism is that it is relative to a specific frame of time. Engels was indeed correct that Europe stood at such a crossroads. Yet a regression into barbarism does not alter the historical inevitability of socialism – it merely delays its arrival. Perhaps one of the reasons that Lenin is often incorrectly attributed the quote: "There are decades where weeks happen, and weeks where decades happen" is since no decisive historical figure comprehended the dynamic, dialectical nature of historical time as keenly and sharply as Lenin.

Throughout the course of his life, Lenin strongly affirmed the need to regard the development of history as often moving and proceeding in 'zigzag' and roundabout ways. And of course, it was Lenin himself who resolved this theoretical 'paradox' in his many polemics with the economists (who rejected the necessity of politics) and narodniks (who rejected the necessity of regarding political contradictions as objective and rooted in economic relationships).

Often overlooked is how Lenin actually does attribute to political will and the subjective factor a role that is really decisive for the development of history: In the dimension of what neoclassical and other Rightward economists often call *time-preference*. In other words, that while the outcome of history, *insofar as there is a real history in the process of development*, is certainly determined by objective and impersonal laws, consciousness and the subjective factor can be decisive in either hastening, retarding or even temporarily regressing this development (backward). In *Against Boycott*, Lenin writes:

> *"That history usually follows a zigzag path and that a Marxist should be able to make allowance for the most complicated and fantastic zigzags of history is indisputable. But this reiteration of the indisputable has nothing to do with the question of what a Marxist should do when that same history confronts the contending forces with the choice of a straight or a zigzag path. […]*
>
> *As it happens,* ***revolutionary periods are mainly such periods in history when the clash of contending social forces, in a comparatively short space of time, decides the question of the country's choice of a direct or a zigzag path of development for a comparatively very long time****.*

> *The need for reckoning with the zigzag path does not in the least do away with the fact that* ***Marxists should be able to explain to the masses during the decisive moments of their history that the direct path is preferable****, should be able to help the masses in the struggle for the choice of the direct path, to advance slogans for that struggle, and so on."*

Here, Lenin dichotomizes 'zigzag' and 'direct' paths of developments, with the 'subjective' role of consciousness and direct political intervention often being decisive not in the determination of history, but in whether it will proceed upon a zigzag or direct path in the development of that determination. It likewise suffices to recall how urgently and pressingly Lenin regarded the need to act on the eve of the October Revolution. "*We must not wait!! We may lose everything!!"*

For Lenin, the scientific class consciousness of Marxism has the power to both accelerate and integrate the development of history. This is by correctly tying all the necessary, already-existing, and fundamentally inter-connected threads of history within a given moment *together* by way of consciousness and practical action. The development of history proceeds in such a way that brings together a host of forces and elements that, while fundamentally inter-connected materially, remain estranged at the level of consciousness.

On the one hand, all social forces are inter-connected materially at the level of the total mode-of-production, at the level of basic material-inter-dependence with respect to the subsistence of all individuals. But what threads and ties *revolutionary* forces together lies in the shared reality of contradictions. Contradictions which are definitely reflected at the level of subjective consciousness but never-the-less *insurmountable*. And it is precisely this insurmountably that gives them objectivity and lawful determination within Marxism.

Only insofar as these fundamental contradictions at the heart of society are responded to in a way that reflects their total inter-connectedness, and which *really reflects* the contradiction itself rather than only one-dimension of it, is the advance of history possible. There are infinitely many possible permutations of consciousness, choice, and action on the part of people embedded within a given historical impasse or paradox. All of these can only give expression to different variations of the same, fundamental historical impasse – unless a responsivity to the fundamental contradiction itself emerges, even by chance and accidentally, among these permutations.

Such a possibility is a common theme of literature and film. Take for example the first Joker (2019) film. Somehow, while stumbling his way through various personal tribulations and great psychological turmoil, Arthur – in a way that was completely accidental and devoid of any conscious intentionality– manages to reflect the fundamental contradictions of society, becoming the symbol of a new movement. Hegel calls the way this complex inter-play of various personalities, private intentions, and actor-networks inadvertently gives rise to a development of the world spirit the 'cunning of reason.'

Since there are infinitely many possible 'subjective' permutations, or permutations of the ways in which people can respond to the world around them, it is strictly and only a matter of probability that a given permutation will arise that correctly concentrates and reflects the totality of society, facilitating new developments of history. Of course, the mode of production, forces and relations of real, material and physical production, are what establish the range of different possible permutations of activity by individuals. Novelty at the level of history arises not simply when new permutations arise that add to the totality of production – but when they accurately reflect changes that had already occurred at the material level, material changes which the sum-total of societal activity gave rise to *inadvertently*. Not according to the conscious intentions, decisions, and choices of actors – but according to the necessarily objective nature of their inter-relations at the level of real production.

Further, the overwhelming majority of the ways in which people accurately reflect and respond to material transformations are accidental and unconscious. This is especially clear in the era of social-media – where consciously inexplicable 'memes' possess the ability to reflect changes in society with an accuracy far more acute than anything the conscious thinking of a single individual could possibly produce. And the majority of these arise accidentally, inadvertently, as one of the many infinite permutations of possible communication.

The objective inevitability of socialism is likewise a simple matter of probability. It will happen inevitably, even without the assistance of scientific consciousness. In fact, the first forms of socialist consciousness were far from scientific. Even now, the majority of revolutionary forces worldwide do not possess any scientific consciousness. The decisive role of Marxism lies not in bringing about from scratch, but *accelerating* the revolutionary process already in motion, by scientifically concentrating all revolutionary forces into a single and united organ of responsivity – the International, or at the national level, the

Communist Party. Without the assistance of Marxism, world revolution is postponed, delayed – its constituent components confused, disunited, and unable to recognize their inter-connectedness.

The majority of the constituent organizations of the First International were composed of all manner of progressive and revolutionary forces. Likewise, the third-international established anti-imperialist struggles as an indispensable part of the impending world revolution.

Today, the task of Marxism lies not in dictating to the already-existing revolutionary forces of the world the terms and conditions upon which they should set about their struggle, but in clarifying scientifically their inter-connectedness, and the fundamental contradictions of the global system that already laid the groundwork for their struggles. Only Marxism can consistently and rationally unite the forces of Russian sovereignty with the axis of resistance, China, existing socialist nations, and the international cause of labor. Such a unity is what gives real meaning and substance to the slogan of world revolution.

It is the comprehension of the already-existing revolutionary struggles as a unified plane of existence that distinguishes the Marxist-Leninist notion of World Revolution from Trotskyism. Marxists are not interested in imposing world-revolution – rather, the point is to recognize it as already existing. And the consistent and scientific application of this recognition acts as an accelerant to the process – a way of fulfilling the direct, rather than zigzag development of history.

2

Marxism, Motherhood, and How the Left's Anti-Family Agenda Dooms Future Generations

Slava Jalili [1]

In today's political landscape, there is a growing disconnect between what many on the left claim to support and the societal trends emerging from the policies they are advocating for. The Marxist ideal of a society where human relationships are rooted in solidarity, mutual respect, and collective responsibility starkly contrasts the growing trend of doomerism and anti-family rhetoric promoted by the left. As we witness the rise of the "DINK" (Dual Income, No Kids) economy and an increasing cultural preference for pets over children, it becomes clear that contemporary leftist ideology is doing more to undermine the family structure than to advance it.

---

1. Slava Jalili is a Ukrainian American, member of the ACP Politburo, and correspondent at the Revolution Report media collective.

At the heart of this issue lies the discouragement of marriage and parenthood. While these are fundamental elements of society and central to the Marxist vision of collective human flourishing, the modern left has increasingly championed narratives that discourage women from pursuing family life. Ironically, these attitudes directly conflict with the very principles of Marxist thought that should prioritize family-building, community, and the nurturing of future generations.

The Rise of the DINK Economy: A Product of Capitalism, Not Socialism

The ”DINK” economy represents a cultural shift in which many couples - particularly women - choose dual incomes over having children. This shift isn’t necessarily an organic societal choice but rather a product of economic conditions largely created by capitalism. Rising housing, education, and healthcare costs, combined with stagnant wages and an increasingly unstable job market, make it harder for young people to envision a future that includes children.

From a Marxist perspective, this phenomenon isn’t a victory for women’s liberation, as some might suggest. The capitalist economy has created a system where people are forced to prioritize work and consumption over family and community. For women, this manifests in a difficult choice: sacrifice time for family to build a career, or forgo motherhood to make ends meet. The narrative of “empowerment” that the left promotes often disguises the fact that this situation is a direct consequence of capitalist exploitation, not a step toward genuine equality.

While the capitalist system profits from the exploitation of both labor and reproductive work, it simultaneously undermines the very possibility of building stable families by making parenthood economically untenable. The solution isn’t more careerism or individualism, but the transformation of societal structures that provide equitable opportunities for women to both contribute to the workforce and nurture families.

Pets Over Children: A Symptom of a Broken System

In many American households today, pets have become a substitute for children. People invest in animals for companionship, and while pets bring joy, they come without the long-term responsibility, financial commitment, and societal expectations that children bring. The rise of pets as ”family members” isn’t simply a matter of personal preference - it’s a reflection of the alienation and disillusionment caused by the capitalist system, which commodifies human relationships and reproduces a culture that sees children as burdens rather than blessings.

What’s deeply troubling here, from a Marxist perspective, is that children are the future of society and revolutionary change. By prioritizing pets over children, the dominant culture is not only making a political statement about individualism but also erasing the communal bonds that sustain future generations. This trend undermines the family as the building block of a collective and equitable society. Pets, unlike children, don’t come with the need for long-term care or the potential to question and transform the world in meaningful ways. Yet, the capitalist machine has made the prospect of raising children seem unfeasible for a growing number of people, particularly among younger generations who face a grim economic outlook.

Doomerism and the Left's Anti-Family Narrative

One of the most insidious trends among the so-called left today is a pervasive sense of ”doomerism” - the belief that the world is in an irreversible state of decline. Leftists, particularly those with a surface-level Marxist analysis, have propagated the idea that it’s irresponsible to bring children into a world threatened by climate change, economic collapse, and political instability. Instead of offering solutions that would enable families to thrive, these leftists tell young people that the future is too bleak to build meaningful lives or raise children.

Doomerism, while rooted in real concerns about the state of the world, is being used as an excuse to avoid confronting the very systemic issues that make parenthood and family life challenging in the first place. A true Marxist approach would see this pessimism not as a rallying cry, but as an obstacle to revolutionary change. Instead of pushing people away from creating families

and contributing to the future of society, the left should be working to provide the conditions for families to flourish. Free healthcare, childcare, paid parental leave, and decent wages for both parents are not just benefits - they are essential components of building a strong, revolutionary working class.

Telling people not to have children because of the fear that society is doomed only serves to keep them in a state of helplessness, preventing them from taking the necessary steps to create the kind of world that could reverse these trends. Revolutionaries need to build families, not abandon them. The socialist vision should encompass a society where raising children is seen as an integral part of societal progress, not an act of personal sacrifice.

The False Choice: Women as Mothers or Revolutionaries?

One of the most tragic aspects of the modern left's approach to family life is the promotion of a false dichotomy: the idea that women must choose between being mothers or being revolutionary. This narrative assumes that caring for children and building a revolutionary society are mutually exclusive, an idea that is deeply alien to genuine Marxist theory.

Marxism has always understood that the family is a fundamental social unit - one that, when properly supported, can contribute to the collective good. Women can, and should, be both mothers and revolutionaries. The role of motherhood should never be viewed as a hindrance to a woman's potential or her involvement in social change. Instead, it should be seen as part of the collective effort to build a new world. Women do not have to sacrifice their motherly instincts to pursue careers or political activism. The struggle for socialism must include the struggle for women to have the right to fully participate in both motherhood and revolutionary activity without facing economic or social barriers.

To create a society that empowers women, we must dismantle the structures that prevent them from having both children and fulfilling careers. We need to fight for the creation of a system that supports working parents, where child care, healthcare, and education are universally accessible and where women's labor - both in the home and in the workforce - is valued equally. Only then can women be free to choose both career and motherhood without fear of economic ruin.

Conclusion: Reclaiming the Family for Socialism

The current leftist discourse on family life, motherhood, and parenthood does not reflect the true spirit of Marxism. Rather than promoting policies that allow families to flourish, it has embraced a culture that encourages individuals - especially women - to forgo having children and embrace a future without the communal bonds that families create. This has resulted in a society where people, particularly women, are forced to choose between career and family, between individualism and collective solidarity.

A true socialist future requires a reimagining of family life, one in which women can be mothers, workers, and revolutionaries all at once. Marxists should not be discouraging people from building families, but advocating for the policies and societal structures that allow families to thrive. Children are the future of the revolution, and women must be free to nurture that future without sacrificing their aspirations. We must fight for a world where motherhood and revolution can coexist, where families are not seen as an obstacle to progress, but as a vital part of building a better, more just world for everyone.

The Impermanence of Alliances and the Non-Ideological Nature of Multipolarity

Dr. Christopher Mott [1]

So-called ‘permanent alliances’ have a terrible record of being permanent. The over 600-year-old Anglo-Portuguese alliance is an extreme outlier made noteworthy because there is nothing else quite like it.

---

1. Dr. Christopher Mott is an international relations scholar focused on historical geopolitics, grand strategy, and the intersection of defensive realism and conceptions of sovereignty in an era of increasing multi-polarity. He holds a Ph.D. in International Relations from the University of St Andrews, an MA in International Relations from London Metropolitan University, and a BA in History from Rutgers University. He has published a book, *The Formless Empire: A Short History of Diplomacy and Warfare in Central Asia*, on the rise of indigenous forms of geopolitical strategy on the Eurasian steppe, as well as numerous peer reviewed and general audience articles on foreign policy and historical topics in a variety of places. Dr. Mott published the esteemed essay, *Woke Imperium: On the Confluence of Social Justice and Neoconservatism* in 2022, a text for which he was interviewed on The Grayzone.

Throughout history, people have sought long-term security arrangements for a variety of reasons, only to find that the ever-shifting nature of geopolitics, where all other nations tend to have a say over one's strategic dispositions, constantly makes mockery of the attempt to make security arrangements that freeze any relationship in amber.

In the 'unipolar moment' of 1991-2015 many came to ignore these clear lessons of history for the belief that they lived in truly exceptional times. History, so it was claimed, had ended. Liberal democracy was triumphant across the world and thus was assumed to have proven its teleological inevitability.[2] The American alliance network that had made it all possible was only going to grow, and initially, with the NATO alliance's eastward expansion, this did indeed seem to be the case. Within such a context the 9/11 terrorist attacks were seen as a rebellion to an inevitable order, with global jihad being the only alternative.[3]

This changed with the costly failures of the post-9/11 wars and the Great Recession of 2008. The United States had used most of its post-Cold War peace dividend to offshore its industries and asset-strip its utilities to fuel the non-material chimera of international finance. With the end of stock market reliability, the façade of the unipolar moment rapidly began to crumble. In what is commonly known as 'multipolarity', not only did the other great powers begin to reassert themselves, but even smaller less traditional powers grew in relative strength in relation to the U.S. capacity to manage world affairs as a monopoly. World hegemony, or even the bipolar Cold War-like position of a two-sided standoff, became an impossibility.[4]

This is not as brave and new an era as a panicking commentariat makes it out to be. The overwhelming majority of human history has existed in a state of multipolarity. It was the 'liberal international order' that was the freakish outlier, one based ultimately on an arrangement of power in the United States' favor dressed up as a lifestyle brand. In this way it is no different from the Roman domination of the Mediterranean Basin in the late Classical period or Mongol unipolarity in medieval Eurasia.[5] These orders are rightly seen by

historians today as dependent on the power of the dominant state rather than the triumph of their telos. With the ending of the liberal international order comes the stark reality of how alliances actually work, and how romantic, ideological, or even cultural commitments perpetually fail to make them permanent arrangements. It is worth examining how this has happened in the past to further bolster examining its present and future.

How Alliances Function Under Multipolarity

No one is in charge of the international system. The United Nations derives what influence it has from the Security Council, specifically the five strongest victorious powers of the Second World War. In this way it is in fact a project upheld by state power. The U.N. has never seriously attempted to bring about world government, nor could it. Only the United States in the 1990s could have even tried to do that, a project which has now undeniably failed. No one else has the ability nor inclination to try again at present. It risks quagmire and overextension, something that the modern Chinese state, as the only viable peer competitor to the United States, seems be avoiding.

With no universal power there is no final arbiter of a common mythos, save for situational agreements reached between states. In realist political theory this is referred to as 'anarchy', or the lack of overall authority to appeal to in the international system.[6] What it also means is that common ideology or a past shared heritage has little long-term bearing in the cohesiveness of an alliance network. In fact, international arrangements that presuppose ideological solidarity could be said to be volatile, tempting their partners to discount the sovereignty of each other when practices diverge, and creating massive fallouts and breakdowns between alliance members. There are many examples of this but let us focus on two (and one in particular) to really drive the point home. Both of these examples encapsulate the end of special relationships between two important countries which once saw themselves as linked by a special destiny, but saw such relationships edge up to violent confrontation under the reality of the anarchic inter-state system.

In the aftermath of the American Revolution, the new republic saw itself as having entered a special relationship with France. The French Revolution

initially heightened this Francophilia, with many in Paris stating they were inspired by the American experiment and giving honorary citizenship to famous figures across the ocean such as James Madison. The warm feelings were returned by many Americans who believed a new era of enlightenment politics had arrived. The shared hatred of the British was an additional common cause.[7]

A combination of factors began to challenge these initially euphoric assumptions relatively rapidly, however. The security interests of the new United States were based around avoiding war in order to implement domestic development along the Hamiltonian model that would see an economy once engineered to benefit to the British Empire as a raw resource colony reoriented to a national-industrial pole separated from dependency on Europe. Independence was not just meant to be from Britain, but from over-entanglement in European affairs more generally. The goal was to seek political separation to reflect the geographic distance of North America from Europe.[8]

France's different geography and close proximity to rival nations meant it pursued a very different path. After defeating initial attacks, the country took the offensive. Its concept of revolution likewise diverged, requiring a nation perpetually at arms and an aggressive foreign policy to maintain momentum. The two countries may have shared the avant-garde of being the late 18th centuries' revolutionary republics, but their interests diverged more after the French Revolution and the series of wars it set off. The global effects of these wars directly threatened the United States's idea of post-Revolution development. French demands for American assistance likewise threatened the growing American shipping industry, which benefited from non-alignment. British naval power also served as a deterrence against adventurism by even the many Francophile members of the government such as Thomas Jefferson. In such a context did President George Washington issue his Neutrality Proclamation of 1793. This was followed by negotiations with both Britain and Spain to settle outstanding issues and avoid looming war scares with both of those powers. With such matters coming to a close in the Jay Treaty and the Treaty of San Lorenzo (both 1795), the French viewed the actions of the United States as hostile, even claiming that its dedication to neutrality represented a

kind of re-colonization into British rule.[9] As Washington retired he published his now famous "Farewell Address" which cautioned the country about the dangers of being both overly hostile and overly fond of foreign nations, seeing such sentiments as distorting of the national interest through emotional attachment. Diplomacy for young and fragile nations had to be based around situational interest, not ideological consistency.[10]

A volatile domestic reaction ensued, leading to the rise of the political party system as Federalists came out in support of neutrality while Jefferson's Democrat-Republicans lobbied against it. French ministers to the U.S. openly meddled in domestic politics and French privateers, eager to make a quick profit off helpless American shipping in order to fund the reconquest of Haiti (also a revolutionary republic in the making) attacked their old allies directly. By the time of the Adams Administration, the United States found itself tacitly collaborating with the Haitians in the hopes of driving the French out of the Western Hemisphere. More importantly, an American Navy was founded, built from scratch specifically to combat the nation which had only a decade before been the most steadfast of allies. In a series of engagements, the U.S. navy would sink or capture multiple French privateers, as well as pay for its own construction simply by driving down the shipping insurance rates as French ships pulled away from proximity to North American ports.[11]

Most ironically, it would be the rise of Napoleon and the end of French democracy that would see relations restored to normal. Seeing the policies that had led to this undeclared naval war as foolish, Napoleon understood that an unaligned America was a more useful trading partner than one forced to honor obsolete alliance commitments against its will. By 1800 combat had stopped, diplomacy was restored, and soon after the Louisiana Purchase would occur. Breaking the alliance had benefited both parties in the end. Not until the temporary alliance of the First World War, over a century later, would the two countries ever be allied again.[12]

Closer in time to us, we have another example of such a calamitous falling out between two ideologically linked yet geopolitically diverging nations. This would be the Sino-Soviet Split which began in the 1960s and continued on through until the end of the Cold War. Already, the supposedly unified bloc of communist nations had seen divisions arise, particularly between Yugoslavia and the Soviet Union in the aftermath of the Second World War. But the sheer scale of the Soviet Union and People's Republic of China would cause their rupture to be perhaps the most significant geopolitical realignment of the Cold War Era.

The two countries had cooperated against the Japanese in 1945, then the American-led U.N. operation in the Korean War. They were fond of declaring their perpetual amity as harbingers of a communist future. Cracks over foreign policy priorities, however, had already begun to form. Often presented as an ideological rift that grew from Beijing's displeasure at Soviet Premier Nikita Khruschev's 'Secret Speech' where he denounced Stalin, the core of the growing dispute had much more to do with geopolitical autonomy. With the Chinese increasingly displeased at being treated as a subordinate nation to the Soviet Union. China and India had become violent rivals in 1962, but Moscow maintained its close relations with India and expressed outrage that it had not been told about upcoming military operations in the Himalayas by Beijing.[13] Chinese diplomacy had also delivered a plethora of border-settling treaties with neighbors- but not with the Soviet Union. As distrust mounted the un-settled borders between the two countries became flashpoints for military clashes which erupted along the border of China's northeast and Siberia. Mongolia, fearing Beijing's irredentism, provided the military hosting ground for Moscow. The Democratic People's Republic of Korea, seeking more autonomy from the Soviet Union, expressed support for the Chinese position.[14]

While the clashes would end almost as abruptly as they began, the rivalry unleashed by the formal split would manifest in other places. Notably, China opened its diplomatic options by seeking an accommodation with the United States. This was followed by an indecisive military attack on Vietnam after that countries' ouster of the China-sympathetic Khmer Rogue government in Cambodia. The Chinese would then go on to provide tacit support for the mujahadeen fighters in Afghanistan against the Soviet forces operating in that

country. Relations would not be restored to normal until the end of the Cold War. But any pretense that the Cold War was primarily ideological had already ended when Nixon met Mao two decades before.[15] The geopolitics of the pre-revolutionary region between Imperial Russia and the Qing Dynasty had reasserted themselves, implying that the contested nature of changing balances of power in an anarchic world the interplay of geographic proximity and balance of power ultimately determined long term strategy before other more ideological considerations.

The Contemporary End of `Permanent' Alliances

Thanks to the ahistorical and extremely presentist nature of the present commentariat and governing class of a later-stage neoliberal order, the false belief that international alliances can be permanent and represent a kind of mutual values=based annexation by different states is now commonplace. Hence the shock that reverberates from the press when the Trump Administration makes it clear it is breaking with the pieties of the Liberal International Order. From German politicians openly weeping in reaction to a speech from Vice President Vance, to gasps in the Pentagon press room when aid is cut to Ukraine as a negotiating tactic, it is clear that a vast institutional complex greatly resists the reality of multipolarity and the inevitable pivot back to nakedly national interest-based priorities as an adjustment to this arrangement. The ideology may have been very effective at continuing European vassalage in a post-Cold War era, but its overreach grew ever more unsustainable when interacting with the actual great powers of the world such as China and Russia, as well as the increasingly assertive middle powers such as Turkey, Iran, and India.[16]

President Trump is remarkably mercurial and erratic in his conduct of foreign policy. There may be no governing vision at all, and internal discord between underlings may be the driver of many of his decisions. That being said, his transactional nature has pointed him away from holding on to alliances in the present simply because they worked in the past. Whether the end goal is to get the outlying satrapies to increase their tribute to the metropole or to shed them as burdensome commitments (likely a bit of both) it is a large enough change to

American grand strategy that the older ways of doing things has likely been undermined to the point that it could not simply return if the Democratic Party returned to power in a large electoral sweep. The world that the establishment clung to so desperately simply no longer exists. It always was based on a global power distribution, with the United States' former domination of industrial output long since made obsolete by its own self-imposed descent into neoliberal offshoring, and its financial power being looked at with greater suspicion by more abroad every year. In order to slow this now 30 year long decline of relative power, the United States must reindustrialize at home, which requires divesting itself not only of the most distant imperial possessions, but also of the ideology that made justifying such a doomed quest for global hegemony palatable in the first place.[17]

The most onerous alliance of the American Empire, however, is unlikely to be challenged by the Trump Administration. If there is one bilateral relationship which truly illustrates the dangers of adhering to sentimental or permanent alliances based off of domestic commitments, it has to be that of Israel and the United States.

In the early Cold War, this arrangement was distant and pragmatic. France and Britain were the true die-hard backers of the early Israeli state, with the United States often taking a far more skeptical attitude as displayed by sabotaging the actions of those nations during the Suez Crisis of 1956.[18] Gradually, as the United States feared a pro-Soviet tilt among Arab nationalist governments, its security commitments with Israel only grew. By the time the Cold War had ended, Israel had established the most effective lobbying arm in Washington D.C. in all of history. The (debatable) strategic necessity of this relationship had disappeared, so now the fans of the alliance on both sides of the ocean would pivot towards ideology. Israel was "the only democracy in the Middle East", or perhaps a 'bastion of civilization'.[19] This worked on through the Global War on Terror when unhinged ideologues sold endless conflict as some kind of civilizational struggle against some vast looming and unified Islamic threat that did not actually exist outside of some stateless entities. Most importantly, the U.S. would let slip the game by pivoting towards logistically supporting many

of those Islamist groups in the aftermath of the Arab Spring, largely in order to further Israel's goals in the region of removing all challengers to its expansion.

There has been a steady decline in the practical utility of the alliance from the perspective of rational Americans. The U.S. faces backlash from terrorist activity whenever Israel goes on a rampage in pursuit of its ultimately doomed goals of perpetual settlement and regional domination. The U.S. spends billions of dollars, decade after decade, to be baited into a war with Iran that would pose great dangers but few benefits to the American position abroad, all while domestic audiences are browbeaten by a media infatuated with this foreign state and people see their free speech rights curtailed on its behalf.[20]

It is tempting to think that this is the one alliance that could not be sacrificed to the multipolar reality. While it would be the most difficult to drop right now, its position can hardly be assumed to be perpetual. Support for Israel in the general public is collapsing, now at the lowest it has been in 25 years according to Gallup. It is also highly generational, with each new cohort of citizens disregarding the importance of the alliance in greater numbers as time goes on.[21] As the problems maintaining this overly-close relationships mount, and as the realities of polycentrism expand across the post-unipolar world, these trends will only accelerate.

Polling data may be presentist and subject to change, but these are indicative of the historical experience. Francophilia in the United States was at fever pitch in the 1790s, and that alliance had been far more important in the establishment of the country that any other. And yet, when interests diverged under conditions of multipolarity, the alliance was not only broken, but its explicit rejection was also effectively written into the United States' foreign policy doctrine for generations. This strategic posture would last well over a century for guiding the nation's approach to the great powers of the world. If the U.S. and France could divorce in the late 18th Century, so too could the U.S. and Israel go in quite different directions in the future. The historical logic of multipolarity, the world's normal state of affairs, can no longer be ignored now that history has in fact 'resumed'.

Hans-Georg Moeller: Philosophy, Profilicity, and Wokeism

Interview with Hans-Georg Moeller [1]

Garrido: I have been teaching your book, *You and Your Profile: Identity After Authenticity* since it was published. My students always rank it amongst the best readings of the semester. There are a couple influences in the text that I think are central for you and Paul D'Ambrosio.

---

1. This is a transcription of an interview with Professor Moeller, conducted by Professor Carlos L. Garrido. Hans-Georg Moeller is professor of philosophy at the Department of Philosophy and religious Studies at the University of Macau (Macau SAR, China). Moeller is author of numerous academic books and articles including of *The Radical Luhmann* (2011), *The Moral Fool: A Case for Amorality* (2009), and *The Philosophy of the Daodejing* (2006), all with Columbia University Press. He hosts two philosophical YouTube channels: *Carefree Wandering* and *Philosophy in Motion*. Moeller and D'Ambrosio are coauthors of *You and Your Profile: Identity after Authenticity* (Columbia University Press, 2021) and *Genuine Pretending: On the Philosophy of the Zhuangzi* (Columbia University Press, 2017). They are also co-recipients (with Hans-Rudolf Kantor) of the 2018 Dao Annual Best Essay Award of (issued by *Dao: A Journal of Comparative Philosophy*) for their paper on "Incongruent Names: A Theme in the History of Chinese Philosophy."

As far as the historical chronology of modes of identity technology, you seem to be developing on the framework of Lionel Trilling. For profilicity, this unique mode of identity technology you and D'Ambrosio outline, you also make great use of Niklas Luhmann's concept of second order observation. Can you tell us a bit about how you and D'Ambrosio came to develop this framework? Besides Trilling and Luhmann, are there any other major intellectual sources you see your project as developing upon?

Moeller: First of all, thanks for having me and thanks for working with this book. And thanks for talking to your students about it or with your students about it. I read through your questions– they're all very good questions, and I'm happy to talk about them.

So, actually, we of course use Trilling. Paul read this book and then I read it. But the main influence for this book is the previous book that Paul and I wrote, which is on Taoist Chinese philosophy, on the philosophy of Zhuangzi. And our initial plan was to write a Taoist philosophical book for today.

And then we decided we can't really do this. We have to write two different books. We wrote a book about the old Taoism and then we wrote a book where the Taoism is implicit. And that is the second book that is *You and Your Profile*. So the major source for *You and Your Profile* is the book we wrote before. And that is also the case regarding identity technologies. We basically just use Trilling to say something that we wanted to say from our study of Taoist philosophy, and we just use Trilling to have a Western kind of framework. We're not really scholars of Trilling.

I'm not even sure that we use the terminology right in the same way that Trilling uses it, but that was not our intention anyways. So what is the connection? We read Taoism and in particular the Zhuangzi. There are two major works in early Taoism– one is the Laozi or Tao Te Ching and the other one is the Zhuangzi and we work mostly with the Zhuangzi. Now, we read the Zhuangzi very much as a critique of Confucianism, as Marxists should understand as a socio-political book, which by the way is influenced by my own study of philosophy. When I studied Chinese philosophy in the 1980s in China, I got a dialectical Marxist training regarding Chinese philosophy, so if you want to trace this reading of Taoism back you can actually trace it back to my Marxist education in Marxist China where there was real Marxism.

The idea is basically that Taoism is a socio-political critique in early China, and it is a critique of the Confucian ethics and political socio-political structure,

which was very much forcing people into what we call a “regime of sincerity”. That is, it basically imposes a very strict social hierarchy on people and they have to conform to their roles, and that is a form of suppression and a form of alienation. It places a strong pressure on people to conform to their social roles, primarily family roles and political roles, roles in the family, parents and children. You have the obedience of the children towards parents, obedience of women towards men, and so forth, but then also a very strict hierarchical system where everyone has to fulfill their roles, and Taoism criticizes that. So now we read Taoism in Trilling’s vocabulary as a critique of the “regime of sincerity”, but when we wrote the first book, we hadn’t used Trilling's vocabulary yet, and of course Trilling didn't apply this vocabulary to early China either.

The second thing that we found is that we were not happy with the current interpretations of Taoism, which read Taoism as a form of Western individualism. Taoism is usually read now as, in Trilling’s vocabulary, “the pursuit of authenticity”, because in the West there was also a “regime of sincerity” if you want to classify it in traditional Marxist vocabulary: A strong feudal system where people have to submit to their roles– not that different from Confucianism. And then, of course, the whole “age of authenticity” developed as an individualist critique of the previous kind of “regime of sincerity” in Europe. But nevertheless, we thought that this was anachronistic, that the Taoist critique of the Confucian “regime of sincerity” is not actually an individualist authentic philosophy. Instead, it’s what we call a philosophy of “genuine pretending”, which is something altogether different. That was the second aspect. So our first book was reading Taoism as a critique of sincerity or the “regime of sincerity”, but not as a defense of authenticity and not as an argument in favor of authenticity as it is usually read.

Then, because both Paul and I not only studied Chinese philosophy, but we spent many years in China and had been exposed to Chinese society, we also realized that the “age of authenticity” and the individualism connected to Taoism is very much a Western thing. We take it to be universal, but it is actually not. If you live in China, particularly in Macau, it's kind of obvious that there is a mismatch between the semantics of authenticity, (which again we found in reading the interpretations of the Zhaungzi, which always put in this authenticity framework). Then we found there's something wrong with authenticity and that actually we need a different kind of framework to understand how contemporary society functions. I would define our approach ultimately as an existentialist approach. What we call identity technologies, sincerity, authenticity, and profilicity are kind of existential modes, so to speak,

in which we build a sense of self. People nowadays build a sense of self in the mode of profilicity. We understand identity today has a lot to do with the curation of a profile.

So this is the origin of the three concepts. The first one comes from Trilling, but it actually comes from our reading of Chinese philosophy, and we reinvented the term “profilicity” on the basis of thinking that authenticity is not a good conceptual framework for describing contemporary society, particularly not on a global scale.

Garrido: That's fascinating. I had no idea that this was the story behind the book, I look forward to going back and reading the first book you and Paul wrote.

In *You and Your Profile*, You and D’Ambrosio connect the development of authenticity, as a mode of identity technology, to the development of capitalism. As a Marxist, I’ve tried to read your work on the development of profilicity as a reflection of larger developments in capitalist political economy. Do you think that the technological revolution of the last few decades, which has brought about – in my view – a revolutionizing in the forces of production, is the objective background upon which profilicity emerges? In other words, would you root the development of profilicity in the context of large political-economic developments in capitalism?

Moeller: That's also a very good question. Again, we're not really traditional Marxists, we're more like existential philosophers, though I have strong sympathy for Marxism and as I said I was also educated in Marxism from my two years I studied in China which was extensive, so I understand where your question is coming from. I think it's a good question and I have been thinking about it a lot, but our hypothesis is not so much that the new technologies (and the new economy that revolves around these technologies) are the cause for profilicity, but rather that it is the other way around. That these technologies and the consumerism around them work the way they do in the service of profilicity. We use these technologies, and we do politics in the way we do politics, and we market things in the way we market them, and we structure our desires in the way we structure our desires because of the rise of profilicity. So that is not a traditional Marxist approach, which looks at the economy and the mode of production as the base structure. In a way, we look at them as the identity technology at the base structure, but I wouldn't really like to use this “base structure, super-structure” model.

My other influence that you mentioned already is the social theory of Niklas Luhmann, the German social theorist. He also had a big theory, just as big and complex as Marxist theory. And that was a major influence on me in particular rather than Paul, he has a different background. For instance, the influence of Trilling came from Paul. So, yes, I have more of a systemic, organic understanding of how society works. That there is no such thing as a base and super-structure, and that there's no such thing as a "center". Politics and the economy continuously influence one another in an interconnected, organic way—similar to how the human body functions. The traditional idea that a single organ, like the brain, controls everything isn't entirely accurate. Instead, the body consists of different systems that coexist and interact, each forming part of a larger whole. No system is at the top, bottom, center, or periphery—they all influence one another simultaneously.

Likewise, identity technologies operate within economic, political, and social environments. These environments are not separate but constantly shape and influence one another in a dynamic, ongoing process and mutually evolving. So the social view of Luhmann that I share is more of an evolutionary Darwinian view of society, rather than a traditional Marxist framework.

Garrido: That's very interesting. I think that part of where you're getting there is more akin to a good interpretation of Marxism, thinking in a kind of relationality that is guided not by one-sided cause-and-effect but instead by a form of reciprocity. That's consistent with the 1890s letters from Engels. The people who Marx and Engels said weren't Marxist were those who held that linear, cause-and-effect relationship. All they see is "cause there, effect there", and not reciprocity.

I do agree that there's a sort of "Marxism" that has been codified and made very orthodox that has a more linear and one-sided reading of how society functions and that takes too literally the spatial metaphor of base and superstructure, which is only ever employed once by Marx.

The third question I wanted to ask you is the following. You, along with Slavoj Žižek, Susan Neiman, et. al., have been one of the most outspoken leftist philosophers critical of wokeism. As someone who directs a Marxist Institute that has tried to spread your leftist critiques of wokeism far and wide in the U.S., I must say, it has truly helped people come to see the political bankruptcy of this civil religion. With the rise of non-woke lefts in the West, it seems that wokeism might be on its way out. Capitalist ideology, I think, will probably

have to take on a new form. Do you think we are witnessing the tail end of wokeism? Or do you think it still has the strength to throw a few punches and get back in the game?

Moeller: That's also a very good and very important question. I do feel that wokeism is on its way out. It's run its course. And on the one hand, I do think that is a good thing. But yes, I'm not sure that the larger civil religion is on its way out. And I'm not sure that therefore what is replacing woke ism is better than wokeism. I'm afraid it might be the other way around actually.

You rightly said Žižek is on the one hand critical of wokeism but on the other hand he's also kind of woke to an extent. My main hypothesis is that wokeism and Jordan Petersonism are two different denominations of the same civil religion, which in Peterson's terminology is the civil religion of the sovereign individual… which leads us back to the authenticity thing.

So this belief is basically a left wing and right wing individualist identitarianism that focuses on the sovereign individual. It's now the case that the one side of this schism is triumphing over the other but they're both equally problematic. So what I tried to do with my videos on YouTube was basically to break out of this schism. For me wokeism always reminds me, even though I wasn't around at the time, of early modernity and the religious wars at that time when we saw the rise of Protestantism. It's of course not a completely exact comparison, but you can somewhat compare Protestantism with wokeism. Wokeism also has this kind of puritanical aspect to it, somehow very Protestant in taste. And the older, more conservative version is Peterson, the Catholicism, right?

In the present day we are somewhat seeing the counter-revolution of the conservative side and Protestantism is now on the retreat, more or less. I grew up in a time that was deeply shaped by historical shifts—even before I went to China. I'm old enough to remember not just real communism, which I experienced firsthand for a significant part of my life, but also the tail end of the hippie era. By the time I was growing up, the hippie movement was fading out, but its influence was still present—especially in terms of sexual liberation and cultural openness.

For people of my generation—including many of my friends—this makes the rise of modern puritanism feel quite shocking. Žižek, who is from the same generation, has made similar observations… how we have felt that this is such a repressive kind of reversal of what had already been achieved in the 1970s and

80s. For example, as a German myself looking at the Green Party, it is exactly the same evolution. It came out of the 1960s, 1970s student revolutions and so forth and it was very pacifist, and anti-nuclear power. As of today, they've turned into the most militarist, most bourgeois, most moralistic political force.

So the Green Party represents this turnaround of wokeism in Germany which is kind of shocking for me personally and biographically to witness. On the one hand, I think that is more or less coming to an end, and I'm happy it is coming to its end, but I'm not very optimistic that what is replacing it is in any way better.

Garrido: I couldn't agree more. Following your work, we see it as a sort of spurious dialectic that's at play there, and what we've tried to tell our comrades is that we have to be both anti-woke, but anti-anti-woke.

In recent years you have developed the concept of "pariahs" to describe the outcasts, either individuals or whole states, which the media narratives spin as wholly evil and untouchable. I have found this framework extremely interesting and complementary to the work that I've done on the purity fetish, which critiques a worldview where people only seek to support or work with those parties, struggles, or individuals that perfectly align with the abstract ideas that they hold in their heads. Those that fail to live up to this become pariahs and contaminate all who they touch. Do you see the mechanisms behind pariah-making and the purity fetish as fundamentally the same, or are there key distinctions in how they operate? How do you think this dynamic shapes political discourse and social movements today?

Moeller: That's also a very good question. Thank you for that. I do think there is a parallel that you point out. I'm also very worried about this "Pariahism" but since you asked me, I will talk about how I came up with this idea. Again, it has the same influences. On the one hand, my rejection of this "Pariah" mechanism is grounded in my reading of Taoism, because Taoism is very much against the distinctions of good and evil. I wrote a book many years ago called *The Moral Fool*, which is also a Taoist book against these kinds of moralistic, good and evil distinctions.

So that is something I've been interested in for a long time. I see moralistic good and evil distinctions as a grave pathology, psychologically and socially. I think that is at the heart of Taoism. You can see it in other thinkers in the West, for instance Nietzsche, very strongly. I'm just teaching *Beyond Good and Evil*. And I believe the parallel between Nietzsche and Taoism is that they are both

basically coming up with diagnoses of these pathologies. That's how I read both Taoism and Nietzsche. These pathologies are both psychological and social and one of the greatest pathologies is this tendency to eventually end up in this kind of “Pariah mode” where you make this very strong distinction between good and evil. According to both Taoism and Nietzsche, they basically say that through this mode, you're creating that evil in the first place.

Biographically speaking, if I go back to the late 1970s—I was born in the '60s but grew up as a pre-teen in the '70s and a teenager in the '80s—it was still a time of large-scale peace demonstrations. In fact, the first protest I ever attended was one of these demonstrations. I didn't like it, but that was the spirit of the time. It was very much a pacifist time. And this era of politics was called “Entspannungspolitik” in German, or “détent policy”, and we had these communist leaders such as Brezhnev coming to Germany, so it was a completely different spirit at that time. Since that era, the culture has almost totally reversed, which has been very shocking for me.

One very surprising thing about the woke movement is that it very much works on the basis of this “Pariah Mode”. We see this with the whole cancel culture phenomenon as well. In my own life, and I practiced this until today, it's very important that I have not just talked to but have good friends who have very different opinions. This is what I do. For example, I have friends who are religious people, or people who have different political views, or have no political views at all, that think that politics is somehow stupid. But the whole “Pariah Mode” is toxic on an individual level. That's what it is. And it is toxic now as we see politically. So I follow this, as everyone did, I guess, these political developments of the past 10 or 20 years. And I saw that this “Pariah Mode” also crept into politics more and more and was used as a political model.

Of course you have this everywhere, not just in America, but also in Europe. And again, that was like a complete reversal. When I grew up in the 1980s and went to China, China was great, right? Russia was great and people wanted to go there. That was the general attitude. Then I witnessed over the years how this kind of completely reversed and became very, very toxic. And now China and Russia are the “great evils”, and we're at the brink of the Third World War. This may be a little bit of a turning point, the multi-polarity, right? Which is what the Chinese wanted, and also the Russians wanted– a multipolar approach to politics. But if you operate within the “Pariah” principle, of course, multi-polarity is an “evil thing”. And that's why we have this kind of return of the vocabulary that appeasement is a bad thing.

Then again, like the old 1970s and 1980s, the idea was we have to engage in this d**é**tente, in this *Entspannungspolitik*, particularly given the fact that we're dealing with nuclear powers, right? And that is very different from why appeasement is regarded as a bad thing, because that refers to 1938, Hitler's Munich, right? Hitler didn't have a nuclear weapon. And so you can say appeasement didn't work, but again, the times today are different.

And it's not the same historical situation. And so, I do not share this critique or this rejection of the appeasement approach. I think appeasement has to be reinvented in a different form. And it's not being reinvented as long as we stick to the "Pariah" principle, because the "Pariah" principle basically rejects any form of appeasement.

Garrido: Excellent. The final question I have for you is, as a fellow philosophy professor who does quite a bit of his work in a public arena, I very much appreciate the role that you are playing in promoting what some might call public philosophy. What do you think is the importance of philosophy, or philosophers, stepping outside of the academy to situate their work in a public setting, and for a public audience? Do you think that our discipline will continue being enchained within the cave of the academy, or will this seeming trend toward making philosophy public again continue to develop?

Moeller: That's also a very good question, Carlos, and also something I've been thinking about a lot. Sorry, I'm talking so much about my own life, but all the questions are related to my own biographical experience. Another thing that I experienced in the course of my life was the development of what I call the "academic industry". When I was a student in Germany, the academic industry did not exist. People were studying forever. They didn't have exams. They were not interested in which university they were studying. They were not even looking towards a degree or anything, and of course the universities were free. They were all public universities and you didn't pay tuition fees. You were working or doing your own stuff, and then you were at the same time somehow a student.

Of course there were material concerns, but it was not the academic industry as it is now the global model today. And that also meant when I studied philosophy, what the philosophers were doing, they were presenting their own philosophy. That was what a philosopher did in the lecture. And the idea was that in order to become a philosophy professor, you have to be a philosopher, not someone who writes papers. You didn't even have to publish books. You

actually had to be a philosopher who goes into a lecture hall and then stands there in front of, I don't know, three, four, five hundred people in these old lecture halls at Bonn University, in buildings which were built like in the 18th, 19th century, right? And that was how philosophy was being done. It was in a way a very old-fashioned public philosophy because everyone could go there.

And as I said, hundreds of people would go there. There were no exams, no degree. You would just listen to a philosopher speak about their philosophy, which was very difficult. So there was not the idea that you have to address students, on the contrary. The more esoteric you are, the higher your kind of reputation is, right? So there wasn't the idea that you have to make students understand something. Anyway, that was very good. And then of course you see this kind of complete shift and the American way of doing academics took over.

And then I had to then also try to get a job and then it got worse, increasingly worse. You had to write all these papers and then you had to go through this kind of peer review process, which didn't exist at the time as well. These are all new inventions. You can explain it best with Luhmann, I suppose. It's kind of this self-generating auto-poetic system, what I call the “academic industry”. And that develops its own code, its own functioning, its own organizations. As I said, a very good example is the peer review process.

It's very much like a power base, so it's very complex. So, to finally answer your question, I think that's very bad for philosophy. It doesn't fit what philosophers are doing or have been doing. Even in the 20s and 19th century, the most interesting philosophers from Marx, to Nietzsche, to Wittgenstein or whoever, even Sartre or Derrida– they were not professional philosophers, especially not in the way that philosophers are now professional philosophers. And if you go further back in history, of course, no one was a philosopher like that, it just didn't exist. So academic philosophy, I think it is now regarded as the way of doing it, but as a matter of fact, it's rather odd. So philosophy has never been done in that way, not even 30 years ago. That is completely ridiculous. I think, in a way, it's almost a perversion to do philosophy in this way. And I'm glad that by coincidence, I had the chance to do this channel (Carefree Wandering) and I got much more resonance there anyways, than within the academic industry.

And yeah, I do think that this is the “more natural” way of doing philosophy on YouTube and by other means. Even the debate between Žižek and Peterson,

just as a method of doing philosophy… I don't think it was a great debate but that doesn't matter. It's still better than in the normal academic papers that people are supposed to read. The academic sphere is a lot of stress. It's a lot of exploitation, actually. It has become an academic industry that is extremely exploitative. It forces a lot of young people into this and that's why I basically cannot in good conscience advise my students to pursue an academic career. I mean they have very little other options, but it is very problematic, very problematic.

Garrido: Yes, I completely agree, and I really appreciate that context of the last 30 years because I was thinking in the question about a more historical grounding of philosophy, because within my history of philosophy classes I always start with Plato's *Apology*. And I do that to try to get them to get a sense of what the spirit of philosophy is. And then I contrast it a little bit with what it's become. But you're absolutely right, even just 30 years ago It was nothing like it is now and that's unfortunate, but I think it's interesting because even the people that are in charge of the structures and counseling students, they all recognize it. And they say this is all bullshit but we kind of have to do this bullshit to get a job.

Why Class Still Matters: Vivek Chibber on Marxism and the Left

Vivek Chibber [1]

Interview conducted by Jonathan Brown[2]

Vivek Chibber is one of the most prominent Marxist sociologists in the United States today. A professor at New York University, Chibber has been a leading critic of dominant trends in contemporary sociology, including postcolonial theory and culturalist explanations of class. His work rigorously defends the centrality of class analysis, emphasizing the material constraints that shape working-class life in capitalist societies. Chibber is also the founding editor of *Catalyst: A Journal of Theory and Strategy*, a publication dedicated to reviving a class-centered, materialist approach to sociological analysis.

---

1. Vivek Chibber is a professor of sociology at New York University. He is the editor of *Catalyst: A Journal of Theory and Strategy*. He is the author of many books, including, *Confronting Capitalism (2022)*, The *Class Matrix (2022)*, *Postcolonial Theory and the Specter of Capital (2013)*, and more.

2. Jonathan Brown is an educator based in Athens, Georgia, where he teaches high school social studies, specializing in history and economics. Outside the classroom, he is an active member of the Georgia chapter of the American Communist Party and a committed advocate for socialist education. He also co-hosts *The Praxis Report*, a podcast focused on revolutionary theory.

Chibber's most recent work is *The Class Matrix: Social Theory After the Cultural Turn* (2022). In this book, Chibber takes on the dominant tendency in academia to reject materialist explanations of class struggle in favor of culturalist and identity-based frameworks. He argues that capitalism disciplines workers primarily through economic constraints, rather than through cultural hegemony, challenging widespread assumptions of mainstream sociology.

In this interview, conducted exclusively for *Red America*, Chibber discusses the themes of *The Class Matrix*, the current state of class struggle in the U.S., and the strategic directions for the socialist left. Chibber explores the failures of contemporary academic sociology, the persistence of class as the fundamental structuring force of capitalism, and the challenges facing the left in rebuilding a class-based political movement today.

Red America: In mainstream academic sociology, class is often conceptualized as a matter of socioeconomic status – determined by income, occupation, and educational attainment. This perspective tends to focus on gradational inequalities rather than antagonistic relationships. In contrast, the Marxist tradition defines class as more of a structural position, rooted in exploitation and in a relationship to the means of production.

How do you define class in your book, *The Class Matrix*?

Vivek Chibber: My conceptualization of class is a pretty conventional Marxist conception, where, as you described it, class is not rooted in the income that you get, but rather in what you have to do to attain that income. Class is the structural compulsions which force people to undertake economic strategies of a particular kind. Now, of course, that does result in inequality, but the key here is that inequality is the result of class, whereas in mainstream sociology, class is the result of inequality.

So when you look at mainstream literature on economic stratification, people are slotted into different classes by virtue of the income that they attain. So if you're poor, you're in the lower-class. If you make a little more money, you're in the middle-class. And if you make a lot more money, you're in the upper-class. The causal arrow goes from money to class. In Marxist theory, that causal arrow is reversed: it is not income inequality that causes class, but rather class that causes income inequality.

In other words, class is the result of a certain kind of inequality – not an inequality of income but an inequality of assets. Now, an "asset" simply refers

to the means of production. An unequal distribution of the means of production generates class relations by virtue of one group of people monopolizing control over the means of production, putting them in a position to extract labor from the rest of the working people in society. Because they are in a position to extract the labor of others, they are in a position to acquire greater income, which is a consequence of the fact that they own the means of production. So class relations, therefore, are relations that generate inequalities of income.

Class relations also generate inequalities of interpersonal power. And what the ruling class is able to do by virtue of its monopolization of the means of production is impose its power over workers to get them to work at a certain pace, for a certain wage, and on certain terms. But workers resent that. They resent both the coercion that they have to put up with in the workplace, and they resent the unequal distribution of income. This generates an antagonism. This antagonism comes from exploitation, and exploitation is made possible because of the unequal distribution of the means of production. So in Marxian theory, the whole process starts with the unequal distribution of the means of production, which enables a process of exploitation and through that comes income inequality, which then generates the antagonism that is the fount of the class struggle.

Red America: In *The Class Matrix*, you argue that class remains the fundamental structuring force in capitalist society, yet much of contemporary sociological theory has shifted toward cultural explanations of power and oppression. What do you see as the main reason for this cultural turn among intellectuals? And why do so many left-wing scholars resist centering economic structures in their analysis?

Vivek Chibber: The reasons for the cultural turn are both intellectual and sociological.

Intellectually, the cultural turn was based on what I consider an analytical mistake—not one coming from the mainstream, but from left-wing intellectuals themselves. The argument they developed went something like this: If workers are not spontaneously organizing to resist and overthrow capitalism, there must be some mediating factor blocking their ability to recognize their own interests. They believed that traditional Marxist theory had assumed that workers, simply by virtue of being exploited, would automatically develop class consciousness and engage in collective action. But when left-wing intellectuals observed that large-scale collective action was not happening, they sought an explanation.

The answer they arrived at was that workers were somehow failing to understand their own situation. This misunderstanding was labeled “false consciousness.” That is, workers knew they were being oppressed, but they had a distorted understanding of how to resist or what their true interests were. To explain this, left-wing intellectuals argued that capitalist ideology and culture—disseminated through institutions such as the media, schools, and churches—were the primary mechanisms preventing workers from developing class consciousness. In order to understand class struggle, they concluded, one had to study ideology and culture as the mediating forces that shaped workers' consciousness. This is what opened the door to the idea that political contestation in capitalism is primarily a cultural struggle rather than a material one.

The problem with this argument is that it assumes workers are suffering from some kind of catastrophic cognitive failure. Workers experience exploitation on a daily basis—whether it’s being bossed around, facing job insecurity, or struggling with low wages. Are we really supposed to believe that they don’t grasp the reality of their own situation? This interpretation treats workers as dupes, manipulated by ideology into submission.

What I argue in *The Class Matrix* is that workers do, in fact, rationally understand their situation. They are not simply fooled by ideology. The real issue is that workers make a strategic choice about how to resist their exploitation. More often than not, they choose individual forms of resistance over collective action because individual resistance carries fewer risks. Unionizing, going on strike, or organizing politically exposes them to retaliation—being fired, blacklisted, or facing employer repression. But engaging in everyday acts of defiance—slowing down work, calling in sick, or even just mentally checking out—is much less risky. Workers weigh these risks and act accordingly. The assumption that they are simply brainwashed by capitalist culture ignores the real material constraints that shape their behavior.

So the intellectual basis for the cultural turn rests on a fundamental analytical error—the mistaken belief that the absence of collective action means workers don’t understand their exploitation, rather than recognizing that workers are making strategic choices under conditions of constraint.

But this cultural turn wasn’t just the result of an analytical mistake. There are also sociological reasons why it took hold.

In the 1940s and 50s, many intellectuals came to the left through the gravitational pull of the labor movement and the Communist Party. Because of this connection, their research was more directly focused on class struggle. However, as the labor movement became more domesticated into capitalist institutions in the postwar years, the relationship between left intellectuals and the working class weakened. By the 1980s, labor unions had been systematically weakened, socialist and communist parties had largely disappeared from the U.S. political landscape, and left-wing intellectuals found themselves housed almost entirely in universities rather than in political movements.

This had two effects. First, it increased the distance between intellectuals and the working class, which made them more prone to adopting perspectives that emphasized cultural explanations over economic structures. Second, it led to a kind of pessimism about social change—many intellectuals no longer believed that materialist analysis could explain the world or that class struggle was a viable force for transformation. This resulted in what some have called a "flight to culture"—a retreat into cultural analysis as the dominant framework for understanding oppression and power.

And there's another factor that reinforced this shift: career incentives. By the 1980s and 90s, it became much easier to advance in mainstream academia by engaging in cultural analysis rather than insisting on a materialist approach. With the decline of mass movements and working-class politics, the moral imperative to produce research that served working-class struggles gave way to the professional incentives of academic careerism. Many left-wing intellectuals followed the cultural turn not because materialist analysis failed, but because materialism was no longer institutionally rewarded.

This, I think, explains both the rise of the cultural turn and the resistance to materialist analysis that persists among left-wing academics today.

Red America: How has this cultural turn affected political movements in the United States? What are some ways that it has impacted our ability to develop a coherent socialist politics?

Vivek Chibber: The short answer is that it has been catastrophic. Insofar as intellectual trends can be beneficial or harmful to political organizing, the cultural turn has been about as destructive as one can imagine—particularly for the labor movement.

To organize workers, you need a materialist framework, because a materialist framework is rooted in the concept of interests. It recognizes that workers have real, objective interests that unify them as a class. But if you abandon this perspective, the only basis left for organizing becomes opinions, attitudes, and cultural values.

The problem is that attitudes and opinions are fluid—they shift constantly. If you organize solely based on shared cultural views rather than shared material conditions, you become a prisoner of the moment. More importantly, you lose sight of the fact that the fundamental antagonism in capitalism is not based on culture—it is based on class interests. Capital and labor are locked in structural opposition regardless of workers' personal beliefs or ideological positions.

A materialist approach means you organize workers because of their objective position in the economy, not because they already hold the "correct" opinions. Socialist organizing has historically never required workers to pass an ideological litmus test. You don't ask them to fill out a questionnaire to determine whether they are worthy of being organized. You go to them because they are workers. And if they don't hold progressive views, you engage with them, you work with them, and you try to win them over through struggle.

The culturalist approach, however, reverses this. Instead of organizing workers as a class, the left today seeks out pre-formed groups and coalitions that already hold the right cultural or ideological views. This shifts the focus away from class struggle and toward identity-based constituencies that align with a particular worldview. While this might work in the context of electoral campaigns—where broad coalition-building is important—it is completely inadequate as a foundation for long-term socialist strategy.

Beyond its impact on organizing, the cultural turn has also fostered a deeply paternalistic attitude toward workers. Its core assumption is that capitalist culture is so powerful that it completely overrides workers' own rational understanding of their circumstances. But if workers are so deeply misled, where does the "correct" understanding of their situation come from? Not from their own experiences, but from intellectuals, activists, and highly educated elites.

This is a fundamental break from the socialist tradition. Historically, the socialist left immersed itself in working-class realities, seeing workers as the agents of their own liberation. It was the role of intellectuals to learn from

workers, not to lecture them. The culturalist left, by contrast, insists that workers must first educate themselves into a worldview that they are assumed not to understand. Instead of working-class self-emancipation, this approach creates a paternalistic dynamic where intellectuals dictate the terms of political engagement. It is a recipe for alienation and failure, and we are now sadly witnessing the fruits of that failure in real time.

Red America: For many years, academic sociologists have argued that workers in the West have remained passive not because of direct economic pressure but due to the influence of cultural hegemony. According to this view, workers are not simply coerced but are subtly conditioned to identify with capitalist values, which prevents them from recognizing their own class interests and engaging in collective action. However, you argue that capitalism disciplines workers primarily through material constraints—through economic coercion and workplace discipline—rather than cultural hegemony. Can you expand on how this coercion operates in practice and why it remains the key mechanism for maintaining class domination?

Vivek Chibber: I wouldn't use the word coercion; I would use the word compulsion—and here's the difference. Coercion is something that is exercised interpersonally—it is what one person or group does to another. Compulsion, on the other hand, describes a situation in which a person recognizes that they have no real choice, not because someone is directly forcing them, but because their circumstances leave them with no viable alternative.

Now, it's true that the overall system that generates this lack of choice is maintained through coercive structures—through the state, laws, and economic institutions—but the key thing is that this coercion is in the background. It is not being exercised directly, through interpersonal relations.

In capitalism, workers willingly submit to their situation—not because someone is holding a gun to their head, not because they are being physically forced into the workplace, and not because they are under constant surveillance. They submit because the system is structured in such a way that their only alternative to exploitation is destitution. Capitalism's brilliance is that exploiters don't need to send armed enforcers to round up workers and drag them into factories or offices. They can simply sit back and wait—because the system itself ensures that workers must come to them. And once workers arrive, we don't describe them as being coerced into labor; we describe them as being compelled by their material circumstances.

Now, what happens once workers are in the workplace? Here, some interpersonal coercion does come into play—this is the role of management. Employers and supervisors use coercion to control the workforce, dictating the intensity, pace, and conditions of labor. But—and this is crucial—managers do not create exploitation. Exploitation is already guaranteed the moment workers walk through the door. Managers simply shape the intensity and form of that exploitation.

So what keeps workers in place? The fear of job loss.

First, the fear of unemployment brings them to the workplace. Then, once they are there, the fear of losing their job keeps them from leaving. These two fears are what enable exploitation. To generate surplus labor, a worker must first be available for exploitation, and then they must continue to provide that surplus labor. Both of these conditions are created by capitalism itself—not by direct coercion.

Now, this raises a final question: If workers experience exploitation daily, why don't they collectively overthrow the system? The answer, as I argue in *The Class Matrix*, lies in the brute facts of collective action. Collective struggle is difficult, risky, and often costly. Organizing on a mass scale requires significant sacrifices, and workers know that if they fail, they may end up worse off—losing their jobs, facing blacklisting, or suffering employer retaliation.

Because of these risks, workers rationally choose individual resistance over collective resistance whenever possible. They might slow down production, cut corners, or find ways to exert control over their immediate conditions—but they stop short of open confrontation. From their perspective, it is preferable to keep a bad job than to risk losing that job entirely. Collective action might bring gains, but it also brings significant risks—so individual survival strategies become the default.

When we put all of this together, we see that workers' passivity is not due to ideology or cultural hegemony. It is not because they are brainwashed or suffering from false consciousness. Nor is it because they are being directly coerced. It is because they rationally recognize that unless they accept choices they loathe, they will be left with choices that are even worse. Their submission is not a result of confusion—it is a resigned adaptation to their material constraints.

The German Communist Party (Marxist-Leninist): Analysis of the Soviet Downfall and Its Proposed Solution

Toby Terrar[1]

This article summarizes and updates the scholarship done by a writing collective of the former German Communist Party (Marxist-Leninist), abbreviation KPD(ML), concerning the Soviet downfall. This is motivated by the fact that their two main works on the problem have recently been translated and made available to the English-speaking world by Red Star Publishers. Their titles are *When and Why Socialism in the Soviet Union Failed* and *Does*

---

1. Toby Terrar is a member of the National Lawyers Guild and practices in Washington DC. His non-paying job is writing about legal and religious history. He received his J.D. at Georgetown University and his M.A. and Ph.D. at the University of California at Los Angeles.

Socialism Have a Future?[2] The German-language versions were published in 1996 and 1998 respectively.[3]

By way of background, the KPD(ML) was established in 1968 by former members of the German Communist Party (KPD), which the West German government had shut down in 1956. The new group upheld the legacy of Stalin, Mao Zedong and later Hoxha. It dissolved in 1986 but former members continued to publish its newspaper, *Roter Morgen* (Red Dawn) until 2011.[4]

Like the KPD(ML)'s *When and Why*, this article presents the analysis in historical-chronological order starting in the pre-World War II era with the October 1917 Revolution and NEP (1922-1928), and then the collectivization (1927-1933) and industrialization (1929-1941). The pre-World War II period includes discussion of the Stalinist era problems and the revolutionizing of the relations of production, meaning working class control, as a solution to the problems. The second half of the book takes up the post-Stalinist failure.

Among the studies of the Soviet failure, the KPD(ML) tends toward being unique in its detailed analysis of the class forces in the pre-World War era. Studies by those associated with other parties focus largely on the post-Stalin era. A leader in such studies is the Communist Party of China.[5] It stated that it does not want a repeat of the Soviet experience. As General Secretary Xi Jinping commented, the Soviets seized power when it had 200,000 party members, defeated Hitler when it had 2 million members, and lost power when it had 20 million members.[6] The Communist Party of the Russian Federation (CPRF) has studied its fall.[7] The smaller parties have done likewise, including the Communist Party of Greece, the Communist Party, USA and others.[8]

In terms of theory, *When and Why* seeks to improve on what the Germans, following Lenin, called "the theory of the transitional society to communism," as illustrated by the Soviet experience.[9] Along the same lines, Marx had called

the transition period the first or lower phase or stage of communist society.[10] The KPD(ML) summarized the nature of the lower phase:

> *Socialism is also not an independent socio-economic formation. It is a society between capitalism, whose relations of production contain elements of the old society, as well as of communism, and consequently it can develop both forwards toward communism or backwards toward capitalism.*[11]

The reason the Germans studied the Soviets was that they believed it would help toward future progress. The book states:

> *Before socialism can once again become a perspective for the millions, it is necessary to take stock soberly, to thoroughly evaluate the historical experiences. The present book on the development of the Soviet Union is intended as one contribution to this.*[12]

It can be added that the intent of the Germans was to produce in the first volume a study for fellow communists who wanted a Marxist-Leninist view on the Soviet fall. There was no discussion of non-Marxist-Leninist theories. But the second volume was a compilation of papers delivered at a conference called to discuss the first volume. That conference was open to those not connected with the KPD(ML), including those who held to what the Germans called "the old philistine wisdom of the alleged impossibility of communism."[13] The second volume included papers by Robert Steigerwald and Heiner Karuscheit - Alfred Schroder, who were non-KPD(ML).

Positive View about the Soviets: October 1917 Revolution and NEP (1922-1928) .

Among the reasons the KPD(ML) gave for its positive view of the USSR as a socialist country were first, the Bolsheviks had answered in 1917 the demands of the workers and peasants for peace, bread and land. Fifteen million people had died in the inter-capitalist World War I (1914-1918). They also had defeated, at a cost of five million lives, the military forces of the capitalists, kulaks and foreign imperialists during the Russian Civil War.

During the period of war communism (June 1918 to March 1921), the KPD(ML) saw as legitimate the alliance of the communists with the peasant class, despite the peasant rejection of communism. The capitalists could not have been defeated without the alliance. The KPD(ML) pointed out:

> *During the period of war communism, the surplus of peasant production was collected without compensation and distributed to the workers in the cities. In this context Bolsheviks were subject to the illusion that this was the beginning of communist relations. In reality, it was a stopgap measure with which the mass of the peasants agreed only because they knew very well that the large landowners would come back if the Red Army was defeated. That changed with the victory of the Red Army.*[14]

In 1921 following their civil war victory, the Soviets introduced the New Economic Policy (NEP) and multiple policies associated with it, which the KPD(ML) also felt were legitimate, despite being a retreat from socialism. The country was weak and needed time to gain strength. Only 15 percent of the population was working class. Most were peasants and they and their petit bourgeois views had to be accommodated or they could have forced the communists out. The KPD(ML) stated:

> *The first and most urgent question had to be how the working class could forge an alliance with the peasants. This was anything but easy, since the class interests of the workers and the peasants in no way coincided. The Mensheviks (the opportunist wing of the workers' movement, the equivalent of Western social democracy) believed that in a backward*

14. KPD(ML), *When and Why*, p. 33.

> *country like Russia, the working class could not take power. Correspondingly, the Trotskyists argued that if the revolution were not victorious in the Western industrialized countries, the working class could not remain in power... The majority of the Russian workers and the Bolshevik Party had a different idea. Logically, the question of the policy towards the peasants was at the center of the internal party disputes for a very long time, because this question was to be the main problem of the Russian revolution for a long time to come.*[15]

Two of the policies which the NEP required and that were in the interests of the workers were called "bourgeois crutches" by the Germans. The first crutch was the state with its ownership of the means of production and coercive forces. In a communist society there would be no state, but in a transitional society it was necessary. The state was needed to enforce the working class dictatorship over the still existing bourgeois and peasant classes. As the Germans commented:

> *The repressive functions of the Soviet state were unquestionably necessary on the whole and they were ultimately in the interest of the working class… It was a proletarian state power, for it served to realize the strategic goals of the proletariat. But looked at from this view, that it was a socialist state power, it had extremely strong bureaucratic features.*[16]

The second bourgeois crutch made use of by the Bolsheviks was commodity-money relations, the law of value, the supply and demand market economy and profit. In a communist society there would be a centralized subsistence economy, managed by instructions, based on the egalitarian principles of labor and need with no money or material incentives.[17] It was called the natural distributive system, a direct exchange of goods and services between city and countryside and between worker and industry without the intermediary of money.[18]

During the civil war in 1920, the working class's ideal of a no-money, everything-is-free society was apparently made law when, according to

Vyacheslav Molotov's (1890-1986) memoir, Lenin signed a decree on the liquidation of money. Units of labor time replaced it, "This will cost so many hours of labor, that will cost so many." This prevented some from living at the expense of others.[19] It should be noted that, notwithstanding Molotov, the only mention of money in *Lenin's Collected Works* for 1920 is not about a decree but about repaying the peasants for the paper money they were given for grain.[20]

Whether or not there was a formal money liquidation decree, in the second half of 1920 the postal and telegraphic charges were abolished one after the other, the use of flats (apartments), telephones, water, gas and electricity was made available free of charge for workers and employees. On August 16, 1920, the tariffs for passenger and freight transport by rail and water were abolished. In principle it was decided that foodstuffs should also be supplied free of charge by the People's Commissariat for Food.[21] The International Labor Organization estimated that 90 percent of worker wages were in kind.[22] Similar measures had earlier been experienced with the state monopolistic war economy during World War I (elimination of the market, liquidation of money, general compulsion to work).[23]

23. Nicolas Spulber, *Russia's Economic Transitions: From Tsarism to the New Millennium* (New York: Cambridge University Press, [2003] 2006), p. 176 (Imperial Germany's centralized war economy model was similar).

Among the believers in the money-less economy was Stalin.[24] A Soviet economist, Lev Kritzman (1890-1938), wrote in 1925 about the heroic nature of the moneyless "natural" economy:

> *In reality, war communism is the first experience on a large scale of a proletarian-natural economy, the experience of the first steps of the transition to socialism. In its assumptions, it was not at all a mistake of persons or classes, it was, although not in its pure form and with some distortions, an anticipation of the future, the intrusion of this future into the present.*[25]

The money liquidation gave substance to Section 15 of the Bolshevik Party's 1919 program adopted at their 8th Congress. Lenin had drafted the program, and it had looked to the permanent elimination of money. It read:

> *In the initial stage of transition from capitalism to communism, while communist production and distribution of products is not yet fully organized, it is impossible to abolish money. Under such conditions the bourgeois elements of society continue to use money, which still remains private property, for speculation, profiteering, and robbery of the workers. The RKP [Russian Communist Party], assisted by the nationalization of banks, strives toward the adoption of a series of measures which will extend the sphere of non-monetary [cashless] calculations and which will prepare the ground for the abolition of money.*[26]

The full 1919 Bolshevik program (in English) containing the quote about money is in Richard Gregor (comp.), "Programme of the RKP(b)," *The early Soviet period, 1917-1929* [Resolutions and decisions of the Communist Party of the Soviet Union] (Toronto: University of Toronto Press, 1974), LCCN 74195074, pp. 54-72 at p. 70; online at https://drive.google.com/file/d/14Q6C_f7eWSFwlvZDmYBhMfSF3rjAdjlv/view.

Looking back during the 1970s on the period of war communism, the Hungarian economist László Szamuely (b. 1936) argued that the moneyless society was the "purest realization" of a centralized directive model of planned economy yet achieved, stating, "since then not even the most rigidly centralized mechanisms have abolished monetary economy."[27] He added that the Bolsheviks saw it as a "desirable and final aim" and as "laying the foundations of socialist economy," and as having "its own established ideology."[28] About its ideology, he wrote:

> *War communism as a specific economic model in general -- and every one of its traits, in particular -- had its own theoretical background. Not for a single moment did its ideologues consider the system of war-communistic economy as temporary or at least they thought its existence was indispensable until the complete building up of socialism.*[29]

As mentioned, despite its ambitions, the working class was weak and unable to establish the necessary discipline to make the system work. Within a year of instituting the centralized-barter, moneyless command economy, the country was forced to restore the price system. At the party's March 1921 10th Congress, Lenin introduced the new NEP program, stating, "We went further than was necessary theoretically and politically."[30] Later he stated about this:

> *The transfer of state-enterprises to the so-called profit basis is inevitably and inseparably connected with the New Economic Policy… In view of the*

(Moscow: Progress Publishers, 1965), vol. 32, pp. 165-271, online at https://www.marxists.org/archive/lenin/works/1921/10thcong/index.htm.

> *urgent need to increase the productivity of labor and make every state enterprise pay its way and show a profit.*[31]

At the same time, as Aleksy Wakar, director of Poland's Central School of Planning and Statistics in Warsaw points out, in reversing moneyless system by instituting the NEP, "Lenin admitted to an error of haste, not of principle."[32] In October 1921 on the occasion of the fourth anniversary of the October Revolution, Lenin commented:

> *We hoped - or perhaps it would be more correct to say, we assumed without having sufficient grounds for this - that with the help of direct regulations of the proletarian state, we would be able to organize the production of state governments and the state division of products in a country with a small peasant economy according to communist principles. Life revealed our mistake. It turned out that a number of transition stages were necessary - state capitalism and socialism - to* prepare *for many years of work the transition to communism (Lenin's emphasis).*[33]

Collectivization (1927-1933) and Industrialization (1929-1941)

The KPD(ML) was positive about the USSR experience because of the Revolution and NEP, which were seen as steps in building socialism. Another reason the Germans viewed the Soviets with favor was its agricultural collectivization and industrialization programs.

The Germans pointed out that there was a contradiction between socialist industry, which was developing according to the laws of extended [expanded] reproduction, and the predominantly small-scale commodity agriculture, which did not always achieve even simple reproduction. Agriculture lagged behind

industry and was less and less capable of meeting the growing needs of the urban population.

The KPD(ML) summarized about the agriculture problem and the necessary destruction of the landowning class:

> *In 1928-1929 the critical point was reached. A further continuation of the NEP would have led to the downfall of the workers' power. In 1929 the party under Stalin's leadership decided to set course for the destruction of the kulaks as a class and for the collectivization of agriculture. This led to an extremely intensified class struggle, not to say class war…*
>
> *As far as Soviet power was concerned, the backwardness of the village had very great disadvantages, but now the collective-traditions of the peasants turned into an advantage for socialist collectivization, the concrete form of which largely corresponded to the level of development and consciousness of the peasantry. Furthermore, there were tractors and other agricultural machines which the state made available to the collectives in the form of state Machine and Tractor Stations (MTS), so that the economic advantages of collectivization were tangible for the peasants.*[34]

In establishing the system, the collective farms were obliged, first, to deliver a certain quantity of their products to the state at a relatively low "price of acquisition". Second, they had to provide the MTS with a "payment in kind" for the use of state production instruments; these products thus flowed to the state without commodity-money relations. Third, the collectives supplied products at higher prices than the compulsory delivery price. Fourth, there were supply contracts between the collective farms and the state; the state paid contractually agreed upon prices for deliveries according to plan as well as premiums for deliveries in excess of plan.[35] Collectivization of agriculture established stratified collective farms with a white-collar decision-making elite, the field workers at the bottom and blue-collar machine operators in the middle strata.[36]

Along with the collectivization of agriculture, the Soviet industrial program, which, of necessity, included wage differentials and restraint of unions, was

also viewed by the Germans as helping to build socialism. *When and Why* commented:

> *Stalin rightly demanded a differentiated wage system… There were strict penal laws against the violation of work discipline. The unions lost their independence, which had been defended by Lenin against Trotsky in 1920 in a different situation, and were subjected to the "principle of production" in 1932. Their task was now no longer to defend the economic interests of the workers against the enterprise management, but only to achieve the plans... These were all very mild means of enforcing labor discipline when compared with the means the bourgeoisie used in corresponding phases of industrialization.*[37]

In defending the industrialization program, the Germans also quoted Stalin who in 1931 accurately stated that if the Soviets did not industrialize they would be destroyed:

> *"To slacken the tempo would mean falling behind. And those who fall behind get beaten. But we do not want to be beaten. No, we refuse to be beaten!… We are fifty or a hundred years behind the advanced countries. We must make good this distance in ten years. Either we do it, or we shall go under."*
>
> *That this was correct is particularly clear in retrospect. That goal was achieved, and one can say without exaggeration that such a development of the productive forces in such a short period of time is probably unique in world history. But one had no choice in the means of achieving this objective.*[38]

Stalinist Era Problems: NEP Crutches, Management System and Peasantry

As noted, the purpose of *When and Why* was to help communists learn from the USSR's problems in order to make better progress in the future. During the Stalinist era, the Soviets had three basic problem areas as discussed by the Germans. These were:

> *(A) the 1920s NEP crutches.*
> *(B) the 1930s enterprise management system and*
> *(C) the peasantry.*

(A) The bourgeois crutches, consisting of state power and commodity-money-consumerist relations, were necessary as temporary expedients but in fact became permanent.

(B) Besides the crutches, the management system that came in the 1930s with industrialization and the planned economy created four negative side-effects:

> *(I) it added a stratum that had different interests than the working class;*
> *(II) it limited working class influence;*
> *(III) it encouraged economic inequality; and*
> *(IV) it squandered the wealth of the working class.*

(B-I) More specifically, the first side-effect that came with the management system involved a stratum of managers and state planners whose interests were different from those of the working class. The interest of the planners was in plan fulfillment, not in social interests. The KPD(ML) commented:

> *These class-based forces [planners]… worked against the orientation of production towards social interests, and they too raised the flag of "accumulation for accumulation's sake". From their point of view, the purpose of production was not the profit of individual factories but the "fulfillment of the plan" in their own sphere, no matter how formally or even by embellishing this "achievement". For on the one hand, their personal prestige, privileges and careers depended largely on whether the*

> *sphere for which they were responsible was attested to "fulfilling the plan"; on the other hand, they were intoxicated with the "glory" and "splendor" of the "almighty" Soviet power, by which these people did not mean the power of the working class, but of the apparatus. They too embodied private interest, which was opposed to the social interest.*[39]

(B-II) A second side-effect that came with the management system was that the possibilities for workers to directly influence political and economic decisions was limited by the pyramid-shaped management apparatus with the Politburo of the Party at the top, which ran the economy. The KPD(ML) summarized:

> *The system of management that was inevitable at that time could only be temporary. The given relations of production were the material basis for phenomena that Stalin attacked when he deplored the fact that the masses were beginning to look up to the leaders and no longer criticized them, while the leaders were becoming arrogant and looking down on the masses.*[40]

(B-III) Added to the side-effect of limiting worker influence was a third fault of the management system. This was the emergence of huge differences in income, which the Germans maintained was also inevitable. In order to combat the problem, which started at the beginning of the NEP in the early 1920s, the party established the "party-maximum" tax. Party members agreed to a 90 percent tax that went to the party on their income above 210 rubles per month.[41] This was the wage of a worker. The tax helped keep enterprise managers, state planning bureaucrats and technicians who had higher wages from joining the party, unless they really identified with the working class.

During the industrialization and economic planning in the 1930s, however, the high-paid stratum that had no belief in communism joined the party and they forced the termination of the tax. The KPD(ML) commented:

41. *Ibid.*, p. 23. The book cites as authority on the tax, Nils Holmberg (1902-1981), *Friedliche Konterrevolution: die Entwicklung der Sowjetunion vom Sozialismus zum Staatskapitalismus und Sozialimperialismus* (Peaceful counterrevolution: the development of the Soviet Union from socialism to state capitalism and social-imperialis (Berlin: Oberbaumverlag, 1974), OCLC 4053040, vol. 1, p. 36. Holmberg was a leader of the Communist Party of Sweden (SKP).

> *The relations of production determined the consumption relations. Those cadres who were supposed to "get down to work" and actually did so, who – depending on their position in the hierarchically structured management apparatus – often had an enormous amount of power, but as a rule had to work around the clock, these cadres also demanded a corresponding income. No wonder that the party maximum had to be dropped in the end. Once certain management structures had been established the party had to come to terms with the corresponding consumption patterns.*[42]

In the KPD(ML) analysis, the economic inequality that resulted from the management system was exacerbated not only by the wage differentials but by the abuse of the economic accounting practices. Management used the accounting system as a way to convert state funds to its own use. *When and Why* in discussing the Soviet publication, *The Textbook of Political Economy* (1954), observed about one of the accounting practices that was used to enrich management:

> *A part of this net income was "allocated to the director's fund, for material support of the staff and other purposes." That is, 1-5% of the planned net income of the enterprise and 15-45% of the profit in excess of the planned profit. From the director's fund the manager of the enterprise was allowed to pay out bonuses.*[43]

Another type of accounting abuse with a similar aim was that management forced the country to turn over to management partial ownership of the enterprises. This was done with the liquid assets of the enterprises, which flowed into the credit system and were called the "social property" of the enterprise. The KPD(ML) asked about this property:

> *Is it the property of the enterprise or of society?… The material and financial resources of the enterprise are in a sense the "property" of the*

> *enterprise … Society is forced to limit its ownership by giving the enterprise a certain degree of ownership.*[44]

(B-IV) From the *When and Why* perspective the enterprise managers abused the accounting system to enrich themselves and at the same time they also squandered the people's wealth with wasteful accounting practices. On this the book quoted Stalin's complaints about such abuse:

> *In a number of enterprises and business organizations concepts such as "cutting down unproductive expenditure," and "rationalization of production" have long gone out of fashion. Evidently they assume that the State Bank will advance the necessary money anyway… You know that reducing the cost of production by one per cent means an accumulation in industry of 150,000,000 to 200,000,000 rubles. Obviously to raise the cost of production under such circumstances means to deprive industry and the entire national economy of hundreds of millions of rubles… We must introduce and reinforce economic accounting in all our enterprises.*[45]

The KPD(ML) maintained that the solution to the management side-effect was the strengthening of the working class influence. Accounting solutions were not enough. This point will be taken up further in the Solution section of this essay, but *Where and Why* summarized the point as follows:

> *Neither through the mechanisms for economic accounting alone, nor through state centralism alone, nor through the combination of these two elements alone could socialism hold its own in the long run. Only the ever-increasing participation of the working masses in the management of the economy could have ensured the existence of socialism in the long run. "Economic accounting" in itself could only lead to enterprise managers increasingly acting and thinking like private owners.*[46]

(C) In addition to the NEP crutches and the management system, the peasant class was a third basic problem during the Stalinist era. The Germans pointed

out that the class interests of the peasants and the working class "in no way coincided."[47] The farmers were an exploitative class. They used public land to make private profit and live at a standard above the working class. During the period of war communism (1918-1921) they had made an alliance with the communists, despite their rejection of communism, because they knew that if the Red Army was defeated, the large landowners would come back.

The peasant exploitation in the decade following the civil war was studied by KPD(ML) functionary Peter Urban in the second KPD(ML) volume on the Soviet failure. He agreed with Stalin that the NEP had to be ended in 1928 because the capitalist policy was allowing the rich peasants to use commodity production to undermine the working class. More specifically, Urban stated that the peasants were withholding grain with the intention of obtaining higher prices and this led to supply problems in the cities. He wrote:

> *These "peasants" were precisely the kulaks (i.e., rich peasants who exploited the labor of others) as well as other peasants under their influence, and all this was not only about higher profits, but it was also a political struggle: the supply problems in the city were meant to undermine Soviet power so that it could eventually be over- thrown. . . if the Soviet power had continued the NEP indefinitely, it would have undermined its own existence, and the kulaks would have been satisfied with that. This is precisely why Bukharin's policy was counterrevolutionary.*[48]

With the end of the NEP the kulaks were liquidated. What remained in the countryside were poor and middle-sized peasants who had been allied to the communists during the NEP. In the 1930s they formed collective farms. The larger of these farms became wealthy, complete with a social stratification of white-collar decision-making elites at the top, field workers at the bottom and blue-collar machine operators in the middle strata.[49] A sector of the peasants supported communism, but from the view of the KPD(ML), the collective farms generally took up where the kulaks had left off. Eventually they became allied to the enterprise managers and supported Gorbachev in the 1980s.[50] Molotov summarized about the Bukharinist nature of the peasant class, "We are

primarily a peasant country, and the right wing is powerful. Where's the guarantee to prevent them from getting the upper hand? The anti-Stalinists in all probability will come to power in the near future, and they are most likely to be Bukharinists."[51]

Because of their exploitative ways, Stalin proposed taxing the collective farms out of existence.[52] During World War II their profiteering was large enough that in 1947 the ruble had to be devalued (one new for ten old rubles) in order to prevent the peasants from monopolizing the commodity market. The circumstances of the devaluation were that the ration-card system for food and industrial goods was being replaced with a system of free sale at unified state prices. Professor Alex Inkeles commented on this in 1950:

> *Major segments of the peasantry accumulated very large sums of cash holdings during the recent war through the sale of extremely scarce food products. It was largely to prevent this money from flooding the consumers goods market that the monetary reform of 1947 was carried out.*[53]

The government's monetary attack was viewed with hostility by the peasants. One of their western academic supporters compared the devaluation to the kulak liquidation at the end of the NEP. He stated:

> *This gives the Soviet currency reform the same character of social inequality which characterizes all economic and social policy of the Soviet regime. In this respect, the new Soviet currency reform is the continuation of the same fight against the well-to-do peasants, the kulaks, which implemented the collectivization of Russian agriculture.*[54]

In addition to being an exploitative class, the farmers neglected mechanization. As a result, there was a chronic problem of food shortages. The state farms were more productive because they were industrialized. In 1973 Molotov observed:

53. Alex Inkeles, "Social Stratification and Mobility in the Soviet Union: 1940-1950," *American Sociological Review* (Aug., 1950), vol. 15, no. 4, pp. 465- 479, at. p. 472.

54. B. Alexandrov, "The Soviet Currency Reform," *The Russian Review* (Jan., 1949), vol. 8, no. 1, pp. 56-61, at p. 59.

> *The kolkhoz (collective farm) is a transitional, and only a transitional form. No socialism, no complete socialism exists while there are two forms of property, state and cooperative… Brezhnev, in spite of himself, is one of those leaders who doesn't understand this, one of those who live according to a vulgar, petty bourgeois ideology. We have a lot of that around in our county and it cannot but impede progress...*
>
> *Twenty years ago Stalin wrote that the kolkhozes were already beginning to block progress. Today the kolkhozes can rely on their own funds. But what if the state should invest in this matter? The rate of growth would rise phenomenally... Under-mechanization is the major reason for our agricultural problems. In America there is no shortage of grain, cotton, or sugar beets. Why? Because of complete mechanization and integration down to the smallest level. If we were able to this we would outperform them.*[55]

Stalin sought the goals of raising collective property to the higher level of public property, of replacing commodity exchange with product exchange (no money) and of taxing the farmers so that their surplus value would be shared in an egalitarian way.[56]

In discussing the USSR problems, the Germans mentioned by way of explanation, that the Soviets were the first socialist society and there was a lack of developed transition society theory to guide them. This led, in the KPD(ML)'s view, to the fact that Stalin took a subjectivist (idealist) position and did not recognize that during the 1930s a new stratum had developed and threatened to take power from the working class as a result of the state ownership and commodity economic accounting.[57]

About the theoretical problem and not sufficiently guarding against the management apparatus, the Germans commented:

> *Stalin failed to recognize a decisive point, namely that the leading stratum had developed class-based interests on the basis of which it resolutely opposed communist development… This was a glaring misjudgment of reality, because the leading stratum was about to form a new ruling class, to wrest power completely from the working class.*[58]

---

55. Chuev, *Molotov remembers*, pp. 384-385.
56. KPD(ML), *When and Why*, pp. 118-119.
57. *Ibid*., p. 92.
58. *Ibid*., p. 96.

The Germans went on to stress that the idea that it was only necessary to "overcome," as Stalin put it, "those forces that did not understand the necessary changes" was idealist because this idea was abstracted from the class-based interests of the leading stratum, the high party and state functionaries as well as the enterprise managers. At that time, the majority of these leaders primarily wanted to maintain or extend their privileges, their decision-making powers and their privileges in consumption.[59]

Despite the problems and the lack of a developed transition theory, the Germans maintained that the USSR under Stalin remained a socialist country that was serving the interests of the working class.

Solution: Revolutionize Relations of Production

As noted, the intent of the KPD(ML) in studying Soviet history was to help progress toward a communist society in the future. As a result, its study included discussion of how to solve the Soviet faults. The Germans summed up their solution as revolutionizing the relations of production.[60] By this they meant withering the money-commodity relations that had been carried over from the capitalist era. This withering involved a social movement within socialism against the enterprise directors and state bureaucrats.

The KPD(ML) believed that Stalin had not dealt sufficiently with the revolutionary movement. They wrote:

> *The withering away of the state is not a mechanism that takes place on its own at a certain level of development of the productive forces or with the spread of socialism to most countries in the world. Moreover, the strengthening and development of the communist kernel within socialist society is not a mechanism – neither when there still exist foreign imperialist countries or afterwards. Communism can only be won through a social movement within socialism. However, even Stalin did not deal more closely with the question of what changes in the relations of production within the state sector had to be sought in order to take steps along this path.*[61]

---

59. *Ibid*.
60. *Ibid*., p. 55.
61. *Ibid*., p. 56.

The communists viewed the withering issue as part of economic planning. Molotov maintained that the five year plans that began in 1928 should rather have been a single long-term plan, which was broken down into five-year plans and should have spelt out a "specific way of life" moving toward communism. For him, like for the KPD(ML), maximum consumption was not a long-term goal for communism and if the general line was set on peaceful coexistence, there was no need for revolution.[62] Similarly counter-revolutionary was the slogan of being a society of the whole people, meaning the petit bourgeoisie and collective farmers, rather than a dictatorship of the working class.

In discussing solutions and planning, the KPD(ML) took up the issue of objective versus subjective causation. In their view the revolution was "betrayed" by both subjective and objective factors. However, they did not emphasize the objective side, which maintained that it had to happen the way it did happen and that there was little the workers could have done to prevent it and that there was little to learn from the failure. Rather, they took a more subjectivist view and that there were lessons to be learned.

About the objective-subjective issue, the Germans wrote:

> *We are opposed to a subjectivist view that, by saying the word "betrayal", considers everything to be made clear, but at the same time we are opposed to an objectivist view which declares that everything had to happen just as it happened, and precisely because it happened that way. Such a view denies the importance of the subjective efforts of the class forces and individuals involved. If this were the case, then all efforts to learn from history would be meaningless, because according to this view everything had to happen the way it did. But this is not the case, in a second attempt one can learn from the mistakes and shortcomings of the first. Such an objectivist attitude particularly whitewashes the revisionist, counter-revolutionary, backward-looking forces.*[63]

From the KPD(ML) subjectivist view, the post-war Soviet economy was at an appropriate point to push further toward state withering. During the previous several decades a majority of the economy had been socialized. Food, clothing, shelter, education and health were free or subsidized and commodity-money

---

62. Chuev, *Molotov remembers*, pp. 247-248.
63. KPD(ML), *When and Why*, p. 139.

relations did not dominate. In 1920 Lenin, responding to the demand of the workers, had signed a decree to eliminate money and credit entirely and replace it with units of labor time (This will cost so many hours of labor). Money was seen as part of bourgeois society. Unfortunately for the workers, they were only 15 percent of the population at that time and too weak to enforce the ban.

In the post-war era, the workers had become a majority and it was a good time in the KPD(ML) view to revert to Lenin's decree against money. *When and Why* observed, "The relations of production that were established in the 1930s, especially the system of leadership that was established at that time, no longer corresponded to the situation [in the 1950s]. In particular over-centralization had to be reversed in the interests of the working class."[64]

The KPD(ML) explained further about the workers regaining a voice in management:

> *The productive forces in the 1950s were at a much higher level than at the beginning of the 1930s. This increased the possibility, and at the same time the necessity for a greater participation of the working masses in the administration of the economy, state and society.*[65]

The Germans developed the point that the productive forces were much higher by citing statistics concerning growth during the Stalinist era:

> *Success was not lacking: The productive forces were developed to an enormous degree and, not the least, the number of workers and employees rose from 10.8 million in 1928 to 47.9 million in 1955, and the number of technical specialists with a university education increased from 233,000 to 2.2 million within the same period of time.*
>
> *Now, after the end of the war and the reconstruction of the economy, the workers' power could have reaped the fruits, could have strengthened the socialist order and taken steps towards communism on the basis of the developed productive forces; it could have drawn the workers in particular to a far greater extent into the direct management of production.*[66]

---

64. *Ibid*., p. 74.

65. *Ibid*., p. 57.

66. *Ibid*., p. 136*, citing* Wolfgang Leonhard, *The Kremlin Since Stalin, 1962* (Westport, Conn.: Greenwood Press, 1975, [1962]), LCCN 75008720; 403 pp. at p. 14.

In arguing for a revolution in the relations of production, the Germans discussed a number of interrelated strategies that could have been used to win back the proletarian dictatorship. These included:

> *(I) Strengthening the Sovnarkhoz or Regional Economic Councils.*
>
> *(II) Reducing class differences.*
>
> *(III) Replacing as the primary goal of society that of profit and efficiency with social needs goals of balanced development and production.*
>
> *(IV) Reducing economic centralization.*
>
> *(V) Attacking consumerist ideology.*

(I) More specifically, the first strategy to revolutionize the relations of production was to strengthen the Sovnarkhoz. This was a management system that would have enabled and required greater direct participation by the workers. They would have been especially useful to assist the working class to gain power in economic decisions against the pyramid-shaped management apparatus.[67] The Germans called the Regional Economic Councils a "third element" to balance out the commodity forces of the enterprise directors and the state planning domination by the bureaucrats. *When and Why* explained:

> *The state crutch and the commodity crutch mutually mitigated their respective shortcomings only when a third element intervened in a leading way, a socio-economic element which was not borrowed from the old society but embodied the future communism: the social leadership and control by the working people, the "strengthening of the working class as the ruling class in all pores of economic life." This class led by its party, had to ensure that production was oriented towards social interests. If this communist motive force was too weak, the signs of decay that emanated from the state crutch on the one hand and the commodity crutch on the other hand multiplied.*[68]

While the KPD(ML) advocated strengthening the Sovnarkhoz-Regional Economic Councils, they found useless the worker self-management system in

---

67. KPD(ML), *When and Why*, p. 81.
68. *Ibid*.

Yugoslavia. The workers in that country had no class-consciousness, but thought in the narrow terms of their enterprise.[69] Profit and foreign capital drove the system.[70] There was no planned economy because the capitalists did not want state interference.

(II) Besides strengthening the Sovnarkhoz, a second strategy advocated by the KPD(ML) was to reduce class differences by several related measures, including:

> *(II-1) Decreasing prices and increasing wages.*
>
> *(II-2) Shortening the workday.*
>
> *(II-3) Elimination of the privileges given to government and management officials.*
>
> *(II-4) Reducing the centralization of the economy.*

(II-1) Decreasing prices and increasing wages for reducing class differences as suggested by *When and Why* was a strategy which it took from Stalin's *Economic problems of socialism in the USSR* (1951) and gave the example of Stalin, during the post-war era of reducing year-by-year the commodity-money relations and social inequality by lowering prices. Molotov commented that the result of this program was that "We gained tremendously in terms of morale."[71]

(II-2) There was a related measure, which *When and Why* advocated and which was also inspired by Stalin and the working class. It involved shortening the workday to 5 or 6 hours. In explaining this strategy, the Germans quoted Stalin:

> *The members of society must be in a position to receive an education sufficient to enable them to be active agents of social development… It is necessary, first of all, to shorten the working day at least to six, and subsequently, to five hours. This is needed in order that the members of society might have the necessary free time to receive an all round education.*
>
> *It is necessary further to introduce a universal compulsory polytechnic education, which is required in order that the members of society might be*

69. *Ibid*., p. 99.
70. *Ibid*., pp. 95, 97.
71. Chuev, *Molotov remembers*., p. 298.

> *able freely to choose their occupations and not be tied to some one occupation all their lives. It is likewise necessary that housing conditions should be radically improved and that real wages of workers and employees should be at least double, if not more both by means of direct increases of wages and salaries, and, more especially, by further systematic reductions of prices for consumer goods.*[72]

(II-3) Yet another measure for reducing class differences, which the KPD(ML) advocated, was elimination of the privileges given to government and management officials. It was mentioned above in the section on Stalinist era problems that at the beginning of the 1920s, the party had established a "party-maximum" tax. This helped eliminate privileges at that time. Party members agreed to a 90 percent tax that went to the party on their income above 210 rubles per month.[73] This was the wage of a worker. The tax helped keep enterprise managers, state planning bureaucrats and technicians who had higher wages from joining the party, unless they really identified with the working class. Unfortunately for class differences reduction, the management-bureaucrat class gained the elimination of this tax in the 1930s.

Later, when there was an economy slump in 1970, Molotov advocated changing social relations by bringing back the tax. He commented:

> *Because we are now in a deep economic slump, raising prices is not the way out. I think we have to change social relations. To start with, let's impose a party maximum, a cap on remuneration of party members. This would have a tremendous material effect on the country and its morale. The trouble is that Khrushchevites still dominate, even in the Central Committee. Since Stalin's death we have lived on the reserves built up in Stalin's time.*[74]

The party tax was not brought back but the KPD(ML) noted gestures in that direction, such as happened in 1947 with the termination of the feeding and clothing the relatives of Politburo members at state expense.[75] About such

efforts, the Germans remarked that "consumption relations largely follow the relations of production. Of course, the struggle to limit differences in consumption does have its own significance, though the scope for this is extremely limited if relations of production are not revolutionized at the same time and above all."[76]

In other words, the KPD(ML) considered the party privilege problem as secondary to the relations of production problem. This somewhat contrasts with the view of the Communist Party of China (CPC), as represented by Li Shenming, an official at the Chinese Academy of Social Sciences (CASS). For him it was mainly the degeneration of the Soviet party that caused the country's failure.[77] Their relations to production were secondary. As a result the CPC conducts campaigns for party members against corruption. This includes campaigns against ideological corruption. In training films, books and party congresses, the lesson for the cadre is that without the greatest selfless dedication, the same capitalist chaos that took hold in the USSR will take hold in China.

(II-4) There was another strategy besides those dealing with prices, wages and privileges. The Germans supported Stalin's position on reducing class differences in agriculture. Stalin maintained that the working class had to set the strategic goal of creating a unified public ownership of productive property. The *When and Why* quoted Stalin on this:

> *It is necessary by means of gradual transitions carried out to the advantage of the collective farms, and, hence, of all society, to raise collective-farm property to the level of public property, and, also by means of gradual transitions, to replace commodity circulation by a system of products-exchange [that is, without the commodity-money relation, RM], under which the central government, or some other social-economic centre, might control the whole product of social production in the interests of society.*[78]

In achieving public ownership, Stalin proposed, as noted earlier, that a tax be placed on the collective farmers, so that their surplus output was shared in an egalitarian manner. Stalin said:

---

76. KPD(ML), *When and Why*, p. 55.

77. Li Shenming, "The Degeneration of the Soviet Communist Party," pp. 171-185.

78. KPD(ML), *When and Why*, p. 140, quoting Stalin, *Economic problems of socialism in the USSR*, 68-69. The initials RM above stand for Roter Morgen Writers' Collective.

> *In order to raise collective-farm property to the level of public property, the surplus collective-farm output must be excluded from the system of commodity circulation and included in the system of products-exchange (that is, without commodity-money relations, RM) between state industry and the collective farms.*[79]

This proposal, according to Molotov, would likely have driven the peasants to ruin. That is, it would have driven them to state farms and to the working class.[80]

(III) A third interrelated part of the communist strategy advocated by the KPD(ML) involved replacing the profit and efficiency policy of the enterprise managers, which policy was aimed at enriching the managers, with the worker demands of a balanced development of the economy.[81] The German's commented that there was a higher profitability than that of the calculated short-term profit of individual enterprises. On this they quoted Stalin:

> *If profitableness is considered not from the standpoint of individual plants or industries, and not over a period of one year, but from the standpoint of the entire national economy and over a period of, say, ten or fifteen years, which is the only correct approach to the question, then the temporary and unstable profitableness of some plants or industries is beneath all comparison with that higher form of stable and permanent profitableness which we get from the operation of the law of balanced development of the national economy and economic planning, which save us from periodical economic crises disruptive to the national economy and causing tremendous material damage to society, and which ensure a continuous and high rate of expansion of our national economy.*[82]

The Germans commented that what Stalin had said about profit was self-evident for Marxists. That is, Stalin was explaining why one should hold on to socialism and not return to capitalism. The KPD(ML) concluded, "It seems almost scary to read such an argument, which Stalin was forced to make

79. KPD(ML), *When and Why*, pp. 97-98.
80. Chuev, *Molotov remembers*, p. 158.

82. Ibid., pp. 89-90, quoting Stalin, *Economic problems*, p. 24.

in a discussion among 'Marxist' economists."[83] Marx had taught, as the Germans explained, that development and production under socialism was for social need:

> *[*It was] seemingly an absurd idea that production, accumulation, should be an end in itself, not oriented towards the satisfaction of social needs. This idea was by no means absurd: it expressed the aspiration of private interest to reassert itself as the sole interest, to cast off the shackles that socialism had placed on it. But the establishment of the unlimited private interest meant the elimination of the orientation towards communism, meant the elimination of the kernel of social domination over production, meant that production, accumulation, the utilization of value became again an end in itself. Stalin's fight against this was therefore a fight for the defense of socialism.[84]

(IV) A fourth part of the communist strategy advocated by the KPD(ML) involved reducing the centralization of the economy in order to strengthen worker influence at the expense of the enterprise managers and the state bureaucracy. The KPD(ML) commented about the benefits of decentralizing:

> *By increasing the decentralized activities socialist or communist centralism does not become weaker but stronger; decisions of central authorities are then reduced to those spheres in which in substance decisions can or must be made centrally. The sphere in which central authorities make decisions is thus reduced, but the decisions of central authorities take on a higher quality. At the same time the "central" behavior of decentralized levels and individuals, that is, the behavior of decentralized levels and individuals which is characterized by responsibility for society as a whole, is growing.*[85]

(V) A fifth KPD(ML) strategy for solving the Soviet faults was ideological. The ideology of the managerial and planner economists was that the consumerist philosophy at the heart of the crutches was socialist. The Germans commented, "The dogma prevailed among Soviet economists that 'our

---

83. KPD(ML), *When and Why*, p. 90.
84. *Ibid*,, p. 86.
85. *Ibid*., p. 80.

commodities are not commodities and our money is not money, and that the law of value does not work at all under socialism.' "[86]

To this view of the crutch problem, the Germans answered with working class ideology, as voiced by Lenin:

> *How could commodity-money categories, which can finally be overcome only with the transition to communism, be the panacea for solving the problems of socialism? They could be no more than a crutch that, in addition to limited positive effects also produced abundant negative ones. At best, the commodity crutch and the state crutch could be balanced against each other in such a way that the negative effects of both were kept within certain limits.*
>
> *The growing role of the working masses is strategically decisive for the strengthening of socialism – and this ultimately means: for the strengthening of the communist kernel in socialist society.*
>
> > *[quoting Lenin] Creative activity at the grass roots is the basic factor of the new public life… Socialism cannot be decreed from above. Its spirit rejects the mechanical bureaucratic approach: living, creative socialism is the product of the masses themselves.*[87]

Failure: Post-Stalin Enterprise Managers

The second-half of *When and Why* deals with the post-Stalin era. The Germans argue that whatever faults existed under Stalin, he was on the side of the proletarian dictatorship and a hindrance to the liberal program of the enterprise managers. On the other hand Stalin's successors, Khrushchev and Brezhnev, are seen as counter-revolutionaries. To obtain and keep power they balanced the interests of the various groups that made up the new ruling class. The groups were the enterprise managers, government planners, party bureaucrats and peasants.

The new ruling class did not include the workers. The KPD(ML) summarized about their exclusion from power:

> *But after the counter-revolutionary overthrow after Stalin's death, this third element [working class] was not only weak; it had been eliminated. Despite the occasional phrases of Khrushchev's people and later also of the Brezhnev leadership that the workers must be called upon to lead, the state power now served the goal of keeping the working class permanently away from any leadership of production and society in general… Instead of being oriented towards communism, Soviet society rapidly atomized itself into many different groups and individuals pursuing their respective interests.*[88]

The most powerful groups within the new ruling class were the managers and planners. They were antagonistic to each other, with the liberal managers seeking to end government interference and the planners and Communist Party seeking to keep their jobs and privileges. The Germans explained:

> *The two socio-economic factors that socialism had used as crutches now appeared as the sole forces regulating economic life: on the one hand, the commodity element, and on the other, state ownership in terms of planning and management of production. In terms of personnel, it was the two main groupings within the new ruling class mentioned above that embodied these two socio-economic forces, and they worked against each other to a certain extent.*

88. KPD(ML), *When and Why*, pp. 154-155.

> *They were united by their common class interest, which was to keep the working class from exercising power, to determine production and distribution alone and to use the peasants as allies. However, this class was not homogeneous; there were considerable conflicts of interest within this class. The party and state bureaucracy wanted to put an end to the elimination [process] of state ownership in economic life to a certain extent; the enterprise managers wanted to continue this process.*[89]

In balancing the competing interests, Khrushchev's economic policies vacillated. For example, in 1955 he backed legislation that increased the powers of the enterprise mangers at the expense of the planners. The book summarized:

> *The enterprise managers were given the right, with certain restrictions, to change the quarterly plans according to their own conditions, to take orders outside the plan and, if no prices were fixed, to set prices and rates for certain orders. The enterprise managers were also allowed to decide on the operating funds for the reconstruction and expansion building at their own discretion, to independently procure building materials from local industry, to confirm projects, and if necessary, to modify them. Under the existing arrangements, they were allowed to determine the wages for individual categories themselves and, in agreement with the unions, to adapt the wage system to the needs of the enterprise.*[90]

Khrushchev used both communist and consumerist ideology and measures to mask his anti-communist politics. About the use of communist ideology and measures which promised better working conditions, the KPD(ML) observed:

> *Khrushchev believed in "communism" in the sense that he thought there was some kind of world schematic that would make the Soviet Union superior to the West in one way or another. He would certainly have liked the effect of such a world schematic. He may also have believed that such a world schematic would soon ensure that there would be enough goulash for everyone...*
>
> *The bitter irony of history provided that Khrushchev of all people, the gravedigger of the workers' power, was able to announce at the 20th Party*

89. Ibid., pp. 150-151.
90. *Ibid.*, p. 127.

> *Congress some measures that alleviated the immediate pressure on the workers. For example, the decision of June 26, 1940, that workers were not allowed to leave their workplaces and that if they were late by more than 20 minutes they were punished with up to 6 months of educational work at the workplace, was revoked. It was not to Khrushchev's merit that this measure, born out of the war emergency, could be ended now, after the reconstruction of the economy, but it gave him the opportunity to act as a friend of the workers.*
>
> *Furthermore, working hours were reduced and the workers' right to permanent employment was abolished. A two-week period of notice was introduced, and the penalties for workers who left their jobs without official permission were lifted. The coercive measures in question were introduced in the 1930s. The reason for this was the imperative need to achieve an enormous impetus to industrialization in record time and to exert considerable pressure on the mass of workers of peasant background to this end. Success was not lacking.*[91]

Related to "communist" working conditions, the new ruling class promised that the liberal reforms and decreases in planning would bring a miracle increase of food, clothing and shelter. The Germans summarized:

> *The leadership thus promised the population miracles in terms of increasing consumption; presumably it feared the resistance of the communists against the expansion of commodity-money relations and wanted to counteract this resistance in this way. And the revolutionary communists had to swallow yet another toad: Mikoyan proposed the import of food and consumer goods from abroad. This meant a weakening of economic planning, as it made the Soviet power much more dependent on the forces of the world capitalist market. Here, too, the revisionists demagogically waved the flag that one must "satisfy the needs of the people."*[92]

However, what happened with the decrease in economic planning was not an improvement in consumption. The anarchy of production resulted in a number of problems, including:

---

91. *Ibid.*, pp. 135-136, 139. citing Leonhard, *The Kremlin Since Stalin, 1962*, p. 152 concerning worker conditions.

92. KPD(ML), *When and Why*, p. 120.

(I) a scarcity in basic goods.

(II) a degeneration in political, social and economic morals.

(III) an imperialist foreign policy.

(I) More specifically, the first problem resulting from the lack of planning was a chronic problem of supplying basic needs. The focus on consumerism and the limitation on heavy industry production meant the farmers were left without sufficient tractors and their production declined. *When and Why* observed:

> *The Soviet Union, a grain exporter in Stalin's time, had to import grain… Agriculture was in a situation which could only be described as catastrophic. This was above all a consequence of the "new course" of the leadership. Less and less was heard of the consumer goods program that was announced with great pomp.*[93]

(II) A second problem resulting from the counter-revolution besides commodity shortages, was a degeneration in political, social and economic morals. According to the book, bribery was a problem at all levels.[94] About the corruption among Communist Party officials, the book states:

> *The Party functionaries in their own interest thus helped the economic managers concerned to defraud the society by giving the impression, contrary to the facts, that the plan had been "fulfilled"… It was precisely the Party functionaries who acted in the nooks and crannies of the decaying system, using relationships, both legal and illegal, up to and including the mafia-like structures and old-boy networks that increasingly dominated society under Brezhnev.*[95]

(III) A third problem that came with the lack of planning was an imperialist foreign policy. The Soviets built up their military capability. About increasing expenditures for imperialism, *When and Why* commented:

---

93. *Ibid.*, pp. 121, 144.
94. *Ibid.*, pp. 161-165.
95. *Ibid.*, pp. 121, 144.

> *The arms race with the USA, which now [in 1971] began, was by no means oriented towards national defense, but towards the interests of the military-industrial complex and the imperialist objectives of the Soviet Union. The war in Afghanistan, for example, had just as much to do with the "country's security," as Brezhnev demagogically stated, as the deployment of the German army in former Yugoslavia had to do with the security of Germany, that is, nothing at all. Brezhnev guaranteed that at least 13-14% of the Soviet national product was continuously spent on armaments, that is, it was used unproductively. The whole industry was oriented towards military considerations.*[96]

Not a Return to Capitalism Until the 1980s

From the KPD(ML) view, the counter-revolution was not completed in the 1950s and 1960s. That came in the 1980s. Until then the Communist Party, the state planners (Gosplan) and the black marketers retained power.[97] The Germans commented:

> *Decentralization continued, but it should not be exaggerated; the essential interests of the state apparatuses were not touched. The Party apparatus would continue to exert direct and tangible influence on the management of the economy, regardless of any reforms.*[98]

In holding that the counter-revolution was not complete and that capitalism was not re-established, the Germans used a number of arguments, which they backed up with quotes from Marx. The arguments included,

> *(I) The scarcity of commodities and excess of money.*
>
> *(II) The lack of freedom for the bourgeoisie.*
>
> *(III) The setting of prices by the government.*
>
> *(IV) The lack of competition between the state enterprises.*
>
> *(V) The existence of the black market.*

96. *Ibid.*, p. 187, quoting Brezhnev, *Report of the CC to the 24th Congress of the CPSU* (Moscow: 1971), p. 54.

97. KPD(ML), *When and Why*, pp. 152-153.

98. *Ibid.*, p. 160.

Each of those arguments will be explained below. But first there will be mentioned the reason the KPD(ML) held that the issue of the Soviet's non-return was important. They wrote:

> *The assertion that the social orders in question were capitalist does not correspond to reality, so that such an assertion renders oneself untrustworthy and does not allow one to explain the events in question, thus falling into idealist schemes. On the other hand, it is necessary to work out the class content of state ownership in economic management.*[99]

(I) In their first argument that the Soviets did not return to capitalism in the immediate post-World War II era, the Germans emphasized commodity scarcity. They pointed out that capitalism was characterized by excessive commodity production, which was absent from the USSR. Incorporating a quote from Marx, they stated, "The wealth of those societies in which the capitalist mode of production prevails, presents itself as 'an immense accumulation of commodities' ".[100] Related to the lack of commodities, the Germans also noted the chronic excess of money. This was not characteristic of capitalism.[101]

(II) A second KPD(ML) argument about capitalism having not been achieved, was that the Soviet bourgeoisie did not have the "freedom" that a capitalist society gave to that class. The Germans wrote:

> *The undisturbed bourgeois form of movement of these individuals was prevented by hierarchical power apparatuses. (Such a social structure necessarily involved a diverse old-boy network.) This contradiction leads to the decay of society in all spheres, a decay that was still different from the decay inherent in a monopoly capitalist system, a decay that was increasingly perceived as unbearable by most people in the countries dominated by the revisionists, so unbearable that the "freedoms" of the capitalist countries increasingly appeared as a temptation. The basis of this decay is to be found in economics.*[102]

---

99. *Ibid.*, pp. 179-180.

100. *Ibid.*, p. 167. The citation was to (Marx, *Capital*, vol. 1, part 1, ch. I, sect. 1, in Marx Engels *Works*, vol. 23, p. 49.

101. KPD(ML), *When and Why*, p. 166.

102. Ibid., p. 155.

(III) A third point offered by the Germans about the non-return of capitalism was that the Economic Councils and the State Planning Commission still set prices, not the market. The Germans commented, "The bulk of prices remained fixed by the state, and only in the phase of immediate transition to capitalism was this substantially relaxed."[103]

(IV) A fourth argument for the non-return of capitalism was that there was no competition between the state enterprises. According to Marx, capitalism required competition. As support for their argument the KPD(ML) offered the following passage from Marx:

> *Free competition is the relation of capital to itself as another capital, i.e. the real behavior of capital as capital... The reciprocal compulsion exerted under free competition by capitals upon one another, upon labor, etc. (the competition of workers among themselves is merely another form of the competition of capitals) is the free, and at the same time real, development of wealth as capital… Profit-making, the utilization of value is the purpose, the internal tendency of capitalist production, and competition is the "outwardly appearing" sting that enforces the internal law of coercion.*[104]

Because competition was lacking in the degenerated, formerly socialist countries, there were no crises of overproduction there, and there was no oversupply (measured by effective demand) of commodities, but rather an undersupply: money surplus or lack of commodities was chronic.

(V) A fifth argument about capitalism's status dealt with the black market economy, which according to the KPD(ML), grew to be one-fifth of the gross national product.[105] The Germans stated, "The growth of an illegal capitalist black market alongside the official state market was precisely an expression of the fact that the latter was not based on the economic laws of commodity production and was therefore also not a capitalist market."[106]

104. *Ibid.*, pp. 174-175' citing Marx, "Outlines of the Critique of Political Economy," III. Chapter on Capital, [Fixed and Circulating Capital], Marx Engels, *Works*, vol. 29, pp. 38-39; online at https://marxists.architexturez.net/archive/marx/works/1857/grundrisse/ch12.htm#iii2 (footnote 57) (free competition is the relation of capital to itself as another capital).

105. *Ibid.*, p. 167.

106. *Ibid.*, p. 175.

Conclusion

Among the studies done by communist parties, the KPD(ML) interpretation gives a unique insight and guidance for future work. Its conclusions are, first, the USSR was unsurpassed in human history in terms of economic and spiritual achievement for the working class. Second, the path was wide open after World War II for advancement to the communist stage of history. The step that should have been taken, as it was discussed at the time, was to revolutionize the relations of production. Third, the failure to take the communist path allowed the money-commodity relations that were originally adopted as a temporary measure, to bring on a counter-revolution.

Message from the Chairman

Haz Al-Din[1]

Comrades of the American Communist Party,

This month will witness the confirmation of the first democratically-elected national body of our Party's leadership, the Central Committee.

Upon the confirmation of the Central Committee, our Party's institution of democratic centralism will finally be complete.

Many have attempted to critique our Party on the basis that it did not launch with all of the institutions and structures that make possible the full and comprehensive observance of the basic principle of democratic centralism. But as a newly reconstituted Party, facing circumstances of the complete breakdown and collapse of not only the institutions of Marxism-Leninism in the West, but even the minimal semblance of a worker's movement, it could not be possible that our Party could observe the principle of democratic centralism at the outset without first observing the bare minimum of practical activity, to flesh out the scope, scale and reality of the very subject of democracy in the first place - practical activity on a collective level.

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

In the months since the ratification of our Party constitution, a sufficient degree of experience has been acquired by the cadre of our Party in accomplishing the basics of coordinating, organizing, and carrying out practical tasks while maintaining collective discipline. Our Party is beginning to mature and a genuine, sincere, organic attitude and spirit of collective existence is beginning to take hold among our Party cadre.The fundamental prerequisites by way of Party culture and experience for the confirmation of a democratically elected body of experienced and capable cadre have therefore been met. It is now clear what the subject of democratic decision making actually is - not empty and hollow conceits of purely individual opinion, not the arbitration of purely metaphysical questions, but democratic decision making over our Party's commitments at a collective and practical level.

It is therefore necessary to point out that a fundamental transformation at the level of our Party culture, and a new test of resolve for our Party discipline will begin upon the confirmation of the Central Committee. A lively spirit of discussion, productive debate, and criticism is now possible according to the principles and within the framework of democratic centralism. The next decisive chapter and test for our Party will be for the ability of cadre to express contrary views from one and another without such contentions devolving into breaches of discipline and our shared, practical commitments as a Party. As our declaration states plainly, the united mission that fastens the bonds of association is the common development of history, and the bare minimum of an observance of that common development - not as an ideological dogma, but as a practical principle of shared commitment with respect to this development - is at the foundation of both the American Communist Party and all Communist Parties throughout history.

It is necessary to remember that the principle of collective organization and discipline is not merely an ideological conceit, but a type of practical commitment that is fundamentally non-reducible to any individual's given point-of-view. Such is the line that separates a Party of mere individuals from a truly collective organization. While individuals may be free to debate the particular content of that practical commitment, that there must be a common, collective practical commitment is non-negotiable. Therefore, regardless of an individual's point of view, the observance of collective discipline is also non-negotiable. Only by translating the individual point of view into a truly collective form, via the correct observance of both procedure and a genuine ability to persuade the majority of ones comrades through dialogue, does it acquire objectivity and reality with respect to our Party.

Comrades, the confirmation of the Central Committee imposes a newfound degree of responsibility of cadre within our Party for the leadership and direction of our Party's future. The Central Committee is a democratically elected body at the scale of national leadership. Together with the Executive Board and the Politburo, it completes the entirety of the central organs of leadership within our Party. Newfound power comes with newfound responsibilities and obligations, and a newfound degree of skin-in-the-game. While the major decisions of the Executive Board are now accountable at a democratic level, so too does this confer upon the Central Committee the shared responsibility of acting in the best interests of the Party overall, and carrying out to the best of its ability the shared goals and objectives of our Party.

I have full trust and confidence that a lively and powerful culture of democratic centralism will begin to take root in our Party, that our Party will grow ever-more resilient to disruption, individualism and unruliness, and that the confirmation of the Central Committee will make our Party far more powerful and capable as an organization.

2

From the 'Kingdom of Paradise' to the Kingdom of Freedom: Unearthing American Civilization

Volk Vulture[1]

Socialism was an unbounded dream… America, too, was an unbounded dream[2]

These lines open the first two paragraphs of Harvard sociologist Daniel Bell's roughly 200-page chapter in "Socialism and American Life", a contribution to the *Princeton Studies in American Civilization* series. While this work rightfully rests its descriptions of early American socialist development on Christian communitarian experimental utopias, its second volume explains that such globe-spanning social reform & religious movements of the time also had "fullest expression in the United States, and… certain peculiarly American

---

1. V. Vulture is an American citizen and ACP supporter.

characteristics."[3] Elsewhere, the book is keen to point out a "Christian Basis of Scientific Socialism"[4] as well. However, for Daniel Bell himself, in highlighting socialism's tendency to "fail to adapt to the American scene,"[5] a certain ingrained Cold War tendency shows through that dishonestly separates long-standing "pre-1917" American socialist and labor traditions from Bolshevism. Even without accounting for this and similar biases among the "nonaligned" or "unaffiliated" historians of American socialist history, some dreams are bound to come true.

Today, socialism as it actually exists is neither unbounded, nor a dream. Can the same be said for American civilization? M. Kammen once observed that, like the Arabian phoenix, American civilization "is said to exist, but no one knows where."[6] It won't be argued that Daniel Bell was an avowed American Communist or Marxist, and for all his scholarly work in this area, he leaves out important early examples, one of which features centrally here. However, if it may be said that distinct American ethnogenesis involves a "stripping away" of form in this way, or as Lenin says a "smoothing out" of national narrowness and breaking down of vast national differences "as nowhere else in the world"[7], then this would paradoxically promise a more tightly-bound and cohered historical basis for civilizational development. Not merely along ethnic or national lines, but also in recognition of a fundamentally shared legacy. Now, will such a phrase be allowed to catch up to the content? The infamous late 19th century "Turner thesis" argues that almost all aspects of American social and economic development have their motive factor tied directly to Westward expansion. Turner laments that "[t]oo exclusive attention has been paid… to the Germanic origins, too little to the American factors… [t]he frontier is the line of most rapid and effective Americanization."[8] A similar argument might

be made for both early Communist history and emerging American civilization generally.

Most relevant for the present is Turner's statement that initially, "[t]he wilderness masters the colonist… [i]t finds him in European dress… strips off the garments of civilization and arrays him in the hunting shirt and moccasin… he fits himself into Indian clearings and follows the Indian trails."[9] Friedrich Engels too had a kind of "Turner thesis" of his own that he divulged around the same time period. In 1895, Engels describes interacting historical oppositions in 19th century America as they sprawled over the landscape. He points out that although some think "America is the *youngest* it is also the *oldest* country in the world... [h]ence the UPS AND DOWNS of the movement, according to which point of view takes precedence in the average person's mind—that of the urban working man or that of the peasant engaged in reclamation."[10] For American Marxism then, undeniable Germanic origins are difficult to overemphasize. Yet, on a cultural level, the living conditions and social specificities of American life, in town & country alike, dictate this development such that Engels says "Americans will have to learn almost exclusively by practice, and relatively little from theory."[11]

Looking backward over centuries of American civilizational practice, what once may have been unbounded dreams issue forth objectively and circumscribe these geographies of national and local modes of economic life. Expanding territorial dominion and ignominious human exchange gave shape both to American civilization and its organic socialist tendencies. The political surveying and emancipatory enclosure of this boundlessness become the real task of a nation's working class and its Party. Within this process as a global consideration, the various nations entering the historical stage of American civilization also simultaneously "dissolve" and are made anew. In 1613, Samuel Purchas had portended that "the tawnie Moore, blacke Negro, duskie Libyan, Ash-coloured Indian, Olive-coloured American, should, with the whiter European become one sheep-fold under one Great Sheepheard…(all this varieitie swallowed up into an ineffable unity)…. without any more distinction of Colour, Nation, Language, Sexe, Condition…"[12] A tall order, but what

progress was ever made? Early in 18th century Canada, the French explorer de Lahontan relates a conversation he pretends to have had with the fictionalized indigenous chief 'Adario' who exhorts him to give up the "French" customs:

> *Believe me, my dear Brother, 'tis thy Interest to turn Huron, in order to prolong thy life. Thou shalt drink, eat, sleep, and Hunt with all the ease that can be; thou shalt be free'd from the Passions that Tyrannize… thou shalt have no Occasion for Gold or Silver to make thee happy… and if thou hast a mind to be King of all the World, why, thou shalt have nothing to do but to think that thou art so*[13]

Marx wrote of American tribes like the Creeks, Choctaws, Iroquois and Cherokees and others that not only had they been living a "dual" existence between horticulture and hunting-gathering, they also retained the "impress of a common mind."[14] During the 7 Years' War, Henry Bouquet, a Swiss mercenary once implicated in a damnable letter mentioning distribution of smallpox-infected blankets[15], wrote to George Washington complaining of hard-to-control Cherokees. Washington had ordered Bouquet to train and deploy these necessary indigenous allies against mutual Native tribal enemies, but Bouquet found this difficult, stating "it would be easier to make Indians of our White men, than to cox that damned Tanny Race."[16] In 1791, during what turned out to be one of America's first substantial and homegrown naturalist surveys, William Bartram also described some of the Southern American 'civilized' tribes, declaring that "[a]s moral men they certainly stand in no need of European civilization."[17] Whether Bouquet or Bartram were proven right in the long run is immaterial to the fact that such observations were shown to be true in practice decades before being theorized on parchment.

Specifically in early 18th century Cherokee country, a type specimen of the pre-revolution American frontier, one may witness German Christian radical

utopianism and anti-colonial struggle taking shape along Communistic lines. Christian Priber precedes many of the Utopian socialists that Marx mentions by nearly a century. Although Priber himself was preceded in America by groups like the Labadists, a Dutch pietist commune in Maryland, they and others lacked the radical integration into indigenous society and grandiose vision of Priber who went to the Cherokees and "endeavoured to erect a sort of whimsical Republick amongst that barbarous people."[18] Around 1735-36 Priber had arrived in South Carolina and traveled overland to the large Cherokee capital of Tellico with just a trunk of books, ink and a pen.[19] After several years of living as a "great beloved man" with the Cherokee and all but becoming one of them, Priber was captured by Creek Indians, and turned over to English authorities. His personal papers, including an early Cherokee dictionary and manifesto outlining his utopian vision were lost or destroyed. Priber was accused of Jesuitism, French colonialist intrigue and subsequently imprisoned in Anglo-controlled Georgia, where he later died. While living with the Cherokee and instructing them in such matters as weights and measures, Priber was said to have devised a revolutionary scheme of "setting up a Town at the Foot of the Mountains among the Cherokees, which was to be a City of Refuge for all Criminals, Debtors, and Slaves who would fly thither from Justice or their Masters."[20] That the many other early American utopian experiments were either more or less 'successful' is less remarkable here.

What Priber did was to confirm Turner's claim 150 years before it was made. Priber, "being a great Scholar he soon made himself master of [the Cherokee] Tongue, and by his insinuating manner Indeavoured to gain their hearts, he trimm'd his hair in the indian manner & painted as they did going generally almost naked except a shirt & a Flap."[21] Such American Communist enthusiasm breaks a daunting fourth wall between historical observer and historically observed. Long before Morelly or Rousseau actively formulated any system of utopian rationality, Priber had informed a French captive of the Cherokees that in his imagined society, which tribal leaders apparently had already adopted, that all property was to be held in common and "each would

find what he needed, whether for subsistence, or the other needs of life; that each should contribute to the good of the society, as he could."[22] Priber envisioned this society and referred to it "under the name of the Kingdom of Paradise."[23] Though Priber could not actually predict the future, later scholars have been at pains to properly place him, with one commentator saying Priber "combined a mixture of primitivism and perfection…"[24] In 1940, Priber was commended as having "planned to set up in America two hundred years ago a civilization strikingly like that proposed for Soviet Russia"[25], but is this only exaggeration? Unique as American Communist history, but not distinct in its untimely and obscure conclusion. Though ranked among the many failures in a long non-agnatic line of original American utopians, Priber also manifests and allows a kind of dynastic historical indexing of emerging civilization and socialist development across the continent.

F. Turner convincingly argues that the Atlantic coast of North America was "the frontier of Europe in a real sense", but "[m]oving westward, the frontier became more and more American,"[26] so too Priber had gone about his task. To illustrate the importance with which this recognition of American Civilization sets itself apart from the European, James Oglethorpe in 1743 wrote to England saying that Priber desired to "have a great resort hither from the debtors, transport felons, servants and negro slaves…"[27] and all others who sought to flee Anglo domination. Yet Oglethorpe himself had previously sold the idea of a Georgia colony on the promise of a similar "utopia" of sorts, but the presence of fugitive slaves and debtors upended this. These failures of 18th century European utopian socialist & Christian intentional communities did not abate in the 19th century either. American Shakers were admitted by Engels as having been the first in the world to successfully put "community of goods"[28] into practice, and also accepted indigenous and Free persons-of-color members. One Shaker elder described how he "was sent on a school mission, to teach the

Indians of the Five Nations… [but admired the lives of] these poor natives of the wilderness; and to contrast it with the sophistry, superficial pomp and artful dissimulation, so common in countries and among nations claiming the exalted benefits of civilization."[29] Even in the late 18th century, it was surmised these American utopian socialisms would not endure, despite a Kelpius or a Priber's good nature and rapport among the country's inhabitants. Peter Miller, the leader of another celibate religious community at Ephrata, wrote to Ben Franklin in the 1770s stating, "since we have no Successors, the Genius of the Americans is bound another way."[30] Or, as in the case of Priber, perhaps descendants do not require direct parentage, since "Christian Priber's dream for America… essentially the same dream that came to… life in Russia… afterward. That it had birth two centuries ago in the American wilderness is a fact almost too strange to be believed."[31]

Albert Fried once observed that socialism was such an "integral part of the American past" that here "lay the root of its 'failure'… its inability to develop."[32] Yet Marx points out that one of the earliest modern descriptions of a labor theory of value had been made by Benjamin Franklin in the 1720s[33], years before Ephrata or Priber had come into prominence. Marx also freely admits that the 1820s saw a huge American movement in industrial labor and the emergence of one of the first specifically workers' parties in history. The Workingmen's Party in 1829 was emphatic in proclaiming, "[t]he working classes have taken the field, and never will they give up the contest till the power that oppresses them is annihilated."[34] The New England Workingmen's Association declared in 1845, that if the laboring man's condition was lamentable "that of woman is worse, and increasingly so."[35] So if Marx could acknowledge an American primeval indigenous Communism, a homegrown modern radical labor tradition & worker's party of domestic American origin,

what does Marx himself have to contribute? A Viennese church newspaper from 1857 offers some clarification, declaring that Marx: “freed communist theory from… the pathetic phrasing, the theological aftertaste, and… confusion of ideas that characterize the various sects… and… brought it, with iron consistency, into a scientific system… no longer based on enthusiasm… or even on feeling, but on national-economic principles… it is a pleasure to see how this lion of dialectics silences… [the blubberers] and barkers who run along in the wake of the spirit of the times.”[36]

Karl Marx praisefully wrote in 1850, “And now we come to America… [its West Coast] densely populated by people of all races, from Yankee to Chinaman, from Negro to Indian and Malay, from Creole and Mestizo to European. Rivers of Californian gold are pouring over America and the Asiatic coast of the Pacific Ocean, and dragging the most reluctant barbarian nations into world trade, into civilization.”[37] But in writing on the history of colonialism, Marx could also point out that this system of pillaging, murder, displacement and ransom on tribal heads takes “revenge on the descendants of pious pilgrim fathers, who had grown seditious… At English instigation and for English pay [Pilgrims] were tomahawked. The British parliament, proclaimed blood-hounds and scalping as “means that God and Nature had given into its hand.”[38] Gold of course being the most profitable choice between white & Red. The crimes of colonial expansion were both the “binding” and an anarchic cutting off of historical alternatives at the frontier, but what must also be inherited is an inexorable chronology and stratigraphy upon which to develop. After his capture and rendition to Fort Frederica on the Georgia coast, Priber predicted that “before this century is past, the Europeans will have a very small footing on this continent.”[39] In a sagacious sense, Priber was correct, though work in this direction remains.

Nevertheless, a ‘Loaf-Bread Baker’ in 1827 New York wondered how it was that in America “damned custom of European origin still holds her sway through prejudice. Through which again she assumes empire, in despite of the solemn truths on which the rights of man are based and fixed in and by our

constitutions."[40] As a Pilgrim oligarchy arose, so too did a Pilgrim proletariat. And whether from a Shaking Quaker's perspective or from a more universalist secular vantage, Marx's own intellect developed in tandem with and at the magnitude of the 19th century political rise and industrialization of the United States. It is not for nothing then that the "dictatorship of the proletariat"[41] was first described in detail by Marx's friend J. Weydemeyer in an American publication in 1852: "[t]he rule of the proletariat has nothing in common with the rule of a Vandal-like barbarism; on the contrary, the proletariat is the only class which is in a position to step into the entire legacy of the bourgeoisie, since its own welfare depends on the continued development of this legacy."[42] An American legacy in either case. Therefore, the fact that Engels pointed out an "eingebornen Arbeitermassen"[43] emerged in America was not merely a description of where these workers were born, but highlighting a process of 'indigenization.' So the Party too had to become "out and out American"[44], rather than German or something else.

Decades prior, in the 1840s, it was not only the "noble savage" outlook, but as Underground Railroad guide and Black utopian abolitionist Henry Bibb described his former Cherokee master, another kind of "noble savage slaveowner" myth emerged as well. Bibb attempts to explain how indigenous slaveowners allow "slaves enough to eat, [t]hey have no overseers to whip nor drive them… but… as is often the case as otherwise… the slave gets the better of the fight, and even flogs his master…"[45] Whether such claims stand to scrutiny is less important, since as Bibb explains he had to steal a horse to flee to freedom, "if a white man had been captured by the Cherokee Indians and carried away from his family for life into slavery… who would not do the same thing…?"[46] Unexpectedly, Sam Houston too encountered the Cherokees and ran to them as a young man and was "made heartily welcome and adopted into the household of Oolooteka… Houston wore the Indian dress and gained a

thorough command of the difficult Cherokee language"[47], these were to be lifelong allies of his. Houston claimed, "I might have hated the Indians if I had a soul no bigger than a shellbark"[48], his second wife being descended from the same Long Hair Clan that Ludovick Grant[49] had married into prior to describing Priber a century before. Both Henry Bibb and Sam Houston looked upon the Cherokee with a measure of reverence rather than mechanically mimicking or mocking them. On this point, Priber also wondered how he was jailed if "he was not accused of having done any ill to the English… his crime must consist in loving the [Cherokees.]"[50]

Lenin says "in *every* nation there are toiling and exploited masses… [and the] ideology of democracy and socialism… But *every* nation also possesses a bourgeois culture (and most nations a reactionary and clerical culture as well) in the form, not merely of "elements", but of the *dominant* culture"[51] The culture of the lynch mob. The culture of genocidal forced relocation and germ warfare. The culture of hegemonic military and soft power. Of slave auctions and corporate monopolization. Of police corruption, foreign occupation and regime-change wars. This is the 'dominant' culture of the reactionary bourgeoisie of every nation. But Lenin forewarned, "we take *from each* national culture *only* its democratic and socialist elements; we take them *only* and *absolutely* in opposition to the bourgeois culture and the bourgeois nationalism of *each* nation."[52] If, as described presently, the American working massses were wanting or needing to draw aspects from a shared national culture, Lenin's Soviet practice and experience has some instruction:

> *What if the complete hopelessness of the situation… offered us the opportunity to create the fundamental requisites of civilization in a different way from that of the West European countries? Has that altered the general line of development of world history? Has that altered the basic relations between the basic classes of all the countries that are being, or have been, drawn into the general course of world history?*[53]

Engels perhaps makes this seem easy in saying "[f]rom America to Russia is but a step"[54], but the framing of the US Constitution saw similar questions raised as well. If abolitionists like James Otis Jr. and Benjamin Rush and John Adams were able to endorse such a document, Engels could at once announce the US Constitution as "the first to recognize the rights of man" and also see that it "in the same breath confirms the slavery of the coloured races… in America: class privileges are proscribed, race privileges sanctified."[55] Here it is instructive to also apply Engels' observation that within the boundaries of our own historical social landscape, there can be "rediscovered in America… the materialist conception of history"[56], way down in the fractious tumult and ancient bedrock of the People themselves. This cannot but well up and clarify these "dominant" aspects of American chauvinist bourgeois culture, but how long might this 'negative' side be tarried within? It is for America's dead to bury their dead, "[b]ut no one knows America who does not know that the heart of her people beats true… [c]ommon-sense should forbid us and our critics from pressing what is really a terrible accusation—as if a whole nation were composed of conscienceless scoundrels."[57]

For Cornell Professor Martin Sampson writing in 1920, "[t]he past is but a fragment of universal history; so long is time that nations will disappear, undreamed-of nations arise."[58] A year prior, the American Black radical socialist magazine *The Messenger* was able to proclaim, "We want no black and white patriotism, which demands separate camps, separate ships, and separate oceans to travel on. What we really need is a patriotism of liberty, justice and joy. That is Bolshevik patriotism, and we want more of that brand in the United States."[59] Our nation was more than dreamt of, and in the late 19th and early 20th centuries also, an agrarian socialist and populist movement began to take shape in America that again showed promise and left a vast field upon which work remained to be done. Moreover, Engels had written to a rural Texas comrade in 1893 explaining that one need not worry so pre-emptively about expunging all semblance of historical bourgeois symbolic and formal

"baggage" from the political body, since "the first objective of the labour movement is the conquest of political power for and by the working class."[60] So Farmer-labor politics could plainly recognize such a social question. "Is that socialism?" one American man asked, "Why, I have believed in that for years. I have often talked it over down at the store, and lots of folks around here think as I do about it."[61] But a quickly stultifying sort of general "common sense" must also be taken up, magnified, and sustained. A Party is needed in connecting this to dictatorship of the proletariat.

Pre-eminent early 20th century American Marxist Daniel De Leon once pointed out that, "[i]n all revolutionary movement… the thing depends upon the head of the column—upon that minority that is so intense in its convictions, so soundly based on its principles… that it carries the masses with it…[s]uch a head of the column must be our Socialist organization to the whole column of the American proletariat…. The head of whose column must consist of the intrepid socialist organization that has earned their love, their respect, their confidence."[62] Unfortunately for De Leon's otherwise apt description of an American proletarian vanguard party, in the same place, he compares Pizarro's conquest of the "empire of the Incas" to the army of the proletariat conquering Capitalism. Elsewhere he's more on target, "[i]t is in the hands of the socialists that the American Flag is in the keeping of… It is the socialists who are to-day bracing themselves against the attempt, and who will block the attempt to re-introduce despotism under the folds of the flag."[63] Such attempts do not merely come from outside either, since as Horace Greeley pointed out, "Comrades of Washington—Let us remember that, while the 'foreigners' Montgomery and Pulaski died… fighting for our freedom, while Lafayette, Hamilton, and Steuben proved nobly faithful… the traitor Arnold and the False ingrate Burr were sons of the soil" which could "only prove that virtue is bounded by no geographical limits, and treachery peculiar neither to the native nor the immigrant."[64]

64. Horace Greeley, "Horace Greeley's Toast, Sent To a 'Know-Nothing' Banquet", in *The Life of Horace Greeley* by James Parton, (New York: Derby and Miller, 1868), 570.

Daniel De Leon as an immigrant himself and as Socialist Labor Party leader faced overwhelming odds and still kept doggedly along this path, "[i]t seems that there are people who by the word "revolution" understand a social wreck, a splitting off from the past absolutely. I do not so understand revolution… this revolution that we are about to make in our generation is intimately connected with the revolution that the so-called revolutionary fathers accomplished."[65] De Leon's son would later join the early CPUSA. But Standing Bear too spoke from a particular vantage about 'splitting off from the past', he describes mimicry and mockery, neither of which appear as ironic, "after having had my hair cut, a new thought came into my head. I felt that I was no more Indian, but would be an imitation of a white man. And we are still imitations of white men, and the white men are imitations of the Americans."[66] What face would American Communists hailing from all racial and national backgrounds have to put on other than an American one? After speaking of these 'revolutionary fathers', De Leon remarked: "Remember always Columbus's experience. Traveling westward to reach China, he never saw China, but something else spread itself between him and that country. Nevertheless, his principle was correct, and China was ultimately reached on that route. So may we, after we have accomplished our revolution, find something new, something that we know not about."[67]

Marx once said that development of consciousness involves stirring "it out of its dream about itself" and clarifying the "meaning of its own actions."[68] In general, there is no "white man's burden", precisely but not only because of the savagery of the nobleman. There is also no specifically "European civilizing mission" for socialism in America either, these are prolonged nightmares. Socialism and America are not dreams, and both are bound together by a vexing alchemical process of historical dissolution and becoming. For Hegel then, all the way from Europe, since America as both "the expression of a foreign Life" and "a land of the future"[69] carries a positive and multifarious weight in the present, such an encounter of the Other, as the encounter between East & West, is diverging and merging within America. This too offers clarification where

Henryk Grossman: The Best Defender of Marx and Capital

Ted Reese[1]

In that most notorious of years, 1929, a Polish Jewish Marxist called Henryk Grossman published *The Law of Accumulation and the Breakdown of the Capitalist System*. This vital work did the best job after the deaths of Karl Marx in 1883 and Freidrich Engels in 1895 of defending and clarifying the real, revolutionary content of Marx's *Capital*, which exposed capitalism as inherently crisis-prone and historically transient. With the leader of the reformist wing of European socialism, Karl Kautsky, having recently declared that "it is no longer possible to maintain that the capitalist mode of production prepares its own downfall" and in fact stood, in the wake of World War I, "stronger than ever", Grossman's book – published just a few months before the Wall Street Crash – anticipated a major crisis in the US that would ruin its European debtors.

---

1. Ted Reese is a British Marxist and author of *Socialism or Extinction*; *Abundant Material Wealth For All*, and *The End of Capitalism: The Thought of Henryk Grossman*.

While others viewed the soaring stock market as a sign of economic strength, Grossman knew this glorified ponzi scheme boom stood in for diminishing opportunities in profitable commodity production, where new (monetary/exchange) value is actually created. He was therefore able to identify a "massive" 'overaccumulation' of capital – a surplus glut of idle capital that had become unprofitable to invest – serving as a barrier to productivity growth and sustainable economic strength.

Despite having been proven right almost immediately by events on the New York Stock Exchange, *The Law of Accumulation* was met with almost universal hostility. Grossman upheld Marx's key finding that overaccumulated capital arose *inevitably* as a result of the internal contradictions of capitalist production *per se* – resulting in economic breakdown, or recession – and that this overaccumulation *tended to worsen* to a point that would eventually necessitate capitalism's supersession by socialism. In short, because profit equals growth and growth – or making more commodities in less time – equals devaluation, capitalists expand commodity production to increase the overall amount of profit, only to intensify the contradiction and tendentially push the *rate* of profit down. The average commodity contains less and less surplus value (gross profit minus the outlay on wages) and this manifests in an underproduction of surplus value relative to the existing amount of capital value that needs to be 'valorised' (reproduced and expanded) – an overaccumulation of capital. With the ongoing automation and AI revolutions, induced by capital's need to raise productivity, this core problem is naturally growing particularly acute. Capitalism is like a bodybuilder who after making rapid early gains in muscular hypertrophy then has to work harder and longer to see increasingly diminishing returns – while exhausting their energy supply at an accelerating rate.

Grossman was accused of dogmatism and quietism – he supposedly assumed socialism would replace capitalism 'automatically', without the self-liberating action of the working class. Grossman, however, was repeatedly explicit in stating that socialist revolution would not happen without the *conscious* action of the working class – *which therefore required a strong understanding of the capitalist socio-economic system and related historical tendencies*. He merely highlighted the underlying stimuli. His own revolutionary activity, for which he spent much time in prison and exile; his explicit support of the revolutionary praxis of Vladimir Lenin and Rosa Luxemberg (if not the impreciseness of their economic theory); and his continued, outspoken support for the Soviet Union, despite its rejection of his work, suggests that he was far removed from any quietism.

Grossman's critics were mostly pseudo-Marxist social democrats who pursued, at least in word, a reformist (bourgeois electoral) road to socialism; yet, rather contrarily, promoted the theory that capital could accumulate harmoniously and indefinitely so long as it was managed correctly by the state – that recessions were preventable and not systemically inherent.

Such a view, of course, makes the case for socialism redundant – exposing their de facto pro-capitalist loyalties – for if capital accumulation does not break down of its own accord no imperative or indeed opportunity to replace it with a more stable mode of production could ever arise.

Today, Grossman stands even more vindicated. The US stock market is more overvalued than ever as investors try to skim money off each other instead maximizing the innovation and productivity growth that is actually physically possible. All forms of debt, largely a substitute for surplus value, stand at all-time highs; as does money stashed in corporate cash piles, money market funds and tax havens.

Capitalists and investors sit on this money like hens waiting to hatch their eggs while no convenient place for them to do so presents itself. While greed, warmongering and addiction to power are certainly habitual characteristics of capitalism's parasitic monopolists, emanating from the environment in which they were conditioned, the increasing shortage of profitable production arising from capitalism's own nature is the primary driver of falling living standards and the descent towards war and fascism.

Grossman's book remains extremely important – more vital than ever, given that capitalism is now even more senile – and yet it remains relatively unknown, even among most contemporary social democrats and communists. This problem should be regarded as a significant one for communists seeking to rehabilitate Marx, whose work remains largely discredited in a world that saw off the threat of global revolution in the 20th century and returned to being almost universally capitalist. Because Marx's epic tome has been so misrepresented and misinterpreted, *The Law of Accumulation and Breakdown* – which, focusing on crisis theory in one volume, is shorter and easier to read (with entertaining polemical wit to boot) – serves as a grand defence of and exceptional primer to *Capital*, highlighting and elaborating Marx's most important findings at the same time as exposing the counter-revolutionary attacks and distortions that followed.

Marx's methodology

Grossman lamented "a whole generation" of Marxists – from both the reformist and revolutionary wings of the movement – because "no one has proposed … any clear ideas, about Marx's method of investigation". Instead, the focus had been on interpreting Marx's conclusions, which were "worthless divorced from an appreciation of the way in which they were established". Analyses had been based on "only secondary surface appearances that stem from the essence of capital accumulation as their primary basis".

Grossman subjected Marx's method to a reconstruction "for the first time", drawing out "the theory of breakdown" that "forms the cornerstone of the system of Marx":

> *To be sure, Marx himself referred only to the breakdown and not to the theory of breakdown, just as he did not write about a theory of value or a theory of wages, but only developed the laws of value and of wages. So if we are entitled to speak of a Marxist theory of value or wages, we have as much right to speak of Marx's theory of breakdown.*

Other theorists had either 'corrected' Marx's breakdown theory or insisted that he never proposed one. Capital's ability to accumulate harmoniously had been 'proven' theoretically by Austrian social democrat Otto Bauer in 1913. Using an abstract reproduction schema (mathematical pattern) of accumulating profit (and apportioning it to capital, wages, capitalists' consumption) similar to the ones employed by Marx – a simplified, 'pure' version of capitalism for the purpose of examining the essence of the system, with only capitalists and commodity-producing workers and no competition or foreign trade – Bauer claimed to have shown that capital could accumulate indefinitely in spite of a falling rate of profit.

Bauer, however, only worked through four cycles (or 'years'). Simply by continuing Bauer's schema, without any alterations, Grossman found that by the 36th year the process broke down since the amount of surplus value could no longer meet the postulated rate of accumulation – exposing the reformist's intellectual laziness. The schema would have broken down sooner if Bauer had started with a more realistic and higher ratio of capital to labour, which empirically tends to rise with innovation; but Grossman stuck with the figure in order to expose Bauer on Bauer's terms.

Alongside this surplus capital emerges surplus labor – the start of the schema assumes full employment – workers that capital can no longer afford to employ. To overcome overaccumulation, capitalists are compelled to reduce their outlay on wages, which eats into the profit available for accumulation and the consumption of capitalists. They are also compelled to innovate to raise labor's rate of productivity. More commodities must be made and sold in less time than before to devalue prohibitively expensive capital and generate enough extra profit to restore accumulation on a higher level. (The vitality of Grossman's theory is therefore clear when applied to today's environmental crisis – more of nature must be converted into commodities at an ever-faster rate.)

Grossman then does something that no other Marxist since Marx had done, and more thoroughly than Marx, in fact. He applies variations of the assumptions posited in the abstract schema – the constant value of wages and commodities, for example – and reintroduces, one by one, elements that had been initially omitted. Now competing capitalists and foreign trade are included, along with landlords and consumers. The schema is brought closer and closer to reality, testing the initial results as a means of verification. Do any of the variations or new factors help or hinder the breakdown tendency or suppress it altogether? Some things act as counter-tendencies that delay overaccumulation and breakdown, such as the relative or absolute reduction in wages (which are also naturally devalued with higher productivity) or the devaluation of capital; while others – ground rent paid to landlords eat into the profits of productive industrial capital, for example – have the opposite effect. Ultimately, Grossman finds that no counter-tendency suppresses overaccumulation for good. The devaluation that initially brings it down even snaps back in the opposite direction since each commodity now contains less profit.

All of the other theorists of the day, communist as well as social democrat, had taken their findings only from Marx's abstract schema instead of reintroducing the factors that made the schema more empirical – the scientific method of successive approximation. Without assessing these steps, incorrect conclusions were fatally drawn.

They therefore produced a variety of 'underconsumptionist' and 'disproportionality' theories of crisis that could be put down to 'external' rather than inherent factors, such as economic mismanagement. In the former, workers are not paid enough to buy all of the commodities they need, meaning profit goes unrealized. Reform and state regulation raising wages and welfare apparently solves the problem, though. In the latter, imbalances of commodities

and profits between different departments and branches of production, resulting in overproductions of goods that cannot be sold, demands centralized regulation, again making reform the answer.

A variation of underconsumption theory points to saturation of domestic consumption, making the solution the export of commodities and capital to 'non-capitalist' foreign markets – an option that, in the analysis of Rosa Luxemburg, becomes increasingly exhausted as the whole world becomes industrialized and capitalist. This version preserves an inherent breakdown tendency but shifts the crucial problem from the sphere of production to that of circulation or consumption, – as if capitalism actually produces too much value that therefore cannot be realised as profit, instead of too little.

While Grossman never denied that 'external' factors could trigger or catalyse a crisis, he showed that even without any such factors overaccumulation could not be avoided and that underconsumption, disproportionality, and overproduction were all *symptoms* of overaccumulation rather than primary drivers. If capitalists cannot invest, employment and wages must fall, explaining underconsumption, which in turn explains the overproduction of commodities that cannot be purchased – including by private businesses and corporations, which therefore end up with disproportionate stockpiles.

Grossman's findings make logical sense – the function of capitalism is to make a profit on investment and to accumulate capital in order to make more profit. A crisis therefore logically implies the disincentivization of investment and a crisis primarily of profitability, of *an underproduction of value and profit*.

Imperialism and war

Another thing Grossman deserves credit for is providing the clearest understanding of the imperatives behind imperialism and war, two of the most important counter-tendencies that prolong capitalism's ability to rejuvenate at a higher level.

Capital exports – investment in production overseas and high-interest loans – are increasingly needed to expand and cheapen the exploitable workforce; and, at the same time, to provide an outlet for surplus capital that cannot be reinvested profitably 'at home'.

Even Lenin's revered pamphlet *Imperialism: The Highest Stage of Capitalism* comes in for stick from Grossman. Although "he makes many acute observations", Lenin

> *linked [the tendency of stagnation and decay] to the growth of monopolies. That there is such a connection is indisputable, but a mere statement is not enough. One is not dealing simply with the phenomena of stagnation… Imperialism is characterised by both stagnation and aggressiveness. These tendencies have to be explained in their unity… In fact both phenomena are ultimately rooted in the tendency towards breakdown… The growth of monopolisation is a means of enhancing profitability by raising prices and, in this sense, is only a surface appearance whose inner structure is insufficient valorisation.*

Stalin's chief economic advisor Eugen Varga, whose theory was similar to Luxemburg's, denied the possibility of saturation of capital in any single country, simply saying that higher rates of exploitation were the attraction for capital exports. Grossman countered that, "[T]o suppose that capital can expand without limits is to suppose that surplus value can likewise expand without limits, and thus independently of the size of the working population. This [would mean] that surplus value does not depend on labour."

Because profit rates tend to average out across branches or departments of industry on the world market (a higher rate falls to the average rate once the attraction of investment saturates and competitors catch up in terms of innovation and organization), the commodities from the advanced country, with the higher level of technology, will be sold at prices of production higher than their value; and vice-versa. Much or even most of the value created in an underdeveloped country therefore goes towards the GDP of the one in which it is sold. Such transfers, which Grossman called 'unequal exchange' (a term that became more commonly used in the 1970s), "become a matter of life and death for capitalism" as overaccumulation reaches new heights. Hence the incessant aggression of 'foreign policy', especially by the US and Britain, the two age-old imperialist powers who therefore suffer from very high overaccumulations.

At the same time, competition on the world market over relatively dwindling profits intensifies – and with a rising number of countries reaching a state of overaccumulation – meaning the imperialist powers are increasingly drawn

towards violent conflict with each other over resources that should be controlled by the nations in which they reside. Hence today's emerging splits in NATO.

Kautsky claimed that absolute capitalist breakdown would be brought about by world war, which in his view would happen only because of 'uncivilised' ruling classes. On the other side of the same coin, Varga and the Bolshevik Nikolaĭ Bukharin believed WWII would bring about the completion of the world revolution. Grossman says:

> *It would be useless to search Bukharin for any other cause of the breakdown of capitalism than the ravages created by war…. If like Bukharin, we expect the breakdown of capitalism to flow from a second round of imperialist wars, then it is necessary to point out that wars are not peculiar to the imperialist stage of capitalism. They stem from the essence of capitalism as such, during all its stages, and have been a constant symptom of capital since its historical inception…. far from being a threat to capitalism, wars are a means of prolonging the existence of the capitalist system as a whole.*

Of course, war is a threat to capitalism in that it radicalises masses of people – and today capitalism doesn't stand much chance of surviving a nuclear war. But Grossman was at pains to show that Kautsky's was a subjective analysis and that the opposite was true: that massive overaccumulation brought about a systemic breakdown and world war followed necessarily not only because of competition but because it was the only way to sufficiently devalue capital and "create a breathing space" for accumulation to restart. War, because it is the ultimate means for devaluing capital and labor – and destroying the surplus of both – is therefore caused by and a temporary solution to the breakdown tendency. It was the destruction unleashed by World War II that ended the Great Depression and enabled the productivity boom that followed.

Revolutionary conclusions

Ultimately, Grossman finds that all of the counter-tendencies must eventually exhaust themselves – capital, commodities and money cannot be devalued lower than zero. In the final chapter of his book he draws his conclusions: the breakdown tendency continually compels capitalists to attack the wages and

living conditions of the working class – and eventually becomes so strong that the latter is *driven* to revolution:

> *If the largest and most important force of production, human labour power, is thus excluded from the fruits of civilised progress, it is at the same time demonstrated that we are approaching ever closer the situation which Marx and Engels already foresaw in the* Communist Manifesto*: 'the bourgeoisie is unfit to rule because it is incompetent to assure an existence to its slaves within their slavery'. This is also the reason why wage-slaves must necessarily rise against the system of wage-slavery.*

Grossman clearly stressed – and demonstrated – that working-class victories for higher wages and better conditions could deepen the capitalist crisis; or bring forward the next one or even its final demise. He also agreed with Lenin that no crisis could be considered the final one before the working class had seized and consolidated state power and implemented a publicly owned economy.

Liberated from private property and the profit necessity, Grossman argued, production could be organized and planned on a social basis as a purely technical labor process, without any concern for valorisation and thus without any inherent causes of economic crises.

Grossman was right

Although recognition of his work in the socialist bloc only ever came from East Germany, where he lectured after the war; and despite his frustrations with the Soviet leadership over its crisis theory and some of its tactical maneuvers – such as pursuing a Popular instead of United Front – Grossman never called for Stalin to be replaced and never withdrew his support for the Soviet Union. While contemporary Trotskyists tend to be more familiar with Grossman's work than other Marxists they also tend to criticise his 'Stalinism'. But Grossman defended the Soviet Union, having investigated it personally during a tour in the 1930s, on the basis that it was indeed socialist and in the context of immense imperialist aggression. He loudly warned the reformist and ultraleft wings of the movement that the defeat of the Soviet Union would represent an enormous setback for the global working class.

Nevertheless, Grossman's influence remains very limited. Efforts to defend Marx's crisis theory could have been strengthened if Grossman's book had been endorsed by the Soviet Union. The movement has yet to substantially address this issue and, ultimately following Lenin,[2] largely continues to promote a crisis theory of overproduction. Even though such a theory is usually framed as inherent to the rising ratio of capital to labor, it leaves wriggle room for reformism, for if overproduction is the problem, a reduction in production ('artificial scarcity') can be postulated as the solution – something private enterprise is likely to do anyway in order to raise prices as a way of centralising value. Overaccumulation theory centres the very essence of capitalist production and therefore locates the solution with absolute certainty. If capital is surplus, it must be socialised.

An abridged version of Grossman's book – which does not include any of the final chapter, where Grossman talks most about class struggle – published by Pluto Press in 1992, remained the only English translation of book until 2021.[3] Hopefully the full translation can help to strengthen today's burgeoning communist movement at a time when we find ourselves entering capitalism's deepest ever and – given how close we are to achieving 'fully' automated production – possibly final crisis.[4] Grossman's book has a large role to play in addressing such a tall order. Its inclusion in any communist party's education programme should be given serious consideration.

2. Vladimir Lenin, "Marx's Economic Doctrine", Marxists.org.

3. *Henryk Grossman Works, Volume 3: The Law of Accumulation and Breakdown of the Capitalist System*, *Being also a Theory of Crises*, Haymarket, translated by Rick Kuhn and Jairus Banaji. The paperback, released in 2022, while much cheaper than the hardback, is still regrettably pricey. Alternatively see Reese's book (Zero Books, 2022) for a summary of Grossman's most important theoretical and political contributions. See also Rick Kuhn, "Economic Crisis and Socialist Revolution: Henryk Grossman's Law of Accumulation, Its First Critics and His Responses", *Research in Political Economy* 21 (2004), Amsterdam, pp. 181-221; Kuhn, *Henryk Grossman and the Recovery of Marxism*, University of Illinois Press (2007), Illinois; and *Henryk Grossman Works vol I*, edited by Rick Kuhn, Brill, 2017. Kuhn's irritating Trotskyist interjections are to be ignored.

From Engels to Western "Marxism": The Eclipse of Dialectical Materialism

Giannetto Edoardo (Nanni) Marcenaro[1]

1. The Mutilation of Marxist Thought

In the panorama of that political philosophy in the West that has looked to the work of Karl Marx as a possible direction, or even guide, for the analysis and understanding of the economy and society in relation to the concrete relationships between the main political subjects and their transformation through organized and mass action, a tendency has long been manifested that it

---

1. Giannetto Edoardo Marcenaro, a.k.a Nanni is an Italian philosopher, independent researcher in philosophy and political economy, who finances his research by his own wage labor. He holds a degree in Philosophy of Science and is a member of the Centro Studio Nazionale "Domenico Losurdo", annexed to the Movimento per la Rinascita Comunista in Italy. He collaborates with several organizations and is author of some fifteen books (self-published), among which six (out of seven) volumes of a *General Description of Thought*, and a whole *General Commentary to □ριστοτέλης* in seven more volumes recently completed, besides a two-volume *Premise to the Critical Analysis of Political Economy,* title *Value and Knowledge*.

is not wrong to define as *destructive* and that has contributed not a little to the establishment of today's conditions, in which the grip of the capitalist ruling classes has slowly reduced the economies of Western countries to ultra-liberal systems in which no rights are truly guaranteed, and the working class lies inert, faced with the abuses that the masters of society carry out in their countries or abroad, as if stunned, in a *narcissistic impulse*, by the reflection of its own false freedom.

This trend finds its roots in a movement that we could define as historiographical, as well as philosophical, whose main consequence was the *marginalization* of the figure of Friedrich Engels from the intellectual and philosophical path of Karl Marx – in particular with regard to the crucial role played by the former in the development of dialectical materialism and the inestimable scientific function that this epistemological concept brings with it – by a broad theory of scholars and analysts, gathered by the academies in the current of thought coinciding with the so-called “Western Marxism”, which, as Domenico Losurdo shows in his homonymous 2017 book, completely glosses over *the colonial and national question*, completely disavowing Marxism-Leninism as dialectical materialism, and with it throwing science and reasoning out the window, while brazenly embracing the magical thinking of liberal ideology.

It was Engels in fact, in his project on “Dialectics of Nature”, who originally tried to give a precise intelligible order to this concept, before Lenin exposed, however succinctly, and never in a systematic way, its general principle and essential character, which was then further clarified by Mao Zedong in the first half of the 20th century.

It is possible to observe, in the wake of prof. Losurdo, how an evident connection exists between the positions taken, in particular by Engels, regarding the impossibility of avoiding the use of revolutionary violence to achieve the conquest of political power by the working class, and the legitimacy of the use of force, constituted as a State, in defending the result obtained, and the attempt made by the philosophers organic to the historical revisionism of “Western Marxism” to marginalize Engels from their lucubrations across the board, leveraging upon the political strategy to overthrow the bourgeois system, in which “revolutionary violence” is given a crucial role, supported in “The German Ideology”, but also in the “Manifesto of the Communist Party” –that is, two four-handed texts written by Marx and Engels– to separate one from the

other, and to impute to Marx, either an *eschatological* vision of the historical process, or an *economistic* vision of the revolutionary dynamic.

By separating, with this crude expedient, Engels, the supporter of dialectical materialism, from a Marx reduced to the framework of historical materialism alone, both of these conceptions have in effect been mutilated, making ineffective and a refuge for empty formalisms devoid of any concreteness what was intended as the dialectic of openness to the transformations of social conditions, as “historical materialism”, and abandoning Engels’ positions without any hesitation. With this, Marx has also immediately been separated from Lenin, according to the movement of thought that has systematically characterized, as already said, Western Marxism: glossing over the national and colonial question, as well as branding any revolution conducted under the banner of Marxism-Leninism as marked by the cult of terror.

But just as dialectical materialism becomes *empty rhetoric* if it were separated, if it could, from the concrete aspect of the material realization of the historical process, in the same way historical materialism, if one dares to try to separate it from its complementary element, is reduced to nothing more than *taxonomy* and scholastic exercise of *erudition*, which when put to the test of facts turn out to be poorly put together deceptions.

2. Limits of Marx's labor theory of value and dialectical materialism

To contribute to the clarification of the issues outlined, we must first understand how Western “Marxism” is not a current of socialist thought, but a current of *liberal* thought that has fraudulently appropriated the terms of Marxism, corrupting them into an innocuous and adulterated version in which any revolutionary initiative becomes messianic expectation in the strength of the “movements”, in the presumed necessity of the “historical process”, and therefore dogmatic idealism that is configured as the “metaphysical materialism” of which Lenin carried out a corrosive refutation in his “Materialism and Empirio-Criticism”.

Western “Marxism” in fact rejects the *epistemological* theory of dialectical materialism, and with it Marxism-Leninism, and must therefore take refuge in a worldview in which the factors considered are always and in any case separate

elements whose interaction depends on a peculiar character that essentially divides them, so that the whole is reduced to a set of “atoms” isolated from each other whose relationship must be ascribed to a third element, *fabricated* by the mind, to which it attributes the connection between the various factors.

It should be emphasized with this that Western “Marxism” has not failed at all, and indeed, this cultural movement, promoted, financed, governed, and infiltrated by liberal subjects and anti-communist notions, has achieved exactly the objective it had set itself: to neutralize the Marxian theory of value, and make the vanishing point to which it looks *a utopian ideal* that, due to the very essence of humans according to the liberal vision, cannot be achieved.

Marx's theory itself, on the other hand, has many limits, and they must necessarily be recognized. From a strictly logical point of view, in fact, the argument with which he shows how surplus value is generated as a product of living labor that, in excess of what is necessary for the producer, is appropriated by the capitalist, in the terms in which it is placed in “Capital”, is only *apparent*, although his conclusion –that the capitalist *unduly* appropriates a part of the value that should be due to the worker– is true.

As Aristotle teaches, in fact, it is possible to construct an argument in which the structure of the procedure does not guarantee the connection between the two extremes and the middle, the element by which the reasoning is accomplished, and yet its conclusion is nevertheless correct: this depends on the nature of the premises adopted, which, for the argument to be effectively demonstrable, must be assertions, that is, statements already previously proven, that is, *demonstrated as correct*, in a broad sense “true” (for Aristotle, however, it is a question of “a-revelation”).

If in fact the new value produced is equivalent to the value of the means of subsistence, and this is what is paid to the worker, it is clear that, however much one may continue to work, one can never produce more than what is paid to him: the means of subsistence in fact, however necessary, provide energy sufficient for a whole day's work, and if the new value produced is equivalent to the value of these, it is what is transferred during this whole period, in which the energy supplied by those means of subsistence is consumed, and not a shred more can be seen.

Marx thus contented himself with *postulating* that labor power as a commodity is endowed with a “special property”, that of producing more than it consumes,

without however providing any reason, any element of proof, for this assertion. His argument can therefore *always* be refuted: it is not at all necessary, lacking *proof* of such a ”special property” and a rigorous *definition* of it, that the capitalist's profit derives from surplus value, and it remains possible that such profit is the result of a fraud, as the young Engels maintains in his short essay on the “Outlines of a Critique of Political Economy”: the *arbitrary* sale of goods at a price higher than their value, the coverage of which is guaranteed by the issuance of money by the State. In order to exclude this option, Marx demonstrates, at the beginning of Capital, that in the exchange of goods, by means of an exchange-value or not, what occurs is a transaction between *equivalent values*.

This limit of the Marxian theory of contained labor-value depends first of all on the fact that Marx himself still falls almost entirely into the class of dogmatic thought, due to his own individual experience in central Europe in the 19th century: and this starting from historical materialism, which attributes to material conditions alone the determination of the structure of thought and cultural phenomena, thus excluding in an absolute and perfectly *arbitrary* way, the transcendental and existential aspect of the mind, which interacting productively with those material characteristics, in the form of aspects of a concrete contradiction, produce cultural phenomena and the development of the historical process. In this sense Marx, and also Engels, presuppose a behaviorist psychology, and forget in a completely risky way an essential part of the profound and fundamental epistemological lesson of Immanuel Kant, while maintaining its general structure, as they adopt the procedure of critical analysis (i.e. of transcendental philosophy), with the modality of the so-called “Hegelian” dialectic.

If we consider the question from the point of view of dialectical materialism, that is, from the point of view of the concept of unity in the conjunction of two contraries (not opposites, Lenin's definition which shows the residues of dogmatism in the latter's thought, since opposites exclude each other, and therefore must be separated, so that there could never be a synthesis, while contraries are complementary) we cannot be deceived and the question appears completely clear: in fact, if the means of subsistence are *value and use-value*, as they are (also according to Marx who nevertheless considers this fact irrelevant) then the value transferred to the labor force in their consumption as use-values –since the value is never consumed, but is always *transferred* in the same magnitude from one element to another– first of all reappears in that in the form of a mass of energy available to the organism to perform work.

Such energy is therefore, by definition, use-value, insofar as it will be consumed in the execution of living labor: it is consumed, it is not transferred, and therefore does not represent the *value* of the means of subsistence that has been transferred to the labor force in the organism. But as a use-value, this mass of energy must also be, dialectically, in relation to a value: *what does this value, that of the means of subsistence, concretely consist of?*

We know that value remains unchanged, and that it exists as a material object as a coagulation of human labor: therefore the value of the means of subsistence corresponds to the matter of those means, and that is, precisely to an element that is equivalent to constant capital, raw material, which, transformed in the process of digestion, is integrated, in the consumption of the use-value as a mass of energy, into the organism itself, and that is, makes the *growth* of the body and its *material consistency* possible. This matter then differs in quality first of all, as divergent chemical elements or molecules, organic compounds, which precisely bring this or that value to the organism, regardless of their quantity. The body is therefore transcendentally equivalent to accumulated value as constant capital, which is incessantly applied in the process of production and consumption of energy necessary for organic activity.

It follows therefore, in a perfectly consequent and necessary manner, that the value that is transferred from labor power to the commodity is not that of the means of subsistence, and that therefore *precisely in this factor* lies the essence and origin of that "special property", which allows it to produce more than it consumes. Furthermore, since it is such –it produces more than it consumes– then it means that it depends on an element for which it adds a *whole* for each unit of time in living labor, which instead represents only a *part* of the use-value of those means of subsistence, that is, only the part of a whole.

It is then evident that, since the final result of the production process will be a value and a use-value – and the latter is not that of raw materials, nor that of the mass of energy certainly – it follows that this too, the use-value concretely realized as a value, coagulation of living labor, is provided by that part of the labor force in which the value transferred to the product resides: this part then we call "valorized" or "valorizable" labor force, while the other, in which the value and use-value of the means of subsistence reside will be "organic" or "simple" labor force, where the two, again and always dialectically, are *coincident*, although *distinct*.

If the latter then strictly concerns the *quantitative* component of the labor force, the former instead is its aspect that represents the *qualitative* component of the

labor force, coagulation of human knowledge, where the latter is worth as constant capital, and the former instead as variable capital, as organic components of the labor force as a “commodity”.

This is the way of thinking according to the appropriate criterion of the analysis of any phenomenon, that is, *all* phenomena, or the concept of dialectical materialism: *therefore*, of this criterion we have an absolute certainty, as the one that represents transcendentally, that is, to the intellect, *the complete dynamics of the development of phenomena*.

3. Dogmatic character of Western thought and phenomena as material contradiction

It should also be emphasized how, especially in the West, Hegel's work and his influence on Marx are seriously overvalued: Hegel's thought, concretely, is nothing more than an immense apparent reasoning, and his much celebrated “dialectic” is only an idealist distortion of the “διαλεκτικὴ” procedure that was exposed by Aristotle, which last consists *exactly* in the following: starting from a notion of general, drawn from experience, empirically –essentially by similarity of distinct cases, and that is according to a *statistical* procedure– a notion that is the understanding of a certain element in the form of a concept, that is, a transcendental object, expressed as a definition in which the parts of that concept are distinct, it is possible, following the correct procedure of reasoning –that is, not towards the superior genus as Plato does, and so also Hegel– to obtain knowledge regarding all the forms underlying that notion of general.

This is accomplished on the one hand by deducing the parts from the whole, that is, by alternating “contrary” terms –as he calls both the “forms” in relation to each other, and these in relation to the “genus”– in the placement of a “known-fact” as a minor premise, that is, acknowledged by the person evaluating the argument, and therefore demonstrated, equally to the notion of general from which one starts, and on the other hand, without introducing whatever “element” unrelated, “external”, to the fact, by offering material proof of one’s argument, which demonstrates its correctness, as must happen in a court of law.

It is not permitted in any case to postulate premises of which one is not already certain, since by “hypothesis” it is not possible to know anything new: it is only

possible *to confirm* something of which one already knows –something that is implied in the elements available to one's evaluation– that is, by building a structure of relations between those elements that are relevant to the fact, and by identifying the middle, concrete, sensitive term, adequate to act as a probative element of one's argument. For Aristotle, in fact, all knowledge starts from empirical experience, and must return to it to provide proof of the correctness of such knowledge.

Thus Hegel turns Aristotle's dialectic upside down, while Marx brings it back down to earth, as suggested by the words he uses in the "Preface" to "A Contribution to the Critique of Political Economy". It is in fact possible to demonstrate how Aristotle was *the first dialectical materialist thinker* in the West, although his thought, having to adapt to the deeply dogmatic character of his cultural traditions, has not been fully understood in its most characteristic essence until recent years, in the "General Commentary" to his "Corpus", recently completed in his seventh and last volume by who's writing. It is perhaps no coincidence that Marx, precisely in Capital, quotes the acute Greek man several times, and pays particular attention to precisely these elements, the "middle terms".

There are also some quotes from Lenin's "Conspectus of Aristotle's book *Metaphysics*" of 1915, and "Statistics and Sociology" of 1917 that supports this perspective very convincingly even from the point of view of the great revolutionary leader himself: in the latter short work he indeed begins by describing with great clarity and succinctly exactly the position, we just briefly recalled, that the acute Greek man rested upon regarding the proper treatment to give of determined empirical contents in the investigation of concrete phenomenal situations, and Lenin presents such approach as the one that alone can provide reliable and and justified conclusions about the issues at hand[2]

---

2. Vladimir Ilic Lenin, *Statistics and sociology,* Lenin Internet Archive, 2002 (2005): https://www.marxists.org/archive/lenin/works/1917/jan/00d.htm. The quotation is the following, emphases mine: «Precise facts, *indisputable facts* […] are especially necessary if we want to form a proper understanding of this complicated, difficult and often deliberately confused question. But how to gather the facts? *How to establish their connection and interdependence?* The most widely used, and most fallacious, method in the realm of social phenomena is to tear out individual minor facts and juggle with examples. Selecting chance examples presents no difficulty at all, but is of no value, or of purely negative value, for in each individual case everything hinges on the historically concrete situation. Facts, if we take them in their entirety, in their interconnection, are not only stubborn things, but undoubtedly *proof-bearing* things. […] [W]e must seek to build a reliable foundation of precise and indisputable facts that can be confronted to any of the "general" or "example-based" arguments […]. And if it is to be a real foundation, we must take not individual facts, but the sum total of facts, *without a single exception*, [i.e. necessarily] relating to the question under discussion. Otherwise there

while in the former, although grappling with the extremely thick and multilayered levels of Aristotle's reasoning and trying to combat it by somewhat smearing it as anti-dialectical, he must after all admit that «[h]ere we have the point of view of dialectical materialism», even though he maintains as yet incorrectly that Aristotle gets to that point of view «accidentally, not consistently, not elaborated, in passing»[3].

Indeed the Greek's position is exactly that the "phenomenon", what appears as empirical object, is a "unit", "μονάς", whose very existence as "unit" depends on the indissoluble conjunction between two "contrary" elements, "form", "ε□δος", and "matter", "□λὴ", whose coincidence and interaction as "contraries" is the very principle of its own appearance as "phenomenon": in the "ε□ναι", "being" (as in "accomplished-act-of-existing") of any one "phenomenon" there lies an "□ναντὶα", a "contrariness", and what happens is indeed the transformation of some "substrate" from one "contrary" to the other. It must surely be said to Lenin's defense that the versions he had available couldn't but be afflicted by the endemic platonic mystification in the reading of Aristotle's works, who suffered for long centuries from a deep distortion due to the conceptual purification of extremes driven by the idealist mindset produced by dogmatic thought, apparent in the haphazard and rhapsodical translation of very precise terms, arranged in tightly knit extended series of interlocked reasonings whose logical solution requires to respect the order of placement in the procedure, and whose demonstration holds for each of them in connection with all other preceding and following reasonings, as a living organism existing all at once.

Even Marx, after all, due to the historical context of his existence, is not able to abandon the dogmatic, that is, essentially, Western, way of thinking: with the "value" that is "absolutely" separated from the "use-value", so that the latter can be set aside as irrelevant to the production process, and all the determining relations be reduced to a distinct magnitude, just as for example Gyorgy Lukacs with his "social being", to quote one of the most renowned Western "Marxist" philosophers, he still falls entirely back into dogmatism.

---

will be the inevitable, and fully justified, suspicion that the facts were selected or compiled arbitrarily, that instead of historical phenomena being presented in *objective interconnection and interdependence* and treated as a *whole*, we are presenting a "subjective" concoction to justify what might prove to be a dirty business.» This whole paragraph shows indeed astounding similarity to the arguments made by □ριστοτέλης himself in his treaty about rhetoric.

3. Vladimir Ilic Lenin, *Conspectus to Aristotle's book* Metaphysics, Lenin Internet Archive, 2008: https://www.marxists.org/archive/lenin/works/1915/misc/x12.htm.

The latter after all is a structural characteristic of Western culture that in order to be overcome requires the *synthesis* of the two historically dominant traditions of thought in the world, the Eastern one and precisely the Western one: which precisely is dialectical materialism, as a transcendental philosophy conducted through critical analysis. However, there remained the task, which Lenin had no way, possibility, opportunity to accomplish, of offering a demonstrative exposition of this concept in its productive application, that is, of new epistemological value, to the understanding and analysis of the phenomena themselves.

What reason, however, makes dogmatism structural to Western thought? The answer is very simple: the character of Western culture, in fact, that is the measure of its understanding of phenomena, can be expressed in formal terms in the relation, "$+x \neq -x$": a relation where two distinct elements *cannot at all* be coincident, and are therefore opposed and necessarily separate. This is a premise that is necessarily valid, insofar as it results from the understanding of a manifest quality in Western cultural productions: it is an empirical premise, resulting from the critical analysis of the determining conceptual relations detected in concrete material expressions, in the historical intellectual production of the culture that we know by the name of "the West".

Granted this measure, however, this does not change the fact that each of those "x" is a phenomenon, insofar as it is known, and therefore conceptually, that is structurally, the two coincide, while apparently remaining distinct from each other. Western thought, however, by its very nature, cannot conceive of two coinciding elements as being at the same time distinct: therefore it must attribute what they coincide in to a third element, of which however *there is no evidence*, and which always appears as a Platonic "third man" that leads to a regressum ad infinitum, or to a reductio ad absurdum, in the development of which the refutation of one or the other hypothesis occurs: from this proceeds the alternation of the terms of the dogmatic understanding of the dialectical dynamics of phenomena in the historical process.

In fact, since the concept of unity in the conjunction of opposites is equivalent to the understanding of the dynamics of phenomena in general and everything that can be known is nothing other than phenomena –including the set we consider the whole, that is, the Universe– in their contradictory conjunction with the organic structures, organized by species, which they share as a qualitative component that determines them as "this" or as "that", it necessarily follows that the concept of dialectical materialism coincides with the only real

transcendental object, that is, *the only existing concept* as an understanding of the general form of the phenomenon *as a phenomenon*, and which, as such, is the primary origin of the entire development of the historical process: it itself, as the same, presents itself in forms radically distinct from one another, which, adopting alternative but equivalent terms for the definition of the relevant elements and relations, constitute *the history of thought*, as the development of the contradiction between the concept of dialectical materialism and the dogmatic understanding of phenomena, according to that certain measure.

Yes, because even in the East such understanding remains dogmatic, of course, since phenomena are *immediately* received as elements distinct from one another, which the mind therefore assumes to be separate: however, the measure of understanding in Eastern culture is the antithetical one to Western culture, and that is, it is formally represented by the relation "+x = –x", a relation in which the two elements in the distinction coincide, and which historically, *concretely*, has manifested itself in the concept of "dao", that is, the concept, transcendentally extracted from the dogmatic shells of religious traditions, of a "cosmological" unity, fundamental and unconditional, indissolubly constituted by two elements contrary to one another, whose coincidence one within the other is the principle of their changing phenomenal appearance.

This is *precisely* the concept of dialectical materialism, which provides an empirically grounded reason for the fact that Marxism-Leninism and dialectical materialism have been fully and clearly understood precisely in China, the birthplace of the concept of "dao," and in general in the East –a part of the world where that concept has exercised a strong influence, often through Buddhism– while they have been misunderstood, intentionally or not, and vigorously rejected by the entire horizon of "communist" intellectuals in the West.

So, from a dialectical point of view, just as there is no "value" in the sense in which Marx meant it, neither does any "being" exist: the latter is nothing but a thought, a "universal" in fact, nothing concrete or material, but on the one hand this element is always and in any case placed in an absolutely opposed way to "non-being" and cannot but be absolutely separated from it, dogmatically, and on the other hand it is not possible to offer any type of concrete, material example of "being" as "being", "social" or not.

A "being" in fact must necessarily be conceived as an element to which a limit is placed as a unit, as an individual, but in this last form any class of

phenomena has peculiar characteristics that distinguish it from the others, and therefore no such element can be admitted as what all of them have in common. If that which offers its "being" to each of them were in turn a "being" that would be "the being" and therefore *they should all be the same,* while, although on the one hand they coincide, on the other they are clearly distinct.

To speak of "being" is equivalent to speaking of a "nothing", and it is perhaps no coincidence that Heidegger, more than twenty centuries after Aristotle, concluded that the "way-of-being" most "proper" of "being-there" is "existential nothingness", that is, the "anticipation-of-death", that is, "not-being-there": when one "is" one therefore lives in an "inauthentic" way by definition, unless one lives as if one were dead! It cannot be surprising that according to the eminent German intellectual the fundamental sensation in human life was anguish. However, he too is desperately confused in the useless attempt to produce a coherent account of the concept of dialectical materialism from a dogmatic point of view, an undertaking that, *by definition*, can only result in complete failure.

In fact, speaking of "being" –the Greek term that Aristotle himself uses is a verbal voice, conjugated with the present participle, which counts as a verbal adjective, and therefore means rather "what-presently-is", and not "being" as the deplorable modern editions are accustomed to rendering it– and of other presumed elements of whose actual existence there is no evidence, that is, the "universals", is completely meaningless, since it hypothesizes material elements whose existence is purely transcendental, that is, they are simple deduced notions assumed in the absence of proof, and postulated as existing *outside the mind that thinks of them* as overwhelming factors that dominate the dynamics of phenomena.

Thus, when in the framework of dialectical materialism we say "value" we are not at all meaning a "value" in a broad sense, in "general", as an element to be considered separate as "universal", a "value-as-such", but we *always* mean the real magnitude of a *concrete* phenomenon, whose material characteristics are inextricably linked to its complementary, that is, dialectical, or else *contradictory*, forms, so that this phenomenon exists simultaneously as value and use-value, and the same naturally applies to the other notion briefly examined here, "being", whatever its hypothetical species may be.

What is erroneously understood with the term "being" in fact, that is, an individual object existing materially in certain sensible magnitudes,

dialectically, must first of all be called an "*organism*", and the latter depends for its existence on the execution of specific procedures that maintain its shape or increase it. *The latter are "known facts".* The "organism" is therefore an individual object which nevertheless assumes its appearance of unity by virtue of a structure according to which those procedures are carried out: it is therefore not a "being", but a "*structured process"*, that is to say a material event which can occur only and exclusively under certain determined conditions in a very precise concrete situation, in which a set of distinct elements is arranged according to a certain order in accordance with a specific measure for each class of "organisms" (what is true for "value" and "being" is also true for "nature", which is another materialist concept, yes, but metaphysical).

It is therefore, in accordance with the concept of dialectical materialism, a *material contradiction*, as multiplicity that appears as unity. It follows naturally, as Eastern thought itself has been affirming for millennia, that the so-called "I" is nothing other than a thought with which the mind, *deceiving itself*, identifies itself, thus separating itself transcendentally from everything that does not coincide with this "I" thought, whereas it is the mind itself that guarantees that individuality, as an antithetical expression –that is, as an undulatory aspect of organic existence, whose concrete reality as a "morphological field" has been demonstrated by numerous experiments– complementary, once again in a way that conforms to our concept, to the corpuscular one that exists as a process and appears to the senses as a body.

Those who are unable to see all this have not yet developed a dialectical vision of phenomena, and that is, have not yet overcome the "state of minority" that Kant spoke of and that Aristotle called "youthful character".

4. Self-criticism: an unavoidable philosophical task of communists

As communists, that is, Marxist-Leninists, therefore, it is necessary to master the concept of dialectical materialism as completely as possible, because, being the appropriate criterion for analyzing phenomena, if one abandons it, any analysis that one might venture about will certainly be wrong, and therefore relying on them can only lead to suffering one defeat after another: the present condition of the communist movement in the West, which has abandoned dialectical materialism for a liberal current of anarchist thought as evanescent

as the passions of adolescents, inexorably attests to the incontestable correctness of this conclusion.

Such inevitable defeat does not *at all* mean that the opponents had adopted that appropriate criterion, but it simply means that, if one's arguments are reduced to *unprovable* hypotheses whose *credibility* must be guaranteed by a constituted authority, whoever manages to gain the upper hand over the opponent in the dispute depends only on the mass of opinions that support one or the other hypothesis, and therefore on the quantity of individuals that can be reached by those opinions: it is therefore natural that in the Western production system, where the means of information and education are under the control of the capitalist ruling class, it was the latter that overwhelmed with its immense enchanting power the feeble and poorly determined voices against it, convincing hundreds of millions of people thanks to the annual investment of hundreds of billions of dollars.

Could it be surprising then that in the East, where the communists never abandoned dialectical materialism, and where it was even further developed, the Marxist-Leninists were not only not defeated, but instead achieved resounding successes, making *the world anti-colonialist revolution* advance in an imposing and decisive way, thanks to the decisive and formidable development of the productive forces in the People's Republic of China?

The first task of a communist therefore, as is well known, is *self-criticism*: and self-criticism is precisely the complete and detailed analysis of one's own way of thinking, of one's own vision of the world. Each communist is therefore required to ask himself with seriousness, courage, and determination: *does my understanding of phenomena conform to the criterion of dialectical materialism?*

That is: am I able to understand each of the phenomena that manifest themselves in reality, concretely, as a structured process, a conjunction in an indissoluble unity of two opposing dynamics whose very coincidence constitutes the essential fulcrum of its development and existence? And so, am I able to understand each of the phenomena as a complementary part of the set of phenomena in their totality, as organic elements thought of as integrated into my vision of the world, principal or secondary aspects, of secondary contradictions of the *principal* contradiction in *reality*, that between the conditioned and the unconditioned?

5

A Comprehensive Look at the Dialectical Materialist Worldview

Carlos L. Garrido[1]

Introduction

It should be clear to the critical observer that we exist in a nodal point in universal history. The bourgeois fixation of the 'end of history' thesis has itself ended. American imperialist unipolarity is on the precipice of Mephisto's dictum, "all that comes to be deserves to perish wretchedly."[2] In the world beyond that 14% of the global population whose leaders fancy themselves as the 'international community,' the rise of multipolarity means sovereignty,

freedom, win-win relations in international trade, de-militarization, etc. In the Western capitalist world, the sentiment is the opposite. Here crisis has become the norm, and, as Gramsci once said, it "consists precisely in the fact that the old is dying and the new cannot be born."[3] In this "interregnum," the "morbid symptoms" of Boris Johnson, Trump, Biden, Bolsonaro, Le Pen, et. al. arise.[4] These symptoms cannot be known – as is often done by liberals and the pundits of the political-economy that got us here – separated from the crisis of neoliberal capitalism and the decay and delegitimation of American/NATO imperialism. To know the current state of our world concretely, and hence, to ascertain the conditions for a revolutionary way forward, a dialectical materialist outlook, capable of knowing the world comprehensively, in its development and interconnections, is needed.

Why Weltanschauung?

In his posthumously published *Dialectics of Nature*, Friedrich Engels describes dialectics in the following manner:

Dialectics, so-called objective dialectics, prevails throughout nature, and so-called subjective dialectics, dialectical thought, is only the reflection of the motion through opposites which asserts itself everywhere in nature, and which by the continual conflict of the opposites and their final passage into one another, or into higher forms, determines the life of nature.[5]

Any discussion on Marxist dialectics must start, if one wishes to avoid confusion and retain scientific rigor, with a formal distinction between objective and subjective dialectics. Without subjective dialectics objective dialectics would not be known, and, without objective dialectics the materialist character of the Marxist dialectic would be lost – it would be an idealist dialectic, concerned only with the dialectic in thought. Dialectics *en toto,* then, pertains to two fields: an ontology and an epistemology. Objective dialectics refers to the ontological field, and subjective dialectics to the epistemological field. The concept of dialectics refers both to claims about the constitution of

the world – which includes nature, society, and thought – and about the methodology through which one can best come to know the world concretely.[6]

To be clear, these two fields, namely, objective (ontological) and subjective (epistemological) dialectics, are not separated in human practice. In human activity the objectively dialectical character of the world is what allows for our subjective dialectical reflection of it into our minds; and further, this subjective reflection of objective dialectics reciprocally informs and sharpens our ability to interact with the world. It does not do so, however, by cementing itself as an a priori dogma we 'apply' to the world. Instead, As Richard Lewontin and Richard Levins argue, it functions as a set of 'reminders' to prevent "dogmatism and narrowness of thought."[7] Dialectical materialist analysis urges us to

'Remember that history may leave an important trace… Remember that conditions change and that the conditions necessary to the initiation of some process may be destroyed by the process itself. Remember to pay attention to real objects in space and time and not lose them utterly in idealized abstractions. Remember that qualitative effects of context and interaction may be lost when phenomena are isolated.' And above all else, 'Remember that all the other caveats are only reminders and warning signs whose application to different circumstances of the real world is contingent."[8]

This necessary distinction between objective and subjective dialectics is not an artificial bifurcation, but a theoretical one aimed at allowing us to center in and focus on the two primary fields (or aspects) of dialectics *en toto*. If subjective dialectics has emerged in human consciousness (a consequence of a long and arduous attempt to know the world concretely in the trajectory of universal history), then the interactions humans have in the world (i.e., through praxis) will be marked by the inseparability of objective and subjective dialectics. It is in this sense in which we can understand what V. I. Lenin means when he says that "logic, dialectics, and the theory of knowledge of materialism" all stand for the same thing, and hence, the "three words are not needed."[9] As Evald Ilyenkov clarifies in *Leninist Dialectics and the Metaphysics of Positivism,* dialectical materialism holds " 'ontology' is just as inseparably connected with

---

6. Considering 'thought' is under the category 'world,' this means that the methodology of coming to know the world is also the methodology through which we come to know ourselves.

'epistemology', as the categories expressing the dialectical nature of truth are connected with objective dialectics."[10] It is this connection of ontology and epistemology which Lenin expresses above.

Why, then, shall we understand them as two distinct, albeit united, fields? Is Lenin right in saying 'three words are not needed'? I think that although Lenin, as Ilyenkov shows, is right about the connection of a dialectical materialist ontology and epistemology, it is nonetheless worth keeping each 'word' separated, for they depict different 'aspects' or 'fields' of the dialectical materialist *weltanschauung* (worldview). If one is already conscious of the unity of the aspects in the real world, the ability to focus in on one aspect of a thing can help enhance the understanding of the whole. This is not a full-scale reification, but the recognition that placing the microscope on one aspect can enhance the comprehensive view of the whole.

For instance, in evolutionary theory the poles of Lamarckian transformationism and Darwinian variationism – the former which sees an organism as subject of its own evolution, the latter which sees it as the object of "autonomous and alienated" internal and external forces – is overcome by the Marxist position which holds that an organism and its environment are in a "dialectical relationship," where "both are at the same time subjects and objects of the historical process."[11] The fact that an organism is in practice the subject-object of its own evolution does not remove our ability to emphasize one aspect over the other in an investigation, and when this dialectical relationship is kept in mind, the partial reification of an aspect helps enrichen our understanding of its particularities and hence, of the dialectical interaction of the whole. By focusing on the active or subject aspect of an organism you simultaneously enrichen your understanding of it as object, for the environment which the subject aspect transforms retroactively transforms it, making it into its object. As Levins and Lewontin put it, "the organism influences its own evolution, by being both the object of natural selection and the creator of the conditions of that selection."[12] Engels had already noted this in his attacks on Draper and other scientists, namely, they treat the question "as if nature exclusively reacts on man, and natural conditions everywhere exclusively determined his

historical development," this view, he argued, is "one-sided and forgets that man also reacts on nature, *changing it and creating new conditions of existence for himself*."[13] There exists a reciprocal relationship between the two, in each making the other they simultaneously create the condition for the other to make them. Just like we can focus our reflection on the subject or object aspects of an organism separately while understanding their necessary unity in practice – and further, base their separation on an awareness that doing so under certain circumstances will enrichen our understanding of their unity – we can similarly highlight the objective and subjective aspects of dialectics without falling into the reified bifurcation of the 'old materialism' or of 'old metaphysics' which Marx had already overcame in his "11 thesis on Feuerbach" with the Hegelian notion of practice.

It is important to note here the usage of *weltanschauung* to describe Marxism. I am sure its utterance brings about a certain uneasiness in the contemporary Marxist scholar in the West. Like a veteran of war, the Marxist scholar in the West trembles as traumatic memories of second international economistic and deterministic Marxisms rush at the mere utterance of Marxism as a *weltanschauung*. Perhaps these fears are correct, the opportunists, social patriots, and renegades of the second international vulgarized Marxism to unrecognizable extents.

However, their real shivers are not rooted in the second international 'Marxism,' but in the Marxism which actually succeeded in attaining political power and establishing the first socialist state. Regardless of the struggle this Marxism had against the perversions of the second international, Marxist scholars in the West generally share the sentiment of Michael Heinrich, namely, that "a continuation and further simplification of *worldview Marxism* took place within the framework of 'Marxism-Leninism.' "[14] Even further, some argue that the end of Marxism-Leninism (symbolized to them by the fall of Soviet socialism) finally created the conditions for reading Marx anew, free from the bondage of Soviet orthodoxy. Critiques such as these have become a theoretical *hyun-gwan*[15] for Marxists in the West; every book's preface contains the same ritual critique of so-called 'Soviet Marxism.' To them it does not matter that, as I have argued before, "such homogeneity never existed, plurality and debate

13. Engels, *Dialectics of Nature*, 234.

14. Michael Heinrich, *An Introduction to the Three Volumes of Karl Marx's Capital* (New York: Monthly Review Press, 2012), 25.

15. This is the Korean tradition of taking off your shoes before you step into a house.

were always present."[16] It is much easier to grab on to the low hanging fruit of Stalin's "Dialectical and Historical Materialism" and homogenize the thought of a whole population from there. It doesn't matter that "during the communist era, three of every five books in the world were produced in the Soviet Union."[17] Somehow – and these are the folks criticizing the soviet Marxists for 'dogmatism and simplistic thinking' – the country which produced 60% of the world's books with 6% of the population all managed to affect the most uniform thinking in their theorists, such that only one form of Marxism existed – 'Soviet Marxism.' This is the nonsense which has plagued the Marxism of the West and hindered theoretical development.[18] Only as of recent has it become more acceptable to look back at the wealth of Marxist theory (most of which is still unfortunately untranslated) produced out of the soviet experiment. Specifically, this has taken shape through three central periods of examination: 1) the work grounded in Lenin's philosophy, 2) the late 1920s/early 1930s studies in dialectical materialism (e.g., Kuschin (1929), Rubin (1928), Deborin (1930), Rozental (1933), Rozenblum (1933), etc.), and 3) the post-1955 tradition of 'creative Marxism' that emerged out of Lomonosov Moscow State University (e.g., Zinov'ev (1960), Ilyenkov (1960), Tipukhin (1961), Orudzhev (1964), Mankovsky (1962), Vaziulin (1968), etc.).[19]

It is essential to mention the reaction against what is labeled 'Soviet Marxism' because here we find one of the central reasons behind Western Marxist's rejection of a Marxist *weltanschauung*. For them worldview Marxism is synecdochally understood to be equivalent to the Marxism of the Soviet Manuals (in the manuals it is called 'World Outlook').[20] Regardless of the fact that manuals were meant for popular dissemination, and hence, intentionally simplified, Western Marxists treat such manuals as the authoritative word of a Marxist *weltanschauung*. They forget that, as Lenin said, "human knowledge

19. For more on this see: Kaan Kangal's *Friedrich Engels and the Dialectics of Nature* (2020), Roland Boer's *Socialism with Chinese Characteristics* (2021), and Manolis Dafermos' article in *Capital and Class* "Rethinking the relationship between Marx's Capital and Hegel's Science of Logic: The tradition of creative Soviet Marxism" (2021).

20. The two most famous ones are *Fundamentals of Marxism-Leninism: Manual* (1961) which included a collection of scholars, party officials and publicists (the most famous scholar here is Lev Vygotsky, whose status as a communist, developmental psychologists in the West have tried very hard to whitewash – Curry Malott, "Vygotsky's Revolutionary Educational Psychology," *Liberation School* (March 9, 2019)), and the Konstantinov edition of *The Fundamentals of Marxist-Leninist Philosophy* (1979).

develops from ignorance," and hence, a more concrete-complex Marxist *weltanschauung* can only be understood on the grounds that it is built up from the deficiencies of its elementary or base presentations.[21] This was the aim of the manuals, to create such 'base' knowledge in the masses of people, it wasn't supposed to be the most theoretically rich exposition of the Marxist *weltanschauung*, but the one the masses could understand and educate themselves with. The process of knowledge, of going from an abstract to a concrete understanding (as we will see in a later section), is itself a dialectical process. One cannot skip the necessary moments required to understand something concretely. This doesn't mean, however, that one must endure the time it took to get from one moment to another in the sphere of universal history, but simply that the development and process is itself necessary. As Hegel noted in his *Phenomenology of Spirit*,

What in former ages engaged the attention of men of mature mind, has been reduced to the level of facts, exercises, and even games for children; and, in the child's progress through school, we shall recognize the history of the cultural development of the world traced, as it were, in a silhouette.[22]

It would be quite difficult for a worker, peasant, or uneducated militant to engage directly with the works of Ilyenkov and Vaziulin without any background in philosophy and Marxist theory. One must build themselves up to being able to understand these richer forms of creative Marxism. The manuals aided as a 'first step' in this climb. It is in this context in which Western Marxist's synecdochally rooted rejection of a Marxist *weltanschauung* should be understood.

However, the manual's popular character should not make them immune to critique, since, without critiquing them you cannot overcome them as a 'first step.' But the critique they receive must be grounded on a conscious understanding of their character as popular textbooks. This is completely absent in the Western Marxists who use these simplified worldview formulations to scratch off a whole tradition (Marxism-Leninism) and the *weltanschauung* manner in which it understands Marxism. However, Lukács and Gramsci – whom Western Marxists see as the fathers of their tradition's revolt against Soviet orthodoxy, do not engage in critique in the same form their self-proclaimed students do. For instance, Lukács critical review of Bukharin's *Historical Materialism* (1921) does not conclude with a wholesale

condemnation of Bukharin and of the formulation of Marxism as a worldview. Instead, while being upfront about its status as a popular textbook, he rightly demonstrates how Bukharin's text suffers from what he calls "false objectivity," "bourgeois, natural-scientific materialism," and "fetishism," and shows how these faults were not found in Plekhanov's and Mehring's similar attempts at a popular textbook.[23] This sort of critique is also seen in Antonio Gramsci's *Prison Notebooks*. Gramsci takes the same Plekhanov 'manual' Lukács praises above and characterizes it as "vulgar materialism," providing a similar critique as the one Lukács levied against Bukharin.[24] Gramsci would also, like Lukács, criticize Bukharin's *Historical Materialism* and argue that he degraded dialectics into a "subspecies of formal logic and elementary scholasticism."[25] He never, however, took this as an opportunity to provide a wholesale condemnation of the Marxist-Leninist worldview, and understood these vulgarizations as just that, vulgarizations of a richer and more open Marxist worldview.[26]

Here we have Western Marxists' favorite supposed 'rebels' against 'soviet Marxism' and Marxism-Leninism championing the Marxist *weltanschauung* while rightfully criticizing those who distorted it and brought foreign bourgeois elements into it. These two 'rebels,' however, merely repeat the criticism Lenin had already made of Bukharin and the second international Marxists. As Lenin expressed in a 1922 'Letter to the Congress' on Christmas eve, Bukharin had "something scholastic about him (he has never made a study of dialectics, and, I think, never fully understood it)."[27] Additionally, who can forget Lenin's aphorism from his 'Conspectus to Hegel's *Science of Logic*,' namely, that "none of the Marxists have understood Marx."[28] Therefore, as I have showed, one can hold on to the conception of Marxism as a *weltanschauung* while critiquing the

26. To be clear, although Bukharin's textbook provides a Marxist outlook which reduces everything to technological development, the work of recent Marxist Ecological thinkers such as John Bellamy Foster and Ian Angus shows that Bukharin, for all his flaws, was at the forefront of developing – along with Verdansky and other Soviet scientists – a Marxist ecology. In his *Historical Materialism*, the fifth chapter on "The Equilibrium between Society and Nature" engages with Marx's concept of metabolism and metabolic rifts. Likewise, the speech he presented to the International Congress of the History of Science and technology in London in 1931 is extremely rich ecologically and sustains the dialectical unity of theory and practice in a much more concrete manner – showing that he was no longer the amateur dialectician Lenin wrote about before dying.

exponents of vulgarized and simplified forms of the Marxist *weltanschauung*. This position did not have to wait for Lukács or Gramsci, it was already in Lenin. Further, it was in Lukács, Gramsci, Ilyenkov, et. al., because it was in Lenin, and because they were faithful to the Marxist-Leninist *weltanschauung*.

The foolishness of Western Marxists' logic should now be apparent: homogenize all soviet Marxisms to its most elementary expression, then, use this elementary expression to fully reject Marxism as a worldview. It is the equivalent of rejecting evolutionary theory *en toto* because a 9th grade textbook simplified Darwinism. In laypersons terms, it is the tossing of the baby out with the water. The Western Marxist rejection of a Marxist *weltanschauung* is grounded in a combination of the previously mentioned infantilism and a predisposed sentiment that looks weary upon any 'worldview or grand narrative.' When unmasked we see the latter is nothing more than what Ellen Meiksins Wood called the "disease" of postmodernism which has infected the body of the Western Marxists, making them reject anything which smells like grand narratives and universalistic discourse.[29] Additionally, these bourgeoisfied 'Marxist' tendencies aren't necessarily a result of spontaneous theoretical developments; instead, as Gabriel Rockhill's work on the Global Theory Industry has shown, the works of the classical authors from the New Left and the Western Marxist tradition are grounded on a political economy of knowledge that is backed by Western capitalist state departments and intelligence agencies (as well as by major capitalist foundations) which benefit from the dissemination of this compatible, anti-Communist 'Marxism'.[30] Marxists must reject this revisionist infiltration doomed to revolutionary pessimism and affirm the Marxist *weltanschauung*, that is, a dialectical materialist ontology and epistemology. This *weltanschauung* is not a closed and static one (like some of the manual phraseology could have made it seem), but one which is open, dynamic, and *critically receptive* to the latest studies in the sciences for readjustments or expansions in its dialectical method and mode of thinking. As Engels had noted in *Ludwig Feuerbach*, with "each epoch-making discovery in the sphere of natural science," dialectical

materialism must accordingly change its form.[31] Let us now examine the ontological aspect of the Marxist *weltanschauung*.

Dialectical Materialist Ontology

In his *Dialectical Materialism*, Henri Lefebvre uses Marx's *Capital* and Engels's *Dialectics of Nature* to say that "the laws of human reality cannot be entirely different from the laws of nature."[32] A similar sentiment is expressed in the posthumously published *A Defense of History and Class Consciousness: Tailism and the Dialectic*, where Lukács says that it is "self-evident" that "the dialectic could not possibly be effective as an *objective principle of development* of society, if it were not already effective as a principle of development of nature before society."[33] Precisely because of this universal character, argued Lefebvre, is that dialectical materialism "acquires the full dimension of a philosophy: it becomes a general conception of the world, a *weltanschauung* and hence a renewal of philosophy."[34] In the last section we defended the treatment of Marxist philosophy (i.e., dialectical materialism) as a *weltanschauung*, now let us present its ontological basis.

Objective dialectics, i.e., the dialectical materialist ontology, first and foremost holds that the world is dominated by change and interconnection, "nothing is eternal but eternally changing."[35] It acknowledges that "movement is itself a contradiction," and that "contradiction propels movement."[36] These are the

33. Georg Lukács, *A Defense of History and Class Consciousness: Tailism and the Dialectic* (New York: Verso Books, 2000), 30. What is interesting about this affirmation is that for most Marxist scholars, the 'break' between 'western' and 'soviet' Marxism (and hence, the beginning of the 'Engels debate') occurs first in Georg Lukács' famous sixth footnote of the first chapter in his 1923 *History and Class Consciousness*, where he says that "Engels–following Hegel's mistaken lead–extended the [dialectical] method also to knowledge of nature." Instead, argued Lukács, the dialectical method should be limited to "historical-social reality." What those who have banked on this footnote forget, or are unaware of, is that Lukács comes to reject his own position to the point of "[launching] a campaign to prevent the reprints of his 1923 book." Lukács had argued that his book was 'outdated,' 'misleading,' and 'dangerous' because "it was written in a 'transition [period] from objective idealism to dialectical materialism.' " Additionally, he was quite explicit in arguing that " '[his] struggle against… the concept of dialectics in nature' was one of the 'central mistakes of [his] book.' " For more see my review of *Friedrich Engels and the Dialectic of Nature* cited above.

basic premises of dialectics pertaining to the ontological constitution of the world. It is important to note, however, that these central premises make it an ontology of becoming, not being. Insofar as being is understood as an unchanging, pure, universal substratum, it is rejected as an explanatory category. If being, however, is understood as a constant "coming-to-be and ceasing-to-be," that is, if it is understood as becoming, then it can be sustained as a foundational category in a dialectical materialist ontology.[37] Nonetheless, as Hegel noted, although "the first truth is to be found in becoming," this first concrete category is still an abstract first step which gives way to a more concrete understanding of the world.[38] If we stop here, then, we have merely achieved the position of Greek (more specifically Heraclitan) dialectics mentioned above. Although, as Engels said, "the new age begins with the return to the Greeks – negation of the negation," this return is mediated by half a millennium of metaphysically framed scientific studies,[39] and therefore, it is not a return to the same Greek dialectic, but to a richer (more concrete) one.[40] Hence, what is required is not just the understanding that everything is in constant motion and interconnection, driven by internal contradictory forces, but a concrete understanding of the mechanisms and structures through which these changes occur.

The dialectical materialist ontology, as an ontology of becoming, is concerned with the "most general laws" of human and natural "historical development" and "of thought itself."[41] Marx and Engels both agreed that these laws had already been discovered by Hegel, but in a mystified form. For instance, Marx says in a letter to Dietzgen that "The true laws of dialectics are already contained in Hegel, though in a mystical form," and Engels similarly repeats this by saying that "all three [laws of dialectics] are already developed by Hegel… [but] foisted on nature and history as laws of thought, and not deduced from them."[42] These 'laws' are 1) the unity and struggle of opposites, 2) the transition from quantity into quality and vice versa, and 3) the negation of the

negation. It is important to note that Hegel never referred to them as ‘laws’; in his *Logic*[s] they are merely categories, little different than the plethora of other categories his logical unfolding of the concept introduces. However, the reason behind Marx and Engels’ classification of these Hegelian categories as ‘laws’ lies in the fact they can be seen in every ‘moment’ of the movement of Hegel’s concept, and most importantly, because Marx and Engels ‘re-discover’ them in the movement and interconnection of nature and society and postulate their objective existence as the source for their reflective (subjective) existence in the mind. These three dialectical laws, by being the most universal forms in which change occurs, are also the most abstract, and hence, serve as the base upon which a more concrete understanding of change and interconnection in smaller or larger organic totalities can take place.

It is here where the accusations of simplifying dialectics usually begin. Once these three laws are established, it becomes a game of examples, whoever can fit the schema of these laws on nature, human society, history, or thinking the most wins. In treating these laws as a “sum total of examples,” Lenin argued, “dialectics usually receives inadequate attention.”[43] For Lenin the architype for this was Plekhanov, although at times, he argued, “the same is true of Engels.”[44] To be clear, the problem is not the examples in themselves, but when dialectics is *en toto* reduced to a collection of examples. When this reduction takes place, Chris Arthur is right to say that dialectics turns into a “lifeless formalism” which proceeds by “applying abstract schemas adventitiously to contents arbitrarily forced into the required shape.”[45] However, one must not confuse this vulgarization of dialectics to mean that one cannot provide examples in nature, society, or thinking that confirm these laws. Like we saw in the previous section, one can hold onto Marxism as a *weltanschauung* and simultaneously reject vulgarizations of this *weltanschauung*. Similarly, one can reject the reduction of dialectics to a basket of artificially foisted examples but still use examples to understand objective dialectics. After all, the central difference between the Hegelian and Marxist dialectics is the latter’s materialist position that dialectics is the ontological condition of the world, and only when this world is concretely understood does dialectical thinking emerge. It is necessary, then, to use concrete examples from the world to understand the world itself, and hence, grasp objective dialectics subjectively.

The materialist dialectic, therefore, must walk a thin line between two precipices into idealist dialectics: on the one hand, if no concrete examples are used, the 'dialectic' would be purely mental, and hence, idealist; on the other hand, if examples are artificially fabricated out of an apriorist dialectical schema foisted onto the world like a cookie cutter, then the 'dialectic' one is proposing replicates at its core the same mistake of Hegel's demiurgos, except at a much more vulgarized level, lightyears away from the genius with which Hegel espoused his. The theoretical panacea and balancing pole necessary to avoid falling into the precipices of idealism is the dialectical method of going from the abstract to concrete. Only in the rigorous process of investigation required for this method can one be sure that their examples are actually in-the-world, and not foisted on it by an abstract dialectical schema. An exposition of this method will have to wait until the following section.

It is this context in which Engels deduces the dialectical laws in his scientific studies, and Marx in his economic studies. The examples they provide are concrete, and (esp. in the case of Engels) usually include comments on how science already accepted (in certain fields) these 'laws' but under different names. For instance, in Engels' letter to Friedrich Albert Lange, he argues that the "modern scientific doctrine of reciprocity of natural forces [is] just another expression or rather the positive proof of the Hegelian development on cause & effect, reciprocity, force, etc."[46] Let me now provide a few concrete examples in which these most general laws of change and interconnection can be observed. Recall that by being the 'most general' they are also the most abstract, and hence, each example is in itself insufficiently understood if the only thing one says is how one or another of these dialectical laws is observed in it. To be concretely understood, each of these examples must take the structural appearance of the laws as a mere starting point to the investigation of the phenomenon. The laws work like the study of a townhouse community; by knowing how the outside of each townhouse looks, one has grasped the most general fact in the community. This 'most general' fact can then serve as the abstract starting point for the concrete study of the internal structural differences in each household. One cannot claim to know the community by simply knowing the 'most general' fact, and similarly, by only knowing the differences in each household one is blind to the 'most general' fact that the object of one's study is not independent houses, but a townhouse community.

The Three Ontological Laws of Dialectics in Political Economy

"The most important aspect of dialectics," Hegel argued, is the "grasping of opposites in their unity."[47] Similarly, Marx would say in *Capital* Vol. I that the "Hegelian contradiction [is] the source of all dialectic."[48] Lenin would repeat this by saying that "the division of a unity into two and the cognition of its contradictory parts is the essence of dialectics."[49] It is thus, with the law of the unity and struggle of opposites that we must begin, for the "condition for the knowledge of all processes in the world in their 'self-movement,' in their spontaneous development, in their real life, is the knowledge of them as a unity of opposites."[50] It is this law which allows the understanding of the other two, for not only does it "furnish the key to the 'self-movement' of everything that exists; it alone furnishes the key to the 'leaps,' to the 'interruption of gradualness,' to the 'transformation into the opposite,' to the destruction of the old and the emergence of the new."[51] Let us now see how Marx observes the functioning of this law in the realm of political economy.

The law of the unity and struggle of opposites can be seen from the dawn of Marx's *Capital* with the commodity, the "cell-form of bourgeois society" and "germ of all contradictions."[52] Commodities, as Marx says, have an "internal opposition inherent in them," namely, they are "at once use-values and values."[53] As Roslyn Wallach Bologh adds, "the commodity is this contradictory relation, a totality of opposing moments: production of exchange value which excludes use value and the realization of exchange value which requires use value."[54] The commodity, the "simplest, most ordinary and fundamental, most common and everyday *relation* of bourgeois society," presents us with a clear example of the law of the unity and struggle of opposites.[55] Since, as Lenin said, the commodity is the "germ of all the contradictions," we can see similar examples in more 'concrete' categories in Marx's *Capital*.[56] For instance, merchant's capital, Marx argues, "presents… a

unity of opposing phases, a movement that breaks up into two opposing actions – the purchase and the sale of commodities."[57] This cell-form of bourgeois society, as the unity of the opposing forces of exchange and use value (and in its metamorphosis of commodity and money), is the "most abstract form of crisis," and contains within it (implicitly or *in itself*) the general crisis of capitalist production, which, in its periodic actualizations, provides the "manifestation of all the contradictions of bourgeois economy."[58] In all the contradictions of capitalist production as a whole we have lucid examples of the law of the unity and struggle of opposites, and, as Marx adds, "the most abstract forms are recurring and are contained in the more concrete forms."[59] In regard to social class, for instance, the capitalist mode of life is marked by the contradiction between the working and the capitalist class. These two classes are both *struggling* amongst themselves and in *unity* under capitalism, that is, capitalism contains – not externally, but in itself – two opposing forces whose struggle shapes its development. As Lenin argued, once the understanding of the unity and struggle of opposites is grasped, we are 'furnished' with the keys to understand the other laws of movement.

The law of the unity and struggle of opposites, or what is the same, the law of the universality of contradictions, would be enriched by Mao Tsetung's 1937 essay "On Contradiction." Here, Mao develops important categories relating to the *particularity of contradictions*, further concretizing the dialectical materialist ontology and its ability to understand the concrete concretely. The first important categorial development is the notion of principal and secondary contradictions. As Mao notes, "there are many contradictions in the process of development of a complex thing, and one of them is necessarily the principal contradiction whose existence and development determine or influence the existence and development of the other contradictions."[60] It becomes an imperative, therefore, to "devote every effort to finding [the] principal contradiction" in whatever complex process one is studying, for "once this principal contradiction is grasped, all problems can be readily solved."[61] Likewise, Mao notes that in any contradiction, i.e., in any unity of opposites, there is always one antipole which is dominant. This is what he calls the

61. Tsetung, "On Contradiction," 53.

principal aspect of a contradiction, it refers to the "aspect which has gained the dominant position."[62] This dominant position is not static, but always subject to change; what is the principal aspect in one moment may turn into the non-principal aspect in another.

Additionally, Mao refines the law of the unity and struggle of opposite by recapturing a distinction Lenin had already noted between antagonisms and contradictions. Lenin argued that "antagonism and contradiction are not at all one and the same… under socialism, the first will disappear, the second will remain."[63] Mao clarifies this by showing that "antagonism is one form, but not the only form, of the struggle of opposites."[64] Class societies are bound, sooner or later, to develop "the form of *open antagonism*" which shifts the class struggle into a moment of revolution.[65] In Gramscian terms, these are the moments when the emphasis is switched from the war of position (the battle for hegemony) to the war of maneuver, where the opposites engage in direct frontal attacks. Sometimes non-antagonistic contradictions develop into antagonistic ones, and likewise, antagonistic contradictions develop into non-antagonistic ones.[66] Contradictions obtain an antagonistic form in moments of explosion, when "open conflict to resolves old contradictions" takes place and new things are produced.[67] Recognizing whether a contradiction is antagonistic or not is fundamental to the process of resolving it. For instance, the working and the capitalist class are in an irreconcilable antagonism, one which can only be solved through the working class's revolutionary overthrow of the capitalist class. The utopian socialists, for example, did not see the antagonistic character of this contradiction, and therefore, their 'resolutions' involved the harmonizing of class distinctions through an appeal to the benevolence of the owners. History has shown that the incorrect assessment of the relationship between the antipoles of worker and capitalist has produced unsatisfactory resolutions which either became relics of the 19th century, or, in the case of similar strategies by the social democrats, sustained the dominance of capital over labor. On the other hand, the contradiction between the peasantry and the working class is not, on most occasions, an antagonistic one; therefore, the resolution must take (and has taken) a radically different form, one which

unites the peasantry and the working class, under the leadership of the latter, in the struggle for socialism.

After having grasped the law of the unity and struggle of opposites, and how this general law was concretized by Mao, we may examine the law of the transition from quantity to quality and vice-versa. In the transition from money into capital we have an example of the law of the transformation of quantity into quality. For money to be transformed into capital, that is, into something qualitatively new, surplus-value needs to be created. For this to happen, it is necessary for a specific amount of money to be turned "into commodities that serve as the material element of a new product," and further, to "incorporate living labor" onto this "dead substance."[68] If the labor-power incorporated creates only the value necessary for the laborer's subsistence, i.e., if it produces an equivalent to the exchange value it was bought for, then no surplus could be realized. However, what "really influenced" the buyer [i.e., the capitalist] of labor-power was "the specific use-value which this commodity possesses of being *a source not only of value, but of more value than it has itself*."[69]

To create surplus value, and hence, materialize the use value for which the labor-power was bought (viz., to be a source of "more value than it has itself"), that labor power must be extended beyond the time it took it to produce the amount of value it was bought for.[70] As Marx says, "if we compare the two processes of producing value and of creating surplus-value, we see that the latter is nothing but the continuation of the former beyond a definite point."[71] This "definite point" is what Hegel call "nodal points" in his *Logic*[s], it is the moment when "gradual [i.e., quantitative] increase… is interrupted" and the result is "a leap from quantitative into qualitative alteration."[72] The quantitative extension of the working day beyond the time necessary to produce the value the labor-power was bought for is how surplus-value arises. A quantitative accumulation of working hours, at a 'definite point' [i.e., nodal point], produces a qualitative leap and surplus-value comes about. Quantitative change has resulted in a leap into something qualitatively different. This qualitative leap into surplus-value, "a process which is entirely confined to the sphere of production," creates the conditions for the "metamorphosis of money

68. Marx, *Capital Vol. I*, 195.

into capital," another qualitative leap effected by the transcendence of labor-power beyond this 'nodal point.'[73]

There is a plethora of other places where the law of the transition of quantity into quality can be observed in *Capital*. For instance, Marx says that "not every sum of money, or of value, is at pleasure transformable into capital;" a "certain minimum of money or of exchange-value must be pre-supposed in the hands of the individual possessor of money or commodities."[74] This is because there is a nodal point at which the variable capital [i.e., labor-power] involved in production turns the owner into a capitalist proper. "The guilds of the middle ages," Marx argued, "tried to prevent by force the transformation of the master of a trade into a capitalist, by limiting the number of labourers that could be employed by one master within a very small maximum."[75] This fetter presented in the middle-ages prevented the development of the capitalist proper. Only when this fetter is broken can "the possessor of money or commodities actually turn into a capitalist."[76] This transformation occurs "in such cases only where the minimum sum advanced for production greatly exceeds the maximum of the middle ages."[77] Marx then explicitly says that "here, as in natural science, is shown the correctness of the law discovered by Hegel (in his "Logic"), that merely quantitative differences beyond a certain point pass into qualitative changes."[78]

These feudal fetters would be eroded as the barbarism of primitive accumulation evolved. As Marx says, "these fetters vanished with the dissolution of feudal society, with the expropriation and partial eviction of the country population."[79] This "historical process of divorcing the producer from the means of production" is the "fundamental condition" for the development of the capitalist mode of production.[80] Its history is written in the "annals of mankind in letters of blood and fire."[81] The history of this expropriation, of the

---

73. Marx, *Capital Vol. I,* 194-195. This latter transformation requires the surplus-value produced in the moment of production to return to the moment of circulation and realize itself. As Marx says in *Capital* Vol. III, "industrial capitalist merely realises the previously produced surplus-value, or profit, in the process of circulation." Marx, *Capital Vol. III*, 283.

74. Marx, *Capital Vol. I*, 307-308. This is the example Engels uses in his *Anti-Dühring* when discussing the law of the transformation of quantity into quality.

usurpation and enclosure of the commons, is the "prelude to the history of capitalism," and produces "the first negation of individual private property."[82] This first negation establishes, as we saw previously, a qualitatively new mode of production – capitalism. "But," Marx would go on to famously say, "capitalist production begets, with the inexorability of a law of Nature, its own negation. It is the negation of the negation."[83] Capitalism immanently creates the conditions were,

> Along with the constantly diminishing number of the magnates of capital, who usurp and monopolise all advantages of this process of transformation, grows the mass of misery, oppression, slavery, degradation, exploitation; but with this too grows the revolt of the working class, a class always increasing in numbers, and disciplined, united, organised by the very mechanism of the process of capitalist production itself. The monopoly of capital becomes a fetter upon the mode of production, which has sprung up and flourished along with, and under it. Centralisation of the means of production and socialisation of labour at last reach a point where they become incompatible with their capitalist integument. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated.[84]

Here we have the clearest depiction, within the lens of universal history, of the law of the negation of the negation. Capitalist private property negates "self-earned private property."[85] It socializes production and creates for the first time ever a "division of labour in the workshop."[86] Its private "mode of appropriation" at a nodal point presents a fetter to the centralized and socialized means of production, immanently creating its own conditions for its sublation [i.e., negation of the negation].[87] This is a process which involves the "expropriation of a few usurpers by the mass of the people," and hence, is expected to be "incomparably [less] protracted, violent, and difficult" than the capitalist negation of feudalism.[88]

As can be seen from the examples in political economy, these dialectical laws are interconnected. The internal contradiction in all things propels universal movement. At times – in the nodal points mentioned above – this movement breaks its quantitative gradualness and undergoes a qualitative leap. All qualitative leaps are negations of that which has undergone a qualitative transformation. These negations immanently create the conditions for their own negation and bring about, in certain nodal points, a negation of the negation. No negation fully annihilates that which it has negated, part of it is always preserved in the qualitatively new it has unfolded into. For instance, capitalism sustains feudal private property but cancels out feudal individualized production; socialism sustains the socialized production of capitalism but cancels out its privatized accumulation. These are, of course, simple examples; but they are nonetheless helpful pedagogical tools to understand the most general laws of movement and interconnection, and hence, to build the base necessary for knowing more concrete things concretely.

Dialectical Laws in Nature and the Emergentist Dialectic

As was shown at the beginning of our section on dialectical ontology, the presence of these dialectical laws in the natural world grounds their existence in the realm of human sociality and thought. After establishing concrete examples of these laws at play in political economy, a plethora of examples in the natural world could be provided. However, instead of proceeding to give more examples of their existence in the natural world (and continue to fit the collection of examples stereotype), I'd like to shift my focus to a concept which has developed in the sciences which presents a helpful tool for thinking of the relation of these laws in the world. As we previously saw with Engels' letter to Lange, Engels (and Marx) held that natural science was already confirming all of these laws, but often referred to them under different names, or failed to attribute their conceptual source to the dialectical tradition. This is the case with the concept of *emergence*. It is, in essence, a form of understanding these three laws through one concept. This connection has been developed by Kaan Kangal in his work on Engels' "emergentist dialectic," where he goes as far as to say that "Engels cleared the way for establishing a dialectical-materialist ontology of emergence."[89]

89. Kaan Kangal, "Engels' Emergentist Dialectics," *Monthly Review* Vol. 72 N. 6 (November 2020).

Kangal argues that "scholars from diverse backgrounds invariably agree" that "what is indispensable… in Engels's work on philosophy and natural sciences" is "the emergentist character of Engels's dialectics."[90] This can be seen in the work of Zbigniew A. Jordan, who argued in his text, *The Evolution of Dialectical Materialism* (1967), that "the central idea of emergent evolution is to be found in *Anti-Dühring* and *Dialectics of Nature*."[91] Jordan adds that

The central idea of emergent evolution is the logical product of the three following assumptions: material reality has a multilevel structure; each of these levels is characterized by a set of distinctive properties and irreducible laws; and each level has emerged from temporally prior levels according to laws which are absolutely unpredictable with respect to those operating at the lower levels. These levels can be considered either epistemologically as the levels of scientific knowledge, such as physics, chemistry, biology, sociology, and so forth, or ontologically as the corresponding objective structural levels of the external world.[92]

Emergentism develops as a way to escape the problems of reductionism and determinism, namely, the view that "all higher-level causes can be reduced to nothing more than the outcome of the laws operating at lower levels."[93] In opposition to this, emergentism holds that,

The constituent parts of an encompassing whole acquire their integral status in that their properties come into existence by means of their interaction and interpenetration, which eventually bring about a specific mode of organization peculiar to the whole in question. Note here that parts do not come together in order to make a whole to which they belong. Rather, their very interaction structures the way they are interrelated and interpenetrated, resulting in what is called a whole.[94]

Wholes are not reducible to the sum of their parts and higher forms of movement are not reducible to the movement that occurs "at the level of atomic and subatomic matter."[95] For instance, as Malcom Jeeves and Warren S. Brown

90. Kangal, "Engels' Emergentist Dialectics."

explain, “an amoeba, as a complex organization of molecules, has properties that do not exist in the molecules themselves.”[96] “The activity of the amoeba,” they add, “is governed by the current state of the organization of these molecules, not the properties of the molecules themselves.”[97] “The activity of the amoeba,” therefore, “is an emergent property.”[98]

A good example of emergentist qualities is found in Marx’s discussion of cooperation in *Capital*. As I mentioned before, capitalism introduces for the first time in history a division of labor within the manufacturing process itself, and in this process of collaboration it effects “the creation of a new power, namely, the collective power of masses.”[99] As Marx argues, “a dozen persons working together will, in their collective working-day of 144 hours, produce far more than twelve isolated men each working 12 hours, or than one man who works twelve days in succession.”[100] The structure of cooperative work allows for the emergence of new qualities (substantially increased productive capacities) not reducible to the amount of working hours, nor the individuals which worked them. This is not just the case with humans. As Jeeves and Brown note, ant colonies develop emergent qualities such as “intelligent behavior” (e.g., the ability to solve “spatial mathematical problems” such as locating the food sources closest to the ant colony) when they act as colonies.[101] The solutions they provide as colonies are “beyond the capacity of individual ants.”[102]

This does not mean that the laws which operate at the lower levels are uninfluential for those which operate at a higher level. On the contrary, they create the conditions for the activity of the higher level. But this higher level of activity is not determined by the lower level, that is, one cannot reductively explain the activity of the higher level simply by an appeal to the lower levels. As Engels writes in *Dialectics of Nature*,

This is not to say that each of the higher forms of motion is not always necessarily connected with some real mechanical (external or molecular) motion, just as the higher forms of motion simultaneously also produce other

forms, and just as chemical action is not possible without change of temperature and electric changes, organic life without mechanical, molecular, chemical, thermal, electric, etc., changes. But the presence of these subsidiary forms does not exhaust the essence of the main form in each case. One day we shall certainly "reduce" thought experimentally to molecular and chemical motions in the brain; but does that exhaust the essence of thought?[103]

Richard Levins and Richard Lewontin provide a helpful distinction between reduction and reductionism which helps clarify how emergentist dialectics analyzes these changes: "Reduction looks to lower levels of analysis for differentiating symptoms of forces at higher levels, whereas reductionism claims that forces at lower levels are the actual causes of the phenomena higher up."[104] As Kangal explains, "low-level and high-level phenomena are by no means linked by immediate causality," instead, "they are intermediated by Hegelian 'nodal points.' "[105]

Kangal states that "when the organic world grows out of the inorganic, it develops specific forms of movement and its own special laws… [however], what historically precedes the development of the organic world, that is, the inorganic, lives on in a "sublated" form."[106] This process of sublation is another way of describing the law of the negation of the negation, which, as we previously saw, contains within it the law of the transition from quantity into quality (each negation is an example of a 'qualitative leap'), and presupposes such contradictory forces within bodies which allow – in certain nodal points – this qualitative transformation to take place. This capacity for immanent transformation (what Lenin calls "self-movement") is what the Chilean biologists Humberto Maturana and Francisco Varela have termed *autopoiesis* in their text, *Autopoiesis and Cognition: The Realization of the Living*. The transitions from the lowest levels of inorganic bodies to the highest levels of organic bodies is dialectically interconnected by the transcendence of certain nodal points which give way to qualitatively new levels with emergent properties not reducible to the sum of its current parts or to the qualities of the lower levels it presupposes. Hence, in line with dialectical materialism's basic ontological premise concerning universal interconnection and movement, Kangal affirms that the "dialectical emergentist is at pains to *integrate*, and not

juxtapose, parts of a whole in differentiated degrees of organization of matter."[107] In so doing, the dialectical materialist *weltanschauung* provides the conditions for the most comprehensive understanding of the world in its utmost concreteness.

How the Dialectical Materialist Ontology Understands Categories

Before we move on to our section on the dialectical method, it is important to say a few things about how the dialectical materialist *weltanschauung* understands categories. There are three central points which have to be made.

First, we must note that the concept of 'category' itself is not constrained within the limits of cognition. Categories are not simply a "list of all original pure concepts of synthesis that the understanding contains a priori."[108] Since the dialectical materialist *weltanschauung* holds no separation between ontology and epistemology, categories are not a filter which prevents us (along with our sensible intuitions) from knowing the world as it really is. An ontological *ding an sich*, separated from how it is *for others*, is as much an "empty abstraction" for the dialectical materialist as it is for Hegel.[109] The dialectical materialist *weltanschauung* holds that categories, although understood subjectively, depict objective conditions in the world. Their understanding in the mind is a reflection of their existence in the objective world.

Secondly, it is important to note that in the dialectical materialist worldview the traditional categorial sets in philosophy (e.g., subject/object, appearance/essence, quantity/quality, part/whole, identity/difference, positive/negative, freedom/necessity, abstract/concrete, particular/universal, cause/effect, etc.) are not understood through the metaphysical framework of either-or. As Engels states, "dialectics… knows no hard and fast lines, no unconditional, universally valid 'either-or' and bridges fixed metaphysical differences," recognizing instead of 'either-or,' "both this – and that."[110] This is a basic consequence of the law of the unity and struggle of opposites. Examples of how these categorial sets are understood in their unity can be

107. Kangal, "Engels' Emergentist Dialectics."
108. Immanuel Kant, *Critique of Pure Reason* (Indianapolis: Hackett, 1996), 132.
109. Hegel, *Science of Logic*, §22.
110. Engels, *Dialectics of Nature*, 216.

found all throughout this introduction.[111] The only thing I must add is that sometimes a new category arises to describe their unity (e.g., reciprocity with the categories of cause/effect), and other times it doesn't (e.g., subject/object is just subject-object).

Thirdly, besides the above mentioned categorial sets present in all totalities, particular totalities usually contain their own objective categories. Hence, we can speak about the categorial development of Marx's *Capital* and understand that most of the categories which are unfolded are historically specific to the capitalist mode of production. In fact, a big part of the 'critical analysis' Marx is doing involves precisely the removal of the 'eternal halo' bourgeois political economist attach to categories in capitalism. Marx's recognition of the historical (i.e., not eternal), character of the categories of capitalism is a process of exposing the 'unknown knowns,' that is, the presuppositions which sustain the "scientific impotence" of bourgeois political economists.[112]

Let us now turn our focus to the dialectical method, i.e., the mode through which objective dialectics is accurately reflected as subjective dialectics.

The Dialectical Method: From Abstract to Concrete

As we have been formulating in this introduction, the dialectical materialist worldview contains two central parts – an epistemology and an ontology. These two parts cannot be understood wholly separated from one another. Instead, they must be understood dialectically, that is, as interconnected parts of human practice. Now that we have covered the ontological dimension of the dialectical materialist worldview, the ground has been set to examine the epistemological dimension, that is, the dialectical materialist method of engaging with the world.

In the introduction to the notebooks which compose the *Grundrisse* Marx describes the "scientifically correct method" as one in which "abstract determinations lead towards a reproduction of the concrete by way of thought."[113] The correct method involved the movement from the abstract

111. For instance, we saw how an organism and its environment function as subject-objects at the beginning of this introduction; how emergentist dialectic changes how we see the relationship of parts and wholes; how quantity transforms into quality and vice versa; etc.

112. Marx, *Capital Vol. I*, 13.

113. Karl Marx, *Grundrisse* (London: Penguin Books, 1973), 101.

"simple relations" to the concrete, that is, that which contains a "concentration of many determinations," a "unity of the diverse."[114] We can see this method at work in *Capital*'s categorial development from the commodity in Vol. I to the categories that emerge in Vol. III, where the object of study is capitalist production as a whole. The analysis of price, rate of profit, various types of capital, etc. in Vol. III involves an investigation of the "concrete forms which grow out of the *movements of capital as a whole*."[115] These 'concrete forms' are concrete because they "approach step by step the form which they assume on the surface of society, in the action of different capitals upon one another, in competition, and in the ordinary consciousness of the agents of production themselves."[116] These categories more richly reproduce the concrete in thought. They are more concrete because they are concentrations of more determinations than the categories of the previous two volumes.

The order of *Capital*'s categorial development is not arbitrary (as Engels had argued about Hegel's categorial development in his *Logic*),[117] but necessary. The less concrete-simple categories (we may call them abstract, although they're *not purely abstract*) *have* to be understood for the more concrete-complex to be grasped. Marx is very explicit about this, for instance, in referring to competition he says that,

A scientific analysis of competition is not possible, before we have a conception of the inner nature of capital, just as the apparent motions of the heavenly bodies are not intelligible to any but him, who is acquainted with their real motions, motions which are not directly perceptible by the senses.[118]

Each category is where it needs to be, its unfolding is systematic, not arbitrary, or simply historical. As Marx says in the *Grundrisse*, it would be "unfeasible and wrong to let the economic categories follow one another in the same sequence as that in which they were historically decisive."[119] Whether the commodity came before price historically is not the concern; instead, what is at

114. Karl Marx, *Grundrisse*, 100-101.

115. Karl Marx, *Capital Vol. III*, 25.

116. Karl Marx, *Capital Vol. III*, 25.

117. As Engels says in a letter to Conrad Schmidt, "the transitions from one category or from one contradiction to the next are nearly always arbitrary." Friedrich Engels, "Engels to Conrad Schmidt," November 1, 1891. In *Marx-Engels Collected Works Vol 49* (New York: International Publishers, 2001), 286.

118. Marx, *Capital Vol. I*, 316.

119. Marx, *Grundrisse*, 107.

stake is the sequence in which these categories must be understood to grasp the capitalist mode of production as a whole concretely.

A concrete understanding of the more concrete-complex categories presupposes an understanding of the less concrete-complex ones. Here is where the confusion of the old economists lay, they begin with what Marx called the "imagined concrete," with the totality containing within it the most determinations (e.g., population), and in so doing treat the concrete abstractly.[120] One can only end up understanding the *real concrete* abstractly if one doesn't understand the *real abstract* concretely. As I have argued elsewhere

Concrete thought, instead, must be thought of as a process of ascension from the less concrete (the most abstract), to the most concrete. As Marx says, the "reproduction of the concrete by way of thought" is "not a point of departure" but the result of "a process of concentration."[121] *Concrete thought, then, contains abstract thought as a necessary moment in its ascension towards the concrete reproduction of the concrete. However, it overcomes this abstract immediacy by gathering the plethora of determinations which a thing presupposes in a manner which reproduces in the mind the active relations these determinations have with each other within a given totality.*[122]

Therefore, as Henri Lefebvre has noted, "the concrete, from a certain point of view, is also abstract;"[123] or, a As Evald Ilyenkov eloquently states – "the ascent from the concrete to the abstract and the ascent from the abstract to the concrete are two mutually assuming forms of the theoretical assimilation of the world… each of them is realized only through its opposite and in unity with it."[124] Contrary to this dialectical ascension, the treatment of concrete totalities by political economists engages the concrete directly, thereby failing to building up to it through a concrete unfolding of the less concrete; this is what leaves them merely engaging with empty wholes, with an 'imagined concrete'. As Marx affirmed, the concrete always "appears in the process of thinking… as a concentration, as a result, not as a point of departure."[125] To know totalities

120. Marx, *Grundrisse*, 100. This is also what Marcuse called "false concreteness" – Herbert Marcuse, *Reason and Revolution* (Boston: Beacon Press, 1960), 313.

(e.g., capitalist production as a whole) concretely, and hence, to accurately reproduce them in the mind, it is necessary to undergo the tedious process of systematically recreating its logically necessary moments. This must not be understood historically (even if it is not ahistorical), that is, the unfolding of 'moments' required to understand *Capital* as a whole does not depict a historical chronology but a systematic-logical one; "the historical passages [viz., part 8 'The So-Called Primitive Accumulation'] complement the theoretical account, but they don't constitute the theoretical account."[126] Price is a more concrete category because it requires all the previous categories to be understood for one to understand price itself. You can *partially* understand the category of a commodity without yet understanding the category of price. However, it is impossible to understand the category of price without first understanding the commodity, and how, through its immanent contradiction-driven movement, the conditions are created for price to be understood.

The dialectical method of going from the abstract and simple to the concrete and complex is better understood, as Martin Nicolaus points, as a "method of presentation," which is in essence, as Michael Heinrich calls it, a "dialectical presentation of categories."[127] It is, as Lefebvre noted, "nothing less than the complete reconstruction of the concrete in its inner movement."[128] This reading of the dialectical method has propelled a school of thought (stemming in the West from the work of Chris Arthur, Tony Smith, et. al.) which aims to provide a 'new' or 'systematic' reading of *Capital* (usually in connection with Hegel's *Science of Logic*), that is "concerned with the articulation of categories designed to conceptualize an existent concrete whole."[129]

The nature of the abstract to concrete dialectical method also creates conditions where once one gets to the more concrete categories, the previous categories themselves are capable of being more concretely understood, for then one can retroactively see their necessary role in the unfolding of more concrete categories. As Heinrich notes,

---

126. Heinrich, *An Introduction to the Three Volumes of Karl Marx's Capital*, 32.

127. Marx, *Grundrisse*, 61; Heinrich, *An Introduction to the Three Volumes of Karl Marx's Capital*, 37.

128. Lefebvre, *Dialectical Materialism*, 74.

129. Arthur, *The New Dialectic and Marx's Capital*, 4. The focus of these two strands is usually in the categorial development of Marx's *Capital* and its homology to Hegel's *Science of Logic*. In Smith the comparison is much more pronounced, as his reading of Hegel argues that his more 'idealist' aspects were metaphors and pandering to the Christian audience. On the other hand, Arthur thinks there is a fundamental ontological difference between the two, namely, that Hegel is an idealist and Marx is not.

Since Marx represents his object of inquiry on different levels of abstraction that mutually imply and complement each other, the theory of value and surplus value dealt with in the first volume can only be fully understood at the end of the third volume. [Hence], *what one believes to know after reading only the first volume is not only incomplete, but in fact distorted*. [130]

Lenin has previously given us the grueling task of understanding Hegel's *Logic* to understand Marx's *Capital*, now Heinrich adds that one must understand volumes two and three of *Capital* to understand volume one. These tasks, grueling though they may be, imply nothing 'new' or uniquely tedious. What Heinrich is saying is somewhat commonsensical: only in the end can one fully understand the beginning. This is not something necessarily unique to *Capital*. It is common knowledge that, as Schopenhauer said, all good books should be read twice, for "only when we know the end do we really understand the beginning."[131] One could likewise say that your understanding of *Godfather I* is only fully concrete when you finish the trilogy. It is only natural, then, that a complete reading of *Capital* (the three volumes) is the condition for the possibility of a complete reading of the beginning of *Capital* (Vol. I).

Heinrich's statements on the reading of *Capital* themself depict a dialectical truth, namely, that the 'moments' in the unfolding of a totality are enriched as their progenitors actualize themselves in more concrete forms. It isn't simply the case that a study limiting itself to the acorn amputates the possibility of understanding its complete organic process, moreover, the acorn as acorn would itself be incompletely understood. It would be reified and it's understanding merely abstract. Hence, the acorn in itself is better understood in light of its immanent unfolding into the oak tree. To understand price, you need to understand value, but to fully understand value you need to see it in light of its reflection into price. The relationship is reciprocal, each creates the conditions for the other to be understood concretely. The dialectical exposition, then, requires a dialectical reader too. The reader must realize that *repetitio est mater studiorum*, the beginning must be re-read in light of the completion of the text.

However, this implies something Vaziulin (one of the great minds of the tradition of soviet 'creative Marxism') clarifies in his work, namely, one can only use the dialectical method of going from the abstract to the concrete with matured totalities. Vaziulin argues that,

---

130. Heinrich, *An Introduction to the Three Volumes of Karl Marx's Capital*, 9.

131. Arthur Schopenhauer, "On Reading and Books," In *Parega and Paralipomena Short Philosophical Essays Vol. II* (Oxford: Oxford University Press 2000), 559.

The ascent from the abstract to the concrete is not the product of pure thought but a reflection of a real organic whole. The real existence of an organic whole is a necessary prerequisite for the application of the method of ascent from the abstract to the concrete. The application of this method is possible insofar as the internal relationships of an organic whole have been sufficiently developed.[132]

A young totality, in its embryonic stages of development cannot be subjected to this dialectical method of investigation. The concrete which is sought to be replicated in thought is itself not completely concrete yet. This stage requires merely an observational treatment, to have its activities jotted down in bluebooks for those who come later to investigate. As Nikolai Chernychevsky said, history is like a grandmother, "terribly fond of its smallest grandchildren… to latecomers it [gives] not the bones but the marrow."[133] This is true not just for the peoples of the world, but for the interpreters of it too. Capitalism required maturation for Marx to analyze it as a totality, and hence, to treat it with the abstract-concrete dialectical method. History gave Adam Smith the bones and Marx the marrow.[134]

This method stays like an unlocked character in a video game when the totality is still in an infant stage. The abstract-concrete approach of the dialectical method is not something, then, that one 'applies' onto the world. Marx expressed in an 1858 letter to Engels his critique of Ferdinand Lassalle's "silly concoction" in his *Heraclitus* text; because Lassalle attempts to 'apply' dialectics, he argued that

[Lassalle] *will discover to his cost that it is one thing for a critique to take a science to the point at which it admits of a dialectical presentation, and quite another to apply an abstract, ready-made system of logic to vague presentiments of just such a system.*[135]

The dialectical method is not an apriorist 'application' onto the world, instead, it is something that is derived from the world precisely at the specific historical conjunctures where the emerging totality under examination qualitatively leaps into a stage of maturity and its essential characteristics are capable of being grasped, and hence, reflected in the human mind (i.e., subjective dialectics). The dialectical method is not a mantle one puts on the world, but a gift the world affords those industrious and courageous enough to investigate it. As Marx reminds us with the words of Dante, "at the entrance to science, as at the entrance to hell, the demand must be made:

> qui si convien lasciare ogni sospetto
> Ogni viltá convien che qui sia morta"[136]

Conclusion

In sum, the materialist dialectic at the core of the Marxist *weltanschauung* constitutes a unity of a dialectical ontology and epistemology. This unity holds that the world is dominated by change and interconnection, and that if we study the world concretely, we may begin to decipher the forms and structures through which change and interconnection take place. Since "freedom does not consist in an imaginary independence from natural laws, but in the knowledge of these laws and in the possibility which is thus given of systematically making them work towards definite ends," the concretization of our knowledge of the world is simultaneously the expansion of potential human freedom.[137] For this potential freedom to become actual, the 'definite ends' towards which we make these laws work must be crafted *by* the mass of people *for* the mass of people. In so far as development takes place within the constraints of modes of life governed by class antagonisms, this 'potential freedom' will fail to actualize itself in the mass of people. Therefore, as you go through this anthology of classical Marxist texts dealing with the question of dialectical materialism, always recall that Marxism serves as a guide to action, as an outlook which seeks to change (as opposed to merely interpret) the world.

The Contradiction of Exchange and Use Value in American Healthcare

Edward Liger Smith[1]

In *Capital, Volume I*, Karl Marx begins with his analysis of the commodity — a section that has famously perplexed first-time readers.[2] Yet this is the only logical point of departure, as Marx identifies the commodity as the "cell-form" of bourgeois society.[3] From this starting point, he develops his critique dialectically, expanding outward from the commodity to the broader structures of the system — at least as far as he was able before his death. The contradictions and crises that define capitalist society, Marx shows, are best understood through an analysis of commodity production. In that light, the many dysfunctions of the American healthcare system are symptoms of the same foundational logic that governs all of capitalist society.

3. *Ibid*, p. 125.

Every commodity under capitalism can be understood in terms of three distinct but interrelated forms of value: use-value, exchange-value, and value proper. While these terms can initially appear to be confusing, their meanings are crucial to grasping Marx's critique. "Value," in the strict sense, refers to the amount of labor needed to produce a product – that is, the amount of socially necessary labor time needed to create the commodity in the process of production. Exchange-value refers to the amount of money that the commodity can be sold for on the market which is expressed through its price, which can be measured quantitatively. This allows all commodities to be commensurable with one another, meaning they can all be measured through their prices, which roughly correspond to their value. Finally, use-value is the qualitative aspect that cannot be measured numerically. It refers to the utility or usefulness that a buyer gets from the commodity. It is only through possessing use-value that a commodity can be sold at all, yet it is use-value that is most often subordinated under capitalist production.

This contradiction between use-value and exchange-value lies at the heart of countless social ills under capitalism, and perhaps nowhere is it more starkly revealed than in the American healthcare system.

The American healthcare system operates on a for-profit capitalist basis, meaning its primary objective is to generate surplus value and return profit to owners and investors. These profits are distributed among Wall Street shareholders, hospital system executives, doctors who own private practices, and even the highly compensated administrators within the so-called "non-profit" sector. The system as a whole comprises a sprawling network of institutions—including pharmaceutical companies, insurance providers (both private and public), hospital conglomerates, nursing homes, ambulance services, medical equipment and software firms, rehabilitation centers, and more. The goal of these entities is not to provide the best possible care to their communities (that is, to prioritize healthcare as a use-value), but to remain financially solvent and, ultimately, to deliver profit to those who own or control them. This dynamic is not the result of personal greed or the moral failings of the individuals who own healthcare companies — though the logic of capital accumulation may encourage those traits. Rather, it is a structural feature of the system itself: healthcare corporations must generate a profit or they will be driven out of business by rival companies. Healthcare firms are driven by market competition to make as much money as possible and accumulate a financial surplus measured in dollars. Thus, the pursuit of profit, not the well-being of patients, governs the logic of the American healthcare system.

At the heart of capitalism lies a fundamental contradiction between exchange-value and use-value. A society that organizes production around the goal of accumulating exchange-values in the form of profit, surplus, and capital cannot be a society organized around meeting human needs. The capitalist mode of production is, at its core, irrational: it manages production anarchically for the enrichment of those who own capital. This contradiction can be seen most clearly in the American healthcare system. Here, the consequences of subordinating use-value to exchange-value are not abstract — they are painfully concrete, as nearly every American has either experienced the system's cruelty, inefficiency, and exploitation.

The Insurance Industry

Let's begin by dismantling the health insurance industry. These companies operate as mafia-style middlemen with no role in actually administering medical care. Their sole function is to extract monthly payments from working people and then deny or minimize payouts when care is needed. Their business model depends on this contradiction: they profit by charging as much as possible while covering as little as possible. Like every other capitalist enterprise, their goal isn't to ensure public health—it's to generate surplus value.

Bernie Sanders' beloved "Medicare for All" proposal is essentially an effort to nationalize the bulk of the insurance industry — transforming it into a publicly owned, nonprofit system.[4] Unsurprisingly, this was decried by NPR and other bourgeois media outlets as a step toward "socialized medicine," painting it as dangerously radical.[5] Meanwhile, Barack Obama's "Obamacare" was framed as a moderate compromise — a so-called half-measure. But in truth, even Medicare for All falls short of true systemic reform. It attempts to patch up the insurance model without addressing the rest of the for-profit healthcare infrastructure and still leaves room for private insurers to operate. And Obamacare actually traces its origins to a policy blueprint drafted by the

Heritage Foundation — one of the most powerful right-wing think tanks in America, bankrolled heavily by the insurance industry itself.[6]

The lust for surplus value gives rise to an entire ecosystem of swindlers and parasitic middlemen — figures who wedge themselves between buyers and sellers to siphon off profit without adding any real value. These actors inflate prices, distort markets, and commodify essential goods and services. The insurance industry is a textbook example, thriving in the vacuum left by America's nearly fully deregulated, market-driven healthcare system. Even capitalist countries in Europe — and our neighbor to the north — have reined in the parasitic insurance industry through universal healthcare systems that drastically reduce the role of for-profit insurers.[7] This stands in stark contrast to the privatized system that runs rampant in the United States.

The Contradiction of Preventative Care

It is well established in the field of public health that preventative care is one of the most effective strategies for maintaining a healthy population.[8] Regular exercise, a nutritious diet, clean environments, and early detection of illness all significantly reduce the need for expensive medical interventions later on. Yet, within the American healthcare system, the contradiction between use-value and exchange-value once again reveals itself. In a rational system oriented toward human well-being, investments in preventative care would be prioritized. However, under a capitalist system organized around the pursuit of profit, healthcare firms maximize revenue not by keeping people healthy, but by ensuring a steady demand for services. The sicker the population becomes, the greater the profits for hospitals, pharmaceutical companies, and insurance providers. In this way, the commodification of healthcare produces outcomes that are not only irrational, but actively harmful to public health.

A chronically ill patient is a permanent customer—not only for the hospitals and clinics that provide their care, but also for the pharmaceutical companies

that supply their ongoing treatments. It is no coincidence, then, that the prevalence of chronic illness has steadily increased in the United States, even as medical technology has advanced.[9] This is yet another manifestation of the deeper contradiction at the heart of a commodified healthcare system: institutions have little material incentive to foster a healthy population. Instead, their profits depend on the continuous sale of medical services and products. In a system driven by the pursuit of exchange-value rather than human well-being, sickness itself becomes a profitable commodity.

Countries like Cuba, which have made their entire healthcare systems publicly owned and operated, have demonstrated the transformative power of prioritizing preventative care. Through comprehensive community health programs, proactive illness monitoring, widespread public health campaigns promoting nutrition and exercise, and citizen education on hygiene and disease prevention, Cuba has built a model focused on the health needs of the population rather than profit.[10] Despite suffering under a crippling U.S. embargo for over sixty years, Cuba has achieved a lower infant mortality rate than the United States and maintains a comparable life expectancy. The country is internationally recognized for its success in disease management and early prevention efforts.[11] If a small, blockaded island nation can achieve such outcomes by removing the drive for exchange-value from healthcare and focusing solely on use-value for the community, one can only imagine what a country as wealthy as the United States could accomplish under a rational, public-centered system.

The Surgical Industry

Physicians carry with them an air of authority, and most people would probably find it hard to believe that their doctor would suggest a surgery they don't actually need. If you are one of these people, you may be shocked to learn that C-section births are on the rise in the United States, despite the fact that they

are more dangerous for both the mother and the child. Even the World Health Organization, a state arm of the healthcare bourgeoisie, has warned about the unnecessary growth in cesarean deliveries.[12] And everyone within the healthcare industry knows the real reason why: C-section births are more expensive, and they generate more profit for whichever capitalist controls the hospital conducting the delivery—a fact that these institutions often conveniently forget to explain to expecting mothers.

There is even a growing skepticism among doctors, surgeons, and rehabilitation specialists about the validity of labrum surgeries. Many feel that the procedure is often unnecessary, as the prospects for recovery appear to be nearly as high for patients who forgo surgery as for those who undergo it. Increasingly, medical professionals believe that labrum surgeries are being overprescribed in the pursuit of monetary gain — or, as we have described throughout this article, the prioritization of exchange-value and the extraction of surplus value in its monetary form.[13] This example hits close to home for me, as I have seen many people through the sport of wrestling suffer greatly and experience more problems after getting this procedure, while I have also seen multiple people make full recoveries without ever undergoing surgery.

The Pharmaceutical Industry

The pharmaceutical industry is one that makes more money the more medicine you need, and its primary goal at all times is to maximize profit. A 2020 CDC survey found that 49.9% of Americans had taken a prescription drug within the past 30 days, revealing that millions of Americans rely on the pharmaceutical industry on a daily basis.[14] Added to this is the growing rate of diabetes, which can lead to a life-or-death dependence on insulin. The pharmaceutical industry, of course, only benefits from creating lifetime customers, even if it signals that the overall health of the population is steadily deteriorating.

The most glaring example of the pharmaceutical industry's public health failures — and perhaps the greatest failure of the American healthcare system as a whole — is what has become known as the opioid crisis. Opioids are a class of drugs that include both prescription pain relievers like oxycodone and morphine, as well as illegal substances like heroin. They work by binding to opioid receptors in the brain and body, reducing the perception of pain while also producing feelings of euphoria, which makes them highly addictive. Beginning in the late 1990s and continuing for decades afterward, the pharmaceutical industry aggressively promoted the idea that these medicines were a harmless and effective tool for managing pain — perhaps after undergoing an unnecessary procedure like a labrum surgery. Billions of dollars were spent lobbying hospitals to prescribe more opioids, and even more insidiously, lobbying medical schools to indoctrinate young physicians with the belief that prescribing large quantities of opioids was a normal and compassionate part of their job. Pharmaceutical industry think tanks even developed a strategy of smearing those who raised concerns about the addictive nature of opioids, branding them as "opiophobic" and accusing them of being indifferent to patient suffering.[15]

While opioids can have some medical value in small doses, extended use of large quantities will almost always lead to addiction and a multitude of negative consequences. The stories are endless of Americans who got hooked on oxycodone after a surgery and literally ended up homeless and on heroin after they ran out of money to continue buying their prescriptions from walgreens. Today the crisis of opioid abuse is responsible for an estimated 800,000 deaths at least, and 80,000 Americans continue to die every year from fentanyl use.[16] Lawsuits against the companies involved have forced them to pay millions in settlements, an infinitesimal fraction of the money they made from selling these drugs, and all the top people involved have been allowed to continue working in pharmaceuticals, albeit often under a new name. A sudden clampdown on opioids has also made the situation worse in many ways, as so many Americans are already addicted, and often turn to street drugs when their medical supply runs dry.

---

15. Nora D. Volkow and Francis S. Collins, "The Role of Science in Addressing the Opioid Crisis," *The New England Journal of Medicine* 377(1) (2017): https://pubmed.ncbi.nlm.nih.gov/32661741/.

16. USAFacts Team, "Who Is Overdosing on Fentanyl?" *USAFacts* (May 29, 2024): https://usafacts.org/articles/who-is-overdosing-on-fentanyl/

Opioid commodities were a win-win for the pharmaceutical industry. Their exchange value was exceptionally high, and one of their use-values — at least from the perspective of capital—was their ability to create lifetime customers. For the vast majority of the population, however, it has been a lose-lose situation. But then again, the system was never designed to serve them in the first place. At least we can pop a hydrocodone and, for a little while, forget that we live in a society where the ruling class profits from poisoning us.

Holistic Medicine

So-called holistic medicine refers to medical practices that often originate from the East, such as acupuncture, traditional Chinese medicine, and meditation.[17] There is abundant evidence demonstrating that acupuncture, in particular, offers a wide range of health benefits, especially in the treatment of chronic pain, while many traditional Chinese herbal remedies have also been shown to improve health with minimal or no side effects.[18] This stands in stark contrast to most American pharmaceutical medications, where the majority of a full-length commercial is often spent listing the drug's numerous and severe side effects.

Despite the proven benefits of Holistic or Eastern Medicine, it is rarely covered comprehensively by insurance plans in the United States. The reason is simple: the same financial interests control all sectors of the healthcare system. The people who own shares in the insurance industry are often the same people who own shares in the pharmaceutical companies, the hospital systems, and so on. All of these institutions share a vested interest in sidelining holistic medicine to preserve the chronic care model—a model that creates endless customers and generates unlimited profits. Eastern medicine is relatively cheap to administer and emphasizes preventative care and the maintenance of long-term healthy lifestyles. This approach is not conducive to a business model that relies on populations dependent on daily pharmaceutical drugs and frequent doctor visits. Holistic medicine threatens the extraction of surplus value from the sick and vulnerable, and thus it is routinely smeared as quackery by the institutions that profit from the status quo.

Yet despite these efforts, holistic medicine has persisted and even grown in the U.S., precisely because of the use-value it offers to those seeking genuine health and wellness. Naturally, its growth has also attracted a number of scam artists, whose predatory practices unfortunately lend credibility to the attacks against holistic medicine. Nevertheless, a rational healthcare system would integrate the best of Traditional Eastern Medicine with modern scientific practices, emphasizing treatments that achieve the best public health outcomes. This is precisely the goal that Xi Jinping outlines in *The Governance of China*, where he describes China's efforts to integrate traditional and modern medicine in order to better serve the health of the people.[19]

My Struggle with Lyme Disease

The reason I write so much about the American healthcare system is because I have a personal vendetta against it. When I was five years old, I was bitten by a deer tick during a camping trip and soon developed what's known as a "bullseye rash" — a tell-tale sign of Lyme disease. The side effects of the disease included fatigue, Bell's palsy, a random tingling sensation on the skin that felt like raindrops, joint pain, headaches, fever, chills, and swollen lymph nodes. The most common treatments for Lyme disease are doxycycline and amoxicillin; I was prescribed the latter. At first, it worked. But like a growing number of Lyme patients, my symptoms returned a few months later — including the most inexplicable and haunting ones, like the sensation of rain on my skin even while indoors.

Over many years of hardship with the medical system, I came to learn that there is a deep divide within the medical community over the existence of chronic Lyme disease. At its core, the conflict stems from the fact that many Western medical professionals and institutions deny chronic Lyme's existence, largely because they are unable to treat it successfully. Again and again throughout my childhood, I discovered that acupuncture and other holistic treatments consistently produced better health outcomes for me than anything the mainstream medical system could offer. This experience is not unique to me — it is a common story among chronic Lyme patients, and increasingly, among Lyme patients in general.[20]

---

19. Xi Jinping, *The Governance of China* (Beijing: Foreign Languages Press, 2014).

20. Edward Liger Smith, "Chronic Lyme Disease: Misdiagnosis and Treatment," Midwestern Marx (April 26, 2022): https://www.midwesternmarx.com/articles/chronic-lyme-disease-misdiagnosis-and-treatment-by-edward-liger-smith

In short, the for-profit healthcare industry cannot treat Lyme disease as effectively as holistic medicine, so many arrogant professionals simply argue that it does not exist. This is a perfect example of the broader approach these institutions take toward medicine and public health. If an ailment that afflicts hundreds of thousands of Americans cannot be easily treated with a pill or surgery, then in the eyes of the medical establishment, it effectively does not exist. Their priority is profit, and anything that does not contribute to that profit is dismissed or ignored. Even if individual physicians do not personally believe this, it is the ideology they are systematically indoctrinated into through years of medical education — education that is heavily funded by for-profit healthcare corporations.

Conclusion

Marx explained that capitalism represents commodity production in its most highly developed form. Under capitalism, everything in life is transformed into a commodity, and every sphere of existence becomes a means of generating profit. It is precisely this kind of degeneration that the story of Jesus driving the moneylenders from the temple warns against: the corruption that occurs when what is sacred is reduced to a mere tool for personal enrichment.

The healthcare system in America has become little more than a means for personal enrichment. Positive health outcomes, when they occur, are largely accidental byproducts of general technological progress — not the result of any effort by those who sit atop the healthcare industry extracting surplus value from below. Healthcare today is a commodity, and the contradiction between exchange-value and use-value manifests itself in every direction. Childbirth has become a way to extort burgeoning families for thousands of dollars. Injured people stumble away from ambulances in terror of the bills they will face. Car accident victims suffering from concussions are asked which local hospital is ”in-network” before they can receive care. This so-called healthcare system is a parasitic, money-sucking scheme, robbing people blind — or worse, hooking them on pills—at their most vulnerable moments.

Only capitalism could create such a perverse system, and only socialism can bring it to an end. The American Communist Party, like the traditional Communist parties before us, seeks to build a robust healthcare system that prioritizes public health and preventative care. We envision a system that

administers healthcare with a focus on its use-value for the population, not one obsessed with its exchange-value or the amount of surplus value it can extract.

A more irrational system than this could scarcely be imagined. Yet a massive barrier stands in the way of changing it: capitalism itself, and the capitalist ruling class that has captured the American state and largely controls its healthcare institutions, including the National Institutes of Health and the World Health Organization. The only force capable of remedying this situation is the American working class, which holds the power to overthrow the dictatorship of capital through political struggle.

The American Communist Party seeks to be the vehicle for the working class, and our policy program includes a clear and expansive plan for transforming healthcare into a system that truly serves the public. Profit should have no place in healthcare — whatsoever. While policies like Medicare for All aim to nationalize the insurance industry, we seek to nationalize the entire system. No longer will they be allowed to profit off our grandparents' strokes or our children’s chronic illnesses. No longer will they trap working people who suffer injuries on the job into a lifetime of opioid addiction. Their system is crumbling, and we will be the force that breaks it and builds it anew in a sublated form — a form of society that works for itself, not for those who happen to own the land, the banks, the means of production, or the healthcare infrastructure.

A new world is possible, and the American Communist Party is leading the charge to fight for it!

Race and the American National Question

Haz Al-Din[1]

Race Vs. Nationality

The peculiar category of ‘race,' which acquires a pronounced significance in the United States of America, is overall a geographic and continental category of population.

When one speaks of “race,” it is not necessary to think in grand, metaphysical terms - or, in the case of the various pseudointellectual and pseudoscientific racialists, something biological. It suffices only to familiarize oneself with the colloquial historical use of the word ‘race,’ which is often far less metaphysically loaded.

A ‘race’ of people broadly refers to a multitude of different groups united by certain common characteristics. But in contrast to nations and civilizations, or other unifying principles of mankind - “race” is a passive principle. It is what Hegel would regard as an inferior or false universality. Not a dialectical unity of universal and particular, but merely common qualities across the particular.

---

1. Haz Al-Din is the Executive Chairman of the American Communist Party. He is a political theorist and thought-leader for the Infrared Media Collective.

These qualities do not themselves shape the particular or exert any influence upon it - they are purely passive, accidental characteristics which are determined passively, in a ‘one sided’ way. By contrast - for Hegel, a true dialectical universality itself shares identity with the particular, itself exerting causal and definitive influence (thus, for Hegel, ‘the Rose is Red’ means that Roses *literally are* the color Red, rather than redness being a mere attribute).

“Racial” qualities are not rooted in religion, politics, or ideology, or any other unifying principle of existence - but in shared characteristics (including physical) that are a consequence of shared geographic and civilizational (exchange, diplomacy, conflict, etc.) proximity. Passive proximity is thus the essence of “race” and the realities of “race.”

The notion of a political project or ideology founded upon “race” is therefore nonsense. To elevate race into a national principle is likewise an absurdity - for as per Stalin's definition of a nation, nations are not merely defined by passive proximity, but an actively shared social, cultural, historical and economic reality reflected in shared political traditions of revolution and struggle.

“Races,” by contrast, are not defined by any *actively* common existence, but rather those common qualities which are merely the consequence of shared geographic proximity. National principles unify people on a much more profound level - actively giving expression to a shared historical existence.

It is for this reason that the national principle acquires its most developed form in the French revolution, which establishes a universal state founded upon complete equality before the law. The various masses suspended in struggle, compelled by the fight for liberty, equality and fraternity acquire then a shared horizon of national existence.

While nations exist objectively and are not determined by politics, politics still plays a fundamental role in giving expression to the national form - and the modern, universal form of state (or the struggle for one thereof) is precisely an indispensable condition for national principles to acquire reality.

One might, in contesting this distinction between nation and race - point to the example of how before the French revolution, there was no uniform or homogenous “French people,” but rather a people divided ethnically. Were the French, then, merely a “race” of people who possessed only a passive common existence - until the subjective element introduced an active, national principle?

The various ‘decolonial’ Marxists in the USA argue that the United States is not a real nation, due to ethnic inequalities. Yet France was neither a homogenous nation nor likely will never become one. Various inequalities across different gentile, tribal, ethnic, religious, etc. historical minorities likely persist even to this day.

Does this justify various forms of separatism - for Bretons, etc. Even within a nation as Homogenous as France?

The truth is, is that there has never been an “ideal” homogenous nation in history. All nations are replete with “ethnic” and “national” forms of inequality which are vestiges of various premodern “gentile” “caste” and “tribal” hierarchies - inequalities which modern capitalism has never proven capable of eliminating even in the most democratic of universal republics.

The various factors which determine the inequalities within modern capitalist society are precisely accidental and passive factors that are devoid of historical meaningfulness. The truism of Marxism is precisely that the only true, active historical cause lies in the shared destiny of the proletarian class. That is why the proletarian class is the greatest force capable of unifying nations and peoples, in spite of all feudal, pre-capitalist vestiges.

One may make reference to Lenin's national question in the case of the Russian Empire. A few silly “Marxists” have attempted to liken these circumstances to today's United States. The fundamental difference, of course, lies in the fact that questions of shared language and independent, shared historical existence remained dire for the various other groups in the Russian Empire - whose own historical struggles had not yet been fully united with the predominantly Russian forces leading the Russian Revolution.

In various regions of the Russian Empire, bourgeois nationalists attempted to foment separatism and alienate the non-Russian masses from the Russian revolution. Thus, Lenin's application of the national question principally served to combat bourgeois nationalism, and elevate the forces aligned with the Russian proletariat and peasantry to leadership within regions of the then former empire.

It served to squash the pretext for separatism, by demonstrating that the Soviet state would be founded on historically inclusive principles, incorporating the diverse histories and languages of various peoples.

Moreover, Lenin's application of the national question in practice is far from infallible or applicable to all circumstances. The development of the Leninist national question under Stalin, and later in China under Mao demonstrate that clearly.

This argument regarding France, further, neglects that the French people had already been united by a common state tradition and authority in the form of the absolute monarchy. This therefore gave them an active, common historical existence rather than a merely passive one. The French revolution did not "create" the French nation, but revealed its existence, since the revolution had principally objective rather than subjective causes.

The modern, universal state is what gives the various accidental circumstances of shared existence, proximity, etc. national determination, but only insofar as it is bounded up and rooted in a particular, shared historical existence - one that itself is proven in the course of revolution and struggle itself.

Geographic Proximity

The shared characteristics of a people within geographic proximity also reflect thousands of years of warfare, conflict, trade, etc. - and even a more ancient locus of the dispersion of a population, language group with shared origins (i.e. the Gaelic peoples). Yet since all mankind shares origins at some point, this can be defined rather arbitrarily.

If the crusades, for example, had lasted longer, and the conflict between European and Arabs were further prolonged, they would, as a consequence of an increased proximity, eventually have merged into a single "race." Modern race theorists would then exaggerate common "Caucasian" origins between them.

It is precisely thanks to the fact that Arabs and Europeans did not fight each other all that often, that they now belong to separate "races" of mankind.

There is nothing extraordinary about the fact that human populations clustered more closely together are similar. And between "races" there is almost always intermediary populations that live in intermediate geographic spaces (South Europeans, East Africans, etc.).

“Race” is a purely passive and inadvertent principle - the inadvertent shared qualities that are a result of groups clustering in geographic proximity. It is not an active principle of history or existence.

The notion of race acquires a more pronounced significance as a consequence of modernity.

Populations that formed in relative isolation for thousands of years were suddenly and rapidly brought into contact. Their differences became immediately pronounced.

Global-scale maritime colonialism also led European populations to very suddenly settle on lands they had no geographic connection with.

Maritime trade routes and networks allowed “artificial” populations to subsist in lands and extract their natural wealth, without actually adapting to them geographically and civilizationally.

Thanks to advances in maritime technology and trade networks, they could still belong to a “European race” without having to actually live in Europe.

Maritime Commercial Empire

However, the actual forces of production remain rooted in land and geographic integration, not maritime commerce.

Maritime commerce accelerates the flow of goods and information. But it principally increases the interconnectivity between things and not people.

The actual production of goods - and information itself - still remains rooted in the realities of people - and their culture, habits, ways of life, and labor - united by geographic proximity.

Maritime empires are empires of “alienation.” They alienate and extract the products of civilization for a global scale accumulation for the sake of accumulation itself.

These are empires of property and not people. Their dominion is principally commodities and things.

This is why the British Empire, the ultimate maritime empire, often didn't even try to change local laws that governed people. They didn't really see governing people as their business.

It’s also not a coincidence the British Empire helped invent racism - turning human beings into objects and “animal breeds” to be classified abstractly. A development, of course, inexorably tied to the rise of chattel slavery.

This was an Empire of pure capitalist alienation, at war with human existence itself.

America - Capital of Racism

In some North American colonies, European settlers started to become more closely tied to the land than rooted in Britain's maritime empire.

These were the yeomen, small subsistence farmers, and the growth of an American manufacturing class.

They began to resent the British Empire for its excessive taxation and general parasitism.

They were part of the “European race,” but rebelled against the very thing maintaining this racial status.

The institution of chattel slavery, for example, always depended upon Britain's maritime empire. This subsisted up to the US civil war, where it was sustained by the export of cheap cotton to Europe - at the expense of US industry itself.

Americans, from the beginning, dreamed of building a new civilization founded on a principle totally independent of Europe.

Was it insanity?

What followed is America's awkward national existence.

Groups of people brought together solely by colonialism and slavery, otherwise separated by millennia. Very clearly distinct “races.”

That's why America is the world capital of racism. Nations usually emerge as subdivisions of races and regions (i.e. France in Europe).

In America, the various peoples do not even share the accidental shared physical characteristics of prolonged geographic proximity.

In America, a national principle struggles to be born - that must unify peoples descended from entirely distinct continental 'races' of mankind. There is no precedent for that in world history.

Yet the institutions of “racial exclusion” in America were never viable in the long term - they were propped up solely by the continued dependence on maritime global trade (Southern export of cotton to Europe).

Yet the more American becomes industrially autarkic, the more the institutions of racial exclusion start to lose their material basis - the more racism actually becomes an ancillary detail in a class war that objectively transcends race.

A distinct “white race” depends upon maintaining separation within land inhabited by non-European groups. This separation can only be maintained by a flow of capital, resources and wealth *outside the land*.

Shared dependency on shared land, industry and wealth inevitably creates coexistence and fusion.

The entire premise of America as a distinct and independent nation is founded upon this shared dependency. Without it, there is no USA at all - only a variation of the British Empire.

In the early 20th century, the US began to merge with the British Empire. And today, it has evolved into its successor.

America - Capital of Anti-Racism

Now the maritime empire has evolved into its final form: The world-wide internet, planetary telecommunications and the information age itself.

American culture today is mainly based on mass media and social media. The empire of alienation has now reached its limit, transcending physical space itself.

It is precisely for this reason that the realities of physical production, geopolitics and nature (ecology) have become all the more pronounced and evident. Now they are clearly distinct.

The realities of the physical world, geography and of production - which actually unite a peoples existence - haven't been transcended. They remain.

America is now at a crossroads - taking responsibility for its geographic, natural, industrial, and continental realities - or continuing to dwell in the fake Hollywood empire of lies.

The British Empire was an “empire of alienation” only in the periphery. In the core, Britain still retained a “normal” national and “racial” existence (with the notable exception of the Irish struggle).

By contrast, the USA is both a nation and empire founded upon alienation.

The American people are alienated from their own physical reality. Even racially.

What unites black, white, brown, yellow and red in America?

Self-depreciating mockery of race itself. American super-racism creates its opposite, a type of unique anti-racism: Where all Americans retain a comical, self-aware distance from their 'race' itself.

Americans appear “alienated” from their “race” itself. European racists had a snobbish sense of superiority.

American white racists are mainly just certain of others “inferiority” - their own superiority seems undecided. The European snobbishness is un-American.

Deep down, Americans are racist toward all races, including the white race, and therefore invented the ultimate anti-racism.

Some theorize that in America, the various “races” represent distinct nations. The more inconvenient truth is that America is a nation based purely on alienation from “race” itself.

And either America is totally fake and artificial - in which case, different “racial” groups should simply return to their “native” continents - or, there is

reality to the fantastical glimmer of hope that has always taken possession of the minds and dreams of Americans - that despite the total alienation of maritime capitalist modernity, some form of humanity itself can be redeemed and salvaged at the end of it all.

This is not simply a return to the past but is a consequence of embracing an unforeseen future.

This is the entire purport of Marxism and Communism. That is why America's destiny is bound up with Communism.

The construction of a Republic of *labor*, of an authentic shared national existence based on a shared integration of labor, production and life.

Ending the parasitism of the dollar on the world, and digging one's heels into the land, becoming relatively autarkic industrially and civilizationally. Rediscovering the very premises upon which peoples are born, premises that otherwise take millennia of development to appear.

In America's (thus far dwindling) multi-racial blue collar working class and farmers, united by shared conditions of production, culture and life, we find the basis of a racially united America.

Can a new Communist future wipe out the wages of the past?

The existence of America as a nation itself depends upon it.

Then, generations into the future of a common reality of land-based production, there will be one shared American race, with different ethnic subdivisions, and cultures all united by one continental and civilizational existence.

The very premises of "race" will have been re-founded anew. The debts of the past wiped out by the shared living principle of labor and production.

The Continuation of Class Struggle by Other Means: Part one —What Causes War?

Alan Freeman[1]

Since the birth of capitalism, whether we date it from the Columbian conquest, from the political revolutions of the eighteenth century, or from the industrial revolutions of the nineteenth, war kills ever more people.[2] According to the most authoritative figures available, the first World War cost over 13 million battlefield deaths and the second, nearly 20 million.[3] If civilians are included, these wars alone killed or maimed up to 100 million human beings.

---

1. Alan Freeman is a former principal economist with the Greater London Authority and is now a research affiliate of the University of Manitoba. With Radhika Desai, he is co-director of the Geopolitical Economy Research Group. He is also co-editor of the Future of World Capitalism book series with Pluto Books, and the Geopolitical Economy book series with Manchester University Press He is a committee member of the Association for Heterodox Economics (www.hetecon.net) and a vice-chair of the World Association for Political Economy. He is a

The 'he made me do it' argument, though regularly repurposed, currently in Gaza, isn't worth wasting paper on. Wars arise from conflicting interests, not conduct. However, the second claim is shored up by a genuine fact: since 1945 there have been no major military conflicts between the so-called Great Powers. Capitalism's supporters claim that this is because the USA destroyed the Axis Powers, knocked sense into the warlike Europeans, and ushered in a new phase of peaceful capitalist development called 'Pax Americana'.[5]

However, there is an alternative explanation: after the revolutions which created the USSR in 1917 and the People's Republic of China in 1949, US leaders became convinced that the Great Powers, their own country included, faced existential threats of revolution, military defeat, or both, unless they

stopped fighting each other. These leaders then built an alliance to hold back communism while making war on the remaining four fifths of the world as aggressively as ever, in return for appointing the USA world banker and alliance bailiff.

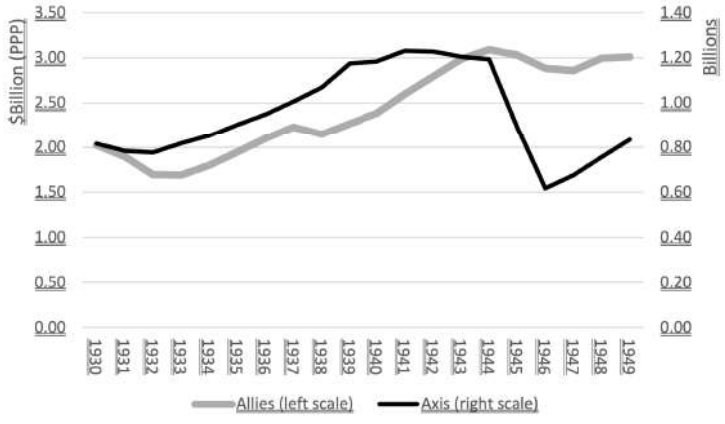

Figure 2: GDP of the major war powers

Source: Maddison Data Project[6]

The function of science is to judge theories in the light of facts, so let's start by asking if it's true that war is too costly. Actually, figure 1 shows, war is the most profitable thing a capitalist nation can do. Between the onset of war preparation in 1938 and 1944, US GDP rose at an average of 10% per year. In contrast, between the crash of 1929 and 1938, it hardly rose at all. Indeed it was arguably the war, not the New Deal, that got the USA out of the Great Depression.[7]

What is unprofitable is *defeat*, as figure 2 shows. The only mystery is why capitalists are willing to risk it. This mystery vanishes once we recognise war as just a form of competition. In competition there are winners and losers, so for the capitalists, it's just another gamble. War, therefore, is just the highest form of capitalist competition. Workers, however, don't just lose money; they lose their lives. It follows that they comprise the only force that can finally put an end to war, because they are the only class with an interest in doing so.

7. Freeman, A. 2022c. Theses on the warfare state: new data on the profit rate, causes of the present crisis, and Marx's Theory of Value. https://www.academia.edu/74615059/Theses_on_the_warfare_state_new_data_on_the_profit_rate_causes_of_the_present_crisis_and_Marxs_Theory_of_Value

Pax Americana and the True Cause of Peace

Another fact contradicts the Pax Americana claim; though eighty years have passed without another war between the 'Great Powers', the picture changes once we look at the rest of the world. The USA has been at war for all but fifteen years since 1776, involving 104 countries including itself, and has stationed troops in every country in the world except Lichtenstein, Bhutan and Andorra.[8] This did not stop in 1945; it got worse, with major wars in Korea, Indochina, Afghanistan, and Iraq, and countless 'minor' invasions; it has garrisons in more countries than anyone else in history.

Nor are the Europeans any better: the colonial legacy of the Spanish, French, British, Dutch, Germans, Portuguese and Belgians are bywords for barbarity, the only exceptions arising from military ineptitude, in which respect Europe is only now approaching the high bar set by Italy.

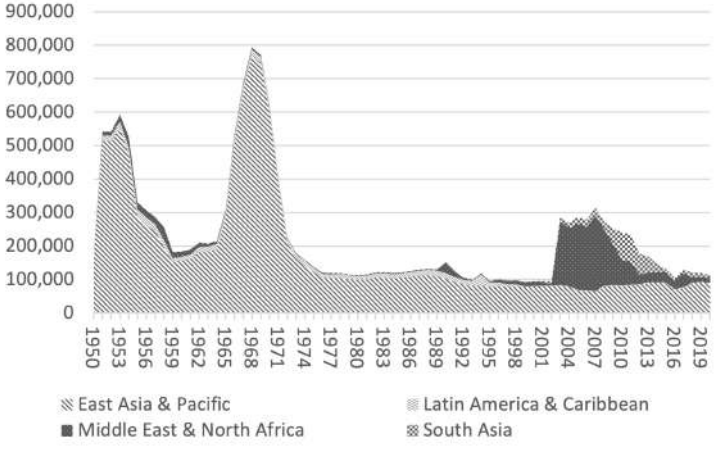

Figure 3: US troop deployments (total) abroad since 1950

Source: Allen et al. 2020. Congressional Research Service report RL30172

Finally, the Pax Americana narrative runs up against another fact: neither the postwar political system nor its world economic order is uniquely capitalist.

Both arose from a compromise between the US, the UK and the USSR and China.

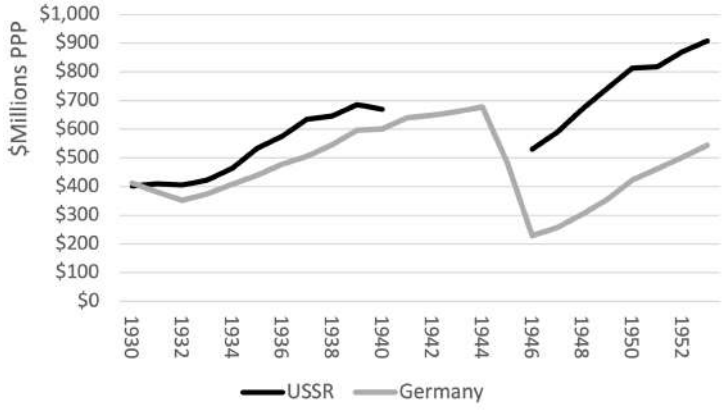

Figure 4: GDP of USSR and Germany since 1930

Source: Maddison Data Project[9]

Figure 4 illustrates the most fundamental outcome of World War 2: Germany, Europe's dominant capitalist power, was displaced not by another capitalist country but by a non-capitalist one: the USSR. This strongly reenforces my principal claim: peace arises from the effect of war on workers. When radicalised by the sacrifices war imposes on them, they become an existential threat to capitalist states. The peace of 1945 arose not from capitalism but the threat of revolution. What made the Great Powers give in to it was neither capitalism's economic achievements, nor the USA's astute world leadership, but the tremendous sacrifices of the peoples of the USSR and China.

Imperialist War: A Military Battle for the Labour of Others

For the above reasons, the term 'Class Struggle' in our title, refers to two aspects of a single unity: the competitive struggle of capitalist nations against each other, and the anti-capitalist struggle of their propertyless peoples which, in wartime, becomes a battle for survival. This multifaceted struggle takes a different form in each specific war and each specific country, but certain basic features apply in every case. Not least, workers go into battle and die while capitalists stay at home and make money. This makes war a crucible of class

9. Bolt, J., R. Inklaar, H. de Jong and J. Luiten van Zanden, 2018. *The Maddison Project Database.*

consciousness: it drives the victims to all the radical conclusions which the capitalists blame on extremists.

The mystery of capitalist war thus begins to clear once we recognise it as a form of competition. But what *is* competition? As Marx tells us, it is a struggle over the distribution of the fruits of labour. Why should this provoke war? Because the capitalists of the 'Great Powers' do not merely make profits from their own workers, but from the value produced by the workers of other nations, as explained in the theses on the Eastern Question adopted by the Third Congress of the Communist International, drafted by Indian Communist M. N. Roy:

> As a result of the War, the world finds itself divided today into two great colonial empires…The United States of America endeavours to assume supreme and exclusive **right of exploiting** and ruling the entire New World, while Great Britain has annexed to its empire practically the entire continents of Asia and Africa … [T]he **destruction of its monopolist right of exploitation** in the vast Eastern colonial empire is a vital factor in the final and successful overthrow of the capitalist order.[10]

This 1920 description of reality provides a theoretical question at the heart of deciding what to do in 2025: which nations exercise Roy's right of monopolist exploitation? As the very word 'monopolist' tells us, there are not many of them. A small group has jealously and fiercely clung, at great cost to those who dare to resist, to the exclusive right to exploit the labour of other nations.

They used to call themselves the Great Powers or sometimes the 'Civilised' nations. Their opponents once called them the colonial powers but by the turn of the 19th Century both the socialists and the once-influential anti-imperialist League, founded in 1897 to stop the US expanding into the Philippines, called them the imperialist powers. Nowadays they have nicer names: the collective West, the global North, the first world, or even the 'advanced' nations.

Because of their origin in the conquest, I call these the *Columbian* nations.[11] Together they constructed the imperialist system, concentrating power in the

hands of a disintegrating club that reigns over no more than a fifth of the world's population.[12] It consists of the European heartlands, the settler colonies, the USA and Japan. Its composition has hardly changed since King Edward ruled the British Empire: South Korea and possibly Singapore have been added, one-time claimants such as Argentina have been firmly put in their third-world place, and that's it. As Russian and Chinese leaders insist this system, far from disappearing as Western intellectuals predicted, has merely mutated: in its economic essence and its disastrous human effects, it is the same.[13]

These facts are obscured in western literature,[14] which systematically ignores the underlying class relations between nations. Sadly, its ideas dominate the liberal left and far too much of the Marxist left. Take, for example, the claim that China or Russia is imperialist. When scrutinised, this amounts to little more than saying they are big, and they defend themselves from existential threats. Such Columbian narratives miss the key point: an imperialist power owes its prosperity to the labour of those living outside it. The sheer scale of this robbery explains its role in war: the average GDP of the global North, by 2000, was twenty times greater than in the rest of the world excepting China. As a consequence, imperial capitalists can squeeze 5-10 times more profit from foreign workers than from their own.[15]

Imperialist competition is thus a fight *between national capitals for a share of the labour of other nations*. The Western Left's ideological weaknesses almost all originate in denials of this fact; for example, the idea that class struggle consists only of a battle between the workers and capitalists of a single nation,

14. The word 'liberal' is often bandied around as a term of abuse. In this article it has the precise meaning which Losurdo (2011, 2020) masterfully dissects: the philosophy, which forms the bedrock of modern capitalist political thinking, that identifies freedom with private property. This is also far from the way the modern right use it.

15. Freeman, A. 2023a. The Geopolitical Economy of International Inequality', *Development and Change*, Volume55, Issue 1, Pages 3-37. 23 January 2024. Accessible via https://onlinelibrary.wiley.com/doi/10.1111/dech.12812.

or the illusion, articulated by ‘Political Marxism’ that capitalism evolved, and now sustains itself in the heartlands, independently of their relation to the Third World.[16] Until and unless such weaknesses are overcome, there can be no prospect of building a left, in the Collective West, adequate to the tasks that confront it.

Not surprisingly, since its profits swamp all other, imperial capital dominated those countries which pioneered it, giving rise to specific types of state, dedicated to creating, defending and exploiting the monopolies over resources, markets, and technologies on which imperial superprofits depend. Such states compete with each other for ‘spheres of influence’: just as capitals within a single nation act as a ‘band of brothers’ to protect their share of nationally produced value while competing for a share of it, the imperialist states combine forces to protect their superprofit but battle each other for a share of it. They make war on the nations where the creators of this profit live, and on each other over the right to exploit them.

This is the cause of war.

Whilst the workers’ movement was host to seminal debates on the nature of imperialism which should on no account be ignored or discounted, the left should be wary of the theoretical disputes about the ‘true’ definition of imperialism—whether its essence is the export of capital as Lenin emphasises, or the thirst for foreign markets as Luxemburg suggests. Roy’s description transcended these; it synthesised a decade of intense discussion and was adopted by the Communist movement in one of its most significant conferences. It defines an imperialist nation as one whose primary source of profit is the lifeblood of foreign labour.

I would controversially therefore argue that it is as irresponsible to treat Lenin, Luxemburg or Bukharin as rival sources of authority for defining imperialism, and especially for branding Russia, China, or even Brazil as ‘imperialist’ or ‘sub-imperialist’.[17] Roy’s predecessors did not dispute that their nations exploited the labour of the colonial world: all they wanted to understand is how it was done. The *mechanism* of imperialism, which has evolved and constantly changed arguably since 1492, does not furnish us with a *definition.*

17. See Bond et al. (2018_, for a presentation of the claim and Clarke 2023) for a response.

Whose labour creates the profits of Russia's, China's or Brazil's capitalists? Russian, Chinese and Brazilian workers. To the extent that Russian, Chinese and Brazilian capitalists retain political rights over the value thus created, there will be a class struggle within these nations over what happens to this value. The decision is the job of these nations, and nobody else's, least of all the military machines of the Columbian nations. Those who live off another nation's labour have no right to tell that nation how to govern itself.

A variant of the self-same problem arises from the protagonists of the Clinton-era cult of 'globalisation', who treat the world as if it were a nation and forget the role of plunder in enrichment.[18] Sadly, this includes those Western socialists who forget, ignore or indignantly deny, the source of the exorbitant profits of their capitalists: this leads to the racist conclusion that their lifestyle is due to the historically advanced state of their civilization.

These problems are most evident in the politics of the Columbian nations, which we will study at greater length in part two of this article. The relative well-being of the peoples of the West has combined with a century of miseducation to create an ideology that dominate self-proclaimed 'left' or liberal mass parties. These betray their heritage by mobilising their supporters to kill workers in other lands instead of fighting the oppression that their governments inflict on these workers.[19]

To overcome this miseducation, history is more useful than doctrine. Though the essence of imperialism remains, it has evolved different *forms* of imperialist superprofit and created different states, corresponding to these forms, to extract it. The first and crudest such form was the direct exploitation of labor in conquered lands. Starting with Columbus's enslavement and extermination of the Taino people, this culminated in the Silver Mines of Potosí, which financed the rise of European capitalism.[20] By 1600 the fourth largest city in Christendom, Potosí employed at its height 160,000 people—one quarter the working class of Europe—who were simply captured and worked to death.

Such direct semi-slavery, restricted to literally digging money out of the ground, financed the launch of capitalism. However, its Spanish and Portuguese

pioneers lost out to those nations that organized their colonies to supply not just money but the whole range of primary goods on which capitalist industry, and society, depended—of which cotton, on which the Industrial Revolution depended from the get-go, was as central to Manchester as it was to the Antebellum South, and as Marx noted in his writings on the US Civil War, created a completely symbiotic relation between the two.

This form of extraction was pioneered by the Dutch, the French, and above all the British in India where it reached its most complete form. The claim that it laid the foundations of industrialization in otherwise backward lands is a complete myth.[21] India was *deindustrialized* by the British[22] who reduced it to the classical colonial status of a provider of raw materials and primary products:

> In 1750, China and India together accounted for almost 57 percent of world manufacturing output, while India itself accounted for almost a quarter. By 1800, India's world share had already eroded to less than a fifth, by 1860 to less than a tenth, and by 1880 to less than 3 percent.[23]

The British Raj perfected a new system: the direct management of production to service the needs of the occupier. Shorn of the right to create its own industry and feed its own people, the colonial state exported raw materials to British industry and foodstuffs for its labour force.

This became the model for all the Great Powers except the USA, which pioneered, in Latin America, the still more superior model of economic colonialism. This model delegated formal rule to independent governments such as the 'Banana Republics' of Central America but tyrannized them into acting as simple agents of the capitalists of the colonial power.

The economic power which the USA acquired, by financing two world wars, allowed it to coerce its European rivals into conceding formal independence to movements of liberation pushed forward by the Russian and then the Chinese revolution. This was a huge advance for the peoples of these oppressed nations, but the battle was not over. Essentially, colonial liberation took two paths.

23. Clingingsmith, D. and J. G. Williamson. n.d. 'India's Deindustrialization in the 18th and 19th Centuries'. London School of Economics

Those nations which took the communist road created a secure basis to recover their economic sovereignty; those which did not, to varying degrees, exchanged political freedom for economic slavery.

Political colonialism then mutated into economic colonialism or neocolonialism as it was described by its opponents. The great confusion this created arose because superprofit was no longer extracted by the direct political colonisers, but by through the world market, as organised by the Columbian nations under US leadership. The mechanism is straightforward: trade does not equalise but creates winners and losers.[24] The winners are those with the highest productivity, who in one hour can produce what takes twenty hours in their former colonies. Productivity differentials do not even out, contrary to a mass of apologetic literature.[25] The Columbian nations invest their surplus profits in research and military suppression, to maintain a permanent monopoly of ever-more advanced technology.

The world market thus does the exact opposite of what the apostles of Clinton-style 'free trade' claim. Actually, it is anything but free; it is not a vehicle for distributing the fruits of world labour equitably, but a sophisticated system for preventing the poorer nations using their states to protect their economies.

The Columbian World Order

For all the above reasons, I describe the ideology of this system as 'Columbianism'; this better describes what used to be called 'Eurocentrism'. It cements the alliance of the USA, Western Europe, Japan, South Korea and the settler colonies who, forced by the risk of Communism to give up trying to destroy each other, were coerced by their financier-bailiff into cooperating to suppress the economic sovereignty of the global South, but compete by other means for the superprofits produced by its workers and poor peasants.

This system is now decomposing from its own internal weakness.[26] This is welcome, but it also has its dangers, generating rogue militarism and ever more

frenzied attacks on workers, as the imperialist powers strive to make up for what they have lost as economic domination slips from their grasp. It also generates confusion as the ‘common-sense’ ideas of Columbian ideology lose their connection with reality. So-called ‘left’ parties are the most rabidly warlike while new right-wing forces present uncharacteristic challenges to the military aspirations of the Columbian nations, unfortunately more often than not as precursors to prostration before imperialist masters they briefly defied.

The confusion arises because national states both mediate between classes, and act as instruments of the class that dominates them. We must therefore ask how the economic circumstances of classes drive their political behaviour. Much is written about this but unfortunately not all of it is useful; as a shortcut, I offer the loose idea of the ‘genetic disposition’ of a class, by which I mean those ways of behaving that are passed from generation to generation as a result of the way its members are driven to live, that is, by the way they get their livelihood.

Thus, the capitalist class is competitive by virtue of the way it perpetuates itself. An individual capitalist may be a great philanthropist, but his kind will die out, because to the extent that he deploys his capital for the good of his fellows, it will not last beyond him. His class evolves, but its evolution is conditioned by the survival of the profitable. This creates a kind of mental built environment for prospective class members. Capitalists create families to perpetuate their wealth. They raise children to respect what they do; they pay intellectuals to preach their virtues, hire politicians to promote their interests, build well-feathered foundations to hire and corrupt their black sheep, set caste-like standards of behaviour and ‘culture’ to entice, stratify and discipline their flock, and create ‘bodies of armed men’ to impose their needs. They spit out dissenters with disdain for both reason and morals; when these become dangerous, they imprison them, torture them, and kill them, adding fear to the mental armoury of their kind.

In contrast, solidarity is the single most essential requirement for workers to overcome the condition in which capital constantly seeks to use them, of functioning as a collection of isolated individuals. Instincts such as mutual support and self-sacrifice arise from their conditions of life. Even to function as labour, they must cooperate, because production is inherently co-operative. Nor is production the only ‘school’ of cooperation; the need to work together arises from the very nature of wage labour. Employers take no responsibility for employees; they take them as they find them. Labour can only perpetuate itself by combining.

This struggle for survival takes contradictory forms which capital exploits to set worker against worker. Ties of family, language, and social status conflict with those of work and dwelling place. The most successful working class movements overcome these divisions by uniting their diverse members for a common political purpose. This purpose is passed on to everyone whose struggles workers support, whether wage labourers or not. The achievements of the popular alliances created in this way are passed from generation to generation. This becomes the mental built environment of the propertyless.

However, in contrast with the capitalists, working class consciousness is fragile and does not reproduce itself automatically; it is transmitted from generation to generation by ties of family, community, workplace struggle, but above all by political institutions, especially parties. When this continuity is broken, as by imperialism or Nazism, past lessons must be relearned; this calls for a work of historical recovery, in which ‘organic intellectuals’ play a vital role. All the above is speculative; I don’t offer it as a grand narrative; it’s the way I try, for my own purposes, to make sense of war. Maybe a reader or two can make something more rigorous out of it.

War accelerates all these processes. It drives home the most basic lesson of capitalism, which is that the capitalists have no interest even in the existence of their soldiers, let alone their welfare: they are simply expendable cannon-fodder. Workers in contrast can only defend their own interests by combining to fight for them. This is what makes war the crucible of revolution.

The Political Economy of the Warfare State

The imperialist nation-state has to organise both classes to achieve military superiority; to do that, it must overcome their genetic nature. It must make its capitalists work together inside the nation, and make its workers kill their natural allies outside it. To the extent that it succeeds, this has an enormous effect on production, which is the immediate source of the profitability of war. One chart alone, figure 5, makes this clear.

Figure 5: US share of public investment in total investment

The efficiency of fascist planning is well-known. Less well-known is that in World War II, US production was converted into a planned system managed by capitalists. Public investment rose to 85% of the total. The unused productive capacity which characterises capitalism in its normal state[28] was sucked into production. Soviet economics, imported via the input-output calculus of Wassily Leontieff, computed production targets with efficiency that put Hayek to shame even as he polished off his proof that this could not be done; capitalists who refused to cooperate were carted out of their offices by the FBI. In the UK, a mini-coup following Chamberlain's ouster led to a mass influx of Keynesians and Marxists into the state planning apparatus, whilst wartime regulations both brought workers into the direct management of production.

Wartime regulations put an end to labour disputes: in the UK there was only one strike throughout the war. In the USA Roosevelt sent in the army against strikes whilst in Germany, of course, labour unionism was destroyed.[29] Thus, in wars between the Great Powers, the national class struggle was suppressed, persuading the capitalists to suspend opposition to measures they regarded as socialistic, having been reassured that their workers could or would not take advantage. With the war over, witch-hunts and fierce anti-labour legislation put this genie back in the bottle, and the reinvigorated productive apparatus was handed back to the capitalists at rock-bottom prices, reversing the long decline

28. The Federal Reserve of St Louis (2025) produces an index of capacity utilization—the proportion of invested capital that is actually being used to produce things. It gives a pretty good indication of how the economy is doing. Until the early 1970s this stood at 80-90%. In each recession it got worse, and now sits only just above 75%

29. Willig, Kimberly. 1942. 'US military steps in to halt strikes'. https://blogs.shu.edu/ww2-0/1942/08/25/us-military-steps-in-to-halt-strikes/

in the profit rate that produced the Great Depression and threatened them with economic extinction and launching a ‘long boom’ which lasted until the ‘Second Slump’ of 1974.[30]

Thus, far from demonstrating the great prowess of capitalism, imperialist war temporarily converts capitalism it into its opposite. It overrules the natural behaviour of the nation’s classes, uniting the capitalists around a single ‘national’ project, and it suppresses the antiwar instincts of the working class. The way this is done depends on the history and culture of the nation concerned; however, this is only a question of mechanism.

Whatever the mechanism, the process is costly. Only when, and if, it can marshal sufficient resources to stave off an outright revolt, can an imperialist state ward off the threat of revolution. This threat is no smaller when, as in the struggle against Nazi Germany, the workers are fighting for the very existence of their class. Indeed as we shall see, it is if anything even greater, each such state therefore fights a lone battle on three fronts: to defend its shrinking grasp of imperial superprofit; to defend itself against the other imperialists; and to hold off, corrupt, and divide, its own working class.

The chain, as Lenin noted, breaks at its weakest link, the most immediate threat being colonial revolt as Ireland, India, Africa, China, Korea and Vietnam each demonstrated in their time. It is a permanent source of instability even in the absence of direct occupation, punctuating political life outside the fortresses behind which the imperialists shelter with uprisings and military interventions. Yet as the Portuguese revolution of 1974 demonstrates, an imperialist power that goes too far places itself at the mercy of its own workers.

In the economically subordinate nations, where workers, usually in alliance with the poor peasantry, are fighting the double burden of their own capitalists and their imperialist masters, the dialectic of national and class struggle therefore is different and more positive. The greater the weight of the working class in the struggle against national oppression, the greater its willingness to fight; conversely the greater the weight of its capitalists in the state, the less resolute the nation. This dialectic carries over into post-colonial states: the greater the weight of the working class in the state, the greater the economic

power at its disposal; conversely, the more the state advances the interests of the nation's workers, the greater their weight becomes.

The Import Substitution Model (ISM): Lessons from the Mexican Miracle for the 21st Century

Dr. Oscar David Rojas Silva[1]

1. Introduction

Economic history is not merely an activity of reviewing documents from the past, as if it were limited only to *reconstructing* events along a timeline. In reality, it represents a *perspective of study* that allows us to observe the history of our species' evolution through the so-called modes of production and how they leave behind a trail of lessons and insights that help us understand the long-term trajectory and guide our contemporary practice.

---

1. Professor of Political Economy at FES-Acatlán UNAM (National Autonomous University of Mexico).

This is fundamental for economic science because the social processes of the human species are *metabolisms* whose development cycle exceeds the average lifespan of a generation, which is why their *totality* can only be understood if their determinants, laws of interconnectivity, and effects are revealed in theoretical form.[2]

Hence, the analysis of the period known as the Import Substitution Model (ISM) as an industrialization strategy, from 1939 to 1970, offers us a solid analytical foundation to identify in that experience: a) the actions of the State through a range of economic policies and their combinations to produce specific effects, b) the global geoeconomic conditions that determine the possibilities for structural change, and c) the lessons and insights that are necessary for the present moment—now nearing the end of the first quarter of the 21st century—in which State intervention is making a comeback, and with it, in particular, *industrialization policy*.

For the purposes of this introduction, I propose the general context in which the Import Substitution Model (ISM) emerges—not only as a period but considering that this policy model takes place within a Nation-State, while simultaneously being shaped by the Global Economic State (GES), a concept that represents the international financial architecture and the supranational bodies that have the power to determine policies in subordinate countries.[3] In other words, countries exist within hegemonic power relations, which act as chains of force transmitted through the interaction or competition among capital (transnational corporations). They are under the general dominance of a hegemonic country that also controls the global monetary standard monopolized by the dollar, which means that access to credit is monopolized, thereby determining the international financial architecture that constrains the

---

2. Theoretical evolution always responds to certain paradigms that define it. During the analyzed period of import substitution, there was consensus on the necessity of state intervention; during neoliberalism, the paradigm was replaced by the notion of a self-regulated market with state assistance only for minimal functions. However, as we move further into the 21st century, we observe the return of the paradigm of the state as the main agent, planner, and programmer. Therefore, the epistemological critique represents the need to highlight not only the change in discourse but also the recovery of other logical connections that support new practices. To delve deeper into this discussion, see: G. Guillaumin, *Historia y estructura de La estructura: origen del pensamiento histórico de Thomas Kuhn*. (Mexico City: Universidad Autónoma Metropolitana, 2012).

3. To explore this concept further, see: O. Rojas, "The Dialectic of the State Form in the Post-capitalist Crisis and Transition," *Midwestern Marx Institute*, 2024, https://www.midwesternmarx.com/articles/the-dialectic-of-the-state-form-in-the-post-capitalist-crisis-and-transition-by-dr-oscar-d-rojas-silva.

actions of Nation-States within the GES. Without this context, the national period cannot be understood. [4]

The GES is a way of categorizing what Marx traditionally referred to as the World Market (WM). It refers to the historical formation of a *global unit* produced by the relentless process of capital accumulation. From the Marxist perspective, the concept of capitalist profit appears as an inexorable compulsion to continuously increase accumulation, with a tendency toward *concentration and centralization* in a minority class that begins to struggle for control of markets during a cycle of industrial rise in the second half of the 19th century, ultimately leading to military conflagration. It took two periods of world war (1914–1918 and 1939–1945), not to mention the Great Depression of 1929, for the United States to emerge—through the Bretton Woods agreements—as the dominant hegemonic power. It is no minor detail that the ISM coincides with the rise of U.S.-led capitalism.

The new hegemonic power, based in the United States of America (USA), initiated an expansion of the world market that generated a kind of *hegemonic dividend*—also driven by the necessary post-war reconstruction spending—which boosted global demand and allowed countries like Mexico to be in a position to expand their productive base. This, of course, was a necessary but not sufficient condition.

On the other hand, Mexico began the 20th century on its own path with a social revolution aimed at overcoming the old colonial structures of the previous global period—most clearly represented by the Primary Export Model (PEM). The maturation of the Mexican social state under Lázaro Cárdenas materially provided, through the oil expropriation and agrarian reform, the conditions needed to initiate a future process of industrialization. The Mexican state reached economic maturity by building its institutional strength to direct economic policy within its territory. This laid the foundation for what would later be known, from 1939 to 1970, as the "Mexican Miracle."

Three unprecedented decades began—unmatched by any other phase—in which the Mexican economy underwent a rapid process of industrialization, with an average annual growth rate above 6%. The specific strategy pursued by the Mexican state was the *import substitution* strategy as a path to achieving industrialization. What was the secret of that model? Why, if Mexico once

4. Oscar Ugarteche, *Arquitectura financiera internacional: una genealogía (1850–2015)*. (Madrid: Akal Editores, 2018).

reached such growth rates, is it now structurally below 2%? How was it possible that during the neoliberal era (1982–2018), the country proceeded to auction off the assets built under the previous model through privatizations? Why is it that today, terms once considered obsolete—like "planning"—are making a comeback? In fact, the term "import substitution" appears officially in the so-called *Plan México*, through which the current government of President Claudia Sheinbaum Pardo is advancing its development plan[5].

Nevertheless, some of the lessons from the ISM are painful. The Mexican economy—like all Latin American economies—faced structural limitations that prevented the deepening of the proposed industrialization process. A series of internal and external constraints were revealed, which ultimately led us into the neoliberal model, or the model of external sector specialization, resulting in a deepening of the systemic crisis of our economy. Is it possible to break through these limitations? What has changed from then to now?

In the development of the GES, as I write this introduction in the first quarter of the 21st century, there is a significant geopolitical reconfiguration taking place, with the United States undergoing a process of hegemonic decline in the face of China's rise. If we trace a long-term cycle beginning in 1944 with the Bretton Woods agreements and ending with the *subprime* crisis in 2008, we can state that the classic ISM occurred during the ascending phase of U.S. hegemonic power. In contrast, if a similar model were to take shape today, it would be unfolding in the context of the civilizational crisis of the United States as a hegemonic power. Thus, the hegemonic cycle is of central importance for drawing historical lessons relevant to the immediate future.

2. The Mexican Miracle: From a Colonial Economy to Semi-Industrialization.

The so-called Mexican Miracle refers to the explosive dynamism of our economy following the outbreak of World War II, with an average GDP growth rate exceeding 6% (to be verified), which, in hindsight, stands in sharp contrast

5. Plan México is an initiative that emerged during the administration of Andrés Manuel López Obrador, highlighting the systemic loss of participation by the North American bloc in comparison to the Asian bloc. This situation calls for a new process of import substitution to reverse the trend. The plan is formalized by President Claudia Sheinbaum as the medium- and long-term roadmap for continuing the construction of basic infrastructure for industrial production.

to the diminished 2% during the subsequent neoliberal model. The Mexican state decisively established itself as an intervening agent, both directly through investments in infrastructure and strategic sectors, and indirectly through the use of *economic policy*—particularly a combination of industrial promotion and tariff *protectionism* to contain external competitive forces in favor of national development. [6]

From my point of view, the heroic character attributed to this period stems from the contrast with our country's difficult economic history since the 16th century, under the framework of an extractive encomienda model, which culminated during the Porfiriato with a modern form serving the first wave of European industrialization in the 19th century. [7] Thus, the Mexican Revolution signifies, among many other things, the formation of a politically sovereign nation-state with the aspiration of achieving economic sovereignty. As Moreno-Brid & Ros point out:

> *In the process of achieving its hegemony, the Mexican state became convinced that it had to play an active role in investment and production if Mexico wanted to develop. By the late 1930s, it controlled fundamental resources and had significantly increased the number of economic policy instruments. But it remained to be seen whether it would succeed in turning the economic recovery of the late 1930s into a sustained growth momentum.*[8]

Considering this historical trajectory that runs from the outbreak of the Mexican Revolution in 1910 to 1937 and 1938—the years in which the Federal Electricity Commission (CFE) was founded and control of oil was achieved, respectively—both essential elements for taking the next step toward industrialization, this period also represents the struggle to consolidate the *Mexican state* with effective capacity to intervene through public institutions capable of making strategic combinations between fiscal policy and monetary policy to influence the economic process. It should be noted that it was during this period, in 1925, that the Bank of Mexico was established.

6. R. Villareal, *El desequilibrio externo en la industrialización de México (1929–1975): un enfoque estructuralista* (Mexico City: Fondo de Cultura Económica, 1976).

7. A. Aguilar, *Dialéctica de la economía mexicana*. (Mexico City: Editorial Nuestro Tiempo, 1980).

8. Moreno-Brid, J., and J. Ros. *Desarrollo y crecimiento en la economía mexicana: una perspectiva histórica* (Mexico City: Fondo de Cultura Económica, 2010), 132.

That is to say, the ISM is not limited to developmentalism but also reflects the building of institutional frameworks as a consequence of the revolution—essential elements facing the eventual formation of the new world market based on competition among joint-stock companies at a transnational scale. Therefore, it was necessary to have instruments to manage these large flows of capital, without losing sight that this is the exercise of economic policy with social purposes.[9]

In general, I consider that the ISM can be interpreted as a *continuation* of the revolutionary process. The *substitution model* is often read as a story of failure derived from state *inefficiency*. This period has been viewed by the neoliberal paradigm as a symbol of the state's failure, but in reality, from a contemporary perspective in which the state paradigm is making a comeback, it can be read as a success story in which the Mexican Revolution gave birth to a *Social State* with hegemonic capacity to intervene in the economic territory and autonomy over trade policies to actively protect Mexican enterprises. In other words, the State managed to induce transformations in its own general conditions of production. Moreno-Brid & Rosclearly sum up the nature of that miracle:

> *However, it did not take long for a full transformation in the economy and society to begin. Over the next thirty years, Mexico's economy grew at a sustained annual rate of 6.4% in real terms, and the per capita gross domestic product grew by 3.2%. The manufacturing sector was the engine of growth, with an annual production increase rate of 8.2%, and for most of the period, the dynamism of the domestic market was its greatest source of demand. The country transformed from an agrarian society to an urban, semi-industrial one. The proportion of the population living in urban areas grew from 35% to 58%, while the total population increased from 20 to 48 million, and the share of manufacturing production rose from 15% to 23.3%.*[10]

---

9. In this regard, Carlos Tello (1980) explains: "The political and social transformation of Mexico following the Revolution of 1910, along with the sustained economic growth beginning in 1935, supported the favorable opinion that foreign investors and bankers had of the country—especially when that growth was combined with monetary and price stability after 1956. These factors gave strong backing to the reasoned optimism and confidence that national capital held in Mexico's development prospects." C. Tello, *La política económica en México: 1970-1976.* (Mexico City: Siglo XXI editores, 1980), 11

10. J. Moreno-Brid, J. Ros, *Desarrollo y crecimiento en la economía mexicana: una perspectiva histórica*. (Mexico City: Fondo de Cultura Económica, 2010), 132.

Nevertheless, despite the successes in implementing the ISM, it was unable to resolve the chronic imbalances of the national economy—as we will see later. Structural signs of our condition as a dependent country soon became evident, which led us into neoliberalism, a period of widespread crisis starting in the 1980s, especially marked by the 1982 crisis and, later, the December error of 1994.

Even so, in contemporary times, this history becomes a source of experience to deeply understand the diagnosis of Mexico's chronic industrialization failure and the essential points that need to be addressed in order to trigger a new cycle of industrialization. I emphasize that the historical recovery of this phase is important for recognizing the *potential* for likely industrial growth today. Is a Mexican Miracle 2.0 possible?

To answer this question, it is necessary to formalize the core elements that make up the import substitution strategy. Next, we will focus on delving deeper into this historical experience.

3. The Mechanism of State Intervention and the ISI Strategy

So far, we have outlined the global and systemic context in which the ISM unfolds. We have especially highlighted the importance of this period due to the contemporary novelty marked by the return of the *state* paradigm as the global planner of the national economy. We refer specifically to the relevance of a new type of National Development Plan (2019–2024 and 2024–2030), in contrast to those aligned with the so-called Washington Consensus. Furthermore, political continuity has brought to the table the possibility of maturing a new model that openly calls for industrialization. In addition to the six-year plan, there is an additional medium- and long-term plan that sets the general reference framework, called *Plan México*. It is within this context that it becomes necessary to return to the fundamentals of what we mean by state intervention through planning.

According to Cibotti & Sierra, planning can be understood through the division of state *intervention forms* into *regulatory actions* and *direct productive actions*.[11] The state has an administrative apparatus that allows it to exercise

11. R. Cibotti, E. Sierra, *El sector público en la planificación del desarrollo*. (Mexico City: Siglo XXI Editores, 2005).

general guidelines through economic policy, but it also participates directly in investment activities and direct operations through public enterprises. The scope of action ranges from the production of consumer goods and services to capital installation for accumulation activities. Additionally, a fundamental element that completes this framework lies in actions aimed at establishing specific levels of financing for the economic activity as a whole.

Once we have established what we mean by state intervention, let us now focus specifically on the period from 1939 to 1970, during which a comprehensive strategy was developed that combined different levels of action to achieve the process of industrialization through import substitution (IS) in certain economic sectors. Let's take a closer look at what this entailed.

According to René Villareal, who developed the following formalization that we present here, the concept of import substitution is expressed when the share of imports in the total supply systematically decreases.[12] The relevance of these formulas lies in the ability to specifically measure the progress of substitution across different sectors.

The level of import substitution (IS) at a given time m_i^1 is defined as:

$$beginequationm_i^1 = \frac{M_i^1}{M_i^1 + Q_i^1} = \frac{M_i^1}{S_i^1}$$

End{equation} Where:

M_i = *Imports of a good in the industry* i
Q_i = *Gross domestic product in industry* i
S_i = *Total supply of the industry's product* i

So, if we consider the difference between two periods, we have:

$\Delta m_i = m_i^1$ - m_i^2 *(1)*

12. Villareal, *El desequilibrio externo en la industrialización de México*, 53.

So yes, $\Delta m_i = x > 0$, then it means that there has been a substitution process in the industry i.

The general trajectory of this process is to cover by levels, first those branches dedicated to consumer goods and then advance to intermediate and capital goods. Exemplifying the above with data for the first phase of the MSI, following Villareal: "For the consumer goods sector in the 40s (1939-1950), the share of imports in the total supply decreased by 69.0% (the SI index m_i^1 decreased from 0.22 in 1939 to 0.069 in 1950), and by 26% and 18% in intermediate and capital goods respectively."[13]

This process of substitution involves, of course, a combination of trade policy, monetary policy, and fiscal policy, all framed within industrial policy. In other words, the ISI model—unlike the neoliberal one—implies a conscious and planned action by the state through a combination of policies that follow a specific sequence based on the various levels necessary to achieve the structural objective. That is to say, it is not about policies in general, but about policies that are always tailored to particular conditions at sequential moments. From this perspective, industrial policy is not the abstract application of principles, but rather the concrete programming aligned with the necessary sequence to materialize its objectives.

4. The Two Phases of ISI and the Limits of the Model

The notion of sequence is relevant when studying ISI (Import Substitution Industrialization) because its *development process* can be broken down into phases, each with distinct objectives according to their specific needs and the needs of the context—in other words, the short and long term coexist in the present moment. This reconfiguration of temporality enables the need for state planning. In the case of ISI, we can identify two stages: the first is commonly referred to as the growth-centered phase under the process of *devaluation-inflation*, which spans from 1939 to 1958, while the second phase is known as the stabilization period, which runs from 1959 to 1970.

At this point, it is important to remember that the planning process is not only about *quantitatively* "adding" more industrial sectors, or even increasing the degree of specific substitution; rather, a new level of industrialization implies a

13. Villareal, *El desequilibrio externo en la industrialización de México*, 53.

reorganization of the structural design and involves new levels of supply and demand flows between the *domestic market* and the *external sector*. It is a process of a *qualitative leap* to a new equilibrium. From this perspective, sequences are therefore necessary in order to carry out the phases of transformation and *stabilize them* for continuous functioning at the new level.

It is important to note that this decision to intervene in an economy takes place within the framework of the capitalist system of production—that is, under a geopolitical condition in which international relations are not based on coordination but on domination. Therefore, it is not only a matter of having appropriate policies, but also of whether the *hegemonic balance of power* allows for gaining ground in the ongoing struggle for control of global capital.

In other words, planning must take into account this vector of opposition between the Nation-State and the Global Economic State (GES), which means there are structural forces that subject a country to bottlenecks resulting from the disparities between an industrialized or colonizing country (with strong markets and resources) and a non-industrialized country shaped by a history of colonialism and dependency (with internally disconnected, enclave-like markets). For this reason, the sequence becomes a strategy for building the necessary economic institutions in the process, and thus a *programming* of the sequence must be developed.[14]

In the first phase of ISI, the state had to build the nonexistent economic infrastructure (public works) through a fiscal policy focused on public spending for capital formation. This was financed not through revenue (taxes), but through *primary money issuance*—that is, financing by the Central Bank. As a result, a certain level of inflation was accepted in order to enable the construction of basic infrastructure. This approach contrasts with the traditional view in which inflation is undesirable at all times; in fact, as the ISI experience shows, it was part of the short-term strategy. A clear sign of this is that inflation was brought under control in the following stage without halting the growth rate. The sequence was successful.

---

14. As Guillén points out: “In other words, the solution to the external bottleneck depended on modifying the productive system through industrialization and the creation of an endogenous base of accumulation. This task could not unfold spontaneously through the market, but rather through planned action by the State.” Guillén, A. “La teoría estructuralista del desarrollo en América Latina: aportes y enseñanzas.” In *Trayectorias y encrucijadas de las teorías del desarrollo en América Latina*, edited by A. Guillén et al., (Mexico City: Fondo de Cultura Económica, 2024), 159.

The problem arises in the area of *external imbalance*—that is, the current account balance—which, for example, went from a deficit of 22.4 million dollars in 1939 to 280 million in 1958, a deficit that grew at an average accelerated rate of 14.2% during the period. In this situation, the primary tool is *devaluation*, which reverses the current account flow to activate forces that curb imports and expand exports.[15] The issue is that if this measure fails to produce results—as was the case during the ISI—then its final limit is reached, and the problem becomes structural. As a result, the country must resort to financing the balance of payments deficit through the use of foreign capital, represented by foreign investment and external loans. This is why Villareal states:

> *Undoubtedly, devaluations and increasing public spending financed through primary money issuance largely explain the inflation during this period. On the other hand, the continuous and persistent external imbalance is explained by the first stage of ISI that the Mexican economy was undergoing during that period (1939–58), in which the imbalance was determined more by structural factors than by an inadequate combination of trade, fiscal, and monetary policies.*[16]

It is from this "structural" perspective, in fact, that the view emerges which critically examines the economic backgrounds of countries like those in Latin America—countries shaped by a previous model, generally referred to as the primary-export model, but more fundamentally by historical social relations of exploitation and segmentation. As a result, the state becomes the only viable actor capable of consciously intervening through the active promotion of industrialization.

The essential factor for this is maintaining high investment rates, although in this regard, Guillén warns: "that alternative would require national autonomy, which became increasingly difficult due to the growing presence of transnational corporations."[17] Therefore, the limits of ISI are closely tied to structural dependency relationships with an industrial center. In fact, from the structuralist perspective, inflation is seen as "an element of the struggle among different social classes over income distribution," reflecting a broader view

---

15. Villareal, *El desequilibrio externo en la industrialización de México*, 69.
16. Villareal, *El desequilibrio externo en la industrialización de México*, 69.
17. A. Guillén, "La teoría estructuralista del desarrollo en América Latina: aportes y enseñanzas." In *Trayectorias y encrucijadas de las teorías del desarrollo en América Latina*, ed. A. Guillén et al. (Mexico City: Fondo de Cultura Económica, 2024), 168

rooted in coloniality, in which the global order necessitates the reproduction of *underdevelopment* conditions in certain countries to enable the accumulation of capital in the core economies.[18] The result was a disparity between the capacity of exports and the development of the domestic market, leading to systemic stagnation.

What Latin American countries witnessed was a historic intersection between this attempt at industrialization and the simultaneous rise of U.S. imperialism, which advanced through the forceful export of capital—alongside, of course, the political and military interventionist policies that shaped and repressed social protest in order to impose external control over the development process as part of a global system. In this context, ISI offers an opportunity to reflect on the shift in circumstances that followed the period from 1982 to 2018, during which the dismantling of public assets began in order to specialize in the reception of foreign direct investment and the systemic placement of debt under the dominance of transnational capital. From this lesson, we can describe ISI as a model which, under conditions of subalternity, was ultimately condemned to growth with underdevelopment.

5. Conclusion

The Import Substitution Industrialization (ISI) model, implemented in Mexico between 1939 and 1970, marked an era of remarkable economic growth, with annual rates exceeding 6%, driven by a state that sought sovereignty in the face of the dominance of the Global Economic State (GES). However, its dependence on foreign capital and the chronic external imbalance—due to its dependent condition vis-à-vis U.S. imperialism, represented by foreign investment—revealed the impossibility of achieving equilibrium in the ISI during the second stage, that is, through the consolidation of the domestic market to sustain the advanced substitution phase (intermediate and capital goods). This limit worsened during neoliberalism (1982–2018), when the process even began to reverse through the sale of public assets—assets precisely attained during the ISI—sacrificing the productive base for a subordinate integration into the global market by converting industrial policy into monetary stabilization economic policy serving the dominance of financial capital.

---

18. Guillén, "La teoría estructuralista del desarrollo en América Latina, 162. A. Quijano, *Ensayos en torno a la colonialidad de poder* (Buenos Aires: Ediciones del Signo, 2019).

The development of neoliberalism as the dismantling of ISI led to a worsening of the conditions for workers and subjected the country to low growth rates that reflect the chronic stagnation of the period. This gave rise to a political change that, through democratic means, opted for a process of reindustrialization and wealth redistribution. Today, Claudia Sheinbaum's Plan México represents a projection of recovering the domestic market through the construction of basic infrastructure and the pursuit of coordination with both national and international actors to promote an increase in the investment rate.

Could a "Mexican Miracle 2.0" emerge? Yes—if the reflection centers on addressing the structural failures that require, as a prerequisite for success, building an industrial dynamic within the domestic market and achieving balance in our productive and commercial connections abroad, all within a context of geopolitical transition.

This circumstance demands an epistemological shift in economic science. The paradigm of the self-regulating market and the separation of economic studies from their state foundation and relations of domination cannot continue if we truly want to uncover the conditions of the present challenge. The central point is that the hegemonic history of the U.S. today is in a deep crisis; in fact, we can describe it as the decline of its dominance, which means that the conditions are radically different from those that interrupted the first industrialization process of the 20th century.

From this perspective, we can state that ISI was not a failure, but rather an experiment that challenges us to boldly rethink future development—with an objective recognition of the historical opportunity and a determined effort to broaden public discussion about the combined use of economic policies in new sequences to address the chronic problems of our economy.

1. R.D. Johnston is a Canadian doctoral student in pediatrics, who holds an MSc in epidemiology and an MA in education. He has experience working in numerous hospital and school contexts, as well as lecturing in university seminars. He is a cadre in the ACP Ontario Chapter. While the majority of his research acumen has been established in medical publications, including JAMA Pediatrics and BMJ, he has a passion for bridging gaps between medicine, philosophy, and history.

symbols through which we, the living, engage dialectically with the struggles and aspirations of our own time. One such life is that of Dr. Norman Bethune—a Canadian physician, Communist, and internationalist who gave his life in service to the Chinese people during their War of Resistance against Japanese Imperialism. Though he died in 1939, his legacy remains a living contradiction—a privileged doctor who became a revolutionary; a Canadian forgotten in his motherland but a hero throughout the People's Republic of China. A man whom Mao Zedong described in his writings as, "utterly devoted to others without any thought of self," and who came to embody the very spirit of communism.[2]

Bethune's biography traverses continents and contradictions: Canada, Spain, China; medicine and politics; personal ambition and political commitment. Yet if we view him only as a courageous figure in history, we fall prey to idea worship, failing to grasp the deeper lesson. As Mao famously asked: "What kind of spirit is this that makes a foreigner selflessly adopt the cause of the Chinese people's liberation as his own?" The answer—the spirit of internationalism, the spirit of communism—demands more than reverence.[1] It demands recursion. To honour Bethune today is not to celebrate a fossilized hero, but to enter into struggle with the living principles he died to defend.

This article will trace Bethune's life—not as an antiquarian record, but as a political becoming. In the Marxist tradition, Bethune's biography will be presented not as a tale of individual heroism, but as an example of ideological transformation: the move from professional detachment to revolutionary commitment, from liberal idealism to proletarian internationalism. We will follow him from his early medical career in Canada, through the battlefields of Spain, and finally to the revolutionary base areas of northern China. In doing so, we aim to recover the material basis of his transformation—how Bethune overcame the contradictions within himself and aligned his skills with the needs of the oppressed.

Bethune's life will be placed in dialogue with the philosophical tradition of dialectical materialism. Drawing from Marxist understandings of history, we will argue that his path exemplifies the dialectic not only in content, but in form. His actions represent the concrete realization of international solidarity, and his death raises enduring questions about Communist heroism: What does it mean to live and die for a people not your own? How does the internationalist spirit

---

2. Mao Tse-tung, *"In Memory of Norman Bethune,"* in *Selected Works of Mao Tse-tung*, vol. 2 (Peking: Foreign Languages Press, 1967).

resist co-optation by liberal humanitarianism? And what role does memory itself play in the dialectical development of revolutionary consciousness?

By revisiting Bethune through this dual lens—biographical and philosophical—we resist the bourgeois impulse to isolate the man from the movement. Instead, we reclaim him for what he was: a historical agent shaped by, and contributing to, the global Communist struggle. In doing so, we ask our readers not simply to remember Norman Bethune, but to learn from him—and to struggle with his example in the contradictions of our own moment.

A biography of Norman Bethune

The following biographical account of Bethune draws primarily on authoritative works which include Roderick Stewart and Sharon Stewart's *Phoenix: The Life of Norman Bethune* (2011), Roderick Stewart and Jesús Majada's *Bethune in Spain* (2014), and Chung Chih-cheng's *Norman Bethune in China* (1975).[3] Their comprehensive research and careful documentation form the foundation of this account. Unless otherwise indicated, all information and quotations are derived from these sources.

Henry Norman Bethune was born on March 4, 1890, in Gravenhurst, Ontario, to Malcolm Bethune (1857-1932), a Presbyterian minister, and Elizabeth Ann Goodwin (1852-1948). The family moved often due to his father's frequent clashes with congregations and financial instability, which shaped Norman's early years. Despite these challenges, he developed a strong sense of justice, independence, and artistic talent. Though rebellious against his father's strict religious discipline, Norman internalized his father's moral sensibility and desire to help the sick and poor. Norman graduated secondary school in 1907 and secured a spot at the University of Toronto. To fund his education, he took demanding jobs in Ontario's Algoma District, spending summers on passenger ships and winters in construction camps.

Medical School and Early Career

3. Roderick Stewart and Sharon Stewart, *Phoenix: The Life of Norman Bethune* (Montreal: McGill-Queen's University Press, 2011); Roderick Stewart and Jesús Majada, *Bethune in Spain* (Montreal: McGill-Queen's University Press, 2014); Chung Chih-cheng, *Norman Bethune in China* (Peking: Foreign Languages Press, 1975).

Bethune entered medical school in 1912. As Europe descended into war in 1914, he enlisted in the Canadian Expeditionary Force in September that year. He was assigned to the Canadian Army Medical Corps and saw action in February 1915, helping to defend the line against a German chlorine gas attack during the Second Battle of Ypres. After a shrapnel injury in April 1915, Bethune returned to Canada. He resumed his medical studies, graduating with a Bachelor of Medicine in December 1916. He then joined the Royal Navy, but after conflicts with superiors and contracting influenza, was demobilized in February 1919.

After his demobilization, Bethune pursued a surgical internship in London, England, where he became involved in the city's cultural and social life. His flamboyant personality and love for art and high society clashed with his resentment of wealth and privilege. In London, he met and married Frances Campbell Penney in 1923. During their honeymoon in Europe, tensions between them escalated, culminating in financial hardship, driven by Bethune's frivolous spending and cavalier lifestyle. After their funds ran out in Europe, they returned to London where Bethune failed to secure a medical position. Faced with limited opportunities, in 1924 Norman returned to Canada with Frances and later moved to the United States where Bethune hoped to find more success. After struggling to establish a medical practice in Detroit, Bethune's fortunes improved when he passed a Michigan medical exam, securing a position as an assistant surgeon at Harper Hospital. By 1926, his career had flourished, however his marriage deteriorated due to Bethune’s emotional volatility and heavy drinking, with Frances eventually leaving.

Class Consciousness and the Shedding of Bourgeois Individualism

In September 1926, Bethune was diagnosed with tuberculosis, which led him to seek treatment at various hospitals, including Trudeau Sanatorium. His illness deepened his depression, and he struggled with isolation, financial worries, and the breakdown of his marriage. He pursued a radical treatment, the pneumothorax procedure, despite the risks. Although the procedure caused complications, Bethune persisted in his creative efforts. For Bethune, this was a period of deep self-reflection, leading to a renewed resolve to make a meaningful contribution to the world. This marked a shift from his previous despair to a more purposeful mindset, as he began to search for ways to leave a lasting impact before his death.

After recovering from the procedure, Bethune immersed himself in tuberculosis research at Ray Brook Sanatorium. His enthusiasm and rapid learning impressed many colleagues, though his unconventional and rebellious spirit put him at odds with others. His work on new surgical techniques, particularly in thoracic surgery, earned him recognition, and he designed several medical instruments that garnered attention.

By 1931, Bethune found himself at a crossroads, both professionally and personally. Disillusioned with the limitations of his life and the capitalist medical system, Bethune's emotional and intellectual struggles began to shape his political beliefs. Increasingly drawn to communism, he embraced its promise of justice. This transformation was not just intellectual, but moral, as Bethune became determined to use his medical skills for the collective will. While his political consciousness was still developing, crises such as The Great Depression fueled his curiosity about societal inequities and the struggles of the working class. Bethune began to observe disparities in medical institutions, stating, "there is a rich man's tuberculosis and a poor man's tuberculosis. The rich man recovers and the poor man dies."[4] His evolving views on medicine and class would eventually contribute to his radicalization. By the mid-1930s, as a chief thoracic surgeon at the Hôpital du Sacré-Cœur in Montreal, Bethune had pioneered medical contributions, including the first person-to-person blood transfusion at the institute. However, his volatile nature and unconventional methods created tension in the operating room.

Bethune's growing social awareness extended beyond surgery. He became a vocal critic of healthcare inequities, particularly regarding tuberculosis and its connection to poverty. Through his involvement with the League for Social Reconstruction, he aligned himself with political movements advocating for systemic change. Impressed by their state-run medical system, Bethune traveled to Moscow in 1935 to study the Soviet approach to medicine. He returned to Canada and soon joined the, then-illegal, Communist Party of Canada. He formed a study group of progressive medical professionals to design a healthcare plan for all Canadians and continued to advocate for a system free from private profit. In a 1936 speech, he condemned the commercialization of medicine and called for ethics based on justice between medicine and the people. Hoping to influence a Quebec provincial election, he and his group created four pilot healthcare plans to improve the current system without proposing full socialization. These were ignored by politicians and the

4. Norman Bethune, "A Plea for Early Compression in Pulmonary Tuberculosis," *Canadian Medical Association Journal* 27, no. 1 (July 1932): 36-42.

public alike and by the summer of 1936, he was disillusioned and ready to leave Montreal. Bethune's evolving medical vision became inseparable from his growing commitment to proletarian internationalism, a thread that would guide his work in the years ahead.

The Spanish Civil War

In July 1936, civil war erupted in Spain between the Republican government and the Nationalist forces led by General Francisco Franco. Outraged by the rise of fascism and the global community's indifference, Bethune became increasingly committed to the Republican cause. When the Canadian Red Cross refused to intervene, Bethune co-founded the Committee to Aid Spanish Democracy (CASD) with journalist Graham Spry, and emerged as its most passionate advocate. Bethune resigned from his post at Montreal's Hôpital du Sacré-Cœur in October 1936. At a rally in Toronto, he was introduced as the head of a Canadian medical mission to Spain. His speech condemned fascism and called for action. Plans for a similar rally in Montreal were blocked by opposition from Catholic and right-wing groups. Angered, Bethune publicly criticized the city's leaders for suppressing aid to the Spanish people.

On October 24, 1936, Bethune left Canada with medical supplies. After securing passage through Paris, he arrived in Madrid on November 2 as Nationalist forces closed in. There, he purchased anti-tetanus vaccines for wounded miners in Oviedo, earning him the gratitude of Spanish officials. Madrid, though under siege, remained resilient—shops stayed open, propaganda posters lined the streets, and civilians—including children—took up arms.

Bethune partnered with Danish-Canadian journalist Henning Sorensen, who served as his interpreter. They visited hospitals across Madrid, offering Bethune's services as a chest surgeon. However, his lack of Spanish and the absence of need for his specialization limited his utility. Witnessing the devastation caused by German and Italian air raids, Bethune redirected his efforts. He proposed creating a mobile blood transfusion service—a pioneering and innovative contribution to wartime medicine. With $5,000 in funding and a converted station wagon purchased in London, Bethune returned to Spain in December 1936 and launched the Canadian Blood Transfusion Institute in Madrid. On January 3, 1937, the team performed its first successful transfusion,

saving a soldier's life. The service proved vital, delivering blood to frontline hospitals and casualty stations. Bethune aimed to expand the operation across Republican-held Spain and met with Spanish officials to propose a national blood service. While initially met with skepticism and concern over overlapping efforts with Dr. Frederic Duran i Jordà's Barcelona-based system, a collaboration was eventually agreed upon.

In February 1937, Bethune traveled to Málaga to test the mobile service, where he encountered chaos as Nationalist forces advanced and refugees flooded the roads. He helped evacuate civilians to Almería, offering medical aid under bombing raids. Deeply moved by the suffering, Bethune documented the ordeal in his pamphlet *The Crime on the Road: Málaga to Almería*, to raise international awareness.

Despite his efforts on the ground, Bethune soon encountered resistance from Spanish authorities, who moved to place the blood service under joint control with Spanish doctors, sidelining Bethune. Despite contributing financially and logistically, he was frustrated by bureaucratic resistance, unpaid salaries, and growing tensions with colleagues. Disillusioned, Bethune decided in April 1937 to withdraw Canadian staff from the institute and return to Canada to campaign against fascism. Bethune shifted focus to new projects, including aid for war orphans.

On June 2, 1937, Bethune departed for New York, effectively ending his direct involvement in Spain. Reflecting on his missteps during the journey, he admitted to colleague Hazen Sise, "I have blotted my copybook." Despite his troubled exit, Bethune's contributions to battlefield medicine were significant. His innovative mobile blood transfusion service laid the groundwork for future mobile surgical units, such as MASH units used in later wars. His humanitarian work, particularly during the Málaga-Almería evacuation, left a lasting impact.

Although largely forgotten for decades—overshadowed by events like the bombing of Guernica—Bethune's legacy in Spain was revived in the 1990s. In 1996, an exhibition commemorated his efforts, and in 2006, the city of Málaga honored him with a maple tree and a plaque inscribed: "Walk of Canadians – In memory of aid from the people of Canada at the hands of Norman Bethune, provided to the refugees of Málaga in February 1937."[5] This long-overdue

recognition reaffirmed Bethune's place in history as a visionary who risked his career and life to aid those in need.

Return to North America

Upon returning to North America on June 7, 1937, Bethune launched a public campaign to expose the inaction of Western democracies in the face of fascist aggression. At a New York press conference in June 1937, he condemned their failure to support Republican Spain and framed the Spanish Civil War as a chapter in a larger global battle against fascism—linking it to Japan's invasion of Manchuria and Benito Mussolini's campaign in Ethiopia.

From June to October 1937, Bethune toured Canada and the U.S., galvanizing support for the Republican cause. In Toronto, he was celebrated at a major rally, urging unity against fascism and warning of an impending global conflict. His rhetoric, however, soon alienated more moderate audiences; in Montreal, he described capitalist democracies as "a shell and a sham." Nevertheless, his vivid accounts of wartime atrocities and his proposal for a "child-city" for Spanish orphans moved thousands—both emotionally and financially.

As his tour wore on, Bethune became increasingly open about his political beliefs. Initially denying Communist affiliation to maintain broad appeal, he later publicly declared his membership in the Communist Party during a speech in Winnipeg, arguing that only communism could achieve emancipation and peace. This public stance, however, came at a personal cost. His political radicalization, combined with signs of emotional exhaustion, led to strained relationships and heavy drinking. He fell into depression, disillusioned by Canadian indifference and feeling torn between medicine and political advocacy. Despite his eagerness to return to the International Brigades, Bethune was denied re-entry. Spanish Communist officials, citing his erratic behavior, drinking, and mishandling of funds, labeled him unreliable. The rejection left him devastated, his medical ambitions and sense of purpose once again in limbo. It was in this moment of personal and professional exile that Bethune turned to a new possibility: China (中国).

In August 1937, Bethune proposed a medical mission to aid Chinese Communist forces resisting Japanese aggression. Although his idea was initially shelved, it gained traction as the Canadian and American Communist

Parties warmed to the notion. For Bethune, this was more than a tactical shift; it was a lifeline. China became the focus of his hope for redemption—a final attempt to fulfill the vow he had long carried: to do something of enduring value for humanity.

Bethune's final months in North America were defined by continued fundraising and planning for the China mission. Though leftist circles remained more invested in Spain, key figures like Earl Browder, Philip Jaffe, and Corliss Lamont contributed funds. Jaffe helped establish the China Aid Council (CAC), a front group for logistical and financial support. Bethune began assembling a team and stockpiling supplies for a small mobile hospital. Among those who joined was Lewis M. Fraad, a young CPUSA doctor initially skeptical of Bethune but ultimately won over by his passion.

This period was also deeply personal. Bethune was plagued by feelings of failure and emotional loneliness. He felt increasingly disconnected from those closest to him—kept at arm's length by his love interest Marian Scott. He confessed to feeling adrift, with no money, little professional standing, and the looming sense that China might be his final chapter. As the *Empress of Japan* set sail from Vancouver in January 1938, Bethune was a man suspended between hope and desperation. In his parting letters, his emotional spectrum was on full display. To Marian Scott, he was buoyant, almost euphoric, calling on her to read revolutionary texts. China represented his final chance—not just to practice medicine, but to redeem a life marred by personal and political failure. He believed deeply that this mission would be different. This time, he would get it right.

Bethune Travels to the Far East

Bethune's journey to support the Chinese Communists during their resistance against Japan was marked by physical hardships and intense interpersonal conflicts. Onboard the Empress of Asia, Bethune clashed with companions who Bethune suspected of financial mismanagement, causing mistrust. Bethune pushed for transparency but was ignored.

Upon arriving in Hong Kong, logistical chaos and missing funds fueled Bethune's frustration, though a temporary wire transfer offered short-term relief. In wartime Hankou, under constant threat of Japanese air raids, Bethune

faced poor hospital conditions and tensions with journalists. A key meeting with Communist leaders Zhou Enlai and Bo Gu resulted in Bethune committing directly to the Communist cause, despite opposition from peers.

In Tongguan, Bethune began his medical work under primitive and dangerous conditions. Despite increasing volatility in the region, he demonstrated unwavering professionalism. Their final journey to Linfen exposed the full chaos of war: overcrowded trains, air raid threats, and humanitarian crises. Throughout, Bethune emerged as a brilliant yet difficult figure, deeply committed to justice and the Communist cause, unafraid to confront allies and institutions when he saw failure.

Arriving in Yan'an

In late March 1938, after traveling long distances by ship, plane, train, mule wagon, and truck—and narrowly escaping air bombings multiple times—Bethune finally reached Yan'an (延安), the sacred heart of China's revolution, alongside the Eighth Route Army (八路军). On the day after his arrival, he met Chairman Mao Zedong (毛泽东), leader of the Communist Party of China. It was the first time Bethune saw the man whom the Western world called a legend. Mao was dressed plainly in a simple black cotton-padded garment, patched at the sleeves and knees, with the cotton-padded shoes of an ordinary Eighth Route Army soldier.[6]

They spent several hours in an open, free-flowing conversation that stretched late into the night. They talked about China and the world, the challenges faced both on the frontline and in the rear areas, military strategy, and health care. Bethune was struck by Mao's poised manner and the simplicity of his surroundings in the cave dwelling on Fenghuangshan Mountain (凤凰山). Reflecting on the Long March and the strategic guerrilla tactics developed by Mao and Zhu De (朱德) to outmaneuver the better-equipped Japanese forces, Bethune marveled at the man's stature—realizing why Mao inspired such admiration and respect. In his diary, he described Mao as a giant, one of the greatest people in the world.

During this meeting, Mao embraced Bethune's commitment and agreed to his request to go to the frontline to save more soldiers. Mao also warmly welcomed

6. Global Times, "The Happiest and Most Meaningful Two Years in My Life — Stories of Chinese Communists in Norman Bethune's Last Letter," *Global Times*, May 17, 2021, https://www.globaltimes.cn/page/202105/1223647.shtml.

him into the Communist Party and supported his proposal to establish mobile surgical units, assigning Dr. Ma Haide (马海德) to assist him.

Bethune quickly became a public figure in Yan'an but chose to live modestly to avoid burdening local people. At Hejiachuan (何家川), he converted homes into makeshift operating rooms, treating many patients and donating his own blood multiple times. On May 22, he wrote to Mao criticizing the poor medical conditions and calling for a complete overhaul of the Eighth Route Army's medical system, proposing a permanent mobile surgical team funded by Canadian and American aid.

Following this, Bethune moved to Lanxian (蓝县) to continue surgeries and assess local health services. Traveling through Japanese-occupied territory by night, he was welcomed in Wutai County (五台县) and proceeded to Communist headquarters in Jingangku (金岗库) to advance his medical work. There, he met Commander-in-Chief Nie Rongzhen (聂荣臻), who immediately recognized Bethune's value and appointed him medical adviser for the frontier region. Under Nie's leadership, Bethune was empowered to overhaul medical services, establish mobile surgical units, and train local medical personnel—work critical to supporting the guerrilla campaign against the Japanese.

Bethune's Revolutionary Medical Work with the Eighth Route Army

Upon joining the Chinese Communist forces, Bethune shifted his focus from preaching communist ideology to revolutionizing the Eighth Route Army Medical Service. Despite facing significant cultural and language barriers—he did not speak Chinese and was known for his volatile temperament, earning the nickname "Lao Hu" (Old Tiger; 老虎) from Chinese medical staff. Bethune's commitment to improving medical care was unwavering. To help bridge communication gaps, an interpreter, Dong Yueqian (董岳谦), was assigned to assist him. Bethune was highly critical of the poor hospital conditions and outdated medical practices. He demanded sweeping reforms including staff retraining, improved sanitation, and better surgical procedures. Although initially met with resistance, his persistence gradually led to tangible improvements. As Medical Advisor, he launched a "Five Weeks Plan" to transform the base hospital into the finest facility within the Eighth Route Army.

He redesigned operating rooms, introduced new medical equipment, organized patient care routines, established record-keeping systems, and founded cleanup squads and recreational facilities. He advocated for medical education reform by proposing the creation of a training school and a model hospital to rapidly raise standards. Despite military concerns about fixed construction targets, Bethune successfully persuaded authorities to approve building a demonstration hospital in Songyankou (松岩口). This project became a major community effort, involving local villagers in construction and equipment production.

In November, Bethune led his medical team through harsh winter conditions and difficult mountainous terrain in the Yanbei region (燕北地区) to reach frontline hospitals. Upon arrival, he insisted on immediate care for the wounded, personally providing blankets when none were available, emphasizing that patient care was paramount. He and his team treated hundreds of wounded soldiers, often performing surgeries under rudimentary and dangerous conditions. Bethune encountered many cases of severe infection and gangrene caused by inadequate care during transport. This spurred him to perform amputations and pioneer mobile operating units near battlefields, providing timely surgical care that significantly reduced infection rates and mortality.

During a large-scale attack, Bethune's mobile surgical unit worked tirelessly, often in makeshift facilities under enemy bombing, showcasing extraordinary endurance and dedication. His efforts convinced military leaders to support the wider deployment of mobile surgical teams closer to combat zones, fundamentally changing battlefield medical treatment by emphasizing proactive intervention.

Throughout late 1938, while deeply involved in developing the Special Surgical Hospital in North China, Bethune was a prolific writer. He produced numerous letters, articles, reports, medical textbooks, and even a detailed hospital constitution. His literary work also reflected the harsh realities of war: the short story *"The Dud"* and the essay *"Wounds"* vividly depicted wartime suffering and condemned the capitalist and nationalist causes of the conflict.[78]

In January 1939, Bethune inaugurated the Special Surgical Practice School to train largely uneducated and illiterate peasant doctors in surgery and hospital management. His rigorous, hands-on teaching included rotating trainees

through nursing and janitorial roles to build discipline and comprehensive skills. His organizational reforms led to dramatic improvements in medical care, with reports indicating a 200% improvement at the Huata (华塔) base hospital. His methods were recommended for broader adoption throughout the region.

Bethune's dedication extended beyond his professional role, where he lived under extremely harsh conditions, subsisting on poor nutrition and rudimentary housing. He refused better food or rest to live in solidarity with soldiers and patients. This self-sacrifice, however, took a toll on his health, leading to infections and significant weight loss. Despite profound loneliness caused by isolation from language, cultural barriers, and limited contact with others—Bethune remained fiercely committed to his medical and political mission.

Bethune in the Jin-Cha-Ji Border Region, 1938--1939

In June 1938, Bethune arrived in the Jin-Cha-Ji Border Region (晋察冀边区) amidst a desperate shortage of medical supplies. Over the ensuing months, he appealed for assistance from the China Aid Council, sending monthly reports and urgent requests for essential materials like catgut, carbolic acid, and anesthetics. Despite these efforts, communication from the Council was minimal, with only three letters received that failed to address his critical supply needs. Unknown to Bethune, the Council in New York raised funds that intermediaries funneled to the Eighth Route Army, but none of the supplies reached Bethune.

Meanwhile, the China Defence League (CDL; 保卫中国同盟), led by Song Qingling (宋庆龄), sympathetic to Bethune's work, coordinated donations from various sources, including the Canadian League for Peace and Democracy. The CDL received multiple consignments earmarked for Bethune's unit and allocated funds for supplies. Political and logistical challenges likely hindered delivery. These included the long, hazardous transportation routes through Yan'an, Japanese occupation of nearby cities, and potential diversion of supplies to other Communist forces or base hospitals. Communication breakdowns left Bethune unaware of these diversions, fueling his frustration and sense of abandonment.

By late 1938, Bethune sought alternative supply routes leveraging contacts in Japanese-occupied Beijing (北京), where sympathizers had already smuggled

supplies to partisans. This hope was furthered by his December encounter with Kathleen Hall, a New Zealand missionary nurse running a small hospital near his area of operation. Despite ideological differences—Bethune distrusted missionaries as imperialist allies—Hall and Bethune found common ground in their humanitarian mission. Hall's unique position, holding a British passport allowing her train travel to Beijing under Japanese control, made her a vital link. After several meetings and discussions, Hall agreed to transport medical supplies for Bethune and to assist in reuniting his interpreter, Yueqian, with his family in Beijing by covertly smuggling them out under cover. Bethune understood the dangers Hall faced if discovered by Japanese authorities, prompting him to devise further plans to protect their efforts. Throughout this period, Bethune's unwavering commitment to delivering medical aid to the Eighth Route Army endured despite immense obstacles, scarce resources, and political complexities.

In early July 1939, relentless monsoon rains battered Hebei Province (河北省), flooding rivers and turning the land into a quagmire. These floods caused widespread destruction, sweeping away entire villages and devastating crops, but also temporarily stalled Japanese military advances into West Hebei. Despite suffering from infected feet due to prolonged exposure to wet conditions, Bethune remained dedicated and shifted his focus during this military lull to organizing, planning, and teaching. Shortly after returning from Central Hebei, Bethune discovered that the Hospital Central Committee Plan he had championed at the Yangjiazhuang (杨家庄) Special Surgical Hospital had been abandoned. The base hospital was moved, staff dispersed, and the model of elected committees was discarded. He wrote a fierce eight-page letter to Jin-Cha-Ji's health officials, condemning their bureaucratic failure and criticizing their revolutionary understanding. Bethune's ongoing inspections of hospitals across eight subdistricts revealed a severe lack of trained medical personnel, with only a handful of qualified doctors available to care for tens of thousands of wounded troops. Convinced that foreign aid would not arrive, he resolved to build a training program within China, aimed at quickly producing doctors and nurses equipped for guerrilla warfare conditions.

He designed a comprehensive medical school curriculum, including a six-month general course, followed by specialized nursing or medical courses, internships, and further surgical training. A model hospital for practical instruction was planned, to be housed in easily replaceable peasant homes to avoid the vulnerabilities exposed by permanent structures. Bethune also authored a 150-page textbook on mobile surgical techniques. Despite repeated

appeals, Bethune's requests for funds and supplies were ignored. Seeking alternative avenues, he looked to the Anglo-American community in Beijing for support. However, when Kathleen Hall's Anglican mission and hospital at Songjiazhuang (宋家庄) were destroyed by the Japanese in July, and she was subsequently detained and expelled from Beijing, Bethune's plan to travel to Beijing was thwarted. He was warned that Japanese security was tight and that his capture would mean certain execution. With his hopes for fundraising in Beijing dashed, Bethune resolved to return temporarily to North America to conduct a speaking tour and raise the funds necessary to support the medical program.

A Glorious Death: The Final Days of Norman Bethune

In the autumn of 1939, as the Japanese intensified their winter "mopping-up" campaign in western Hebei, Comrade Bethune made a fateful decision. Though scheduled to depart on October 20, he postponed his return and instead led his mobile medical team to the front at Laiyuan-Motienling (来远-摩天岭), where fierce fighting raged. Near the village of Sunchiachuang (孙家庄)—only a few kilometers from the front—Bethune and his comrades, without pausing to eat, converted a small hillside temple into a makeshift operating theatre and began treating wounded soldiers.

As enemy troops drew dangerously near, Bethune's resolve hardened. When warned that Japanese forces were approaching the village, he responded with urgency but no fear, calling for more operating tables to accelerate treatment. Despite the rattling of machine-gun fire and pleas from colleagues to evacuate, Bethune insisted on staying. "An army doctor's duty is to stay with the fighters," he said. "If he dies at his post, it's a glorious death." Even as he sliced his own hand with a scalpel mid-surgery, he dismissed the injury, disinfected it, and pressed on.

After completing his final operation just as bullets rained down, Bethune escaped on horseback with his team, riding through the night to the rear hospital at Kanhoching (坎霍金). There, despite his infected wound, he refused to rest, declaring, "There are so many wounded in need of treatment. How can I sit idly by?" But the infection worsened. As the wound festered and his fever climbed, Bethune still insisted on returning to the front, saying, "You should use me like a machine-gun."[9] Weak and feverish, he rocked in the saddle on the

9. "A Great Internationalist Fighter," *China's Medicine* 11 (November 1967): 823.

journey, apologizing to wounded soldiers for arriving “so late.” By the time the team reached Wangchiatai (王家台), Bethune’s condition was critical. The infection had spread near his elbow, but he worked 16 more hours without pause. On November 9, his temperature soared again. As the Japanese resumed their attack, the army leadership ordered an emergency evacuation. Though wracked with fever and shivering violently, Bethune’s thoughts remained with the soldiers: “What I’m worried about most are the fighters shedding their blood at the front.”

Bethune was taken to Yellow Stone Village (黄石村), where his condition rapidly deteriorated. Villagers and soldiers alike gathered, refusing to leave as news of his illness spread. Despite the doctors’ best efforts—including their suggestion of amputation—Bethune calmly told them to stop, stating, “It’s no longer a matter of the arm. It’s in the blood. Septicemia. Nothing can help me.” In his final hours, he summoned his strength to write a letter expressing gratitude to the Communist Party of China and his comrades. “The last two years have been the most significant, the most meaningful years of my life,” he wrote. To Chairman Mao, he sent thanks for “the education he and the Communist Party have given me.”

With his final breath, Norman Bethune urged his comrades to “fight on” and “carry the cause forward.” He died on November 12, 1939, a martyr to the internationalist cause, remembered not only for his unmatched medical skill, but for his unshakable commitment to human dignity and solidarity. On December 1 soldiers and civilians alike gathered for a memorial meeting in Yan’an, with Bethune’s death igniting a renewed courage among the troops. On December 21, Mao Zedong penned the famous eulogy, *In Memory of Norman Bethune*, enshrining him forever in the hearts of the Chinese people:

“*Comrade Norman Bethune, a member of the Communist Party of Canada, was around fifty when he was sent by the Communist Parties of Canada and the United States to China; he made light of travelling thousands of miles to help us in our War of Resistance Against Japan. He arrived in Yenan in the spring of last year, went to work in the Wutai Mountains, and to our great sorrow died a martyr at his post. What kind of spirit is this that makes a foreigner selflessly adopt the cause of the Chinese people's liberation as his own? It is the spirit of internationalism, the spirit of communism, from which every Chinese Communist must learn. Leninism teaches that the world revolution can only succeed if the proletariat of the capitalist countries supports the struggle for liberation of the colonial and semi-colonial peoples and if the proletariat of the*

colonies and semi-colonies supports that of the proletariat of the capitalist countries. Comrade Bethune put this Leninist line into practice. We Chinese Communists must also follow this line in our practice. We must unite with the proletariat of all the capitalist countries, with the proletariat of Japan, Britain, the United States, Germany, Italy and all other capitalist countries, for this is the only way to overthrow imperialism, to liberate our nation and people and to liberate the other nations and peoples of the world. This is our internationalism, the internationalism with which we oppose both narrow nationalism and narrow patriotism. Comrade Bethune's spirit, his utter devotion to others without any thought of self, was shown in his great sense of responsibility in his work and his great warm-heartedness towards all comrades and the people. Every Communist must learn from him. There are not a few people who are irresponsible in their work, preferring the light and shirking the heavy, passing the burdensome tasks on to others and choosing the easy ones for themselves. At every turn they think of themselves before others. When they make some small contribution, they swell with pride and brag about it for fear that others will not know. They feel no warmth towards comrades and the people but are cold, indifferent and apathetic. In truth such people are not Communists, or at least cannot be counted as devoted Communists. No one who returned from the front failed to express admiration for Bethune whenever his name was mentioned, and none remained unmoved by his spirit. In the Shansi-Chahar-Hopei border area, no soldier or civilian was unmoved who had been treated by Dr. Bethune or had seen how he worked. Every Communist must learn this true communist spirit from Comrade Bethune. Comrade Bethune was a doctor, the art of healing was his profession and he was constantly perfecting his skill, which stood very high in the Eighth Route Army's medical service. His example is an excellent lesson for those people who wish to change their work the moment they see something different and for those who despise technical work as of no consequence or as promising no future. Comrade Bethune and I met only once. Afterwards he wrote me many letters. But I was busy, and I wrote him only one letter and do not even know if he ever received it. I am deeply grieved over his death. Now we are all commemorating him, which shows how profoundly his spirit inspires everyone. We must all learn the spirit of absolute selflessness from him. With this spirit everyone can be very useful to the people. A man's ability may be great or small, but if he has this spirit, he is already noble-minded and pure, a man of moral integrity and above vulgar interests, a man who is of value to the people."[10]

10. Mao Tse-tung. "In Memory of Norman Bethune." In *Selected Works of Mao Tse-tung*, Vol. 2, 337–40. Peking: Foreign Languages Press, 1967.

Communist Heroism: The Living Legacy of Comrade Bai Qiu-En

At 5:20 a.m. on November 12, 1939, Norman Bethune died in a frontline surgical station in northern China. He had operated for over 19 hours in a dim cave hospital, saving the lives of wounded soldiers fighting for national liberation against Japanese imperialism. He died not with his name engraved in textbooks or cast in bronze, but with bloodied sleeves, an infected body, and unfinished work. Yet that unfinished work—the selfless internationalism, the devotion to the people, the revolutionary spirit—was taken up by those who lived.

Forty days later, Chairman Mao Zedong wrote *In Memory of Norman Bethune*, one of the most widely read and enduring political texts in Chinese revolutionary literature. In it, Mao called Bethune "a man of moral integrity, above vulgar interests," and named his spirit, of utter selflessness and internationalism, as one that every Chinese Communist must emulate. This was not idle praise. It was a call to serve the people wholeheartedly and fight imperialism wherever it may take root.

In China today, that call continues to echo. Bethune is remembered not just as a friend of the Chinese people, but as a comrade whose example has become foundational to the moral and political education of hundreds of millions. His story appears in elementary and secondary textbooks across every province, from Hebei to Guangdong. Students learn not only his biography, but the meaning of his deeds—how he transformed his medical skill into a weapon of revolutionary service. In a time when rural China lacked access to even the most basic surgical care, Bethune introduced modern battlefield medicine to the Communist base areas: blood transfusions, antiseptic techniques, mobile surgical units, and hands-on medical training for local health workers. He operated tirelessly under fire, often in makeshift cave hospitals, and insisted that medical care be available to all—not just officers, but the peasantry and the wounded rank-and-file. In doing so, he laid the foundations for a new proletarian medical ethic, rooted in accessibility, egalitarianism, and political purpose. In Hebei Province where he died, an entire network of hospitals, schools, statues, and museums bear his name, including the Bethune International Peace Hospital, the Bethune Memorial Hall, and the Bethune Hope Primary School in the very village where he last operated.

The Bethune Medical Science Center at Jilin University remains one of China's leading medical institutions, and its hospitals—officially named Bethune First, Second, and Third Hospitals—treat thousands each day. Beyond his symbolic presence, Bethune's practical introduction of modern surgical techniques and his dedication to training Chinese medical personnel fundamentally accelerated the development of China's contemporary healthcare system.[11] Statues of Bethune dot university campuses, PLA hospitals, and town square. His image and writings are engraved in the landscape, recited in Party study sessions and political education courses. He is not a foreigner in China. He is a moral ancestor, a name known to virtually every citizen of the People's Republic of China.

And yet in Canada, his legacy is scarcely remembered. In Gravenhurst, Ontario—the small Canadian town where Bethune was born, and the site of one of the country's least visited national historic sites—there are calls to have his statue torn down.[12]

Residents denounce the local monuments to Bethune as a stain on Canadian values. They are so insecure in their own idealism that they will not acknowledge Bethune's years of free medical work among the poor in Montreal, his frontline service in the Spanish Civil War, or his sacrifice in the Chinese resistance against fascism. Instead, they demand the removal of Bethune Memorial House, the downtown statue, and Bethune Drive, on the grounds that a "murderous dictator wrote [his] eulogy." To this camp, Bethune's association with Mao Zedong is reason enough for erasure. His commitment to communism, they argue, disqualifies him from recognition in a town that sees itself as part of the Anglo-Saxon ideal.

Their conceit stretches beyond historical ignorance—it exposes the deep ideological divide over how memory functions under capitalism versus communism. In Canada, Bethune is remembered faintly, if at all, and always with suspicion. His radical commitments are excised or reframed as mere eccentricities. His work is depoliticized, reduced to humanitarian service devoid of context or conviction. But in moments of ideological crisis, when capitalism is forced to name its enemies, his memory is vilified outright,

11. Jean Deslauriers and Denis Goulet, "The Medical Life of Henry Norman Bethune," *Canadian Respiratory Journal* 22, no. 6 (November–December 2015): e32–42, https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4676399/.

12. Doppler Online, "Letters: Remove All Recognition of Norman Bethune in Gravenhurst," *South Muskoka Doppler*, March 18, 2025, https://southmuskoka.doppleronline.ca/letters-remove-all-recognition-of-norman-bethune-in-gravenhurst/[13]

transformed into an object of moral panic. This is not simply amnesia. It is suppression.

Contrast this with China, where Bethune's legacy is not only preserved but actively used to teach, to inspire, to discipline, and to mold new generations into revolutionary citizens. His memory is dialectically reproduced, not as a static icon, but as a standard of living political commitment. In this way, the Chinese proletariat has not merely remembered Bethune, they have made him immortal.

The contradiction could not be more stark: a man erased at home, immortalized abroad. In Canada, he is "a communist" a reason for shame; in China, he is "Comrade Bai Qiu'en" (白求恩), a reason for pride. This contradiction is not personal—it is historical. It reflects the class forces in struggle where imperialism seeks to forget its traitors and communism seeks to elevate its martyrs. And Norman Bethune was a traitor to empire. He betrayed wealth, imperialism, and privilege to serve the international proletariat.

He died not for an Anglo-Saxon Canada, but for Communist solidarity.

What does this tell us today? It tells us that the memory of revolutionaries will always be contested, because history is not a neutral ledger; it is a battlefield; it is undetermined. The war over Bethune's statue in Gravenhurst is not about one man's legacy. It is about what that legacy threatens to reveal: that it is possible—indeed, necessary—for individuals in the imperial core to align themselves with struggles not their own, to renounce nationalist chauvinism, and to give their lives to the fight of the masses against imperialism. Or as Stalin made clear, it is a "necessity for the proletariat of the "dominant" nations to support—resolutely and actively to support—the national liberation movement of the oppressed and dependent peoples."[14] And to this day, protesters in Montreal gather around Bethune's statue in solidarity with Palestine, committed to contemporary struggles against imperialism and occupation.[15]

Norman Bethune is not a hero because he died. He is a hero because he knew what to die for. Because he turned his back on bourgeois individualism and personal privilege, and through action and sacrifice, became a servant of

national liberation. The December 1966 *PLA Daily* editorial marking the anniversary of Bethune's death crystallized this shift, describing Mao's memorial as a "powerful weapon to eradicate self-interest and foster public interest," and portraying petty individualism as a persistent residue of class society that required continual eradication.[16]

In the end, Bethune does not belong to Canada. He belongs to the real movement. He belongs to the collective will. And in every Chinese child who learns his name, every patient treated in a Bethune hospital, and every comrade who reads Mao's eulogy and feels its fire, his legacy lives—unbending, undefeated, and still in struggle.

The Crisis of Neoliberal Capitalism: The Limits of Populism and the Necessity of Socialist Transformation

Jonathan Brown[1]

---

1. Jonathan Brown teaches high school social studies in Athens, Georgia, where he inspires students with his deep passion for exploring society and history. He also teaches sociology as an adjunct professor at Athens Technical College. Jonathan holds a bachelor's degree from the University of Georgia and a master's degree from California State University, Northridge, where he studied culture and politics from a Marxist perspective. Outside the classroom, Jonathan plays guitar in a punk rock band and is an active member of the Jewish anti-Zionist community. He is a committed member of the American Communist Party. Jonathan is the co-host of the Praxis Report, a podcast focusing on revolutionary theory and political analysis.

Introduction

In 1992, in the wake of the collapse of the Soviet Union and the end of the Cold War, American political scientist Francis Fukuyama arrogantly proclaimed the "end of history."[2] According to Fukuyama, Western liberal democracy and free-market capitalism had triumphed once and for all, representing the final form of human government. This ideological triumphalism — the belief that there was no alternative to capitalism — became the foundation for a new political era. For the next fifteen years, the United States operated under a bipartisan economic consensus committed to privatization, deregulation, trade liberalization, and incarceration — a model now widely recognized as *neoliberalism*.[3]

This period of neoliberal triumphalism came crashing down in 2008. The Global Financial Crisis, triggered by the housing market collapse, ushered in the most severe economic recession since the Great Depression.[4] In its wake, the ideological pillars of the neoliberal consensus were thrown into question. Populist movements on the left and right – exemplified by Occupy Wall Street and the Tea Party – emerged to challenge the legitimacy of the existing order.[5] Their message was clear: free-market capitalism is not the inevitable destiny of human history.[6] Public disillusionment with the status quo has only continued to deepen in the years following the 2008 financial crisis — yet this populist energy has yet to coalesce into a successful challenge to the enduring power of neoliberal capitalism.

This paper attempts to provide a comprehensive historical-materialist analysis of neoliberal capitalism: its economic and ideological foundations, its emergence as a distinct phase in the history of capitalist development, the roots of its growing crisis of legitimacy, and the rise of populist movements on the left and right. I argue that only a revived communist movement can transform the scattered populist rebellions of today into a unified, revolutionary struggle. Rather than calling for reforms, this movement must aim to rebuild the country

from the ground up — re-industrializing the economy, restoring popular sovereignty, and taking back power from the financial oligarchy. Such a revolutionary transformation can only be achieved by the working-class, under the vanguard leadership of the American Communist Party (ACP).

What is Neoliberal Capitalism?

To understand the challenges posed to neoliberal capitalism by populist movements today, we must first define what neoliberalism is, outline its core features, situate it within the historical development of the capitalist mode of production, and identify the specific mechanisms through which it has entered a state of crisis. Neoliberalism can be analyzed as both a specific period in capitalism's historical development and a set of ideas and policies regarding the role of markets in social life. In that sense, I will define neoliberalism broadly as a social, political, and economic regime that emerged in the late 1970s that serves the interests of global financial institutions seeking to transform all domains of social life along the lines of free-market capitalism.[7]

The present study focuses on two salient dimensions of neoliberalism that are commonly explored in the literature. The first dimension highlights neoliberalism as a set of policy issues, such as deregulation and global free trade initiatives. The second characterizes neoliberalism as a governing rationality that has come to pervade both economic and non-economic spheres of social life. This second dimension refers not just to a specific set of policies, but rather to a dominant ideology that imposes market logic and rationality onto the operation of major institutions that shape our lives. In the sections that follow, I offer an analysis of both these two distinct dimensions of neoliberalism.

The Neoliberal Policy Agenda

One way to think of neoliberalism is as support for a particular political and economic policy agenda designed to expand global markets and restructure domains of social life under the purview of the marketplace. This neoliberal policy agenda includes four core elements: privatization, deregulation, trade liberalization, and incarceration. These will each be explored in detail below.

7. Raewyn Connell, "Understanding Neoliberalism," in *Neoliberalism and Everyday Life*, ed. Susan Braedley and Meg Luxton (Montreal: McGill-Queen's Press-MQUP, 2010), 22-36.

Privatization

During the early 20th century, governments around the world began to take on the administration of a variety of tasks that the private sector had previously performed, nationalizing industries such as transportation, energy, education, and healthcare.[8] Privatization represents the reversal of public-sector administration, transferring the control and delivery of essential services from the state to the market.[9] As a result, the maintenance of public infrastructure and the provision of vital social services are being driven by the pursuit of private profit rather than by serving the public interest.[10] Since the 1970s, large swaths of public services have been transferred to private enterprises.

Privatization is often justified by its proponents as a means of promoting economic freedom. Within this framework, government administration is portrayed as a form of tyranny, while market mechanisms are equated with individual liberty.[11] However, historical research has shown that the origins of privatization lie not in freedom, but in fascist dictatorship, as both Nazi Germany and Pinochet's Chile used it to enrich elites and suppress dissent.[12] These experiments laid the groundwork for privatization's adoption in the United States in the 1980s, where it became a central plank of neoliberal policy. Far from enhancing liberty, it has functioned as a tool of ruling-class consolidation, replacing public interest with private profit.

Deregulation

Deregulation is the second key policy goal under neoliberalism. This involves the reduction of government rules and guidelines that regulate the behavior of the private sector, as well as the defunding or elimination of government regulatory agencies.[13] Since neoliberalism views government regulations as an

obstacle to free market competition, deregulation is promoted as a means of removing unnecessary government interference and unleashing economic growth, which is believed to benefit the general public. However, in practice, deregulation has often produced harmful consequences for consumers and society.

For example, efforts to deregulate media and finance in the 1990s, such as loosening ownership rules and dismantling the separation between commercial and investment banking, led to massive corporate consolidation and speculative risk-taking. A handful of conglomerates came to dominate media markets, limiting consumer choice and access, especially in less profitable rural areas.[14] In finance, deregulation paved the way for the reckless practices that triggered the 2008 global crisis—causing widespread foreclosures, job losses, and recession.[15] Far from benefiting consumers, these policies have concentrated power, weakened public oversight, and heightened economic instability.

Trade Liberalization

Neoliberalism involves the process of eliminating barriers to corporate free trade and establishing international governmental organizations to manage and oversee the flow of capital across national boundaries.[16] While often presented as a path to growth and efficiency, trade liberalization has had devastating effects on working people in the United States. By removing tariffs, quotas, and other protections for domestic industry, neoliberal trade policy has enabled corporations to offshore manufacturing to countries with lower wages, fewer regulations, and minimal labor protections.[17] This process of global labor arbitrage has led to the deindustrialization of vast sectors of the U.S. economy. Cities and towns once sustained by unionized manufacturing jobs — especially across the Rust Belt — have been hollowed out, leaving behind mass

unemployment, wage stagnation, social disintegration, and the collapse of working-class political power.[18]

Incarceration

The final aspect of the neoliberal policy agenda involves the expansion and militarization of the carceral state.[19] Whereas liberal policy-makers of the mid-20th century had once declared a "War on Poverty," the neoliberal consensus has sparked a war on the poor themselves.[20] Under neoliberalism, the carceral state has supplanted the welfare state as the primary means of managing the surplus population, warehousing the unemployed through means of policing, incarceration, and surveillance rather than social support.[21] As neoliberal politicians dismantled the social safety net through privatization and deregulation, and deindustrialization drove factory workers into unemployment by offshoring manufacturing jobs, the prison system emerged as the primary tool for managing social inequality.[22] As incarceration rates soared in the late 20th century, the government increasingly outsourced prison operations to private corporations whose profit model depends on mass incarceration.[23] Such is the logic of neoliberalism: dismantle industry, auction off public services, and lock away those who have been left behind.

Neoliberal Subjectivity

Neoliberalism goes beyond a set of policies: it is also a way of thinking about and understanding the world.[24] A unique form of subjectivity has emerged as a

result of the way production is organized under neoliberal capitalism. This neoliberal subjectivity applies the logic of market calculation not only to the management of the affairs of the state but also to virtually all major institutions in contemporary society.[25] As a result, the entrepreneurial values of individual competition has come to be the dominant standard across society as a whole, not just the marketplace.[26] Consequently, all institutions of the public sector and civil society now operate according to the logic of the profit-seeking corporation.[27]

But neoliberalism does not stop at transforming the mode of governance of social institutions. Neoliberal subjectivity persuades individuals to govern themselves through the model of individual competition promoted through the market.[28] It is in this sense that the governing rationality of the marketplace penetrates not only institutions but the individual as well. Under neoliberalism, identity, lifestyle, and the self all become commodities to be bought and sold on the marketplace.[29] This neoliberal governing rationality encourages individuals to view themselves as brands to be marketed and promoted.[30] This notion of "self as commodity" reproduces neoliberalism's core logic: that individuals can only realize their potential through the pursuit of self-interest in the marketplace.

Having defined neoliberalism as both a set of policies and a mode of subject formation, we can now situate it within the broader historical development of the capitalist mode of production. Neoliberalism is not an ahistorical phenomenon, but a distinct phase in the ongoing transformation of capitalist social relations — one shaped by, and responsive to, the specific crises and contradictions of its time.

The historical-materialist perspective divides the development of human society into stages based on its mode of production, which encompasses both the forces of production (such as tools and technology) and the relations of production (how labor is organized).[31] Historically, there have been five major modes of production: primitive communism, slavery, feudalism, capitalism, and socialism.[32] Each stage develops internal contradictions that ultimately lead to its revolutionary transformation into a new social order. Importantly, past forms of society do not disappear all at once; remnants of previous modes of production persist within newer systems. In this sense, capitalism did not appear overnight, but emerged from within the decaying structures of feudalism, gradually supplanting it as its internal contradictions intensified.

Capitalism itself can be divided into several distinct periods or stages. The earliest period was identified by Marx as "primitive accumulation."[33] This involved the dispossession of peasants from the common land, colonial conquest, and the transatlantic slave trade. These activities created the conditions for the development of capitalism by centralizing wealth and resources in the hands of a few, setting the stage for wage labor and commodity production.[34] Primitive accumulation was followed by the era of mercantile capitalism, marked by the dominance of merchants and the expansion of long-distance trade.[35] During this time, the early factory system began to emerge, but production largely remained organized by guilds and artisans.

By the end of the 18th century, the Industrial Revolution shifted capitalism's center from trade to large-scale factory production. Manufacturing displaced guilds, and a sharp division between capitalists and workers emerged.[36] This era was defined by classical liberalism, which promoted individual rights and free markets as natural expressions of liberty.[37] But the promise of free competition soon gave way to monopoly capitalism.[38] Smaller firms were

absorbed into large corporations, forming cartels and conglomerates. Capitalist states expanded abroad in search of markets and resources, revealing the imperialist dimension of the system.[39] The unregulated market, far from guaranteeing freedom, produced a new kind of domination — financial oligarchy masked as liberty.

In the early 20th century, several global developments pushed monopoly capitalism into a period of transformation. In response to the Great Depression and World War II, the Western capitalist countries adopted extensive policies of state intervention and social welfare to stabilize their economies and contain social unrest. This period, often referred to as state-managed capitalism, saw governments take an active role in economic regulation — nationalizing key industries, expanding public services, and creating social safety nets.[40]

The period of state-managed capitalism was marked by high public spending, progressive taxation, and a heavily unionized workforce. The economy functioned under the logic of mass production, standardized labor, and rising wages to create a stable base of mass consumers.[41] This supported the growth of a large middle-class, strong organized labor, and a relative degree of economic equality. Welfare policies during this era were not socialist in character but rather reformist measures designed to save capitalism from itself, defuse working-class militancy, and prevent revolutionary upheaval.[42] As Nicole Aschoff explained, "the only thing that kept [state-managed capitalism] alive was the threat posed by the Soviet Union, the space for profitable economic growth after the devastation of World War II, and the power of organized labor and mass social movements – a power so great it made ruling elites quake."[43]

By the end of the 1970s, the state-managed capitalist order was in crisis.[44] The economy was experiencing several problems, including inflation,

unemployment, oil shocks, and declining profits. These conditions discredited state-managed capitalism in the eyes of the ruling class and opened the door to new ideas. Neoliberalism was offered as a solution that could restore the economy by favoring capital over labor. President Jimmy Carter became the first administration that began to experiment with neoliberal policies, shifting the Democratic Party away from New Deal economic policies toward fiscal conservatism. Carter slashed the top income tax-rates and deregulated several key industries, including trucking, airlines, railroads, and oil.[45] This set the stage for Ronald Reagan to deepen and accelerate the neoliberal turn, embedding market deregulation, austerity, and anti-labor policies as the new bipartisan consensus that would dominate American politics for decades.

When Reagan took office in 1981, he famously declared, "government is not the solution to our problem; government is the problem."[46]. Reagan slashed the top marginal income tax rates from 70% down to 28%.[47] This was justified by the pseudo-intellectual doctrine of "supply-side economics," which claimed that cutting taxes for the rich would "trickle down" to the benefit of the working-class.[48] Reagan followed his upper-class tax-cuts with massive reductions in funding for welfare programs, public housing, education, and healthcare.[49] But perhaps most significantly, Reagan launched an all-out assault on organized labor. In 1981, Reagan infamously fired 11,000 striking air traffic controllers, signaling an aggressive stance against labor unions.[50] As a result, union membership declined sharply throughout the 1980s.

The election of Democratic Party president Bill Clinton in 1992 demonstrated the extent to which neoliberalism had become accepted by both parties. Clinton

proudly declared that "the era of big government is over" and continued his predecessor's policies of deregulation and privatization.[51] During his eight years in office, Clinton launched a massive overhaul of the welfare system, drastically expanded the carceral state, de-industrialized manufacturing jobs, and deregulated the financial sector.[52]

The bipartisan neoliberal consensus continued into the 21st century with the subsequent presidencies of Bush and Obama, who both offered little more than slight variations on the same neoliberal policy agenda. It seemed as though neoliberalism was an unstoppable force, the "end of history," as Fukuyama had foretold. Yet beneath this apparent consensus, the structural contradictions of neoliberal capitalism were deepening — setting the stage for a profound legitimation crisis and the beginnings of a revolutionary situation. It is the nature of this crisis that we turn to next.

The Crisis of Neoliberalism

In the wake of the 2008 financial crash, the ruling class has become increasingly unable to secure consent through traditional means such as electoral politics, consumer integration, or ideological control. This has led to widespread disillusionment with the institutions of bourgeois society, growing political polarization, and an erosion of faith in capitalism's ability to provide a stable or dignified life. The old consensus — built on endless growth, upward mobility, and consumer abundance — has fractured. In its place has emerged a volatile social order marked by economic precarity, mass debt, collapsing public infrastructure, and a rising tide of resistance. What we are witnessing is not merely a political crisis, but a structural one. Neoliberalism has exhausted its ability to stabilize the system it was designed to rescue.

In order to understand the current instability of neoliberal capitalism, it is essential to examine the theoretical conditions under which a social order begins to unravel. Lenin's concept of a *revolutionary situation* offers us a crucial insight into how and when ruling systems enter periods of crisis and

potential transformation.[53] Lenin identified three essential objective conditions that signal the onset of a revolutionary situation: first, the ruling class is no longer able to govern in the old way, which leads to a crisis at the top; second, the misery and suffering of the working-class has grown extreme, generating a crisis from below; and finally, the masses begin to take independent political action demanding change.[54] Yet even these conditions are not sufficient on their own. What determines whether a revolution actually occurs is the presence of a *subjective factor* — that is, a conscious and organized revolutionary force capable of leading the masses in toppling the old order. This includes the political consciousness of the working class, its level of organization, and most importantly, the existence of a vanguard party capable of developing and applying a clear revolutionary strategy.[55]

Today, many of Lenin's objective conditions are already present. There is growing evidence of a crisis at the top, with the ruling class becoming fractured and increasingly reliant on authoritarian and technocratic measures to maintain control. Public opinion polls reveal a broad loss of trust in nearly every major American institution—from schools and healthcare to Congress, the media, and the criminal justice system.[56] This collapse of institutional trust has forced the ruling class to govern through increasingly unstable and contradictory means. Rather than securing consent through genuine democratic participation or shared prosperity, the elites now rely on a combination of authoritarian coercion, technocratic management, and manufactured spectacle. Political leadership increasingly takes the form of aestheticized rebellion, with candidates across the spectrum marketing themselves as outsiders, disruptors, or populists — even as they remain fully embedded in the structures of elite power.[57] This phenomenon is not a renewal of democratic vitality but a symptom of decay: the ruling class can no longer rule in the old way, and must now simulate popular legitimacy through manipulation and performance.

At the same time, the suffering of the working class has grown acute, revealing a deep crisis from below. The disintegration of working-class life is now visible in the so-called "deaths of despair" — rising rates of suicide, drug overdose, and alcohol-related illness — particularly among middle-aged workers stripped of stable employment and social rootedness.[58] These are not isolated pathologies, but systemic outcomes of a political economy that has abandoned productive labor in favor of speculative capital. The collapse of manufacturing, the decline of union density, the erosion of public services, and the rise of precarious gig work have created a landscape of atomization, hopelessness, and rage.[59] This is not simply economic hardship but a material breakdown of the conditions of life, which, as Lenin warned, produces the combustible fuel for revolutionary change.

These mounting pressures have not gone unanswered by the masses, who have begun to take political action outside the boundaries of traditional elite consensus.[60] The rise of populist movements on the left and right reflect a widespread sense that the system is rigged, illegitimate, and incapable of meeting the needs of ordinary people.[61] However, these movements remain immature and politically incoherent, lacking both a revolutionary theory and a revolutionary organization to guide them. Their energy has been absorbed into reformist channels, redirected back into the two-party system.[62] The working class has shown signs of awakening, but its political activity is still largely spontaneous, fragmented, and reactive. As Lenin emphasized, mass unrest alone is not enough — without a conscious vanguard capable of uniting scattered discontent into a disciplined revolutionary force, such uprisings risk being defused, co-opted, or crushed. What exists today is not yet a revolutionary situation, but the raw material from which one could be built, if revolutionary leadership rises to the task. Such a moment will not arise or resolve itself spontaneously — it will require bold leadership from a vanguard

party, namely the ACP, to channel the mounting frustrations of the masses into organized, revolutionary struggle.

Responses to Neoliberalism

If neoliberal capitalism is facing a crisis of legitimacy, then why haven't resistance movements been successful at channeling public discontent into a revolutionary situation? Thus far, anti-establishment politics has not significantly altered the political and economic domination of neoliberalism.[63] Why is this the case? Bonanno argues that neoliberalism has been able to maintain its dominance due to the various ways in which the system has co-opted resistance movements through a process that he refers to as the "neoliberalization of resistance."[64] There has been a significant transformation in the strategies, ideologies, and organizational characteristics of social movements that has occurred during the transformation from state-managed capitalism to neoliberalism. Class struggle during the period of state-managed capitalism was based on "social places of opposition," or spatial locations of socio-political aggregation where people could collectively pursue oppositional struggle.[65] These social places of opposition included schools, neighborhoods, workplaces, and other geographic locations where communities of people were spatially concentrated. As a result, resistance was expressed through participation in membership-based organizations, such as labor unions and the Communist Party. Today, resistance has shifted to loosely connected informal organizations that emphasize individual action over class struggle.[66] Individual activism is often expressed through consumption in the market. Under neoliberalism, supporting a political cause takes the form of purchasing an "environmentally friendly" product or supporting a "socially conscious" brand, actions which turn resistance into a commodity.[67]

A related phenomenon is the rise of what Nancy Fraser has termed "progressive neoliberalism," which is an attempt to harmonize leftist ideals of social justice

with the market imperatives of corporate profit.[68] This doctrine of progressive neoliberalism emerged as many on the left began to see capitalism as unassailable, and therefore sought a way to pursue leftist goals of social emancipation within the parameters of the neoliberal order.[69] In particular, advocates of progressive neoliberalism seek to align movements that advocate for identity politics with powerful sectors of the business world, such as finance, Big Tech, and the mass media.[70] This has led to an odd alliance of "movements that stress identity and the right to be different with Wall Street, the Silicon Valley, and Hollywood."[71] It can be seen, then, that progressive neoliberalism is an attempt to use identity politics to mask capitalist exploitation behind a veneer of diversity.[72]

However, this doctrine has proved to be both deeply unpopular and completely ineffective at containing the growing contradictions of neoliberal capitalism. The obsession with identity politics has led to a widespread backlash, as many reject the notion that elevating a new rank of black professionals into the halls of corporate power constitutes genuine progress for the black working-class.[73]Rather than lead to any substantial change in political-economic policy, progressive neoliberalism has merely contributed to an increased fragmentation of society, leading to widespread polarization and division. Perhaps this is because slapping a progressive veneer on neoliberal capitalism was destined to fail. As Friedrich Engels once explained, the bourgeoisie will always essentially be conservative, no matter how liberal it dresses itself up to be.[74]

The failure of progressive neoliberalism has not gone unanswered. In its wake, a growing populist backlash has taken shape in America, giving rise to new

movements on both the left and the right. Disillusioned with decades of neoliberal policies and the hollow promises of identity politics, millions have turned toward populist alternatives that claim to speak for the people against entrenched power. It is to these populist movements that we now turn.

The Rise of Populism

Marx famously observed that history repeats itself, first as tragedy, then as farce.[75] The rise of 21st century populism illustrates this pattern all too well. The crises of the early 20th century — World War I, the Great Depression — provoked a wave of militant labor organizing and a surge in socialist radicalism.[76] In contrast, the response to the Great Recession has not been the rebirth of a mass communist movement, but rather the rise of a populist backlash that resembles more a diffuse mood of discontent than a revolutionary project. Despite its ideological vagueness, this populist mood has provoked panic among elites, revealing just how fragile neoliberal legitimacy has become.

But what is populism? The term first emerged in the 1890s with the People's Party, which championed agrarian interests against industrial elites. Today, it broadly refers to political movements that seek to represent the interests of "the people" against a "corrupted elite."[77] Yet who counts as "the people" and who belongs to "the elite" varies widely, making populism a flexible and often ambiguous category. Scholars typically distinguish between left-wing and right-wing varieties of populism. Purdy argues that left populism punches upward at the elite, while right-wing populism punches both up and down – attacking the elites while also scapegoating those at the bottom who are seen as threats to the people, such as immigrant groups.[78]

Since 2008, both forms of populism have gained ground in U.S. politics, reflected in protest movements and electoral campaigns alike. While they give voice to growing discontent with neoliberalism, neither offers a coherent

revolutionary alternative. The following section will explore the specific dynamics of left and right populism, highlighting their appeal, and their limitations.

Left-Wing Populism

The current wave of left-wing populist resistance to neoliberalism began with Occupy Wall Street in 2011 — a mass uprising against economic inequality that spread rapidly across the country. Sparked by the 2008 financial crisis, Occupy helped shape public discourse with its popular slogan, "we are 99 percent!"[79] The movement's strategy was centered on physically reclaiming public spaces as symbolic encampments of resistance. These "occupied zones" were intended to represent liberated spaces where democratic participation and communal living could flourish.[80] However, this tactic ultimately failed, with the encampments being torn down and evicted by the police.[81]

Despite raising awareness of income inequality, Occupy suffered from two major weaknesses. First, its central slogan, though rhetorically effective, failed to articulate a class analysis. By presenting the crisis as a moral outrage committed by the "1 percent" against the "99 percent," Occupy obscured the structural relationship between labor and capital and collapsed class distinctions. Its critique was focused on the *distribution* of wealth, not the *production* and ownership of it.[82] Second, the movement rejected formal leadership, refused to articulate demands, or build organizational infrastructure.[83] As a result, Occupy was unable to contest capitalist dominance in any serious manner. In retrospect, the movement revealed a real hunger for anti-capitalist politics — but lacked the theory, discipline, and organizational clarity necessary to channel that hunger into revolutionary action.

In the wake of Occupy's collapse, the momentum it unleashed found a new outlet in electoral politics — culminating in the 2016 and 2020 Bernie Sanders campaigns, which marked the peak of left-populist electoral energy in the United States. Sanders galvanized millions, especially young college students and downwardly mobile urban professionals, by speaking the language of the working class in an era of elite technocratic detachment. Sanders openly embraced the label "socialist," breaking a decades-long taboo in American politics.[84] He called for a "political revolution," railed against the billionaire class, and demanded reforms like Medicare for All, tuition-free college, and progressive taxation.[85] In doing so, he brought the term "socialism" back into mainstream political discourse and exposed the corruption of the Democratic National Committee (DNC).[86]

Yet Sanders' populism was defined as much by its limitations as its breakthroughs. The DNC actively undermined his campaign in both election cycles, rigging the primary process to secure establishment victories.[87] Rather than confront this betrayal or break from the Democratic Party, Sanders capitulated to the party elite. Despite mobilizing a mass movement, he refused to pursue an independent path outside the Democratic machine. His critique of the party elites ultimately collapsed into a call to vote for the very establishment politicians he had just denounced. As such, Sanders functioned not as a threat to the Democratic Party, but as its left-wing safety valve — channeling discontent back into the party.[88]

Politically, Sanders' vision suffered from the same ideological weaknesses as Occupy. His critique of capitalism focused on redistribution, not production. While he advocated for a more generous welfare state, he never challenged the capitalist ownership of the means of production. His "socialism" amounted to a

88. Kimberley, "Bernie and AOC Sheepdog for the Democrats."

nostalgic desire to restore the New Deal rather than to supersede capitalism.[89] In the end, Sanders offered not a break with capitalist exploitation, but a more humane version of it.

Following the collapse of the Sanders campaigns, the most significant political developments were the explosive growth of the Democratic Socialists of America (DSA) and the electoral rise of a new generation of politicians known as "the Squad."[90] Together, they represent the institutional afterlife of Bernie's populist wave — its energy absorbed, redirected, and ultimately neutralized by the Democratic Party. The DSA saw rapid expansion in the wake of Sanders' rise. Virtually overnight, its membership surged from around 6,000 to nearly 60,000, with the median age dropping from 68 to 33.[91] Yet while the numbers grew, its strategy remained firmly tied to the Democratic Party. Founded during the Cold War, the DSA sought to distance itself from Marxism-Leninism and explicitly denounced the Soviet Union. Instead, they advocated for working within the Democratic Party, calling this strategy "the left wing of the possible."[92] The DSA was never intended as a vehicle for class struggle, but as a pressure group aimed at nudging the Democrats leftward through electoral reform and moral persuasion. However, after decades of futile attempts to "push the party to the left," it is clear that the DSA's strategy is fundamentally flawed.

The failure of left-wing populism is not accidental — it reflects a deeper historical pattern. The debate between reform and revolution has a long history within the socialist movement. Marxists, such as Rosa Luxemburg in her famous pamphlet *Reform or Revolution*, have always maintained that reforms can be valuable, but only insofar as they prepare the working class for the final, decisive struggle against capitalism itself.[93] Lenin, likewise, rejected the idea that workers should be placated with redistribution, mocking the idea of

fighting over "crumbs" left by the bourgeoisie.[94] For Marxists, the goal has always been seizing control of state power and the means of production.

Left-wing populism has failed to learn from this history. It seeks to challenge neoliberalism, but not capitalism as a whole. Its politics are rooted in economic nostalgia — a longing to return to the New Deal and the mid-century welfare state.[95]. But that era of state-managed capitalism was made possible by conditions that no longer exist. First, it was the strength of militant labor that forced capital to make concessions.[96] Second, the existence of the Soviet Union offered a viable alternative that threatened the dominance of global capitalism.[97] And third, the postwar dominance of U.S. imperialism allowed the American ruling class to extract super-profits from the Global South, using them to pacify its domestic working class.[98] Without those structural conditions, the dream of returning to a more humane capitalism is fantasy. Left-wing populism, far from breaking the system, serves to stabilize it — giving the illusion of dissent while protecting capital.

Right-Wing Populism

The current manifestation of right-wing populism can trace its roots back to the Tea Party movement, which emerged in 2009 in response to the financial crisis.[99] While often dismissed as racist and reactionary by neoliberals, the Tea Party was rooted in the real grievances of downwardly mobile middle Americans, particularly small business owners and rural conservatives whose economic standing had deteriorated under neoliberal capitalism.[100] They protested the Wall Street bailouts and railed against tax increases. Though many Tea Party activists claimed to support the free-market, their critique of

"crony capitalism" reflected a proto-class consciousness: a vague sense that the system was rigged, even if they misidentified the source of their oppression.[101] Ultimately, the Tea Party was absorbed into the Republican establishment, where it served to redirect working-class anger into culture war politics while leaving capitalist power structures untouched.[102]

The ultimate electoral expression of right-wing populism in the United States has been the rise of Donald Trump and the Make America Great Again (MAGA) movement. While often reduced to the persona of Trump himself, MAGA is not about one man — it is a broader political expression of disillusionment, betrayal, and class anger among millions of Americans.[103]. Trump, despite being a billionaire real estate mogul and reality TV celebrity, became a vessel for this discontent. His presidential campaigns broke from Republican Party orthodoxy in key ways: he attacked political corruption, criticized neoliberal trade deals, promised to "drain the swamp," and lambasted the corporate media as "fake news."[104] He portrayed America as a nation in decline, ravaged by "carnage," and offered himself as a populist savior.[105] Trump's crude, unscripted style and rejection of technocratic decorum exposed the fragility of elite authority, and resonated with millions of Americans — especially in rural, deindustrialized, and small-town regions.[106].

The political establishment responded to Trump with open panic. In their ideological hysteria, they branded him simultaneously as a fascist and a Russian agent — Hitler and Stalin in the same breath.[107] These absurd claims reveal less about Trump himself than about the crisis of neoliberalism. What the ruling-class truly fears is not Trump's policies — many of which conform to capitalist orthodoxy — but the fact that he pierced the illusion of consensus

and gave voice to millions of disgruntled workers.[108] Hillary Clinton captured the contempt of the neoliberal elite when she dismissed the MAGA movement as a "basket of deplorables."[109] A cottage industry of pundits and researchers emerged to insist that economic anxiety played no role in Trump's success, reducing everything to racial resentment.[110] But this narrative collapses under scrutiny. Millions of Obama voters switched to Trump in 2016, and Trump gained historic levels of support from non-white voters in 2024.[111]. MAGA is not an expression of white supremacy but rather an embryonic form of class discontent.

For all his populist bombast, Trump is clearly no revolutionary. He is a capitalist oligarch who critiques the system without actually challenging it. His rhetoric captures mass frustration, but his ideology is incoherent and his policies serve the very system he claims to oppose. Despite promising to "drain the swamp," Trump filled his administration with corporate executives, lobbyists, and war hawks —the same swamp creatures he had railed against.[112] Far from dismantling neoliberalism, his tariffs function as a means of shifting tax burdens onto workers, reinforcing the very structures Trump claimed to resist.[113]

Right-wing populism is a symptom of a system in crisis. It offers no coherent solution, but it does mark a rupture — an opening through which a genuine communist alternative can emerge.[114] The task now is to meet this moment with revolutionary clarity — not vague populist slogans or nostalgia for postwar liberalism, but a working-class movement capable of confronting capitalism at its root.

Conclusion

The neoliberal era began in the 1980s, driven by a bipartisan consensus around market privatization, deregulation, trade liberalization, and incarceration. After the fall of the Soviet Union, this model was celebrated as the final triumph of capitalism — the so-called "end of history." For a brief moment, the ruling class believed its own mythology: that bourgeois democracy and the free-market had permanently defeated the specter of communism. But today, that illusion lies in ruins. No one — least of all the neoliberals themselves — still believes the Western capitalist order is stable, just, or inevitable. After four decades, neoliberalism has produced nothing but stagnation, inequality, and decay. The objective conditions for revolutionary transformation are present. But history does not advance through conditions alone. It demands conscious leadership — a revolutionary force capable of giving direction to mass discontent.

The populist movements that have emerged reflect the rage of a population betrayed by elites and abandoned by both major parties — but they offer no real path forward. We must go beyond the dead-end of populism. Both left-wing and right-wing variants rely on nostalgia: a longing to return to the postwar era of state-managed capitalism. But that material foundation is gone. There will be no New Deal revival, no return to the Great Society. The path forward is not back to a kinder capitalism, but toward a new system entirely. Only communism can resolve the current crisis — by ending the dictatorship of capital and placing society's needs at the center of economic life.

In opposition to decades of neoliberal policies that have hollowed out the American economy, the ACP stands poised to offer a genuine socialist alternative — rooted in the unique social and historical conditions of the American people. Against the neoliberal era's drive toward privatization, the ACP demands housing, healthcare, education, and employment as fundamental rights. In response to the offshoring of manufacturing and the collapse of industrial labor, it calls for the reindustrialization of the country under public ownership and democratic control. The task ahead is to transform the public's widespread discontent with the status quo into a revolutionary movement for a renewed and distinctly American socialism. A new chapter in American history is waiting to be written — and only a revived communist movement can lead the way.

Message from the Chairman

Haz Al-Din[1]

Dear comrades,

Over the past month, it was uncertain whether or not our country was on the precipice of a world war against Iran. It still remains to be seen what consequences will be born out of the various threats and provocations of our criminal regime. We are living in an unprecedented era of geopolitical instability, and open criminal aggression by an increasingly desperate and declining American imperialist hegemony. It is necessary to strongly take into consideration the ramifications of our criminal regime's outward aggression will have domestically, principally with respect to patriotic opponents of criminal US imperialism - including our American Communist Party.

Now more than ever, it is necessary to return to the basic writings and wisdom of our Marxist-Leninist tradition, specifically the works of Lenin on the question of what stance it is necessary for principled Marxists to take with respect to their own imperialist regime, and what domestic class contradictions are wrought out from wars of foreign imperialist aggression and chauvinism. The dynamics of the internal national contradictions at play with respect to the oppression of other nations by our own regime are especially important to bare in mind and keep in consideration. The basic wisdom of Leninism holds that the most effective means by which we can combat the imperialist designs of our

---

regime - is by linking up foreign anti-imperialist struggles with the mass strata of working people domestically, to concretely draw out and realize through the most advanced means of communication how their interests and position aligns.

Toward that end, we must be especially vigilant toward the opportunistic trends which are inevitably emerging amidst the breakdown and decay of the American imperialist system - principally those which, while fashioning themselves as ‘left,’ align materially with the hegemony of the criminal US regime. By this, I chiefly have in mind the latest ‘trend’ of liberal-leftism in the form of Zohran Mamdani’s New York City mayoral run. Just recently, Zohran has won the Democratic Party primary, which has created an air of excitement and momentum around his personality. It is the responsibility of principled Marxists to correctly educate the masses about why such ‘campaigns’ - following a long trend of Obama, Bernie Sanders, AOC, etc. - are unable to succeed in confronting the system, and only serve the purpose of directing the energy of young people toward the imperial hegemony.

The principal advantage of Communists over all such ‘trends’ lies in their acknowledgement of the principle of collective organization: A principle which, while not as glamorous as the various political ‘celebrity’ vanity campaigns, surely outlives and outlasts them all in practice.

The Dual Meaning of Philosophy in Crisis

Carlos L. Garrido[1]

Why philosophy in crisis? Is this simply a hyperbolic expression, a blowing out of proportion the condition we are in, or, better yet, the condition philosophy is in? Today speaking about the crisis of something is quite popular. Could the subject of the crisis of philosophy be simply one more in a general trend of individuals who treat everything as a crisis? For the layman, a crisis is a situation of chaos, a situation where control is lost. "We are in a crisis situation" is equivalent, then, to "We have lost control."

I do not seek to employ the concept of crisis in the same manner. Crisis, for me, is not a moment where control is lost and one renounces oneself to uncertainty. Crisis, from its original Greek, *krísis,* refers to a turning point. Its root is *krinō*, which refers to a separation. A separation is a tearing apart of what was together. To speak of crisis, then, is to speak about a lost connection. It is to

---

1. Carlos L. Garrido is a Cuban American philosophy professor. He is the Director of the Midwestern Marx Institute and the Secretary of Education of the American Communist Party. Subscribe to his Substack: *Philosophy in Crisis*.

speak about disconnection, about alienation. A crisis is the making foreign of something that is integral to its other.

Capitalism and Crisis for Marx

For Marx, the germ of the general crisis of capital was in the tearing apart of the moment of production and sale, in the fact that they "fall apart and can become independent of each other."[2] It was the disconnection of a more primordial direct appropriation of producers, central to the capitalist mode of production, which festers in time into the general crisis of capital. As he writes in the all-too often overlooked *Theories of Surplus Value*, "the crisis manifests the unity of the two phases that have become independent of each other. There would be no crisis without this inner unity of factors that are apparently indifferent to each other… The Crisis is precisely the phase of disturbance and interruption of the process of reproduction."[3] The 'crisis' in the crisis of capitalism, for Marx, is still understood in its etymological terms – crisis as disconnection, as separation. But this separation is not all. It is only the first component.

This is a separation that in manifesting itself retroactively demonstrates the fundamental unity which has been disrupted. In crisis we are forced to tarry with the immediate need of reconnecting, reuniting, that which has been separated. It is through the obstacle, that is, through the disconnection, that the horizon for the need for unity presents itself. As Marx writes, "the general possibility of crisis is the formal metamorphosis of capital itself, the separation, in time and space, of purchase and sale."[4] "But" he adds, "this is never the cause of the crisis."[5] What does he mean by it not being the cause? Simply that the immediate cause arises after the initial separation, that capitalist crisis is of the nature whose conditions for the possibility come from itself. Crisis does not arrive from something external imposed upon it. It comes from within it, its separation and incompleteness are a constitutive component of it.

It is only well after, when the immediate, germ, or general separation of buying and selling develops thoroughly, that the crisis is felt as crisis, that is, as a moment where unity is desperately needed. This is the moment when capitalists scramble to sell their products, when the crisis of overproduction (from the standpoint of the logic of capital) is felt, when, as Marx writes, "too

2. Karl Marx, *Theories of Surplus Value Vol. 2* (London: Lawrence and Wishard, 1969), 500.
3. Marx, *Theories of Surplus Value Vol. 2*, 500, 503.
4. Marx, *Theories of Surplus Value Vol. 2*, 515.
5. Marx, *Theories of Surplus Value Vol. 2*, 515.

much has been produced for the purpose of *enrichment*, or that too great a part of the product is intended not for consumption as revenue, but *for making money* (for accumulation): not to satisfy the personal needs of its owner, but to give him money, abstract social riches and capital, more power over the labor of others, i.e., to increase this power."[6] This is when the general separation becomes immediately felt.

Phenomenologically, for the capitalists, it is the moment of desperation when the unsold products need to be sold. For a long time, this left the capitalists frantic. Nothing in their dominant assumptions could accurately explain how this would happen. Smaller and medium sized capitalists feared at the possibility of being swallowed up by large capitals, and becoming proletarianized themselves. In the mid-20th century indebting the consumer opens a new horizon for responding to this crisis, but it is a horizon that, just like all other band aids for the crises of capital, only creates the conditions for the possibility of more intense and desperate crises later on.

Why Philosophy in Crisis?

Crisis, then, is not only a separation, but the moment when such an embryonic separation festers into one that manifests itself in our everydayness. Crisis is both the embryonic separation and the truth-event, as Alain Badiou would call it, which forces us to reckon with the need for uniting what has been separated.[7] A crisis is a predicament that ruptures the uninterrupted flow of life, but yet it comes from that flow itself.

In what sense, then, can we speak today of a philosophy in crisis? In a fundamentally dual sense: as a philosophy in crisis and a crisis in philosophy.

In one sense, we are dealing with the task of doing philosophy in a time of crisis, at a nodal point in history where, unlike Gramsci's dictum, the old world is dying, and the *new one is being born*.[8] In this sense, we are dealing with philosophy in a time of crisis.

But there is another sense, as well, for philosophy in crisis. It is that philosophy, or, better yet, the institution of philosophy, is itself in crisis. Which is to say,

---

6. Marx, *Theories of Surplus Value Vol. 2*, 533-4.

7. Alain Badiou, *Logic of Worlds: Being and Event 2*, trans. Alberto Toscano (New York: Continuum, 2009), 50.

8. Antonio Gramsci, *Prison Notebook* (New York: International Publishers, 1971), 556.

there has been a rupture of our everydayness which has shown the ultimate need to repair a separation that has occurred within philosophy itself, which is not external to it but integral to its development.

Philosophy in a Time of Crisis

Foolish is the man who cannot see that today we are in an irreversible conjuncture. Today is a time of global crisis, a transition of which is necessarily being affected on the world scale. The Columbian world order, initiated in 1492, is coming to an end. No longer is it on the historical horizon the security of the capitalist West being the center of the world. This is not simply a transition away from the capitalist mode of production, but also from the Western civilizational paradigm that has accompanied it. It is a paradigm that has been conjoined to a worldview of domination and supremacy, a worldview where an ontological hierarchy of humans was long-ago established, and where those Western souls with pale skins and capital were considered fully human, worthy of their so-called "human rights." Everyone else vacillated from being ontologically inferior to rising to this standard only insofar as they assimilated themselves within this reference point of the fully human. It was a framework that operated through an abstract logic of separation. In the Cartesian framework it made explicit its separation of mind from body, a separation from which flowed a deeper disconnection of the human from nature, their precondition for existence. In the Robinsonades that dominated bourgeois political economy and political philosophy, it made explicit its separation of the individual from the community, reducing a social-political being to a Leibnizian monad capable of operating, paradoxically, both independent of everything but yet in harmony with it.

As the *weltgeist* moves eastward, toward Asia and Africa, that is, toward China, Russia, and the resurgent pan-Africanist movements in the great mother continent, what role is philosophy to play in this transition?

Historically, philosophy and philosophies itself arose out of crisis, out of periods of transitions into new historical epochs.

It was amidst Pharoah Akhenaten's struggle against the polytheistic priests of the 14th century BC Egypt that the proto-scientific philosophical notion of Aten, the solar element out of which everything comes into being (similar to the Presocratics who searched for the *archê*, the primary material substance of the

world) arose. In other words, it was in a period of epochal transition that philosophy made its appearance.

Similarly, the context of the Presocratics, the first philosophers of the so-called West, is one of transition, of crisis. When the sociopolitical context is analyzed, it is clear that Miletus was riddled by a comprehensive crisis; class struggles (often bloody) between the rich and poor were accompanied by crises of legitimacy (i.e., a lack of consent in ruling institutions), the whirlwind accompanied by the emergence of money, and politically, the transition from a decrepit aristocracy to slave-democracies.

It is this backdrop that creates a sense of urgency in the elite to build the monuments to the Gods that prompted the development of the architects and philosophy – these monuments were aimed at reconquering the peoples consent to the dominant order. They were extravagant buildings aimed at regaining the people's reverence for the old Gods (and hence, the old order). As Robert Hahn shows, it was through the "unanticipated consequence of an aristocratic effort to bolster failing authority" through "monumental temple building" aimed at restoring political legitimacy and hegemony that science, philosophy, and technology develops.[9] The first philosophers were also architects. Their need to advance new technologies to satisfy the demands of the ruling elite, Hahn argued, provided an impetus for their reflection into philosophical questions.

Conjoined to this you have the development of coinage for money. As David Graeber writes, "Miletus appears to have been the first Greek city to strike its own coins."[10] Following the analysis of coinage and money as a concrete abstraction developed by Alfred Sohn-Rethel, and then by British classicist Richard Seaford, Graeber writes that the search for the primal substance that "gave rise to the endless particular stuffs that humans actually encounter in the world, [and] from which physical objects are composed," this notion, which was central to the origins of philosophy, had its corollary, and perhaps inspiration, in the physical existence of money.[11] "Gold, shaped into coins, is a material substance that is also an abstraction. It is both a lump of metal and something more than a lump of metal – it's a drachma or an obol, a unity of currency which (at least if collected in sufficient quantity, taken to the right

9. Robert Hahn, *Anaximander and the Architects: The Contributions of Egyptian and Greek Architectural Technologies to the Origins of Greek Philosophy* (New York: SUNY, 2001), 44, 41.

10. David Graeber, *Debt: The First 5,000 Years* (Brooklyn: Melville House, 2012), 245.

11. Graeber, *Debt*, 245.

place at the right time, turned over to the right person) could be exchanged for absolutely any other object whatsoever."[12] The abstract question which initiated philosophy in the west: "what is all that is?" implied in Thales's statement, "all is water," is made possible, according to Sohn-Rethel and Seaford, by the social upheaval caused in the introduction of the concrete abstraction of money to Miletus and Greek society in general.

Philosophy, then, is born of crisis; it sees the light in a transition period (from the 6th to the 4th century BC) from a crumbling Greek aristocracy to the emergence of Greek democracy. It is clear, in the context of socio-economic-political disintegration and reintegration, how this revolutionary, critical form of thinking arises.

Many centuries after, Cartesianism, which marks, in many ways, the origin of the modern world in the sphere of thought, is a product of the slowly disintegrating hegemonic institutions of the church, shaken by both the birth of a new economic system and the scientific discoveries that accompanied it.

In every period of crisis humanity has traversed through in world history, new avenues of thought are always opened, new questions are asked, new answers are given. *Philosophy is, in many ways, a handmaid of crisis, the ideological midwife of new worlds*.

As people living in turbulent, crisis-ridden times, studying the origins and development of philosophy's role in periods of crisis is of tremendous importance. It leads us to understand that there is a role philosophy must play in this transition, a role that it has played in all the other ones. Most principally, it is about negotiating, on the basis of objective developments into a new epochal predicament, what the conceptual paradigm will be – what will be the problems that define the era's concerns, what will be the notions through which such problems are approached?

In this sense, philosophy in crisis is a call to wake up, to respond to the duty that philosophy has to play in a world in transition. It is high time that philosophy listens to Marx's 11 thesis and conjoins it with his sentiments from his High School graduation essay, "Reflections of a Young Man on the Choice of a Profession." Here he tells us that

12. Graeber, *Debt*, 245.

> *But the chief guide which must direct us in the choice of a profession is the welfare of mankind and our own perfection. It should not be thought that these two interests could be in conflict, that one would have to destroy the other; on the contrary, man's nature is so constituted that he can attain his own perfection only by working for the perfection, for the good, of his fellow men.*
>
> *If he works only for himself, he may perhaps become a famous man of learning, a great sage, an excellent poet, but he can never be a perfect, truly great man.*
>
> *History calls those men the greatest who have ennobled themselves by working for the common good; experience acclaims as happiest the man who has made the greatest number of people happy; religion itself teaches us that the ideal being whom all strive to copy sacrificed himself for the sake of mankind, and who would dare to set at nought such judgments?*
>
> *If we have chosen the position in life in which we can most of all work for mankind, no burdens can bow us down, because they are sacrifices for the benefit of all; then we shall experience no petty, limited, selfish joy, but our happiness will belong to millions, our deeds will live on quietly but perpetually at work, and over our ashes will be shed the hot tears of noble people.*[13]

Philosophy must have a commitment to serve humanity, to play a part in changing a changing world towards collective, human ends. It must help us refine our thinking, steer away from dogmas, remain critical and willing to provide creative responses to new problems. It was because the proletariat, the working class, in freeing itself by necessity frees the whole of humanity, that this humanistic sentiment in Marx is concretized, given a particular subject that could carry its objective out. Or, to put it in his terms, "philosophy finds its material weapons in the proletariat, so the proletariat finds its spiritual weapons in philosophy."[14]

Today's philosophy, philosophy in times of crisis, is necessarily a *Marxist philosophy*. Jean-Paul Sartre's sentiment, that any attempt at "going beyond Marxism will be at worst only a return to pre-Marxism; at best, only the rediscovery of a thought already contained in the philosophy which one

---

13. Karl Marx, *Marx-Engels Collected Works Vol. 1* (Moscow: Progress Publishers 1975), 8-9.
14. Karl Marx, "A Contribution to the Critique of Hegel's Philosophy of Law: Introduction," *Marx-Engels Collected Works Vol. 3* (Moscow: Progress Publishers, 1975), 187.

believes he has gone beyond," is certainly correct.[15] It is because we are still faced with the same problematic which gave rise to Marxism itself – as the inheritor and highest form of philosophy in the history of philosophy – that only Marxism could live up to the task of philosophy in this period of transition. Marx's thought, as well as that of those who have developed upon his worldview (Engels, Lenin, Mao, etc.), is today more pertinent than even at the time it was developed. Marx's thought becomes even *more right* as the object of study that he critically analyzed continues to unfold in ways he, almost prophetically, anticipated many decades prior.

A Crisis in Philosophy

The second sense in which we can speak about philosophy in crisis is as a crisis in philosophy. Even a blind man could see that the spirit that animated Socrates's defense in Plato's *Apology*, that is, the public, critical, and unapologetic spirit of philosophy, is foreign to what today passes for philosophy.[16]

Philosophy today has been reduced to an academic discipline amongst others, forced to exist within the confines of the commodified logic of capital and the aristocratic-like confines of academic institutional respectability and formalism.

Today philosophers are those who write papers published by high impact factor journals behind paywalls only breached by the dozen other fellow philosophers in your highly specialized field. Today the philosopher has been reduced to a cog in a publishing machine, scrambling to publish their way to higher steps in the tenure track ladder.

This is not an attack on my fellow philosophers, it is not their fault. They have been thrown into a world where this is what philosophy is. The objective conditions of the development of the academy in modern capitalism have imposed themselves on them. Many don't see it, others see it but prefer to forget it, to acquiesce to it, and yet others see it but have a glimmer of hope that if they make it to the top of the ladder, perhaps decades down the line, they may return to the essence of philosophy.

---

15. Jean-Paul Sartre, *In Search of Method* (New York: Vintage Books, 1968), 7.

16. Carlos L. Garrido, The Real Reason why Socrates is Killed and why Class Society Must Whitewash his Death, *Midwestern Marx Institute* (08/22/2021): https://www.midwesternmarx.com/articles/the-real-reason-why-socrates-is-killed-and-why-class-society-must-whitewash-his-death-by-carlos-l-garrido

In either case, philosophy today is like a chained guard dog unable to protect the house from an intruder – its whole *raison d'etre* is disconnected from it.

It is in this sense that we can speak about a crisis in philosophy. What passes for philosophy today, this "academic" philosophy, has no resemblance whatsoever with the Socratic spirit of philosophy. It has lost its public element; it now delves in the most private of terrains – inside the walls of academic journals. In class lectures we are reduced to reporters, not philosophers. The task we are given is to teach what others have said, but for this a philosopher is not needed, a historian of ideas would do.

Today, then, we have philosophers and a "philosophy" which share nothing with the very essence of philosophy. It is a philosophy which acquiesces to the acceptable parameters of discourse, not only of its substance, but of its form too. Every academic paper shares the "academic form." Any sense of unique writing style must be muted in the background of the acceptable form. The ideas, the form of the ideas, and the space they cohabit all betray the creative, critical, and public essence of philosophy.

As Socrates once told Athenians,

> *Why do you who are a citizen of the great and mighty and wise city of Athens, care so much about laying up the greatest amount of money and honor and reputation, and so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? Are you not ashamed of this?*[17]

Can't we tell ourselves, fellow philosophers, the same today?

> *Why do you, citizens of the great and mighty tradition of philosophy, care so much about impact factors and tenure ladders, and so little about the public, critical, and creative essence of philosophy. Are you not ashamed of this?*

In such a period of crisis, where the need for philosophy is felt more than ever, we encounter, precisely through the general social crisis another crisis, the

---

17. Plato, *Complete Works* (Indianapolis: Hackett, 1997), 27 or 29e.

crisis of philosophy, that is, the moment were we are faced with the need to unite what has been divided, the practice of philosophy, thus far enchained within the academy, and the essence of philosophy. It is a project of returning, to put it in Hegel's terms, actuality to philosophy – that is combining the existence of philosophy with its essence.

But if today, the philosophy which is to play this role, as we mentioned earlier, is Marxism, then the crisis of philosophy, for us in America, is nothing more than the crisis of Marxism, the divorce of the dialectical and revolutionary essence of Marxism from the current practice of Marxism, or Marxists.

This is a subject I have dedicated much of my writing to, my thoughts of which could be found in my book, *The Purity Fetish and the Crisis of Western Marxism*. To restore the dialectical and revolutionary-practical essence of Marxism, I held that we needed to recenter socialist organizations in the working class and disarticulate it from the academy-based professionals. We needed to develop, as Gramsci would say, organic intellectuals that could accurately provide us, on the basis of the dialectical materialist framework, coherence, unity, and direction in our practice and understanding.

Since then, the American Communist Party, which I have the honor of being the Secretary of Education for, has formed to try to fulfil this role.

Conclusion

When we speak about philosophy in crisis, then, we are speaking in a dual sense, as philosophy in a time of crisis, and as the absence of philosophy's role in that time, rooted in a crisis in philosophy, in a separation between the practice of philosophy and its essence. If any philosophy that is to play its historical duty is today, by necessity, Marxist philosophy, then the crisis we are dealing with is a crisis of Marxism. The existence and work of the American Communist Party is the conditions for the possibility of overcoming this crisis, of guiding America into the new world and of restoring the essence of philosophy with its existence, giving philosophy actuality again.

2

The Continuation of Class Struggle by Other Means: Part two —When do workers go to war?

Alan Freeman[1]

In part one, I tried to explain why capitalists make war.[2] But what about the people that actually do the fighting? Faced with real violence, academic theory basically throws in the towel. It offers only fatalistic generalisations: humans are innately violent or individualistic or, in more sinister narratives, driven by

---

With Radhika Desai, he is co-director of the Geopolitical Economy Research Group. He is also co-editor of the Future of World Capitalism book series with Pluto Books, and the Geopolitical Economy book series with Manchester University Press He is a committee member of the Association for Heterodox Economics (www.hetecon.net) and a vice-chair of the World Association for Political Economy. He is a board member of Video Pool Winnipeg and the Christopher Freeman Trust, and a former board member of the Winnipeg Symphony Orchestra.

2. This is part two of two. Part one of this article, which addresses “What Causes War?” was featured in the June Issue #008 of Red America.

primal forces like the survival of the fittest. Actually, humans fight because they belong to classes. All real nations were formed by peoples of many diverse origins, containing many beliefs and practices. Only capitalists benefit by suppressing one of these at the expense of the others. The question is therefore not why humans, races, or faiths make war, but why classes do.

War is not an extension of random street violence: it is an organised business, a specific form of class struggle, in which property-owners try to extend their power over both their rivals, and all other classes. Moreover while precapitalist aristocrats took part in their own wars, capitalists normally don't: they get workers to fight for them. But workers have no inherent reason to fight each other; when they do, it is either because they submit to their masters' thirst for killing, or because they take the free decision to fight these masters to stop the killing.

All modern wars are a mix of both, which is why they unleash revolutionary forces. This makes the question historical: we must first ask not *why* classes go to war, but *when* they do. When do workers fight for others, and when do they fight for themselves? This is the central question of modern class politics. The story begins with the First International (Braunthal 1967), founded in 1864. The Communists of the Manifesto, who as Zetkin points out, were the left current within the International, wanted it to be a mass party through which workers could express their independent political interests and rise in Marx's words from a class 'in itself' to a class 'for itself'.[3]
